Response PH243-2 Although forms of aerial transit technology have been available and utilized for the last 100 years, modern applications have seen the evolution of the technology as a feasible mode of urban rapid transit. As discussed in Section 2.0, Project Description, of the Draft EIR, the proposed Project would have a maximum capacity of approximately 5,000 people per hour per direction, and the travel time from Los Angeles Union Station (LAUS) to Dodger Stadium would be approximately seven minutes. As in the Technology Penetration Analysis, included in Appendix J, Greenhouse Gas Emissions Technical Report, of the Draft EIR, a large capacity for a new mode of transportation in Los Angeles will allow passengers to see the potential for other emerging innovations to be integrated into the public transit system. The proposed Project would thus exemplify how alternative transportation technology can be integrated into a city's transportation infrastructure and will show that new technology can successfully operate in concert with other existing modes of transportation. Refer to Topical Response M, Comparable Urban Aerial Transit Systems, for discussion of comparable aerial transit systems in cities around the world and their operations, integration with nearby residential and open space uses, community benefits, promotion of public art and collaborations with local artists, and evidence that such systems can reduce violent crime in nearby areas and promote a sense of security compared to other modes of public transportation.

Comment PH243-3 The idea of the gondola as a public transportation solution and traffic congestion relief on game days, surprise, I'm a Dodger fan. I had season tickets last year and I took the Dodger bus. We're not all bad. So, I can tell you the people who are in cars now are going to stay in cars. A gondola is not going to change that.

The people who figured out how to get to Union Station and are already taking the Dodger shuttle are going to continue --

Response PH243-3 Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS, Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Dodger Stadium draws large regional crowds, with approximately 100 baseball games and other events each year, but there are no permanent transit connections to the venue. The vast majority of visitors drive their personal vehicles to access the venue. These vehicles create congestion on

the surface streets leading up to and around Dodger Stadium, including Sunset Boulevard/Cesar E. Chavez from LAUS and throughout the surrounding communities. Given the capacity of the proposed Project's system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system. This would reduce vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days. Refer to Topical Response B, Ridership Model; Queueing at Stations and Pre-game and Post-game Transportation, for discussion of the proposed Project's ridership model which is based on extensive data sources and assumptions validated by data, and the management of queuing at stations, and pre-game and post-game transportation. As detailed in Appendix N, Ridership Model Development Memorandum, of the Draft EIR, the model is based on the statistical relationship between cost and travel time, using data from a variety of sources including mode choice surveys for Angelenos traveling to sporting events in Downtown Los Angeles, travel time and cost to Dodger Stadium and LAUS for driving and transit, parking costs, value of time, mode of access intercept surveys of Dodger Stadium Express riders, and many other data. Many of the underlying factors that would influence pre-game/event and post-game/event travel conditions and ridership are built into the ridership model developed for the proposed Project based on extensive data sources and assumptions validated by data.

Comment Letter PH244 - Albert Holm

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH244

Comment PH244-1 MR. HOLM: Hi, this is Albert Holm, a born and raised Angeleno. I strongly oppose this project.

At its core, it is a personal pet project proposed by a white billionaire, Frank McCourt, who has a history of being scumbag, and it is a project that will negatively impact and has absolutely no benefits for the low-income, working class communities in and around Chinatown.

Response PH244-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project. Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at Los Angeles Union Station (LAUS), Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Refer to Topical Response C, Project Features, discussing the proposed Project's potential partnerships with and benefits to local businesses in Chinatown. As discussed in Section 2.0, Project Description, of the Draft EIR, and Topical Response C, Project Features, the proposed Project creates a first/last mile transit link for residents and businesses within Chinatown while unifying and connecting communities through transit mobility access. This new mode of transportation will expand rider access to the regional transit system by attracting new visitors including Dodgers fans, and represents an opportunity for additional visitors along the proposed Project alignment, creating economic opportunities for local businesses, including shops and restaurants, through potential partnerships that drive customers to Chinatown and other businesses along the proposed Project alignment, which, consequently, adds revenues to these small businesses in the communities the proposed Project hopes to serve.

Comment PH244-2 The very well-respected and objective UCLA Mobility Research Team recently published a report that concluded that a gondola would have virtually no impact on traffic on Dodger game days.

So, in return for destroying the lives and dignity of working class communities in and around Chinatown, in return for taking away green space from the LA Historic State

Park that's currently used and enjoyed by many every day, in return for building an ugly project that will ruin everyone's view of the skyline when they look up, you get a gondola that will have virtually no impact on traffic or carbon emissions.

Response PH244-2 Refer to Topical Response O, Response to UCLA Mobility Lab Study, for detailed responses to the items in the Mobility Lab Study. The Mobility Lab Study was not submitted by its authors at the Mobility Lab as a comment on the proposed Project's Draft EIR, and does not appear to have been prepared for that purpose. Refer to Topical Response C, Project Features, for discussion of how the proposed Project would provide open space enhancements, including at the Alameda Triangle, the Los Angeles State Historic Park, and along the pedestrian pathway connecting Dodger Stadium Station and Dodger Stadium. Refer to Section 2.0, Project Description, Section 3.16, Parks and Recreational Facilities, and Section 5.0, Other CEQA Considerations, of the Draft EIR, for discussion of the footprint of the proposed Project in the Los Angeles State Historic Park. With the small footprint of the proposed Project's Chinatown/State Park Station, and the required clearances and the height at which the cabins would cross over the Park, the ability to use the vast majority of the Park would not be affected by the proposed Project. Refer to Response S2-4 for additional discussion regarding the ability of uses to continue at the Park. Refer to Section 3.01, Aesthetics, and Appendix C, Visual Impact Assessment, of the Draft EIR, for discussion of how the proposed project would not have a significant impact to aesthetic and visual resources, including at the Park. Refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gas emissions through reduced vehicular travel.

Comment PH244-3 And you get to enrich the scumbag, Frank McCourt's, pocket, because we all know the point of the gondola is to spur development of retail and entertainment complexes on the Dodger Stadium parking lots that are owned by Frank McCourt.

If that happens, then Dodger Stadium will become a year-round destination which will just increase the amount of traffic and carbon emissions overall throughout the year, so instead of traffic for 82 days a year when the Dodgers are playing, you get traffic every day of the year, which will increase carbon emissions and increase pollution.

Anybody who believes otherwise is either being very disingenuous, very dishonest, very ignorant, or they don't live here, because they don't care what happens to other people.

Response PH244-3 Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit,

a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project. Refer to Topical Response G, No Improper Project Segmentation: The Proposed Project Is Intended to Create a Transit Connection from Metro's Union Station Transportation Hub via an Aerial Gondola System to the Dodger Stadium Property for a discussion of how the proposed Project solely proposes an aerial gondola system. The proposed Project does not include other development, and neither the Project Sponsor nor any other applicant has applied for other development unrelated to the existing stadium uses on the Dodger Stadium property.

Comment Letter PH245 - Liliana Cortez

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH245

Comment PH245-1 MS. CORTEZ: Yes, hi. Thank you for calling. The irony of when you called on me earlier is that I was on the bus and couldn't answer due to how crowded and noisy the bus was because it was running late.

I find it really funny to hear many of you talk about how this gondola project will bring public transportation to Chinatown and reduce traffic in the area, but really, how many of you are really willing to get out of your cars and ride public transportation and deal with the late schedules, overcrowding, rude bus drivers, and dirty buses and trains due to lack of cleaning and sanitation on a daily basis?

I ask because I'm also a cyclist and many of my friends and I ride our bicycles not just for fun like many of you might think, but as actual daily commuters who use these roads and streets to get from point A to point B, from home to work, to school, to running errands, always under the risk and threat of whether we'll make it home alive.

How many of you are willing to get out of your cars and deal with traffic noise, toxic exhaust fumes from vehicles, and traffic violence, or have you missed the news of continuous assaults that have led to hospitalization and death for us cyclists?

Of course, you're not. You're sitting here being hypocrites about the benefits of this project for public transportation and traffic. I call balderdash.

Response PH245-1 Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, and Topical Response N, Environmental Justice, for discussion how the proposed Project would address a need for a permanent transit connection to one of the region's most visited venues and would alleviate existing congestion on surrounding neighborhood streets, arterial roadways, and freeways, thereby reducing associated air pollution and improving safety. The proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gas emissions through reduced vehicular travel are discussed in Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR. Refer to Topical Response M, Comparable Urban Aerial Transit Systems, for discussion of comparable aerial transit systems in cities around the world and their operations, integration with nearby residential and open space uses, community benefits, promotion of public art and collaborations with local artists, and evidence that such systems can reduce violent crime in nearby areas and promote a sense of security compared to other modes of public transportation.

Comment PH245-2 The quiet streets that my friends and I used to ride our bicycles to enjoy the beautiful views of the Elysian Valley, Angel's Point, and the LA Historic State Park would be filled with entitled tourists and drivers who already use violence to push us off the streets with the racism and death machines.

Response PH245-2 Traffic congestion is not required to be analyzed under CEQA in the Draft EIR following the implementation of Senate Bill 743, which designated "vehicle miles traveled" as the method for assessing transportation impacts on the environment for CEQA projects. Refer to the Los Angeles Aerial Rapid Transit Project Non-CEQA Transportation Assessment, which found that there could be localized increases in traffic at the intersections closest to the proposed Project's Alameda Station and Chinatown/State Park Station due to some riders choosing to park and ride or take Uber/Lyft and recommended the proposed Project work with Metro to identify a transit partnership for the proposed Project riders to further encourage them to take transit, walk, or bike to the proposed Project's stations.

Comment PH245-3 But obviously, some of you here feel we are not entitled to this as residents and patrons of these green spaces, and this is why we are against this project. Metro can start by improving the existing transportation system because this gondola project is not even part of the solution.

Response PH245-3 Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project.

Comment PH245-4 The gondola in Mexico City was built for the white American colonizers invading the city because of how cheap it is, while outpricing locals with exorbitant rents. For the caller who was gushing over this, this is called gentrification and this is exactly what this project will bring to Chinatown and the surrounding communities.

Response PH245-4 Refer to Topical Response E, The Proposed Project Will Not Displace Housing or Prevent Planned Housing, for discussion of how the proposed Project will not exacerbate gentrification or result in displacement of residents in the surrounding neighborhoods and is consistent with Metro's considerations regarding gentrification and displacement. Refer to Topical Response M, Comparable Urban Aerial Transit Systems, for discussion of comparable aerial transit systems in cities around the world and their operations, integration with nearby residential and open space uses, community benefits, promotion of public art and collaborations with local artists, and evidence that such systems can reduce violent crime in nearby areas and promote a sense of security compared to other modes of public transportation.

Comment PH245-5 Chinatown is not dying. It's lacking real community investments and this gondola project is not one of them.

Long-term residents of Chinatown are mostly monolingual elders, seniors, and families with young children. They are immigrant, low-income, and facing continuous harassment and threats of eviction.

Response PH245-5 Refer to Topical Response C, Project Features, discussing the proposed Project's potential partnerships with and benefits to local businesses. As discussed in Section 2.0, Project Description, of the Draft EIR, and Topical Response C, Project Features, the proposed Project creates a first/last mile transit link for residents and businesses within Chinatown while unifying and connecting communities through transit mobility access. This new mode of transportation will expand rider access to the regional transit system by attracting new visitors including Dodgers fans, and represents an opportunity for additional visitors along the proposed Project alignment, creating economic opportunities for local businesses, including shops and restaurants, through potential partnerships that drive customers to Chinatown and other businesses along the proposed Project alignment, which, consequently, adds revenues to these small businesses in the communities the proposed Project hopes to serve. Refer to Topical Response N, Environmental Justice, for discussion of how the Draft EIR addresses environmental justice by considering the proposed Project's ability to reduce congestion and emissions from on-road vehicles in an area disproportionately burdened by pollution, and including an analysis of the proposed Project's potential impacts to the surrounding community, concluding that the proposed Project could result in air quality benefits for the surrounding communities.

Comment Letter PH246 - Jennifer Wong

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH246

Comment PH246-1 MS. WONG: Hi, my name is Jennifer Wong. I am a resident of Chinatown and I oppose this project.

I actually find it to be kind of racially traumatic that this is going on, that you are ignoring marginalized communities, the Asian-American community, thinking that we would just kind of take this without comment and sitting down, so I really hope you take that into consideration the next time that you propose ridiculous projects.

Response PH246-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Topical Response N, Environmental Justice, for discussion of how public outreach for the proposed Project was designed with environmental justice principles in mind and the proposed Project provided translated materials in four different languages, and interpretation services in five different languages, to reflect the surrounding community, and provided opportunities for in-person and virtual meetings with toll-free dial in options and ADA accessibility features.

Comment PH246-2 I don't feel like this will help with our traffic issues. I liked that idea where you need to have shuttles, not just going from Union Station, but other parts of the city. That makes sense to me.

Response PH246-2 Traffic congestion is not required to be analyzed under CEQA in the Draft EIR following the implementation of Senate Bill 743, which designated "vehicle miles traveled" as the method for assessing transportation impacts on the environment for CEQA projects. Refer to the *Los Angeles Aerial Rapid Transit Project Non-CEQA Transportation Assessment*, which found that there could be localized increases in traffic at the intersections closest to the proposed Project's Alameda Station and Chinatown/State Park Station due to some riders choosing to park and ride or take Uber/Lyft and recommended the proposed Project work with Metro to identify a transit partnership for the proposed Project riders to further encourage them to take transit, walk, or bike to the proposed Project's stations. Refer to Topical Response B, Ridership Model; Queueing at Stations and Pre-game and Post-game Transportation, for discussion of the proposed Project's ridership model which is based on extensive data sources and assumptions validated by data. Refer to Topical Response H, The Draft EIR Considered an Appropriate Range of Alternatives and Design Options, for discussion of how the Transportation Systems Management Alternative for an enhanced Dodger Stadium Express is unlikely to achieve the same level of ridership as the proposed Project, and otherwise fails to meet most of the Project Objectives which seek to achieve the proposed Project's underlying purpose of providing a

permanent direct transit connection between LAUS and the Dodger Stadium property and improving connectivity for surrounding communities, including Chinatown, Mission Junction, Elysian Park, Solano Canyon, and the Los Angeles State Historic Park. As discussed in Topical Response H, a system of buses from numerous remote locations throughout the Los Angeles region to and from Dodger Stadium events would require a substantial increase in the number of buses which, similar to expanding the fleet for an expanded Dodger Stadium Express service, would result in a fleet of buses that would either be underutilized most of the time or regular Metro bus service that utilizes these vehicles would be disrupted every time a Dodger game or event at the stadium is held. Such a service would also incur substantial costs in paid time and mileage for driving empty buses out to the remote locations before a game and back from the remote locations after a game and paid idle time during the game. Buses from a variety of remote locations would also need to travel in rush hour congestion to get to Dodger Stadium. With limited regional facilities that provide bus only lanes that these services could utilize, they would not materially improve transit travel time compared with driving. For example, the current Dodger Stadium Express service from South Bay serves a broad area of southern Los Angeles County at stations spread across eight miles, is free, and travels on a priority lane within the I-110 freeway median for most of its trip, but the South Bay Dodger Stadium Express carried an average of only 415 passengers per game in 2019, which is substantially lower than the ridership of 1,895 riders per game on the LAUS Dodger Stadium Express. Refer to Topical Response H, The Draft EIR Considered an Appropriate Range of Alternatives and Design Options, for discussion of how improving the connection between LAUS and Dodger Stadium via the proposed Project would provide the quickest, most frequent, and highest capacity transit connection for the greatest number of riders traveling to Dodger Stadium to have the most travel time competitive transit trips from more locations in the region.

Comment PH246-3 In terms of it bringing business into our community, I don't believe that's true. It would just bring businesses that are expensive and would not be affordable to the residents here.

What we need are things like a laundromat, a grocery store, and I don't believe tourists or people who would ride the gondola are going to be using any of those types of things, so it doesn't make any sense at all.

Response PH246-3 Refer to Topical Response C, Project Features, discussing the proposed Project's potential partnerships with and benefits to local businesses in Chinatown. As discussed in Section 2.0, Project Description, of the Draft EIR, and Topical Response C, Project Features, the proposed Project creates a first/last mile transit link for residents and businesses along the proposed Project alignment while unifying and connecting communities through transit mobility access. This new mode of transportation will expand rider access to the regional transit system by attracting new visitors including Dodgers fans, and represents an opportunity for additional

visitors along the proposed Project alignment, creating economic opportunities for local businesses, including shops and restaurants, through potential partnerships that drive customers to businesses along the alignment, which, consequently, adds revenues to these small businesses in the communities the proposed Project hopes to serve. Refer to Topical Response N, Environmental Justice, for discussion of how the proposed Project would not preclude development of uses including housing, grocery stores, and/or healthcare facilities in the surrounding communities, and would itself address a need for a permanent transit connection to one of the region's most visited venues and would benefit the surrounding community by alleviating existing congestion on surrounding neighborhood streets, arterial roadways, and freeways, thereby reducing associated air pollution and improving safety.

Comment PH246-4 I also really enjoy the state historic park and I don't want to see a gondola as I'm trying to experience nature, take walks, and enjoy my community. So, I really do hope you just do not go along with this project. Thank you.

Response PH246-4 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Section 3.01, Aesthetics, and Appendix C, Visual Impact Assessment, of the Draft EIR, for discussion of the aesthetic impacts of the proposed Project, which would be less than significant, including at the Park.

Comment Letter PH247 - Fernanda Sanchez

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH247

Comment PH247-1 MS. SANCHEZ: Hello, my name is Fernanda Sanchez and I am a long-time community member of Lincoln Heights. I'm here in solidarity with the residents of Chinatown and I strongly oppose this disgraceful project.

Response PH247-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Because the comment does not address an environmental issue or raise a substantive issue on the content of the Draft EIR, no further response is warranted.

Comment PH247-2 The lack of transparency from these predatory projects will continue to be faced with opposition from all of our community members here. It is the residents of Chinatown that need to be heard because they are the ones that will be directly impacted.

Response PH247-2 Refer to Topical Response N, Environmental Justice, Appendix A, Public Outreach Report, of the Final EIR, and Appendix A, Scoping Report, of the Draft EIR, for discussion of the proposed Project team's outreach efforts to neighborhoods along the proposed Project alignment. Metro sought to engage with stakeholders in neighborhoods along the proposed Project alignment in each stage of the environmental review process. Metro engaged stakeholders in neighborhoods along the proposed Project alignment in decision making for the proposed Project beginning with the public scoping period for the Draft EIR in October 2020 to receive public comment on the proposed Project's scope of environmental review under CEQA. In June 2021, the Project Sponsor conducted two virtual public outreach meetings. The input from stakeholders in neighborhoods along the proposed Project, including Chinatown, during this period led directly to changes to the proposed Project, including selecting the proposed Project's alignment and the location of Chinatown/State Park Station, as discussed in Section 5.0, Other CEQA Considerations, of the Draft EIR. Eight public meetings were held immediately preceding, during, and immediately following the Draft EIR public review period, with four held in-person in the Project area at Los Angeles Union Station and Cathedral High School, and four held virtually via Zoom webinar. Project materials and information were provided at both the in-person meetings and on Metro's website in English, Spanish, Chinese (Traditional), and Chinese (Simplified). Interpretation was provided in English, Spanish, Mandarin, and Cantonese during the eight public meetings, with interpretation provided in Taishanese during the final two public meetings. Refer to Topical Response C, Project Features, for discussion of the potential added benefits from the proposed Project, including potential partnerships with and benefits to local businesses in Chinatown.

Comment PH247-3 I can list a million other things our communities need and a gondola is not one of them. I want to also highlight the violent gentrification that is happening to our communities directly caused by USC and the Dodgers.

They have taken our parks, our neighborhoods, our homes, our lives. Gentrification is death. Our community continues to be targeted and it's time that we take our city back from the greedy hands of the top one percent who treat our communities like they're profitable playgrounds.

Response PH247-3 Refer to Topical Response N, Environmental Justice, for discussion of how the Draft EIR addresses environmental justice by considering the proposed Project's ability to reduce congestion and emissions from on-road vehicles in an area disproportionately burdened by pollution, and including an analysis of the proposed Project's potential impacts to the surrounding community, concluding that the proposed Project could result in air quality benefits for the surrounding communities. The proposed Project would not preclude development of other uses in the surrounding communities and would itself address a need for a permanent transit connection to one of the region's most visited venues, and would also benefit the surrounding community by improving safety. Refer to Topical Response E, The Proposed Project Will Not Displace Housing or Prevent Planned Housing, for discussion of how the proposed Project will not exacerbate gentrification or result in displacement of residents in the surrounding neighborhoods and is consistent with Metro's considerations regarding gentrification and displacement.

Comment PH247-4 I also want to mention that for those that are speaking in favor of this project, if you really believe that this gondola will improve traffic and reduce emissions, you are seriously confused for believing such a blatant lie and logical fallacy, or you are being paid to speak in favor. If you have a contract riding on this gondola and you're speaking in favor, you need to be transparent about that.

Response PH247-4 Refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gas emissions through reduced vehicular travel.

Comment PH247-5 Lastly, I want to comment on the community advocates and activists who spoke up during the last gondola hearing where there really wasn't any public comment because the developer did not want to listen to us.

I want to thank all of the brave voices and their efforts for giving us the opportunity for public comment and for the meeting today.

Response PH247-5 Refer to Appendix A, Public Outreach Report, of the Final EIR, for discussion of the proposed Project's opportunities for public testimony during the Draft EIR public

review period. During the public review period, comments on the Draft EIR could be submitted in writing via email or mail, by phone, and during the four public hearings. Comments on the Draft EIR could be submitted by email to LAART@metro.net, by mail to One Gateway Plaza, Mail Stop 99-22-6, Los Angeles, CA 90012, or over the phone by calling (213) 922-6913. Comments could also be submitted at each public hearing. At virtual public hearings, comments could be given verbally. At the two public hearings held in person, comments could be submitted either in writing on forms provided by Metro, or verbally to the court reporters who were set up at a "comment station" in the venue. Written comment forms provided instructions on how to comment on the Draft EIR in English, Spanish, and Chinese (Simplified). Interpretation was provided in English, Spanish, Mandarin, and Cantonese during all four public hearings, with interpretation provided in Taishanese during the final two public hearings. During the January 12, 2023, public hearing at Cathedral High School, attendees were provided with the opportunity to submit public comments either in writing on forms provided by Metro, or verbally to the court reporters at a comment station in the venue. Written comment forms provided instructions on how to comment on the Draft EIR in English, Spanish, and Chinese (Simplified). An estimated 143 attendees participated in the January 12, 2023, public hearing, and Metro received 31 verbal comments and 95 written comments on the Draft EIR. In light of the disruptions at the January 12, 2023, public hearing, Metro provided a fourth public hearing by way of a virtual public hearing held on February 8, 2023. Verbal comments made at the virtual February 8, 2023, public hearing were deemed timely submitted for the purposes of the Draft EIR public review period.

Comment PH247-6 I urge you to stop this project. Stop the gondola. Nobody here in these communities supports this project, and we will not accept developers to further exploit, destroy, and displace our communities. Thank you.

Response PH247-6 This comment provides a general conclusion regarding the comments raised in this letter. Responses to the comments contained in this letter are provided above in Responses PH247-1 through PH247-5.

Comment Letter PH248 - Cheng Yang & Yu Hang Tang

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH248

Comment PH248-1 MR. YANG: Hello.

MS. SISCO: Hi.

MR. YANG: Hi, this is Cheng Yang. I'm here at Cassia Manor. I have the President of Cassia Manor, Mr. Tyru Hung. He will be speaking on behalf of several residents.

MS. SISCO: Okay. Could you please ask him to move closer to the speaker, and we'll restart the clock?

MR. TANG: (Foreign language spoken.)

MR. YANG: Thank you.

MS. SISCO: Okay. We'll provide a moment for the interpretation of that comment.

INTERPRETER: Hi. My name is Yu Hang Tang (phonetic), and I am speaking here on behalf of ten other residents who are with me right now.

I live at 917 Cafe Manor. I have lived here for over 22 years. Besides me, there is also residents from Unit 402, Unit 604, Unit 610, Unit 112, as well as Unit 508.

We all believe we don't need this gondola. I live on the ninth floor.

Response PH248-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Because the comment does not address an environmental issue or raise a substantive issue on the content of the Draft EIR, no further response is warranted.

Comment PH248-2 If the gondola is going to fly over our home, the people on the gondola will be able to see us change, and for this reason, I oppose the gondola.

Response PH248-2 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Topical Response M, Comparable Urban Aerial Transit Systems, discussing how, like the proposed Project, comparable aerial transit systems in cities around the world are integrated with their surrounding urban environments. In particular, comparable aerial transit systems in other locations demonstrate that such systems can operate safely, efficiently, and in concert with nearby residential and open space uses, including parks and other recreational facilities. The proposed Project would be located in a densely populated, urban environment surrounded by a variety of commercial, industrial, and residential development types. In this type of environment, it is common for public transportation, such as Metro's light rail, to be

located adjacent to residential uses and modern aerial transit systems in other cities, including Portland, Oregon and New York City, operate adjacent to residential uses. Nevertheless, as discussed in Topical Response J, Gondola Design and Operations, and Section 2.0, Project Description, of the Draft EIR, cabin windows can be equipped with privacy glass that can become opaque while adjacent to sensitive views, and the proposed Project would work with stakeholders adjacent to the proposed Project alignment to identify locations where the use of privacy glass would be warranted. Considerations as to the locations along the proposed Project alignment where the privacy glass could be activated include the subject adjacent sensitive views and the vertical and horizonal distance between the proposed Project cabins and the adjacent sensitive views.

Comment PH248-3 We don't need the gondola. What we need is hospital, supermarket, and affordable housing.

Our community will not benefit from this gondola project. It will only bring harm.

So, I urge this project to be withdrawn. Please remove this gondola project.

Thank you.

Response PH248-3 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer also to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. Refer to Topical Response N, Environmental Justice, for discussion of how the proposed Project would not preclude development of uses including housing, grocery stores, and/or healthcare facilities in the surrounding communities, and would itself address a need for a permanent transit connection to one of the region's most visited venues and would alleviate existing congestion on surrounding neighborhood streets, arterial roadways, and freeways, thereby reducing associated air pollution and improving safety. Refer to Topical Response M, Comparable Urban Aerial Transit Systems, for discussion of how comparable aerial transit systems in cities around the world operate safely, efficiently, and in concert with nearby residential and open space uses, have brought benefits to their surrounding areas by connecting disparate neighborhoods, promoting commerce, beautifying communities, and enhancing transit system rider safety, and have been shown to reduce violent crime in nearby areas. Additionally, refer to Topical Response C, Project Features, for discussion of the proposed Project's features to enhance and provide additional benefits to the surrounding communities, including but not limited to, sustainability features and open space enhancements, the Community Access Plan for fares, access to parks, mobility hubs, signage, utilization of local artists for site specific artwork at each station reflective of the unique neighborhood culture, design of each component of the proposed Project to complement and reflect the unique character of the surrounding neighborhood, the Business and Community Support Program during construction, and benefits to local businesses along the proposed

Project alignment. The Project Sponsor would convene stakeholder groups to coordinate on issues related to proposed Project features.

Comment Letter PH249- Edwin Li

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH249

Comment PH249-1 MR. LI: Hello. My name is Edwin Li. Can you guys hear me?

MS. SISCO: Yes.

MR. LI: All right, thank you.

My name is Edwin Li, and I'm a local resident of Chinatown. And I live near the proposed pivot point of the gondola, and I oppose this project.

I don't believe the gondola will help Chinatown businesses because the tourists would be flying over Chinatown, right into Frank McCourt's parking lots.

Response PH249-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project. Refer to Topical Response C, Project Features, discussing the proposed Project's potential partnerships with and benefits to local businesses. As discussed in Section 2.0, Project Description, of the Draft EIR, and Topical Response C, Project Features, the proposed Project creates a first/last mile transit link for residents and businesses within Chinatown while unifying and connecting communities through transit mobility access. This new mode of transportation will expand rider access to the regional transit system by attracting new visitors including Dodgers fans, and represents an opportunity for additional visitors along the proposed Project alignment, creating economic opportunities for local businesses, including shops and restaurants, through potential partnerships that drive customers to Chinatown and other businesses along the proposed Project alignment, which, consequently, adds revenues to these small businesses in the communities the proposed Project hopes to serve.

Comment PH249-2 I believe the Dodger Express, which is actually more practical and less invasive, will be a better solution. It also economically more responsible and doesn't destroy the neighborhood.

Response PH249-2 Refer to Topical Response H, The Draft EIR Considered an Appropriate Range of Alternatives and Design Options, for discussion of how the Transportation Systems Management Alternative for an enhanced Dodger Stadium Express is unlikely to achieve the same level of ridership as the proposed Project, and otherwise fails to meet most of the Project Objectives, which seek to achieve the proposed Project's

underlying purpose of providing a permanent direct transit connection between Los Angeles Union Station (LAUS) and the Dodger Stadium property and improving connectivity for surrounding communities, including Chinatown, Mission Junction, Elysian Park, Solano Canyon, and the Los Angeles State Historic Park. Improving the connection between LAUS and Dodger Stadium via the proposed Project would provide the quickest, most frequent, and highest capacity transit connection for the greatest number of riders traveling to Dodger Stadium to have the most travel time competitive transit trips from more locations in the region. Refer to Topical Response C, Project Features, for discussion of the proposed Project's features to enhance and provide additional benefits to the surrounding communities, including but not limited to, sustainability features and open space enhancements, the Community Access Plan for fares, access to parks, mobility hubs, signage, utilization of local artists for site specific artwork at each station reflective of the unique neighborhood culture, design of each component of the proposed Project to complement and reflect the unique character of the surrounding neighborhood, the Business and Community Support Program during construction, and benefits to local businesses along the proposed Project alignment. The Project Sponsor would convene stakeholder groups to coordinate on issues related to proposed Project features. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, and Section 4.0, Costs and Financing, of the Final EIR, which provide detail as to the proposed Project's capital, operation, and maintenance costs and planned sources of funding, recognizing that the proposed Project's capital funding would primarily be sourced from bond financing serviced by revenue from the proposed Project. No public sources of funding have been sought or committed to the proposed Project.

Comment PH249-3 I think it's wrong to use public funds to help a private company, especially Frank McCourt, and

Response PH249-3 This comment is noted and will be provided to the decision makers for review and consideration. Because the comment does not address an environmental issue or raise a substantive issue on the content of the Draft EIR, no further response is warranted. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, and Section 4.0, Costs and Financing, of the Final EIR, which provide detail as to the proposed Project's capital, operation, and maintenance costs and planned sources of funding, recognizing that the proposed Project's capital funding would primarily be sourced from bond financing serviced by revenue from the proposed Project. No public sources of funding have been sought or committed to the proposed Project.

Comment PH249-4 I don't think it's safe to build objects that are flying over people in earthquake zone areas. And I think that's it for me. Thank you.

Response PH249-4 Refer to Section 2.0, Project Description, of the Draft EIR and Topical Response J, Gondola Design and Operations, of the Final EIR, for discussion of the proposed Project's design and operations, including discussion of the safety, privacy, and operations features of the proposed Project. Refer to Section 3.07, Geology and Soils, and Appendix I, Geotechnical Document in Support of the Environmental Impact Report, of the Draft EIR, and Appendix F, Memo on Structural Engineering, of the Final EIR, for discussion of how the proposed Project would meet applicable standards, requirements, and building codes, including all standards addressing environmental factors such as seismic effects, and would have less than significant impacts related to geology and soils with implementation of Mitigation Measures GEO-A and GEO-B.

Comment Letter PH250 - Luis Guerrero

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH250

Comment PH250-1 MR. GUERRERO: Hello, can you hear me?

MS. SISCO: Yes.

MR. GUERRERO: Hello, my name is Luis Guerrero. My family is from the Williams Mead Projects, and we are calling support of the gondola.

Response PH250-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment PH250-2 We've seen that this is going to help alleviate the traffic in the neighborhoods, but I was actually calling as well because the last meeting I tried to go to to give a public comment, I got stopped by protestors, and I had, like, my family with me. I had little kids with me. They were cussing and, like, literally got in my face.

I didn't know if Metro had security there or what, but that was extremely disgraceful, especially considering that was at a school, and there was high schoolers and other kids just everywhere. That was just -- I was so ashamed of Metro and the city right there. That was awful, but thank you, guys.

Response PH250-2 Refer to Appendix A, Public Outreach Report, of the Final EIR, for discussion of the proposed Project's opportunities for public testimony during the Draft EIR public review period. During the January 12, 2023, public hearing at Cathedral High School, attendees were provided with the opportunity to submit public comments either in writing on forms provided by Metro, or verbally to the court reporters at a comment station in the venue. Written comment forms provided instructions on how to comment on the Draft EIR in English, Spanish, and Chinese (Simplified). Shortly after the public hearing started, a group of approximately 40 protesters with "Stop the Gondola" signs entered the meeting and began speaking with amplified bullhorns, using profanity. Due to this group's loud, prolonged protests, the court reporters and interpreters could not take verbal public comment. Metro requested that the protestors turn off their amplifier to enable the agency to continue to take verbal public comment. The protestors then began marching around the room, chanting and continuing to speak into the amplified bullhorns. Approximately 6 to 10 protestors then started to tear down poster boards, knock over easels and tables and throw materials. Metro and AECOM staff, subject matter experts, and the Project team expressed that they were physically intimidated and frightened by the damage done by the protesters, as discussed in greater detail in the February 10, 2023, memo submitted by the Project Sponsor and included as Attachment D to Appendix A, Public Outreach Report, of the Final EIR. After the protesters left, Metro staff concluded the

meeting by talking to several remaining attendees. An estimated 143 attendees participated in the January 12, 2023, public hearing, and Metro received 31 verbal comments and 95 written comments on the Draft EIR. In light of the disruptions at the January 12, 2023, public hearing, Metro provided a fourth public hearing by way of a virtual public hearing held on February 8, 2023. Verbal comments made at the virtual February 8, 2023, public hearing were deemed timely submitted for the purposes of the Draft EIR public review period.

Comment Letter PH251 - Miguel Castellon

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH251

Comment PH251-1 MR. CASTELLON: Hello?

MS. SISCO: Hello. We can hear you.

MR. CASTELLON: All right, good evening. My name is Miguel Castellon and I am with the Ironworkers Local 433.

I love this project and appreciate that it will be built with partnership with labor. That means good paying jobs for our community and new, modern transportation for everyone.

We need more zero emissions and infrastructure in Los Angeles.

Thank you.

Response PH251-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. The proposed Project will enter into a Project Labor Agreement and will work in coordination with the LA/OC Building and Construction Trades.

Comment Letter PH252 - Richard Rojas

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH252

Comment PH252-1 MR. ROJAS: Good evening. My name is Richard Rojas. I currently serve on the Advisory Board for Latino Outdoors.

We're a national organization that connects youth and families with the outdoor space, including Los Angeles State Historic Park. Our organization vehemently opposes the project as we see it another environmental injustice in this community.

Response PH252-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. This comment provides a general summary of the comments raised in this letter. Responses to the comments contained in this letter are provided below in Responses PH252-2 through PH252-5.

Comment PH252-2 As currently proposed, the project is viewed by our community as an availed attempt to degrade the land that was hard fought and promised to be the Central Park of Los Angeles.

For seven generations of Californians and beyond, recognizing the need for green space in LAs urban area, three great environmental warriors dedicated their lives to finding a way to create this open space in the industrial-commercial wasteland of Northeast Los Angeles.

The work of the late Robert Garcia from the city project, Ted Jackson from California State Parks Operations, Ron Schaefer from the LA Parks District, now all deceased but not to be forgotten, but cherished, protected, and preserved.

Response PH252-2 Metro and the Project Sponsor acknowledge the more than 20 years of effort the community undertook to convert the closed rail yard at River Station to what is now the Los Angeles State Historic Park. Refer to Topical Response M, Comparable Urban Aerial Transit Systems, discussing how, like the proposed Project, comparable aerial transit systems in cities around the world are integrated with their surrounding urban environments. In particular, comparable aerial transit systems in other locations demonstrate that such systems can operate safely, efficiently, and in concert with nearby residential and open space uses, including parks and other recreational facilities. Refer also to Topical Response C, Project Features, for discussion of how the proposed Project would provide open space enhancements, including at the Alameda Triangle, the Los Angeles State Historic Park, and along the pedestrian pathway connecting Dodger Stadium Station and Dodger Stadium. Refer to Response S2 regarding the Los Angeles State Historic Park.

Comment PH252-3 We want LA State Park for the viewshed and the experience for the community it provides. It took 20 years to be envisioned and developed, not to rely on the Draft Environmental Impact Report that the state park should change the general plan to accommodate this private venture.

Response PH252-3 Metro and the Project Sponsor acknowledge the more than 20 years of effort the community undertook to convert the closed rail yard at River Station to what is now the Los Angeles State Historic Park. Through collaboration with State Parks, the proposed Project has been designed to provide additional benefits to the Los Angeles State Historic Park, including pedestrian improvements between Metro's L Line (Gold) and the park, and integration of the Chinatown/State Park Station into the southern boundary of the park with hardscape and landscape enhancements, a mobility hub, and other park amenities including concessions, restrooms, and a breezeway connecting the concessions and restrooms. Refer to Section 2.0, Project Description, Section 3.16, Parks and Recreational Facilities, and Section 5.0, Other CEQA Considerations, of the Draft EIR, for discussion of the footprint of the proposed Project in the Los Angeles State Historic Park. With the small footprint of the proposed Project's Chinatown/State Park Station, and the required clearances and the height at which the cabins would cross over the Park, the ability to use the vast majority of the Park would not be affected by the proposed Project. Refer to Response S2-4 for additional discussion regarding the ability of uses to continue at the Park. Refer to Section 3.01, Aesthetics, with supporting data provided in Appendix C, Visual Impact Assessment and Lighting Study of the Draft EIR, and Appendix H.1, Memo Regarding Preparation of KOPs, of this Final EIR, for discussion of how the proposed project would not have a significant impact to aesthetic and visual resources and how view simulations were prepared and analyzed. Refer to Section 3.11, Land Use and Planning, of the Draft EIR, for a discussion of the proposed Project's consistency with the Los Angeles State Historic Park General Plan. As discussed therein, State Parks has determined that the proposed Project would be inconsistent with the Los Angeles State Historic Park General Plan because the identified land uses in the General Plan's Preferred Park Concept Elements did not contemplate a transit station like the proposed Project's Chinatown/State Park Station. State Parks considers this inconsistency a potentially significant impact. Therefore, Mitigation Measure LUP-A would be implemented to require the proposed Project to obtain an amendment to the Los Angeles State Historic Park General Plan. The General Plan Amendment is subject to the review and approval by the State Park Commission, which retains its independent authority related to the proposed Project. Refer to Topical Response F, Los Angeles State Historic Park, for a discussion of the Los Angeles State Historic Park General Plan Amendment.

Comment PH252-4 This is not public transportation. It seeks to get people to Dodger Stadium for a private interest, for a private profit.

Response PH252-4 Refer to Topical Response A, SB 44, for discussion of how the proposed Project is public transportation because it will be open to the general public for service at regular, scheduled operating times, operating daily to serve existing residents, workers, park users, and visitors to Los Angeles. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project.

Comment PH252-5 On behalf of the Latino community and current future park users, we urge you to instruct the project proponent to properly identify, analyze, and mitigate all park impacts required by law and not usurp the legal responsibility to provide a clear, thorough, and complete, defendable project in the Draft Environmental Impact Report.

Response PH252-5 This comment provides a general conclusion regarding the comments raised in this letter. Responses to the comments contained in this letter are provided above in Responses PH252-1 through PH252-4. As discussed in Section 2.0, Project Description, Section 3.16, Parks and Recreational Facilities, and Section 5.0, Other CEQA Considerations, of the Draft EIR, the Draft EIR clearly defines the potential requirements to implement the proposed Project's Chinatown/State Park Station, which would have a footprint of 2,195 square feet in the Los Angeles State Historic Park (~.1% of the total 32-acre park), and the station canopy would have an overhang of 9,320 square feet over the park. The proposed Project alignment crosses over the westernmost edge of the Los Angeles State Historic Park, adjacent to the existing Metro L Line (Gold) and the associated overhead catenary system. The proposed Project's required aerial clearance would be located above approximately 59,470 square feet of the total 32-acre park, plus an Additional Separation Buffer. With the required clearances and the height at which the cabins would cross over the Los Angeles State Historic Park, the ability to use the vast majority of the Park for kite flying, special events (e.g., concerts, craft fairs, partnership events, 5K/10K runs, workshops, cultural festivals, and the farmers' market), and other passive recreational opportunities (e.g., picnicking, jogging, walking, and informal play) would not be affected by the proposed Project. Refer to Response S2-4 for additional discussion regarding the ability of uses to continue at the Park. As discussed in Sections 3.01, Aesthetics, 3.04, Biological Resources, 3.05, Cultural Resources, 3.06, Energy, 3.07, Geology and Soils, 3.09, Hazards and Hazardous Materials, 3.10, Hydrology and Water Quality, 3.11, Land Use and Planning, 3.13, Noise, 3.15, Public Services, 3.16, Parks and Recreational Facilities, 3.17, Transportation, 3.18, Tribal Cultural Resources, 3.19, Utilities and Service Systems, 3.20, Wildfire, and 5.0, Other CEQA Considerations, the proposed Project would have less than significant operational impacts, including to Los Angeles State Historic Park. CEQA does not require extensive detail beyond that needed for evaluation and review of the proposed Project's environmental impact. (See, e.g., CEQA Guidelines § 15124.) The

Draft EIR provided sufficient information in order for the public and decisionmakers to meaningfully evaluate the proposed Project's potential environmental impacts.

Comment Letter PH253 - Dahma Cho

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH253

Comment PH253-1 MS. CHO: Hi. Can you hear me?

MS. SISCO: Yes.

MS. CHO: Okay. My name is Dahma Cho. I'm a resident of LA. I'm calling in solidarity with the Chinatown community in opposition to this gondola project.

Response PH253-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment PH253-2 This project is another case of profits being prioritized over the people, of private interests, of those more privileged being prioritized over the well-being of marginalized communities.

Response PH253-2 Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project. Refer to Topical Response N, Environmental Justice, for discussion of how the Draft EIR addresses environmental justice, how the proposed Project supports Metro's goal of prioritizing equity opportunities, is designed to extend affordable, regional access and mobility options to the communities adjacent to the proposed Project alignment, how the public outreach for the proposed Project was designed with environmental justice principles in mind, how the proposed Project would not preclude development of uses including housing, grocery stores, and/or healthcare facilities in the surrounding communities, and would itself address a need for a permanent transit connection to one of the region's most visited venues and would alleviate existing congestion on surrounding neighborhood streets, arterial roadways, and freeways, thereby reducing associated air pollution and improving safety, and how the proposed Project is designed to be ADA compliant.

Comment PH253-3 Also, this project is an extension of the harm that Dodgers and Frank McCourt inflicted on the local communities, including the people of the Palo Verde, La Loma, and Bishop communities that the Dodgers corporation forcefully displaced.

Response PH253-3 Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project. Refer to Section 5.0, Corrections and Additions, of this Final EIR for a discussion of Chavez Ravine.

Comment PH253-4 This project just serves Dodgers fans and other parties who have some kind of profit to gain from this project, not the actual communities that this project would be impacting.

Previous speakers have mentioned the importance of tourism for the health of the economy, but I think the well-being of the actual community members is more important.

The aging, low income Chinatown community does not need Dodger fans and tourists coming into their communities. They need actual resources like affordable, accessible grocery stores, green spaces, safe, affordable housing, and this project would only contribute to ongoing gentrification of Chinatown.

The people and their needs have been neglected by Metro in this process.

Response PH253-4 Refer to Section 2.1, Overview of the Project, of the Draft EIR, discussing how the proposed Project would operate daily to serve existing residents, workers, park users, and visitors to Los Angeles. As discussed on page 2-42, in Section 2.0, Project Description, of the Draft EIR, the proposed Project would provide service to all pre-season, regular season, and post-season Los Angeles Dodger games and any special events (e.g., concerts, the Los Angeles Marathon) at the Dodger Stadium property. The proposed Project would also provide service to events at the Los Angeles State Historic Park. In addition to providing service on game and special event days at Dodger Stadium and events at the Los Angeles State Historic Park, it is anticipated that the proposed Project would also provide daily service between 6:00am to 12:00am, for the surrounding communities, including Chinatown, Mission Junction, Elysian Park, Solano Canyon, and the Los Angeles State Historic Park. The proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan. Refer to Topical Response E, The Proposed Project Will Not Displace Housing or Prevent Planned Housing, and Topical Response N, Environmental Justice, for discussion of how the proposed Project will not displace housing, prevent planned housing, or preclude development of uses including housing, grocery stores, and/or healthcare facilities in the surrounding communities, and would itself address a need for a permanent transit connection to one of the region's most visited venues, and would benefit the surrounding community by alleviating existing congestion on surrounding neighborhood streets, arterial roadways, and freeways, thereby reducing associated air pollution and improving safety. Refer to Topical Response E, The Proposed Project Will Not Displace Housing or Prevent Planned Housing, for discussion of how the proposed Project will not exacerbate gentrification or result in displacement of residents in the surrounding neighborhoods and is consistent with Metro's considerations regarding gentrification and displacement.

Comment PH253-5 Regarding the environmental impact, it just seems to be moving traffic and air pollution from one place to another, not really -- and in that regard,

Response PH253-5 Refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gas emissions through reduced vehicular travel. Refer to Topical Response N, Environmental Justice, for discussion of the Draft EIR addresses environmental justice by considering the proposed Project's ability to reduce congestion and emissions from on-road vehicles in an area disproportionately burdened by pollution, and including an analysis of the proposed Project's potential impacts to the surrounding community, concluding that the proposed Project could result in air quality benefits for the surrounding communities. Traffic congestion is not required to be analyzed under CEQA in the Draft EIR following the implementation of Senate Bill 743, which designated "vehicle miles traveled" as the method for assessing transportation impacts on the environment for CEQA projects. Refer to the *Los Angeles Aerial Rapid Transit Project Non-CEQA Transportation Assessment*, which found that there could be localized increases in traffic at the intersections closest to the proposed Project's Alameda Station and Chinatown/State Park Station due to some riders choosing to park and ride or take Uber/Lyft and recommended the proposed Project work with Metro to identify a transit partnership for the proposed Project riders to further encourage them to take transit, walk, or bike to the proposed Project's stations.

Comment PH253-6 Climate Resolve and LA Art Metro all seem to be greenwashing this project, making it seem like it would be environmentally beneficial when it doesn't actually, it won't actually be.

Response PH253-6 Refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gas emissions through reduced vehicular travel. The lifetime emissions of the proposed Project over its useful life would be a reduction of 166,653 MT CO2e. The lifetime VMT reduction of the proposed Project would be a reduction of 129,629,500 VMT. Emissions are decreased through reducing vehicle miles traveled. The proposed Project would result in a net reduction in criteria pollutant emissions by reducing vehicle miles traveled. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization

dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project.

Comment PH253-7 Metro, you all are not being transparent, and you're being very deceptive throughout this process. I think Metro should focus on getting rid of their fares, considering it also costs more for them to keep it running, than moving forward with a project like this that just isn't public transit. It does not meet the transportation needs of the Chinatown community.

Thank you.

Response PH253-7 Refer to Appendix A, Public Outreach Report, of the Final EIR, for discussion of the proposed Project's public outreach and opportunity for public testimony during the Draft EIR public review period. Refer to Appendix A, Scoping Report, of the Draft EIR, for discussion of outreach and community engagement during the Draft EIR scoping period. Refer to Topical Response A, SB 44, for discussion of how the proposed Project is public transportation because it will be open to the general public for service at regular, scheduled operating times, operating daily to serve existing residents, workers, park users, and visitors to Los Angeles. Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS, Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. The proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan.

Comment Letter PH254 - Billy Yates

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH254

Comment PH254-1 MR. YATES: Hi, this is Billy Yates (phonetic). I am the former bilingual Mandarin and English civics instructor at the Chinatown Library, and I maintain a close relationship with a lot of my students who live and work in Chinatown.

I'm also a transit rider because I don't have a car. Everything is bike, bus, or Metro for me, and that's why I feel that this scam of a gondola is really deceptive.

And we want to talk about, oh, we should be respectful. Oh, we should do all these things. But public transit riders are disrespected every single day in this city. We are not thought of as actual people, and we know that because of the head wait times, and how dirty it is, and the lack of service, including, if we just get, you know -- taking on like a project like this when we already have so many existing problems with public transit in this city. It's like a glittery band-aid that we want to put on for all these little things, and it's just not a real solution.

What people need are frequent times to be able to move around in LA with public transit. People need free transit so that more people can use it because it takes more time, when the bus is already late, to go and add another person who's looking for change.

Response PH254-1 Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at Los Angeles Union Station (LAUS), Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. The proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan. Refer to Topical Response H, The Draft EIR Considered an Appropriate Range of Alternatives and Design Options, for discussion of how improving the connection between LAUS and Dodger Stadium via the proposed Project would provide the quickest, most frequent, and highest capacity transit connection for the greatest number of riders traveling to Dodger Stadium to have the most travel time competitive transit trips from more locations in the region. As discussed in Section 2.0, Project Description, of the Draft EIR, the proposed Project would require routine maintenance that would be performed by the system operator.

Comment PH254-2 You know, there's so many problems that we could be focusing on with all this money, and the fact that we're thinking about a toy gondola is just -- it really is not the best

of us. And I want LA Metro to do so much better because I know we can be a much better city if we really just prioritize the least among us and made it a public transit.

Response PH254-2 Refer to Topical Response A, SB 44, for discussion of how the proposed Project is public transportation because it will be open to the general public for service at regular, scheduled operating times, operating daily to serve existing residents, workers, park users, and visitors to Los Angeles. Refer to Section 2.01, Overview of the Project, of the Draft EIR, discussing how the proposed Project would operate daily to serve existing residents, workers, park users, and visitors to Los Angeles. As discussed on page 2-42, in Section 2.0, Project Description, of the Draft EIR, the proposed Project would provide service to all pre-season, regular season, and post-season Los Angeles Dodgers games and any special events (e.g., concerts, the Los Angeles Marathon) at the Dodger Stadium property. The proposed Project would also provide service to events at the Los Angeles State Historic Park. In addition to providing service on game and special event days at Dodger Stadium and events at the Los Angeles State Historic Park, it is anticipated that the proposed Project would also provide daily service between 6:00am to 12:00am, for the surrounding communities, including Chinatown, Mission Junction, Elysian Park, Solano Canyon, and the Los Angeles State Historic Park. The proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan.

Comment PH254-3 Not some dude over here from Colorado or whatever talking about buses are sexy and he comes from a ski town. That's not the community. Please, please, please let's focus on helping people as much as we can, and that starts with real public transit, and getting rid of this gondola, and focusing on what people need.

Response PH254-3 Refer to Response PH254-2 for discussion of how the proposed Project would operate daily to serve existing residents. Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS, Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Dodger Stadium draws large regional crowds, with approximately 100 baseball games and other events each year, but there are no permanent transit connections to the venue. The vast majority of visitors drive their personal vehicles to access the venue. These vehicles create congestion on the surface streets leading up to and around Dodger Stadium, including Sunset Boulevard/Cesar E. Chavez from LAUS and throughout the surrounding communities. Given the capacity of the proposed Project's system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system. This would reduce vehicular congestion in and around Dodger

Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days.

Comment PH254-4 Thank you very much. There's a lot of other concerns with transparency and environmental pollution, but we don't even need to go there. Let's just start with the basics.

Thank you, and I know we can do better.

Response PH254-4 Refer to Appendix A, Public Outreach Report, of the Final EIR, for discussion of the proposed Project's public outreach and opportunity for public testimony during the Draft EIR public review period. Refer to Appendix A, Scoping Report, of the Draft EIR, for discussion of outreach and community engagement during the Draft EIR scoping period. Refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gas emissions through reduced vehicular travel.

Comment Letter PH255 - Camarillo

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH255

Comment PH255-1 MR. CAMARILLO: Hi. Thank you so much.

I just wanted to express my opinion and say that this gondola project is completely unnecessary and shameful. It's a luxury project designed by the privileged for tourists and outdated, parlor, aging Dodger fans.

Response PH255-1 Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at Los Angeles Union Station (LAUS), Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Dodger Stadium draws large regional crowds, with approximately 100 baseball games and other events each year, but there are no permanent transit connections to the venue. The vast majority of visitors drive their personal vehicles to access the venue. These vehicles create congestion on the surface streets leading up to and around Dodger Stadium, including Sunset Boulevard/Cesar E. Chavez from LAUS and throughout the surrounding communities. Given the capacity of the proposed Project's system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system. This would reduce vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days. Refer to Section 2.1, Overview of the Project, of the Draft EIR, discussing how the proposed Project would operate daily to serve existing residents, workers, park users, and visitors to Los Angeles. In addition to providing service on game and special event days at Dodger Stadium and events at the Los Angeles State Historic Park, it is anticipated that the proposed Project would also provide daily service between 6:00am to 12:00am, for the surrounding communities, including Chinatown, Mission Junction, Elysian Park, Solano Canyon, and the Los Angeles State Historic Park. The proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan.

Comment PH255-2 We can hear the desperate concerns of the local generations of the people who live in Chinatown. Listen to the seniors, listen to the families, and make their concerns valid. Provide value to the opinions of people who will be most affected by this money grab project.

And also, don't be foolish. Chinatown has had lowered foot traffic from tourists over the years, but this gondola project is just not the way to acquire more foot traffic. It's truly a scam. Invest in existing shops, invest in Chinatown's business, and invest in Chinatown itself.

Response PH255-2 Refer to Topical Response N, Environmental Justice, Appendix A, Public Outreach Report, of the Final EIR, Appendix A, Scoping Report, of the Draft EIR, and Topical Response C, Project Features, for discussion of the proposed Project team's outreach efforts to neighborhoods along the proposed Project alignment and the proposed Project's features to enhance and provide additional benefits to the surrounding communities. Metro sought to engage with stakeholders in neighborhoods along the proposed Project alignment in each stage of the environmental review process. Input from the public, including local community stakeholders, led directly to the selection of the proposed Project alignment, including an intermediate station in Chinatown (the Chinatown/State Park Station), as well as to the redesign of the proposed Project stations and junction and additional pedestrian enhancements including hardscape and landscape improvements. Refer to Topical Response C, Project Features, discussing the proposed Project's potential partnerships with and benefits to local businesses in Chinatown. As discussed in Section 2.0, Project Description, of the Draft EIR, and Topical Response C, Project Features, the proposed Project creates a first/last mile transit link for residents and businesses within Chinatown while unifying and connecting communities through transit mobility access. This new mode of transportation will expand rider access to the regional transit system by attracting new visitors including Dodgers fans, and represents an opportunity for additional visitors along the proposed Project alignment, creating economic opportunities for local businesses, including shops and restaurants, through potential partnerships that drive customers to Chinatown and other businesses along the proposed Project alignment, which, consequently, adds revenues to these small businesses in the communities the proposed Project hopes to serve.

Comment PH255-3 By the way, how can Metro fully focus on the success of this gondola project when Metro cannot even clean their buses properly?

Response PH255-3 Refer to Section 2.0, Project Description, of the Draft EIR and Topical Response J, Gondola Design and Operations, of the Final EIR, for discussion of the proposed Project's operations, including maintenance.

Comment PH255-4 This gondola project will not eliminate traffic, instead provide one of various existing ways for fans to see a baseball game.

Response PH255-4 Refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions,

and to reduce greenhouse gas emissions through reduced vehicular travel. The opportunities for more mobility choices through improved connections to additional public transit options created by the proposed Project are projected to increase the number of attendees of games or events at Dodger Stadium to ride public transportation.

Comment PH255-5 Stop valuing money and tourism over long-time Los Angelenos and our well-being. This gondola project is completely disingenuous and unnecessary.

Response PH255-5 This comment provides a general conclusion regarding the comments raised in this letter. Responses to the comments contained in this letter are provided above in Responses PH255-1 through PH255-4.

Comment Letter PH256- Monica

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH256

Comment PH256-1 PARTICIPANT: Yes, hi. My name is Monica, and on January 12, I attended the meeting at the Cathedral High School in LA and supported the gondola project.

And there were some protesters there, and they took over the meeting. I was so disappointed in how the meeting turned out. The protesters were shouting profanity and using bad language in front of the children attending the meeting, and most of all, it was in a Catholic school.

Protesters had no respect for the community nor the people attending the meeting. They were so loud and obnoxious that we were not able to provide public comments on the day of January the 12th. I felt scared and threatened by these -- by the way these protesters were acting.

Response PH256-1 Refer to Appendix A, Public Outreach Report, of the Final EIR, for discussion of the proposed Project's opportunities for public testimony during the Draft EIR public review period. During the public review period, comments on the Draft EIR could be submitted in writing via email or mail, by phone, and during the four public hearings. Comments on the Draft EIR could be submitted by email to LAART@metro.net, by mail to One Gateway Plaza, Mail Stop 99-22-6, Los Angeles, CA 90012, or over the phone by calling (213) 922-6913. Comments could also be submitted at each of the four public hearings. At virtual public hearings, comments could be given verbally. In light of the disruptions at the January 12, 2023, public hearing, Metro provided a fourth public hearing by way of a virtual public hearing held on February 8, 2023. Verbal comments made at the virtual February 8, 2023 public hearing were deemed timely submitted for the purposes of the Draft EIR public review period.

Comment PH256-2 Me and the community, we approve the gondola project. I believe it's a very perfect and new, exciting way to Chinatown -- to come, allow meaning. There's going to be more jobs, more profit for the community as well.

And like I said, I approve this project. Please, please approve it.

Response PH256-2 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Topical Response C, Project Features, discussing the proposed Project's potential partnerships with and benefits to local businesses. As discussed in Section 2.0, Project Description, of the Draft EIR, and Topical Response C, Project Features, the proposed Project creates a first/last mile transit link for residents and businesses within Chinatown while unifying and connecting communities through transit mobility access. This new mode of transportation will expand rider access to the regional

transit system by attracting new visitors including Dodgers fans, and represents an opportunity for additional visitors along the proposed Project alignment, creating economic opportunities for local businesses, including shops and restaurants, through potential partnerships that drive customers to Chinatown and other businesses along the proposed Project alignment, which, consequently, adds revenues to these small businesses in the communities the proposed Project hopes to serve.

Comment Letter PH257 - Bill

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH257

Comment PH257-1 PARTICIPANT: Hello?

MS. SISCO: Yes?

PARTICIPANT: Can you hear me okay?

MS. SISCO: Yes, we can.

PARTICIPANT: My name is Bill. Oh, excuse me. Yes. I live in the neighborhood, and I support the proposed gondola project. We need new transportation in our community that are good for the environment and that don't have emission problems.

So, please vote for it. I support the gondola project. Thank you very much.

Response PH257-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH258 - Angelica

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH258

Comment PH258-1 PARTICIPANT: Hello. My name is Angelica, and I support the gondola.

Response PH258-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment PH258-2 I also want to add that I'm really upset that the meeting on January 12 was so disrespectful to the community. We have no place in the community for profanity, threats, shouting at people, and disrespecting.

I protest something myself, but I didn't like that and I found it scary enough to attend another meeting because, just because a lady said that she was supporting the gondola, there was this man chasing her around with his hand raised up like he was going to slap her, just because she said that she supports the gondola. He told her, why are you supporting it? You can't be doing that.

I got scared. I wanted to get away from there. We can't let this happen again. I don't know if Metro -- why they allowed the protesters to take over the community meeting and create a terrible environment for other people that were there with their families. Also, I don't understand why they were jumping around the gym and, you know, trying to create panic to the people.

Like I said, I'm here to support the gondola, and thank you for listening

Response PH258-2 Refer to Appendix A, Public Outreach Report, of the Final EIR, for discussion of the proposed Project's opportunities for public testimony during the Draft EIR public review period. During the public review period, comments on the Draft EIR could be submitted in writing via email or mail, by phone, and during the four public hearings. Comments on the Draft EIR could be submitted by email to LAART@metro.net, by mail to One Gateway Plaza, Mail Stop 99-22-6, Los Angeles, CA 90012, or over the phone by calling (213) 922-6913. Comments could also be submitted at each public hearing. At virtual public hearings, comments could be given verbally. At the two public hearings held in person, comments could be submitted either in writing on forms provided by Metro, or verbally to the court reporters who were set up at a "comment station" in the venue. Written comment forms provided instructions on how to comment on the Draft EIR in English, Spanish, and Chinese (Simplified). Interpretation was provided in English, Spanish, Mandarin, and Cantonese during all four public hearings, with interpretation provided in Taishanese during the final two public hearings. During the January 12, 2023, public hearing at Cathedral High School attendees were provided with the opportunity to submit public comments either in writing on forms provided by Metro, or verbally to the court reporters at a comment

station in the venue. Written comment forms provided instructions on how to comment on the Draft EIR in English, Spanish, and Chinese (Simplified). Shortly after the public hearing started, a group of approximately 40 protesters with "Stop the Gondola" signs entered the meeting and began speaking with amplified bullhorns, using profanity. Due to this group's loud, prolonged protests, the court reporters and interpreters could not take verbal public comment. Metro requested that the protestors turn off their amplifier to enable the agency to continue to take verbal public comment. The protestors then began marching around the room, chanting and continuing to speak into the amplified bullhorns. Approximately 6 to 10 protestors then started to tear down poster boards, knock over easels and tables and throw materials. Metro and AECOM staff, subject matter experts, and the Project team expressed that they were physically intimidated and frightened by the damage done by the protesters, as discussed in greater detail in the February 10, 2023, memo submitted by the Project Sponsor and included as Attachment D to Appendix A, Public Outreach Report, of the Final EIR. After the protesters left, Metro staff concluded the meeting by talking to several remaining attendees. An estimated 143 attendees participated in the January 12, 2023, public hearing, and Metro received 31 verbal comments and 95 written comments on the Draft EIR. In light of the disruptions at the January 12, 2023, public hearing, Metro provided a fourth public hearing by way of a virtual public hearing held on February 8, 2023. Verbal comments made at the virtual February 8, 2023 public hearing were deemed timely submitted for the purposes of the Draft EIR public review period.

Comment Letter PH259 - Annie Shaw

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH259

Comment PH259-1 MS. SHAW: Hi. Can you hear me?

MS. SISCO: Yes.

MS. SHAW: Okay. You know what is scary? The violence of gentrification, when a white developer can come in and unleash an entire project on a poor community that is in need of the most basic, essential living.

This is a shameful project that will kill the remaining of Chinatown. It is truly shameful that in 2023, we still have organizations, unions, and museums who are willing to sacrifice poor peoples' survival in exchange for their own community benefits.

Let's be real: if this gondola was proposed in a wealthy, white neighborhood like Beverly Hills or Malibu, it would have ended yesterday. This is a racist, white elephant project that takes advantage of disenfranchised poor people who are fighting for their last survival.

Response PH259-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Topical Response E, The Proposed Project Will Not Displace Housing or Prevent Planned Housing, for discussion of how the proposed Project will not exacerbate gentrification or result in displacement of residents in the surrounding neighborhoods and is consistent with Metro's considerations regarding gentrification and displacement. Refer to Topical Response N, Environmental Justice, for discussion of how the proposed Project would not preclude development of uses including housing, grocery stores, and/or healthcare facilities in the surrounding communities, and would itself address a need for a permanent transit connection to one of the region's most visited venues and would alleviate existing congestion on surrounding neighborhood streets, arterial roadways, and freeways, thereby reducing associated air pollution and improving safety. Refer to Topical Response M, Comparable Urban Aerial Transit Systems, for discussion of how comparable aerial transit systems in cities around the world operate safely, efficiently, and in concert with nearby residential and open space uses, have brought benefits to their surrounding areas by connecting disparate neighborhoods, promoting commerce, beautifying communities, and enhancing transit system rider safety, and have been shown to reduce violent crime in nearby areas. Additionally, refer to Topical Response C, Project Features, for discussion of the proposed Project's features to enhance and provide additional benefits to the surrounding communities, including but not limited to, sustainability features and open space enhancements, the Community Access Plan for fares, access to parks, mobility hubs, signage, utilization of local artists for site

specific artwork at each station reflective of the unique neighborhood culture, design of each component of the proposed Project to complement and reflect the unique character of the surrounding neighborhood, the Business and Community Support Program during construction, and benefits to local businesses along the proposed Project alignment. The Project Sponsor would convene stakeholder groups to coordinate on issues related to proposed Project features. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project.

Comment PH259-2 Let me be clear. The gondola will not save Chinatown. Tourism has not saved Chinatown. New businesses that do not serve working class community will not save Chinatown.

Response PH259-2 Refer to Topical Response C, Project Features, discussing the proposed Project's potential partnerships with and benefits to local Chinatown businesses. As discussed in Section 2.0, Project Description, of the Draft EIR, and Topical Response C, Project Features, the proposed Project creates a first/last mile transit link for residents and businesses within Chinatown while unifying and connecting communities through transit mobility access. This new mode of transportation will expand rider access to the regional transit system by attracting new visitors including Dodgers fans, and represents an opportunity for additional visitors along the proposed Project alignment, creating economic opportunities for local businesses, including shops and restaurants, through potential partnerships that drive customers to Chinatown and other businesses along the proposed Project alignment, which, consequently, adds revenues to these small businesses in the communities the proposed Project hopes to serve.

Comment PH259-3 The gondola is a white elephant project that wastes valuable resources, gentrify community, increase pollution, and make parking and food and housing even more expensive. Stop imposing this project on the community when the community have said it again and again that we don't want this.

Response PH259-3 Refer to Topical Response E, The Proposed Project Will Not Displace Housing or Prevent Planned Housing, for discussion of how the proposed Project will not exacerbate gentrification or result in displacement of residents in the surrounding neighborhoods and is consistent with Metro's considerations regarding gentrification and displacement. Also refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/ Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gas emissions through reduced vehicular travel. Parking is not required to be analyzed under CEQA or the

Transportation Assessment Guidelines ("TAG"). Nevertheless, the Parking Study was prepared to provide additional information to the community and decision makers about existing parking conditions and the proposed Project's potential to effect parking conditions around the Alameda Station and Chinatown/State Park Station. The proposed Project would include a parking management plan prepared in collaboration with the City, who would implement any on-street parking management strategies, and with robust feedback from community stakeholders to inform development of the plan.

Comment PH259-4 Entire community of seniors protested your recent hearing. And how dare you? You raised their concerns by calling it a disruption when you are actually disrupting their homes and ignoring their voice of concern.

Response PH259-4 Refer to Appendix A, Public Outreach Report, of the Final EIR, for discussion of the proposed Project's opportunities for public testimony during the Draft EIR public review period. During the public review period, comments on the Draft EIR could be submitted in writing via email or mail, by phone, and during the four public hearings. Comments on the Draft EIR could be submitted by email to LAART@metro.net, by mail to One Gateway Plaza, Mail Stop 99-22-6, Los Angeles, CA 90012, or over the phone by calling (213) 922-6913. Comments could also be submitted at each public hearing. At virtual public hearings, comments could be given verbally. At the two public hearings held in person, comments could be submitted either in writing on forms provided by Metro, or verbally to the court reporters who were set up at a "comment station" in the venue. Written comment forms provided instructions on how to comment on the Draft EIR in English, Spanish, and Chinese (Simplified). Interpretation was provided in English, Spanish, Mandarin, and Cantonese during all four public hearings, with interpretation provided in Taishanese during the final two public hearings. During the January 12, 2023, public hearing at Cathedral High School attendees were provided with the opportunity to submit public comments either in writing on forms provided by Metro, or verbally to the court reporters at a comment station in the venue. Written comment forms provided instructions on how to comment on the Draft EIR in English, Spanish, and Chinese (Simplified). An estimated 143 attendees participated in the January 12, 2023, public hearing, and Metro received 31 verbal comments and 95 written comments on the Draft EIR. In light of the disruptions at the January 12, 2023, public hearing, Metro provided a fourth public hearing by way of a virtual public hearing held on February 8, 2023. Verbal comments made at the virtual February 8, 2023, public hearing were deemed timely submitted for the purposes of the Draft EIR public review period. Refer to Topical Response C, Project Features, for discussion of the proposed Project's features to enhance and provide additional benefits to the surrounding communities, including how the Project Sponsor would convene stakeholder groups to coordinate on issues related to proposed Project features.

Comment PH259-5 Right now, everyone is facing evictions and horrifying living conditions in Chinatown. This money can be used so much more constructively for peoples' lives in Chinatown, for their survival, instead of creating a project that a community can't even afford to participate.

Response PH259-5 Refer to Response PH259- 1 for discussion of how the proposed Project would not preclude development of uses including housing, grocery stores, and/or healthcare facilities in the surrounding communities, and would itself address a need for a permanent transit connection to one of the region's most visited venues and would alleviate existing congestion on surrounding neighborhood streets, arterial roadways, and freeways, thereby reducing associated air pollution and improving safety. Refer to Topical Response N, Environmental Justice, for discussion of how the proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan.

Comment PH259-6 Once again, residents of Chinatown do not need these boxes above their heads and they do not need their neighborhood to be.

Response PH259-6 Refer to Topical Response M, Comparable Urban Aerial Transit Systems, discussing how, like the proposed Project, comparable aerial transit systems in cities around the world are integrated with their surrounding urban environments. In particular, comparable aerial transit systems in other locations demonstrate that such systems can operate safely, efficiently, and in concert with nearby residential uses, including parks and other recreational facilities. Refer to Topical Response C, Project Features, for discussion of the potential added benefits from the proposed Project, including potential partnerships with and benefits to local businesses in Chinatown, as well as providing an accessible and affordable mobility option for employees and area residents.

Comment Letter PH260 - Maria Cervantes

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH260

Comment PH260-1 MS. CERVANTES: Hi, my name is Maria Cervantes (phonetic). Can you guys hear me?

MS. SISCO: Yes. Sorry about that. Yes, we can.

MS. CERVANTES: My neighborhood has some of the worst traffic and pollution in the LA County. We want to -- we're deserving, we want cleaner air, less traffic, and more zero emission transportation opportunities.

This project is about less cars, less pollution, and safe and healthy -- safety and health of the neighborhood. I support the project stated gondola.

Response PH260-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH261 - Edgar

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH261

Comment PH261-1 PARTICIPANT: Okay. Hi, my name is Edgar. I'm a local resident, and I just wanted to say that I support the gondola project.

I think, like some others have said, it is definitely one of the ways we go into the future with transportation, just provide different modes of transportation to different areas of the city.

This will connect the local parks and hopefully relieve some of the traffic to get into Dodger Stadium.

It's zero emission, no electricity. So, I think it'd be, you know, a nice way to get up to that area. I support the gondola project and ask the council to do the same.

Thank you.

Response PH261-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH262 - Lynn Dwyer

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH262

Comment PH262-1 MS. DWYER: Okay, I think I'm here now.

MS. SISCO: Yes, you are.

MS. DWYER: My name is Lynn Dwyer (phonetic). I would like to document my concerns that the project will have long-term, negative environmental impacts to parks, historic sites, and residents.

The gondola system will have a negative impact on some of Los Angeles' most iconic views, including streetscapes, historic sites like Union Station in El Pueblo, and parks, including the Legion Park and LA Historic Park.

The project will negatively impact the environment during construction with air pollution, traffic, and noise.

Response PH262-1 As discussed in Sections 3.01, Aesthetics, 3.04, Biological Resources, 3.05, Cultural Resources, 3.06, Energy, 3.07, Geology and Soils, 3.09, Hazards and Hazardous Materials, 3.10, Hydrology and Water Quality, 3.11, Land Use and Planning, 3.13, Noise, 3.15, Public Services, 3.16, Parks and Recreational Facilities, 3.17, Transportation, 3.18, Tribal Cultural Resources, 3.19, Utilities and Service Systems, 3.20, Wildfire, and 5.0, Other CEQA Considerations, the proposed Project would have less than significant operational impacts. The Draft EIR fully analyzed and addressed the proposed Project's potential impacts to historic resources in Section 3.05, Cultural Resources, with supporting data provided in Appendix G, Historical Resource Technical Report for the Los Angeles Aerial Rapid Transit Project (HRTR). As discussed in Section 3.5, the Draft EIR's analysis concludes that all potential impacts related to historical resources would be less than significant. Refer to Section 3.01, Aesthetics, and Appendix C, Visual Impact Assessment, of the Draft EIR, for discussion of the aesthetic impacts of the proposed Project, which would be less than significant. Refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gas emissions through reduced vehicular travel. Refer to Section 3.13, Noise, and Appendix M, Noise and Vibration Technical Report, of the Draft EIR, for discussion of the construction and operational noise impacts from the proposed Project. As detailed therein, construction related noise impacts would be significant and unavoidable even with implementation of mitigation. Operational noise impacts would be less than significant.

Comment PH262-2 The ongoing operation of the gondola will disrupt park users and residents with noise, trash, and visual distractions.

There will be an invasion of privacy.

I believe a better solution would be safe pedestrian access to Dodger Stadium.

Thank you.

Response PH262-2 Refer to Section 2.0, Project Description, of the Draft EIR and Topical Response J, Gondola Design and Operations, of the Final EIR, for discussion of the proposed Project's design and operations, including discussion of the safety, privacy, and operations features of the proposed Project. Refer to Section 2.0, Project Description, Section 3.16, Parks and Recreational Facilities, and Section 5.0, Other CEQA Considerations, of the Draft EIR, for discussion of the footprint of the proposed Project in the Los Angeles State Historic Park. With the small footprint of the proposed Project's Chinatown/State Park Station, and the required clearances and the height at which the cabins would cross over the Park, the ability to use the vast majority of the Park would not be affected by the proposed Project. Refer to Response S2-4 for additional discussion regarding the ability of uses to continue at the Park. Refer to Topical Response M, Comparable Urban Aerial Transit Systems, discussing how, like the proposed Project, comparable aerial transit systems in cities around the world are integrated with their surrounding urban environments. In particular, comparable aerial transit systems in other locations demonstrate that such systems can operate safely, efficiently, and in concert with nearby residential and open space uses, including parks and other recreational facilities. The proposed Project would be located in a densely populated, urban environment surrounded by a variety of commercial, industrial, and residential development types. In this type of environment, it is common for public transportation, such as Metro's light rail, to be located adjacent to residential uses and modern aerial transit systems in other cities, including Portland, Oregon and New York City, operate adjacent to residential uses. Nevertheless, as discussed in Topical Response J, Gondola Design and Operations and Section 2.0, Project Description, of the Draft EIR, cabin windows can be equipped with privacy glass that can become opaque while adjacent to sensitive views. Refer to Section 5.0, Corrections and Additions, of the Final EIR, for discussion of a Pedestrian Enhancement Alternative to the proposed Project in which the proposed Project would not be constructed, and instead an enhanced pedestrian walkway and vertical circulation elements would be constructed to improve the safety, comfort, and accessibility of walking between the Metro L Line (Gold) Station and Dodger Stadium. This alternative was considered but dismissed from further detailed analysis because it did not meet most of the basic objectives of the proposed Project.

Comment Letter PH263 - Valerie Morishige

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH263

Comment PH263-1 MS. MORISHIGE: Hello. My name is Valerie Morishige (phonetic), and I just want to say thank you to everyone that's been providing public comment here. It's been very illuminating, since what's been going on in the press about this has been green washing and kind of astroturfing at best.

So, when I first heard about this project, I thought it was dumb, and now that I'm hearing from community members, I realize how heinous it actually is.

So, they're trying to sow class division to shove this through, and we're just supposed to stand by and not listen to the community? It's absolutely ludicrous.

Tourism is not going to save us, and we see how up and down that tourism can be, especially since the COVID-19 pandemic. So, that -- I don't think we should be trying to rely on that as a stable source of income for folks.

Response PH263-1 This comment indicating opposition to the Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gas emissions through reduced vehicular travel. Refer to Topical Response C, Project Features, discussing the proposed Project's potential partnerships with and benefits to local businesses. As discussed in Section 2.0, Project Description, of the Draft EIR, and Topical Response C, Project Features, the proposed Project creates a first/last mile transit link for residents and businesses within Chinatown while unifying and connecting communities through transit mobility access. This new mode of transportation will expand rider access to the regional transit system by attracting new visitors including Dodgers fans, and represents an opportunity for additional visitors along the proposed Project alignment, creating economic opportunities for local businesses, including shops and restaurants, through potential partnerships that drive customers to Chinatown and other businesses along the proposed Project alignment, which, consequently, adds revenues to these small businesses in the communities the proposed Project hopes to serve. In addition to providing service on game and special event days at Dodger Stadium and events at the Los Angeles State Historic Park, it is anticipated that the proposed Project would also provide daily service between 6:00am to 12:00am, for the surrounding communities, including Chinatown, Mission Junction, Elysian Park,

Solano Canyon, and the Los Angeles State Historic Park. The proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan. As detailed in Appendix N, Transportation Appendices, of the Draft EIR, tourism related ridership is estimated from an analysis prepared by HR&A, which determined the potential for the proposed Project to capture a share of the tourism attractions market in the County of Los Angeles.

Comment PH263-2 And regarding the quality of life issues, I think that takes precedence over trying to build, like, another LA Live that -- or, like, a super-mall that's on top of a hill that only out-of-towners are going to go to. And it's not going to help any of our community members at all.

So, I say, down with the gondola. It's dumb, and thank you very much for everyone that's here and providing comment.

Response PH263-2 This comment indicating opposition to the Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS, Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Dodger Stadium draws large regional crowds, with approximately 100 baseball games and other events each year, but there are no permanent transit connections to the venue. The vast majority of visitors drive their personal vehicles to access the venue. These vehicles create congestion on the surface streets leading up to and around Dodger Stadium, including Sunset Boulevard/Cesar E. Chavez from LAUS and throughout the surrounding communities. Given the capacity of the proposed Project's system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system. This would reduce vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days. The proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan. Refer to Topical Response G, No Improper Project Segmentation: The Proposed Project Is Intended to Create a Transit Connection from Metro's Union Station Transportation Hub via an Aerial Gondola System to the Dodger Stadium Property, for discussion of how the proposed Project does not include other development, and neither the Project Sponsor nor any other applicant has applied for other development unrelated to the existing stadium uses on the Dodger Stadium property.

Comment Letter PH264 - Paul Des Marais

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH264

Comment PH264-1 MR. DES MARAIS: Hello, can you hear me?

MS. SISCO: Yes.

MR. DES MARAIS: Hi. My name is Paul Des Marais, and I'm a resident of Lincoln Heights and a former resident of Solana Canyon, and I'm speaking today in opposition of the gondola.

Response PH264-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Because the comment does not address and environmental issue or raise a substantive issue on the content of the Draft EIR, no further response is warranted.

Comment PH264-2 It is a horrible idea, and as someone who is primarily a pedestrian, transit rider, and cyclist, getting to Elysian Park, LA State Historic Park, and around the Chinatown area is very difficult.

There are barely any bicycle lanes in Elysian Park, there are barely any bicycle lanes to get to LA State Historic Park, and like previous speakers have said, bus waiting times and Metro waiting times are insane.

Response PH264-2 Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at Los Angeles Union Station (LAUS), Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Refer to Topical Response C, Project Features, for discussion of how the proposed Project would include several sustainability features and open space enhancements, including pedestrian enhancements and drought tolerant landscaping, open space enhancements, including at the Alameda Triangle, the Los Angeles State Historic Park, and along the pedestrian pathway connecting Dodger Stadium Station and Dodger Stadium, and improved access to Los Angeles State Historic Park and Elysian Park. As discussed in Section 5.0, Corrections and Additions, of the Final EIR, the proposed Project would provide a mobility hub at the Dodger Stadium property to provide connectivity to Elysian Park, the City's second largest park, comprising 575 acres, and the surrounding communities. Outside of game day periods, passengers would be able to access a suite of first/last mile multi-modal options, such as a bike share program, and individual bike lockers to access Elysian Park and other nearby neighborhoods, including Solano Canyon.

Comment PH264-3 This project does not prioritize the residents of Chinatown. It does not prioritize the residents of surrounding neighborhoods. It's just a cash grab, and I believe that Metro should be spending their time, resources, and dollars on improving existing public transportation networks.

Response PH264-3 Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS, Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. As discussed in Section 2.0, Project Description, of the Draft EIR, and Topical Response C, Project Features, the proposed Project creates a first/last mile transit link for residents and businesses within Chinatown while unifying and connecting communities through transit mobility access. Refer to Topical Response C, Project Features, for discussion of the proposed Project's features to enhance and provide additional benefits to the surrounding communities, including potential partnerships with and benefits to local businesses in Chinatown. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, and Section 4.0, Costs and Financing, of the Final EIR, which provide detail as to the proposed Project's capital, operation, and maintenance costs and planned sources of funding, recognizing that the proposed Project's capital funding would primarily be sourced from bond financing serviced by revenue from the proposed Project. No public sources of funding have been sought or committed to the proposed Project.

Comment PH264-4 There needs to be more Dodger Express buses to the park, to Elysian Park, and if you look at any game day, or any day, really, in Elysian Park, it is a playground for cars. It is not a playground for people.

It's difficult to walk around Elysian Park without having cars speeding past you, speeding to get to the games, and there are barely any bike lanes. And just recently, the main road to get into the stadium was repaved. Not a single bike lane was added to that road. It's disgraceful.

Response PH264-4 This comment is noted and will be provided to the decision Refer to Topical Response H, The Draft EIR Considered an Appropriate Range of Alternatives and Design Options, for discussion of how the Transportation Systems Management Alternative for an enhanced Dodger Stadium Express is unlikely to achieve the same level of ridership as the proposed Project, and otherwise fails to meet most of the Project Objectives which seek to achieve the proposed Project's underlying purpose of providing a permanent direct transit connection between LAUS and the Dodger Stadium property and improving connectivity for surrounding communities, including Chinatown, Mission Junction, Elysian Park, Solano Canyon, and the Los Angeles State Historic Park. Refer to Topical Response C, Project Features, for discussion of how the proposed Project would include several sustainability features and open space

enhancements, including pedestrian enhancements and drought tolerant landscaping, open space enhancements, including at the Alameda Triangle, the Los Angeles State Historic Park, and along the pedestrian pathway connecting Dodger Stadium Station and Dodger Stadium, and improved access to Los Angeles State Historic Park and Elysian Park. As discussed in Section 5.0, Corrections and Additions, of the Final EIR, the proposed Project would provide a mobility hub at the Dodger Stadium property to provide connectivity to Elysian Park, the City's second largest park, comprising 575 acres, and the surrounding communities. Outside of game day periods, passengers would be able to access a suite of first/last mile multi-modal options, such as a bike share program, and individual bike lockers to access Elysian Park and other nearby neighborhoods, including Solano Canyon.

Comment PH264-5 Thank you very much, and I stand in solidarity with previous commenters.

Thank you.

Response PH264-5 This comment is noted and will be provided to the decision makers for review and consideration. Because the comment does not address an environmental issue or raise a substantive issue on the content of the Draft EIR, no further response is warranted.

Comment Letter PH265 - Vincent Montago

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH265

Comment PH265-1 MR. MONTAGO: Hello, can you hear me?

MS. SISCO: Yes, we can.

MR. MONTAGO: Hi. My name is Vincent Montago (phonetic). I am the son of Adele Montago (phonetic) and the grandson of Adele and John Denava (phonetic), former residents of the three communities of Palo Verde, La Loma, and Bishop that were violently destroyed by the Dodgers and the City of Los Angeles. I come before you today in full support of the Chinatown residents opposing the gondola.

For far too long, corporations and city entities have taken advantage of poor, brown, and black communities to benefit their own good. And the deal with the taking of our homes, the land was supposed to be taken away for housing, and instead was given to the Dodgers to build their empire that they have today on the backs of the poor people of Los Angeles. This must stop.

This led me into my position of today, which is an elected office, as I stand also from that point of view in opposition of it as Chinatown is being killed. It is not a dying industry.

The plans were put into place 20 years ago for most of our communities to be attacked, and they're being implemented today. And this is a tragedy, that public agencies like Metro would participate in the destructions of our communities when they are supposed to be here to uplift and support local community businesses and residents.

There has never been, in all the years of our families' trauma history, looking at over a 100 years of history with the city and public entities,

Response PH265-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Section 5.0, Corrections and Additions, of this Final EIR for a discussion of Chavez Ravine. Refer to Topical Response N, Environmental Justice, for discussion of how the Draft EIR addresses environmental justice, how the proposed Project supports Metro's goal of prioritizing equity opportunities and is designed to extend affordable, regional access and mobility options to the communities adjacent to the proposed Project alignment. Public outreach for the proposed Project was designed with environmental justice principles in mind. The proposed Project would not preclude development of uses including housing, grocery stores, and/or healthcare facilities in the surrounding communities, and would itself address a need for a permanent transit connection to one of the region's most visited venues and would alleviate

existing congestion on surrounding neighborhood streets, arterial roadways, and freeways, thereby reducing associated air pollution and improving safety. Refer to Topical Response C, Project Features, for discussion of the proposed Project's features to enhance and provide additional benefits to the surrounding communities, including but not limited to sustainability features and open space enhancements, the Community Access Plan for fares, access to parks, mobility hubs, signage, utilization of local artists for site specific artwork at each station reflective of the unique neighborhood culture, design of each component of the proposed Project to complement and reflect the unique character of the surrounding neighborhood, the Business and Community Support Program during construction, and benefits to local businesses along the proposed Project alignment. As discussed in Section 2.0, Project Description, of the Draft EIR, and Topical Response C, Project Features, the proposed Project creates a first/last mile transit link for residents and businesses within Chinatown while unifying and connecting communities through transit mobility access. This new mode of transportation will expand rider access to the regional transit system by attracting new visitors including Dodgers fans, and represents an opportunity for additional visitors along the proposed Project alignment, creating economic opportunities for local businesses, including shops and restaurants, through potential partnerships that drive customers to Chinatown and other businesses along the proposed Project alignment, which, consequently, adds revenues to these small businesses in the communities the proposed Project hopes to serve. The Project Sponsor would convene stakeholder groups to coordinate on issues related to proposed Project features. Refer to Topical Response E, The Proposed Project Will Not Displace Housing or Prevent Planned Housing, for discussion of how the proposed Project will not exacerbate gentrification or result in displacement of residents in the surrounding neighborhoods and is consistent with Metro's considerations regarding gentrification and displacement.

Comment PH265-2 no good has ever come between the deal between the Dodgers and the City of LA.

In fact, we find that these are backdoor corrupt deals that don't benefit the public but benefit people like Frank McCourt, who has owned the parking lot and the stadium at one point in time. And that's their invested interest. So we strongly support the Chinatown residents and all the local --

Response PH265-2 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Section 5.0, Corrections and Additions, of this Final EIR for a discussion of Chavez Ravine. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project. This comment raises issues that were litigated and decided in The California Endowment v. Los Angeles County Metropolitan Transportation Authority, Case No. 22STCP01030

(Jan. 9, 2023, Order Denying Petition for Writ of Mandate). There, the Los Angeles Superior Court upheld Metro's sole source determination for the proposed Project.

Comment Letter PH266 - Melissa Archiga

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH266

Comment PH266-1 MS. ARECHIGA: Hello?

MS. SISCO: Hi. We can hear you.

MS. ARECHIGA: Okay. All right, here we go.

My name is Melissa Arechiga, and I am here today before you as a representative of the surviving families that were violently evicted from Palo Verde, La Loma, and Bishop, three Mexican indigenous communities that were destroyed to build the Dodgers Stadium.

Response PH266-1 Refer to Section 5.0, Corrections and Additions, of this Final EIR for a discussion of Chavez Ravine.

Comment PH266-2 I am here today to oppose the gondola project from Union Station to Dodger Stadium. While this may be exciting to film, it is a sign of change and change that is not inclusive to all, specifically people of color.

The Dodgers Corporation and the City of Los Angeles have a long partnership together working to destroy and exploit communities of color. The gondola represents gentrification, the destruction of not only our communities, but the environment and our beloved wildlife.

Response PH266-2 Refer to Topical Response E, The Proposed Project Will Not Displace Housing or Prevent Planned Housing, for discussion of how the proposed Project will not exacerbate gentrification or result in displacement of residents in the surrounding neighborhoods and is consistent with Metro's considerations regarding gentrification and displacement. Refer to Topical Response N, Environmental Justice, for discussion of how the Draft EIR addresses environmental justice. Refer to Section 5.0, Corrections and Additions, of this Final EIR, for a discussion of Chavez Ravine. As discussed in Sections 3.01, Aesthetics, 3.04, Biological Resources, 3.05, Cultural Resources, 3.06, Energy, 3.07, Geology and Soils, 3.09, Hazards and Hazardous Materials, 3.10, Hydrology and Water Quality, 3.11, Land Use and Planning, 3.13, Noise, 3.15, Public Services, 3.16, Parks and Recreational Facilities, 3.17, Transportation, 3.18, Tribal Cultural Resources, 3.19, Utilities and Service Systems, 3.20, Wildfire, and 5.0, Other CEQA Considerations, the proposed Project would have less than significant operational impacts.

Comment PH266-3 The gondola project is no different than the deal that was made to take away our families' generational wealth by destroying the three communities to build Dodgers Stadium.

Response PH266-3 Refer to Section 5.0, Corrections and Additions, of this Final EIR for a discussion of Chavez Ravine.

Comment PH266-4 The Dodgers and the Los Angeles City Council set to build the gondola in the middle of our communities, and this would only benefit the Los Angeles Dodgers. Our residents and small business owners will suffer with this so-called revitalization project that is gentrification and a long-term that leaves our most valuable community members displaced with no benefits.

Response PH266-4 Refer to Topical Response E, The Proposed Project Will Not Displace Housing or Prevent Planned Housing, for discussion of how the proposed Project will not exacerbate gentrification or result in displacement of residents in the surrounding neighborhoods and is consistent with Metro's considerations regarding gentrification and displacement. Also refer to Topical Response C, Project Features, for discussion of how the Project Sponsor would create a Business and Community Support Program to assist local businesses financially affected by proposed Project construction activities. The proposed Project would provide numerous benefits to local businesses in El Pueblo, Chinatown, and other areas along the proposed Project alignment, including through potential partnerships with these businesses as well as by providing an accessible and affordable mobility option for employees and area residents. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project.

Comment PH266-5 The history between the Los Angeles Dodgers and the Los Angeles City Council has left our communities in worse condition from the deals of the 1950s, when our homes and the three communities were destroyed. And the lies that were told to the public of building public housing today leave us with the current conditions of our unhoused and affordability crisis that affect us all today.

It is a win-win for the Dodgers, and that has been since Black Friday, May 8, 1959, when our families were dragged out. It's time to put a stop the Dodgers Corporation of exploiting the people of Los Angeles.

I strongly urge that everyone in the public and elected officials oppose this project, as it will damage -- have damaging effects that will last for generations on generations.

Response PH266-5 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Response PH266-2 through PH266-4 for discussion of how the proposed Project will not exacerbate gentrification or result in displacement of residents in the surrounding neighborhoods and would provide benefits to local communities.

Comment Letter PH267- Rafael.pdf

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH267

Comment PH267-1 PARTICIPANT: Can you hear me?

MS. SISCO: Yes, we can.

PARTICIPANT: Hi. I'm Rafael. I'm bred and born Los Angeles and long-time Dodger fan.

Like, I would love to get to Dodger Stadium, like, fast and, you know, not deal with traffic, and it be environmentally friendly, and I've taken the Metro Express. However, I don't think that this gondola is the best way of going about it.

Response PH267-1 This comment provides a general introduction to the comments raised in this letter. Responses to the comments contained in this letter are provided below in Responses P267-2 through P267-4.

Comment PH267-2 Number one, you know, besides all the comments that have already been said by people of the community, the one thing for me is this is a pet project and, you know, a way for Frank McCourt to make money off Dodger fans after he, you know, badly, you know, managed the Dodger organization.

Response PH267-2 This comment is noted and will be provided to the decision makers for review and consideration. Because the comment does not address an environmental issue or raise a substantive issue on the content of the Draft EIR, no further response is warranted. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project.

Comment PH267-3 Number two, I don't think this is going to be safe at all, and I'm not talking about earthquakes or anything like that. I mean, those who have been to Dodger games, especially if you sit in the, you know, right and left of the pavilion, you know people get drunk. There's been fights after games.

You put them in a gondola, that one fight in a gondola, I mean, how is that going to get broken up, you know, when you're stuck in midair for, what, seven minutes? Or maybe three and a half, if you go from Dodger Stadium to Chinatown and -- or Union Station? That's a long time to wait for security.

Response PH267-3 Refer to Section 2.0, Project Description, of the Draft EIR and Topical Response J, Gondola Design and Operations, for discussion of how the proposed Project would be equipped with security features and the Emergency Operations Plan for the proposed

Project would include emergency response protocols and safety procedures developed in conjunction with the operator, system provider, and local authorities.

Comment PH267-4 I oppose this, and I think Metro can look into other resources of getting people into Dodger Stadium.

That's all I have.

Response PH267-4 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Topical Response H, The Draft EIR Considered an Appropriate Range of Alternatives and Design Options and Section 4.0, Alternatives, of the Draft EIR, for a discussion of the Draft EIR's consideration of a range of reasonable alternatives pursuant to CEQA.

Comment Letter PH268 - Ray

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH268

Comment PH268-1 PARTICIPANT: Good evening, everyone. My name is Ray, and I'm with Anchor Church of DTLA.

First, I just want to say, go Dodgers. We have the best baseball franchise in LA history, and now that we've settled that, I want to be clear on something else.

A lot of people are under the impression that the churches as a whole aren't concerned with climate change. However, any Bible based church knows that God cares deeply about our climate.

For instance, Revelation, Section 11, verse 18 reads, the nations are very angry and your wrath has come. And the time of the dead, they should be judged, and you should reward your servants, the prophets and the saints and those who fear your name, small and great, and should destroy those who destroy who destroy the earth.

We want to see development at the civic level that endorses positive climate change and zero emission. Public transit shows people at this city not only have the -- not only have great baseball, by the way, and the greatest sports franchise in all of baseball, great people and a great God, but genuine care for this earth. Because after all, this is His earth, too.

Thank you and God bless you.

Response PH268-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gas emissions through reduced vehicular travel.

Comment Letter PH269 - Carlos Gomez

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH269

Comment PH269-1 MR. GOMEZ: Hello, hi. My name is Carlos Gomez. Thank you for taking my call.

So, I've thought about this long and hard. I am a Dodgers season ticket holder, but, you know, I am a consumer of Chinatown and surrounding areas, and, you know, I've got a chance to talk to locals and some friends about this.

But the reality is, LA's a city of champions. It's, you know, filled with championship in every single major sport. You know, we're going to be the home to the 2026 World Cup, the 2028 Olympics. You know, let that sink in. We're not your typical city.

We're LA. We deserve the absolute best. Most stadiums have some form of train or some form of trams or some, you know, for transportation to the stadium.

Response PH269-1 This comment is noted and will be provided to the decision makers for review and consideration. Because the comment does not address and environmental issue or raise a substantive issue on the content of the Draft EIR, no further response is warranted.

Comment PH269-2 We have two buses that leave from Union Station that depart every 15 minutes. Dodger Stadium is iconic, right? It's a rich culture that's bigger than just Chinatown. It represents us as a whole. Right?

We, you know, we owe it to Dodger fans and even visiting guests to provide them with, you know, best possible game experience which, you know, obviously, includes less traffic. This gondola project will set us apart from basically the rest and makes us that much better.

Response PH269-2 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Topical Response M, Comparable Urban Aerial Transit Systems, for discussion of comparable aerial transit systems in cities around the world and their operations, integration with nearby residential and open space uses, community benefits, promotion of public art and collaborations with local artists, and evidence that such systems can reduce violent crime in nearby areas and promote a sense of security compared to other modes of public transportation.

Comment PH269-3 On another note, you know, Dodger Stadium is no longer just a baseball stadium. You know, we've had the Fluffy Show, the concert, Elton John.

You know, I am a Chinatown consumer, and the reality is that outside of a few breweries and a few restaurants in the neighborhood, it's sad, but Chinatown's a ghost town. You know, it's filled with small shops that come and go.

I really believe this project would rejuvenate the city, eliminate traffic, and really, you know, keep LA at the very top of the sports industry.

Response PH269-3 Refer to Topical Response C, Project Features, for discussion of the proposed Project's features to enhance and provide additional benefits to the surrounding communities, including potential partnerships with and benefits to local businesses in Chinatown.

Comment PH269-4 You know, like it, love it, it's coming. You know, I support this gondola project 1,000 percent. Go Dodgers.

Response PH269-4 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH270 - Tom Savio

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH270

Comment PH270-1 MR. SAVIO: Okay, can you hear me?

MS. SISCO: Yes, we can.

MR. SAVIO: Okay. I'm Tom Savio, Executive Director of the Los Angeles Union Station Historical Society. This is our opinion.

We oppose billionaire Frank McCourt's racist gondola real estate scheme because it's obviously a Metro sweetheart deal after McCourt paid millions of dollars to Metro's political campaigns, this according to state records.

Response PH270-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Because the comment does not address an environmental issue or raise a substantive issue on the content of the Draft EIR, no further response is warranted. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project.

Comment PH270-2 Metro's Cory Zelmer and company falsified the gondola's Draft Environmental Report by not mentioning that the world's busiest helicopter airport is just a half a mile from the gondola's Union Station terminal, which is –should the 13-story towers and cable be struck by a helicopter, many of Union Station's historical architecture and its trains and passengers could be harmed.

Response PH270-2 The Draft EIR addresses potential airport hazards in Section 3.09 Hazards and Hazardous Materials, Section 5.5.5, Heliports, in Section 5.0, Other CEQA Considerations, and in Appendix O, Airspace Analysis Technical Memo. The determination on page 3.9-30 of the Draft EIR – that the proposed Project alignment is not in an area covered by an airport land use plan nor located within two miles of a "public airport" – is based on facts and the specific language of CEQA's thresholds of significance for this issue. This threshold is stated in the Draft EIR under Impact HAZ-5, which asks the question: "For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public use airport, would the project result in a safety hazard…?" The Draft EIR concludes that the proposed Project alignment is not within two miles of a "public use airport" as that term is defined under CEQA. Regardless of any distinction between heliports and airports, the Draft EIR immediately follows this conclusion with a clear disclosure that the city-owned Jay Stephen Hooper Heliport is within 0.38 miles of the proposed

Project. According to the LAPD and AirNav.com1, the Hooper Heliport is a city-owned, private use facility. As a private use facility, it does not meet the "public use airport" description in the CEQA threshold. Note that the determination is based on the distinction between public and private facilities, not the definition of "airport." Thus, comparison to federal or state case law or regulations relying on a different definition of "airport" is irrelevant to the analysis required by CEQA. The analysis in Appendix O, Airspace Analysis Technical Memo, of the Draft EIR, is based on FAA analysis standards, concludes with substantial evidence that construction and operation of the proposed Project is clear of the airspace associated with the existing heliports, including the Hooper Heliport, in the proposed Project's vicinity. As such, no adverse effects related to aeronautical hazards are predicted based on these findings, and no notification is required for the proposed Project construction unless the FAA makes a specific request to the Project Sponsor. In addition, refer to Appendix I, Firefighting Helicopter Response Memo, of this Final EIR, for discussion of how helicopter flight paths would not be impeded as a result of the proposed Project.

Comment PH270-3 Union Station architecture will also be negatively impacted by the gondola's modernistic carnival ride architecture that's in front of Union Station.

Response PH270-3 Refer to Section 3.01, Aesthetics, and Appendix C, Visual Impact Assessment, of the Draft EIR, for discussion of the aesthetic impacts of the proposed Project, which would be less than significant. Refer to Appendix H.1, Memo Regarding Preparation of KOPs, of the Final EIR, for discussion of the methodology used to prepare the visual simulations included in Appendix C, Visual Impact Assessment, of the Draft EIR. Refer to Topical Response C, Project Features, discussing how the proposed Project's design takes cues from the immediate neighborhood culture, including how each component of the proposed Project would be designed to complement and reflect the unique character of the surrounding area. As discussed in Section 3.01, Aesthetics, of the Draft EIR, the Alameda Station's platform and canopy would include a light color scheme and warm tones, which has been designed to complement and reflect the materiality of the existing mix of adobe buildings, large Victorian commercial blocks, and Spanish Revival style buildings within the El Pueblo and Olvera Street area. In addition, the "shell" roof design provides a visual lightness with an integrated perforation pattern motif based upon the arched forms that mark openings and entries to Union Station, Pico House, and other historic buildings within El Pueblo. The proposed Project would also integrate physical and visual connections between the proposed Alameda Station and existing adjacent development, such as the new pedestrian plaza at El Pueblo. The new pedestrian plaza at El Pueblo would be open to the public and would extend view corridors between the proposed Alameda Station and existing development in a way that creates an observed visual unity.

Comment PH270-4 We believe the real purpose of the gondola is to allow McCourt to build a high-end real estate development on Dodger Stadium's parking lots that he still controls, thus

putting the local, low income minority community out of their homes by raising rents through gentrification.

Response PH270-4 Refer to Section 2.1, Overview of the Project, of the Draft EIR, discussing how the proposed Project would operate daily to serve existing residents, workers, park users, and visitors to Los Angeles. As discussed on page 2-42, in Section 2.0, Project Description, of the Draft EIR, the proposed Project would provide service to all pre-season, regular season, and post-season Los Angeles Dodger games and any special events (e.g., concerts, the Los Angeles Marathon) at the Dodger Stadium property. The proposed Project would also provide service to events at the Los Angeles State Historic Park. Refer to Topical Response G, No Improper Project Segmentation: The Proposed Project Is Intended to Create a Transit Connection from Metro's Union Station Transportation Hub via an Aerial Gondola System to the Dodger Stadium Property, for discussion of how the proposed Project solely proposes an aerial gondola system. The proposed Project does not include other development, and neither the Project Sponsor nor any other applicant has applied for other development unrelated to the existing stadium uses on the Dodger Stadium property. Refer to Topical Response E, The Proposed Project Will Not Displace Housing or Prevent Planned Housing, for discussion of how the proposed Project will not exacerbate gentrification or result in displacement of residents in the surrounding neighborhoods and is consistent with Metro's considerations regarding gentrification and displacement.

Comment PH270-5 Part and parcel of the gondola project is Metro's plan to use $20 million in federal funds to build a water fountain next to the gondola's Union Station terminal to cool riders while they wait for their gondola rides in the hot season. It's crazy for a new water fountain to be built when LA is experiencing its worst drought in history, which probably will go on for decades.

Response PH270-5 Refer to Section 2.0, Project Description, of the Draft EIR, for discussion of Metro's LAUS Forecourt and Esplanade Improvements Project, which is not part of the proposed Project. The proposed Project does not include a water fountain in the planned LAUS Forecourt. As described in Section 2.0, Project Description, of the Draft EIR, page 2-49, the proposed Project includes several sustainability and water efficiency measures, including drought tolerant landscaping and use of reclaimed water for irrigation where available.

Comment PH270-6 Furthermore, McCourt's gondola will trample Los Angeles State Historic Park.

Response PH270-6 As discussed in Sections 3.01, Aesthetics, 3.04, Biological Resources, 3.05, Cultural Resources, 3.06, Energy, 3.07, Geology and Soils, 3.09, Hazards and Hazardous Materials, 3.10, Hydrology and Water Quality, 3.11, Land Use and Planning, 3.13, Noise, 3.15, Public Services, 3.16, Parks and Recreational Facilities, 3.17, Transportation, 3.18, Tribal Cultural Resources, 3.19, Utilities and Service Systems, 3.20, Wildfire, and 5.0, Other CEQA Considerations, the proposed Project would have

less than significant operational impacts, including to Los Angeles State Historic Park. Refer to Section 2.0, Project Description, Section 3.16, Parks and Recreational Facilities, and Section 5.0, Other CEQA Considerations, of the Draft EIR, for discussion of the footprint of the proposed Project in the Los Angeles State Historic Park. With the small footprint of the proposed Project's Chinatown/State Park Station, and the required clearances and the height at which the cabins would cross over the Park, the ability to use the vast majority of the Park would not be affected by the proposed Project. Refer to Response S2-4 for additional discussion regarding the ability of uses to continue at the Park. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project.

Comment Letter PH271 - Lisa Duardo

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH271

Comment PH271-1 MS. DUARDO: Hi. My name is Lisa Duardo, and I'm born in raised in Los Angeles.

I responded to the Draft EIR earlier via letter back on January the 17th, and I would like to add on to the public record these other points that the Draft EIR either dismisses or omitted.

Response PH271-1 This comment provides a general introduction to the comments raised in this letter. Responses to the comments contained in this letter are provided below in Responses PH271-2.

Comment PH271-2 The Rim of the Valley Corridor Preservation Act was passed by Congress, the 117th Congress. Adam Schiff introduced the bill, and he just spoke about it at P22's Celebration Life at the Greek theater this past weekend.

What the Rim of the Valley Corridor Preservation Act does is it preserves open space for people and for wildlife from the Santa Monica mountains, which include Griffith Park and Elysian Valley Park, to the foothills of the San Gabriel Mountains, which are the Repetto Hills around Highland Park through South Pasadena, Pasadena, connects to the San Gabriel Mountains and the National Angeles Mountains, the Verdugo Mountains, which then connect to the Pacific Rim, which go to Canada and Mexico.

It creates a green wildlife corridor for animals so that they can coexist in our LA environment, and one of the lines on the points of this Congressional Act is that the Rim of the Valley unit would include habitat for iconic wildlife such as the mountain lion, the bobcat, the fox badger, the coyote, and the deer, as well as some endangered species of our area.

The LA Rim --

Response PH271-2 In response to comments regarding the Rim of the Valley Trail Corridor, an addition to the Draft EIR has been provided for the Rim of the Valley Trail Corridor Master Plan. Refer to Section 5.0, Corrections and Additions, of the Final EIR, for discussion of the Rim of the Valley Trail Corridor Master Plan. As noted therein, while the proposed Project is located within the boundaries of the Rim of the Valley Trail Corridor, the proposed Project would have no impact on the Rim of the Valley Trail, which is located north of Elysian Park, across Interstate I-5. The proposed Project would provide access to and connectivity between El Pueblo, Los Angeles State Historic Park, and Elysian Park.

Comment Letter PH272 - Michael Calareza

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH272

Comment PH272-1 MR. CALAREZA: Hello?

MS. SISCO: Hi.

MR. CALAREZA: Hi, yes. My name is Michael Calareza (phonetic). I'm a resident of Lincoln Heights, a stakeholder in this project.

I frequent the state park often. I go to Dodger games, and North Broadway is continually impacted by traffic on Dodger days. However, if Metro wanted to be pedestrian friendly, it would do more.

Metro is not pedestrian friendly. It placates to the political powers or, in this case, the money, pro quid pro -- quid pro quo, I guess, is what's going on from McCourt and his political contributions.

Response PH272-1 Refer to Topical Response C, Project Features, for discussion of how the proposed Project would include several sustainability features and open space enhancements, including pedestrian enhancements and drought tolerant landscaping, open space enhancements, including at the Alameda Triangle, the Los Angeles State Historic Park, and along the pedestrian pathway connecting Dodger Stadium Station and Dodger Stadium, and improved access to Los Angeles State Historic Park and Elysian Park. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, and Section 4.0, Costs and Financing, of the Final EIR, which provide detail as to the proposed Project's capital, operation, and maintenance costs and planned sources of funding, recognizing that the proposed Project's capital funding would primarily be sourced from bond financing serviced by revenue from the proposed Project. No public sources of funding have been sought or committed to the proposed Project. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project.

Comment PH272-2 So, this is the fast track for him to take advantage of public funds for his commercial interests at the expense of public transportation needs.

Response PH272-2 Refer to Response PH272-1 for discussion of the Project Sponsor and the proposed Project's capital, operation, and maintenance costs and planned sources of funding. Refer to Topical Response G, No Improper Project Segmentation: The Proposed Project Is Intended to Create a Transit Connection from Metro's Union Station Transportation Hub via an Aerial Gondola System to the Dodger Stadium Property for a discussion of how the proposed Project solely proposes an aerial gondola system.

Comment PH272-3 There should be a sidewalk and stairs that gets people from North Broadway up into Dodger Stadium. Simple, common sense things for pedestrians, like safe sidewalks.

Response PH272-3 Refer to Section 5.0, Corrections and Additions, of the Final EIR, for discussion of a Pedestrian Enhancement Alternative to the proposed Project in which the proposed Project would not be constructed, and instead an enhanced pedestrian walkway and vertical circulation elements would be constructed to improve the safety, comfort, and accessibility of walking between the Metro L Line (Gold) Station and Dodger Stadium. While this alternative would provide improved pedestrian connections compared to existing conditions, the 25 minute plus travel time from the Metro L Line (Gold) Station to the location of the proposed Dodger Stadium Station would be at least nine times greater than the three minute travel time between those two locations with the proposed Project, and this alternative would be unlikely to attract substantially more people to walk to Dodger Stadium compared to existing conditions given the travel time and the physical exertion. This alternative was considered but dismissed from further detailed analysis because it did not meet most of the basic objectives of the proposed Project. Refer to Topical Response B, Ridership Model; Queueing at Stations and Pre-game and Post-game Transportation, for discussion of how while there are some game attendees who currently choose to walk to and from Dodger Stadium, the walk would take approximately five to eight times as long as the ride on the proposed Project, and the path would be on a steep downward grade which does not meet Americans with Disabilities Act Accessibility Guidelines, and would be challenging for children, seniors, or people with limited physical mobility.

Comment PH272-4 Transportation should be 21st Century transportation. Gondolas? What's the capacity of a gondola ride? How long is it going to take? How many dozens of people are you expecting to stand in line to take a gondola ride? Drunk after a Dodger game? Before a Dodger game? Come on, where's the common sense? This lacks it.

Response PH272-4 Although forms of aerial transit technology have been available and utilized for the last 100 years, modern applications have seen the evolution of the technology as a feasible mode of urban rapid transit. As discussed in Section 2.0, Project Description, of the Draft EIR, the proposed Project would have a maximum capacity of approximately 5,000 people per hour per direction, and the travel time from LAUS to Dodger Stadium would be approximately seven minutes. Also refer to Section 2.0, Project Description, of the Draft EIR and Topical Response J, Gondola Design and Operations, for discussion of how the proposed Project would be equipped with security features and the Emergency Operations Plan for the proposed Project would include emergency response protocols and safety procedures developed in conjunction with the operator, system provider, and local authorities. As discussed in Appendix D of Appendix J, Greenhouse Gas Emissions Technical Report, of the Draft EIR, a large capacity for a new mode of transportation in Los Angeles will allow passengers to see the potential for other emerging innovations to be integrated into the public transit system. The proposed Project would thus exemplify how alternative

transportation technology can be integrated into a city's transportation infrastructure and will show that new technology can successfully operate in concert with other existing modes of transportation. Refer to Topical Response B, Ridership Model; Queueing at Stations and Pre-game and Post-game Transportation, for discussion of the proposed Project's ridership model which is based on extensive data sources and assumptions validated by data, and the management of queuing at stations, and pre-game and post-game transportation. Post-game queues at Dodger Stadium were estimated based on assumptions about the departure patterns and estimates of walk times from the various seating areas within the stadium. Those seated the furthest away from the Dodger Stadium Station would take more time to arrive at the Station, much like how it is currently for passengers riding the Dodger Stadium Express. In addition, passengers who would rather not join the line immediately to board the proposed Project in the post-game period could visit some of the entertainment amenities at the stadium, including at the Centerfield Plaza. The post-game/event queue for the proposed Project would be constantly moving as cabins would depart every 23 seconds.

Comment PH272-5 It's political. It stinks of corruption. There should be no public funds for this. Shame on Metro for even putting this in front of people and trying to fast track it.

Response PH272-5 Refer to Response PH272-1 for discussion of the proposed Project's capital, operation, and maintenance costs and planned sources of funding. . This comment raises issues that were litigated and decided in The California Endowment v. Los Angeles County Metropolitan Transportation Authority, Case No. 22STCP01030 (Jan. 9, 2023, Order Denying Petition for Writ of Mandate). There, the Los Angeles Superior Court upheld Metro's sole source determination for the proposed Project. Refer to Appendix A, Public Outreach Report, of the Final EIR, for discussion of the proposed Project's public outreach and opportunity for public testimony during the Draft EIR public review period. Refer to Appendix A, Scoping Report, of the Draft EIR, for discussion of outreach and community engagement during the Draft EIR scoping period. Metro sought to engage the community in each stage of the environmental review process.

Comment Letter PH273 - Brenda Miramontes

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH273

Comment PH273-1 Can anyone hear me?

MS. SISCO: Yes.

MS. MIRAMONTES: Okay, hi.

I am in today to support the gondola project. I am a resident of the community, and I am also a big Dodger fan.

Response PH273-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment PH273-2 I believe that we're all talking about everything but the pollution. And I believe that that is the most important thing because right now, we have buses and, you know, cars, and all that, and that's just affecting our pollution even more, so why not try anything new?

Response PH273-2 Refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gas emissions through reduced vehicular travel.

Comment PH273-3 We are already a city of tourism, so it's not going to affect other -- make any, like, anything worse. I think it's just going to make it better for the Chinatown community. Also, like, we're going to get more tourists, you know, to come in and shop more for them, and it's going to benefit them at the end. So, I'm all in for it.

Thank you. Good night.

Response PH273-3 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH274 - Maria Manzanilla

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH274

Comment PH274-1 MS. MANZANILLA: Hello? Hello, can you hear me?

MS. SISCO: Hi, yes.

MS. MANZANILLA: Yes? This is Maria Sanchez Manzanilla, and I'm calling just to say that I oppose this gondola very, very strongly.

And I am talking for my community, William Mead, and all the community surrounding the park, LA State Historic Park. And all the communities, William Mead, Chinatown, Solana Canyon, Lincoln Heights, Highland Park, and all of us oppose this horrible gondola. This project is not good for our communities.

Response PH274-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS, Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Dodger Stadium draws large regional crowds, with approximately 100 baseball games and other events each year, but there are no permanent transit connections to the venue. The vast majority of visitors drive their personal vehicles to access the venue. These vehicles create congestion on the surface streets leading up to and around Dodger Stadium, including Sunset Boulevard/Cesar E. Chavez from LAUS and throughout the surrounding communities. Given the capacity of the proposed Project's system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system. This would reduce vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days. The proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan.

Comment PH274-2 And we know that billionaire Frank McCourt is going to get his money back when, after he raise $300,000 -- $300 million and leases that there because he didn't even ask the communities for doing this horrible gondola.

And I think this community, this serves them some kind of, you know -- they just deserve some respect because he didn't ask us for, you know, for anything. He just said he was going to start this project, and we oppose it.

Response PH274-2 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Because the comment does not address an environmental issue or raise a substantive issue on the content of the Draft EIR, no further response is warranted. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project.

Comment PH274-3 We are opposed to this gondola because it's not good for us. It will destroy our park, LA State Historic Park, and a lot of very bad things will happen to our communities in downtown LA.

Response PH274-3 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS, Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. As discussed in Section 2.0, Project Description, Section 3.16, Parks and Recreational Facilities, and Section 5.0, Other CEQA Considerations, of the Draft EIR, the Chinatown/State Park Station would have a footprint of 2,195 square feet in the Los Angeles State Historic Park (~.1% of the total 32-acre park), and the station canopy would have an overhang of 9,320 square feet over the park. The proposed Project alignment crosses over the westernmost edge of the Los Angeles State Historic Park, adjacent to the existing Metro L Line (Gold) and the associated overhead catenary system. The proposed Project's required aerial clearance would be located above approximately 59,470 square feet of the total 32-acre park, plus an Additional Separation Buffer. With the required clearances and the height at which the cabins would cross over the Los Angeles State Historic Park, the ability to use the vast majority of the Park for kite flying, special events (e.g., concerts, craft fairs, partnership events, 5K/10K runs, workshops, cultural festivals, and the farmers' market), and other passive recreational opportunities (e.g., picnicking, jogging, walking, and informal play) would not be affected by the proposed Project. Refer to Response S2-4 for additional discussion regarding the ability of uses to continue at the Park.

Comment PH274-4 And all this is only lies because what happens if one of these gondolas falls on top of the head of people who is running in the park?

Response PH274-4 Refer to Topical Response M, Comparable Urban Aerial Transit Systems, discussing how, like the proposed Project, comparable aerial transit systems in cities around the world are integrated with their surrounding urban environments. In particular, comparable aerial transit systems in other locations demonstrate that such systems can operate safely, efficiently, and in concert with nearby residential and open space uses, including parks and other recreational facilities. Refer to Section 2.0, Project Description, of the Draft EIR and Topical Response J, Gondola Design and Operations, of the Final EIR, for discussion of the safety features of the proposed Project and how aerial transit systems such as the proposed Project represent one of the safest modes of transportation relative to other forms of transit.

Comment Letter PH275 - Jennifer Martinez

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH275

Comment PH275-1 MS. MARTINEZ: Hi. Can you hear me?

MS. SISCO: Yes.

MS. MARTINEZ: Okay. Thank you for giving me a second chance because I was left off last time. My name is Jennifer Martinez. I'm a resident of Echo Park,and I oppose the gondola project.

Response PH275-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Because the comment does not address an environmental issue or raise a substantive issue on the content of the Draft EIR, no further response is warranted.

Comment PH275-2 And I am grateful for this session because I have learned a lot, and I also work providing sessions like this, so I appreciate the effort. But I have some common sense concerns about the project, and what strikes me from this discussion is, and what has bothered me about the project is the process. This is a missed opportunity for a wealthy member of Los Angeles to come into a community and create opportunities, perhaps, for that community.

So, my biggest problem is that the public sessions, which I know are part of the process, have not been made easily accessible to all in the community.

Response PH275-2 Refer to Appendix A, Public Outreach Report, of the Final EIR, for discussion of the proposed Project's public outreach and opportunity for public testimony during the Draft EIR public review period. Refer to Appendix A, Scoping Report, of the Draft EIR, for discussion of outreach and community engagement during the Draft EIR scoping period. Metro sought to engage the community in each stage of the environmental review process. Metro engaged the public in decision making for the proposed Project beginning with the public scoping period for the Draft EIR in October 2020 to receive public comment on the proposed Project's scope of environmental review under CEQA. In June 2021, the Project Sponsor conducted two virtual public outreach meetings. The input from the public, including local community stakeholders, as well as from agencies, organizations, and interested parties, during this period led directly to changes to the proposed Project to incorporate public feedback, including selecting the proposed Project's alignment and the location of Chinatown / State Park Station, as discussed in Section 5.0, Other CEQA Considerations, of the Draft EIR. The Draft EIR was released on October 17, 2022, for a 60-day public review period, which Metro extended an additional 30 days for a 90-day public review period ending on January 17, 2023. Eight public meetings were held immediately preceding, during, and

immediately following the Draft EIR public review period, with four held in-person in the Project area at Los Angeles Union Station and Cathedral High School, and four held virtually via Zoom webinar, to accommodate agencies, interested parties, and organizations who were unable to attend the meetings held in person. Project materials and information were provided at both the in-person meetings and on Metro's website in English, Spanish, Chinese (Traditional), and Chinese (Simplified). Interpretation was provided in English, Spanish, Mandarin, and Cantonese during the eight public meetings, with interpretation provided in Taishanese during the final two public meetings.

Comment PH275-3 And we're hearing this evening about concerns about businesses in Chinatown. So, how many restaurants and halls and public spaces are there where LA Art and Frank McCourt could have held sessions to create actual -- to just good faith, you know, action? And I mean, not like –I mean, two things about that.

One is, I don't understand why Frank McCourt and LA Art are not courting the business owners and the residents of Chinatown. They have the capacity. They have --

Response PH275-3 Refer to Response PH275- 2 for discussion of the proposed Project's public outreach during each stage of the environmental review process. Refer to Topical Response C, Project Features, discussing the proposed Project's potential partnerships with and benefits to local businesses. As discussed in Section 2.0, Project Description, of the Draft EIR, and Topical Response C, Project Features, the proposed Project creates a first/last mile transit link for residents and businesses within Chinatown while unifying and connecting communities through transit mobility access. This new mode of transportation will expand rider access to the regional transit system by attracting new visitors including Dodgers fans, and represents an opportunity for additional visitors along the proposed Project alignment, creating economic opportunities for local businesses, including shops and restaurants, through potential partnerships that drive customers to Chinatown and other businesses along the proposed Project alignment, which, consequently, adds revenues to these small businesses in the communities the proposed Project hopes to serve. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project.

Comment Letter PH276 - Mary

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH276

Comment PH276-1 PARTICIPANT: Hello.

MS. SISCO: Hi. We can hear you.

PARTICIPANT: My name is Mary, and I'm a senior, and I want to make a comment about the last meeting that Metro had.

I believe Metro should have had taken better control of the meeting since the protesters had all the control with the disruption, the profanity, making people feel threatened, scared of the situation happening in front of them.

We should all feel safe no matter where we are, as well as be able to speak and share our support for the gondola.

Thank you so much.

Response PH276-1 Refer to Appendix A, Public Outreach Report, of the Final EIR, for discussion of the proposed Project's Draft EIR public review period, including the January 12 public hearing. Metro sought to engage with stakeholders in neighborhoods along the proposed Project alignment in each stage of the environmental review process. In light of the disruptions at the January 12, 2023, public hearing, Metro provided a fourth public hearing by way of a virtual public hearing held on February 8, 2023. Verbal comments made at the virtual February 8, 2023 public hearing were deemed timely submitted for the purposes of the Draft EIR public review period.

Comment Letter PH277 - Marlo Cervantes

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH277

Comment PH277-1 MR. M. CERVANTES: Hello?

MS. SISCO: Hi, we can hear you.

MR. M. CERVANTES: Yes. My name is Marlow Cervantes (phonetic), and I am a LA citizen born and raised, and I support the Dodger Stadium gondola.

My neighborhood deserves less traffic, less pollution for clean air with more transportation options. I hope that this is a better and for our future for us and our nation to come. Thank you.

Response PH277-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH278 - Ali Rubinfeld

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH278

Comment PH278-1 MS. RUBINFELD: Hi. My name is Ali Rubinfeld. I'm a resident of Solana Canyon. I don't think there are people in Los Angeles who want to alleviate traffic to Dodger Stadium more than the residents of Solana Canyon, but this is just not the way.

This is a transparent power grab with the long-term goal of creating a high end development and shopping center at Dodger Stadium that does not meet the needs of a community currently living in the area.

Response PH278-1 Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at Los Angeles Union Station (LAUS), Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Given the capacity of the proposed Project's system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system. This would reduce vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project. Refer to Topical Response G, No Improper Project Segmentation: The Proposed Project Is Intended to Create a Transit Connection from Metro's Union Station Transportation Hub via an Aerial Gondola System to the Dodger Stadium Property for a discussion of how the proposed Project solely proposes an aerial gondola system. The proposed Project does not include other development, and neither the Project Sponsor nor any other applicant has applied for other development unrelated to the existing stadium uses on the Dodger Stadium property.

Comment PH278-2 There are so many ways to make Dodger Stadium more accessible that will not cause more harm to communities still healing from the violent taking of Chavez Ravine.

Response PH278-2 Refer to Topical Response H, The Draft EIR Considered an Appropriate Range of Alternatives and Design Options, and Section 4.0, Alternatives, of the Draft EIR, for a discussion of the Draft EIR's consideration of a range of reasonable alternatives pursuant to CEQA. Improving the connection between LAUS and Dodger Stadium via the proposed Project would provide the quickest, most frequent, and highest capacity transit connection for the greatest number of riders traveling to Dodger Stadium to

have the most travel time competitive transit trips from more locations in the region. Refer to Section 5.0, Corrections and Additions, of this Final EIR for a discussion of Chavez Ravine.

Comment PH278-3 This gondola will completely change the socioeconomic landscape of Chinatown, which is one of the last affordable neighborhoods left in Los Angeles, and people have been fighting to keep their homes there.

This gondola will make Los Angeles a less affordable and less livable city and is completely ignoring the true needs of the community. It's here for a profit motive.

We need a grocery store. We don't need a gondola. Thank you.

Response PH278-3 Refer to Topical Response E, The Proposed Project Will Not Displace Housing or Prevent Planned Housing, for discussion of how the proposed Project will not displace housing or prevent planned housing and how the proposed Project will not result in displacement of residents in the surrounding neighborhoods. Refer to Topical Response N, Environmental Justice, for a discussion of how the Draft EIR addresses environmental justice and how the proposed Project would not preclude development of uses including housing, grocery stores, and/or healthcare facilities in the surrounding communities, and would itself address a need for a permanent transit connection to one of the region's most visited venues and would alleviate existing congestion on surrounding neighborhood streets, arterial roadways, and freeways, thereby reducing associated air pollution and improving safety. Refer to Topical Response C, Project Features, for discussion of the potential added benefits from the proposed Project, including potential partnerships with and benefits to local businesses in Chinatown. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project.

Comment Letter PH279 - Erik Van Breene

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH279

Comment PH279-1 Good evening, Erik Van Breene from the Los Angeles Conservancy. The Conservancy submitted written comments prior to the January 17 deadline.

We have real concerns about the project in its current form and its impacts to Chinatown, Union Station, El Pueblo, and Los Angeles State Historic Park.

Response PH279-1 As discussed in Sections 3.01, Aesthetics, 3.04, Biological Resources, 3.05, Cultural Resources, 3.06, Energy, 3.07, Geology and Soils, 3.09, Hazards and Hazardous Materials, 3.10, Hydrology and Water Quality, 3.11, Land Use and Planning, 3.13, Noise, 3.15, Public Services, 3.16, Parks and Recreational Facilities, 3.17, Transportation, 3.18, Tribal Cultural Resources, 3.19, Utilities and Service Systems, 3.20, Wildfire, and 5.0, Other CEQA Considerations, the proposed Project would have less than significant operational impacts, including to Chinatown, LAUS, El Pueblo, and the Los Angeles State Historic Park. Additionally, refer to Topical Response M, Comparable Urban Aerial Transit Systems, discussing how, like the proposed Project, comparable aerial transit systems in cities around the world are integrated with their surrounding urban environments. In particular, comparable aerial transit systems in other locations demonstrate that such systems can operate safely, efficiently, and in concert with nearby residential and open space uses, including parks and other recreational facilities.

Comment PH279-2 Additionally, we have concerns about the proposed transfer of public lands to private hands.

Response PH279-2 Refer to Section 2.5, Proposed Project Alignment and Components, with supporting data provided in Appendix Q, Proposed Alignment Plan and Profile, of the Draft EIR for discussion of how the proposed Project maximizes alignment along the public ROW and publicly owned property and minimizes aerial rights over private properties. Refer to Topical Response C, Project Features, for discussion of how the proposed Project would provide numerous benefits to local businesses in El Pueblo, Chinatown, and other areas along the proposed Project alignment, including through potential partnerships with these businesses as well as by providing an accessible and affordable mobility option for employees and area residents.

Comment PH279-3 We don't believe the draft EIR fully demonstrates the purpose and need when an environmentally superior alternative has been identified that would expand the already existing Dodger express bus line.

Response PH279-3 Refer to Topical Response H, The Draft EIR Considered an Appropriate Range of Alternatives and Design Options, for discussion of how the Transportation Systems

Management Alternative for an enhanced Dodger Stadium Express is unlikely to achieve the same level of ridership as the proposed Project, and otherwise fails to meet most of the Project Objectives, which seek to achieve the proposed Project's underlying purpose of providing a permanent direct transit connection between LAUS and the Dodger Stadium property and improving connectivity for surrounding communities, including Chinatown, Mission Junction, Elysian Park, Solano Canyon, and the Los Angeles State Historic Park. Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS, Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Dodger Stadium draws large regional crowds, with approximately 100 baseball games and other events each year, but there are no permanent transit connections to the venue. The vast majority of visitors drive their personal vehicles to access the venue. These vehicles create congestion on the surface streets leading up to and around Dodger Stadium, including Sunset Boulevard/Cesar E. Chavez from LAUS and throughout the surrounding communities. Given the capacity of the proposed Project's system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system. This would reduce vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days. The proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan.

Comment PH279-4 With the project's encroachment into Union Station's parking lots, it's foreseeable that this project will tap federal funding and therefore require additional environmental reviews that typically coincide with the CEQA process, which is not happening here.

Thank you for hearing my comments and we encourage you to take these concerns seriously.

Response PH279-4 Refer to Section 2.0, Project Description, for discussion of the proposed Project's Alameda Station. Refer to Section 3.05, Cultural Resources, and Appendix G, Historical Resource Technical Report for the Los Angeles Aerial Rapid Transit Project (HRTR), of the Draft EIR, for a discussion outlining the proposed Project's potential construction and operational impacts to the Los Angeles Union Station Passenger Terminal and Grounds. Construction and operational impacts associated with the proposed Project would be less than significant. As proposed, the proposed Project does not require Federal review.

Comment Letter PH280 – Katherine Christman

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH280

Comment PH280-1 Hello, can you hear me? Yes.

Hi, I'm Katherine Christman from West Los Angeles. I'm a 31-year-old entrepreneur from our city with Parkway [inaudible]. I'm also a proud board member on the National Association of Woman Business Owners [inaudible], currently serving in the VP role. I am in full support of this project for a variety of reasons, but to keep it short, the most pressing and urgent to me is the air quality for the beautiful community surrounding the stadium.

[inaudible] deserves a better scenario than they're currently enduring. I also love the opportunity for Dodger Stadium to become more accessible and available from other Southern California [inaudible] from Union Station. And so I think it's a beautiful project. I'm very proud of the [inaudible] and I'm in full support of it, as is our Association of Women Business Owners.

We are so excited about it. A lot of value in it. Thank you so much.

Response PH280-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS, Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Dodger Stadium draws large regional crowds, with approximately 100 baseball games and other events each year, but there are no permanent transit connections to the venue. The vast majority of visitors drive their personal vehicles to access the venue. These vehicles create congestion on the surface streets leading up to and around Dodger Stadium, including Sunset Boulevard/Cesar E. Chavez from LAUS and throughout the surrounding communities. Given the capacity of the proposed Project's system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system. This would reduce vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days. The proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan. Refer to Topical Response C, Project Features, discussing how the proposed Project's design takes cues from the immediate

neighborhood culture, including how each component of the proposed Project would be designed to complement and reflect the unique character of the surrounding area. The design for the proposed Project's stations and junction studied in the Draft EIR would provide an opportunity for site specific artwork that is reflective of the unique neighborhood culture and could be commissioned from local artists. In addition, the proposed Project's cabins could feature artwork from local artists or other community programming.

Comment Letter PH281 – Chris Wilson

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH281

Comment PH281-1 Good evening. My name is Chris Wilson with the Los Angeles County Business Federation. This is in full support of this project as proposed. LA ART will provide the first public transit connection to Dodger Stadium, which has the highest attendance out of any stadium in the country and is one of the few without a dedicated transit connection. It will improve traffic and parking for residents by potentially removing up to 3,000 car trips from neighborhood streets, easing local traffic, improving safety and reducing the need to park in the local community.

The LA ART system will be emissions free, emissions free and will provide the opportunity to connect communities who have been dis-appropriately impacted by traffic and pollution. This would significantly improve traffic conditions and air quality in the neighborhood for these reasons, and more [inaudible] supports the zero-emission gondola from Union Station to Dodger Stadium. Thank you so much.

Response PH281-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH282 – Mary

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH282

Comment PH282-1 Hello, my name is [Mary] and I live in Solano Canyon.

I support the gondola since it would eliminate the traffic as well as the cars that park and block our driveway. That would be greatly appreciated that this project passes and it will make everyone happy in Solano Canyon. Thank you so much.

Response PH282-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH283 – Kathleen Johnson

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH283

Comment PH283-1 Hi, can you hear me? My name's Kathleen Johnson. I'm executive director of L.A. River State Park Partners, the support organization for our state historic park and the two other parts of the park. The gondola will not only adversely affect nearby neighborhoods, it will severely and permanently compromise people's experience of LA State Historic Park, a publicly funded green space that residents fought for decades, literally, to establish, and a site with deep historic significance to L.A. as the former home of the [inaudible] Station. LA ART seeks to take what we feel is a significant portion of land to the station with towers and gondola lines running over the southwestern section just 20 feet above people's heads.

Response PH283-1 Metro and the Project Sponsor acknowledge the more than 20 years of effort the community undertook to convert the closed rail yard at River Station to what is now the Los Angeles State Historic Park. As discussed in Sections 3.01, Aesthetics, 3.04, Biological Resources, 3.05, Cultural Resources, 3.06, Energy, 3.07, Geology and Soils, 3.09, Hazards and Hazardous Materials, 3.10, Hydrology and Water Quality, 3.11, Land Use and Planning, 3.13, Noise, 3.15, Public Services, 3.16, Parks and Recreational Facilities, 3.17, Transportation, 3.18, Tribal Cultural Resources, 3.19, Utilities and Service Systems, 3.20, Wildfire, and 5.0, Other CEQA Considerations, the proposed Project would have less than significant operational impacts, including to Los Angeles State Historic Park. Refer to Responses PH238-2 and PH238-3 regarding the footprint of the proposed Project in the Los Angeles State Historic Park.

Comment PH283-2 This aerial road to the park will disrupt as much as an actual road would with at least 10% of the park under the constant traffic of gondola cars,

Response PH283-2 As discussed in Section 2.0, Project Description, Section 3.16, Parks and Recreational Facilities, and Section 5.0, Other CEQA Considerations, of the Draft EIR, the Chinatown/State Park Station would have a footprint of 2,195 square feet in the Los Angeles State Historic Park (~.1% of the total 32-acre park), and the station canopy would have an overhang of 9,320 square feet over the park. The proposed Project alignment crosses over the westernmost edge of the Los Angeles State Historic Park, adjacent to the existing Metro L Line (Gold) and the associated overhead catenary system. The proposed Project's required aerial clearance would be located above approximately 59,470 square feet of the total 32-acre park, plus an Additional Separation Buffer. With the required clearances and the height at which the cabins would cross over the Los Angeles State Historic Park, the ability to use the vast majority of the Park for kite flying, special events (e.g., concerts, craft fairs, partnership events, 5K/10K runs, workshops, cultural festivals, and the farmers' market), and other passive recreational opportunities (e.g., picnicking, jogging,

walking, and informal play) would not be affected by the proposed Project. Refer to Response S2-4 for additional discussion regarding the ability of uses to continue at the Park. Further, through collaboration with State Parks, the proposed Project has been designed to provide additional benefits to the Los Angeles State Historic Park, including pedestrian improvements between Metro's L Line (Gold) and the park, and integration of the Chinatown/State Park Station into the southern boundary of the park with hardscape and landscape enhancements, a mobility hub, and other park amenities including concessions, restrooms, and a breezeway connecting the concessions and restrooms. Additionally, refer to Topical Response M, Comparable Urban Aerial Systems, discussing how, like the proposed Project, comparable aerial transit systems in cities around the world are integrated with their surrounding urban environments. In particular, comparable aerial transit systems in other locations demonstrate that such systems can operate safely, efficiently, and in concert with nearby residential and open space uses, including parks and other recreational facilities.

Comment PH283-3 the thoughtfully designed sense of tranquility and open space will be degraded and the park's open skies and magnificent views of the downtown skyline, [Legion] Park and Broadway Viaduct forever altered.

Response PH283-3 Refer to Section 3.01, Aesthetics, and Appendix C, Visual Impact Assessment, of the Draft EIR, for discussion of the aesthetic impacts of the proposed Project, which would be less than significant, including at the Park. Regarding scenic vistas, as analyzed in the Draft EIR, there are no designated scenic vistas present in the area of potential impact. However, the Project area provides views that are considered scenic by certain viewers, including views of the downtown Los Angeles skyline, LAUS, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium, and the mountains that make up the Transverse Ranges, including the San Gabriel and San Bernardino Mountains. Specifically, as it pertains to Los Angeles State Historic Park, the open views of the Park, as well as the view of the downtown Los Angeles skyline, make the Park "visually memorable." As discussed in Section 3.01, Aesthetics, and Appendix C, Visual Impact Assessment, views considered to be scenic locally would not be substantially impacted. In addition, while views from the Park toward the surrounding existing urban landscape exhibit various visual values, and the proposed Project would not substantially impact these views as shown in the simulated views. As discussed in Section 3.01, the Chinatown/State Park Station location in the southernmost portion of the park would not block any designated scenic vistas, alter scenic resources, or block panoramic views, including views of Elysian Park and the Broadway Bridge to the north. Therefore, the proposed Project would not block any designated scenic views, alter a designated scenic area, or block panoramic views, and impacts to scenic or panoramic views would be less than significant. In addition, refer to Appendix H.2, Supplemental KOPs in Response to Comments, for additional visual simulations of the proposed Project, including views from a cabin over the park, providing a new and unique perspective of the park, and

its surroundings, including the Roundhouse Observation Deck and the exposed Zanja Madre, which is currently not visually apparent from inside the park.

Comment PH283-4 These park impacts have been severely downplayed or glossed over in the draft EIR, so we request any use of this hard-fought public park, land airways [inaudible] for private enterprise.

Response PH283-4 Refer to Response PH238-2 and PH238-3 regarding the Draft EIR's discussion of the proposed Project's impacts to the Los Angeles State Historic Park. Refer to Comment S2 and the responses therein regarding the Los Angeles State Historic Park. The fundamental goals of environmental review under CEQA are to provide information and allow for a meaningful opportunity for the public to participate in the environmental review process. The Draft EIR provided sufficient information in order for the public and decisionmakers to meaningfully evaluate the proposed Project's potential environmental impacts.

Comment PH283-5 And despite the traffic study, there are 3,000 cars that the planners hope will be eliminated at Dodger Stadium we have little faith about. We feel that they would just be re-routed to the park and surrounding neighborhoods, just further compromising park users' access and experience of this treasured urban greenspace. Thank you very much.

Response PH283-5 Refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gas emissions through reduced vehicular travel. Refer to Topical Response B, Ridership Model; Queueing at Stations and Pre-game and Post-game Transportation, for discussion of the proposed Project's ridership model which is based on extensive data sources and assumptions validated by data. Traffic congestion is not required to be analyzed under CEQA in the Draft EIR following the implementation of Senate Bill 743, which designated "vehicle miles traveled" as the method for assessing transportation impacts on the environment for CEQA projects. Refer to the Los Angeles Aerial Rapid Transit Project Non-CEQA Transportation Assessment, which found that there could be localized increases in traffic at the intersections closest to the proposed Project's Alameda Station and Chinatown/State Park Station due to some riders choosing to park and ride or take Uber/Lyft and recommended the proposed Project work with Metro to identify a transit partnership for the proposed Project riders to further encourage them to take transit, walk, or bike to the proposed Project's stations.

Comment Letter PH284 – Bill Chen

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH284

Comment PH284-1 Can you hear me?

Thank you. I am not at my computer. I want to say that the park should have its own autonomy and that there should be no compromise from the original park design tree cutting and/or taking of any of the land.

Response PH284-1 As discussed in Section 2.0, Project Description, Section 3.16, Parks and Recreational Facilities, and Section 5.0, Other CEQA Considerations, of the Draft EIR, the Chinatown/State Park Station would have a footprint of 2,195 square feet in the Los Angeles State Historic Park (~.1% of the total 32-acre park), and the station canopy would have an overhang of 9,320 square feet over the park. The proposed Project alignment crosses over the westernmost edge of the Los Angeles State Historic Park, adjacent to the existing Metro L Line (Gold) and the associated overhead catenary system. The proposed Project's required aerial clearance would be located above approximately 59,470 square feet of the total 32-acre park, plus an Additional Separation Buffer. With the required clearances and the height at which the cabins would cross over the Los Angeles State Historic Park, the ability to use the vast majority of the Park for kite flying, special events (e.g., concerts, craft fairs, partnership events, 5K/10K runs, workshops, cultural festivals, and the farmers' market), and other passive recreational opportunities (e.g., picnicking, jogging, walking, and informal play) would not be affected by the proposed Project. Refer to Response S2-4 for additional discussion regarding the ability of uses to continue at the Park. The proposed Project would implement BIO-PDF-F and adhere to ordinances and requirements applicable to tree replacement, based on the corresponding jurisdiction of the property where each tree is located. As discussed on page 3.04-23, in Section 3.04, Biological Resources of the Draft EIR, and in Appendix K.1, Updated Tree Report, and in Appendix G, Supplemental Biological Resources Report, of this Final EIR, the removal of the 75 trees within Los Angeles State Historic Park would require a permit or approval from the California Department of Parks and Recreation, and all existing trees required to be removed on California Department of Parks and Recreation property would be replaced at a minimum 1:1 ratio within the Park or as agreed to as part of the approvals required for implementation of the proposed Project from the Department. In addition, 6 trees within the public ROW located near the Los Angeles State Historic Park would be replaced at a ratio specified by the Urban Forestry Division, typically, at a 2:1 ratio. Refer to Section 3.11, Land Use and Planning, of the Draft EIR, for a discussion of the proposed Project's consistency with the Los Angeles State Historic Park General Plan. As discussed therein, the proposed Project's Chinatown/State Park Station would be consistent with the goals and

guidelines of the Los Angeles State Historic Park General Plan, including those that focus on recreation, aesthetics, interpretation, and access and circulation and thus would not conflict with its goals, policies, and objectives that were adopted for the purpose of avoiding or mitigating an environmental effect. However, State Parks considers there to be an inconsistency between the proposed Project and the Los Angeles State Historic Park General Plan and therefore a potentially significant impact because the Los Angeles State Historic Park General Plan does not identify transit as a use for the Park. Mitigation Measure LUP-A would be implemented to require the proposed Project to obtain a Los Angeles State Historic Park General Plan Amendment. The General Plan Amendment is subject to the review and approval by the State Park Commission, which retains its independent authority related to the proposed Project. With implementation of Mitigation Measure LUP-A, impacts related to inconsistencies with the Los Angeles State Historic Park General Plan would be reduced to a less than significant level. Refer to Topical Response F, Los Angeles State Historic Park, for additional discussion of the Los Angeles State Historic Park General Plan Amendment.

Comment PH284-2 That said is one thing, but traffic with MTA and I understand events for athleticism, it's just discretionary money that is more important for MTA to look at transportation when people are actually working in downtown [inaudible] into the downtown.

I'm talking about the intersection of Sunset and [inaudible], where the central city West specific plan says there should be widening of [inaudible] onto Sunset. And I'm talking about the 101 freeway that needs to have more lanes. If it has more lanes, it would help with commuter traffic going in and out of downtown.

Response PH284-2 Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at Los Angeles Union Station (LAUS), Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Dodger Stadium draws large regional crowds, with approximately 100 baseball games and other events each year, but there are no permanent transit connections to the venue. The vast majority of visitors drive their personal vehicles to access the venue. These vehicles create congestion on the surface streets leading up to and around Dodger Stadium, including Sunset Boulevard/Cesar E. Chavez from LAUS and throughout the surrounding communities. Given the capacity of the proposed Project's system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system. This would reduce vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, and Section 4.0, Costs and Financing, of the Final EIR, which provide detail as to the proposed Project's capital, operation, and maintenance

costs and planned sources of funding, recognizing that the proposed Project's capital funding would primarily be sourced from bond financing serviced by revenue from the proposed Project. No public sources of funding have been sought or committed to the proposed Project.

Comment PH284-3 And it would also help with moving transportation into Dodger Stadium by way of traffic south of Sunset on [inaudible] going in and out on Sunset Boulevard by way of [inaudible] and to [inaudible] Way up to the mesa.

Response PH284-3 Refer to Response PH284-2 for discussion of the need for the proposed Project. Refer to Topical Response H, The Draft EIR Considered an Appropriate Range of Alternatives and Design Options, for discussion of how improving the connection between LAUS and Dodger Stadium via the proposed Project would provide the quickest, most frequent, and highest capacity transit connection for the greatest number of riders traveling to Dodger Stadium to have the most travel time competitive transit trips from more locations in the region.

Comment PH284-4 And I also wonder why people don't talk about having free shuttle from the Chinatown Go station to go up to the [inaudible] because there is busses from Union Station. Why not from Chinatown as well? Thank you.

Response PH284-4 Refer to Topical Response C, Project Features, for discussion of how the proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan. Refer to Topical Response H, The Draft EIR Considered an Appropriate Range of Alternatives and Design Options, for discussion of how the Transportation Systems Management Alternative for an enhanced Dodger Stadium Express is unlikely to achieve the same level of ridership as the proposed Project, and otherwise fails to meet most of the Project Objectives which seek to achieve the proposed Project's underlying purpose of providing a permanent direct transit connection between LAUS and the Dodger Stadium property and improving connectivity for surrounding communities, including Chinatown, Mission Junction, Elysian Park, Solano Canyon, and the Los Angeles State Historic Park. As discussed in Topical Response H, a system of buses from numerous remote locations throughout the Los Angeles region to and from Dodger Stadium events would require a substantial increase in the number of buses which, similar to expanding the fleet for an expanded Dodger Stadium Express service, would result in a fleet of buses that would either be underutilized most of the time or regular Metro bus service that utilizes these vehicles would be disrupted every time a Dodger game or event at the stadium is held. Such a service would also incur substantial costs in paid time and mileage for driving empty buses out to the remote locations before a game and back from the remote locations after a game and paid idle time during the game. Buses from a variety of remote locations would also need to travel in rush hour congestion to get to Dodger Stadium. With limited regional facilities that provide bus

only lanes that these services could utilize, they would not materially improve transit travel time compared with driving. For example, the current Dodger Stadium Express service from South Bay serves a broad area of southern Los Angeles County at stations spread across eight miles, is free, and travels on a priority lane within the I-110 freeway median for most of its trip, but the South Bay Dodger Stadium Express carried an average of only 415 passengers per game in 2019, which is substantially lower than the ridership of 1,895 riders per game on the LAUS Dodger Stadium Express.

Comment Letter PH285 – Elias Garcia

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH285

Comment PH285-1 Good evening. My name's Elias Garcia. On behalf of the Los Angeles Area Chamber of Commerce, we'd like to offer our strong support for this project and join others on this call that have supported us, have stated their support. The Rapid Transit Project is a transformative project that offers the capacity to move approximately 5,000 people per hour per direction, using a quiet, safe, environment-friendly and a proven zero-emission technology.

It will connect such communities as [inaudible] Union Station, Chinatown, Mission Junction to Newark, Solano Canyon, while also providing access to the L.A. State Historic Park, the LA River and [inaudible] Park. Of course, this connectivity is great, but it also means this project also means better health outcomes for these communities as a result of lower pollution and fewer congestion.

So we urge to move this project forward. Thank you.

Response PH285-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS, Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Dodger Stadium draws large regional crowds, with approximately 100 baseball games and other events each year, but there are no permanent transit connections to the venue. The vast majority of visitors drive their personal vehicles to access the venue. These vehicles create congestion on the surface streets leading up to and around Dodger Stadium, including Sunset Boulevard/Cesar E. Chavez from LAUS and throughout the surrounding communities. Given the capacity of the proposed Project's system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system. This would reduce vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days. The proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan.

Comment Letter PH286 – Phyllis Ling

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH286

Comment PH286-1 MS. LING: Hello

MS. SISCO: Hi, Phyllis. We can hear you.

MS. LING.: Okay, hi, my name is Phyllis Ling. I'm a resident by the Broadway Junction. I'm completely opposed to this project. It makes no sense. Logistically, it shifts parking and traffic further into Chinatown and this project would dangle less than 40 feet above my property, which invades my air rights

Response PH286-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Traffic congestion is not required to be analyzed under CEQA in the Draft EIR following the implementation of Senate Bill 743, which designated "vehicle miles traveled" as the method for assessing transportation impacts on the environment for CEQA projects. Refer to the *Los Angeles Aerial Rapid Transit Project Non-CEQA Transportation Assessment*, which found that there could be localized increases in traffic at the intersections closest to the proposed Project's Alameda Station and Chinatown/State Park Station due to some riders choosing to park and ride or take Uber/Lyft and recommended the proposed Project work with Metro to identify a transit partnership for the proposed Project riders to further encourage them to take transit, walk, or bike to the proposed Project's stations. As discussed in Section 2.0, Project Description, of the Draft EIR, the proposed Project was chosen as it maximizes alignment along the public ROW and publicly owned property and minimizes aerial rights over private properties, taking into account existing and future adjacent land uses. As described throughout the Draft EIR, the proposed Project would require aerial easements for certain properties along the proposed Project (see Sections 2.5 of Section 2, Project Description and 3.11.1, Figure 6-12 of Section 3.11, Land Use and Planning). How the Project Sponsor acquires the aerial rights for the proposed Project is beyond the scope of the Draft EIR. Refer to Topical Response M, Comparable Urban Aerial Transit Systems, discussing how, like the proposed Project, comparable aerial transit systems in cities around the world are integrated with their surrounding urban environments. In particular, comparable aerial transit systems in other locations demonstrate that such systems can operate safely, efficiently, and in concert with nearby residential and open space uses, including parks and other recreational facilities. The proposed Project would be located in a densely-populated, urban environment surrounded by a variety of commercial, industrial, and residential development types. In this type of environment, it is common for public transportation, such as Metro's light rail, to be located adjacent to residential uses and modern aerial transit systems in other cities, including Portland, Oregon and New

York City, operate adjacent to residential uses. Nevertheless, as discussed in Topical Response J, Gondola Design and Operations and Section 2.0, Project Description, of the Draft EIR, cabin windows can be equipped with privacy glass that can become opaque while adjacent to sensitive views, and the proposed Project would work with stakeholders adjacent to the proposed Project alignment to identify locations where the use of privacy glass would be warranted. Considerations as to the locations along the proposed Project alignment where the privacy glass could be activated include the subject adjacent sensitive views and the vertical and horizonal distance between the proposed Project cabins and the adjacent sensitive views.

Comment PH286-2 The noise study is vague and needs some more details. Gondola stations and junctions are noisy and you're talking about running this 18 hours per day and then doing maintenance and testing during the other 6 hours. You don't even name the gondola system that was used to take measurements to estimate the noise that the stations would cause.

Response PH286-2 Refer to Section 3.13, Noise, and Appendix M, Noise and Vibration Technical Report, of the Draft EIR, for discussion of the operational noise impacts from the proposed Project. To provide a conservative operational noise analysis, the worst-case scenario was selected which represents a Dodger Game Day, with the highest line speed, cabins per hour, and queuing numbers, and with nighttime operations. Tables 3.13-22, 3.13-23, and 3.13-24 on pages 3.13-53 to 3.13-57 of Section 3.13, Noise, of the Draft EIR demonstrate that operational noise impacts would be less than significant at all receptor locations based on the L.A. CEQA Thresholds Guide, FTA, and LAMC. In addition to the primary operational noise levels evaluated in the Draft EIR, the noise generated inside cabins was also evaluated separately, as demonstrated on Table 3.13-25 on page 3.13-57 of the Draft EIR. The cabin noise would not result in a contribution to cumulative noise levels because NOI-PDF-A ensures that the cabins would be designed such that they would generate noise levels of at least 10 dBA below the current background levels. Table 3.13-26 summarizes operational noise impacts for the worst-case operational scenario which includes potential impacts from cabin noise as the gondolas travel between and within the stations, towers, and junction. Operational noise impacts would be less than significant. Refer to Section 2.0, Project Description, of the Draft EIR and Topical Response J, Gondola Design and Operations, of the Final EIR, for discussion of the safety features of the proposed Project and how maintenance would be performed by the operator and would include daily observation of the overall system as part of the startup routine.

Refer to Section 2.0, Project Description, of the Draft EIR and Topical Response J, Gondola Design and Operations, of the Final EIR, for discussion of how maintenance would include observation of the overall system as part of the startup routine for system safety. Maintenance for the proposed Project would include maintenance of cabins, daily inspections, minor repairs, and major repairs. The proposed Project cabins would be primarily serviced overnight at the subterranean cabin maintenance

area below the Dodger Stadium Station. Maintenance activities in the Broadway Junction are expected to be limited primarily to maintenance of the Broadway Junction itself and would include daily inspections, minor repairs, and major repairs. Daily inspections would be conducted by the system operator and would not be associated with any noise generating equipment. Periodically, minor repairs may be needed based on these daily inspections. Work associated with minor repairs would be limited. Any major repairs to or replacement of large capital equipment at the Broadway Junction would be performed during planned outages and would occur on an infrequent basis. For instance, the drive motor is estimated to have a ten-year or greater life cycle and would be replaced as part of a planned outage.

Refer to Topical Response P, Gondola System Noise Modeling, of the Final EIR, for discussion of the noise model used to predict noise levels from operations of the proposed Project and how use of the Rossi Article's equations to evaluate the proposed Project's operational noise was appropriately validated and has been shown to result in a conservative assessment of the noise generated by the proposed Project. The reference noise levels in Appendix L, 3S Sound Measurements Memo, of the Final EIR, were taken in Tyrol, Austria at the Stubai Glacier.

Comment PH286-3 There's no discussion of the differences between these systems the drive [inaudible] pulling the gondolas all the way from Union Station is in a junction across the street from my house. So that's going to have a huge impact.

Response PH286-3 Refer to Section 3.13, Noise, and Appendix M, Noise and Vibration Technical Report, of the Draft EIR, for discussion of the construction and operational noise impacts from the proposed Project. Operational noise impacts would be less than significant, including from Broadway Junction. Refer to Response PH286-2 for discussion of the noise model used to predict noise levels from the operation of the proposed Project and how the reference noise levels in Appendix L, 3S Sound Measurements Memo, of the Final EIR, were taken in Tyrol, Austria at the Stubai Glacier. The Evaluation of operational noise impacts in the Draft EIR appropriately relied on the Rossi Article because a 3S gondola system similar to the proposed Project, which includes the system components of the Broadway Junction, was utilized in the assessment of noise impacts to validate the Rossi Article equations. Based on the similarities between the 3S gondola system for the proposed Project, and the 3S gondola system in Tyrol, including the same speed as the proposed Project, a similar cabin capacity, and similar system mechanics. Using the Tyrol system to validate the Rossi Article equations is appropriate and no adjustment to the noise predictions is needed to use the Tyrol system to validate the Rossi Article. Like the Broadway Junction, the system in Tyrol includes both a drive bullwheel and a return bullwheel. Accordingly, the assumptions in the Draft EIR conservatively reflect noise associated with both a drive bullwheel and a return bullwheel at all station and junction locations.

Comment PH286-4 There's also hardly any disclosure about how this project would be operated and implemented, which would impact ridership and greenhouse gas emissions

Response PH286-4 Refer to Section 2.0, Project Description, of the Draft EIR and Topical Response J, Gondola Design and Operations, of the Final EIR, for discussion of the proposed Project's design and operations, including discussion of the safety, privacy, and operations features of the proposed Project. Refer to Topical Response B, Ridership Model; Queueing at Stations and Pre-game and Post-game Transportation, for discussion of the proposed Project's ridership model which is based on extensive data sources and assumptions validated by data, and the management of queuing at stations, and pre-game and post-game transportation. Refer to Section 2.0, Project Description, of the Draft EIR, for discussion of how the proposed Project would operate at zero emissions, with the electrical power for the proposed Project supplied by the City of Los Angeles Department of Water and Power (LADWP) through the utility's Green Power Program, pursuant to GHG-PDF-A. Refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gas emissions through reduced vehicular travel.

Comment PH286-5 Security management of cues and crowd control are hardly discussed at maximum capacity. People could have to wait in line for 1 to 2 hours, and you're relying on a magical ticket reservation system to even out the crowds. You need to explain how that works.

Response PH286-5 Refer to Section 2.0, Project Description, of the Draft EIR and Topical Response J, Gondola Design and Operations, of the Final EIR for discussion of how the proposed Project is equipped with security features. For example, to provide added security to system passengers, each gondola cabin would have a security camera on board with a feed to the control room, as well as a "push to talk" button, which would open two-way communications with the control room. The control room would be able to address all cabins at once, or an individually selected cabin. Control room operators would have the ability to contact local security, law enforcement or other emergency response agencies as needed. The Emergency Operations Plan for the proposed Project would also include emergency response protocols and safety procedures developed in conjunction with the operator, system provider, and local authorities, and would address operational changes and communication protocols required in response to a range of potential emergencies such as a medical emergency in a cabin or in a station or a fire near the alignment. The plan would consider a wide range of scenarios for which default operational responses would be determined. In addition, the plan would include communication protocols with local authorities for further instruction and coordination. Refer to Topical Response B, Ridership Model; Queueing at Stations and Pre-game and Post-game Transportation, for discussion of how queues would be managed by efficient vertical circulation and by staff at the station and due to the nature of queue formation, the pre-game/event passenger

queues at the Alameda Station in 2026 are estimated to be largely contained on the platform and only minimally extend out into the planned LAUS Forecourt. More active queue management would become more frequently needed at Alameda Station as ridership increases toward the 2042 ridership projection of 10,000 riders, but even with the maximum queue length, a person at the end of the line would wait for an estimated maximum of seven minutes before boarding the gondola cabin. Others would wait shorter durations. Approximately 15 percent of proposed Project riders to Dodger Stadium (900 passengers in 2026 and 1,500 passengers in 2042) are expected to board the system before a game or event at the Stadium at the Chinatown/State Park Station, and queues would therefore be accommodated within the Station, given this lesser boarding demand and the larger queuing capacity at the Station. Post-game queues at Dodger Stadium were estimated based on assumptions about the departure patterns and estimates of walk times from the various seating areas within the stadium. Those seated the furthest away from the Dodger Stadium Station would take more time to arrive at the Station, much like how it is currently for passengers riding the Dodger Stadium Express. In addition, passengers who would rather not join the line immediately to board the proposed Project in the post-game period could visit some of the entertainment amenities at the stadium, including at the Centerfield Plaza. The post-game/event queue for the proposed Project would be constantly moving as cabins would depart every 23 seconds.

The purpose of the timed ticket reservation system would be to reduce queue lengths and waiting times for riders waiting to board the proposed Project at the Alameda Station or the Chinatown/State Park Station before a large game or event at Dodger Stadium by managing arrival times. Potential elements of such a system could include: the timed arrival reservations would be free; the reservation system would be online; for those without online access, kiosks could be provided at LAUS, the Chinatown/State Park Station, and/or at Dodger Stadium; reservations would be issued for 30-minute arrival periods and the user would pick a time and the boarding station; the timed ticket reservations would be transferable similar to how game and event tickets themselves are transferable; the timed tickets would be checked by proposed Project attendants at the entrance to the line; those who arrive earlier than their arrival window would be fed into the boarding line when possible in advance of their arrival window or wait until their arrival window; those who arrive later than their arrival window would be held and fed into the boarding line when possible; incentives could potentially be offered to encourage choice of earlier windows; and there would be no exclusive access to preferred arrival windows to particular groups of people. The timed ticket reservation system would likely not be used post-game. The system will be more fully developed prior to proposed Project operations.

Comment PH286-6 I don’t even have time to get into the flight from advertisements constantly streaming over our neighborhoods.

Response PH286-6 Refer to Topical Response K, Signage and Lighting, for discussion of how the proposed Project's Sign Concept Plan included at Appendix B of the Lighting Study, which is included in Appendix C, Visual Impact Assessment, of the Draft EIR, provides that across the entire proposed Project, including stations, the junction, towers, and cabins, the proposed Project is proposing static signage and digital signage. The digital signage would be limited to the Alameda Station and the Dodger Stadium Station. No digital signage is proposed on the exterior of the cabins. Signage proposed for the exterior of the cabins is static non-illuminated naming rights signage. In addition to the naming rights signage, the proposed Project is proposing that two cabins be designated for the display of community programming graphics and that one cabin be designated for the display of artwork by local arts collaborators. Signage would be designed to complement the proposed Project design and use and would be consistent with the existing urban condition, as illustrated in Appendix H.2, Supplemental KOPs in Response to Comments, of the Final EIR, which includes KOPs updated in part to incorporate the proposed Project's signage program, as depicted in the signage package included in the Lighting Study. There is existing signage in the Project area, and the proposed Project signage would not substantially degrade the existing visual character or quality of public views. Instead, the proposed Project's design ensures that signage would enhance the public realm. Specifically, signage for the proposed Project would be architecturally integrated into the design of the proposed Project system, including its stations, the junction, towers, and cabins, and would be designed consistent with applicable Metro, City, and State approval requirements.

Comment PH286-7 There's also cutting down 50-foot trees and oak trees in the park.

Response PH286-7 Refer to Section 3.04, Biological Resources, and Appendix E, Biological Resources Assessment, of the Draft EIR and Appendix G, Supplemental Biological Resources Report, of the Final EIR. The proposed Project would implement BIO-PDF-F and adhere to ordinances and requirements applicable to tree replacement, based on the corresponding jurisdiction of the property where each tree is located. As discussed on page 3.04-23, in Section 3.04, Biological Resources, of the Draft EIR, and in Appendix K.1, Updated Tree Report, and in Appendix G, Supplemental Biological Resources Report, of this Final EIR, the removal of the 75 trees within Los Angeles State Historic Park would require a permit or approval from the California Department of Parks and Recreation, and all existing trees required to be removed on California Department of Parks and Recreation property would be replaced at a minimum 1:1 ratio within the Park or as agreed to as part of the approvals required for implementation of the proposed Project from the Department. In addition, 6 trees within the public ROW located near the Los Angeles State Historic Park would be replaced at a ratio specified by the Urban Forestry Division, typically, at a 2:1 ratio.

Comment PH286-8 And this faulty parking study that includes a lot of parking that isn't even open until, such as parking at the state park, which closes at sunset. So how are people going to get their cars out of the state park parking lot?

Response PH286-8 Parking is not required to be analyzed under CEQA or the Transportation Assessment Guidelines ("TAG"). Nevertheless, the Parking Study was prepared to provide additional information to the community and decision makers about existing parking conditions and the proposed Project's potential to effect parking conditions around the Alameda Station and Chinatown/State Park Station. As recommended in the Parking Study, the Project Sponsor will prepare, in collaboration with the City, and with robust feedback from community stakeholders, a parking management plan. The City would implement any on-street parking management strategies identified. Anyone parking in a parking lot is subject to the operating hours established by the operator of the parking lot.

Comment PH286-9 And then also, I want to say that the pedestrian bridge into the park from Broadway, it shouldn't be held hostage to this project.

Response PH286-9 As discussed in Topical Response C, Project Features, while not proposed as part of the proposed Project, the Draft EIR included as Design and Use Option E an analysis of the State Park's proposed bike and pedestrian bridge. The bridge would provide important connections for students at Cathedral High School, as well as between the Park and the Chinatown, Savoy, and Solano Canyon neighborhoods to support convenient access for the community. The analysis serves to provide environmental clearance for the bike and pedestrian bridge as a benefit to the Los Angeles State Historic Park, as while the bike and pedestrian bridge was mentioned in the Los Angeles State Historic Park General Plan and studied in the State Park's Bridge Feasibility Study, the bike and pedestrian bridge was never environmentally cleared. Support for the Los Angeles State Historic Park bike and pedestrian bridge would otherwise be provided as part of the proposed Project. Accordingly, the proposed Project is furthering the bike and pedestrian bridge by providing the necessary environmental clearance and support for the bridge.

Comment PH286-10 And then I think an option to get to Dodger Stadium is all fine and good, but not when it sucks away resources from all other options that we're not even discussing. This would be a tourist trap. There should be additional studies. The Dodger Stadium Express from other locations, such as Pasadena.

Response PH286-10 Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS, Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Dodger Stadium draws large regional crowds, with approximately 100 baseball games and other events each year, but

there are no permanent transit connections to the venue. The vast majority of visitors drive their personal vehicles to access the venue. These vehicles create congestion on the surface streets leading up to and around Dodger Stadium, including Sunset Boulevard/Cesar E. Chavez from LAUS and throughout the surrounding communities. Given the capacity of the proposed Project's system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system. This would reduce vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, and Section 4.0, Costs and Financing, of the Final EIR, which provide detail as to the proposed Project's capital, operation, and maintenance costs and planned sources of funding, recognizing that the proposed Project's capital funding would primarily be sourced from bond financing serviced by revenue from the proposed Project. No public sources of funding have been sought or committed to the proposed Project. Refer to Topical Response H, The Draft EIR Considered an Appropriate Range of Alternatives and Design Options, for discussion of how the Transportation Systems Management Alternative for an enhanced Dodger Stadium Express is unlikely to achieve the same level of ridership as the proposed Project, and otherwise fails to meet most of the Project Objectives which seek to achieve the proposed Project's underlying purpose of providing a permanent direct transit connection between LAUS and the Dodger Stadium property and improving connectivity for surrounding communities, including Chinatown, Mission Junction, Elysian Park, Solano Canyon, and the Los Angeles State Historic Park. As discussed in Topical Response H, a system of buses from numerous remote locations throughout the Los Angeles region to and from Dodger Stadium events would require a substantial increase in the number of buses which, similar to expanding the fleet for an expanded Dodger Stadium Express service, would result in a fleet of buses that would either be underutilized most of the time or regular Metro bus service that utilizes these vehicles would be disrupted every time a Dodger game or event at the stadium is held. Such a service would also incur substantial costs in paid time and mileage for driving empty buses out to the remote locations before a game and back from the remote locations after a game and paid idle time during the game. Buses from a variety of remote locations would also need to travel in rush hour congestion to get to Dodger Stadium. With limited regional facilities that provide bus only lanes that these services could utilize, they would not materially improve transit travel time compared with driving. For example, the current Dodger Stadium Express service from South Bay serves a broad area of southern Los Angeles County at stations spread across eight miles, is free, and travels on a priority lane within the I-110 freeway median for most of its trip, but the South Bay Dodger Stadium Express carried an average of only 415 passengers per game in 2019, which is substantially lower than the ridership of 1,895 riders per game on the LAUS Dodger Stadium Express. Improving the connection between LAUS and Dodger Stadium via the proposed Project would provide the quickest, most frequent, and highest capacity transit connection for the greatest number of riders traveling to

Dodger Stadium to have the most travel time competitive transit trips from more locations in the region.

Comment Letter PH287 - Tabitha

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH287

Comment PH287-1 Hi, my name is Tabitha, I'm an organizer with Power Out Way. We do organizing in this area, especially around Chinatown. I have a few issues with the draft EIR and I'm completely opposed to the project.

Response PH287-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. This comment provides a general introduction to the comments raised in this letter. Responses to the comments contained in this letter are provided below in Responses PH287-2 through PH287-9.

Comment PH287-2 The first one being that the EIR studies are routinely conducted by outside entities that are selected by the developers of the project. [inaudible] disclosure, public input in deciding who's going to conduct the EIR.

Response PH287-2 Refer to Section 8.0, List of Preparers, of the Draft EIR for list of preparers for the Draft EIR. AECOM was selected from Metro's roster of environmental consultants.

Comment PH287-3 So it's very convenient for them, that they found everything to be less than significant.

Response PH287-3 Consistent with the requirements of CEQA, Metro has and will independently review, evaluate, and exercise its judgment over the proposed Project's environmental review and EIR. The Draft EIR that was circulated reflects Metro's independent judgment. The Draft EIR includes 7,877 pages of detailed analysis from experts in their respective fields, intended to provide the public and decision makers the information that they need to meaningfully consider the proposed Project's potential environmental impacts, as well as a shorter executive summary that explains the analysis and conclusions in clean and simple language. Accordingly, the Draft EIR more than adequately complies with CEQA's requirements for a Draft EIR. Additionally, Metro hired Stantec to peer review the transportation analyses conducted for the proposed Project, including Section 3.17, Transportation, and Appendix N, Transportation Appendices, of the Draft EIR.[1] Stantec is an internationally-respected global design and delivery firm that provides transportation engineering and planning services among its many service lines. Stantec concluded that the proposed Project ridership forecasting model and the model inputs and data sources were credible, defendable, and appropriate to use for the analysis and that they agreed with the ridership forecasts in the Draft EIR.

Comment PH287-4 Second is it's unclear to me that this project will reduce vehicle miles traveled. It seems like we'll just displace those vehicle miles traveled to Union Station and

[1] Stantec. 2023. Memo to Holly Rockwell Regarding Los Angeles Aerial Rapid Transit (LA ART) Project Transportation Analysis Peer Review.

Chinatown Station. Chinatown is the neighborhood with the lowest [inaudible] after Skid Row. And this community cannot become a giant parking lot.

Response PH287-4 Refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gas emissions through reduced vehicular travel. Refer to Topical Response B, Ridership Model; Queueing at Stations and Pre-game and Post-game Transportation, for discussion of the proposed Project's ridership model which is based on extensive data sources and assumptions validated by data. Traffic congestion is not required to be analyzed under CEQA in the Draft EIR following the implementation of Senate Bill 743, which designated "vehicle miles traveled" as the method for assessing transportation impacts on the environment for CEQA projects. Refer to the Los Angeles Aerial Rapid Transit Project Non-CEQA Transportation Assessment, which found that there could be localized increases in traffic at the intersections closest to the proposed Project's Alameda Station and Chinatown/State Park Station due to some riders choosing to park and ride or take Uber/Lyft and recommended the proposed Project work with Metro to identify a transit partnership for the proposed Project riders to further encourage them to take transit, walk, or bike to the proposed Project's stations. Parking is not required to be analyzed under CEQA or the Transportation Assessment Guidelines ("TAG"). Nevertheless, the Parking Study was prepared to provide additional information to the community and decision makers about existing parking conditions and the proposed Project's potential to effect parking conditions around the Alameda Station and Chinatown/State Park Station. As recommended in the Parking Study, the Project Sponsor will prepare, in collaboration with the City, and with robust feedback from community stakeholders, a parking management plan. The City would implement any on-street parking management strategies identified.

Comment PH287-5 Citizens need actual services. During the land use and planning analysis, they talk about how this will remove first the last mile transit. I don't see how that's possible. People are still going to have to drive to the gondola in order to take it. So that is, I don't see how that makes any sense.

Response PH287-5 Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS, Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Dodger Stadium draws large regional crowds, with approximately 100 baseball games and other events each year, but there are no permanent transit connections to the venue. The vast majority of visitors

drive their personal vehicles to access the venue. These vehicles create congestion on the surface streets leading up to and around Dodger Stadium, including Sunset Boulevard/Cesar E. Chavez from LAUS and throughout the surrounding communities. Given the capacity of the proposed Project's system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system. This would reduce vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days. The proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan. Refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gas emissions through reduced vehicular travel.

Comment PH287-6 I'm also opposed to giving any sort of exceptions to the general plan for the park to cut down the trees.

Response PH287-6 The proposed Project would implement BIO-PDF-F and adhere to ordinances and requirements applicable to tree replacement, based on the corresponding jurisdiction of the property where each tree is located. As discussed on page 3.04-23, in Section 3.04, Biological Resources of the Draft EIR, and in Appendix K.1, Updated Tree Report, and in Appendix G, Supplemental Biological Resources Report, of this Final EIR, the removal of the 75 trees within Los Angeles State Historic Park would require a permit or approval from the California Department of Parks and Recreation, and all existing trees required to be removed on California Department of Parks and Recreation property would be replaced at a minimum 1:1 ratio within the Park or as agreed to as part of the approvals required for implementation of the proposed Project from the Department. In addition, 6 trees within the public ROW located near the Los Angeles State Historic Park would be replaced at a ratio specified by the Urban Forestry Division, typically, at a 2:1 ratio. Refer to Section 3.11, Land Use and Planning, of the Draft EIR, for a discussion of the proposed Project's consistency with the Los Angeles State Historic Park General Plan. As discussed therein, State Parks has determined that the proposed Project would be inconsistent with the Los Angeles State Historic Park General Plan because the identified land uses in the General Plan's Preferred Park Concept Elements did not contemplate a transit station like the proposed Project's Chinatown/State Park Station. State Parks considers this inconsistency a potentially significant impact. Therefore, Mitigation Measure LUP-A would be implemented to require the proposed Project to obtain an amendment to the Los Angeles State Historic Park General Plan. The General Plan Amendment is subject to the review and approval by the State Park Commission, which retains its independent

authority related to the proposed Project. Refer to Topical Response F, Los Angeles State Historic Park, for a discussion of the Los Angeles State Historic Park General Plan Amendment.

Comment PH287-7 As several members of the communities have voiced, I don't know if you know, but Chinatown has an increasing aging community and the construction impacts, I don't know if they were calculated for average people of like average age or if they're calculated, considering that this elderly community has special needs. The elderly population is more sensitive to air pollutants and noise pollutants.

Response PH287-7 Refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gas emissions through reduced vehicular. Refer to Section 3.03, Air Quality, of the Draft EIR, for a discussion of how the proposed Project's potential to expose sensitive receptors to Toxic Air Contaminants during construction was evaluated through a Health Risk Assessment (HRA), included as Appendix D, Air Quality/Health Risk Assessment Technical Report, in the Draft EIR. As discussed in the Draft EIR, the HRA was conducted in accordance with South Coast Air Quality Management District (SCAQMD) risk assessment guidelines, which are based on the Air Toxics Hot Spots Program Risk Assessment Guidelines developed by the California Office of Environmental Health Hazard Assessment (OEHHA) and updated in 2015. The 2015 OEHHA guidelines are based on years of scientific studies evaluating health risks and include a number of conservative assumptions to be protective of human health and to estimate potentially higher risks and sensitivity factors for infants, children, and other sensitive receptors, including the elderly. The results from the construction HRA in Table 3.3-7 show that the maximum incremental cancer risk and chronic non-cancer impacts would be below SCAQMD significance thresholds for all modeled receptors, which include the sensitive receptors located near proposed construction areas. Refer to Section 3.13, Noise, and Appendix M, Noise and Vibration Technical Report, of the Draft EIR, for discussion of the construction and operational noise impacts from the proposed Project. As detailed therein, construction related noise impacts would be significant and unavoidable even with implementation of mitigation. Operational noise impacts would be less than significant. Refer to Responses GO17-129 and GO17-130 for discussion of the proposed Project's less than significant impact on human health associated with hearing loss, hearing damage, and sleep disturbance.

Comment PH287-8 Will the gondolas affect property values? A lot of planners like to say that displacement will not happen because you're not removing any houses, you're not building on an existing housing site. But if it's going to hike property values and that's going to cause gentrification to come into the neighborhood, again, this is the poorest

house neighborhood in the city, but you're not going to add or alter any existing facilities.

Response PH287-8 Refer to Topical Response E, The Proposed Project Will Not Displace Housing or Prevent Planned Housing, for discussion of how the proposed Project will not exacerbate gentrification or result in displacement of residents in the surrounding neighborhoods and is consistent with Metro's considerations regarding gentrification and displacement. Refer to Section 3.15, Public Services, of the Draft EIR, for discussion of how the proposed Project would have less than significant operational impacts, including to public facilities.

Comment PH287-9 This is a community that needs more investment in services. So the fact that you're making it harder to add more is a problem for wildfire. Existing wildfire routes are already inadequate a lot of times.

Response PH287-9 Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, and Section 4.0, Costs and Financing, of the Final EIR, which provide detail as to the proposed Project's capital, operation, and maintenance costs and planned sources of funding, recognizing that the proposed Project's capital funding would primarily be sourced from bond financing serviced by revenue from the proposed Project. No public sources of funding have been sought or committed to the proposed Project, and accordingly the proposed Project would not detract from potential investment in neighborhood services. Refer to Section 3.20, Wildfire, of the Draft EIR for discussion of the proposed Project's potential impacts to wildfire, which would be less than significant, including with respect to the implementation of emergency evacuation plans. Refer to Section 3.15, Public Services, for a discussion of how impacts related to fire protection services during proposed Project operation would be less than significant.

Comment Letter PH288 – Speaker 18

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH288

Comment PH288-1 My name is [inaudible]. My family owns and operates the [inaudible] in Olvera Street, and we are in full support of the project. Not only would it help reduce traffic, good for the environment and provide much needed infrastructure and resources to an underserved part of downtown L.A., but as we enter a global recession, the L.A. region would benefit greatly from this world class project, a proven, innovative mode of transportation, and would attract much needed visitors from around the region and the globe.

It can also be a catalyst for future innovative transport solutions. This is a huge opportunity for L.A. and I hope it is approved. Thank you.

Response PH288-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS, Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Dodger Stadium draws large regional crowds, with approximately 100 baseball games and other events each year, but there are no permanent transit connections to the venue. The vast majority of visitors drive their personal vehicles to access the venue. These vehicles create congestion on the surface streets leading up to and around Dodger Stadium, including Sunset Boulevard/Cesar E. Chavez from LAUS and throughout the surrounding communities. Given the capacity of the proposed Project's system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system. This would reduce vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days. The proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan.

Comment Letter PH289 – Speaker 19

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH289

Comment PH289-1 Hello, my name is [inaudible], Manager of Advocacy and Public Policy for [inaudible], Southern California. We're an environmental health non-profit that focuses on clean air and healthy lungs. We would like to convey our support for the L.A. Aerial Rapid Transit Project. The project provides a zero-emission form of transportation that would decrease greenhouse gas emissions, cut smog and reduce the number of cars on the road, all of which provide significant public health and environmental benefits.

Thank you.

Response PH289-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH290 – Ernest Li

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH290

Comment PH290-1 Thank you. My name is Ernest Li from the [inaudible] Chinese Consolidated Benevolent Association. I'm speaking in full support of the gondola project. It is a good project that is almost zero emission. This green project is good for the environment. And also it's at the iconic structure through the Chinatown area, and this is good for Chinatown, and also it provides an opportunity to link up the key cultural institution like Olvera Street, the Chinese [inaudible] Museum, and it links to Chinatown and allow a lot of the traffic and the opportunity for the local merchants to promote visitors, to eat and shop locally.

So it's good for the local economy. So I'm speaking in full support of this project. Thank you.

Response PH290-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Topical Response C, Project Features, discussing the proposed Project's potential partnerships with and benefits to local businesses. As discussed in Section 2.0, Project Description, of the Draft EIR, and Topical Response C, Project Features, the proposed Project creates a first/last mile transit link for residents and businesses within Chinatown while unifying and connecting communities through transit mobility access. This new mode of transportation will expand rider access to the regional transit system by attracting new visitors including Dodgers fans, and represents an opportunity for additional visitors along the proposed Project alignment, creating economic opportunities for local businesses, including shops and restaurants, through potential partnerships that drive customers to Chinatown and other businesses along the proposed Project alignment, which, consequently, adds revenues to these small businesses in the communities the proposed Project hopes to serve.

Comment Letter PH291 – Speaker 21

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH291

Comment PH291-1 Hello? Hello? Can you hear me?

Okay. What's [inaudible] this project cause the people that we live here, we get stuck when there's anything. And if we come back from work and we forget something from our groceries we have to go away to [inaudible] come back into our own houses. This will help a lot, you know, [inaudible] we move around the city.

Also, zero emissions. I am here to support the [inaudible]. Thank you very much.

Response PH291-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH292 – Wong

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH292

Comment PH292-1 Hi, I organize with Power L.A. and Chinatown Community for Equitable Development, providing tenant support to low-income Cantonese seniors and I absolutely oppose this project. Seniors with limited ability, with limited mobility have no need for a train in the sky that only goes to Dodger Stadium. Their needs are on staying housed, securing affordable housing and a halt to the rising cost of living, which this gondola as a tourist attraction would only contribute to.

Response PH292-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. Refer to Topical Response N, Environmental Justice, for discussion of how the proposed Project would not preclude development of housing in the surrounding communities, and would itself address a need for a permanent transit connection to one of the region's most visited venues, and would benefit the surrounding community by alleviating existing congestion on surrounding neighborhood streets, arterial roadways, and freeways, thereby reducing associated air pollution and improving safety. Refer to Topical Response E, The Proposed Project Will Not Displace Housing or Prevent Planned Housing, for discussion of how the proposed Project will not exacerbate gentrification or result in displacement of residents in the surrounding neighborhoods and is consistent with Metro's considerations regarding gentrification and displacement. Refer to Topical Response M, Comparable Urban Aerial Transit Systems, for discussion of how comparable aerial transit systems in cities around the world operate safely, efficiently, and in concert with nearby residential uses.

Comment PH292-2 If you look at just College Station alone, where one of these gondolas support towers is slated to be built, that area's already been flipped into this upscale expensive area to dire effects, pricing out long-time low-income residents. This gondola is just more of the same. And before you think that affordability of the neighborhood is not an issue with this project, which I know you're thinking because one of the L.A. ART Cantonese-speaking interpreters tried to tell me so after reading a resident's written comment at the Union Station hearing on Saturday, You're wrong!

Response PH292-2 Refer to Topical Response E, The Proposed Project Will Not Displace Housing or Prevent Planned Housing, for discussion of how the proposed Project will not exacerbate gentrification or result in displacement of residents in the surrounding neighborhoods and is consistent with Metro's considerations regarding gentrification and displacement.

Comment PH292-3 This gondola is being built public land where that land should be used for public good. To serve the most good, you must protect and be in alignment with the most poor. You want to fly over red lanterns and go to rooftops. You want to flash Chinese culture without paying a lick for the Chinese immigrants who built it and risk being displaced from it.

This gondola is not a community serving project. It is a private billionaire serving project. Chinatown is the second poorest neighborhood in L.A. It doesn't even have a full-service grocery store. It does everything that you would spend time and money catering to a seasonal entertainment issue and not honoring the truly urgent life-threatening issues of displacement that our most vulnerable residents face.

So every time I saw this project for the good of people, do not build this gondola. Thanks, maybe.

Response PH292-3 Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, and Section 4.0, Costs and Financing, of the Final EIR, which provide detail as to the proposed Project's capital, operation, and maintenance costs and planned sources of funding, recognizing that the proposed Project's capital funding would primarily be sourced from bond financing serviced by revenue from the proposed Project. No public sources of funding have been sought or committed to the proposed Project. Refer to Topical Response C, Project Features, discussing the proposed Project's potential partnerships with and benefits to local businesses. As discussed in Section 2.0, Project Description, of the Draft EIR, and Topical Response C, Project Features, the proposed Project creates a first/last mile transit link for residents and businesses within Chinatown while unifying and connecting communities through transit mobility access. This new mode of transportation will expand rider access to the regional transit system by attracting new visitors including Dodgers fans, and represents an opportunity for additional visitors along the proposed Project alignment, creating economic opportunities for local businesses, including shops and restaurants, through potential partnerships that drive customers to Chinatown and other businesses along the proposed Project alignment, which, consequently, adds revenues to these small businesses in the communities the proposed Project hopes to serve. Refer to Topical Response N, Environmental Justice, for discussion of how the proposed Project would not preclude development of uses including housing, grocery stores, and/or healthcare facilities in the surrounding communities and would alleviate existing congestion on surrounding neighborhood streets, arterial roadways, and freeways, thereby reducing associated air pollution and improving safety. Refer to Topical Response E, The Proposed Project Will Not Displace Housing

or Prevent Planned Housing, for discussion of how the proposed Project will not displace housing or prevent planned housing.

Comment Letter PH293 – King

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH293

Comment PH293-1 Hi, my name is King [inaudible], a member of the Chinatown Community for Equitable Development, which is located in Chinatown. I strongly oppose the gondola project. It is nothing but a rip off of the taxpayers using public space, public money and is only for the good of one guy who want to build a kind of LA life, kind of a project up on the parking lot and near the Dodger Stadium.

Response PH293-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, and Section 4.0, Costs and Financing, of the Final EIR, which provide detail as to the proposed Project's capital, operation, and maintenance costs and planned sources of funding, recognizing that the proposed Project's capital funding would primarily be sourced from bond financing serviced by revenue from the proposed Project. No public sources of funding have been sought or committed to the proposed Project. Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. Refer to Topical Response G, No Improper Project Segmentation: The Proposed Project Is Intended to Create a Transit Connection from Metro's Union Station Transportation Hub via an Aerial Gondola System to the Dodger Stadium Property, for a discussion of how the proposed Project solely proposes an aerial gondola system. The proposed Project does not include other development, and neither the Project Sponsor nor any other applicant has applied for other development unrelated to the existing stadium uses on the Dodger Stadium property.

Comment PH293-2 And I think that is not going to be good for the Chinatown community, for small businesses. Why would anybody stick around Chinatown when they can just get up there, eat and drink and attend games? So I think that the line that is good for Chinatown business is not are not going to [inaudible], in fact it make things worse, make things a lot worse.

If there's a station near LA State Historic Park, who want to walk up there to Chinatown, maybe for [inaudible] and the [inaudible] area. But who are going to [inaudible] and Alpine area to eat and shop, which is a [inaudible]. Nobody would do that. Convenience is they're going to just take the gondola and go and shop up there.

Response PH293-2 Refer to Topical Response C, Project Features, discussing the proposed Project's potential partnerships with and benefits to local businesses. As discussed in Section 2.0, Project Description, of the Draft EIR, the proposed Project creates a first/last mile transit link for residents and businesses along the proposed Project alignment while unifying and connecting communities through transit mobility access. This new mode of transportation will expand rider access to the regional transit system by attracting new visitors including Dodgers fans, and represents an opportunity for additional visitors along the proposed Project alignment, creating economic opportunities for local businesses, including shops and restaurants, through potential partnerships that drive customers to businesses along the alignment, which, consequently, adds revenues to these small businesses in the communities the proposed Project hopes to serve.

Comment PH293-3 So it is going to be worse for Chinatown, but that is going to be cause more gentrification, making housing a more expensive and less affordable for the low-income residents in Chinatown. [inaudible] oppose the project.

Response PH293-3 Refer to Topical Response E, The Proposed Project Will Not Displace Housing or Prevent Planned Housing, for discussion of how the proposed Project will not exacerbate gentrification or result in displacement of residents in the surrounding neighborhoods and is consistent with Metro's considerations regarding gentrification and displacement.

Comment Letter PH294 – Luke MacDonald

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH294

Comment PH294-1 Hello? Can you hear me? My name is Luke MacDonald. I live nearby Union Station and I wanted to comment that I think this is a really bad idea. I don't really trust the arguments for lower pollution and I think that the money would be much better invested in in public transportation. The [inaudible] application, not just going to Dodger Stadium, baseball games.

Response PH294-1 Refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gas emissions through reduced vehicular travel. Refer to Topical Response A, SB 44, for discussion of how the proposed Project is public transportation because it will be open to the general public for service at regular, scheduled operating times, operating daily to serve existing residents, workers, park users, and visitors to Los Angeles. Refer to Section 2.01, Overview of the Project, of the Draft EIR, discussing how the proposed Project would operate daily to serve existing residents, workers, park users, and visitors to Los Angeles. As discussed on page 2-42, in Section 2.0, Project Description, of the Draft EIR, the proposed Project would provide service to all pre-season, regular season, and post-season Los Angeles Dodger games and any special events (e.g., concerts, the Los Angeles Marathon) at the Dodger Stadium property. The proposed Project would also provide service to events at the Los Angeles State Historic Park. In addition to providing service on game and special event days at Dodger Stadium and events at the Los Angeles State Historic Park, it is anticipated that the proposed Project would also provide daily service between 6:00am to 12:00am, for the surrounding communities, including Chinatown, Mission Junction, Elysian Park, Solano Canyon, and the Los Angeles State Historic Park. The proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan.

Comment PH294-2 I'm definitely also concerned with the gentrifying of the communities and also like the thing that like that's going to improve parking I think is also very [inaudible]. It seems like it's just going to move [inaudible] thing making Chinatown a big parking lot. It doesn't seem like great idea. So it's just kind of like a really strange and kind of a waste of money.

So yeah, yeah, I think [inaudible].

Response PH294-2 Refer to Topical Response E, The Proposed Project Will Not Displace Housing or Prevent Planned Housing, for discussion of how the proposed Project will not exacerbate gentrification or result in displacement of residents in the surrounding neighborhoods and is consistent with Metro's considerations regarding gentrification and displacement. Parking is not required to be analyzed under CEQA or the Transportation Assessment Guidelines ("TAG"). Nevertheless, the Parking Study was prepared to provide additional information to the community and decision makers about existing parking conditions and the proposed Project's potential to effect parking conditions around the Alameda Station and Chinatown/State Park Station. As recommended in the Parking Study, the Project Sponsor will prepare, in collaboration with the City, and with robust feedback from community stakeholders, a parking management plan. The City would implement any on-street parking management strategies identified. Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at Los Angeles Union Station (LAUS), Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, and Section 4.0, Costs and Financing, of the Final EIR, which provide detail as to the proposed Project's capital, operation, and maintenance costs and planned sources of funding, recognizing that the proposed Project's capital funding would primarily be sourced from bond financing serviced by revenue from the proposed Project. No public sources of funding have been sought or committed to the proposed Project.

Comment Letter PH295 – Michael

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH295

Comment PH295-1 Hi, good evening. Michael [inaudible] with Central City Association. We support the proposed L.A. ART zero emission project and appreciate the community engagement that the project team has conducted in downtown and in surrounding areas. In addition to making progress on our state's climate goals, the proposed gondola would reduce emissions, and some of the L.A. community is very most impacted by air pollution.

I think LA ART is expected to take 3,000 cars off the road before and after Dodger Stadium events. It will reduce vehicle congestion, which frees up stadium visitors and the surrounding communities' time and improves accessibility to surrounding residences and local businesses in the project area. Thank you.

Response PH295-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Appendix A, Public Outreach Report, of the Final EIR, for discussion of the proposed Project's public outreach and opportunity for public testimony during the Draft EIR public review period. Refer to Appendix A, Scoping Report, of the Draft EIR, for discussion of outreach and community engagement during the Draft EIR scoping period. Metro sought to engage the community in each stage of the environmental review process. Metro engaged the public in decision making for the proposed Project beginning with the public scoping period for the Draft EIR in October 2020 to receive public comment on the proposed Project's scope of environmental review under CEQA. In June 2021, the Project Sponsor conducted two virtual public outreach meetings. The input from the public, including local community stakeholders, as well as from agencies, organizations, and interested parties, during this period led directly to changes to the proposed Project to incorporate public feedback. The Draft EIR was released on October 17, 2022, for a 60-day public review period, which Metro extended an additional 30 days for a 90-day public review period ending on January 17, 2023. Eight public meetings were held immediately preceding, during, and immediately following the Draft EIR public review period, with four held in-person in the Project area at Los Angeles Union Station and Cathedral High School, and four held virtually via Zoom webinar. Project materials and information were provided at both the in-person meetings and on Metro's website in English, Spanish, Chinese (Traditional), and Chinese (Simplified). Interpretation was provided in English, Spanish, Mandarin, and Cantonese during the eight public meetings, with interpretation provided in Taishanese during the final two public meetings.

Refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical

Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gas emissions through reduced vehicular travel. Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS, Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Refer to Topical Response C, Project Features, for discussion of the proposed Project's features to enhance and provide additional benefits to the surrounding communities including but not limited to sustainability features and open space enhancements, the Community Access Plan for fares, access to parks, mobility hubs, signage, utilization of local artists for site specific artwork at each station reflective of the unique neighborhood culture, design of each component of the proposed Project to complement and reflect the unique character of the surrounding neighborhood, the Business and Community Support Program during construction, and benefits to local businesses along the proposed Project alignment. The Project Sponsor would convene stakeholder groups to coordinate on issues related to proposed Project features. The proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan.

Comment Letter PH296 – Douglas Carstens

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH296

Comment PH296-1 Hello. Good evening. This is Douglas Carstens on behalf of the California Endowment. We oppose the gondola project. Metro should not be pursuing this private project at Frank McCourt's behest at all. Metro should not be the lead agency because the City of Los Angeles is in a much better position and there's more property designated as the lead agency.

Response PH296-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project. Refer to Topical Response D, Metro Is the Proper Lead Agency for the Proposed Project as the Region's Transportation Authority; Metro Named and Consulted with the Applicable Responsible Agencies, for discussion of how Metro is the proper lead agency for the proposed Project because Metro has primary responsibility for implementation of the proposed Project as the region's transportation authority.

Comment PH296-2 First, regarding the EIR SEQA, the California Environmental Quality Act is a Bill of Rights for an environmental democracy. An EIR is the heart of SEQA, an EIR is not supposed to be a sales brochure or an infomercial for a project.

It's supposed to be an unbiased, full disclosure document that advises the public and decision-makers of the impacts of the project and how those impacts can be reduced. This draft EIR presented by ART and Metro falls woefully short of those legal requirements for full disclosure and accuracy, and instead it's biased in favor of the project.

Response PH296-2 The Draft EIR includes 7,877 pages of detailed analysis from experts in their respective fields, intended to provide the public and decision makers the information that they need to meaningfully consider the proposed Project's potential environmental impacts, as well as a shorter executive summary that explains the analysis and conclusions in clean and simple language. Accordingly, the Draft EIR more than adequately complies with CEQA's requirements for a Draft EIR.

Comment PH296-3 I wish I could repeat verbatim everything that Kathleen Johnson, [inaudible], Tabitha, Phyllis Ling, Bill Chen, Luke McDonald said.

Because a lot of that I'd like to say, but I only have this 2 minutes, so I will say the analysis in the gondola, instead of being meaningful and accurate, is distorted and misleading.

Response PH296-3 The Draft EIR complied with CEQA's requirements, providing the necessary analysis in the Draft EIR's main sections to adequately inform the public and decision makers regarding the proposed Project and its potential environmental impacts. Refer to Response PH296-2 for discussion of how the Draft EIR more than adequately complies with CEQA's requirements for a Draft EIR. Refer to Appendix A, Public Outreach Report, of the Final EIR, for discussion of the proposed Project's public outreach and opportunity for public testimony during the Draft EIR public review period. Refer to Appendix A, Scoping Report, of the Draft EIR, for discussion of outreach and community engagement during the Draft EIR scoping period.

Comment PH296-4 The entire financial plan, which the Metro Board was promised would be made available before the end of September 2022, is missing altogether. The missing financial information is critical to understanding how impacts identified in the EIR would be mitigated by the project proponent and how they will not be.

The project proponent, Frank McCourt, has only committed to funding 3% of the entire project budget, so the shortfalls in construction and operating revenues will be need to be made up somewhere, most likely from public transit funding sources. Better use for public projects.

Response PH296-4 Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, and Section 4.0, Costs and Financing, of the Final EIR, which provide detail as to the proposed Project's capital, operation, and maintenance costs and planned sources of funding, recognizing that the proposed Project's capital funding would primarily be sourced from bond financing serviced by revenue from the proposed Project. No public sources of funding have been sought or committed to the proposed Project. Refer to Topical Response I, Use of Project Design Features and Plans in Mitigation Measures, for discussion of how CEQA does not require the proposed Project to provide a full accounting of how each mitigation measure will be funded.

Comment PH296-5 We ask that you terminate the project review process immediately if you don't terminate it immediately, Metro should transfer the lead agency status to the city of L.A. to complete the review and process it.

Thank you for your time.

Response PH296-5 Refer to Topical Response D, Metro Is the Proper Lead Agency for the Proposed Project as the Region's Transportation Authority; Metro Named and Consulted with

the Applicable Responsible Agencies, for discussion of why Metro is the proper lead agency for the proposed Project and the City's participation in the environmental review process as a CEQA responsible agency.

Comment Letter PH297 – Speaker 27

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH297

Comment PH297-1 From the very start of this project, I knew I wanted to keep an eye on it because it impacts both my communities of Chinatown and my community of Pueblos or [inaudible]. My name is [inaudible], I grew up in Chinatown, and I am currently, after retiring from Cal State L.A. as a professor of [inaudible] education, I am now associated with the Chinese American Museum.

Response PH297-1 This comment is noted and will be provided to the decision makers for review and consideration. Because the comment does not address an environmental issue or raise a substantive issue on the content of the Draft EIR, no further response is warranted.

Comment PH297-2 So from the very beginning I was keeping my eye on this project, and what I found very worthy of supporting is the fact that I agree that this project would benefit both Chinatown and El Pueblo. Very often when I had questions or wanted to push back on some of the plans, I was able to communicate with L.A. ART and they listened and they tried to incorporate as much of our community's suggestions as possible.

Response PH297-2 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Topical Response N, Environmental Justice, Appendix A, Public Outreach Report, of the Final EIR, Appendix A, Scoping Report, of the Draft EIR, and Topical C, Project Features, for discussion of the proposed Project team's outreach efforts to neighborhoods along the proposed Project alignment and the proposed Project's features to enhance and provide additional benefits to the surrounding communities. Metro sought to engage with stakeholders in neighborhoods along the proposed Project alignment in each stage of the environmental review process. Input from the public, including local community stakeholders, led directly to the selection of the proposed Project alignment, including an intermediate station in Chinatown (the Chinatown/State Park Station), as well as to the redesign of the proposed Project stations and junction and additional pedestrian enhancements including hardscape and landscape improvements.

Comment PH297-3 For the EIR tonight. I just want to comment that as an academic, I understand what significant means and what less than significant means. And so while on one hand, I like the reporting that it lessened significant with mitigation, but even then I like to connect that with community input to look at what that, what those mitigations might be so that we can have a more well-rounded view on how we can resolve some of the problems that not everybody would agree with. Thank you

Response PH297-3 Refer to Topical Response I, Use of Project Design Features and Plans in Mitigation Measures, for discussion of how the proposed Project's use of mitigation measures and project design features is consistent with the requirements of CEQA. Refer to Appendix A, Public Outreach Report, of the Final EIR, for discussion of the proposed Project's public outreach and opportunity for public testimony during the Draft EIR public review period. Refer to Appendix A, Scoping Report, of the Draft EIR, for discussion of outreach and community engagement during the Draft EIR scoping period.

Comment Letter PH298 – Jim Starr

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH298

Comment PH298-1 Hello, this is Jim Starr. I'm against Frank McCourt [inaudible] because it's Alameda Street Terminal, which is designed like a Disneyland attraction, will harm the view of Los Angeles Union Station's Hispanic architecture. And one of the reasons it is a national historic landmark. Thank you.

Response PH298-1 This comment indicating opposition to the Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project. Refer to Section 3.01, Aesthetics, and Appendix C, Visual Impact Assessment, of the Draft EIR, for discussion of the aesthetic impacts of the proposed Project's towers, which would be less than significant. The Draft EIR fully analyzed and addressed the proposed Project's potential impacts to historic resources in Section 3.05, Cultural Resources, with supporting data provided in Appendix G, Historical Resource Technical Report for the Los Angeles Aerial Rapid Transit Project (HRTR). As discussed in Section 3.05, the Draft EIR's analysis concludes that all potential impacts related to historical resources would be less than significant.

Comment Letter PH299 – Melissa

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH299

Comment PH299-1 Hello.

Hi, good afternoon.

I'm calling today because I support the gondola project.

One of the reasons is because I feel like, there will be actually more visitors to Chinatown than people just jumping into their cars after the game and going back home.

They'll pass by Chinatown. And, you know, be curious and come back and visit. Also because of the pollution and less traffic. Thank you for your time.

Response PH299-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH300 – Michael Chong

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH300

Comment PH300-1 Hi. This is Michael [Chong], and I'm calling in favor of the L.A. ART project. I'm currently a Chinatown resident, and, you know, Metro has, in the past couple of decades, has made us understand that Los Angeles can have a strong network of public transportation along the side of cars and other variables. The [inaudible] is a good example of that.

But unfortunately, it doesn't [run] on non-Dodger events. We have a lot more activities in Dodger Stadium lately, which is a good thing, but also causes a lot of concerns in regards to traffic and congestion, air traffic congestion and pollution. I believe that the gondola project is the next step in our future. It would be a marker and an important infrastructure that people can visually see that Los Angeles can be centered around alternative modes of transportation, finding creative solutions for people to get out of their vehicles and hopefully as a result, supporting the surrounding businesses instead of driving past them.

Thank you.

Response PH300-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Section 2.0, Project Description, of the Draft EIR, discussing how the proposed Project would operate daily to serve existing residents, workers, park users, and visitors to Los Angeles. As discussed on page 2-42, in Section 2.0, Project Description, of the Draft EIR, the proposed Project would provide service to all pre-season, regular season, and post-season Los Angeles Dodger games and any special events (e.g., concerts, the Los Angeles Marathon) at the Dodger Stadium property. The proposed Project would also provide service to events at the Los Angeles State Historic Park.

Comment Letter PH301 – Edwin Lee

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH301

Comment PH301-1 Hi, my name's Edwin Lee and I'm a resident at the Bishop and Broadway Junction and I'm against the project.

Response PH301-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Because the comment does not address an environmental issue or raise a substantive issue on the content of the Draft EIR, no further response is warranted.

Comment PH301-2 I don't, I think the visual impact assessment is biased and dismissive. These are massive concrete structures and five-ton gondola cabinets flying over our streets and parks. Of course, this will have a negative visual impact. If this was a more rich, more wealthier neighborhood, this would not be allowed.

Response PH301-2 Refer to Section 3.01, Aesthetics, and Appendix C, Visual Impact Assessment, of the Draft EIR, for discussion of the aesthetic impacts of the proposed Project, which would be less than significant. Refer to Appendix C, Visual Impact Assessment, for detailed discussion about the implementation and results of the visual simulation. Refer to Appendix H.2, Supplemental KOPs in Response to Comments, for additional visual simulations of the proposed Project. Refer to Appendix H.1, Memo Regarding Preparation of View Simulations, of the Final EIR, for a discussion of how the view simulations were prepared. As discussed in Sections 3.01, Aesthetics, 3.04, Biological Resources, 3.05, Cultural Resources, 3.06, Energy, 3.07, Geology and Soils, 3.09, Hazards and Hazardous Materials, 3.10, Hydrology and Water Quality, 3.11, Land Use and Planning, 3.13, Noise, 3.15, Public Services, 3.16, Parks and Recreational Facilities, 3.17, Transportation, 3.18, Tribal Cultural Resources, 3.19, Utilities and Service Systems, 3.20, Wildfire, and 5.0, Other CEQA Considerations, the proposed Project would have less than significant operational impacts. Refer to Topical Response M, Comparable Urban Aerial Transit Systems, discussing how, like the proposed Project, comparable aerial transit systems in cities around the world are integrated with their surrounding urban environments. In particular, comparable aerial transit systems in other locations demonstrate that such systems can operate safely, efficiently, and in concert with nearby residential and open space uses, including parks and other recreational facilities. Refer to Section 2.0, Project Description, Section 3.16, Parks and Recreational Facilities, and Section 5.0, Other CEQA Considerations, of the Draft EIR, for discussion of the footprint of the proposed Project in the Los Angeles State Historic Park. With the small footprint of the proposed Project's Chinatown/State Park Station, and the required clearances and the height at which the cabins would cross over the Park, the ability to use the vast majority of the Park would not be affected by the proposed Project. Refer to Response S2-4 for additional discussion

regarding the ability of uses to continue at the park. Refer to Topical Response N, Environmental Justice, for discussion of how the Draft EIR addresses environmental justice, how the proposed Project supports Metro's goal of prioritizing equity opportunities, and is designed to extend affordable, regional access and mobility options to the communities adjacent to the proposed Project alignment. The proposed Project would not preclude development of uses including housing, grocery stores, and/or healthcare facilities in the surrounding communities, and would itself address a need for a permanent transit connection to one of the region's most visited venues and would alleviate existing congestion on surrounding neighborhood streets, arterial roadways, and freeways, thereby reducing associated air pollution and improving safety, and how the proposed Project is designed to be ADA compliant. The Draft EIR addresses environmental justice by considering the proposed Project's ability to reduce congestion and emissions from on-road vehicles in an area disproportionately burdened by pollution and including an analysis of the proposed Project's potential impacts to the surrounding community, concluding that the proposed Project could result in air quality benefits for the surrounding communities. The proposed Project is designed to extend affordable, regional access and mobility options to the communities adjacent to the proposed Project alignment, providing connections to Metro's growing regional public transit system. The proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan.

Comment PH301-3 And the noise from the gondola station in our neighborhood is not adequately studied. The noise analysis is vague and does not even disclose the gondola system used to take reference measurements. We are the difference. What the difference and similarities in these gondola systems?

Response PH301-3 Refer to Section 3.13, Noise, and Appendix M, Noise and Vibration Technical Report, of the Draft EIR, for discussion of the construction and operational noise impacts from the proposed Project. As detailed therein, construction related noise impacts would be significant and unavoidable even with implementation of mitigation. Operational noise impacts would be less than significant. Refer to Topical Response P, Gondola System Noise Modeling, of the Final EIR, for discussion of the noise model used to predict noise levels from operations of the proposed Project and how use of the Rossi Article's equations to evaluate the proposed Project's operational noise was appropriately validated and has been shown to result in a conservative assessment of the noise generated by the proposed Project. The evaluation of operational noise impacts in the Draft EIR appropriately relied on the Rossi Article because a 3S gondola system similar to the proposed Project, which includes the system components of the Broadway Junction, was utilized in the assessment of noise impacts to validate the Rossi Article equations. Based on the similarities between the 3S gondola system for the proposed Project, and the 3S gondola system studied in the Rossi Article (in Tyrol,

Austria), including the same speed as the proposed Project, a similar cabin capacity, and similar system mechanics. Using the Tyrol system to validate the Rossi Article equations is appropriate and no adjustment to the noise predictions is needed to use the Tyrol system to validate the Rossi Article.

Comment PH301-4 And furthermore, there's still no funding plan for this project. Thank you.

Response PH301-4 This comment is noted and will be provided to the decision makers for review and consideration. Because the comment does not address an environmental issue or raise a substantive issue on the content of the Draft EIR, no further response is warranted. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, and Section 4.0, Costs and Financing, of the Final EIR, which provide detail as to the proposed Project's capital, operation, and maintenance costs and planned sources of funding, recognizing that the proposed Project's capital funding would primarily be sourced from bond financing serviced by revenue from the proposed Project. No public sources of funding have been sought or committed to the proposed Project.

Comment Letter PH302 – Alan Weeks

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH302

Comment PH302-1 Okay. Okay. Thank you. My name is Alan Weeks and I'm very interested in the project. I think it's interesting, it's unique and it will make a great tourist attraction.

Response PH302-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment PH302-2 But I do have one objection, and I think it's a major one. I've lived here, I'm 90 years old. I've lived here all my life. And I remember my mother took me to the Union Station opening in 1939. And as you know, when you come in from the Plaza, you get a tremendously beautiful view of really historical monuments. And if you build that station and it appears to be quite significantly large, and will definitely block the view from people coming in on the west side of the station, it's going to block their views. So for that reason alone, if you find another location for the station, otherwise I don't have any objection to the project.

Thank you.

Response PH302-2 Refer to Section 3.05, Cultural Resources, and Appendix G, Historical Resource Technical Report for the Los Angeles Aerial Rapid Transit Project (HRTR), of the Draft EIR for a discussion outlining the proposed Project's potential construction and operational impacts to the Los Angeles Union Station Passenger Terminal and Grounds. Construction and operational impacts associated with the proposed Project would be less than significant. Refer to Section 3.01, Aesthetics, and Appendix C, Visual Impact Assessment, of the Draft EIR, for discussion of the aesthetic impacts of the proposed Project, which would be less than significant, including at Los Angeles Union Station (LAUS).

Comment Letter PH303 – Darryl Saucedo

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH303

Comment PH303-1 Did it work?

Did it work? Okay. Well, good afternoon. My name is Darryl Saucedo. I'm the chairman of the board of the Los Angeles Latino Chamber of Commerce, and we support this project as well.

Response PH303-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment PH303-2 But I would like to go on record that the LA [LCC] has strongly recommended that if this project moves forward, that the project hires at least 35% small, local, small, diverse businesses, not only in construction but to provide maintenance and staffing through our local AGC participants.

And I think that they should be given a preference for anybody that uses our local workforce. Thank you.

Response PH303-2 Refer to Topical Response N, Environmental Justice, for discussion of how the Project Sponsor has committed to a goal of 35 percent utilization of minority business enterprises (MBE), women business enterprises (WBE), disadvantaged business enterprises (DBE), small business enterprise (SBE), disabled veteran business enterprises (DVBE), and LGBTQ-owned businesses during the proposed Project's construction phase.

Comment Letter PH304 – Speaker 35

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH304

Comment PH304-1 So my name is [inaudible]. I'm a local resident of the Chinatown community. I'm here in support of the gondola project because I believe it brings a lot of benefits to our neighborhood and community. First, it improves the traffic, improves the air quality, also brings visitors to different locations and thereby improve our business structure. Thank you.

I already participate.

Response PH304-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH305 – Carlos Gomez

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH305

Comment PH305-1 Yes? Can you hear me?

Hi. Yeah. Carlos Gomez, long-time Dodger season ticket holder. I fully support the gondola project. I think it's very innovative. You know, this specific year, you know, attending so many games, I caught myself waiting longer than usual for the Dodger Stadium Express. I don't know if there was maybe like, a lack of funding or but I know there were just like, you know, maybe two busses going out every 50 minutes or so.

And, you know, anything that we can do to really alleviate any type of congestion or traffic, you know, for the what is 30 to 40,000 Dodger fans that go to the games or millions throughout the season would be great. I fully support this project. And we really need this project. I mean, I think it would help the surrounding community and Dodger fans in general. Go Dodgers!

Response PH305-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH306 – Lester

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH306

Comment PH306-1 Oh, hello.

Yeah, Lester [inaudible].

I just wanna say that I'm a big Dodgers fan and I support this project.

Response PH306-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH307 – Speakers 40/41

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH307

Comment PH307-1 I support the project.

Hello?

[inaudible]

I support the gondola project in Chinatown because it brings more attention business to the area.

[inaudible]

Response PH307-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH308 – Kayla

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH308

Comment PH308-1 Good evening. This is Kayla. I am a resident of Chinatown, and I wanted to call in today to oppose the gondola project for a few reasons. There's no additional parking accommodations for those 3,000 vehicles you mentioned that would presumably be arriving at Union Station. So the traffic won't really be alleviated at all. The congestion will just shift south a few blocks.

Response PH308-1 Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at Los Angeles Union Station (LAUS), Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Dodger Stadium draws large regional crowds, with approximately 100 baseball games and other events each year, but there are no permanent transit connections to the venue. The vast majority of visitors drive their personal vehicles to access the venue. These vehicles create congestion on the surface streets leading up to and around Dodger Stadium, including Sunset Boulevard/Cesar E. Chavez from LAUS and throughout the surrounding communities. Given the capacity of the proposed Project's system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system. This would reduce vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days. Parking is not required to be analyzed under CEQA or the Transportation Assessment Guidelines ("TAG"). Nevertheless, the Parking Study was prepared to provide additional information to the community and decision makers about existing parking conditions and the proposed Project's potential to effect parking conditions around the Alameda Station and Chinatown/State Park Station. As recommended in the Parking Study, the Project Sponsor will prepare, in collaboration with the City, and with robust feedback from community stakeholders, a parking management plan. The City would implement any on-street parking management strategies identified. Traffic congestion is not required to be analyzed under CEQA in the Draft EIR following the implementation of Senate Bill 743, which designated "vehicle miles traveled" as the method for assessing transportation impacts on the environment for CEQA projects. Refer to the Los Angeles Aerial Rapid Transit Project Non-CEQA Transportation Assessment, which found that there could be localized increases in traffic at the intersections closest to the proposed Project's Alameda Station and Chinatown/State Park Station due to some riders choosing to park and ride or take Uber/Lyft and recommended the proposed Project work with Metro to identify a transit partnership for the proposed Project riders to further encourage

them to take transit, walk, or bike to the proposed Project's stations. Refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gases through reduced vehicular travel.

Comment PH308-2 It's also hard to be convinced of an emission reduction plan that's only one mile long, especially when the vehicles will still be driving to the gondola terminal, but more so than the traffic in the parking.

Response PH308-2 Refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gas emissions through reduced vehicular travel. Contrary to the comment, the Draft EIR analysis reports that the proposed Project would reduce air pollutant emissions in the area. As shown in Table 3.3-5, Maximum Mass Daily Emissions Due to Operation of the Project, of the Draft EIR, the proposed Project would result in a net reduction in criteria pollutant emissions in both 2026 (Build Out) and 2042 (Horizon Year) by reducing vehicle miles travelled (VMT) and thereby decreasing emissions compared to existing conditions. The analysis shows that VMT reduction may occur from riders' use of other transit to arrive at Los Angeles Union Station (LAUS), and that not all users would drive to LAUS. As a fixed guideway transit project, providing new high-frequency high speed transit connections between the regional transit hub of LAUS and Dodger Stadium, the proposed Project is forecast to reduce VMT, as game and event attendees shift their travel mode from driving to Dodger Stadium to utilizing transit on the proposed Project. As an innovative transportation project that will reduce VMT over time, the proposed Project helps advance local and state climate and transportation policies (see Section 3.8.4 of the Draft EIR and Table C-1 through Table C-4 provided in Appendix J, Greenhouse Gas Emissions Technical Report, of the Draft EIR for additional discussion). The operational VMT and trips for the existing, Build Out, and Horizon Year that are used to calculate these mobile emissions are presented in Table A.2-3 of Draft EIR Appendix D, Air Quality/Health Risk Assessment Technical Report. Refer to Response PH308-1 for discussion of traffic.

Comment PH308-3 I'm concerned about the impacts of gentrification and displacement that were mentioned by some other commenters earlier, especially due to that property value increase in this historic but unfortunately very under-supported neighborhood.

Response PH308-3 Refer to Topical Response E, The Proposed Project Will Not Displace Housing or Prevent Planned Housing, for discussion of how the proposed Project will not

exacerbate gentrification or result in displacement of residents in the surrounding neighborhoods and is consistent with Metro's considerations regarding gentrification and displacement.

Comment PH308-4 The gondola won't support Chinatown businesses. It'll detract from them, people going from Union Station and flying right over.

Response PH308-4 Refer to Topical Response C, Project Features, discussing the proposed Project's potential partnerships with and benefits to businesses in Chinatown. As discussed in Section 2.0, Project Description, of the Draft EIR, and Topical Response C, Project Features, the proposed Project creates a first/last mile transit link for residents and businesses along the proposed Project alignment while unifying and connecting communities through transit mobility access. This new mode of transportation will expand rider access to the regional transit system by attracting new visitors including Dodgers fans, and represents an opportunity for additional visitors along the proposed Project alignment, creating economic opportunities for local businesses, including shops and restaurants, through potential partnerships that drive customers to businesses along the alignment, which, consequently, adds revenues to these small businesses in the communities the proposed Project hopes to serve.

Comment PH308-5 It's the gondola's plan to use public rights of way public airspace, public land. It'll impose itself on our skyline. Cars moving thousands of camera-phone equipped sports spectators back and forth between Union Station and Dodger Stadium with a full view down into our patios or gardens or homes.

Response PH308-5 As discussed in Section 2.0, Project Description, of the Draft EIR, one of the proposed Project objectives is to maximize the proposed Project's alignment along the public ROW and publicly owned property and minimize aerial rights requirements over private properties, taking into account existing and future adjacent land uses. Refer to Topical Response M, Comparable Systems, discussing how, like the proposed Project, comparable aerial transit systems in cities around the world are integrated with their surrounding urban environments. In particular, comparable aerial transit systems in other locations demonstrate that such systems can operate safely, efficiently, and in concert with nearby residential and open space uses, including parks and other recreational facilities. The proposed Project would be located in a densely-populated, urban environment surrounded by a variety of commercial, industrial, and residential development types. In this type of environment, it is common for public transportation, such as Metro's light rail, to be located adjacent to residential uses and, as discussed in Topical Response M, Comparable Systems, modern aerial transit systems in other cities, including Portland, Oregon and New York City, operate adjacent to residential uses. Refer to Topical Response J, Gondola Design and Operations and Section 2.0, Project Description, of the Draft EIR, for discussion of how cabin windows can be equipped with privacy glass that can become opaque while adjacent to sensitive views, and the proposed Project would work with stakeholders adjacent to the proposed Project alignment to identify locations where

the use of privacy glass would be warranted. Considerations as to the locations along the proposed Project alignment where the privacy glass could be activated include the subject adjacent sensitive views and the vertical and horizonal distance between the proposed Project cabins and the adjacent sensitive views.

Comment PH308-6 The gondola's not needed year-round, but it'll be visible and audible year round like a permanent string of cables and towers and our sidewalks and our skies.

Response PH308-6 Refer to Section 2.1, Overview of the Project, of the Draft EIR, discussing how the proposed Project would operate daily to serve existing residents, workers, park users, and visitors to Los Angeles. As discussed on page 2-42, in Section 2.0, Project Description, of the Draft EIR, the proposed Project would provide service to all pre-season, regular season, and post-season Los Angeles Dodger games and any special events (e.g., concerts, the Los Angeles Marathon) at the Dodger Stadium property. The proposed Project would also provide service to events at the Los Angeles State Historic Park. In addition to providing service on game and special event days at Dodger Stadium and events at the Los Angeles State Historic Park, it is anticipated that the proposed Project would also provide daily service between 6:00am to 12:00am, for the surrounding communities, including Chinatown, Mission Junction, Elysian Park, Solano Canyon, and the Los Angeles State Historic Park. The proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan. Refer to Section 3.01, Aesthetics, and Appendix C, Visual Impact Assessment, of the Draft EIR, for discussion of the aesthetic impacts of the proposed Project, which would be less than significant. Refer to Topical Response C, Project Features, discussing how the proposed Project's design takes cues from the immediate neighborhood culture, including how each component of the proposed Project would be designed to complement and reflect the unique character of the surrounding area. Additionally, refer to Topical Response M, Comparable Urban Aerial Transit Systems, discussing how, like the proposed Project, comparable aerial transit systems in cities around the world are integrated with their surrounding urban environments. In particular, comparable aerial transit systems in other locations demonstrate that such systems can operate safely, efficiently, and in concert with nearby residential and open space uses. Refer to Section 3.13, Noise, and Appendix M, Noise and Vibration Technical Report, of the Draft EIR, for discussion of the operational noise impacts from the proposed Project, which would be less than significant.

Comment PH308-7 Lastly, it's unclear who will pay for this project, but it's clear that a billionaire will profit from it. It's for these reasons that I oppose the gondola. Thank you. Thank you very much.

Response PH308-7 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Because the comment does not address and environmental issue or raise a substantive issue

on the content of the Draft EIR, no further response is warranted. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, and Section 4.0, Costs and Financing, of the Final EIR, which provide detail as to the proposed Project's capital, operation, and maintenance costs and planned sources of funding, recognizing that the proposed Project's capital funding would primarily be sourced from bond financing serviced by revenue from the proposed Project. No public sources of funding have been sought or committed to the proposed Project.

Comment Letter PH309 – Monica Vasquez

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH309

Comment PH309-1 Yes. Hi. Yes.

My name is Monica Vasquez, and I fully support the gondola project. This not only will help with the traffic and pollution and stuff like that, but now I live [inaudible] and it has some of the worst traffic, too. And this is [inaudible]. Less traffic and more [inaudible] transportation, which the gondola will provide all of that.

Plus it'll be good for the people. And this project will help the region with traffic. Like I said, the pollution, the time of traffic as well, because driving [inaudible] my house to the Dodger Stadium. It's only a short distance, but once in traffic it's a long way. And like I said, I just I just called to support the [inaudible] and gondola project and I hope you guys do, too.

Thank you so much.

Response PH309-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH310 – Ms. Wong

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH310

Comment PH310-1 Hello?

[inaudible]

So my name Ms. Wong, I'm a local resident of the Chinatown area. I'm pulling support in favor of this project because it's going to bring a lot of good things to the area. It's going to help with the air quality and relieve the traffic and various benefits and welfare for the neighborhood. Thank you.

Response PH310-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH311 - Jason

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH311

Comment PH311-1 Hi. Yes, this is Jason [inaudible]. I'm with the Los Angeles Chinatown Corporation. We are the founding organization that actually founded Chinatown when it was displaced, when it moved from Union Station to where it's at now. We own Central Plaza and we are one of the oldest organizations in Chinatown. Conceptually, the board has voted to support the gondola project, but conceptually there are still things that still need to be worked out.

But in general, we do support it for several reasons. Reasons to for reasons no other than Chinatown is completely dead. It has been dead for many, many years. I have lived in Chinatown before I moved out and nothing has happened. And so with the gondola project, this attraction will hopefully bring in visitors, people to see Chinatown, shop, visit, eat, and our merchants need it.

Despite what all the opposing arguments are, our merchants do need some kind of revitalization and right now our merchants are suffering. I speak to our merchants all the time and they support the gondola because they need people in Chinatown to serve, to make money, and to hopefully get Chinatown out of being one of the poorest area in the community.

Thank you.

Response PH311-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Topical Response C, Project Features, discussing the proposed Project's potential partnerships with and benefits to local businesses. As discussed in Section 2.0, Project Description, of the Draft EIR, and Topical Response C, Project Features, the proposed Project creates a first/last mile transit link for residents and businesses within Chinatown while unifying and connecting communities through transit mobility access. This new mode of transportation will expand rider access to the regional transit system by attracting new visitors including Dodgers fans, and represents an opportunity for additional visitors along the proposed Project alignment, creating economic opportunities for local businesses, including shops and restaurants, through potential partnerships that drive customers to Chinatown and other businesses along the proposed Project alignment, which, consequently, adds revenues to these small businesses in the communities the proposed Project hopes to serve.

Comment Letter PH312 – Sharon Coleman

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH312

Comment PH312-1 My name is Sharon Coleman. I am president of the National Association [inaudible] Contractors. And I just want to say I support this mission and I agree with the previous caller in reference to making sure that we have not only minority participation on the building of the actual structure, but on the long-term aspects of it.

That's my comment.

Response PH312-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Topical Response N, Environmental Justice, for discussion of how the Project Sponsor has committed to a goal of 35 percent utilization of minority business enterprises (MBE), women business enterprises (WBE), disadvantaged business enterprises (DBE), small business enterprise (SBE), disabled veteran business enterprises (DVBE), and LGBTQ-owned businesses during the proposed Project's construction phase.

Comment Letter PH313 – Sarah Van de Camp

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH313

Comment PH313-1 Hi. Thank you so much. My name's Sarah Van de Camp and I'm a resident of East L.A., specifically Cypress Park. I support this project. I think it's really no secret that we desperately need zero-emission solutions and climate solutions. We also need more public transportation options and connectivity in Los Angeles. So I wholeheartedly support this project and the efforts by climate resolve.

And I'm also really excited about the opportunity that aerial gondola technology presents in Los Angeles as well. This is a super innovative idea and I really do think it would be good for the city. Thank you so much.

Response PH313-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH314 – Bill

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH314

Comment PH314-1 Hi, my name is Bill [inaudible] with people organized for Westside Renewal. Yes, we oppose this project. I'm concerned about a couple of things in the EIR in particular.

Response PH314-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Because the comment does not address and environmental issue or raise a substantive issue on the content of the Draft EIR, no further response is warranted.

Comment PH314-2 One is I'm concerned about the way this project fits in with the larger plan to redevelop the parking lots around Dodger Stadium. I do not believe that the actual goal of this project is to facilitate the growth of business in Chinatown, but to facilitate an excuse to redevelop the parking lots that Frank McCourt still has an interest in.

This is not really a secret that this was part of the goal. They were discussing it in the press over a decade ago, and I always find very, very wealthy individuals boosting a project that serves their interests and trying to use the public infrastructure to do that as very suspect.

Response PH314-2 Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at Los Angeles Union Station (LAUS), Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Refer to Topical Response G, No Improper Project Segmentation: The Proposed Project Is Intended to Create a Transit Connection from Metro's Union Station Transportation Hub via an Aerial Gondola System to the Dodger Stadium Property for a discussion of how the proposed Project solely proposes an aerial gondola system. The proposed Project does not include other development, and neither the Project Sponsor nor any other applicant has applied for other development unrelated to the existing stadium uses on the Dodger Stadium property. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project.

Comment PH314-3 I think people have already talked about the way that the traffic study is flawed.

I don't see how adding a gondola really takes cars off the road. It doesn't do anything to get people to take transit to where they can get the gondola. I do not believe it's a

first and last-mile solution. I think it's going to become an only mile solution. And what folks will do in practice is really take the gondola as kind of more a tourist attraction type thing and bring traffic and parking into the community.

Response PH314-3 Refer to Section 3.17, Transportation, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel. The Draft EIR's transportation analyses were prepared by experts in the field, as set forth in Section 8.0, List of Preparers, and intended to provide the public and decision makers the information that they need to meaningfully consider the proposed Project's potential environmental impacts. Metro hired Stantec to peer review the transportation analyses conducted for the proposed Project, including Section 3.17, Transportation, and Appendix N, Transportation Appendices of the Draft EIR.[2] Stantec is an internationally-respected global design and delivery firm that provides transportation engineering and planning services among its many service lines. Stantec concluded that the proposed Project ridership forecasting model and the model inputs and data sources were credible, defendable, and appropriate to use for the analysis and that they agreed with the ridership forecasts in the Draft EIR. Traffic congestion is not required to be analyzed under CEQA in the Draft EIR following the implementation of Senate Bill 743, which designated "vehicle miles traveled" as the method for assessing transportation impacts on the environment for CEQA projects. Refer to the Los Angeles Aerial Rapid Transit Project Non-CEQA Transportation Assessment, which found that there could be localized increases in traffic at the intersections closest to the proposed Project's Alameda Station and Chinatown/State Park Station due to some riders choosing to park and ride or take Uber/Lyft and recommended the proposed Project work with Metro to identify a transit partnership for the proposed Project riders to further encourage them to take transit, walk, or bike to the proposed Project's stations.

Comment PH314-4 And of course, once that redevelopment around Dodger Stadium happens, I don't see those folks even spending that much money or time in Chinatown. When we talk to members in the community, nobody says the thing that we need most is a gondola. Folks need affordable housing, but they also need like local level traffic solutions, like a traffic light to get from William Meade Public housing community to the historic state park, for instance.

We need to invest in what folks actually need and do bottom-up planning. This is a misuse of the public process. Thank you.

Response PH314-4 Refer to Topical Response G, No Improper Project Segmentation: The Proposed Project Is Intended to Create a Transit Connection from Metro's Union Station Transportation Hub via an Aerial Gondola System to the Dodger Stadium Property for a discussion of how the proposed Project solely proposes an aerial gondola system. The proposed Project does not include other development, and neither the Project

[2] Stantec. 2023. Memo to Holly Rockwell Regarding Los Angeles Aerial Rapid Transit (LA ART) Project Transportation Analysis Peer Review.

Sponsor nor any other applicant has applied for other development unrelated to the existing stadium uses on the Dodger Stadium property. Refer to Topical Response C, Project Features, for discussion of how the proposed Project would provide numerous benefits to local businesses in El Pueblo, Chinatown, and other areas along the proposed Project alignment, including through potential partnerships with these businesses as well as by providing an accessible and affordable mobility option for employees and area residents. Refer to Topical Response N, Environmental Justice, for discussion of how the proposed Project would not preclude development housing and would itself address a need for a permanent transit connection to one of the region's most visited venues, and would benefit the surrounding community by alleviating existing congestion on surrounding neighborhood streets, arterial roadways, and freeways, thereby reducing associated air pollution and improving safety. Refer to Topical Response N, Environmental Justice, Appendix A, Public Outreach Report, of the Final EIR, Appendix A, Scoping Report, of the Draft EIR, and Topical Response C, Project Features, for discussion of the proposed Project team's outreach efforts to neighborhoods along the proposed Project alignment and the proposed Project's features to enhance and provide additional benefits to the surrounding communities. Metro sought to engage with stakeholders in neighborhoods along the proposed Project alignment in each stage of the environmental review process. Input from the public, including local community stakeholders, led directly to the selection of the proposed Project alignment, including an intermediate station in Chinatown (the Chinatown/State Park Station), as well as to the redesign of the proposed Project stations and junction and additional pedestrian enhancements including hardscape and landscape improvements.

Comment Letter PH315 – Diane Weiss

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH315

Comment PH315-1 Hi. Can you hear me? Okay. Hi. I am 100% opposed to this project.

Response PH315-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Because the comment does not address an environmental issue or raise a substantive issue on the content of the Draft EIR, no further response is warranted.

Comment PH315-2 In the last 50 years, which is barely a blip of time, we have lost two-thirds of our worldwide wildlife. Two-thirds in 50 years. Recently, it was documented, also that documentation can be found through the World Wildlife Fund. It's also been documented that currently there are over 150,000 species that are threatened or extinction currently due to man-made endeavors such as this kind of short-sighted one,

We are the stewards of the environment and we just forget about that every time some billionaire wants to have a seasonal vanity project that they will benefit from.

I know the wildlife doesn't buy Dodger tickets. Wildlife doesn't buy amusement park tickets.

And it doesn't want a tourist trap. We already have enough of all of those things. At some point we have to realize that we have to preserve our environment because even if you're a billionaire developer, you have to understand that when we kill the environment, we kill ourselves.

Response PH315-2 Refer to Section 3.04, Biological Resources, and Appendix E, Biological Resources Assessment, of the Draft EIR and Appendix G, Supplemental Biological Resources Report, of the Final EIR for discussion of how impacts to biological resources from the proposed Project would be less than significant. Further, as discussed in Sections 3.01, Aesthetics, 3.04, Biological Resources, 3.05, Cultural Resources, 3.06, Energy, 3.07, Geology and Soils, 3.09, Hazards and Hazardous Materials, 3.10, Hydrology and Water Quality, 3.11, Land Use and Planning, 3.13, Noise, 3.15, Public Services, 3.16, Parks and Recreational Facilities, 3.17, Transportation, 3.18, Tribal Cultural Resources, 3.19, Utilities and Service Systems, 3.20, Wildfire, and 5.0, Other CEQA Considerations, the proposed Project would have less than significant operational impacts.

Refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's

ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gas emissions through reduced vehicular travel.

Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS, Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Dodger Stadium draws large regional crowds, with approximately 100 baseball games and other events each year, but there are no permanent transit connections to the venue. The vast majority of visitors drive their personal vehicles to access the venue. These vehicles create congestion on the surface streets leading up to and around Dodger Stadium, including Sunset Boulevard/Cesar E. Chavez from LAUS and throughout the surrounding communities. Given the capacity of the proposed Project's system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system. This would reduce vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days. The proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan. Refer to Section 2.1, Overview of the Project, of the Draft EIR, discussing how the proposed Project would operate daily to serve existing residents, workers, park users, and visitors to Los Angeles. As discussed on page 2-42, in Section 2.0, Project Description, of the Draft EIR, the proposed Project would provide service to all pre-season, regular season, and post-season Los Angeles Dodger games and any special events (e.g., concerts, the Los Angeles Marathon) at the Dodger Stadium property. The proposed Project would also provide service to events at the Los Angeles State Historic Park.

Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project

Comment PH315-3 And even the highly skilled greenwasher, like this whole plan has been presented as, it's pretty dubious.

We need to get our priorities straight and quit thinking so short term in our city.

Response PH315-3 Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project. Refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation,

Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gas emissions through reduced vehicular travel.

Comment Letter PH316 – Drew Miller

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH316

Comment PH316-1 Hi, my name is Drew Miller, and I am calling to voice my full support for the gondola. The proposed Los Angeles Aerial Rapid Transit Project presents an important opportunity to advance zero emissions transportation and slash carbon emissions at a crucial time in human history. It would be the first permanent rapid transit connection from the region's transportation hub, Union Station, to Dodger Stadium, as well as a region park.

This will remove thousands of vehicles from the road, reducing congestion and pollution while providing a unique and safe experience for the community. As rising temperatures from human-caused greenhouse gases threaten the city of Los Angeles and the world as we know it, the time for action is now. Thank you.

Response PH316-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH317 – Dawn Huang

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH317

Comment PH317-1 Hi. Can you hear me? My name is Dawn Huang and while I agree that Los Angeles is much more in need of public transportation, a gondola going to a sports stadium is a bizarre choice. Have any of you ridden a gondola? How many people does a gondola move and how quickly? I know taking gondolas in my life, including the Roosevelt Island gondola, known as the aerial tramway, they're very slow and they're huge expense that will be funded by our city for a slow moving mile that doesn't take that many people.

Response PH317-1 Refer to Topical Response A, SB 44, for discussion of how the proposed Project is public transportation because it will be open to the general public for service at regular, scheduled operating times, operating daily to serve existing residents, workers, park users, and visitors to Los Angeles. Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS, Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Dodger Stadium draws large regional crowds, with approximately 100 baseball games and other events each year, but there are no permanent transit connections to the venue. The vast majority of visitors drive their personal vehicles to access the venue. These vehicles create congestion on the surface streets leading up to and around Dodger Stadium, including Sunset Boulevard/Cesar E. Chavez from LAUS and throughout the surrounding communities. Given the capacity of the proposed Project's system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system. This would reduce vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days. The proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan. Refer to Section 2.1, Overview of the Project, of the Draft EIR, discussing how the proposed Project would operate daily to serve existing residents, workers, park users, and visitors to Los Angeles. As discussed on page 2-42, in Section 2.0, Project Description, of the Draft EIR, the proposed Project would provide service to all pre-season, regular season, and post-season Los Angeles Dodger games and any special events (e.g., concerts, the Los Angeles Marathon) at the Dodger Stadium property. The proposed Project would also provide service to events at the Los Angeles State Historic Park. Refer to Topical Response M, Comparable Urban Aerial Transit Systems, discussing

how, like the proposed Project, comparable aerial transit systems in cities around the world are integrated with their surrounding urban environments. In particular, comparable aerial transit systems in other locations demonstrate that such systems can operate safely, efficiently, and in concert with nearby residential and open space uses, including parks and other recreational facilities.

Refer to Section 2.0, Project Description, of the Draft EIR and Topical Response J, Gondola Design and Operations, of the Final EIR, for discussion of the proposed Project's design and operations, including discussion of the safety, privacy, and operations features of the proposed Project. The proposed Project would carry up to approximately 5,000 passengers per hour per direction (pphpd). The cabins would move at an approximate speed of 13.4 miles per hour with headways of approximately 23 seconds, which represents the time between cabins arriving at a station. The proposed Project's Tricable Detachable Gondola system ("3S") cabins typically carry between 30 to 40 passengers each, depending on the exact configuration of seating and cabin amenities selected.

Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, and Section 4.0, Costs and Financing, of the Final EIR, which provide detail as to the proposed Project's capital, operation, and maintenance costs and planned sources of funding, recognizing that the proposed Project's capital funding would primarily be sourced from bond financing serviced by revenue from the proposed Project. No public sources of funding have been sought or committed to the proposed Project.

Comment PH317-2 I lived in New York City for years and saw the aerial tramway overhead and underneath.

Few people felt like walking underneath it.

Response PH317-2 Refer to Topical Response M, Comparable Urban Aerial Transit Systems, discussing how, like the proposed Project, comparable aerial transit systems in cities around the world are integrated with their surrounding urban environments. In particular, comparable aerial transit systems in other locations, including the Roosevelt Island Tramway in New York City, demonstrate that such systems can operate safely, efficiently, and in concert with nearby residential and open space uses, including parks and other recreational facilities.

Comment PH317-3 Apparently only two properties in the world, according to Roosevelt Island's aerial tramway, can make these systems. So it's a French company that built the Roosevelt Island one that was only used temporarily and meant to be used temporarily.

Response PH317-3 This comment is noted and will be provided to the decision makers for review and consideration. Because the comment does not address an environmental issue or raise a substantive issue on the content of the Draft EIR, no further response is warranted. Refer to Comments from Doppelmayr USA, Inc. and Leitner-Poma of

America, Inc., the two manufacturers of 3S gondola systems. Refer to Response PH317-2 for discussion of the Roosevelt Island Tramway.

Comment PH317-4 It's currently privately run and pays New York City a franchise free, while subways and cars are much more often used by residents due to speed. I never went to Roosevelt Island in those 20 years on the tramway while I did drive and take the subway. Not all people are comfortable with aerial travel.

Response PH317-4 Refer to Response PH317-3 for discussion of the Roosevelt Island Tramway. Refer to Topical Response M, Comparable Urban Aerial Transit Systems, discussing how, like the proposed Project, comparable aerial transit systems in cities around the world are integrated with their surrounding urban environments. In particular, comparable aerial transit systems in other locations, including the Roosevelt Island Tramway in New York City, demonstrate that such systems can operate safely, efficiently, and in concert with nearby residential and open space uses, including parks and other recreational facilities. Refer to Response PH317-1 for discussion of the need for the proposed Project and how the proposed Project is public transportation because it will be open to the general public for service at regular, scheduled operating times, operating daily to serve existing residents, workers, park users, and visitors to Los Angeles.

Comment PH317-5 There's a large percentage of the population who are afraid of heights. The tram often wasn't used by the residents because of its slowness and was used often by tourists or in a Spider-Man movie. Although the tramway was opened in 1976 in July it was intended to be just temporary transportation while the subway was getting connected. And then the subway fell behind schedule and it became a permanent fixture.

Response PH317-5 This comment is noted and will be provided to the decision makers for review and consideration. Because the comment does not address an environmental issue or raise a substantive issue on the content of the Draft EIR, no further response is warranted. Refer to Responses PH317-2 through PH317-4 for discussion of the Roosevelt Island Tramway.

Comment PH317-6 But in the 50 years it was in existence, it was only moved 26 million people while the subway moved millions a day, billions of people since. And then when the subway was completed in 1989, ridership drastically went down. So as a historian and documentary filmmaker, I've studied the impacts of public policy and transport policies on community [inaudible].

Response PH317-6 This comment is noted and will be provided to the decision makers for review and consideration. Because the comment does not address an environmental issue or raise a substantive issue on the content of the Draft EIR, no further response is warranted. Refer to Responses PH317-2 through PH317-4 for discussion of the Roosevelt Island Tramway.

Comment PH317-7 Chinatown's historically suffered from being moved already, past harassment and a past massacre perpetrated by non-Chinese. In the past, China and the US. California looks like.

Well, racism is a part here. You chose a community that can't speak enough for itself and is in depression. So I believe that I should be able to speak and to use fund public funding to fund a private enterprise for a specific group of people, baseball fans, which is not the whole population. You could funnel your money into actual metro service for the entire city. Thank you very much.

Response PH317-7 Refer to Topical Response C, Project Features, discussing the proposed Project's potential partnerships with and benefits to local businesses in Chinatown. As discussed in Section 2.0, Project Description, of the Draft EIR, the proposed Project creates a first/last mile transit link for residents and businesses along the proposed Project alignment while unifying and connecting communities through transit mobility access. This new mode of transportation will expand rider access to the regional transit system by attracting new visitors including Dodgers fans, and represents an opportunity for additional visitors along the proposed Project alignment, creating economic opportunities for local businesses, including shops and restaurants, through potential partnerships that drive customers to businesses along the alignment, which, consequently, adds revenues to these small businesses in the communities the proposed Project hopes to serve. The Project Sponsor would convene stakeholder groups to coordinate on issues related to proposed Project features. Refer to Topical Response N, Environmental Justice, for discussion of how the Draft EIR addresses environmental justice by considering the proposed Project's ability to reduce congestion and emissions from on-road vehicles in an area disproportionately burdened by pollution, and including an analysis of the proposed Project's potential impacts to the surrounding community, concluding that the proposed Project could result in air quality benefits for the surrounding communities.

Refer to Appendix A, Public Outreach Report, of the Final EIR, for discussion of the proposed Project's public outreach and opportunity for public testimony during the Draft EIR public review period. Refer to Appendix A, Scoping Report, of the Draft EIR, for discussion of outreach and community engagement during the Draft EIR scoping period. Metro sought to engage the community in each stage of the environmental review process.

Comment Letter PH318 - Carlos

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH318

Comment PH318-1 Hi, my name is Carlos [inaudible] Senior. [inaudible] I support the project, the gondola. We are taking people out of town, so I'm fine with [inaudible] and it's really a pain in the neck trying to get parking [inaudible]. Now [inaudible] much benefit for the community. It will be [inaudible] the gondolas going to go through [inaudible] support the project is also [inaudible] going to Dodger Stadium and it's good for people who don't [inaudible] parking lot [inaudible] and they like to take their kids and their families for, you know, [inaudible] and bottom line 100%, hopefully that this project can get approval. Thank you for listening

Response PH318-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH319 - Eric

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH319

Comment PH319-1 Yeah. Hello. My name is, my name is Eric. I've lived in Echo Park within a gondola ride of Dodger Stadium for about 13 years, but on the other side of the stadium. On game nights when I'm leaving my house, it often means waiting like ten minutes just to exit my driveway. So I totally understand how important it is to find new ways to bring visitors to Dodger Stadium.

But this project won't bring enough people fast enough to justify the intrusion into the community's backyards. It's not the answer to our problems. It will divert cars to Chinatown in Union Station if anything. If you don't get rid of the parking, you'll never get rid of the cars. Let's call this gondola project what it is. It's silly. It's a novelty and it's a [inaudible].

Response PH319-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS, Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Dodger Stadium draws large regional crowds, with approximately 100 baseball games and other events each year, but there are no permanent transit connections to the venue. The vast majority of visitors drive their personal vehicles to access the venue. These vehicles create congestion on the surface streets leading up to and around Dodger Stadium, including Sunset Boulevard/Cesar E. Chavez from LAUS and throughout the surrounding communities. Given the capacity of the proposed Project's system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system. This would reduce vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days. The proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan.

Traffic congestion is not required to be analyzed under CEQA in the Draft EIR following the implementation of Senate Bill 743, which designated "vehicle miles traveled" as the method for assessing transportation impacts on the environment for CEQA projects. Refer to the Los Angeles Aerial Rapid Transit Project Non-CEQA Transportation Assessment, which found that there could be localized increases in

traffic at the intersections closest to the proposed Project's Alameda Station and Chinatown/State Park Station due to some riders choosing to park and ride or take Uber/Lyft and recommended the proposed Project work with Metro to identify a transit partnership for the proposed Project riders to further encourage them to take transit, walk, or bike to the proposed Project's stations.

Parking is not required to be analyzed under CEQA or the Transportation Assessment Guidelines ("TAG"). Nevertheless, the Parking Study was prepared to provide additional information to the community and decision makers about existing parking conditions and the proposed Project's potential to effect parking conditions around the Alameda Station and Chinatown/State Park Station. As recommended in the Parking Study, the Project Sponsor will prepare, in collaboration with the City, and with robust feedback from community stakeholders, a parking management plan. The City would implement any on-street parking management strategies identified.

Comment PH319-2 This [inaudible] achievement will enrich Frank McCourt and be a shiny new thing to show up at the Olympics. The community doesn't want this. Stop wasting time and money talking about it.

Response PH319-2 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project. Refer to Response PH319-1 for an overview of the need for the proposed Project.

Comment PH319-3 Please just run more busses and dedicated lanes to run even when there is no game. There's a beautiful park up there that's more or less inaccessible by transit. We don't want novelty tourist transit. We want robust systems to access our green spaces. This project ain't it. Thank you.

Response PH319-3 Refer to Response PH319-1 for an overview of the need for the proposed Project, including improving mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS, Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Refer to Topical Response H, The Draft EIR Considered an Appropriate Range of Alternatives and Design Options, for discussion of how the Transportation Systems Management Alternative for an enhanced Dodger Stadium Express is unlikely to achieve the same level of ridership as the proposed Project, and otherwise fails to meet most of the Project Objectives which seek to achieve the proposed Project's underlying purpose of providing a permanent direct transit connection between LAUS and the Dodger Stadium property and improving connectivity for surrounding communities, including Chinatown, Mission Junction, Elysian Park, Solano Canyon, and the Los Angeles State

Historic Park. Improving the connection between LAUS and Dodger Stadium via the proposed Project would provide the quickest, most frequent, and highest capacity transit connection for the greatest number of riders traveling to Dodger Stadium to have the most travel time competitive transit trips from more locations in the region. As discussed in Section 5.0, Corrections and Additions, of the Final EIR, access to Elysian Park, the City's second largest park, comprising 575 acres, would be provided through a mobility hub at Dodger Stadium Station, where passengers would be able to access a suite of first/last mile multi-modal options, such as a bike share program.

Comment Letter PH320 – Monica Cruz

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH320

Comment PH320-1 Hi everyone. I am Monica and I support the [inaudible] congestion wants to find a solution that will enhance our communications [inaudible] as a zero emission transit. So in this case, [inaudible] we support this project as we know that aerial rapid transit through this road, through extraordinary innovation [inaudible].

Response PH320-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH321 – Michael Berg

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH321

Comment PH321-1 Hello.

I'm so sorry. I started talking without even [inaudible]. Anyway, thank you. My name is Michael Berg and I am a Los Angeles Union Station Historical Society board member, also the founder of the Aliso Street Manufacturer [inaudible] Society, and also a member of the Chinese Historical Society that's along the route. This is nothing more than a carnival ride.

Response PH321-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS, Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Dodger Stadium draws large regional crowds, with approximately 100 baseball games and other events each year, but there are no permanent transit connections to the venue. The vast majority of visitors drive their personal vehicles to access the venue. These vehicles create congestion on the surface streets leading up to and around Dodger Stadium, including Sunset Boulevard/Cesar E. Chavez from LAUS and throughout the surrounding communities. Given the capacity of the proposed Project's system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system. This would reduce vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days. The proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan.

Comment PH321-2 Los Angeles private transport projects historically have proven to be financially and viable for carrying [inaudible] passengers, i.e. [inaudible].

Response PH321-2 Refer to Topical Response A, SB 44, for discussion of how the proposed Project is public transportation because it will be open to the general public for service at regular, scheduled operating times, operating daily to serve existing residents, workers, park users, and visitors to Los Angeles. Refer to Response PH321-1 for an overview of the need for the proposed Project. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, and Section 4.0, Costs and

Financing, of the Final EIR, which provide detail as to the proposed Project's capital, operation, and maintenance costs and planned sources of funding, recognizing that the proposed Project's capital funding would primarily be sourced from bond financing serviced by revenue from the proposed Project. No public sources of funding have been sought or committed to the proposed Project.

Comment PH321-3 And I agree with the California Endowment's position that the ruining of the view scape of their building severely degrades the quality of their company, and that by doing the same, [inaudible] damage in front of Union Station by that enormous terminal on Alameda Street blocks a world class architectural wonder, one of the most iconic and culturally significant architectural masterpieces in all of Los Angeles.

Response PH321-3 Refer to Section 3.01, Aesthetics, and Appendix C, Visual Impact Assessment, of the Draft EIR, for discussion of the aesthetic impacts of the proposed Project's Alameda Tower, which would be less than significant, and for visual simulations of the proposed Project's Alameda Tower. The Alameda Tower's modern architectural style is evident and would complement the buildings within The California Endowment. The neutral light-tone gray color scheme of Alameda Tower was designed for consistency with the surrounding urban environment, and to not distract from visually distinct structures such as the United States Post Office Terminal Annex building. And, as discussed in Section 3.01, Aesthetics, of the Draft EIR, the proposed Project's Alameda Station is in an urban area that currently has a mix of architectural styles, building materials and colors, as well as a mix of primarily traditional and some modern style buildings. As discussed in Section 2.0, Project Description, of the Draft EIR, the proposed Project's design goal is to develop a common architectural design that unifies the overall aerial gondola system, while allowing for each major component to contribute to the respective localized urban condition. The Alameda Station's platform and canopy would include a light color scheme and warm tones, which has been designed to complement and reflect the materiality of the existing mix of adobe buildings, large Victorian commercial blocks, and Spanish Revival style buildings within the El Pueblo and Olvera Street area. In addition, the "shell" roof design provides a visual lightness with an integrated perforation pattern motif based upon the arched forms that mark openings and entries to Union Station, Pico House, and other historic buildings within El Pueblo. The proposed Project would also integrate physical and visual connections between the proposed Alameda Station and existing adjacent development, such as the new pedestrian plaza at El Pueblo. The new pedestrian plaza at El Pueblo would be open to the public and would extend view corridors between the proposed Alameda Station and existing development in a way that creates an observed visual unity. The Draft EIR fully analyzed and addressed the proposed Project's potential impacts to cultural resources in Section 3.05, Cultural Resources, with supporting data provided in Appendix F, Archaeological and Paleontological Resources Assessment for the Los Angeles Aerial Rapid Transit Project, and Appendix G, Historical Resource Technical Report for the Los Angeles Aerial Rapid Transit Project (HRTR). As discussed in Section 3.05, the Draft EIR's

analysis concludes that all potential impacts related to historical resources would be less than significant, and all potential impacts related to archaeological resources would be either less than significant or reduced to less than significant with mitigation Refer to Topical Response C, Project Features, discussing how the proposed Project's design takes cues from the immediate neighborhood culture, including how each component of the proposed Project would be designed to complement and reflect the unique character of the surrounding area.

Comment PH321-4 We would like to, I would like to say that I believe this project is not viable for anything, and the damage to these [inaudible] is completely irresponsible and unacceptable. And it's amazing to me to think that all of this could be changed if they just put in a subway to Dodger Stadium would solve all of the issues you're talking about.

Response PH321-4 Refer to Response PH321-2 for an overview of the need for the proposed Project. Refer to Topical Response H, The Draft EIR Considered an Appropriate Range of Alternatives and Design Options, for discussion of how the proposed Project's objectives were defined in order to assist Metro in considering alternatives that achieve the proposed Project's fundamental purpose of providing a permanent transit connection to Dodger Stadium. Aerial rapid transit technology has the ability to overcome grade and elevation issues between LAUS and Dodger Stadium in order to provide a direct transit connection between the two locations, and provide safe, zero emission, environmentally friendly, and high-capacity transit connectivity in the Project area that would reduce GHG emissions as a result of reduced vehicular congestion in and around Dodger Stadium and on neighborhood streets, arterial roadways, and freeways.

Comment PH321-5 And I did a little calculation. You have to unload 80 people every minute, to 5,000 people an hour. And I'd like to know how you plan to load and unload 80 people a minute to meet that 5,000 number. I believe that traffic stats that you gave a flood of.

Thank you.

Response PH321-5 Refer to Topical Response B, Ridership Model; Queueing at Stations and Pre-game and Post-game Transportation, for discussion of the proposed Project's ridership model which is based on extensive data sources and assumptions validated by data, and the management of queuing at stations, and pre-game and post-game transportation. Refer to Section 2.0, Project Description, of the Draft EIR and Topical Response J, Gondola Design and Operations, of the Final EIR, for discussion of how the proposed Project would carry up to approximately 5,000 passengers per hour per direction (pphpd). The cabins would move at an approximate speed of 13.4 miles per hour with headways of approximately 23 seconds, which represents the time between cabins arriving at a station. As one hour consists of 3,600 seconds, approximately 156.5 cabins would arrive every hour (3,600 seconds / 23 seconds).

The proposed Project's Tricable Detachable Gondola system ("3S") cabins typically carry between 30 to 40 passengers each, depending on the exact configuration of seating and cabin amenities selected. At a capacity of 35 passengers per cabin, at 156.5 cabins per hour, 5,478 passengers would arrive at each station per hour (35 passengers per cabin x 156.5 cabins per hour). Given that the same headway applies in each direction, the total, calculated system capacity is therefore 5,478 pphpd. To account for variations in the exact configuration of seating and cabin amenities, as well as operational considerations (including, for example, fewer than 35 people boarding a cabin or cabins being either slowed or stopped in the station for boarding purposes), the proposed Project has included an approximately 10 percent reduction in capacity from 5,478 pphpd to 5,000 pphpd.

Comment Letter PH322 – Alex Alvarez

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH322

Comment PH322-1 Oh, sorry about that. Good evening. My name is Alex Alvarez. We all have to deal with the traffic around Dodger Stadium on game days.

The gondolas could take 3,000 cars off the road, making it easier to get around and reducing our pollution from cars.

I support the gondola, [inaudible] because it would be great for Los Angeles, for the Dodgers and their fans.

And you for taking the opportunity to take my comment and have a good night.

Response PH322-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH323 – Speaker 58

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH323

Comment PH323-1 Hello?

Yes, my name is [inaudible] for the community and I am [inaudible] and I would like to thank you for your time.

Response PH323-1 This comment is noted and will be provided to the decision makers for review and consideration. Because the comment does not raise a substantive issue on the content of the Draft EIR, no further response is warranted

Comment Letter PH324 - Crystal

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH324

Comment PH324-1 Hi. My name is [Crystal]. [inaudible]. Thank you.

Response PH324-1 This comment is noted and will be provided to the decision makers for review and consideration. Because the comment does not raise a substantive issue on the content of the Draft EIR, no further response is warranted

Comment Letter PH325 – Ron

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH325

Comment PH325-1 Hello.

Right. Thank you. I can't stress enough how opposed I am for this project.

There's not enough time really to address the countless reasons that this is a bad idea. Even if I didn't live in the neighborhood, I'd still be against this project. I'm all for environmental protection and for business people to do well and to be successful. But this whole project is built on a lie.

Response PH325-1 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR, for discussion of the proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gas emissions through reduced vehicular travel. Refer to Topical Response C, Project Features, for discussion of how the proposed Project would provide numerous benefits to local businesses in El Pueblo, Chinatown, and other areas along the proposed Project alignment, including through potential partnerships with these businesses as well as by providing an accessible and affordable mobility option for employees and area residents.

Comment PH325-2 It's not about saving the environment, but about increasing the fortunes of a billionaire. There's no way that this project will be paid for by proponents or pay for itself, and taxpayers do not need to be put on the hook for this.

Response PH325-2 This comment is noted and will be provided to the decision makers for review and consideration. Because the comment does not address an environmental issue or raise a substantive issue on the content of the Draft EIR, no further response is warranted. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, for discussion of the Project Sponsor and donation to Zero Emissions Transit, a nonprofit organization dedicated to supporting zero emissions transportation programs, policies, and projects, such as the proposed Project. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, and Section 4.0, Costs and Financing, of the Final EIR, which provide detail as to the proposed Project's capital, operation, and maintenance costs and planned sources of funding, recognizing that the proposed Project's capital funding would primarily be sourced from bond financing serviced by revenue from the proposed

Project. No public sources of funding have been sought or committed to the proposed Project.

Comment PH325-3 There are other ways to reduce emissions. California's already on track to have automobiles become environmentally safer. If you live in the neighborhood, there's nothing environmentally friendly about this project. Rather, it's environmentally ruinous to everything it touches or is in its vicinity.

Response PH325-3 The proposed Project's ability to reduce vehicular travel, to improve air quality through reduced emissions, and to reduce greenhouse gases through reduced vehicular travel are discussed in Section 3.03, Air Quality, Section 3.08, Greenhouse Gas Emissions, Section 3.17, Transportation, Appendix D, Air Quality/Health Risk Assessment Technical Report, Appendix J, Greenhouse Gas Emissions Technical Report, and Appendix N, Transportation Appendices, of the Draft EIR. The proposed Project would improve mobility and accessibility for the region by connecting LAUS to Dodger Stadium via an aerial gondola system, including an intermediate station at the southernmost entrance of the Los Angeles State Historic Park. Dodger Stadium draws large regional crowds, with approximately 100 baseball games and other events each year, but there are no permanent transit connections to the venue. Given the capacity of this system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system. This would reduce vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days, thereby reducing VMT and GHG emissions. Accordingly, the proposed Project would result in air quality benefits to the surrounding communities. The lifetime emissions of the proposed Project over the useful life of the project would be a reduction of 166,653 MT CO2e. The lifetime VMT reduction of the project would be a reduction of 129,629,500 VMT. Emissions are decreased through reducing vehicle miles travelled. The proposed Project would result in a net reduction in criteria pollutant emissions by reducing vehicle miles travelled. Refer to Section 2.0, Project Description, of the Draft EIR, for discussion of how the proposed Project would operate at zero emissions, with the electrical power for the proposed Project supplied by the City of Los Angeles Department of Water and Power (LADWP) through the utility's Green Power Program, pursuant to GHG-PDF-A.

As discussed in Sections 3.01, Aesthetics, 3.04, Biological Resources, 3.05, Cultural Resources, 3.06, Energy, 3.07, Geology and Soils, 3.09, Hazards and Hazardous Materials, 3.10, Hydrology and Water Quality, 3.11, Land Use and Planning, 3.13, Noise, 3.15, Public Services, 3.16, Parks and Recreational Facilities, 3.17, Transportation, 3.18, Tribal Cultural Resources, 3.19, Utilities and Service Systems, 3.20, Wildfire, and 5.0, Other CEQA Considerations, the proposed Project would have less than significant operational impacts. Additionally, refer to Topical Response M, Comparable Urban Aerial Transit Systems, discussing how, like the proposed Project, comparable aerial transit systems in cities around the world are integrated with their

surrounding urban environments. In particular, comparable aerial transit systems in other locations demonstrate that such systems can operate safely, efficiently, and in concert with nearby residential and open space uses, including parks and other recreational facilities.

Comment PH325-4 It offers nothing but [inaudible]. Generally impacts would not be significant until they are, and they will be. If whatever benefits to the business community there could possibly be would already be provided by the Metro rail. This will not add to anything. If anybody thinks Chinatown is dead, maybe they could encourage businesses to paint their buildings so that the buildings looked alive.

Response PH325-4 Refer to the Executive Summary of the Draft EIR for discussion of how the proposed Project operation would have less than significant environmental impacts. Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. Refer to Topical Response C, Project Features, for discussion of the proposed Project's features to enhance and provide additional benefits to the surrounding communities, including the proposed Project's potential partnerships with and benefits to local businesses. Refer to Topical Response N, Environmental Justice, for discussion of how the proposed Project would not displace businesses and represents an opportunity for additional visitors along the proposed Project alignment, creating economic opportunities for local businesses, including shops and restaurants, through potential partnerships that drive customers to businesses along the alignment, which, consequently, adds revenues to these small businesses in the communities the proposed Project hopes to serve. Refer to Topical Response C, Project Features, for discussion of how during construction, the Project Sponsor would create a Business and Community Support Program to assist local businesses affected by proposed Project construction activities. The proposed Project would provide numerous benefits to local businesses in El Pueblo, Chinatown, and other areas along the proposed Project alignment, including through potential partnerships with these businesses as well as by providing an accessible and affordable mobility option for employees and area residents.

Comment PH325-5 But actually I have one more comment. The scheme just screams the old saying about preferring to ask for forgiveness instead of permission. And surely things are going to go wrong and there'll be no way to forgive those things from happening. Thank you.

Response PH325-5 This comment is noted and will be provided to the decision makers for review and consideration. Because the comment does not address an environmental issue or raise a substantive issue on the content of the Draft EIR, no further response is warranted.

Comment Letter PH326 – Katie

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH326

Comment PH326-1 Hey, can you hear me? Yes, thank you. My name is Katie. I live right by Dodger Stadium. I do agree that we need better public transit on game days. It's very difficult to leave my house and go anywhere, but the gondola is the opposite of that. The gondola won't make it easier to take public transit to Dodger Stadium. It won't help our neighbors access effective and affordable public transit.

Response PH326-1 Refer to Section 2.3.7, Purpose and Need, of the Draft EIR, for an overview of the need for the proposed Project. The proposed Project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS, Dodger Stadium, Los Angeles State Historic Park, Elysian Park, and surrounding communities via the intermediate Chinatown/State Park Station. Dodger Stadium draws large regional crowds, with approximately 100 baseball games and other events each year, but there are no permanent transit connections to the venue. The vast majority of visitors drive their personal vehicles to access the venue. These vehicles create congestion on the surface streets leading up to and around Dodger Stadium, including Sunset Boulevard/Cesar E. Chavez from LAUS and throughout the surrounding communities. Given the capacity of the proposed Project's system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system. This would reduce vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days. The proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan. Refer to Topical Response C, Project Features, for discussion of how the proposed Project would provide active transportation connectivity along the proposed Project alignment through pedestrian access enhancements and first/last mile multi-modal options at the mobility hubs proposed for the Chinatown/State Park Station and the Dodger Stadium Station.

Comment PH326-2 And frankly, it won't help anyone get anywhere that they need to go. It's going to disrupt our neighborhood. And it's, as other people have said, an entirely unrealistic plan. The numbers that are, that it says it will bring of people is just like, that's a wish. That's not reality. And as a taxpayer, I do not agree with the city paying hundreds of millions of dollars, of dollars of our own money for something that none of us want or need.

Response PH326-2 Refer to Response PH326-1 for an overview of the need for the proposed Project. Refer to Section 2.1, Overview of the Project, of the Draft EIR, discussing how the

proposed Project would operate daily to serve existing residents, workers, park users, and visitors to Los Angeles. As discussed on page 2-42, in Section 2.0, Project Description, of the Draft EIR, the proposed Project would provide service to all pre-season, regular season, and post-season Los Angeles Dodger games and any special events (e.g., concerts, the Los Angeles Marathon) at the Dodger Stadium property. The proposed Project would also provide service to events at the Los Angeles State Historic Park. Refer to Topical Response L, Project Sponsor and Proposed Project Costs and Financial Analysis, and Section 4.0, Costs and Financing, of the Final EIR, which provide detail as to the proposed Project's capital, operation, and maintenance costs and planned sources of funding, recognizing that the proposed Project's capital funding would primarily be sourced from bond financing serviced by revenue from the proposed Project. No public sources of funding have been sought or committed to the proposed Project.

Comment PH326-3 We need affordable housing. We need streets where we can ride our bikes and use accessible public transportation. We need to be able to have public transportation that goes to places that we actually need to go in a way that gets us there.

And that's not what the gondola does. So we really do not need the gondola and we are opposed to it in our neighborhood. Thank you.

Response PH326-3 This comment indicating opposition to the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Response PH326-1 for an overview of the need for the proposed Project. Refer to Topical Response N, Environmental Justice, for discussion of how the proposed Project would not preclude development of uses including housing, grocery stores, and/or healthcare facilities in the surrounding communities, and would itself address a need for a permanent transit connection to one of the region's most visited venues, and would benefit the surrounding community by alleviating existing congestion on surrounding neighborhood streets, arterial roadways, and freeways, thereby reducing associated air pollution and improving safety. The proposed Project is designed to extend affordable, regional access and mobility options to the communities adjacent to the proposed Project alignment, providing connections to Metro's growing regional public transit system. The proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan.

Comment Letter PH327 – Yeg Lin Wong

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH327

Comment PH327-1 Support Gondola, brings more business

Response PH327-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH328 – Wu Shuo Li

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH328

Comment PH328-1 Support Gondola

Response PH328-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH329 – Zhey Wen Zhen

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH329

Comment PH329-1 Support Gondola

Response PH329-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH330 – Lorenz G Biyun

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH330

Comment PH330-1 Support Gondola, brings more business to Chinatown

Response PH330-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH331 – Aicui Zhou

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH331

Comment PH331-1 Support Gondola, brings more business to Chinatown

Response PH331-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH332 – Zhou

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH332

Comment PH332-1 Support

Response PH332-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH333 – Wei Mei

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH333

Comment PH333-1 Support Gondola

Response PH333-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH334 – Mei Kven Li

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH334

Comment PH334-1 Support Gondola

Response PH334-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH335 – Lean Ah Tan

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH335

Comment PH335-1 Ok to build the gondola bring more people here

Response PH335-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH336 – Sean Lee

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH336

Comment PH336-1 It would benifit the traffic when there is dodger games

Response PH336-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH337 – Lee Suan

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH337

Comment PH337-1 It would benefit the traffic when there is dodger games

Response PH337-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH338 – Josefina Hanas

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH338

Comment PH338-1 I urgently need this project to be finished, I don't like the crowds, they litter, the cut plants when they pass by, they block driveways with their cars.

Response PH338-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH339 – Magdalena Luna

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH339

Comment PH339-1 I am pleased that the project is done soon. That would save us some headaches related to our houses' parking, also less garbage.

Response PH339-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH340 – Isabel Rios

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH340

Comment PH340-1 I think it will be very helpful with regards to traffic, especially for people like me, who suffer panic attacks, we could be stuck for long on the road; over there, we won't even have time to feel bad because it will only take 7 minutes, I hope I can ride it one day and that it helps other people that suffer anxiety or panic attacks so they want to ride this means of transportation. I rode one in Chicago.

Response PH340-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH341 – Maria Ortega

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH341

Comment PH341-1 I support the Gondola Project, it seems to me like a good idea and I hope it is done soon so I can see it, because who knows how long it is going to take and I am already an old woman.

Response PH341-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH342 – Enrique Luna

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH342

Comment PH342-1 I want this Gondola Project to be ready soon, it would reduce a lot of traffic on our street and there won't be so many cars blocking our driveways, they block our streets and sometimes our cars have to stay far away from our home until very late.

Response PH342-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH343 – Bertha Magona

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH343

Comment PH343-1 I support the Gondola because it will bring more business to us,

Response PH343-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Topical Response C, Project Features, for discussion of how the proposed Project would provide benefits to local businesses in El Pueblo, Chinatown, and other areas along the proposed Project alignment, including through potential partnerships with these businesses as well as by providing an accessible and affordable mobility option for employees and area residents.

Comment PH343-2 also because it will help with traffic and because it will be free for us, the residents in the area.

Response PH343-2 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration. Refer to Topical Response N, Environmental Justice, for discussion of how the proposed Project would be free to ride for anyone with a ticket to a Dodgers game. In addition, the proposed Project would allow all residents, employees, and businesses located close to the proposed Project to ride the gondola using their Metro fare at no additional cost under the Community Access Plan.

Comment Letter PH344 – Araceli Rico

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH344

Comment PH344-1 I support the Gondola and I hope they won't come and park here because they would take the bus or train, and the gondola to Union Station.

Response PH344-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH345 – Alicia Garcia

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH345

Comment PH345-1 A very good idea to reduce traffic and clean the environment, it was about time to have something like that here in Los Angeles

Response PH345-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH346 – Jesus Rico

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH346

Comment PH346-1 I heard about this project 10 years ago.

It should already be built after so long, it would help a lot to our area in terms of parking spots, because they park here and they walk to the stadium.

Response PH346-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH347 – Andrea Hernandez

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH347

Comment PH347-1 I like it because it is very fast, just 7 minutes to get to the stadium it will carry 5000 people per hour and will reduce pollution.

Response PH347-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH348 – Bertha

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH348

Comment PH348-1 I support the gondola, I think it is a good idea.

Response PH348-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment PH348-2 There won't be so much traffic anymore and we will have cleaner air.

Response PH348-2 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH349 – Rosa Juarez

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH349

Comment PH349-1 I support the Transit plans because they will help reduce traffic and because the air will be less polluted.

Response PH349-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH350 – Maribel Aceves

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH350

Comment PH350-1 This new project is a good idea because many more people will visit Chinatown and that would help their community, and will also reduce traffic.

Response PH350-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH351 – Karen Alfaro

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH351

Comment PH351-1 I am all in for this new project because a lot more people will be curious to visit other small businesses in the area.

Response PH351-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment PH351-2 Secondly I believe that the aerial transit will reduce traffic and last one of the most catching good facts is less polution.

Response PH351-2 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH352 – Saul Duran

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH352

Comment PH352-1 It would bring many benefits

It would benefit in terms of traffic, less pollution, more tourists, less time to get to the stadium and get back home, it will alleviate stress, because there won't be as much traffic as now;

Response PH352-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment PH352-2 it would be modern, efficient and take stress away from traffic.

Response PH352-2 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH353 – Angel Ruiz

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH353

Comment PH353-1 Good Idea cause it's good for the environment and cause is going to reduce traffic

Response PH353-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH354 – Stephanie

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH354

Comment PH354-1 Good idea. Is going to cut down traffic. Will help us get quiquer where wwe want to go or have to go cause we cant get out on game day

Response PH354-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH355 – Alexis Cuevas

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH355

Comment PH355-1 The gondola could remove up to 3,000 cars from the neighborhood streets before and after events at Dodgers Stadium, helping reduce traffic and reducing the need to park in the local community

Response PH355-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH356 – Manuel Antonio Vasquez

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH356

Comment PH356-1 I support this means of transportation, it is a good project, new transportation for the community. It helps with traffic and it will clean our air.

Response PH356-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH357 – Alfredo Gutierrez

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH357

Comment PH357-1 This project is about less cars, less pollution and safer & healthier neighborhoods. I support the Dodger Stadium Gondola.

Response PH357-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH358 – Cynthia Gutierrez

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH358

Comment PH358-1 The gondola is a great project that will aid with the traffic situation in our city.

Response PH358-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH359 – Alicia Jimenez

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH359

Comment PH359-1 Great project, up to 3000 cars would be removed from the streets in the neighborhood before and after the Dodgers' events, it would ease local traffic and reduce the need to park within the local community.

Response PH359-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH360 – Aquiles Castino

The full bracketed comment is provided in Appendix B, Public Hearing Transcripts, of the Final EIR, for reference.

Responses to PH360

Comment PH360-1 I like the project but what I don't like is the exit is for away from the stadium. I prefer to have the stop by the dodgers store. Easeir for people that have trouble to walk.

Response PH360-1 Refer to Section 2.0, Project Description, of the Draft EIR and Topical Response J, Gondola Design and Operations, of the Final EIR, for discussion of the safety features of the proposed Project and how it meets ADA requirements. The station boarding process and cabins would comply with all accessibility requirements of the Americans with Disabilities Act ("ADA"). If needed, cabins could be either slowed or stopped in the station for boarding purposes. Station attendants would be located within each station to assure safe boarding and to execute stops for unloading or boarding purposes, if necessary. Attendants would also provide customer interaction and observation; if a passenger needs special assistance, an attendant may either further slow or stop a cabin. A separate operator would be at stations in a control booth monitoring screens, which would show activities in each cabin and station, as well as the system controls. The time necessary to slow or stop a cabin is factored into the overall system capacity of the proposed Project. Pathways to the boarding areas would be ADA compliant with redundant vertical circulation and appropriately sized passageways. The entry widths and interiors size of each cabin would comply with the requirements of the ADA. The pedestrian pathway from the Dodger Stadium Station to the Stadium would be ADA compliant.

Comment PH360-2 Also please offer rides to people with disability to walk from their car to the stadium.

Response PH360-2 Refer to Response PH360-1 for discussion of the proposed Project's compliance with ADA requirements.

Comment Letter PH361 – Jose Luis Ramos

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH361

Comment PH361-1 This project in Los Angeles would be very helpful to the local community, I have been near the Dodger Stadium for many years now and there will be much less traffic with this project. I hope it is built as soon as possible. Thank you.

Response PH361-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH362 – Giovanni Duran

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH362

Comment PH362-1 Great Ideas. It's convinent and reduces traffic and good for the enviornment.

Response PH362-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH363 – Edith Salmeron

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH363

Comment PH363-1 It is an excellent project, my neighborhood has one of the worst traffic and pollution problems in all Los Angeles. We want and deserve cleaner air.

Response PH363-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Comment Letter PH364 – Elena Garcia

The full bracketed letter is provided in Appendix C, Public Comments on the Draft EIR, of the Final EIR for reference.

Responses to PH364

Comment PH364-1 I like the project because it would also be a tourist attraction, not to mention that it would be beneficial in terms of traffic and less pollution here in the area.

Response PH364-1 This comment indicating support for the proposed Project is noted for the record and will be provided to the decision makers for review and consideration.

Section 7.0 | Mitigation Monitoring and Reporting Program

7.1 INTRODUCTION

The California Environmental Quality Act (CEQA) requires a lead agency to adopt a Mitigation Monitoring and Reporting Program (MMRP) for projects where mitigation measures are a condition of their approval and development. An Environmental Impact Report has been prepared to analyze and address the potential environmental impacts of the proposed Project, identifying project design features or recommending mitigation measures in order to avoid or substantially lessen the significant environmental impacts associated with the proposed Project. As the lead agency for the proposed Project, Metro is responsible for administering and implementing the MMRP, which has been prepared in compliance with CEQA, including Public Resources Code section 21081.6 and CEQA Guidelines section 15097. The decision makers must define specific monitoring and reporting requirements to be enforced during implementation of the proposed Project. The primary purpose of the MMRP is to monitor the implementation of the project design features (PDFs) and mitigation measures (MMs) identified in the Draft and Final EIR.

7.2 ORGANIZATION

As shown in **Table 7-1, Mitigation Monitoring and Reporting Program**, below, each identified PDF and MM for the Project is listed and categorized by environmental impact area, with accompanying discussion of the following:

- **Responsible Party:** The entity accountable for the action.
- **Monitoring Agency:** The agency to which reports involving feasibility, compliance, implementation, and development are made.
- **Enforcement Agency:** The agency or agencies with the power to enforce the project design feature or mitigation measure.
- **Monitoring Phase:** The phase of the Project during which the project design feature or mitigation measure shall be monitored.
- **Monitoring Frequency:** The frequency at which the project design feature or mitigation measure shall be monitored.
- **Action(s) Indicating Compliance:** The action(s) of which the Enforcement or Monitoring Agency indicates that compliance with the identified project design feature or required mitigation measure has been implemented.

7.3 PROGRAM MODIFICATION

After review and approval of the final MMRP by the Lead Agency, minor changes and modifications to the MMRP are permitted, but can only be made subject to Metro approval. The Lead Agency, in conjunction with any appropriate agencies or departments, will determine the adequacy of any proposed change or modification. This flexibility is necessary in light of the nature of the MMRP and the need to protect the

environment. No changes will be permitted unless the MMRP continues to satisfy the requirements of CEQA, as determined by the Lead Agency.

The proposed Project shall be in substantial conformance with the PDFs and MMs contained in this MMRP. The enforcing departments or agencies may determine substantial conformance with PDFs and MMs in the MMRP in their reasonable discretion. If the department or agency cannot find substantial conformance, a PDF or MM may be modified or deleted as follows: the enforcing department or agency, or the decision maker for a subsequent discretionary project-related approval, finds that the modification or deletion complies with CEQA, including CEQA Guidelines Sections 15162 and 15164, which could include the preparation of an addendum or subsequent environmental clearance, if necessary, to analyze the impacts from the modifications to or deletion of the PDFs or MMs. Any addendum or subsequent CEQA clearance shall explain why the PDF or MM is no longer needed, not feasible, or the other basis for modifying or deleting the PDF or MM, and that the modification will not result in a new significant impact or a substantial increase in the severity of a previously identified significant impact consistent with the requirements of CEQA. Under this process, the modification or deletion of a PDF or MM shall not in and of itself require a modification to any proposed Project discretionary approval unless the Director of Planning for Metro as the Lead Agency also finds that the change to the PDF or MM results in a substantial change to the proposed Project or the non-environmental conditions of approval.

Table 7-1: Mitigation Monitoring and Reporting Program

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
Aesthetics					
AES-PDF-A: Project Lighting. The Project would also include the following Project Design Features related to lighting: • Building Lighting will not exceed 60 watts. • Building Lighting outdoor luminaires will not exceed 6200 initial lumens. • Sign Lighting luminance will not exceed 10,000 candelas per m2 (cd/m2) during the day from after sunrise until 45 minutes prior to sunset. Sign Lighting will not exceed 300 cd/m2 at night from sunset until 45 minutes prior to sunrise. • Sign Lighting luminance shall transition smoothly from daytime luminance to nighttime luminance and vice versa. • Illuminated signs that have the potential to exceed 300 cd/m2 will include an electronic control mechanism to reduce sign luminance to 300 cd/m2 at any time when ambient sunlight is less than 100 footcandles (fc).	Project Sponsor Lighting Professional	Metro and/or the City of Los Angeles	Prior to issuance of Certificate of Occupancy	Once, prior to issuance of Certificate of Occupancy	Compliance Certificate by Lighting Professional Issuance of Certificate of Occupancy
Air Quality					
AIR-PDF-A: All off-road diesel-powered construction equipment greater than 50 horsepower shall meet, at a minimum, the Tier 4 emission standards for nonroad diesel engines promulgated by the USEPA.	Project Sponsor Construction Contractor	Metro and/or the City of Los Angeles and South Coast Air Quality Management District	Pre-Construction Construction	Once, Plan Check (proof of compliance) Periodic Field Inspections during Construction	Inclusion of requirement in Construction Plan Submittal of Compliance Report
Biological Resources					
BIO-PDF-A: The Project will establish a Tree Protection Zone to protect trees during construction to establish and maintain a healthy environment for all retained trees during the course of construction. The Tree Protection Zone will apply to any trees within the construction footprint, or any trees where a portion of their drip line overhangs the construction footprint (i.e., the trunk of a tree may be outside of the construction footprint, but the tree's drip line	Project Sponsor Arborist or Landscape Contractor Construction Contractor	Metro and/or the City of Los Angeles (Department of Public Works Urban Forestry) and/or State Department of Parks and Recreation	Pre-Construction Construction	Once, Plan Check (proof of compliance) Periodic Field Inspections during Construction	Inclusion of requirement in Construction Plan Submittal of Compliance Report

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
overhangs the construction footprint). The Tree Protection Zone generally encompasses an area within the drip line of the tree plus an additional 5 feet, depending on the species and size of the tree. Any construction activities within the Tree Protection Zone should follow the following guidelines for root protection. For utilities, any required trenching should be routed in such a manner as to minimize root damage. In areas where the grade around the Tree Protection Zone will be lowered, some root cutting may be unavoidable. Cuts should be clean and made at right angles to the roots. When practical, roots will be cut back to a branching lateral root to avoid root damage.					
BIO-PDF-B: Avian Collision Mitigation, Monitoring, and Adaptive Management Plan. The Project Sponsor, in coordination with and subject to the approval of CDFW, shall develop an Avian Collision Mitigation, Monitoring, and Adaptive Management Plan to address the potential for bird collisions. The Plan shall include the following components: 1. Monitoring for first 5 years of Project operation: All Project operations and maintenance personnel, including subcontractors, shall undergo training on how to identify and report avian and bat injuries or mortalities detected in the Project area during routine maintenance activities. 2. An adaptive management table will be developed, outlining measures to implement upon detection of incidents associated with common species and special status species. 3. Annual reporting criteria and requirements.	Project Sponsor Qualified Biologist	Metro and/or California Department of Fish and Wildlife	Prior to Certificate of Occupancy (Submittal of Plan) Operations, first 5 years (Annual Monitoring)	Once, prior to Certificate of Occupancy (Submittal of Plan) Annually, for first 5 years	Submittal of Avian Collision Mitigation, Monitoring, and Adaptive Management Plan Annual Reporting, for first 5 years
BIO-PDF-C: Cabin Window Features. The cabin windows shall be designed with non-transparent (tinted) and/or partially covered with a vinyl window film to be made visible to birds in flight. Reflective surfaces would be reduced as much as possible with opaque or translucent surfaces.	Project Sponsor Qualified Biologist	Metro and/or the City of Los Angeles	Prior to issuance of Certificate of Occupancy	Once, prior to issuance of Certificate of Occupancy	Compliance Certificate by Qualified Biologist Issuance of Certificate of Occupancy

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
BIO-PDF-D: The proposed Project shall avoid using any rodenticides and second generation anticoagulant rodenticides during Project activities. Any agreement between the proposed Project and a pest control service provider would include restrictions on the use of rodenticides and second generation anticoagulant rodenticides.	Project Operator Pest Control Service Provider	Metro and/or the City of Los Angeles	Prior to issuance of Certificate of Occupancy	Once, prior to issuance of Certificate of Occupancy	Inclusion of requirement in Pest Control Service Agreement Issuance of Certificate of Occupancy
BIO-PDF-E: **Tree Disease Management**. Trees scheduled for removal resulting from the Project shall be inspected for contagious tree diseases, including but not limited to: thousand canker fungus (*Geosmithia morbida*), Polyphagous Shot Hole Borer (*Euwallacea spp.*), and goldspotted oak borer (*Agrilus auroguttatus*) (TCD 2020; UCANR 2020; UCIPM 2013). To avoid the spread of infectious tree diseases, diseased trees shall not be transported from the Project site without first being treated using the best available management practices relevant for each tree disease observed. Any agreement between the proposed Project and a tree removal contractor would include the provisions for tree disease management.	Project Sponsor Arborist or Landscape Contractor	Metro and/or the City of Los Angeles	Pre-Construction Construction (Tree Removal)	Once, Plan Check (proof of compliance) Periodic Field Inspections during Construction (Tree Removal)	Inclusion of requirement in Construction Plan Issuance of Applicable Building Permit Compliance Certificate by Arborist or Landscape Contractor Submittal of Compliance Report
BIO-PDF-F: The proposed Project would comply with applicable tree replacement requirements, based on the jurisdiction of the property where each tree is located, including the following replacement ratios for trees: • City of Los Angeles: ○ "Protected" Trees: 4:1 ○ Non-protected, but "significant" trees, i.e., where the trunk is > 8 inches at 4.5 feet DBH: 1:1 ○ "Street trees" in the public ROW: as specified by Urban Forestry Division (typically 2:1) • California Department of Parks and Recreation: At least 1:1 • Caltrans: Large trees, where the trunk is > 8 inches at 4.5 feet DBH: 1:1	Project Sponsor Arborist or Landscape Contractor	Metro and/or the City of Los Angeles and/or Department of California Parks and Recreation and/or Caltrans	Prior to Certificate of Occupancy	Once, prior to Certificate of Occupancy	Compliance Certificate by Arborist or Landscape Contractor Issuance of Certificate of Occupancy

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
BIO-PDF-G: Tree removal for the proposed Project would occur outside of the bird nesting season (generally February 1 through September 30) and bat maternity roosting season (generally April 15 through August 31).	Project Sponsor Construction Contractor	Metro and/or the City of Los Angeles	Pre-Construction Construction (Tree Removal)	Once, Plan Check (proof of compliance) Periodic Field Inspections during Construction (Tree Removal)	Inclusion of requirement in Construction Plan Issuance of Applicable Building Permit Submittal of Compliance Report
BIO-PDF-H: Any fencing used during and after the proposed Project's construction would be constructed with materials that are not harmful to wildlife. Prohibited materials should include, but are not limited to, spikes, glass, razor, or barbed wire. Where chain link fences are used, they would utilize scrim, green screen or other such coverage to avoid injuring wildlife. Use of chain link fences would be minimal and would not create barriers to wildlife dispersal. All hollow posts and pipes would be capped to prevent wildlife entrapment and mortality. Metal fence stakes used on the proposed Project site would be plugged to avoid this hazard. Fences would not have any slack that may cause wildlife entanglement. In addition, workers will be educated and instructed in best practices to avoid attracting wildlife to the construction site, including requiring lids on all trash cans and permitting eating in designated areas or offsite, with daily cleanup of such areas. All workers will be educated on reporting protocols for the appropriate authorities in the event wildlife is encountered on the construction site.	Project Sponsor Qualified Biologist Construction Contractor	Metro and/or the City of Los Angeles	Pre-Construction Construction	Once, Plan Check (proof of compliance) Periodic Field Inspections during Construction	Compliance Certificate by Qualified Biologist Issuance of Applicable Building Permit Inclusion of requirement in Construction Plan Submittal of Compliance Report
MM-BIO-A: *Avoid and minimize project related impacts to special-status and/or roosting bat species*. During the maternity season (April 15 through August 31) prior to construction, a field survey shall be conducted by a qualified biologist to determine the potential presence of colonial bat roosts within 100 feet of the Alameda Station and Dodger Stadium Station footprints and SR-110 overpass over Stadium Way (near Stadium Tower), because these locations	Project Sponsor Qualified Biologist Construction Contractor	Metro and/or the City of Los Angeles	Pre-Construction Construction	Once, Plan Check (proof of compliance) Periodic Field Inspections during Construction	Pre-Construction Field Survey by Qualified Biologist Compliance Certificate and Report by Qualified Biologist

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
provide potentially suitable habitat. A visual inspection and/or one-night emergence survey of trees to be removed near the Alameda Station and Dodger Stadium Station and of the overpass shall be completed using acoustic recognition technology to determine if any maternity roosts are present. To avoid any impacts on roosting bats resulting from construction activities for Stadium Tower, the following shall be implemented: <u>At the SR-110 Overpass</u> Should an active maternity roost be found at the SR-110 overpass, a determination (in coordination with a qualified bat biologist) shall be made whether indirect effects of construction-related activities (i.e., noise and vibration) could substantially disturb roosting bats, and if exclusionary devices should be used to remove bats. This determination shall be based on baseline noise/vibration levels, anticipated noise levels associated with construction of the Stadium Tower, and the sensitivity to noise-disturbances of the bat species present. If it is determined that noise could result in the temporary abandonment of a maternity roost, construction-related activities shall be scheduled to avoid the maternity season (April 15 through August 31), or as determined by the biologist. To avoid any impacts on roosting bats resulting from construction activities at Alameda Station and Dodger Stadium Station, the following shall be implemented: <u>Trees</u> All trees to be removed as part of the Project at the Alameda Station, Stadium Tower, and Dodger Stadium Station sites should be evaluated for their potential to support bat roosts. In particular, any palm and eucalyptus trees that bats are known to use should be evaluated by a qualified biologist by conducting a one-night emergence survey during acceptable weather conditions; or if conditions permit, physically examine the trees for presence or absence of bats (such as with lift equipment) before the start of construction/tree					Inclusion of requirement in Construction Plan Issuance of Applicable Building Permit Submittal of Compliance Report

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
removal. Palm trees are present at the Alameda Station site along Alameda Street and eucalyptus trees are present at the Dodger Stadium Station site. The following measures would apply to trees to be removed that are determined to provide potential bat roost habitat by a qualified biologist. • If roosting bats are determined present during the maternity season (April 15 through August 31), the tree shall be avoided until after the maternity season, when the young are self-sufficient. If roosting bats are determined present during the winter months when bats are in torpor, a state in which the bats have significantly lowered their physiological state, such as body temperature and metabolic rate, due to lowered food availability (October 31 through February 15, but is dependent on specific weather conditions), a qualified bat biologist shall physically examine the roost if conditions permit for presence or absence of bats (such as with lift equipment) before the start of construction. If the roost is determined to be occupied during this time, the tree shall be avoided until after the winter season when bats are once again active. • Trees with potential colonial bat habitat can be removed outside of the maternity season and winter season (February 16 through April 14 and August 16 through October 30, or as determined by a qualified biologist) using a two-step tree trimming process that occurs over 2 consecutive days. ○ Day 1, Step 1: Under the supervision of a qualified bat biologist, tree branches and limbs with no cavities shall be removed by hand (e.g., using chainsaws). This will create a disturbance (noise and vibration) and physically alter the tree. Bats roosting in the tree will either abandon the roost immediately, or, after emergence, will avoid returning to the roost. ○ Day 2, Step 2: Removal of the remainder of the tree under the supervision of a qualified bat					

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
biologist may occur on the following day. Trees that are only to be trimmed and not removed would be processed in the same manner; if a branch with a potential roost must be removed, all surrounding branches would be trimmed on Day 1 under supervision of a qualified bat biologist, and then the limb with the potential roost would be removed on Day 2. • Trees with foliage (and without colonial bat roost potential), such as sycamores, that can support lasiurine bats, shall have the two-step tree trimming process occur over one day under the supervision of a qualified bat biologist. Step 1 would be to remove adjacent, smaller, or non-habitat trees to create noise and vibration disturbance that would cause abandonment. Step 2 would be to remove the remainder of the tree on that same day. For palm trees that can support western yellow bat (a special-status bat species documented in the BSA with the potential to occur in the Project area), the two-step tree process shall be used over two days. Western yellow bats may move deeper within the dead fronds during disturbance. The two-day process will allow the bats to vacate the tree before removal. • The results of bat surveys, evaluations, and monitoring efforts that are undertaken shall be documented in a report by the qualified biologist at the conclusion of all bat-related activities.					
MM-BIO-B: *Avoid and minimize project-related impacts to nesting birds.* To avoid impacts to nesting birds protected under the MBTA and CFGC resulting from construction activities that may occur during the nesting season, the following mitigation measure shall be implemented: • Construction activities, including the clearance of trees potentially suitable for nesting birds, shall occur outside of the nesting season (generally February 1 through September 30). If construction	Project Sponsor Qualified Biologist Construction Contractor	Metro and/or the City of Los Angeles	Pre-Construction Construction	Once, Plan Check (proof of compliance) Periodic Field Inspections during Construction	Pre-Construction Field Survey by Qualified Biologist Compliance Certificate and Report by Qualified Biologist Inclusion of requirement in Construction Plan

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
activities must occur within this time period, the following measures shall be employed: ○ A pre-construction nesting survey shall be conducted by a qualified biologist within 3 days (72 hours) prior to the start of construction activities to determine whether active nests are present within 500 feet of the construction zone. All nests found shall be recorded. ○ A minimum 300-foot no-work buffer shall be established around any active passerine bird nest. A minimum 500-foot no-work buffer shall be established around any active raptor nest. The qualified biologist shall monitor the nest on a weekly basis, and construction activities within 300 feet of an active nest of any passerine bird or within 500 feet of an active nest of any raptor shall be postponed until the biologist determines that the nest is no longer active. However, the standard 300- to 500-foot no-disturbance buffer distance may be adjusted (including increases or reductions to the buffer) by a qualified biologist on a case-by-case basis, taking into consideration the location, type, duration and timing, and severity of work, distance of nest from work area, surrounding vegetation and line-of-sight between the nest and work areas (also taking into account existing ambient conditions from human activity within the line of sight), the influence of other environmental factors, and species' site-specific level of habituation to the disturbance. If the qualified biologist determines nesting activities may fail as a result of work activities, the biologist shall immediately inform the construction manager, and all Project work shall cease (except access along established roadways) within the recommended no-disturbance buffer until the biologist determines the adults and young are no longer reliant on the nest site.					Issuance of Applicable Building Permit Submittal of Compliance Report

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
○ Buffers will be delineated on-site with bright flagging for easy identification by project staff. The on-site construction supervisor and operator staff will be notified of the nest and the buffer limits, and instructed of the sensitivity of the area to ensure the buffer is maintained. ○ A summary of preconstruction surveys and methodologies employed, monitoring efforts, and any no-disturbance buffers that were installed shall be documented in a report by the qualified biologist at the conclusion of each nesting season.					
Cultural Resources					
CUL-PDF-A: Pre-Construction Documentation of The Winery. Prior to the issuance of building permits for the Alameda Station, the Project Sponsor will prepare documentation equal to Historic American Building Survey (HABS) Level III for The Winery, per the *Secretary of the Interior's Standards and Guidelines for Architectural and Engineering Documentation*. The report will: 1. Be prepared by a historic preservation professional meeting the Secretary of the Interior's Professional Qualifications Standards for history, architectural history, or historic architecture with demonstrated experience in preparing HABS documentation. 2. Include full-color digital photographs (with a minimum resolution of 300 ppi and 3,000-pixel image size along one dimension) showing the following: a. The full northern elevation (facing Cesar E. Chavez Avenue) and i. The roofline, foundation, and any door, window, or walkway openings, ii. Detail views showing the typical existing condition of the exterior wall, and	Project Sponsor Historic Preservation Professional	Metro and/or the City of Los Angeles (City of Los Angeles Office of Historic Resources)	Pre-Construction	Once, prior to Issuance of Applicable Building Permits for the Alameda Station (proof of compliance)	Pre-Construction Documentation by Historic Preservation Professional Issuance of Applicable Building Permits for the Alameda Station

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
iii. Detail views showing any existing damage to the exterior such as cracks or spalling. b. West elevation (facing Olvera Street), and i. The roofline, foundation, and any door, window, or walkway openings, and ii. Detail views showing the typical existing condition of the exterior brick wall, and iii. Detail views showing any existing damage to the exterior such as loose bricks and mortar. c. East elevation (facing Alameda Street) i. The roofline and foundation, and ii. Detail views showing the typical existing condition of the exterior brick wall, and iii. Detail views showing any existing damage to the exterior such as loose bricks and mortar. 3. Include written descriptive data, including detailed notes of its pre-construction condition, index to photographs, and photo key plan. Photographs of existing damage will be keyed to a sketch of the elevation indicating its location. 4. Include copies of historic photographs and other supporting documentation, if available. 5. Be offered to the following repositories for use by future researchers and educators. Each repository will be contacted as to whether they are willing and able to accept the items, as well as their preferred format for transmittal. Copies need to only be distributed to repositories that express interest. a. Los Angeles Public Library - One hard copy and/or digital file (dependent on repository preference) of the descriptive data, index to photographs, photo key plan, and photographs. b. El Pueblo de Los Angeles Historical Monument Authority - One hard copy and/or digital file (dependent on repository preference) of the

CUL-PDF-D: Protection During Adjacent Construction. Prior to the issuance of building permits for the Alameda Station, the Project Sponsor will ensure that the *El Grito* mural is sufficiently protected from any inadvertent damage caused by construction activities. Following National Park Service guidance for protecting historical resources during nearby construction, the following measures, at a minimum, should be implemented:	Project Sponsor Historic Preservation Professional Construction Contractor	Metro and/or the City of Los Angeles (City of Los Angeles Office of Historic Resources)	Pre-Construction Construction	Once, prior to Issuance of Applicable Building Permits for the Alameda Station (proof of compliance) Periodic Field Inspections during Construction	Documentation by Historic Preservation Professional Issuance of Building Permits for the Alameda Station

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
1. Vibration monitoring equipment (VIB-A) should be carefully installed so that it does not permanently damage the face of the *El Grito* mural. 2. The *El Grito* mural should be cushioned and buttressed from either side of the wall with padded wood supports. The padding may consist of insulating foam or similar material. 3. A protective barrier or barriers made from plywood should be installed over the front, back, top, and sides of the *El Grito* mural and curved wall to diffuse the force of any potential physical contact. The barrier should include removable panels or a similar feature to ensure the vibration monitors and mural can be visually inspected during construction monitoring (CUL-PDF-C). 4. Plastic tarp or polyethylene sheeting should be secured over the wood barriers to protect against the accumulation of dust or contact with materials such as uncured concrete or other liquids that could damage or mark the surface of the *El Grito* mural. All of the protective measures described above should be installed and secured in such a way that does not damage the *El Grito* mural or the wall on which it is located. The barrier will not be physically attached to the *El Grito* mural or wall with screws, nails, or other fasteners.					
CUL-PDF-E: Construction Monitoring Plan (Built Resources). Prior to the issuance of building permits for the Alameda Station, the Project Sponsor will prepare a Construction Monitoring Plan in coordination with the DCA. The Construction Monitoring Plan will identify specific project milestones at which a qualified professional meeting the Secretary of the Interior's Standards for architectural history or historic architecture will be notified by the Project Sponsor or Project Sponsor's contractor to visit the site and observe and document the *El Grito* mural's condition. Details will be recorded in construction monitoring	Project Sponsor Historic Preservation Professional Construction Contractor	Metro and/or the City of Los Angeles (City of Los Angeles Office of Historic Resources)	Pre-Construction Construction Post-Construction	Once, Pre-Construction of the Alameda Station Periodic Field Inspections during Construction (after each phase of construction) Once, Post-Construction Once, if Repairs Required, Post-Repairs	Construction Monitoring Plan and other Documentation by Historic Preservation Professional If Repairs Required, Repairs within 12 Months; Completion of Repairs shall not Delay Issuance of

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
memorandums submitted to DCA. These milestones will include, at a minimum: 1. Pre-Construction: Before protection measures are installed (CUL-PDF-D), to confirm the baseline condition of the *El Grito* mural is still consistent with the information presented in the HABS-like documentation (CUL-PDF-C). 2. Pre-Construction: Once protection measures (CUL-PDF-D) are installed, to ensure they are sufficient, and their installation has not damaged the *El Grito* mural. 3. Construction: After each phase of active construction. 4. Post-Construction: After construction is complete and protective measures have been removed. At this stage, pictures of the *El Grito* mural equivalent to CUL-PDF-C will be taken to objectively compare the condition of the *El Grito* mural before and after construction. The Construction Monitor will also be included on notifications from the real-time vibration monitoring equipment (VIB-A). In the event that damage to the *El Grito* mural not documented at the time of the pre-construction survey is identified as being caused by construction activities during construction monitoring, the Project Sponsor will retain an experienced professional or professionals qualified to carry out the repairs within 12 months of completion of the Project. Repairs will conform to the Secretary of Interior's Standards for the Treatment of Historic Properties 36 CFR Part 68.					Certificate of Occupancy
MM-CUL-A: Cultural Resources Monitoring and Mitigation Plan. A Cultural Resources Monitoring and Mitigation Plan (CRMMP) shall be prepared for the Project by a qualified archaeologist meeting the Secretary of Interior Standards for Archaeology (36 CFR § 61) prior to construction. Where specific Project components, such as the Chinatown/State Park Station, have requirements specific to that component, the CRMMP	Project Sponsor Qualified Archaeologist Construction Contractor	Metro and/or the City of Los Angeles and/or the California Department of Parks and Recreation	Pre-Construction Construction Post-Construction	Once, Prior to Construction Periodic Field Inspections During Construction as Determined by the Qualified Archaeologist	Cultural Resources Monitoring and Mitigation Plan (CRMMP) by Qualified Archaeologist If There Is a Discovery That Proves

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
will lay out regulatory requirements (such as PRC § 5024) which will be adhered to. This includes SHPO consultation and following practices that seek to avoid and preserve state-owned historical resources, when prudent and feasible. The same would be for any specific requirement from El Pueblo de Los Angeles specific to the work at the Alameda Station. The General Plan acknowledges the Park has archaeological sensitivities and, as such, recommends continued study of existing and potential resources as well as the need to constantly update and expand the knowledge of historic activities at the Park. As for the cultural resources associated with the Park, the General Plan states that the Park should "[i]dentify, document, evaluate, and interpret cultural resources at the Park," and "[p]rotect, stabilize, and preserve significant cultural resources within the Park." Specifically, the CRMMP shall be applicable to all ground-disturbance activities extending into native soil within known archaeological sites and other areas of high sensitivity. Excavations within a specified radius of known archaeological sites shall be monitored up to a depth at which the qualified archaeologist determines the base of the archaeological deposit has been reached. The qualified archaeologist shall supervise the archaeological monitor. Monitoring is expected to be required to the maximum depth of planned excavations at the Alameda Station and up to approximately 15 feet in depth at the Alameda Tower and the Chinatown/State Park Station. Work will also be monitored by Native American monitors in accordance with Mitigation Measure TCR-A. However, if in the course of excavations the qualified archaeologist determines that the site is disturbed or the sensitivity for significant archaeological resources is low because no resources have been encountered, then monitoring may be reduced or suspended. The monitoring plan shall define pre-construction coordination, construction monitoring for the excavations based on activities and depth of				Once Post-Construction Once, if There Is a Discovery that Proves Significant	Significant, Curation of Specimens and a Repository Submittal Report within a Year of Completion of Fieldwork; Final Report Filed with the SCCIC

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
disturbance planned for each Project component (including ground-disturbing activities in native soil within known archaeological sites), unanticipated discovery protocols, data recovery (including halting or diverting construction so that archaeological resources can be evaluated and recovered in a timely manner), artifact and feature treatment, procurement (including a curation plan), and reporting. The Project Sponsor shall coordinate with the archaeologist and Metro to develop an appropriate treatment plan for the resources in accordance with California Public Resources Code (PRC) Section 21083.2(i) if they are determined by Metro to be potentially eligible for the CRHR or potentially qualify as unique archaeological resources pursuant to CEQA. Preservation in place is the preferred method of treatment, but if preservation in place is not feasible, treatment may include implementation of archaeological data recovery excavations to remove the resource. Key staff shall be identified, and the process of notification and consultation (where entities specific to each station would be identified) shall be specified within the CRMMP as well as protocols for reporting. If the discovery proves significant under CEQA and data recovery is the selected means of treatment, the archaeologist shall also be required to curate specimens in a repository with permanent retrievable storage and submit a written report to the lead agency within a year of completion of the fieldwork. Once complete, the final report shall be filed with the SCCIC. For Resource 19-004200 and the granite paving (within the Area of Direct Impact of the Project) at Site 19-003120, the CRMMP shall describe the required documentation and treatment of the resources during excavation and potential removal.					

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
MM-CUL-B: Archaeological Resources Worker Training Program. To mitigate unknown historical resources within the Area of Direct Impacts and mitigate potential impacts to them, a qualified archaeologist shall be hired by the Project Sponsor to develop and conduct a worker training program for the Project with input from El Pueblo (as it pertains to the Alameda Station) and Los Angeles State Historic Park staff (as it pertains to the Chinatown/State Park Station) prior to the start of ground-disturbing activities. The training shall be prepared by an archaeologist who meets the Secretary of the Interior's Standards for Archaeology and will be adjusted to the specific details at the two parks. The training shall provide information to construction workers about the known locations of archaeological resources and potential areas that may be sensitive for archaeological resources associated with the Project. Participation in the training by Los Angeles State Historic Park and El Pueblo staff, will be encouraged. In the event construction crews are phased or rotated, additional training shall be conducted for the new construction workers conducting ground-disturbing activities. The qualified archaeologist shall retain documentation demonstrating that the appropriate construction workers attended the worker training program. An appropriate presentation shall be prepared by a qualified archaeologist which shall describe and illustrate resources likely to be encountered by Project excavation and outline the protocol to be followed in the event of a find. If any archaeological resources are encountered during ground-disturbing activities, work shall be temporarily halted in the vicinity of the find, and the Construction Contractor shall contact the qualified archaeologist to examine and evaluate the resource in accordance with the provisions of CEQA as outlined by the CRMMP.	Project Sponsor Qualified Archaeologist Construction Contractor	Metro and/or the City of Los Angeles and/or California Department of Parks and Recreation	Pre-Construction Construction	Once, Pre-Construction Periodic Field Inspections during Construction	Archaeological Resources Worker Training Program by Qualified Archaeologist Inclusion of requirement in Construction Plan Training Submittal of Compliance Report
MM-CUL-C: Archaeological Testing Plan for 19-000887 and 19-004320 (Alameda Station). To mitigate impacts to Resources 19-000887 and 19-004320, both of which include portions of the Zanja, an NRHP-eligible	Project Sponsor Qualified Archaeologist	Metro and/or the City of Los Angeles	Pre-Construction Construction	Once, Pre-Construction and as Determined by Archaeological Testing Plan and/or Data	Archaeological Testing Plan

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
archaeological site, and where avoidance is not feasible, an archaeological testing plan and data recovery plan for the Area of Direct Impacts, which is located north of the Placita de Dolores, shall be prepared prior to ground-disturbing activities and implemented after the paving is removed. Although the proposed Project is designed to not impact the portion of the Zanja Madre within 19-000887, there is the potential to encounter either previously unrecorded portions of the Zanja or artifact refuse from the overall site. Therefore, a testing plan shall be prepared for the portions of the sites that will be impacted outside of the known Zanja location. Within the Project Area of Direct Impacts, 19-000887 overlaps unevaluated 19-004320 which will, therefore, also be included in the testing plan. The testing plan shall be prepared in consultation with El Pueblo de Los Angeles Historical Monument Authority specific to these resources at the Alameda Station. The testing plan shall propose limited archaeological excavations of a portion of the site overlapping the Area of Direct Impacts and contain maps showing the overlap of the sites with the project Area of Direct Impacts. The test excavations are intended to identify the location, integrity, and significance of archaeological deposits that may be impacted by the proposed Project. The testing plan shall outline excavation locations and methods, such as where and in what soils mechanical excavations may or may not be used, screen sizes, and the criteria thresholds that would require data recovery. The testing plan shall be implemented once the paving has been removed and far enough in advance of construction for there to be sufficient time to carry out the plan and to prepare a plan for and conduct a data recovery program if needed. If significant archaeological remains are encountered that appear to contribute to the significance of the overall site during the test excavations and avoidance/preservation in place is not feasible, data	Construction Contractor			Recovery Plan (proof of compliance)	If Significant Archaeological Remains Are Discovered, Data Recovery Plan

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
recovery excavations will be required, and a data recovery plan shall be prepared and implemented. The data recovery plan shall detail the treatment of the surviving archaeological remains, if testing identifies any. The data recovery plan will specify a statistically significant sample of the site to be excavated and shall describe the specific tools, screening size, and methods to be used. The plan shall describe how structural remains, if any, will be exposed and mapped. Laboratory studies planned for the analysis of the finds shall also be described.					
MM-CUL-D: Archaeological Testing Plan for LAUS Forecourt. To mitigate impacts to Resource 19-001575, an NRHP-eligible archaeological site, an archaeological testing plan and data recovery plan for the Area of Direct Impacts shall be prepared and implemented prior to ground-disturbing activities. The testing plan shall propose limited archaeological excavations of a portion of the site overlapping the Area of Direct Impacts. The test excavations are intended to identify the location, integrity, and significance of archaeological deposits that may be impacted by the proposed Project. The testing plan shall outline excavation locations and methods, such as where and in what soils mechanical excavations may or may not be used, screen sizes, and the criteria threshold that would require data recovery. If significant archaeological remains are encountered that appear to contribute to the site's NRHP and CRHR eligibility during the test excavations and avoidance/preservation in place is not feasible, data recovery excavations will be required, and the data recovery plan shall be implemented. The data recovery plan shall specify a statistically significant sample of the site to be excavated and shall describe the specific tools, screening size, and methods to be used. The plan shall describe how structural remains, if any, will be exposed and mapped. Laboratory studies planned for the analysis of the finds shall also be described. MM-CUL-E: Archaeological Testing Plan for Los Angeles State Historic Park. To mitigate unavoidable impacts to Resource 19-003120, an NRHP-eligible archaeological site, an archaeological testing plan and data recovery plan for the Area of Direct Impacts shall be prepared and implemented prior to ground-disturbing activities. The testing plan shall be prepared in consultation with California State Parks and SHPO (per PRC § 5024.5). The testing plan shall propose limited archaeological excavations of a portion of the site overlapping the Area of Direct Impacts. The test excavations are intended to identify the location, integrity, and significance of archaeological deposits that may be impacted by the proposed Project; and will specifically be used to confirm and define potential foundations for the Southern Pacific Railroad office/freight house that are shown in Sanborn fire insurance maps to overlap the Area of Direct Impacts for the station. The plan shall outline excavation locations and methods, such as where and in what soils mechanical excavations may or may not be used, screen sizes, and the criteria thresholds that would require data recovery. If significant archaeological remains are encountered that appear to contribute to the site's NRHP and CRHR eligibility during the test excavations and avoidance/ preservation-in-place is not possible, data recovery excavations will be required, and the data recovery plan shall be implemented. The plan shall specify a statistically significant sample of the site to be excavated and shall describe the specific tools, screening size, and methods to be used. The plan shall describe how structural remains, if any, will be exposed and mapped. Laboratory studies planned for the analysis of the finds shall also be described. Geology and Soils					
MM-GEO-A: Prepare a Site-Specific Final Geotechnical Report: The Project Sponsor shall engage a California-registered geotechnical engineer to prepare and submit a site specific- final geotechnical investigation and report to the City of Los Angeles for review, consistent with the requirements of the CBC, applicable Los Angeles amendments, and California Geological Survey Special Publication 117 (as amended). A site-specific geotechnical exploration program, along with associated laboratory testing, is necessary to complete a design-level evaluation of the geologic hazards and conditions, seismic hazards, grading conditions, and foundation capacities. The site-specific final geotechnical report shall provide a description of the geological and geotechnical conditions at the site; the findings, conclusions, and mitigation recommendations for potential geologic and seismic hazards; and design-level geotechnical recommendations in support of grading and foundation design. Additionally, the geotechnical report shall include recommended measures to reduce potential impacts related to landslides, subsidence, liquefaction, differential settlement, expansive soils, soil corrosivity, or other potential ground failures induced by the proposed Project. The submittal and approval of the final geotechnical report shall be a condition of the grading and construction permits issued by the City of Los Angeles Department of Building and Safety. The Project Sponsor shall implement the recommendations contained in the approved report during project design and construction. MM-GEO-B: Prepare a Paleontological Resources Monitoring and Mitigation Plan (PRMMP): A PRMMP shall be developed by a qualified paleontologist meeting the criteria established by the Society for Vertebrate Paleontology. The plan shall apply to paleontologically sensitive deposits, including older Quaternary alluvium and Puente formation deposits, that may be impacted by the proposed Project, as determined by a qualified paleontologist in consultation with the construction team and guided by geotechnical coring. The qualified paleontologist shall supervise the paleontological monitor, who shall be present during construction excavations into older Quaternary alluvial deposits and Miocene Puente formation deposits. Monitoring shall consist of visually inspecting fresh exposures of rock for larger fossil remains, and where appropriate, collecting wet or dry screened sediment samples of promising horizons for smaller fossil remains. The frequency of monitoring inspections shall be determined by the paleontologist, and shall be based on the rate of ground-disturbing activities, the material being excavated, and the depth of excavation; and if found, the abundance and type of paleontological materials. If any paleontological materials are found, the paleontological monitor shall temporarily divert or redirect ground-disturbing activities in the area of the exposed fossil to facilitate evaluation, and if necessary, salvage. The paleontologist shall assess the discovered material(s) and provide a recommendation(s), if necessary, for the preservation, conservation, or relocation of the resource, as appropriate. The Project Sponsor shall comply with the recommendations of the evaluating paleontologist, and ground-disturbing activities may resume once the paleontologist's recommendations have been implemented to the paleontologist's satisfaction. If paleontological materials are found, the paleontologist shall prepare a report identifying the resource and the recommendations proposed and implemented, within 1 year of completion of the	Project Sponsor Qualified Paleontologist Construction Contractor	Metro and/or City of Los Angeles	Pre-Construction Construction	Once, Plan Check (proof of compliance) To Be Determined in Consultation with Qualified Paleontologist	Monitoring and Mitigation Plan (PRMMP) by Qualified Paleontologist In the Event that Paleontological Materials are Found, Report Prepared and Submitted to the Los Angeles County Natural History Museum within 1 Year of Completion of Fieldwork

fieldwork. A copy of the report shall be submitted to the Los Angeles County Natural History Museum.					
Greenhouse Gas Emissions					
GHG-PDF-A: Green Power. Electrical power for the operation of the proposed Project's aerial gondola system and associated stations, junction, and towers would come from renewable resources. The proposed Project shall achieve this through applying to LADWP's Green Power Program or other available LADWP (or equivalent) programs that provide renewable electricity.	Project Operator	Metro and/or the City of Los Angeles	Prior to issuance of Certificate of Occupancy	Once, prior to issuance of Certificate of Occupancy	Compliance Certificate Issuance of Certificate of Occupancy
Hazards and Hazardous Materials					
MM-HAZ-A: Prepare a Soil and Groundwater Management Plan: The Project Sponsor shall retain a qualified environmental consultant to prepare a Soil and Groundwater Management Plan prior to any re-grading, decommissioning, or construction activities. The Soil and Groundwater Management Plan would be prepared and implemented to specify methods for handling and disposal in the event contaminated groundwater, contaminated soil, or structures, are encountered during project construction. The Soil and Groundwater Management Plan shall provide a summary of the environmental conditions at each Project component site, including stations and towers. The Soil and Groundwater Management Plan shall include methods and procedures for sampling and analyzing soils and/or groundwater in order to classify them as either hazardous or non-hazardous, and if identified as hazardous, shall include additional methods and procedures for the proper handling and removal of impacted soils and/or groundwater for off-site disposal and/or recycle. Methods and procedures in the Soil and Groundwater Management Plan shall be in accordance with current federal, state, and local regulations and be protective of workers and the environment. This Soil and Groundwater Management Plan shall be submitted to the LADBS for review prior to	Project Sponsor Qualified Environmental Consultant Construction Contractor	Metro and/or the City of Los Angeles (Los Angeles Department of Building and Safety)	Pre-Construction Construction	Once, Plan Check (proof of compliance) Periodic Field Inspections during Construction	Approval of Soil and Groundwater Management Plan by Qualified Environmental Consultant by the City of Los Angeles (Department of Building and Safety) Issuance of Building Permits Compliance Certificate Issuance of Certificate of Occupancy

Project shall provide a 10-foot temporary noise barrier on the temporary platforms between the Project construction site and NSR 5. • Chinatown/State Park Station o For the entire duration of construction, the Project shall provide an 8-foot temporary noise barrier between the Project construction site and NSR 9 [Blossom Plaza], NSR 10 [Future Residential Development], NSR 11 [Capitol Milling], and NSR 14S [Los Angeles State Park]. The noise barrier will include a gate that may be temporarily opened for access during construction hours along Spring Street for construction access. o For the entire duration of construction, the Project shall provide a 10-foot temporary noise barrier between the Chinatown / State Park Station and NSR 8 [College Station] and NSR 12 [Future Residential Development]. o During a portion of the Structural Steel and Gondola Equipment Erection phase, temporary platforms will be installed to facilitate construction activities. While the temporary platforms are installed, the Project shall provide a 10-foot temporary noise barrier on the temporary platforms between the Project construction site and NSR 8, NSR 12, and NSR 14S. • Broadway Junction o For the entire duration of construction, the Project shall provide a 24-foot temporary noise barrier between the Project construction site and NSR 13 [Future Development], NSR 14N [Los Angeles State Historic Park], and NSR 17 [Low Rise Residential]. o During the Demolition phase and the Foundations and Columns phase, the Project shall provide a 24-foot temporary noise barrier					

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
between the Project construction site and NSR 16 [Cathedral High School]. ○ During the Structural Steel and Gondola Equipment Erection phase and the Vertical Circulation, Hardscaping, Landscaping, and Interior Work phase, the Project shall provide an 8-foot temporary noise barrier between the Project construction site and NSR 16 [Cathedral High School] ○ During a portion of the Structural Steel and Gondola Equipment Erection phase and during a portion of the Vertical Circulation, Hardscaping, Landscaping, and Interior Work phase, temporary platforms will be installed to facilitate construction activities. While the temporary platforms are installed, the Project shall provide a 10-foot temporary noise barrier on the temporary platforms between the Project construction site and NSR 13, NSR 14 N, NSR 16, and NSR 17. • Stadium Tower ○ During the Foundations and Columns phase, the Project shall provide an 8-foot temporary noise barrier between the Project construction site and NSR 16 [Cathedral High School] and NSR 17 [Low Rise Residential]. ○ During a portion of the Structural Steel and Gondola Equipment Erection phase, temporary platforms will be installed to facilitate construction activities. While the temporary platforms are installed, the Project shall provide a 10-foot temporary noise barrier on the temporary platforms between Project construction and NSR 16 and NSR 17. • **Equipment Maintenance**: Construction equipment shall be properly maintained per manufacturers' specifications to prevent noise due to worn or improperly maintained parts and shall be fitted with the best available noise suppression devices (i.e., mufflers, lagging, and/or motor enclosures).					

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
All impact tools shall be shrouded or shielded, and all intake and exhaust ports on power equipment shall be muffled or shielded. • **Electrical Sources:** When possible, on-site electrical sources shall be used to power equipment rather than diesel generators. • **Sensitive Uses:** Fixed and/or stationary equipment (e.g., generators, compressors, concrete mixers) shall be located away from noise-sensitive receptors. • **Community Outreach:** The following shall be implemented to reduce impacts to the local community related to disturbances from construction noise: o Noise Disturbance Coordinator: A noise and vibration disturbance coordinator shall be established. The noise disturbance coordinator shall be responsible for responding to any local complaints about construction noise. The noise and vibration disturbance coordinator shall determine the cause of the complaint (e.g., starting too early, bad muffler, etc.) and shall be required to implement reasonable measures to address the complaint. Construction hours, allowable workdays, and the phone number of the job superintendent shall be clearly posted at all construction entrances to allow surrounding property owners to contact the job superintendent if necessary. In the event a complaint is received, appropriate corrective actions shall be implemented, and a report of the action provided to the reporting party. o Construction Notice: The construction contractor shall provide a construction notice to residents within 500 feet of the construction site for each Project component prior to initiation of construction activities. The construction site notice shall include job site address, anticipated equipment to be used and duration of construction activities, permit					

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
number, name and phone number of the job superintendent, construction hours, and the City telephone number where violations can be reported. The notice will also include the phone number of the noise disturbance coordinator. • **Limit Idling Equipment**: Construction equipment shall not idle for longer than 5 minutes, as required by section 2485 of the California Code of Regulations.					
MM-VIB-A: **Vibration Monitoring:** Prior to the issuance of grading permits for the proposed Project, the Project Sponsor shall design a Vibration Monitoring Plan. The Plan shall provide for: • Vibration Monitoring Equipment: the placement of vibration monitoring equipment approximately 26 feet away from the Avila Adobe (1970s addition), El Grito mural wall, and The Old Winery by a qualified professional for real-time vibration monitoring for construction work at the Alameda Station requiring heavy equipment or ground compaction devices. • Modification of Vibration Equipment: the monitoring devices shall notify the construction crew if vibration levels are within 0.1 PPV, in/sec, of the vibration damage threshold. The construction crew shall modify the construction equipment to ensure that the vibration damage threshold is not exceeded.	Project Sponsor Qualified Vibration Consultant Construction Contractor	Metro and/or the City of Los Angeles	Pre-Construction Construction	Once, Plan Check (proof of compliance) Periodic Field Inspections during Construction	Submittal of Vibration Monitoring Plan by Qualified Vibration Consultant Issuance of Grading Permits Compliance Certificate by Qualified Vibration Consultant
MM-VIB-B: Force-Adjustable Ground Compaction Devices: For construction work occurring at the Alameda Station in proximity to the Avila Adobe (1970s addition), El Grito Mural, and The Old Winery: • At a distance of 26 feet or more from the Avila Adobe (1970s addition), El Grito Mural and The Old Winery, any ground compacting equipment, including vibratory rollers and plate compactors, shall be calibrated onsite prior to use to ensure vibration levels remain below the assumed reference level of 0.21 PPV, in/sec, at 25 feet. If the ground compacting equipment cannot achieve the	Project Sponsor Qualified Vibration Consultant Construction Contractor	Metro and/or the City of Los Angeles	Construction	Once, Plan Check (proof of compliance) Periodic Field Inspections during Construction	Inclusion of requirement in Construction Plan Issuance of Building Permits Compliance Certificate by Qualified Vibration Consultant

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
assumed reference level, equipment with less vibration (less than 0.21 PPV, in/sec, at 25 feet), non-vibrating equipment, or hand tools shall be required for ground compaction activities. • Any ground compaction or excavation/drilling operations within 26 feet of the Avila Adobe (1970s addition), El Grito Mural or The Old Winery structures must be completed with non-vibrating equipment or hand tools.					
Transportation					
TRA-PDF-A: Additional Visibility Enhancements: Subject to the approval of the Los Angeles Department of Transportation, as a best practice to further enhance pedestrian visibility at the Chinatown/State Park Station, stripe a high visibility crosswalk and add upgraded lighting for the driveway crossing south of the Los Angeles State Historic Park.	Project Sponsor Transportation Engineer Construction Contractor	Metro and/or the City of Los Angeles (Los Angeles Department of Transportation)	Prior to Completion of Construction	Once, Prior to Completion of Construction	Approval of Additional Visibility Enhancements by the City of Los Angeles (Los Angeles Department of Transportation) Submittal of Compliance Report Certificate of Occupancy
MM-TRA-A: Visibility Enhancements: Prior to the completion of construction of the proposed Project, and in coordination with and subject to the approval of LADOT, the Project Sponsor shall design the following visibility enhancements at the following locations: • Alameda Tower – Implement a no right turn on red restriction to prohibit vehicles from making a right turn on red from westbound Alhambra Avenue to northbound Alameda Street. • Chinatown/State Park Station – Implement an operational strategy or design to channelize pedestrians walking from the Los Angeles State Historic Park to the crosswalk across the existing driveway south of the Park to prevent pedestrians from crossing the driveway west of columns supporting the Chinatown/State Park Station to ensure crossings occur in the crosswalk where	Project Sponsor Transportation Engineer Construction Contractor	Metro and/or the City of Los Angeles (Los Angeles Department of Transportation) and California Department of State Parks (as to the Chinatown/State Park Station)	Prior to Completion of Construction	Once, Prior to Completion of Construction	Approval of Visibility Enhancements by the City of Los Angeles (Los Angeles Department of Transportation) and California Department of State Parks (as to the Chinatown/State Park Station) Submittal of Compliance Report Certificate of Occupancy

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
visibility is sufficient. The ultimate design or operational method of channelization (such as station staff directing pedestrians towards the crosswalk or a physical method such as a gate) would be coordinated with State Parks. The mitigation measure would be implemented during the construction phase and would be completed prior to proposed Project operations.					
MM-TRA-B: Construction Traffic Management Plan: Prior to the issuance of a building permit for the proposed Project, a detailed Construction Traffic Management Plan (CTMP), including street closure information, detour plans, haul routes, and a staging plan, shall be prepared and submitted to the City for review and approval. The CTMP shall formalize how construction will be carried out and identify specific actions that will be required to reduce effects on the surrounding community. The CTMP shall be based on the nature and timing of the specific construction activities at each of the Project construction sites. This coordination will ensure construction activities of the concurrent related projects and associated hauling activities are managed in collaboration with one another and the proposed Project. The CTMP may be updated as construction progresses to reflect progress at the various Project construction sites. The CTMP will include, but not be limited to, the following elements as appropriate: • As traffic lane, parking lane, and sidewalk closures are anticipated, worksite traffic control plans, approved by the City of Los Angeles, shall be developed and implemented to route vehicular traffic, bicyclists, and pedestrians around any such closures. • Visibility to open pedestrian crossings will be maintained, or temporary or permanent measures consistent with Mitigation Measure TRA-A shall be implemented if determined to be appropriate in coordination with LADOT. In absence of measures to mitigate or eliminate visual obstructions for	Project Sponsor Transportation Engineer Construction Contractor	Metro and/or the City of Los Angeles (Los Angeles Department of Transportation)	Pre-Construction	Once, Plan Check (proof of compliance)	Approval of Construction Traffic Management Plan by City of Los Angeles (Los Angeles Department of Transportation) Inclusion of requirement in Construction Plan

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
pedestrians crossing the street, pedestrian crossings may be closed or relocated to more visible locations. • Existing school crossings, as denoted by yellow crosswalk striping consistent with the Manual on Uniform Traffic Control Devices (MUTCD) along proposed detour routes, shall be evaluated in coordination with LADOT to determine if crossing guards should temporarily be assigned. If it is determined that crossing guards should be assigned, on days/times when detours are active, the proposed Project shall fund crossing guards during morning school arrival and afternoon school departure periods during periods when adjacent schools are in session. If school crossings along detour routes are unsignalized, temporary traffic signals will be evaluated in coordination with LADOT and would be implemented by the proposed Project if deemed necessary. • As partial and full street closures are anticipated at various locations during portions of the Project construction, detour plans, approved by the City of Los Angeles, shall be developed and implemented to route vehicular traffic and bicyclists to alternative routes during these periods. • Ensure that access will remain accessible for land uses in proximity to the Project alignment and component sites during project construction. In some cases, alternative access locations would be provided or supervised temporary access through the worksite would be accommodated during construction phases where access is hindered, such as foundation construction. • Coordinate with the City and emergency service providers to ensure emergency access is provided to the Project alignment and component sites and neighboring businesses and residences. Emergency access points will be marked accordingly in consultation with LAFD, as necessary.					

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
• Conduct bi-monthly construction management meetings with City staff and other surrounding construction-related project representatives (i.e., construction contractors) whose projects will potentially be under construction at around the same time as the Project, or as otherwise determined appropriate by City Staff. • Provide off-site truck staging in a legal area furnished by the construction truck contractor. • Schedule deliveries and pick-ups of construction materials during non-peak travel periods to the extent possible and coordinate to reduce the potential of trucks waiting to load or unload for protracted periods. • During construction activities when construction worker parking cannot be accommodated at the Project component sites, identify alternate parking location(s) for construction workers and the method of transportation to and from the Project component sites (if beyond walking distance) for approval by the City 30 days prior to commencement of construction. • Provide all construction contractors with written information on where their workers and their subcontractors are permitted to park and provide clear consequences to violators for failure to follow these regulations.					
MM-TRA-C: Temporary Disaster Route Plan: Prior to the issuance of a building permit for the proposed Project, and in coordination with and subject to the approval of LADOT, the Project Sponsor shall submit a temporary disaster route plan to LADOT, which shall include street closure information and detour plans in order to facilitate the movement of emergency vehicles through the study area and minimize effects on emergency response during a disaster. Construction activities and temporary lane closures could quickly be halted in event of an emergency to allow emergency vehicles to travel through the work zones. In addition	Project Sponsor Transportation Engineer Construction Contractor	Metro and/or the City of Los Angeles (Los Angeles Department of Transportation)	Pre-Construction	Once, Plan Check (proof of compliance)	Approval of Construction Traffic Management Plan by City of Los Angeles (Los Angeles Department of Transportation) Inclusion of requirement in Construction Plan

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
to detours, the temporary disaster route plan could also include temporary operational measures that would be implemented by the City during a disaster, including temporary contra-flow lanes or reversing directions to flush vehicles during a disaster situation. The temporary disaster route plan would be prepared for the following locations: • During those periods when construction of the Alameda Station, the Chinatown/State Park Station, and the Alameda and Alpine Towers require partial closure of one direction or full closure of both directions of Alameda Street or Spring Street.					
Tribal Cultural Resources					
MM-TCR-A Native American Monitor. Because of the potential to encounter tribal cultural resources, a Native American monitor shall be retained to monitor project-related, ground-disturbing construction activities (e.g., boring, grading, excavation, drilling, trenching) that occur after existing pavement and structures are removed at the location of the Alameda Station. If cultural resources are encountered elsewhere along the alignment during construction that, in the opinion of the archaeological Principal Investigator (as defined in 32 CFR Section 767.8), are likely of Native American origin, then Native American monitoring may be extended to include the area of the find. The Principal Investigator will make the recommendation to the Project Sponsor and Metro if it seems the Native American monitoring should be extended. The appropriate Native American monitor shall be selected based on ongoing coordination with consulting tribes and shall be identified in the CRMMP. The CRMMP is described in Mitigation Measure CUL-A. Specifically, the CRMMP and Native American monitoring would be applicable to ground disturbance activities extending into native soils at the location of the Alameda Station and, if cultural resources are encountered elsewhere along the alignment during construction that, in the opinion of the archaeological	Project Sponsor Qualified Native American Monitor Construction Contractor	Metro and/or the City of Los Angeles	Pre-Construction Construction	Once, Plan Check (proof of compliance) To Be Determined by the Archaeological Principal Investigator	Cultural Resources Monitoring and Mitigation Plan If Cultural Resources That May Be of Native American Origin Are Discovered, Data Recovery Plan

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
Principal Investigator, are likely of Native American origin. Monitoring procedures and the role and responsibilities of the Native American monitor shall be outlined in the CRMMP. In the event the Native American monitor identifies cultural or archeological resources, the monitor shall be given the authority to temporarily halt construction (if safe) within 50 feet (15 meters) of the discovery to investigate the find and contact the archaeological Principal Investigator. The Native American monitor and consulting tribe(s) shall be provided an opportunity to participate in the documentation and evaluation of the find. If a data recovery plan is prepared, the consulting tribe(s) shall be provided an opportunity to review and provide input on the plan.					
Utilities and Service Systems					
MM-USS-A: Development of a Utility Relocation Plan: Before the start of construction-related activities, including the relocation of utilities, the Project Sponsor shall coordinate with the Los Angeles Department of Water & Power, the Los Angeles Sanitation & Environment Department, the Southern California Gas Company, and Metro to prepare a Utility Relocation Plan. The Project Sponsor shall also coordinate with the utility companies to minimize impacts to services throughout the Project and obtain their approval of the Utility Relocation Plan. The Utility Relocation Plan shall be prepared, reviewed, and approved by a licensed civil engineer and, at a minimum, include the following: • Plans that identify the utility infrastructure elements, including access for utility providers and easements, as applicable, that require relocation as a result of the proposed Project; • Safety measures to avoid any human health hazards or environmental hazards associated with capping and abandoning some utility infrastructure, such as natural gas lines or sewer lines; and	Project Sponsor Civil Engineer Construction Contractor	Metro and/or the City of Los Angeles (Los Angeles Department of Water & Power, the Los Angeles Sanitation & Environment Department) and Southern California Gas Company	Pre-Construction	Once, Pre-Construction (proof of compliance)	Approval of the Utility Relocation Plan

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
• Timing for completion of the utility relocation, which shall be scheduled to minimize disruption to the utility companies and their customers.					
Wildfire					
WFR-PDF-A: The Project will prepare a Fire Protection Plan, which will be implemented during construction of the Broadway Junction, Stadium Tower, and Dodger Stadium Station. The Fire Protection Plan will include the following measures that shall be implemented to the extent applicable in order to further reduce risks associated with ignition of wildland fire: • Prior to the start of any construction activities, a Fire Prevention Program Superintendent shall be designated to interface with the LAFD and coordinate fire watch and site fire prevention and response. • In exceedance of regulatory requirements, the Fire Prevention Program Superintendent shall prohibit hot work construction activities during Red Flag Warnings, which are issued for a stated period of time by the National Weather Service using pre-determined criteria to identify particularly critical wildfire danger in a particular geographic area. • Prior to the start of any hot work construction activities, the Fire Prevention Program Superintendent will implement tiered fire watches with increased staff tasked with monitoring for ignitions during hot work activities (fire watch). The fire watch shall be provided during hot work and shall continue to monitor for a minimum of 30 minutes following completion of the hot work activities. The Fire Prevention Program Superintendent may determine during construction that this monitoring period be increased based on the potential for weather conditions that may increase the potential for sparks to be carried by the wind and result in ignition (i.e., the potential for high wind events, high temperature, and/or low relative humidity).	Project Sponsor Fire Consultant Construction Contractor	Metro and/or the City of Los Angeles (LAFD)	Pre-Construction Construction	Once, Plan Check (proof of compliance) Period Field Inspection during Construction by Fire Prevention Program Superintendent	Fire Protection Plan by the Fire Consultant Training Records Provided to the City, LAFD, and Metro

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
• Prior to the start of any construction activities, the construction manager in coordination with the Fire Prevention Program Superintendent shall provide site fire safety training for all construction crew members, including on the regulatory requirements set forth in Section 3.20.2, the proper use of firefighting equipment, and procedures to be followed in the event of a fire. Project staff shall be trained prior to the start of construction to identify and report to the appropriate authority potential fire safety hazards, including the presence of sparks or smoke. The construction manager shall maintain training records which will be available for review by Metro, the City, and LAFD. • Prior to the start of construction, the construction area shall be cleared of all dead and downed vegetation and dead or dry leaves and pine needles from the ground. Trees within the construction area shall either be removed or trimmed to keep branches a minimum of 10 feet from other trees. Vegetation within the construction area shall be controlled through periodic cutting and spraying of weeds. • Ongoing fire safety inspections and patrols of the construction site shall be integrated into Project site security procedures for the duration of construction. The assigned fire patrols shall verify the proper tools and equipment are on site, serve as a lookout for fire starts, including participating in a fire watch to make sure no residual fire exists following the completion of the construction activity. • Each construction area shall be equipped with fire extinguishers and firefighting equipment sufficient to extinguish small flames. • The Fire Prevention Program Superintendent shall provide outreach and orientation services to responding fire stations including pre-staging measures prior to the start of hot work construction activities.					

Project Design Feature or Mitigation Measure	Responsible Party	Monitoring / Enforcement Agency	Monitoring Phase	Monitoring Frequency	Action(s) Indicating Compliance
• Any fire ignited on site shall be promptly reported to LAFD.					
WFR-PDF-B: Prior to the start of construction, the Project shall provide a fuel modification zone surrounding the Stadium Tower construction site starting from the construction area perimeter of either 70 feet or until the nearest paved roadway that thins or removes all vegetation, dead or dry leaves and pine needles from the ground, and trims or remove trees to keep branches a minimum of 10 feet from other trees. The Stadium Tower construction site plan shows a buffer zone of 70 feet or to nearest paved roadway.	Project Sponsor Construction Contractor	Metro and/or the City of Los Angeles (LAFD)	Pre-Construction	Once, Plan Check (proof of compliance)	Field Inspection Issuance of Applicable Building Permit for Stadium Tower
WFR-PDF-C: During operation of Broadway Junction, Stadium Tower, and Dodger Stadium Station, security monitoring by staff and cameras shall be implemented. Project staff shall be trained to identify and report to the appropriate authority potential fire safety hazards, including the presence of sparks or smoke. Any fire ignited on site shall be promptly reported to LAFD.	Project Operator	Metro and/or the City of Los Angeles	Prior to issuance of Certificate of Occupancy	Once, prior to issuance of Certificate of Occupancy	Inclusion of requirement in Emergency Operations Plan Issuance of Certificate of Occupancy

Section 9.0 | List of Preparers

For ease of reference, this section, providing the lead agency and list of preparers for the Final EIR, reincorporates the preparers from Section 8.0, List of Preparers, of the Draft EIR, and includes additions for preparers of the Final EIR.

9.1 LEAD AGENCY

Los Angeles County Metropolitan Transportation Authority

Contacts: *Cory Zelmer, Deputy Executive Officer*
Anthony Jusay, Transportation Planner
Michael Cortez, Community Relations Manager
Martha Butler, Senior Director
Daniel Clark, Administrative Analyst
Kimberly Sterling, Senior Transportation Planner
Elizabeth Carvajal, Senior Director
Andrina Dominguez, Senior Environmental Specialist
Stacy Sinclair, Environmental Specialist
Anthony Crump, Deputy Executive Officer – Community Relations
Holly Rockwell, Senior Executive Officer
Gary Byrne, Principal Transportation Planner
Ginny Brideau, Community Relations Manager

9.2 ENVIRONMENTAL IMPACT REPORT PREPARATION

Kimley-Horn and Associates, Inc.

Contacts: *Kim Avila, Project Manager*
Jessie Barkley, Assistant Project Manager
Danae Hall, Assistant Project Manager
Laura Worthington-Forbes, Senior Project Coordinator
Steve Peterson, Senior Project Coordinator
Reina Calder, Project Analyst
Jessica Mauck, Cultural and Visual Resources
Olivia Chan, Air Quality and Noise
Chris Jones, Senior Environmental Planner
Dennis Kearney, Senior Environmental Planner
Mia Berg, Environmental Planner
Taylor Blanford, Environmental Planner
Cameron Bauer, Environmental Planner
Mayra Garcia, Environmental Planner
Tyler Lindberg, Environmental Planner
Amanda McCallum, Document Production
Cindy Dalen-Slade, Document Support
Brison Coldiron, Document Support

AECOM

Contacts: *David DeRosa, Project Manager*
David Rader, Project Manager, Public Outreach
Fareeha Kibriya, Environmental Planner
Jaime Guzman, Senior Project Manager
Cristina Lowery, Deputy Project Manager

SECTION 1.0 EXECUTIVE SUMMARY

32 CFR Section 767.8.

California Code of Regulations, Article 4, Sections 1529, 5208, and 1532.

California Code of Regulations, Section 2485.

California Code of Regulations, Sections 3150 through 3191.

California Geological Survey Special Publication 117 (as amended).

California Public Resources Code (PRC) Section 21083.2(i).

California State Department of Parks and Recreation, Los Angeles State Historic Park Bike and Pedestrian Bridge Study, Feasibility Study, 2019.

California State Department of Parks and Recreation, Los Angeles State Historic Park General Plan and Final Environmental Impact Report, June 2005.

California Streets and Highways Code Section 660.

Civil Code Section 801.

Government Code Section 14666.

Government Code Sections 65864 through 65869.5.

LAMC Section 11.5.7.

LAMC Sections 13.11 and 12.32.S.

LAMC Section 12.24.M.

Los Angeles Charter and Administrative Code, Sec. 13.4. Applicability.

Los Angeles Charter and Administrative Code, Sec. 390. Franchises.

Los Angeles Charter and Administrative Code, Sec. 22.109. Board of Cultural Affairs Commissioners Control over Works of Art.

OSHA 29 CFR Sections 1926.62 and 1926.1101.

Public Resources Code 5002.2.

Public Resources Code Section 5003.17.

Public Utilities Code Section 130252.

Public Utilities Code Section 130521.

SCAQMD Rule 1403.

Secretary of Interior Standards for Archaeology (36 CFR § 61).

Secretary of Interior's Standards for the Treatment of Historic Properties (60 FR 35843).

Secretary of the Interior's Standards and Guidelines for Architectural and Engineering Documentation (68 FR 43159).

SECTION 2.0 INTRODUCTION

49 U.S.C. § 5302(7).

Cal. Pub. Res. Code § 21168.6.9(a)(1)(A)-(F).

Senate Bill (SB) 44, effective January 1, 2022.

SECTION 3.0 PROJECT DESCRIPTION

Appendix A
Public Outreach Report

APPENDIX A
PUBLIC OUTREACH REPORT

INTRODUCTION

This public outreach report provides an overview of Metro's public outreach during the Draft EIR public review period, in compliance with the requirements of CEQA and Senate Bill (SB) 44, and Metro's public outreach and engagement efforts following the close of the Draft EIR public review period and prior to certification of the Final EIR.

AGENCY AND INTERESTED PARTY OUTREACH OVERVIEW

Metro released the Draft Environmental Impact Report ("EIR") for the proposed Project on October 17, 2022, for a 60-day public review period ending on December 16, 2022. On November 15, 2022, Metro extended the public review period an additional 30 days for a 90-day public review period ending on January 17, 2023. Notice of the release of the Draft EIR, the extension of the public review period, and the public meetings was provided to agencies and interested parties in several ways in compliance with CEQA.

The proposed Project is utilizing Senate Bill 44 ("SB 44"), which provides for streamlined judicial review for certain transit projects that will reduce GHG emissions, known as "environmental leadership transit projects." While SB 44 only requires one informational workshop, Metro held two informational workshops to inform the public of the key analyses and conclusions of the Draft EIR within 10 calendar days of its release. Similarly, while SB 44 only requires one public hearing to be held within 10 calendar days before the public review period's close, Metro held four public hearings to receive testimony on the Draft EIR.

During the public review period, comments on the Draft EIR could be submitted in writing, by phone, and during the four public hearings. Comments on the Draft EIR could be submitted by email to LAART@metro.net, by mail to One Gateway Plaza, Mail Stop 99-22-6, Los Angeles, CA 90012, or over the phone by calling (213) 922-6913. Comments could also be submitted at each public hearing. At the two in-person public hearings, comments could be submitted either verbally or in writing. During the two virtual public hearings, comments could be submitted verbally.

The Draft EIR public review period ended on January 17, 2023.[1] Metro received 1,132 comments on the Draft EIR during the Draft EIR public review period from agencies, groups, organizations, individuals, private companies, and public hearing attendees. All public comments received are included in Appendix B, Public Hearing Transcripts, and Appendix C, Public Comments on the Draft EIR, of the Final EIR. Pursuant to SB 44, public comments received were posted online at the proposed Project's SB 44 website at https://laartsb44.net and are available for public review. All public comments received during the Draft EIR public review period have been responded to as part of the Final EIR. Pursuant to SB 44, the Draft EIR and other documents relied on by Metro in the preparation of the Draft EIR, as well as documents

[1] Comments received during the fourth public hearing on February 8, 2023, held after the close of the public review period as a continuation of the January 12, 2023, public hearing, were deemed timely submitted for the purposes of the Draft EIR public review period.

prepared by Metro after the release of the Draft EIR that are part of the record of proceedings, are also available on the SB 44 website.

DRAFT EIR PUBLIC REVIEW PERIOD – PUBLIC NOTICE

CEQA Requirements

Under CEQA, the lead agency shall provide public notice of the availability of a Draft EIR at the same time as it sends a notice of completion to the Office of Planning and Research. (CEQA Guidelines § 15087(a).) Public notice of the availability of a Draft EIR must be provided in each of four ways:

(1) Posting the notice on the lead agency's website (Public Resources Code § 21092(3));

(2) Providing notice to all organizations and individuals who have previously requested notice (CEQA Guidelines § 15087(d));

(3) Posting of the notice by the County Clerk's office (CEQA Guidelines § 15087(d)); and

(4) Providing notice to the general public by at least one of the following three procedures:

a. Publication at least one time by the public agency in a newspaper of general circulation in the area affected by the proposed project. If more than one area is affected, the notice shall be published in the newspaper of largest circulation from among the newspapers of general circulation in those areas;

b. Posting of the notice by the public agency on and off the site in the area where the project is to be located;

c. Direct mailing to the owners and occupants of property contiguous to the parcel or parcels on which the project is located. Owners of such property shall be identified as shown on the latest equalized assessment roll. (CEQA Guidelines § 15087(a)(1) – (3).)

State Clearinghouse Submittal

Metro submitted the Draft EIR and required documents, including the Notice of Completion and Environmental Document Summary form to the State Clearinghouse prior to the release of the Draft EIR (SCH # 2020100007). (CEQA Guidelines § 15087(e).)

Public Notice of Release of Draft EIR

Notice of the release of the Draft EIR, which included information required pursuant to CEQA Guidelines section 15087(c)(1), including the date and location of the public review period public meetings (discussed below), was provided in several ways in compliance with CEQA. Notice was provided (1) by posting the NOA on Metro's website, (2) via email to all organizations and individuals who had previously requested notice by emailing the email list for the proposed Project, which included the last known name and email address of all organizations and individuals who had previously requested such notice in writing (the "proposed Project Email List"), and (3) by posting the NOA by the County Clerk's office. Additionally, notice was provided to the general public by (4) mailing the NOA to organizations and individuals who had previously requested such notice in writing ("Agencies and Interested Parties Mailing List"), and to owners and occupants of property within a 500-foot radius of the proposed Project, (5) publication of the NOA in the Los Angeles Times, The Sentinel, La Opinion, and the Chinese Daily, and

(6) publication in The Source. The Project Sponsor also sent individual email blasts and posted on social media and to its website to announce the release of the Draft EIR.

Public Notice of Extension of Draft EIR Public Review Period

Notice of Metro's extension of the Draft EIR public review period on November 15, 2022, for an additional 30 days for a 90-day public review period ending on January 17, 2023, with a third, in-person public hearing on January 12, 2023, was provided by posting on Metro's website, via email to the proposed Project Email List, and via updated fact sheets provided to attendees at the December 10 public hearing. The Project Sponsor also posted on social media and to its website to announce the extension of the public review period and the third public hearing.

Public Notice of Fourth, Continued Public Hearing

Notice of the fourth public hearing held virtually on February 8, 2023, which was a continuation of the January 12, 2023, public hearing, was provided by posting on Metro's website, and an email sent to the proposed Project Email List. The Project Sponsor also posted on social media to announce the fourth, continued public hearing.

Refer to Attachment A for materials providing notice of the release of the Draft EIR, the extension of the public comment period by 30 days to January 17, 2023, and the fourth public hearing.

DRAFT EIR PUBLIC REVIEW PERIOD ENGAGEMENT – PUBLIC MEETINGS

Metro held a total of eight public meetings immediately before, during, and after the 90-day Draft EIR public review period, including two community information sessions prior to the release of the Draft EIR. Following the release of the Draft EIR for public review, Metro held two informational workshops (one virtual and one in person), and four public hearings (two virtual and two in-person). All informational workshops and public hearings offered Spanish, Cantonese, and Mandarin interpretation, and provided materials in English, Spanish, Chinese (Traditional), and Chinese (Simplified). In addition, following a request for a Taishanese interpreter, the January 12, 2023, and February 8, 2023, public hearings also offered Taishanese interpretation. An estimated 715[2] attendees participated in the eight public meetings. Metro received 1,132 comments during the Draft EIR public review period via U.S. mail, the project email address, voicemail, and by submitting written and/or oral comments at the four public hearings. Materials from the public meetings immediately preceding, during, and immediately following, the public review period, and recordings of the virtual public meetings, are included in Attachment B.

Community Information Sessions (Pre-Draft EIR Release)

Metro held two community information sessions immediately prior to the October 17, 2022, release of the Draft EIR. The purpose of these meetings was to provide information to the public about the CEQA process and timeline, and how to participate in the Draft EIR public review period. Metro held a virtual community information session on October 12, 2022 via Zoom webinar, and an in-person community information session on October 15, 2022 at the Los Angeles Union Station Ticket Concourse. Notice of these meetings was provided through a trifold mailer mailed to the Agencies and Interested Parties Mailing List and to owners and occupants of property within a 500-foot radius of the proposed Project,

[2] The total number of attendees is based on the Zoom webinar attendees for virtual meetings and sign-in sheets for in-person meetings. Because attendees at in-person meetings were not required to sign in, the in-person estimates are an approximation may not reflect the actual total number of attendees at the in-person meetings.

and publication on Metro's website. On September 28, 2022 and October 10, 2022, Metro also sent emails to the proposed Project Email List with notice of the community information sessions and providing the date of the Draft EIR release. Refer to Attachment C for materials providing notice of the two pre-Draft EIR release community information sessions. Materials from the community information sessions, and a recording of the virtual community information session, are included in Attachment B.

First Community Information Session – Virtual – October 12, 2022

The first community information session was held online on Thursday, October 12, 2022, from 5 pm – 7 pm via a Zoom webinar. Interpretation in Spanish, Mandarin, and Cantonese was provided in separate channels and slides were made available to attendees in English, Spanish, Chinese (Simplified) and Chinese (Traditional) on Metro's website, which was linked in the Zoom chat feature. The English presentation was shown in the Webinar, and attendees using the other language channels were directed to access the presentations in their language on Metro's website and follow along based on speaker cues.

The presentation included an overview of the CEQA process and timeline for the Draft EIR. Metro responded to questions regarding the CEQA process and timeline that were submitted by attendees to the Zoom webinar Q&A feature.

73 attendees participated in the October 12, 2022, community information session.

Second Community Information Session - In-person – October 15, 2022

The second community information session was held in-person on Saturday, October 15, 2022, from 10 am – 12 pm at the Union Station Ticket Concourse. Parking validation was provided for attendees who parked at Union Station. A welcome table was set up adjacent to the main entrance to the Ticket Concourse and was visible to those entering the Ticket Concourse, who could come to the welcome table to sign in for the meeting. Spanish, Mandarin, and Cantonese interpreters were provided to assist attendees in need of interpretation, who were directed to the interpretation station when they checked in at the welcome table.

The format of the meeting was an open house, consistent with standard Metro practice, where attendees could learn more about the CEQA process and how to comment on the Draft EIR from Metro staff and staff from AECOM, the Draft EIR preparer, who were present and available throughout the meeting to assist attendees and answer questions on the CEQA process and timeline. Six stations were distributed around the room, with large screens displaying information about the CEQA process and the proposed Project, including a video presentation of the proposed Project with translation in Spanish, Mandarin, and Cantonese, a welcome message, information on the CEQA process and Senate Bill 44, a summary of all environmental topics covered by the Draft EIR, an overview of the proposed Project, the schedule for the Draft EIR public review period, and a map of the proposed Project alignment. Attendees were also provided with detailed fact sheets available in English, Spanish, and Chinese (Simplified). Attendees were provided with information on how to comment on the Draft EIR upon its release.

An estimated 23 attendees participated in the October 15, 2022, community information session.

Draft EIR Informational Workshops

Metro held two informational workshops within 10 days after the release of the Draft EIR, more than required by SB 44, which requires one informational workshop during this period (Public Resources Code

§ 21168.6.9(e)(1)(C)(ii)(3).) The purpose of the Draft EIR informational workshops was to provide information about the CEQA process and the proposed Project, and to inform the public of the key analyses and conclusions of the Draft EIR. Metro held a virtual informational workshop on October 22, 2022 via Zoom webinar, and an in-person informational workshop on October 25, 2022 at the Los Angeles Union Station Ticket Concourse.

Materials from the informational workshops, and recordings of the virtual informational workshop, are included in Attachment B.

First Informational Workshop – Virtual – October 22, 2022

The first informational workshop was held as a virtual informational workshop on Saturday, October 22, 2022, from 10 am – 12 pm, via Zoom webinar. Interpretation in Spanish, Mandarin, and Cantonese was provided in separate channels and slides were made available to attendees in English, Spanish, Chinese (Simplified) and Chinese (Traditional) on Metro's website, which was linked in the Zoom chat feature. The English presentation was shown in the Webinar, and attendees using the other language channels were directed to access the presentations in their language on Metro's website and follow along based on speaker cues. Each language interpretation channel was recorded and posted to Metro's website. Written interpretation of questions typed into Zoom's chat and Q&A features was also available for any questions received in Chinese (Simplified), Chinese (Traditional), and Spanish. Closed-captioning was also provided for ADA accessibility.

The format of the meeting was a presentation of the proposed Project, including the Draft EIR's key analyses and conclusions, followed by a question and answer session where attendees could ask questions using the Zoom Q&A feature. The meeting was staffed by Metro and AECOM staff, experts on subject matter areas including Transportation and Parking; Archaeology; Historical Resources; Air Quality, Greenhouse Gas, and Energy; Ropeway Engineering; Noise; and Aesthetics, and the Project team, who answered questions from attendees on the Draft EIR's key analyses and conclusions.

30 attendees participated in the October 22, 2022 informational workshop.

Second Informational Workshop – In-person – October 25, 2022

The second informational workshop was held in-person on Tuesday, October 25, 2022, from 5 pm – 7 pm at the Los Angeles Union Staton Ticket Concourse. Parking validation was provided for attendees who parked at Union Station. Wayfinding signage was set up outside of the main entrance to Union Station and inside the entryway, directing attendees to the welcome table set up adjacent to the main entrance to the Ticket Concourse and visible to those entering Union Station. A sign-in sheet was provided at the welcome table to track attendance. Spanish, Mandarin, and Cantonese Interpreters were provided to assist attendees in need of interpretation, who were directed to the interpretation station when they checked in at the welcome table.

The format of the meeting was an open house, consistent with standard Metro practice, where attendees could learn more about the proposed Project and the key analyses and conclusions of the Draft EIR, and learn how to comment on the Draft EIR. Twelve stations were set up throughout the Ticket Concourse, with ten stations focused on specific subject matter areas of the Draft EIR, one station dedicated to information on aerial rapid transit technology, and one station with a video presentation of the proposed Project. Each station had large, printed boards summarizing the subject matter of that station, including:

the Project Description, Aesthetics, Air Quality, GHG, and Energy, Cultural (Archaeology and Historical Resources), Parks and Recreation, Noise, Transportation, and Parking. Attendees could walk around to each station and ask questions to subject-matter experts about the Project. Each station also included printed materials that attendees could review and/or take with them, including fact sheets in English, Spanish, and Chinese (Simplified) and printed copies of the presentation from the virtual informational workshop in English, Spanish, Chinese (Simplified) and Chinese (Traditional). A hard copy of the Draft EIR was also available at the Summary of Impacts station for attendees to review during the informational workshop. The meeting was staffed by Metro and AECOM staff, experts on subject matter areas including Transportation and Parking; Archaeology; Historical Resources; Air Quality, Greenhouse Gas, and Energy; Ropeway Engineering; Noise; and Aesthetics, and the Project team, who answered questions from attendees on the Draft EIR's key analyses and conclusions.

An estimated 42 attendees participated in the October 25, 2022, informational workshop.

Draft EIR Public Hearings

Metro held four public hearings during the Draft EIR public review period, with one within 10 days of the close of the public review period, pursuant to the requirement of Senate Bill 44, which requires one public hearing within 10 days before the close of the public review period (Public Resources Code § 21168.6.9(e)(1)(C)(ii)(4).) Pursuant to the requirements of SB 44, the purpose of the Draft EIR public hearings was to receive testimony on the Draft EIR. As discussed below, the first three public hearings also provided information on the Draft EIR's key analyses and conclusions, while the fourth, continued public hearing was held for the sole purpose of receiving testimony on the Draft EIR.

During the Draft EIR public review period, Metro held (1) an in-person public hearing on December 10, 2022, at Union Station, (2) a virtual public hearing on December 13, 2022, via Zoom webinar, and (3) an in-person public hearing on January 12, 2023, at Cathedral High School. Because there were disruptions at the January 12, 2023, in-person public hearing, Metro held a fourth, continued public hearing as a virtual public hearing on February 8, 2023 to provide an additional opportunity for attendees to provide verbal testimony on the Draft EIR, and comments received during this public hearing were deemed timely submitted for the purposes of the Draft EIR public review period.

Pursuant to the requirement of SB 44, transcripts of all verbal public comments received on the Draft EIR during the four public hearings are included in Appendix B, Public Hearing Transcripts, of the Final EIR (Public Resources Code § 21169.6.9(e)(1)(C)(4).) All written public comments received on the Draft EIR during the public review period are included in Appendix C, Public Comments on the Draft EIR, of the Final EIR. Other materials from the public hearings, and recordings of the virtual public hearings, are included in Attachment B.

First Public Hearing: In-Person – December 10, 2022

The first public hearing was held in-person on Saturday, December 10, 2022, from 10 am – 12 pm, at the Union Station Ticket Concourse, and staff remained at the Ticket Concourse past noon to provide any remaining attendees the opportunity to submit public comments after the public hearing had concluded. Parking validation was provided for attendees who parked at Union Station. Wayfinding signage was set up outside of the main entrance to LAUS and inside the entryway, directing attendees to the welcome table set up adjacent to the main entrance to the Ticket Concourse and visible to those entering Union Station. A sign-in sheet was provided at the welcome table to track attendance. Spanish, Mandarin, and

Cantonese Interpreters were provided to assist attendees in need of interpretation, who were directed to the interpretation station when they checked in at the welcome table.

The format of the first public hearing was an open house, consistent with standard Metro practice, where attendees could learn more about the proposed Project and the key analyses and conclusions of the Draft EIR, and also a public comment opportunity so Metro could receive testimony on the Draft EIR.

Twelve stations were set up throughout the Ticket Concourse, with ten stations focused on specific subject matter areas of the Draft EIR, one station dedicated to information on aerial rapid transit technology, and one station with a video presentation of the proposed Project. Each station had large, printed boards summarizing the subject matter of that station, including: the Project Description, Aesthetics, Air Quality, GHG, and Energy, Cultural (Archaeology and Historical Resources), Parks and Recreation, Noise, Transportation, and Parking. Attendees could walk around to each station and ask questions to subject-matter experts about the Project. Each station also included printed materials that attendees could review and/or take with them, including fact sheets in English, Spanish, and Chinese (Simplified) and printed copies of the presentation from the virtual public hearing in English, Spanish, Chinese (Simplified) and Chinese (Traditional). A hard copy of the Draft EIR was also available at the Summary of Impacts station for attendees to review during the public hearing. The meeting was staffed by Metro and AECOM staff, experts on subject matter areas including Transportation and Parking; Archaeology; Historical Resources; Air Quality, Greenhouse Gas, and Energy; Ropeway Engineering; Noise; and Aesthetics, and the Project team, who answered questions from attendees on the Draft EIR's key analyses and conclusions.

In addition to the open house, attendees were provided with the opportunity to submit public comments either in writing on forms provided by Metro, or verbally to the court reporters at a comment station in the venue. In order to accommodate all attendees who sought to provide verbal public comments, each verbal commenter was given a time limit of 2 minutes to provide their verbal public comment, but could return to provide additional verbal comments after getting back in line, and could also provide written public comments. Written comment forms provided instructions on how to comment on the Draft EIR in English, Spanish, and Chinese (Simplified).

An estimated 85 attendees participated in the December 10, 2022, public hearing, and Metro received 25 verbal comments and 50 written comments on the Draft EIR.

Second Public Hearing: Virtual– December 13, 2022

The second public hearing was held as a virtual public hearing on Tuesday, December 13, 2022, from 5 pm to after 7 pm, via Zoom webinar. Interpretation in Spanish, Mandarin, and Cantonese was provided in separate channels and slides were made available to attendees in English, Spanish, Chinese (Simplified) and Chinese (Traditional) on Metro's website, which was linked in the Zoom chat feature. The English presentation was shown in the Webinar, and attendees using the other language channels were directed to access the presentations in their language on Metro's website and follow along based on speaker cues. Each language interpretation channel was recorded and posted to Metro's website. Closed-captioning was also provided for ADA accessibility. Public comments made in Spanish, Cantonese, or Mandarin were

translated to English, and court reporters recorded the English translation. The full audio recording of public comments in the commenter's native language are available on Metro's website.[3]

The presentation included the key analyses and conclusions of the Draft EIR, followed by a public comment session where attendees could indicate that they wished to provide a comment and submit verbal public comments, which were recorded by a court reporter. During the presentation, attendees were informed that public comments during the virtual public hearing would only be taken in verbal format, and anything written in Zoom's chat feature would not be considered a public comment on the Draft EIR. The meeting was staffed by Metro and AECOM staff, who gave the presentation and moderated the public comment session.

151 attendees participated in the December 13, 2022, public hearing, and Metro received 45 verbal comments on the Draft EIR.

Third Public Hearing: In-Person– January 12, 2023

The third public hearing was held in-person on Thursday, January 12, 2023, from 5 pm – 7 pm, at Cathedral High School. Free parking was available on the adjacent streets and in the school's parking lot. Wayfinding signage, including balloons, was set up around the perimeter of the Cathedral campus on North Broadway, Bishops Road, and Cottage Home Street, and within the campus off the entrance at Bishops Road and Cottage Home Street, directing attendees to the location of the meeting in the gymnasium. A welcome table was set up at the entrance to the gymnasium. A sign-in sheet was provided at the welcome table to track attendance. Spanish, Mandarin, Cantonese, and Taishanese Interpreters were provided to assist attendees in need of interpretation, who were directed to the interpretation station when they checked in at the welcome table.

The format of the public hearing was an open house, consistent with standard Metro practice, where attendees could learn more about the proposed Project and the key analyses and conclusions of the Draft EIR, and also a public comment opportunity so Metro could receive testimony on the Draft EIR. Twelve stations were set up throughout the gymnasium, with ten stations focused on specific subject matter areas of the Draft EIR, one station dedicated to information on aerial rapid transit technology, and one station with a video presentation of the proposed Project. Each station had large, printed boards summarizing the subject matter of that station, including: the Project Description, Aesthetics, Air Quality, GHG, and Energy, Cultural (Archaeology and Historical Resources), Parks and Recreation, Noise, Transportation, and Parking. Attendees could walk around to each station and ask questions to subject-matter experts about the proposed Project. Each station also included printed materials that attendees could review and/or take with them, including fact sheets in English, Spanish, and Chinese (Simplified) and printed copies of the presentation from the virtual public hearing in English, Spanish, Chinese (Simplified) and Chinese (Traditional). A hard copy of the Draft EIR was also available at the Summary of Impacts station for attendees to review during the public hearing. The meeting was staffed by Metro and AECOM staff, experts on subject matter areas including Transportation and Parking; Archaeology; Historical Resources; Air Quality, Greenhouse Gas, and Energy; Ropeway Engineering; Noise; and Aesthetics, and the Project team, who answered questions from attendees on the Draft EIR's key analyses and conclusions.

[3] https://www.dropbox.com/sh/trfpt09to0kp4a8/AACTiBt5JPXUgcml1svKcaF7a/Documents/DEIR%20Public%20Hearing%2012.13.22%20(Virtual)?dl=0&subfolder_nav_tracking=1

In addition to the open house, attendees were provided with the opportunity to submit public comments either in writing on forms provided by Metro, or verbally to the court reporters at a comment station in the venue. In order to accommodate all attendees who sought to provide verbal public comments, each verbal commenter was given a time limit of 2 minutes to provide their verbal public comment, but could return to provide additional verbal comments after getting back in line, and could also provide written public comments. Written comment forms provided instructions on how to comment on the Draft EIR in English, Spanish, and Chinese (Simplified).

Shortly after the public hearing started, a group of approximately 40 protesters with "Stop the Gondola" signs entered the meeting and began speaking with amplified bullhorns, using profanity. Due to this group's loud, prolonged protests, the court reporters and interpreters could not take verbal public comment. Metro requested that the protestors turn off their amplifier to enable the agency to continue to take verbal public comment. The protestors then began marching around the room, chanting and continuing to speak into the amplified bullhorns. Approximately 6 to 10 protestors then started to tear down poster boards, knock over easels and tables and throw materials. Metro and AECOM staff, subject matter experts, and the Project team expressed that they were physically intimidated and frightened by the damage done by the protesters.[4] After the protesters left, Metro staff concluded the meeting by talking to several remaining attendees.

An estimated 143 attendees participated in the January 12, 2023, public hearing, and Metro received 31 verbal comments and 95 written comments on the Draft EIR.

Fourth Public Hearing: Virtual – February 8, 2023

A fourth public hearing, held as a continuation of the third public hearing on January 12, 2023, was held online from 5 pm – 8:10 pm, via Zoom webinar on February 8, 2023. The meeting was originally scheduled from 5 pm to 7 pm, but was extended to approximately 8:10 p.m. to ensure that all participants who wanted to speak had an opportunity to do so. This continued public hearing was provided in recognition that interested members of the public may have been unable to provide testimony at the January 12, 2023 in-person public hearing due to disruptions from certain attendees, and was provided for the sole purpose of receiving verbal public testimony on the Draft EIR. Verbal comments received at this continued public hearing were deemed timely received for the purposes of the Draft EIR public review period. The continued public hearing offered Spanish, Cantonese, Mandarin, and Taishanese interpretation through Zoom's interpretation function. Public comments made in Spanish, Cantonese, Mandarin, or Taishanese were translated to English, and court reporters recorded the English translation. Slides contained identical, side-by-side information in English, Spanish, Chinese (Simplified) and Chinese (Traditional). Several commenters identified as "seniors" made their public comments from one phone line as they were all participating from the same location. Accommodations were made to allow each commenter to make their comments from the same phone line.

Certain attendees who expressed concerns about the proposed Project nonetheless shared positive feedback with Metro for the facilitation of this public hearing, including thanking Metro for the "calm, collected, and objective facilitation of this hearing this evening," "inviting a Toisan interpreter and obliging

[4] On February 10, 2023, the Project Sponsor submitted a memorandum regarding the disruptions at the in-person January 12, 2023 LA ART Draft EIR Public hearing, including statements from consultants collected within the days following the hearing regarding their experiences during the hearing and videos and photos from the public hearing. This memorandum is included as Attachment D.

access needs in the meeting," and "continuing this meeting past the time . . . to hear so many of my neighbors views."

An estimated 168 attendees participated in this fourth public hearing, and Metro received 82 verbal comments on the Draft EIR.

SB 44 MEDIATION

SB 44 provides that within five calendar days following the close of the public review period, a commenter on the Draft EIR may submit to the lead agency a written request for nonbinding mediation, and the lead agency must participate in nonbinding mediation with all commenters who timely submitted comments on the draft EIR and who requested the mediation. (Public Resources Code § 21168.6.9(e)(5)(A).) No requests for mediation pursuant to SB 44 were submitted to Metro.

ENGAGEMENT ACTIVITIES: SPRING/SUMMER/FALL 2023

Coordination with Stakeholders

Following the close of the Draft EIR public review period and prior to release of the Final EIR, Metro and the Project Sponsor continued efforts to coordinate with the responsible agencies, agencies, interested parties, and other stakeholders. This included coordination with key stakeholders including El Pueblo stakeholders, Chinatown stakeholders, Los Angeles State Historic Park stakeholders, Homeboy Industries, The California Endowment, William Mead Homes, Cathedral High School, Dodger fans, regional business groups including Central City Association, LA Business Council, Los Angeles County Business Federation (BizFed), organized labor including the OC/LA Building Trades, and additional representatives of businesses and cultural institutions along the proposed Project alignment.

Pre-Final EIR Release Public Meetings

Metro held two public meetings immediately prior to the December 4, 2023, release of the Final EIR. The purpose of these meetings was to provide an update on the proposed Project and the Final EIR. Metro held a virtual public meeting on November 30, 2023, via Zoom webinar, and an in-person public meeting on December 2, 2023, at Metro headquarters. Notice of these meetings was provided through a postcard mailed to the Agencies and Interested Parties Mailing List and to owners and occupants of property within a 500-foot radius of the proposed Project, and publication on Metro's website. On November 9, 2023, Metro also sent emails to the proposed Project Email List with notice of the public meetings and updated its website with information about the public meetings.

Project materials and information were provided at both the in-person meeting and on Metro's website in English, Spanish, Chinese (Traditional), and Chinese (Simplified). Interpretation was provided in English, Spanish, Mandarin, Cantonese, and Taishanese. Materials providing notice of the two pre-Final EIR release public meetings are included as Attachment E.

First Public Meeting – Virtual – November 30, 2023

The first public meeting was held online on Thursday, November 30, 2023, from 5 pm – 6 pm via a Zoom webinar. Interpretation in Spanish, Mandarin, Cantonese, and Taishanese was provided in separate

channels and slides were made available to attendees in English, Spanish, Chinese (Simplified) and Chinese (Traditional) on Metro's website, which was linked in the Zoom chat feature. The English presentation was shown in the Webinar, and attendees using the other language channels were directed to access the presentations in their language on Metro's website and follow along based on speaker cues. The presentation included an update on the proposed Project and an overview of the Final EIR. The meeting provided information about where the proposed Project is in the CEQA process; proposed Project background and overview; an orientation to and overview of the Final EIR, including the contents, additions to the EIR in response to comments, and a summary of comments and responses; how to access electronic and hard copies of the Final EIR; and next steps and future public feedback, including public comment opportunities at the Board of Directors and the future public process when the Project seeks approvals from the City of Los Angeles, California Department of Parks and Recreation, and Caltrans. The Project Sponsor also provided an overview of community benefits and ongoing stakeholder discussions. Metro responded to questions regarding the CEQA process and next steps that were submitted by attendees to the Zoom webinar Q&A feature.

Second Public Meeting - In-person – December 2, 2023

The second public meeting was held in-person on Saturday, December 2, 2023, from 10 am – 11 am at Metro Headquarters. Parking validation was provided for attendees who parked at Union Station. Wayfinding signs were set up outside the building and inside the building to guide attendees to the Metro Board Room, where a welcome table was set up adjacent to the main entrance to the Metro Board Room for attendees to sign in. Spanish, Mandarin, Cantonese, and Taishanese interpreters were provided to assist attendees in need of interpretation, who were directed to the interpretation station when they checked in at the welcome table.

The format of the meeting was a presentation of the Final EIR. The presentation included an update on the proposed Project and an overview of the Final EIR. The meeting provided information about where the proposed Project is in the CEQA process; proposed Project background and overview; an orientation to and overview of the Final EIR, including the contents, additions to the EIR in response to comments, and a summary of comments and responses; how to access electronic and hard copies of the Final EIR; and next steps and future public feedback, including public comment opportunities at the Board of Directors and the future public process when the Project seeks approvals from the City of Los Angeles, California Department of Parks and Recreation, and Caltrans. The Project Sponsor also provided an overview of community benefits and ongoing stakeholder discussions. Metro responded to questions regarding the CEQA process and next steps that were submitted by attendees via handwritten question forms. Hard copies of the presentation were available in English, Spanish, Chinese (Traditional) and Chinese (Simplified).

Notice of Availability

Draft Environmental Impact Report

Los Angeles Aerial Rapid Transit Project

The Los Angeles County Metropolitan Transportation Authority (Metro) is the lead agency under the California Environmental Quality Act (CEQA) and has prepared a Draft Environmental Impact Report (Draft EIR) for the proposed Los Angeles Aerial Rapid Transit Project (proposed Project). LA Aerial Rapid Transit Technologies LLC is the Project Sponsor for the proposed Project. The Draft EIR evaluates the potential for environmental impacts resulting from the proposed Project and provides mitigation measures where required. This notice is being provided to announce and solicit input on the Draft EIR.

Project Location: The proposed Project is located in the City of Los Angeles, situated northeast of downtown Los Angeles. The proposed Project would originate adjacent to the Los Angeles Union Station (LAUS) and El Pueblo de Los Angeles (El Pueblo) in the south and terminate at Dodger Stadium in the north, with an intermediate station at the southernmost entrance of the Los Angeles State Historic Park. Figure 1 provides an overview of the proposed Project location. The proposed Project would generally be located within public right-of-way (ROW) or on publicly owned property, following Alameda Street and then continuing along Spring Street in a northeast direction through the community of Chinatown to the southernmost corner of the Los Angeles State Historic Park. The

ast over the western edge of the Los Angeles State Historic

Notice of Availability

Draft Environmental Impact Report

Los Angeles Aerial Rapid Transit Project

The Los Angeles County Metropolitan Transportation Authority (Metro) is the lead agency under the California Environmental Quality Act (CEQA) and has prepared a Draft Environmental Impact Report (Draft EIR) for the proposed Los Angeles Aerial Rapid Transit Project (proposed Project). LA Aerial Rapid Transit Technologies LLC is the Project Sponsor for the proposed Project. The Draft EIR evaluates the potential for environmental impacts resulting from the proposed Project and provides mitigation measures where required. This notice is being provided to announce and solicit input on the Draft EIR.

Project Location: The proposed Project is located in the City of Los Angeles, situated northeast of downtown Los Angeles. The proposed Project would originate adjacent to the Los Angeles Union Station (LAUS) and El Pueblo de Los Angeles (El Pueblo) in the south and terminate at Dodger Stadium in the north, with an intermediate station at the southernmost entrance of the Los Angeles State Historic Park. Figure 1 provides an overview of the proposed Project location. The proposed Project would generally be located within public right-of-way (ROW) or on publicly owned property, following Alameda Street and then continuing along Spring Street in a northeast direction through the community of Chinatown to the southernmost corner of the Los Angeles State Historic Park. The alignment would then continue northeast over the western edge of the Los Angeles State Historic Park and the Metro L Line (Gold) to the intersection of North Broadway and Bishops Road. At this intersection, the proposed Project alignment would turn and continue northwest following Bishops Road toward its terminus at Dodger Stadium, located in the Elysian Park community.

Project Description: The proposed Project would connect LAUS to the Dodger Stadium property via an aerial gondola system. The proposed Project would include an intermediate station at the southernmost entrance of the Los Angeles State Historic Park. The proposed Project would provide an aerial rapid transit (ART) option for visitors to Dodger Stadium, while also providing access between the Dodger Stadium property, the surrounding communities, including Chinatown, Mission Junction, Elysian Park, and Solano Canyon, and the Los Angeles State Historic Park, to the regional transit system accessible at LAUS. The aerial gondola system would be approximately 1.2 miles and consist of cables, three passenger stations, a non-passenger junction, three towers, and gondola cabins. When complete, the proposed Project would have a maximum capacity of approximately 5,000 people per hour per direction, and the travel time from LAUS to Dodger Stadium would be approximately 7 minutes. The proposed Project would provide pedestrian improvements, including hardscape and landscape improvements, as well as amenities at the Los Angeles State Historic Park. The ART system has the ability to overcome grade and elevation issues between LAUS and Dodger Stadium and provide safe, zero emission, environmentally friendly, and high-capacity transit connectivity in the Project area that would reduce greenhouse gas (GHG) emissions as a result of reduced vehicular congestion in and around Dodger Stadium and on neighborhood streets, arterial roadways, and freeways. The proposed Project would operate daily to serve existing residents, workers, park users, and visitors to Los Angeles.

Established aerial gondola transit systems worldwide, such as in La Paz, Bolivia, and Mexico City, Mexico, are being used as rapid transit for the urban population that they serve. The proposed Project would employ a Tricable Detachable Gondola system (also known as "3S"). 3S Gondola system cabins carry approximately 30 to 40 passengers. Similar systems are used in Koblenz, Germany, Phu Quoc, Vietnam, and Toulouse, France. Figure 2 provides examples of gondola systems that are currently operating in several urban locations around the world.

Summary of Environmental Effects: This Draft EIR is a public information document that assesses the potential physical environmental impacts that could result from construction and use of the proposed Project, recommends mitigation measures to lessen or eliminate adverse impacts, examines feasible alternatives to the proposed Project, and is intended to inform Metro, the responsible agencies, and the general public. The Draft EIR evaluates potential physical environmental impacts that could result from the proposed Project and identifies that the proposed Project may have significant and unavoidable impacts in the following areas:

- Noise and Vibration

COMPLETION AND AVAILABILITY OF THE DRAFT EIR: Metro issued a Notice of Preparation (NOP) for a Draft EIR on October 1, 2020. The Draft EIR for the proposed Project is in compliance with the CEQA (California Public Resources Code §§ 21000 et seq.) and the State CEQA Guidelines (Guidelines) (California Code of Regulations, Title 14, Division 6, Chapter 3, §§ 15000 et seq.). The Draft EIR for the proposed Project is also being prepared under the California Senate Bill 44 judicial streamlining legislation (California Environmental Quality Act: Environmental Leadership Transit Projects) that added provisions to CEQA as Public Resources Code Section 21168.6.9 for environmental leadership transit projects.

The Draft EIR is being made available for public review for a 60-day comment period, commencing on October 17, 2022 and concluding on December 16, 2022. In addition to the above and consistent with the procedural requirements of Section 21168.6.9, the Draft EIR and all other documents submitted to or relied upon by the lead agency in the preparation of the Draft EIR can be accessed and downloaded from the following website: https://www.metro.net/projects/aerial-rapid-transit/. Electronic copies of the document can be made available upon written request to Metro and mailed to recipients for the cost of materials and shipping.

Hard copies of the Draft EIR (and electronic copies of the supporting appendices and technical documents) will be available for public review at the following repositories. Please check hours of operation at the repositories listed prior to visiting.

- Central Library, 630 W. 5th Street, Los Angeles, CA 90071
- Chinatown Branch Library, 639 N Hill St, Los Angeles, CA 90012
- Cypress Park Branch Library, 1150 Cypress Ave, Los Angeles, CA 90065
- Metro Headquarters, Dorothy Peyton Gray Library, One Gateway Plaza, Los Angeles, CA 90012

In addition, a document prepared by the lead agency or submitted by the applicant after the date of the release of the Draft EIR that is a part of the record of proceedings, and comments received on the Draft EIR, will be made available to the public on the same website

(https://www.metro.net/projects/aerial-rapid-transit/) in a readily accessible electronic format within the timeframes specified by Section 21168.6.9.

Also consistent with and in addition to the procedural requirements of Section 21168.6.9, which requires one informational workshop and one public hearing to be conducted, Metro will conduct two informational workshops within 10 days after the release of the Draft EIR to inform the public of the key analyses and conclusions of the Draft EIR, and will hold two public hearings to receive testimony on the Draft EIR within 10 days before the close of the public comment period.

INFORMATIONAL WORKSHOPS AND PUBLIC HEARINGS ON THE DRAFT EIR

Meeting details for the informational workshops and public hearings on the Draft EIR are available at the following website: https://www.metro.net/projects/aerial-rapid-transit/.

Metro will conduct two informational workshops to inform the public of the key analyses and conclusions of the Draft EIR:

Saturday, October 22, 2022, from 10:00 am – 12:00 pm, an informational workshop will be held on-line via Zoom.

Tuesday, October 25, 2022, from 5:00 pm – 7:00 pm, an informational workshop will be held in person at the Los Angeles Union Station Ticket Concourse. (Subject to change depending on County guidance on COVID-19).

Metro will conduct two public hearings to receive testimony on the Draft EIR for the proposed Project.

Saturday, December 10, 2022, from 10:00 am – 12:00 pm, a public hearing will be held in person at the Los Angeles Union Station Ticket Concourse. (Subject to change depending on County guidance on COVID-19).

Tuesday, December 13, 2022, from 5:00 pm – 7:00 pm, a public hearing will be held on-line via Zoom.

All informational workshops and public hearings will offer simultaneous Spanish, Cantonese, and Mandarin interpretation.

AMERICANS WITH DISABILITIES ACT REQUIREMENTS: Upon request, sign language interpretation, materials in alternative formats, and other accommodations are available to the public for Metros-ponsored meetings and events. All requests for reasonable accommodations, interpretation services, and materials in other language must be made at least three working days (72 hours) prior to the scheduled meeting date. Please submit requests by calling (323) 466-3876 between 8:00 am and 5:00 pm, Monday through Friday. Individuals with hearing or speech impairment may use California Relay Service 711 + Metro phone number.

Metro

Metro is hereby releasing this Draft EIR, finding it to be accurate and complete and ready for public review. Members of the public are invited to comment on the Draft EIR and the proposed Project. There is no fee for commenting, and all comments received will be considered by Metro prior to finalizing the EIR and making a decision on the proposed Project. Comments on the Draft EIR should focus on the Project area and description, sufficiency of the EIR in discussing possible impacts on the physical environment, ways in which potential adverse effects might be minimized, and alternatives to the proposed Project in light of the EIR's purpose to provide useful and accurate information about such factors.

SUBMITTING COMMENTS ON THE DRAFT EIR. Comments on the Draft EIR may be submitted in writing, by phone, or orally during the public hearings described above. Written comments and comments by phone concerning the Draft EIR should be submitted to the below email address or to the below mailing address or below phone number. All comments must be received no later than 5:00 p.m. on Friday, December 16, 2022.

By Email LAART@metro.net

By Mail Mr. Cory Zelmer
Deputy Executive Officer
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza, Mail Stop 99-22-6
Los Angeles, CA 90012

By Phone (213) 922-6913

All comments received during the Draft EIR public review period will be compiled and responded to as part of the Final EIR. If there are any questions regarding this notice, or how to review available documents, please contact Metro at (213) 922-6913.

Aviso de Disponibilidad

Borrador de Informe de Impacto Ambiental

Proyecto de Transporte Rápido Aéreo de Los Ángeles

La autoridad de transporte Los Angeles County Metropolitan Transportation Authority (Metro) es la Agencia Líder competente, según la Ley de Calidad Ambiental de California (California Environmental Quality Act (CEQA)), y ha preparado un Borrador del Informe de Impacto Ambiental (Borrador del EIR) para el Proyecto de Transporte Rápido Aéreo de Los Ángeles (proyecto propuesto). LA Aerial Rapid Transit Technologies LLC es el patrocinador del proyecto propuesto. El Borrador del EIR evalúa el potencial de los impactos ambientales que resulten del proyecto propuesto, y proporciona medidas de mitigación cuando sea necesario. Este aviso se proporciona para anunciar y solicitar comentarios sobre el Borrador del EIR.

Ubicación del Proyecto: El proyecto propuesto se encuentra en la ciudad de Los Ángeles, al noreste del centro de Los Ángeles. El proyecto propuesto se originaría junto a la estación Los Angeles Union Station (LAUS) y El Pueblo de Los Ángeles (El Pueblo) en el sur, y terminaría en el estadio Dodger Stadium en el norte, con una estación intermedia en la entrada que está en el extremo sur del parque Los Angeles State Historic Park. La Figura 1 muestra una vista general de la ubicación del proyecto propuesto. El proyecto propuesto se situaría generalmente dentro del derecho de paso público (ROW), o en una propiedad pública, siguiendo la calle Alameda Street y continuando luego por la calle Spring Street en dirección noreste a través de la comunidad de Chinatown hasta la esquina que está más al sur del parque Los Angeles State Historic Park. La alineación continuaría hacia el noreste, sobre el borde poniente del Los Angeles State Historic Park y la Línea L (Dorada) hasta la intersección de las vialidades North Broadway y Bishops Road. En esta intersección, la alineación del proyecto propuesto cambiaría de dirección y continuaría hacia el noroeste, sobre el camino Bishops Road, hacia su final en el Dodger Stadium, ubicado en la comunidad de Elysian Park.

Descripción del Proyecto: El proyecto propuesto conectaría la estación LAUS con la propiedad del Dodger Stadium a través de un sistema de góndolas aéreas. El proyecto propuesto incluiría una estación intermedia en la entrada que está más al sur del Los Angeles State Historic Park. El proyecto propuesto proporcionaría una opción de transporte rápido aéreo (ART) para los visitantes del Dodger Stadium, a la vez que abriría un acceso entre la propiedad del Dodger Stadium, las comunidades circundantes, incluyendo Chinatown, Mission Junction, Los Angeles State Historic Park, Elysian Park y Solano Canyon, al sistema de transporte regional accesible en la estación LAUS. El sistema aéreo de góndolas tendría una longitud aproximada de 1.2 millas (1.93 km) y constaría de cables, tres estaciones para pasajeros, una intersección que no es para pasajeros, tres torres y cabinas de góndolas. Una vez completado, el proyecto propuesto tendría una capacidad máxima de aproximadamente 5,000 personas por hora y por dirección, y el tiempo de traslado desde la estación LAUS hasta el Dodger Stadium sería de aproximadamente 7 minutos. El proyecto propuesto brindaría mejoras peatonales, incluyendo mejoras panorámicas y en el paisaje, así como servicios en Los Angeles State Historic Park. El sistema de transporte ART tiene la capacidad de superar los problemas de pendientes y elevación entre la estación LAUS y el Dodger Stadium; asimismo, proporcionaría una conectividad de transporte segura de gran capacidad en el área del proyecto, de cero emisiones y respetuosa del medio ambiente, la cual reduciría las emisiones de gases de efecto invernadero (GEI) gracias a la reducción de la congestión vehicular en el Dodger Stadium y sus alrededores y en las calles del vecindario, las carreteras arteriales y las autopistas. El proyecto propuesto funcionaría diariamente para dar servicio a los residentes, trabajadores, usuarios del parque y visitantes de Los Ángeles.

Hay sistemas de transportes de góndolas establecidos en el mundo, como los de La Paz, Bolivia y de la Ciudad de México, México, que se usan como sistema de transporte rápido para las poblaciones urbanas a las que sirven. El proyecto propuesto emplearía un sistema de góndolas desmontable tricable (también conocido como "3S"). Las cabinas del sistema de góndolas 3S transportan aproximadamente de 30 a 40 pasajeros. Hay sistemas similares que se utilizan en Koblenz (Alemania), Phu Quoc (Vietnam) y Toulouse (Francia). La Figura 2 muestra ejemplos de sistemas de góndolas que actualmente están funcionando en varios lugares urbanos alrededor del mundo.

Resumen de los Efectos Ambientales: Este Borrador de EIR es un documento de información pública que evalúa los impactos ambientales físicos potenciales que podrían darse como resultado de la construcción y el uso del proyecto propuesto; también recomienda medidas de mitigación para reducir o eliminar los impactos adversos, examina alternativas factibles al proyecto propuesto, y busca informar a Metro, a las agencias responsables y al público en general. El Borrador de EIR evalúa los impactos ambientales físicos potenciales que podrían darse como resultado del proyecto propuesto e identifica que el proyecto propuesto puede tener impactos significativos e inevitables en las siguientes áreas:

- Ruido y Vibraciones

FINALIZACIÓN Y DISPONIBILIDAD DEL BORRADOR DEL EIR: Metro emitió un Aviso de Preparación (NOP) para un Borrador de EIR el 1 de octubre de 2020. El Borrador del EIR para el Proyecto propuesto cumple con la CEQA (en la sección del Código de Recursos Públicos de California §§ 21000 y siguientes) y las Directrices Estatales de la CEQA (Directrices) (Código de Reglamentos de California, Título 14, División 6, Capítulo 3, §§ 15000 y siguientes). Aunado a lo anterior, el Borrador del EIR para el proyecto propuesto también se prepara conforme a la legislación de agilización judicial del proyecto de Ley 44 del Senado de California (Ley de Calidad Ambiental de California: Proyectos de Tránsito de Liderazgo Ambiental) que agregó disposiciones a la CEQA como la Sección 21168.6.9 del Código de Recursos Públicos para proyectos de tránsito de liderazgo ambiental.

El Borrador del EIR se pone a disposición del público para que este lo revise durante un período de comentarios de 60 días, que comienza el 17 de octubre de 2022 y concluye el 16 de diciembre de 2022. Además de lo anterior, y de conformidad con los requisitos de procedimiento de la Sección 21168.6.9, el Borrador del EIR y todos los demás documentos presentados a la agencia líder o en los que se basó para la preparación del Borrador del EIR están accesibles y se pueden descargar en el siguiente sitio web: https://www.metro.net/projects/aerial-rapid-transit/. Pueden obtenerse copias electrónicas del documento, previa solicitud por escrito a Metro, y enviarse por correo a los destinatarios por el costo de los materiales y el envío.

Habrá copias impresas del Borrador del EIR (y copias electrónicas de los apéndices y documentos técnicos de apoyo) disponibles para la revisión pública en los siguientes repositorios. Por favor verifique el horario de funcionamiento de los repositorios indicados antes de visitarlos.

- Central Library, 630 W. 5th Street, Los Angeles, CA 90071
- Chinatown Branch Library, 639 N Hill St, Los Angeles, CA 90012
- Cypress Park Branch Library, 1150 Cypress Ave, Los Angeles, CA 90065
- Metro Headquarters, Dorothy Peyton Gray Library, One Gateway Plaza, Los Angeles, CA 90012

Además, todo documento preparado por la agencia líder o presentado por el solicitante después de la fecha de publicación del Borrador del EIR que forme parte del expediente, así como los comentarios recibidos

sobre el Borrador del EIR, se pondrán a disposición del público en el mismo sitio web http://www.metro.net/aerialrapidtransit (https://www.metro.net/projects/aerial-rapid-transit/) en un formato electrónico de fácil acceso dentro de los plazos especificados en la Sección 21168.6.9.

Asimismo, en concordancia con los requisitos de procedimientos de la Sección 21168.6.9, la cual exige la realización de un taller informativo y una audiencia pública, Metro llevará a cabo dos talleres informativos dentro de los 10 días siguientes a la publicación del Borrador del EIR para informar al público sobre los análisis y las conclusiones clave del Borrador del EIR, y celebrará dos audiencias públicas para recibir testimonios sobre el Borrador del EIR dentro de los 10 días anteriores al cierre del período de comentarios públicos.

TALLERES INFORMATIVOS Y AUDIENCIAS PÚBLICAS SOBRE EL BORRADOR DEL EIR

La información detallada de las reuniones para los talleres informativos y las audiencias públicas sobre el Borrador del EIR están disponibles en el siguiente sitio web: https://www.metro.net/projects/aerial-rapid-transit/.

Metro organizará dos talleres informativos para dar a conocer al público los principales análisis y las conclusiones del Borrador del EIR:

Sábado 22 de octubre de 2022, de 10:00 a.m. – 12:00 p.m., se llevará a cabo un taller informativo en línea vía Zoom.

Martes, 25 de octubre de 2022, de 5:00 p.m. - 7:00 p.m., se llevará a cabo un taller informativo en persona en la explanada de boletos de la estación Los Angeles Union Station. (Sujeto a cambios, dependiendo de las orientaciones que dé el condado sobre COVID-19).

Metro realizará dos audiencias públicas para recibir testimonios sobre el Borrador del EIR del proyecto propuesto.

Sábado 10 de diciembre de 2022, de 10:00 a.m. a 12:00 p.m., se llevará a cabo una audiencia pública en persona en la explanada de boletos de la estación Los Angeles Union Station. (Sujeto a cambios, dependiendo de las orientaciones que dé el condado sobre COVID-19).

Martes 13 de diciembre de 2022, de 5:00 p.m. - 7:00 p.m., se llevará a cabo una audiencia pública en línea vía Zoom.

Todos los talleres informativos y las audiencias públicas contarán con interpretación simultánea en español, cantonés y mandarín.

REQUISITOS DE LA LEY DE ESTADOUNIDENSES CON DISCAPACIDADES: Previa solicitud, se ofrece al público interpretación en lenguaje de señas, materiales en formatos alternativos y otras adaptaciones para las reuniones y los eventos patrocinados por Metro. Todas las solicitudes de adaptaciones razonables, servicios de interpretación y materiales en otros idiomas deben hacerse al menos tres días hábiles (72 horas) antes de la fecha programada para la reunión. Por favor presente las solicitudes llamando al (323) 466-3876 entre las 8:00 a.m. y las 5:00 p.m., de lunes a viernes. Las personas con discapacidades auditivas o del habla pueden utilizar el servicio de retransmisión California Relay 711 + el número de teléfono de Metro.

Por la presente, Metro da a conocer este Borrador del EIR, considerándolo preciso y completo, y listo para la revisión pública. Se invita a los miembros del público a comentar el Borrador del EIR y el proyecto propuesto. No hay costo por hacer comentarios, y todos los comentarios recibidos serán tomados en consideración por Metro antes de finalizar el EIR y tomar una decisión sobre el proyecto propuesto. Los comentarios sobre el Borrador del EIR deben centrarse en el área y la descripción del proyecto, en la suficiencia del EIR para hablar sobre los posibles impactos en el entorno físico, en las formas en que los posibles efectos adversos pueden ser minimizados, y en las alternativas al proyecto propuesto a la luz del propósito del EIR de proporcionar información útil y precisa sobre tales factores.

PRESENTACIÓN DE COMENTARIOS SOBRE EL BORRADOR DEL EIR. Los comentarios sobre el Borrador del EIR pueden presentarse por escrito, por teléfono o verbalmente durante las audiencias públicas mencionadas anteriormente. Los comentarios por escrito y por teléfono sobre el Borrador del EIR deben enviarse a la siguiente dirección de email, a la siguiente dirección postal o al siguiente número telefónico. Todos los comentarios deben recibirse antes del 16 de diciembre de 2022 a las 5:00 p.m.

文件发布通知

环境影响报告草案

洛杉矶空中快捷交通项目

洛杉矶县都会交通局（都会交通局）是洛杉矶空中快捷交通项目的领导机构，依据《加州环境质量法案》（CEQA）规定为洛杉矶空中快捷交通项目（拟建项目）起草了一份环境影响报告草案。洛杉矶空中快捷交通技术有限公司为拟建项目的项目主办方。环境影响报告草案评估了拟建项目可能对环境造成的影响，并提供了所要求的缓解措施。本文件发布通知旨在发布环境影响报告草案并征求对其的意见。

项目地点：拟建项目位于洛杉矶市中心的东北部。拟建项目将以南边的洛杉矶联合车站与洛杉矶古城(El Pueblo)附近为起点站，以北边的道奇体育馆为终点站，并在洛杉矶州立历史公园最南门入口设立了一个中间站。图1提供了拟建项目位置概况。拟建项目的地点大致位于公共通行权（ROW）范围内或公有地产上，先沿着阿拉米达（Alameda）街，然后沿春天（Spring）街向东北方向继续穿过唐人街社区，直至洛杉矶州历史公园的最南门入口。然后，该路线将继续向东北方向延伸，穿过洛杉矶州立历史公园的西部边缘和轻轨L线（金线），到达北百老汇和主教（Bishops）路的交叉路口。在这个交叉路口，拟建项目的路线将转向西北，沿着主教路向西北方向继续延伸，直至位于伊利森公园社区的道奇体育馆终点站。

项目描述：通过空中快捷交通索道项目，拟建项目将联合车站与道奇体育馆物业连接。拟建项目将包括一个位于洛杉矶州立历史公园最南门入口处设置一个中间站。 这将为道奇体育馆的访客提供空中快捷交通（ART）服务，也为道奇体育馆物业及周边社区（包括唐人街、Mission Junction社区、伊利森公园和索拉诺峡谷）以及洛杉矶州立历史公园提供与可由洛杉矶联合车站进入的区域交通系统连通的交通服务。空中索道系统将长约1.2英里，由电缆、三个客站、一个非客枢纽站、索道塔和索道车厢组成。拟建项目完成后，其最大运力将为每小时每个方向约5,000人次，从洛杉矶联合车站到道奇体育馆的旅程约为7分钟。拟建项目将对人行道进行升级改造，包括对硬景观和自然景观进行美化，并将在洛杉矶州立历史公园提供便利设施。空中快捷交通索道系统可以克服洛杉矶联合车站和道奇体育馆之间坡度与地形高度问题，并在项目区域提供安全、零排放、环保和高运力的交通连接。这将减少道奇体育馆及其周围以及附近街道、主要干道和高速公路上的车辆拥堵，从而减少温室气体排放。拟建项目将每天运作，为现有居民、上班族、公园使用者和洛杉矶的访客提供服务。

世界各地（如玻利维亚的拉巴斯和墨西哥的墨西哥城）已有的空中缆车交通系统，正作为其城市人口提供快速交通服务。拟建项目将采用三角可拆卸缆车系统（也称为 “3S”）。3S缆车系统的车厢可搭载约30至40名乘客。 在德国科布伦茨、越南富国岛和法国图卢兹也使用了类似的缆车系统。图2提供了目前在世界各地几个城市运行的空中缆车系统的例子。

环境影响总结：本报告草案是一份公共信息文件，对拟建项目的施工和使用所可能导致的对环境的潜在实际影响进行了评估，对减少或消除不利影响的缓解措施作出了建议，对拟建项目的可行备选方案进行了检查，并旨在告知都会交通局、负责机构和公众。报告草案评估了拟建项目可能对环境造成的潜在实际影响，并确定拟建项目可能在以下方面产生重大和不可避免的影响：

- 噪音与震动

环境影响报告草案的完成和发布：都会交通局于2020年10月1日发布了环境影响报告草案的编制通知。 拟建项目的环境影响报告草案符合《加州环境质量法案》(CEQA)（经修订的《公共资源法典》[PRC]第21000条及以下等等）和《加州环境质量法案指南》(《加州法规法典》[CCR]第14篇第3章第15000条及以下等等）的要求。报告草案也是根据加州参议院第44号法案的司法精简立法（《加州环境质量法案：环保领先交通项目》而编制，该环境影响报告法案在《加州环境质量法案》的《公共资源法典》第21168.6.9条添加了环保领先项目的规定。

本报告草案正在提供予公众审阅，公众评议期为为期60天，从2022年10月17日开始至2022年12月16日结束。除上述内容外，根据第21168.6.9节的程序要求，环境影响报告草案和领导机构在编制报告草案时提交或依赖的所有其它文件可从以下网站获取和下载：https://https://www.metro.net/projects/aerial-rapid-transit/如向都会交通局提出书面申请，可提供该文件的电子副本，并邮寄予收件人以支付材料费和寄件费用。

报告草案的复印文本（以及支持性附录和技术文件的电子副本）将在以下存放处供公众查阅。访问下列存放处前，请先查询存放处的开放时间。

- 中央图书馆, 630 W.5th Street, Los Angeles, CA 90071
- 唐人街图书分馆, 639 N Hill St, Los Angeles, CA 90012
- 柏树公园（Cypress Park）图书分馆, 1150 Cypress Ave, Los Angeles, CA 90065
- 都会交通局总部, Dorothy Peyton Gray Library, One Gateway Plaza, Los Angeles, CA 90012

此外，在第21168.6.9节规定的时间内，在报告草案发布日期之后由领导机构编写或由申请人提交的文件为议项记录的一部分，该等文件以及收到的关于报告草案的意见，将在同一网站http://www.metro.net/aerialrapidtransit(https://www.metro.net/projects/aerial-rapid-transit/) 上以易于访问的电子格式向公众提供。

此外，除了第21168.6.9条要求举行一次信息说明会和一次公开听证会的程序要求以外，都会交通局还将在发布报告草案后的10天内举行两次信息说明会，告知公众报告草案的主要分析和结论，以及将在公众评议期结束前10天内举行两场公开听证会，接受对报告草案的听证。

有关环境影响报告草案的信息说明会和公众听证会

有关环境影响报告草案的信息说明会和公众听证会的会议详情，请浏览以下网页:https://https://www.metro.net/projects/aerial-rapid-transit/.

都会交通局将举办两次信息说明会，告知公众环境影响报告草案中的主要分析和结论

2022年10月22日（周六）上午10:00-12:00, 将通过Zoom举行线上信息说明会。

2022年10月25日（周二）下午5:00-7:00, 将在洛杉矶联合车站售票大厅举行现场信息说明会。(根据县政府对新冠疫情的指导意见，会议安排可能会有变化)。

都会交通局将举行两次公开听证会，听取对拟议项目的环境影响报告草案的证词。

2022年12月10日（周六）上午10:00-12:00, 将在洛杉矶联合车站售票大厅举行现场公众听证会。(根据县政府对新冠疫情的指导意见，会议安排可能会有变化)。

2022年12月13日（周二）下午5:00-7:00, 将通过Zoom举行线上公众听证会。

所有信息说明会和公众听证会都将提供西班牙语、粤语和普通话同声传译。

《美国残疾人法案》要求：在都会交通局主办的会议和活动中，公众可以在提出要求后获得手语翻译、替代格式的材料以及其它便利。所有关于合理便利、口译服务和其它语言材料的请求必须在预定的会议日期之前至少三个工作日（72小时）提出。请于周一至周五上午8:00至下午5:00之间，致电（323）466-3876提出申请。有听力或语言障碍的人士可以使用加州转接服务711+都会交通局电话号码。

都会交通局在此发布本环境影响报告草案，认为其准确且完整，可供公众审查。欢迎公众对报告草案和拟建项目提出意见。 发表意见不收取任何费用，都会交通局会考虑所有收到的意见，然后才会定稿环境影响报告，并就拟建项目作出决定。对环境影响报告草案的意见应集中于：项目位置和描述、报告在讨论可能对自然环境造成的影响方面的充分性、尽量降低潜在不利影响的方法，以及根据报告目的旨在提供有关这些因素的有用和准确信息而提出的拟建项目的备选方案。

提交对环境影响报告草案的意见。对报告草案的意见可在上述公开听证会期间以书面、电话或口头形式提交。对报告草案的书面意见或电话意见应通过以下电子邮件地址或邮寄地址，或以下电话号码提交。所有意见必须在2022年12月16日（周五）下午5点之前送达。

电子邮件：　LAART@metro.net

文件發布通知

《環境影響報告草案》

洛杉磯空中快速纜車計畫

洛杉磯郡都會交通管理局(Metro)為洛杉磯空中快速纜車計畫的主導機構，依據《加州環境品質法案》(CEQA) 草擬了一份《環境影響報告草案》，以評估洛杉磯空中快速纜車化對環境所造成的潛在影響。計畫由LA Aerial Rapid Transit Technologies LLC 贊助。 該《環境影響報告草案》評估了擬建計畫對環境所造成的潛在影響，並適時提供緩解措施。此通知的目的是為發布《環境影響報告草案》並徵求意見。

計畫位置:擬建計畫位於洛杉磯市中心東北部的洛杉磯市中心。該計畫南起於毗鄰洛杉磯聯合車站（LAUS）和洛杉磯古城（El Pueblo），北止於道奇體育場，而中間車站側設於洛杉磯最南端的入口—洛杉磯州立歷史公園。圖 1 概括了建議計畫的位置。擬建計畫將貫穿於公共通行權 (ROW) 範圍內和位於公共財產之上，沿著阿拉米達街(Alameda Street)，至春天街(Spring Street)向東北方延伸，穿過唐人街到達洛杉磯州最南端的歷史公園。該路線將繼續向東北發展，越過洛杉磯州立歷史公園和地鐵 L 線（金線）的西面邊緣，到達北百老匯(North Broadway)和主教街(Bishops Road)的交匯點。在這交匯點，該計畫的路線將轉向，並繼續沿主教街(Bishops Road)向西北方向行駛，前往位於伊利森公園社區的道奇體育場為終點站。

計畫介紹:擬建計畫將透過空中纜車系統將洛杉磯聯合車站（LAUS）連接到道奇體育場。計畫內亦包括在洛杉磯州立歷史公園最南端入口處的一個中轉站。計畫不但為往道奇體育場的遊客提供一個空中快速纜車(ART)的選項，亦將道奇體育場與周邊社區，包括唐人街(China town)、Mission Junction、伊利森公園和索拉諾群峽谷(Solano Canyon)和洛杉磯州立歷史公園連結，聯繫位於洛杉磯聯合車站（LAUS）的區域交通系統。空中纜車系統長約1.2英里，由電纜、三個客運站、一個非客運樞紐站、三個支撐塔和纜車艙組成。計畫建成後，每小時最大容量為單向約 5,000 人次，屆時從洛杉磯聯合車站（LAUS） 到道奇體育場的行程只需約 7 分鐘。擬建計畫將會優化行人設施，包括人工景觀(hardscape)和自然景觀的改善措施，以及洛杉磯州立歷史公園的便利設施。空中快速纜車(ART)系統不僅可以克服洛杉磯聯合車站（LAUS）和道奇體育場之間的坡度和海拔問題，更為該區域提供安全、零排放、環保和高流量的交通連接，有助減少溫室氣體 (GHG) 排放之餘，又可以紓緩道奇球場周邊以及附近街道、主幹道和高速公路的車輛擁堵問題。擬建計畫將會每日運行，為洛杉磯的現有居民、工人、公園使用者和遊客提供服務。

在全球已建立的空中纜車運輸系統的地區之中，例如:在玻利維亞的拉巴斯(La Paz)和墨西哥的墨西哥城(Mexico City)，正給它們用作為城市人口服務的快速交通系統。擬建計畫將採用三角可拆卸纜車系統（也稱為 “3S”）。3S纜車系統的車廂可乘載大約30至40名乘客。德國科佈倫茨、越南富國島和法國圖盧茲亦有使用類似系統。圖 2 介紹目前在全球多個城市地區正式營運的纜車系統範例。

對環境影響的總結：本草案作為一份向公眾發放的資料文件，乃用於評估擬建計畫在建設過程及使用時，可能對環境產生的潛在物理性影響，同時提出減輕或消除不利因素的緩解措施，及審查擬建計畫的可行替代方案等，另外,亦將內容在公告於地鐵、負責機構和公眾知道。草案評估了擬建計畫對環境產生的潛在物理性影響，並判定擬建計畫可能在以下領域產生重大和不可避免的影響：

- 噪音和振動

草案的完成和實用性：地鐵於 2020 年 10 月 1 日發布了草案的草擬備忘 (NOP)。擬建計畫的草案符合 CEQA（加利福尼亞州公共資源法典 § § 21000 及以下下）和州立 CEQA 指南（指南）（加利福尼亞州法規，標題 14，第 6 部分，第 3 章，§ § 15000 及以下）。擬建計畫的草案亦根據加州參議院法案 44 的司法精簡立法（加州環境質量法案：環境主導交通計畫），並將 CEQA 條款添加為公共資源代碼，第 21168.6.9 節，用於環境主導交通計畫。

從 2022 年 10 月 17 日起，到 2022 年 12 月 16 日為止，草案將在 60 天的意見徵集期內公開予公眾查閱。除上述內容外，根據第 21168.6.9 節的章程要求，公眾可以從以下網站瀏覽及下載草案和主導機構在編制草案時提交或補充的所有其他文件：https://www.metro.net/projects/aerial-rapid-transit/。亦可書面向地鐵提出要求該文件的電子副本，副本將郵寄予收件人，及收取材料和運輸費用。

草案的印刷版本（以及補充附錄和技術性文件的電子副本）將在以下儲存庫中供公眾查閱。請在瀏覽之前了解所列出的儲存庫的開放時間。

- 中央圖書館630 W.第五街，洛杉磯，CA 90071
- 唐人街圖書館，639 N Hill St，洛杉磯，CA 90012
- 賽普拉斯公園圖書館，1150 Cypress Ave, Los Angeles, CA 90065
- 地鐵總部，Dorothy Peyton Gray Library，One Gateway Plaza，洛杉磯，CA 90012

此外，由主導機構準備或申請人在草案發布日後才提交的文件，該文件亦作為記錄的一部分，將聯同收到有關草案的評論及建議，在第 21168.6.9 節規定的時間範圍內，可於同一網站上 (https://www.metro.net/projects/aerial-rapid-transit/) ，以電子格式一同向公眾公開。

此外，除了了根據第 21168.6.9 節的章程要求（要求舉行一次資訊說明會和一次公開聽證會）之外，地鐵還將在草案發佈後 10 天內舉辦兩次資訊說明會，以告知公眾有關草案的主要分析和結論，並將在公眾意見咨詢期結束前 10 天內舉行兩次公開聽證會，以聽取有關草案的證詞。

關於草案的資訊說明會和公眾聽證會

有關草案的資訊說明會和公開聽證會的詳情，請瀏覽以下網站：https://www.metro.net/projects/aerial-rapid-transit/

地鐵將舉辦兩次資訊說明會，向公眾介紹草案的主要分析和結論：

在2022 年 10 月 22 日(星期六) 上午10:00 至下午 12:00，將透過 Zoom 在線上舉辦資訊說明會。

在2022 年 10 月 25 日(星期二)，下午 5:00 至 7:00，資訊說明會將在洛杉磯聯合車站售票大堂以實體形式舉行。（將根據郡有關 COVID-19 的指引，資訊可能會有所更改）。

地鐵將舉行兩次公開聽證會，以徵集有關擬建計畫草案的證詞。

在2022 年 12 月 10 日(星期六)上午 10:00 至下午 12:00，將在洛杉磯聯合車站售票大堂以實體形式舉行公開聽證會。（將根據郡有關 COVID-19 的指引，資訊可能會有所更改）。

在在2022 年 12 月 13 日(星期二)下午 5:00 至 7:00，將透過 Zoom 在線上上舉行公開聽證會。

所有資訊說明會和公開聽證會均將提供西班牙語、粵語和普通話的即時傳譯。

《美國殘疾人法案》要求：根據法例要求，所有以地鐵名義贊助的會議和活動均需向公眾提供手語翻譯、不同語言、形式、格式的資料和其他相關的便利設施。所有合理的住宿、傳譯服務及不同語言的資料要求，必須於會議日前最少3個工作天(72 小時)內內提出。並於在星期一至星期五上午 8:00 至下午 5:00 內致電 (323) 466-3876 提交申請。有聽力或語言障礙的人士可以使用加州中轉播服務 711 + 地鐵電話號碼。

此草案由地鐵發布，並確認它準確及完整，可供公眾查閱。歡迎公眾對草案和擬建計畫發表意見。提供意見不收取任何費用，地鐵將於決定擬建計畫的最終方案及決策前，將所有收集到的意見納入考慮當中。 對草案的意見應側重於擬建計畫的所在區域和描述、充分討論對環境方面的物理性影響、將潛在不利影響最小化的可能性，以及根據 EIR 的宗旨對擬建計畫的替代方案提供有用和準確的資料。

就草案提交意見。公眾可以在上述的公開聽證會上以書面、電話或口頭形式提交對草案的意見。有關對草案的書面意見和電話意見可提交至以下電子郵件地址、郵寄地址或電話號碼。所有意見必須在2022 年 12 月 16 日(星期五)下午 5:00 之前提交。

電子郵件： LAART@metro.net

LOS ANGELES AERIAL RAPID TRANSIT PROJECT
Public Meetings | *Reuniones Públicas* | 公众大会 | 公開會議

metro.net/aerialrapidtransit

LA Aerial Rapid Transit Technologies LLC is proposing the Los Angeles Aerial Rapid Transit Project, which would connect Los Angeles Union Station to the Dodger Stadium property with an intermediate station at the Los Angeles State Historic Park via a zero emission aerial rapid transit gondola system in downtown Los Angeles. Los Angeles County Metropolitan Transportation Authority (Metro) is the lead agency under the California Environmental Quality Act (CEQA) and has prepared a Draft Environmental Impact Report (DEIR) to evaluate the potential for environmental impacts resulting from the proposed Project.

LA Aerial Rapid Transit Technologies LLC está proponiendo el Proyecto de Transporte Rápido Elevado de Los Ángeles (Los Angeles Aerial Rapid Transit Project), que conectaría la estación Los Angeles Union Station con la propiedad del Dodger Stadium, con una estación intermedia en el parque Los Angeles State Historic Park a través de un sistema de góndolas de transporte rápido elevado de cero emisiones en el centro de Los Ángeles. La Autoridad de Transporte del Condado de Los Angeles (Los Angeles County Metropolitan Transportation Authority (Metro)) es el organismo principal competente, según la Ley de Calidad Ambiental de California (California Environmental Quality Act (CEQA)), y ha preparado un Borrador de Informe de Impacto Ambiental (DEIR) para evaluar el posible impacto ambiental resultante del proyecto propuesto.

洛杉矶空中快捷交通科技有限责任公司提出了洛杉矶空中快捷交通计划，希望在洛杉矶市中心建设一套零排放的空中快捷交通索道系统，由此将洛杉矶联合车站与道奇体育场的场馆连接起来，途中在洛杉矶州立历史公园设置站点。洛杉矶县都会交通管理局（Metro）是加州环境质量法（CEQA）规定的领导机构。Metro起草了一份《环境影响报告草案》（DEIR），用以评估这一拟议计划将会带来的潜在环境影响。

LA Aerial Rapid Transit Technologies LLC 正提交洛杉磯空中捷運項目建議，該項目建議將透過由市中心建立的零排放空中快速纜車系統將洛杉磯聯合車站 (Los Angeles Union Station) 、道奇體育場 (Dodger Stadium) 和洛杉磯州立歷史公園 (Los Angeles State Historic Park) 中轉站連接起來。洛杉磯郡都會運輸局 (Metro) 作為《加州環境質量法案》(CEQA) 的主導機構，已準備了一份環境影響報告草案，以評估該項目對環境所造成的潛在影響。

All Metro meetings are held in ADA accessible facilities and are accessible by transit. ADA accommodations and translations are available by calling 323.466.3876 or California Relay service at 711 at least 72 hours in advance.

Todas las reuniones de Metro se celebran en instalaciones con acceso requerido por la ADA y son accesibles en transporte público. Las adaptaciones requeridas por la ADA y las traducciones están disponibles llamando al 323.466.3876 o al servicio California Relay al 711 con al menos 72 horas de anticipación.

Metro所有的会议都是在ADA无障碍设施中举办的，并且可以乘坐公共交通抵达。如需ADA照顾措施和翻译，请至少提前72小时拨打323.466.3876或拨打711联系加州中继服务。

所有洛杉磯郡都會交通管理局 (Metro) 會議均在無障礙設施內舉行，並可使用公共交通工具抵達。如需ADA服務支援和翻譯服務，需最少提前 72 小時致電 323.466.3876 或 711 聯絡加州中繼服務。

Summary Form for Electronic Document Submittal

Form F

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

SCH #: 2020100007

Project Title: Los Angeles Aerial Rapid Transit Project

Lead Agency: Los Angeles County Metropolitan Transportation Authority (LSCMTA)

Contact Name: Cory Zelmer

Email: LAART@metro.net Phone Number: 213-922-1079

Project Location: Los Angeles (*City*) Los Angeles (*County*)

Project Description (Proposed actions, location, and/or consequences).

The Los Angeles Aerial Rapid Transit Project would connect Los Angeles Union Station to the Dodger Stadium property via an aerial gondola system in downtown Los Angeles. The proposed 1.2-mile route would travel generally along Alameda Street, Spring Street, and Bishops Road from LAUS to Dodger Stadium, with an intermediate station at the southernmost entrance of the Los Angeles State Historic Park. The proposed system would include aerial cables, passenger stations, a non-passenger junction, towers to support the aerial cables between the stations/junction, and gondola cabins for the passengers. When complete, the proposed Project would have a maximum capacity of approximately 5,000 people per hour per direction, and the travel time from LAUS to Dodger Stadium would be approximately seven minutes.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

See attached Executive Summary

Revised September 2011

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

Other additional evaluations include an evaluation of Los Angeles State Historic Park usage, including kite flying and the Park's special events, the locations of the Alameda and Chinatown/State Park stations, and an airspace analysis as to helicopters and heliports within the Project vicinity.

Provide a list of the responsible or trustee agencies for the project.

Notice of Availability
Draft Environmental Impact Report
Los Angeles Aerial Rapid Transit Project

The Los Angeles County Metropolitan Transportation Authority (Metro) is the lead agency under the California Environmental Quality Act (CEQA) and has prepared a Draft Environmental Impact Report (Draft EIR) for the proposed Los Angeles Aerial Rapid Transit Project (proposed Project). LA Aerial Rapid Transit Technologies LLC is the Project Sponsor for the proposed Project. The Draft EIR evaluates the potential for environmental impacts resulting from the proposed Project and provides mitigation measures where required. This notice is being provided to announce and solicit input on the Draft EIR.

Project Location: The proposed Project is located in the City of Los Angeles, situated northeast of downtown Los Angeles. The proposed Project would originate adjacent to the Los Angeles Union Station (LAUS) and El Pueblo de Los Angeles (El Pueblo) in the south and terminate at Dodger Stadium in the north, with an intermediate station at the southernmost entrance of the Los Angeles State Historic Park. The proposed Project would generally be located within public right-of-way (ROW) or on publicly owned property, following Alameda Street and then continuing along Spring Street in a northeast direction through the community of Chinatown to the southernmost corner of the Los Angeles State Historic Park. The alignment would then continue northeast over the western edge of the Los Angeles State Historic Park and the Metro L Line (Gold) to the intersection of North Broadway and Bishops Road. At this intersection, the proposed Project alignment would turn and continue northwest following Bishops Road toward its terminus at Dodger Stadium, located in the Elysian Park community.

Project Description: The proposed Project would connect LAUS to the Dodger Stadium property via an aerial gondola system. The proposed Project would include an intermediate station at the southernmost entrance of the Los Angeles State Historic Park. The proposed Project would provide an aerial rapid transit (ART) option for visitors to Dodger Stadium, while also providing access between the Dodger Stadium property, the surrounding communities, including Chinatown, Mission Junction, Elysian Park, and Solano Canyon, and the Los Angeles State Historic Park, to the regional transit system accessible at LAUS. The aerial gondola system would be approximately 1.2 miles and consist of cables, three passenger stations, a non-passenger junction, three towers, and gondola cabins. When complete, the proposed Project would have a maximum capacity of approximately 5,000 people per hour per direction, and the travel time from LAUS to Dodger Stadium would be approximately 7 minutes. The proposed Project would provide pedestrian improvements, including hardscape and landscape improvements, as well as amenities at the Los Angeles State Historic Park. The ART system has the ability to overcome grade and elevation issues between LAUS and Dodger Stadium and provide safe, zero emission, environmentally friendly, and high-capacity transit connectivity in the Project area that would reduce greenhouse gas (GHG) emissions as a result of reduced vehicular congestion in and around Dodger Stadium and on neighborhood streets, arterial roadways, and freeways. The proposed Project would operate daily to serve existing residents, workers, park users, and visitors to Los Angeles.

Established aerial gondola transit systems worldwide, such as in La Paz, Bolivia, and Mexico City, Mexico, are being used as rapid transit for the urban population that they serve. The proposed Project would employ a Tricable Detachable Gondola system (also known as "3S"). 3S Gondola system cabins carry approximately 30 to 40 passengers. Similar systems are used in Koblenz, Germany, Phu Quoc, Vietnam, and Toulouse, France.

Summary of Environmental Effects: This Draft EIR is a public information document that assesses the potential physical environmental impacts that could result from construction and use of the proposed Project, recommends mitigation measures to lessen or eliminate adverse impacts, examines feasible alternatives to the proposed Project, and is intended to inform Metro, the responsible agencies, and the general public. The Draft EIR evaluates potential physical environmental impacts that could result from the proposed Project and identifies that the proposed Project may have significant and unavoidable impacts in the following areas: Noise and Vibration.

COMPLETION AND AVAILABILITY OF THE DRAFT EIR: Metro issued a Notice of Preparation (NOP) for a Draft EIR on October 1, 2020. The Draft EIR for the proposed Project is in compliance with the CEQA (California Public Resources Code §§ 21000 et seq.) and the State CEQA Guidelines (Guidelines) (California Code of Regulations, Title 14, Division 6, Chapter 3, §§ 15000 et seq.). The Draft EIR for the proposed Project is also being prepared under the California Senate Bill 44 judicial streamlining legislation (California Environmental Quality Act: Environmental Leadership Transit Projects) that added provisions to CEQA as Public Resources Code Section 21168.6.9 for environmental leadership transit projects.

The Draft EIR is being made available for public review for a 60-day comment period, commencing on October 17, 2022 and concluding on December 16, 2022. In addition to the above and consistent with the procedural requirements of Section 21168.6.9, the Draft EIR and all other documents submitted to or relied upon by the lead agency in the preparation of the Draft EIR can be accessed and downloaded from the following website: https://www.metro.net/projects/aerial-rapid-transit/. Electronic copies of the document can be made available upon written request to Metro and mailed to recipients for the cost of materials and shipping.

Hard copies of the Draft EIR (and electronic copies of the supporting appendices and technical documents) will be available for public review at the following repositories: Central Library, 630 W. 5th Street, Los Angeles, CA 90071; Chinatown Branch Library, 639 N Hill St, Los Angeles, CA 90012; Cypress Park Branch Library, 1150 Cypress Ave, Los Angeles, CA 90065; Metro Headquarters, Dorothy Peyton Gray Library, One Gateway Plaza, Los Angeles, CA 90012. Please check hours of operation at the repositories listed prior to visiting.

In addition, a document prepared by the lead agency or submitted by the applicant after the date of the release of the Draft EIR that is a part of the record of proceedings, and comments received on the Draft EIR, will be made available to the public on the same website (https://www.metro.net/projects/aerial-rapid-transit/) in a readily accessible electronic format within the timeframes specified by Section 21168.6.9.

Also consistent with and in addition to the procedural requirements of Section 21168.6.9, which requires one informational workshop and one public hearing to be conducted, Metro will conduct two informational workshops within 10 days after the release of the Draft EIR to inform the public of the key analyses and conclusions of the Draft EIR, and will hold two public hearings to receive testimony on the Draft EIR within 10 days before the close of the public comment period.

INFORMATIONAL WORKSHOPS AND PUBLIC HEARINGS ON THE DRAFT EIR

Meeting details for the informational workshops and public hearings on the Draft EIR are available at the following website: https://www.metro.net/projects/aerial-rapid-transit/.

Metro will conduct two ***informational workshops*** to inform the public of the key analyses and conclusions of the Draft EIR: ***Saturday, October 22, 2022, from 10:00 am – 12:00 pm,*** an informational workshop will be held on-line via Zoom, and on ***Tuesday, October 25, 2022, from 5:00 pm – 7:00 pm,*** an informational workshop will be held in person at the Los Angeles Union Station Ticket Concourse. (Subject to change depending on County guidance on COVID-19).

Metro will conduct two ***public hearings*** to receive testimony on the Draft EIR for the proposed Project: ***Saturday, December 10, 2022, from 10:00 am – 12:00 pm,*** a public hearing will be held in person at the Los Angeles Union Station Ticket Concourse. (Subject to change depending on County guidance on COVID-19), and on ***Tuesday, December 13, 2022, from 5:00 pm – 7:00 pm,*** a public hearing will be held on-line via Zoom.

All informational workshops and public hearings will offer simultaneous Spanish, Cantonese, and Mandarin interpretation.

AMERICANS WITH DISABILITIES ACT REQUIREMENTS: Upon request, sign language interpretation, materials in alternative formats, and other accommodations are available to the public for Metro-sponsored meetings and events. All requests for reasonable accommodations, interpretation services, and materials in other language must be made at least three working days (72 hours) prior to the scheduled meeting date. Please submit requests by calling (323) 466-3876 between 8:00 am and 5:00 pm, Monday through Friday. Individuals with hearing or speech impairment may use California Relay Service 711 + Metro phone number.

Metro is hereby releasing this Draft EIR, finding it to be accurate and complete and ready for public review. Members of the public are invited to comment on the Draft EIR and the proposed Project. There is no fee for commenting, and all comments received will be considered by Metro prior to finalizing the EIR and making a decision on the proposed Project. Comments on the Draft EIR should focus on the Project area and description, sufficiency of the EIR in discussing possible impacts on the physical environment, ways in which potential adverse effects might be minimized, and alternatives to the proposed Project in light of the EIR's purpose to provide useful and accurate information about such factors.

SUBMITTING COMMENTS ON THE DRAFT EIR. Comments on the Draft EIR may be submitted in writing, by phone, or orally during the public hearings described above. Written comments and comments by phone concerning the Draft EIR should be submitted by email to LAART@metro.net or by mail to Mr. Cory Zelmer, Deputy Executive Officer, Los Angeles County Metropolitan Transportation Authority, One Gateway Plaza, Mail Stop 99-22-6, Los Angeles, CA 90012, or via phone at (213) 922-6913. All comments must be received no later than 5:00 p.m. on Friday, December 16, 2022.

All comments received during the Draft EIR public review period will be compiled and responded to as part of the Final EIR. If there are any questions regarding this notice, or how to review available documents, please contact Metro at (213) 922-6913.

TERRY GILLARD, in court in 2019, was convicted of sexually abusing children. The onetime wrestling coach was sentenced to 71 years in state prison.

$52-million settlement for the victims of abuse

[**Lawsuit,** from B1]
sentencing of the agony she felt seeing her abuser again.

"I've been struggling to learn how to live without the constant dread of seeing you again," she said. "I'm disgusted with myself because of how I foolishly trusted you."

Another of Gillard's victims said he had been lured with the promises of wrestling wins. "I knew something was wrong, and the day the event happened in the back of the Mitsubishi, it was shocking," he said. "You always told me I was the only one who could be trusted. I could never snitch."

During the trial, jurors heard testimony that Gillard sexually abused young wrestlers as far back as 1991, when he directed an 11-year-old boy to have sex with a woman in the backseat of the coach's Cadillac while he watched. He then also engaged in a sex act with the minor, according to prosecutors.

More recently, Gillard directed young wrestlers from 2014 to 2017 to engage in sexual acts while he watched in his vehicles or in a van owned and maintained by the Boys & Girls Club, according to court records.

"LAUSD has a long and sad history of covering up child abuse by teachers and coaches," victims' attorney Ron Labriola said. "We now know that the mechanism created by LAUSD to investigate these crimes is a sham."

Cudahy official faces steep climb in state treasurer race

[**Treasurer,** from B1]
sible for the "mismanagement" of taxpayer dollars.

"The time has come for an independent watchdog who is free from the single-party apparatus in Sacramento to bring checks and balances to the government and to serve honorably and tell the truth to taxpayers of our dire financial condition," Guerrero said in February, while announcing his candidacy.

Although Guerrero's reformist promises were enough to win him 1.4 million votes in the June primary, he was outmatched by Ma, who won 3.8 million — 57% of the ballots cast.

Ma is also vastly outpacing Guerrero in fundraising; she has raised more than $4 million, compared with his $20,000.

It is rare that an elected incumbent state treasurer is unseated. California voters haven't selected a challenger since 1958.

Guerrero is also attempting to become the first Republican treasurer since Matt Fong was elected to the office in 1995 — a steep climb in a state in which nearly 47% of registered voters are Democrats, 24% are Republican and close to 23% are "no party preference."

No Republican has been elected to a statewide office since 2006.

ELIAS FUNEZ Associated Press

STATE Treasurer Fiona Ma has drawn criticism over travel expenses and a lawsuit from a past employee.

Guerrero has attempted to make up ground by criticizing the way the state is handling its debt, credit rating and the large amounts of unfunded debt of CalSTRS and CalPERS, which manage pensions for public school educators and other public employees. He has said the state is overspending on "pet projects," and he calls for fewer taxes and less government spending.

Guerrero said that, if elected, he plans to show up on the Senate and Assembly floors to warn lawmakers about spending bills that would increase state debt.

"I'm going to be doing that until the legislators are sick and tired of seeing my face," he said.

Throughout her campaign, Ma has emphasized her history of working with lawmakers to pass legislation that boosts funding to address some of the state's biggest issues, such as the housing crisis.

Ma championed Assembly Bill 140, which was passed in 2021 and gives the treasurer's office a say in the direction of the California Dream for All program, which aims to make homeownership, especially for first-time buyers, more affordable. The bill has been heralded as a valuable tool to help close the racial wealth gap.

She also is focused on streamlining the process for distributing funding for affordable housing projects, which she said could move more efficiently and with more transparency for those applying for bonds and tax credits.

"If we can make that happen, that would be like the crown jewel for housing," she said.

Among other initiatives she has supported is the Cal KIDS program, which gives every child born in California on or after July 1 up to $100 and gives eligible low-income students up to $1,500 to help pay for and encourage saving for college.

She has also supported CalSavers, which requires businesses and nonprofits with five or more employees to either offer their adult workers a "qualified" retirement plan or sign up for state-run retirement savings programs.

Ma's tenure has also seen controversy.

She was criticized for charging taxpayers more than $32,000 in lodging and meal expenses to travel regularly from her home in San Francisco to Sacramento — a practice that other statewide officers do not engage in, a Sacramento Bee investigation found.

She said she now commutes to and from her home in San Francisco each day.

Ma has also been sued by a former employee who accuses her of sexual harassment and wrongful termination.

She has rejected accusations of misconduct and called the ongoing litigation "frivolous" and the result of a "disgruntled employee" who was terminated for performance issues.

A former San Francisco Board supervisor and state assemblymember, Ma has remained popular among voters despite the controversy.

Guerrero — who, like Ma, is a certified accountant — ran for local office after his city of Cudahy was rocked with scandals.

As mayor aiming to move his hometown past its legacy of corruption, he called on the state controller to audit the city's finances and administrative controls.

Guerrero said he intends to help low-income Californians through training programs for joining the workforce and for the government to offer incentives to encourage investment in the private sector to address areas of need.

"For all quality of life, I think the private sector is the best hope that we have," he said.

Notice of Availability
Draft Environmental Impact Report
Los Angeles Aerial Rapid Transit Project

The Los Angeles County Metropolitan Transportation Authority (Metro) is the lead agency under the California Environmental Quality Act (CEQA) and has prepared a Draft Environmental Impact Report (Draft EIR) for the proposed Los Angeles Aerial Rapid Transit Project (proposed Project). LA Aerial Rapid Transit Technologies LLC is the Project Sponsor for the proposed Project. The Draft EIR evaluates the potential for environmental impacts resulting from the proposed Project and provides mitigation measures where required. This notice is being provided to announce and solicit input on the Draft EIR.

Project Location: The proposed Project is located in the City of Los Angeles, situated northeast of downtown Los Angeles. The proposed Project would originate adjacent to the Los Angeles Union Station (LAUS) and El Pueblo de Los Angeles (El Pueblo) in the south and terminate at Dodger Stadium in the north, with an intermediate station at the southernmost entrance of the Los Angeles State Historic Park. The proposed Project would generally be located within public right-of-way (ROW) or on publicly owned property, following Alameda Street and then continuing along Spring Street in a northeast direction through the community of Chinatown to the southernmost corner of the Los Angeles State Historic Park. The alignment would then continue northeast over the western edge of the Los Angeles State Historic Park and the Metro L Line (Gold) to the intersection of North Broadway and Bishops Road. At this intersection, the proposed Project alignment would turn and continue northwest following Bishops Road toward its terminus at Dodger Stadium, located in the Elysian Park community.

Project Description: The proposed Project would connect LAUS to the Dodger Stadium property via an aerial gondola system. The proposed Project would include an intermediate station at the southernmost entrance of the Los Angeles State Historic Park. The proposed Project would provide an aerial rapid transit (ART) option for visitors to Dodger Stadium, while also providing access between the Dodger Stadium property, the surrounding communities, including Chinatown, Mission Junction, Elysian Park, and Solano Canyon, and the Los Angeles State Historic Park, to the regional transit system accessible at LAUS. The aerial gondola system would be approximately 1.2 miles and consist of cables, three passenger stations, a non-passenger junction, three towers, and gondola cabins. When complete, the proposed Project would have a maximum capacity of approximately 5,000 people per hour per direction, and the travel time from LAUS to Dodger Stadium would be approximately 7 minutes. The proposed Project would provide pedestrian improvements, including hardscape and landscape improvements, as well as amenities at the Los Angeles State Historic Park. The ART system has the ability to overcome grade and elevation issues between LAUS and Dodger Stadium and provide safe, zero emission, environmentally friendly, and high-capacity transit connectivity in the Project area that would reduce greenhouse gas (GHG) emissions as a result of reduced vehicular congestion in and around Dodger Stadium and on neighborhood streets, arterial roadways, and freeways. The proposed Project would operate daily to serve existing residents, workers, park users, and visitors to Los Angeles.

Established aerial gondola transit systems worldwide, such as in La Paz, Bolivia, and Mexico City, Mexico, are being used as rapid transit for the urban population that they serve. The proposed Project would employ a Tricable Detachable Gondola system (also known as "3S"). 3S Gondola system cabins carry approximately 30 to 40 passengers. Similar systems are used in Koblenz, Germany, Phu Quoc, Vietnam, and Toulouse, France.

Summary of Environmental Effects: This Draft EIR is a public information document that assesses the potential physical environmental impacts that could result from construction and use of the proposed Project, recommends mitigation measures to lessen or eliminate adverse impacts, examines feasible alternatives to the proposed Project, and is intended to inform Metro, the responsible agencies, and the general public. The Draft EIR evaluates potential physical environmental impacts that could result from the proposed Project and identifies that the proposed Project may have significant and unavoidable impacts in the following areas: Noise and Vibration.

COMPLETION AND AVAILABILITY OF THE DRAFT EIR: Metro issued a Notice of Preparation (NOP) for a Draft EIR on October 1, 2020. The Draft EIR for the proposed Project is in compliance with the CEQA (California Public Resources Code §§ 21000 et seq.) and the State CEQA Guidelines (Guidelines) (California Code of Regulations, Title 14, Division 6, Chapter 3, §§ 15000 et seq.). The Draft EIR for the proposed Project is also being prepared under the California Senate Bill 44 judicial streamlining legislation (California Environmental Quality Act: Environmental Leadership Transit Projects) that added provisions to CEQA as Public Resources Code Section 21168.6.9 for environmental leadership transit projects.

The Draft EIR is being made available for public review for a 60-day comment period, commencing on October 17, 2022 and concluding on December 16, 2022. In addition to the above and consistent with the procedural requirements of Section 21168.6.9, the Draft EIR and all other documents submitted to or relied upon by the lead agency in the preparation of the Draft EIR can be accessed and downloaded from the following website: https://www.metro.net/projects/aerial-rapid-transit/. Electronic copies of the document can be made available upon written request to Metro and mailed to recipients for the cost of materials and shipping.

Hard copies of the Draft EIR (and electronic copies of the supporting appendices and technical documents) will be available for public review at the following repositories: Central Library, 630 W. 5th Street, Los Angeles, CA 90071; Chinatown Branch Library, 639 N Hill St, Los Angeles, CA 90012; Cypress Park Branch Library, 1150 Cypress Ave, Los Angeles, CA 90065; Metro Headquarters, Dorothy Peyton Gray Library, One Gateway Plaza, Los Angeles, CA 90012. Please check hours of operation at the repositories listed prior to visiting.

In addition, a document prepared by the lead agency or submitted by the applicant after the date of the release of the Draft EIR that is a part of the record of proceedings, and comments received on the Draft EIR, will be made available to the public on the same website (https://www.metro.net/projects/aerial-rapid-transit/) in a readily accessible electronic format within the timeframes specified by Section 21168.6.9.

Also consistent with and in addition to the procedural requirements of Section 21168.6.9, which requires one informational workshop and one public hearing to be conducted, Metro will conduct two informational workshops within 10 days after the release of the Draft EIR to inform the public of the key analyses and conclusions of the Draft EIR, and will hold two public hearings to receive testimony on the Draft EIR within 10 days before the close of the public comment period.

INFORMATIONAL WORKSHOPS AND PUBLIC HEARINGS ON THE DRAFT EIR

Meeting details for the informational workshops and public hearings on the Draft EIR are available at the following website: https://www.metro.net/projects/aerial-rapid-transit/.

Metro will conduct two **informational workshops** to inform the public of the key analyses and conclusions of the Draft EIR: **Saturday, October 22, 2022, from 10:00 am – 12:00 pm**, an informational workshop will be held on-line via Zoom, and on **Tuesday, October 25, 2022, from 5:00 pm – 7:00 pm**, an informational workshop will be held in person at the Los Angeles Union Station Ticket Concourse. (Subject to change depending on County guidance on COVID-19).

Metro will conduct two **public hearings** to receive testimony on the Draft EIR for the proposed Project: **Saturday, December 10, 2022, from 10:00 am – 12:00 pm**, a public hearing will be held in person at the Los Angeles Union Station Ticket Concourse. (Subject to change depending on County guidance on COVID-19), and on **Tuesday, December 13, 2022, from 5:00 pm – 7:00 pm**, a public hearing will be held on-line via Zoom.

All informational workshops and public hearings will offer simultaneous Spanish, Cantonese, and Mandarin interpretation.

AMERICANS WITH DISABILITIES ACT REQUIREMENTS: Upon request, sign language interpretation, materials in alternative formats, and other accommodations are available to the public for Metro-sponsored meetings and events. All requests for reasonable accommodations, interpretation services, and materials in other language must be made at least three working days (72 hours) prior to the scheduled meeting date. Please submit requests by calling (323) 466-3876 between 8:00 am and 5:00 pm, Monday through Friday. Individuals with hearing or speech impairment may use California Relay Service 711 + Metro phone number.

Metro is hereby releasing this Draft EIR, finding it to be accurate and complete and ready for public review. Members of the public are invited to comment on the Draft EIR and the proposed Project. There is no fee for commenting, and all comments received will be considered by Metro prior to finalizing the EIR and making a decision on the proposed Project. Comments on the Draft EIR should focus on the Project area and description, sufficiency of the EIR in discussing possible impacts on the physical environment, ways in which potential adverse effects might be minimized, and alternatives to the proposed Project in light of the EIR's purpose to provide useful and accurate information about such factors.

SUBMITTING COMMENTS ON THE DRAFT EIR. Comments on the Draft EIR may be submitted in writing, by phone, or orally during the public hearings described above. Written comments and comments by phone concerning the Draft EIR should be submitted by email to LAART@metro.net or by mail to Mr. Cory Zelmer, Deputy Executive Officer, Los Angeles County Metropolitan Transportation Authority, One Gateway Plaza, Mail Stop 99-22-6, Los Angeles, CA 90012, or via phone at (213) 922-6913. All comments must be received no later than 5:00 p.m. on Friday, December 16, 2022.

All comments received during the Draft EIR public review period will be compiled and responded to as part of the Final EIR. If there are any questions regarding this notice, or how to review available documents, please contact Metro at (213) 922-6913.

Aviso de Disponibilidad Borrador de Informe de Impacto Ambiental
Proyecto de Transporte Rápido Aéreo de Los Ángeles

La autoridad de transporte Los Angeles County Metropolitan Transportation Authority (Metro) es la Agencia Líder competente, según la Ley de Calidad Ambiental de California (California Environmental Quality Act (CEQA)), y ha preparado un Borrador del Informe de Impacto Ambiental (Borrador del EIR) para el Proyecto de Transporte Rápido Aéreo de Los Ángeles (proyecto propuesto). LA Aerial Rapid Transit Technologies LLC es el patrocinador del proyecto propuesto. El Borrador del EIR evalúa el potencial de los impactos ambientales que resulten del proyecto propuesto, y proporciona medidas de mitigación cuando sea necesario. Este aviso se proporciona para anunciar y solicitar comentarios sobre el Borrador del EIR.

Ubicación del Proyecto: El proyecto propuesto se encuentra en la ciudad de Los Ángeles, al noreste del centro de Los Ángeles. El proyecto propuesto se originaría junto a la estación Los Angeles Union Station (LAUS) y El Pueblo de Los Ángeles (El Pueblo) en el sur, y terminaría en el estadio Dodger Stadium en el norte, con una estación intermedia en la entrada que está en el extremo sur del parque Los Angeles State Historic Park. El proyecto propuesto se situaría generalmente dentro del derecho de paso público (ROW), o en una propiedad pública, siguiendo la calle Alameda Street y continuando luego por la calle Spring Street en dirección noreste a través de la comunidad de Chinatown hasta la esquina que está más al sur del parque Los Angeles State Historic Park. La alineación continuaría hacia el noreste, sobre el borde poniente del Los Angeles State Historic Park y la Línea L (Dorada) hasta la intersección de las vialidades North Broadway y Bishops Road. En esta intersección, la alineación del proyecto propuesto cambiaría de dirección y continuaría hacia el noroeste, sobre el camino Bishops Road, hacia su final en el Dodger Stadium, ubicado en la comunidad de Elysian Park.

Descripción del Proyecto: El proyecto propuesto conectaría la estación LAUS con la propiedad del Dodger Stadium a través de un sistema de góndolas aéreas. El proyecto propuesto incluiría una estación intermedia en la entrada que está más al sur del Los Angeles State Historic Park. El proyecto propuesto proporcionaría una opción de transporte rápido aéreo (ART) para los visitantes del Dodger Stadium, a la vez que abriría un acceso entre la propiedad del Dodger Stadium, las comunidades circundantes, incluyendo Chinatown, Mission Junction, Los Angeles State Historic Park, Elysian Park y Solano Canyon, al sistema de transporte regional accesible en la estación LAUS. El sistema aéreo de góndolas tendría una longitud aproximada de 1.2 millas (1.93 km) y constaría de cables, tres estaciones para pasajeros, una intersección que no es para pasajeros, tres torres y cabinas de góndolas. Una vez completado, el proyecto propuesto tendría una capacidad máxima de aproximadamente 5,000 personas por hora y por dirección, y el tiempo de traslado desde la estación LAUS hasta el Dodger Stadium sería de aproximadamente 7 minutos. El proyecto propuesto brindaría mejoras peatonales, incluyendo mejoras panorámicas y en el paisaje, así como servicios en Los Angeles State Historic Park. El sistema de transporte ART tiene la capacidad de superar los problemas de pendientes y elevación entre la estación LAUS y el Dodger Stadium; asimismo, proporcionaría una conectividad de transporte segura de gran capacidad en el área del proyecto, de cero emisiones y respetuosa del medio ambiente, la cual reduciría las emisiones de gases de efecto invernadero (GEI) gracias a la reducción de la congestión vehicular en el Dodger Stadium y sus alrededores y en las calles del vecindario, las carreteras arteriales y las autopistas. El proyecto propuesto funcionaría diariamente para dar servicio a los residentes, trabajadores, usuarios del parque y visitantes de Los Ángeles.

Hay sistemas de transportes de góndolas establecidos en el mundo, como los de La Paz, Bolivia y de la Ciudad de México, México, que se usan como sistema de transporte rápido para las poblaciones urbanas a las que sirven. El proyecto propuesto emplearía un sistema de góndolas desmontable tricable (también conocido como "3S"). Las cabinas del sistema de góndolas 3S transportan aproximadamente de 30 a 40 pasajeros. Hay sistemas similares que se utilizan en Koblenz (Alemania), Phu Quoc (Vietnam) y Toulouse (Francia).

Resumen de los Efectos Ambientales: Este Borrador de EIR es un documento de información pública que evalúa los impactos ambientales físicos potenciales que podrían darse como resultado de la construcción y el uso del proyecto propuesto; también recomienda medidas de mitigación para reducir o eliminar los impactos adversos, examina alternativas factibles al proyecto propuesto, y busca informar a Metro, a las agencias responsables y al público en general. El Borrador de EIR evalúa los impactos ambientales físicos potenciales que podrían darse como resultado del proyecto propuesto e identifica que el proyecto propuesto puede tener impactos significativos e inevitables en las siguientes áreas: Ruido y Vibraciones.

FINALIZACIÓN Y DISPONIBILIDAD DEL BORRADOR DEL EIR: Metro emitió un Aviso de Preparación (NOP) para un Borrador de EIR el 1 de octubre de 2020. El Borrador del EIR para el Proyecto propuesto cumple con la CEQA (en la sección del Código de Recursos Públicos de California §§ 21000 y siguientes) y las Directrices Estatales de la CEQA (Directrices) (Código de Reglamentos de California, Título 14, División 6, Capítulo 3, §§ 15000 y siguientes). Aunado a lo anterior, el Borrador del EIR para el proyecto propuesto también se prepara conforme a la legislación de agilización judicial del proyecto de Ley 44 del Senado de California (Ley de Calidad Ambiental de California: Proyectos de Tránsito de Liderazgo Ambiental) que agregó disposiciones a la CEQA como la Sección 21168.6.9 del Código de Recursos Públicos para proyectos de tránsito de liderazgo ambiental.

El Borrador del EIR se pone a disposición del público para que este lo revise durante un período de comentarios de 60 días, que comienza el 17 de octubre de 2022 y concluye el 16 de diciembre de 2022. Además de lo anterior, y de conformidad con los requisitos de procedimiento de la Sección 21168.6.9, el Borrador del EIR y todos los demás documentos presentados a la agencia líder o en los que se basó para la preparación del Borrador del EIR están accesibles y se pueden descargar en el siguiente sitio web: https://www.metro.net/projects/aerial-rapid-transit/. Pueden obtenerse copias electrónicas del documento, previa solicitud por escrito a Metro, y enviarse por correo a los destinatarios por el costo de los materiales y el envío.

Habrá copias impresas del Borrador del EIR (y copias electrónicas de los apéndices y documentos técnicos de apoyo) disponibles para la revisión pública en los siguientes repositorios: Central Library, 630 W. 5th Street, Los Angeles, CA 90071; Chinatown Branch Library, 639 N Hill St, Los Angeles, CA 90012; Cypress Park Branch Library, 1150 Cypress Ave, Los Angeles, CA 90065; Metro Headquarters, Dorothy Peyton Gray Library, One Gateway Plaza, Los Angeles, CA 90012. Por favor verifique el horario de funcionamiento de los repositorios indicados antes de visitarlos

Además, todo documento preparado por la agencia líder o presentado por el solicitante después de la fecha de publicación del Borrador del EIR que forme parte del expediente, así como los comentarios recibidos sobre el Borrador del EIR, se pondrán a disposición del público en el mismo sitio web http://www.metro.net/aerialrapidtransit(https://www.metro.net/projects/aerial-rapid-transit/) en un formato electrónico de fácil acceso dentro de los plazos especificados en la Sección 21168.6.9.

Asimismo, en concordancia con los requisitos de procedimientos de la Sección 21168.6.9, la cual exige la realización de un taller informativo y una audiencia pública, Metro llevará a cabo dos talleres informativos dentro de los 10 días siguientes a la publicación del Borrador del EIR para informar al público sobre los análisis y las conclusiones clave del Borrador del EIR, y celebrará dos audiencias públicas para recibir testimonios sobre el Borrador del EIR dentro de los 10 días anteriores al cierre del período de comentarios públicos.

TALLERES INFORMATIVOS Y AUDIENCIAS PÚBLICAS SOBRE EL BORRADOR DEL EIR

La información detallada de las reuniones para los talleres informativos y las audiencias públicas sobre el Borrador del EIR están disponibles en el siguiente sitio web: https://www.metro.net/projects/aerial-rapid-transit/.

Metro organizará dos **talleres informativos** para dar a conocer al público los principales análisis y las conclusiones del Borrador del EIR: el **Sábado 22 de octubre de 2022, de 10:00 a.m. – 12:00 p.m.**, se llevará a cabo un taller informativo en línea vía Zoom, y el **Martes, 25 de octubre de 2022, de 5:00 p.m. - 7:00 p.m.,** se llevará a cabo un taller informativo en persona en la explanada de boletos de la estación Los Angeles Union Station. (Sujeto a cambios, dependiendo de las orientaciones que dé el condado sobre COVID-19).

Metro realizará dos **audiencias públicas** para recibir testimonios sobre el Borrador del EIR del proyecto propuesto: el **sábado 10 de diciembre de 2022, de 10:00 a.m. a 12:00 p.m.,** se llevará a cabo una audiencia pública en persona en la explanada de boletos de la estación Los Angeles Union Station. (Sujeto a cambios, dependiendo de las orientaciones que dé el condado sobre COVID-19), y el **Martes 13 de diciembre de 2022, de 5:00 p.m. - 7:00 p.m.**, se llevará a cabo una audiencia pública en línea vía Zoom.

Todos los talleres informativos y las audiencias públicas contarán con interpretación simultánea en español, cantonés y mandarín.

REQUISITOS DE LA LEY DE ESTADOUNIDENSES CON DISCAPACIDADES: Previa solicitud, se ofrece al público interpretación en lenguaje de señas, materiales en formatos alternativos y otras adaptaciones para las reuniones y los eventos patrocinados por Metro. Todas las solicitudes de adaptaciones razonables, servicios de interpretación y materiales en otros idiomas deben hacerse al menos tres días hábiles (72 horas) antes de la fecha programada para la reunión. Por favor presente las solicitudes llamando al (323) 466-3876 entre las 8:00 a.m. y las 5:00 p.m., de lunes a viernes. Las personas con discapacidades auditivas o del habla pueden utilizar el servicio de retransmisión California Relay 711 + el número de teléfono de Metro.

Por la presente, Metro da a conocer este Borrador del EIR, considerándolo preciso y completo, y listo para la revisión pública. Se invita a los miembros del público a comentar el Borrador del EIR y el proyecto propuesto. No hay costo por hacer comentarios, y todos los comentarios recibidos serán tomados en consideración por Metro antes de finalizar el EIR y tomar una decisión sobre el proyecto propuesto. Los comentarios sobre el Borrador del EIR deben centrarse en el área y la descripción del proyecto, en la suficiencia del EIR para hablar sobre los posibles impactos en el entorno físico, en las formas en que los posibles efectos adversos pueden ser minimizados, y en las alternativas al proyecto propuesto a la luz del propósito del EIR de proporcionar información útil y precisa sobre tales factores.

PRESENTACIÓN DE COMENTARIOS SOBRE EL BORRADOR DEL EIR. Los comentarios sobre el Borrador del EIR pueden presentarse por escrito, por teléfono o verbalmente durante las audiencias públicas mencionadas anteriormente. Los comentarios por escrito y por teléfono sobre el Borrador del EIR deben enviarse vía correo electrónico a LAART@metro.net o vía correo al Sr. Cory Zelmer, Deputy Executive Officer, Los Angeles County Metropolitan Transportation Authority, One Gateway Plaza, Mail Stop 99-22-6, Los Angeles, CA 90012, o por teléfono al (213) 922-6913. Todos los comentarios deben recibirse antes del 16 de diciembre de 2022 a las 5:00 p.m.

Todos los comentarios recibidos durante el periodo de revisión pública del Borrador del EIR serán recopilados y respondidos como parte del EIR Final. Si tiene alguna pregunta sobre este aviso o sobre cómo revisar los documentos disponibles, por favor póngase en contacto con Metro llamando al (213) 922-6913.

雲林滷肉飯節 美食地圖帶你開吃

◀「雲林滷肉飯節」登場，打造優選店家「滷肉飯美食地圖」。（雲林縣政府提供）

（雲林報導）「2022 雲林滷肉飯節嘉年華」15 日在古坑鄉綠色隧道登場，邀集之前在「神級滷肉飯爭霸戰」入選的專業店家及民間高手設攤，共有近 30 個攤位，現場並公布決賽評比前 3 名與優選名單，整理後將製成「滷肉飯美食地圖」，方便民眾按圖索驥，品嘗最好吃的雲林滷肉飯。

「2022 雲林滷肉飯節嘉年華」現場提供千碗滷肉飯，展現千人品嘗大會師盛況，雲林縣長張麗善表示，延續 2020 年，縣政府今年辦理第 2 屆雲林滷肉飯節活動，結合雲林良品豬肉、優質稻米及香醇醬油這 3 項滷肉飯的美味關鍵，一次將雲林在地最優質的產品推薦給大家，讓雲林滷肉飯征服大家的味蕾。

張麗善說，此次共選出專業店家組 15 名、民間高手組 10 名，為方便各縣市遊客來雲林品嘗得獎滷肉飯，縣府將推出「滷肉飯美食地圖」。上屆有些民間高手組得獎者已在網路電商販售滷肉飯及開設實體店面創業，盼藉由滷肉飯節，持續幫助更多人發揮所長，找到屬於自己的一片天。

縣農業處表示，滷肉飯可說是台灣的「國飯」，活動現場除了有香噴噴的滷肉飯饗宴，還有滷肉飯節專屬的「靈魂美食 3 部曲特別活動」，免費發放米、肉、醬油的相關特色美食，以及好玩的「滷肉好料趣味活動」、「神級滷肉飯人氣票選活動」、好逛好買的「雲林金選好農市集」，讓大家滿載而歸。

「神級滷肉飯爭霸戰」專業店家組前 3 名分別為李排骨酥餐館、魯香香黃金樂排飯店、8 鍋臭臭鍋斗六店，另選出 12 家優選店家。民間高手組前 3 名為陳冠閔、蘇嘉益、洪啟昇，以及 7 名優選店家。

旗山隘堤咖啡 長者沖泡好滋味

（高雄報導）在高雄市旗山區圓富社區有兩家老咖啡館，服務生都是七、八十歲的長者，手沖咖啡有模有樣，繞水柱又穩又平均，提供客人高品質的味覺享受。老闆陳宗卿說，隨著社區的老人愈來愈多，希望藉此能為社區注入活力。

原本，「阿嬤的咖啡館」只有一館，後來成立了「隘堤咖啡」（二館），屬於一樓店面與工作坊，長輩不用爬樓梯，也有無障礙設施。為何取名「隘堤咖啡」？陳宗卿解釋，因為這裡是口隘莊，且服務生的年齡都約 80 歲，取英文「Eighty」諧音而成。

老服務生們對於沖泡咖啡，不管是機械式的義式咖啡或手沖的單品豆咖啡都駕輕就熟。72 歲的服務生張素寧說，她平常在家也會沖泡咖啡，並不會因為喝咖啡而睡不著覺，喜歡和客人分享好咖啡。最年長的 87 歲阿嬤吳貴珍誇讚這裡的同伴們都很優秀，多次練習之後，手沖咖啡的水柱又穩又均衡。

高雄市長陳其邁曾經來到阿嬤咖啡館，在他體驗手沖咖啡時，阿嬤服務生還給了市長建議，手勢要緩慢，讓水流慢慢注入咖啡粉中，才能萃取最佳滋味。

陳宗卿表示，前兩年疫情衝擊生意，近來生意有回溫了，希望疫情趕快過去。除了發展咖啡館之外，也串聯附近的鄰里舉辦各類活動、露營，成立鐵馬驛站等，串聯成「山凋八里」，吸引年輕人下鄉或旅遊。他自己還組了「農夫樂團」樂團，團員們來自士農工商，定期練團，參加在地的活動，透過音樂連結人與人心中的夢想和生活。

陳宗欽也指出，由於社區老齡化，出生率低，因此他成立文創公司與阿嬤咖啡館，5 年前開始學習咖啡，並做起咖啡生意。目前兩家店採取預約方式，外客占多數，生意好的時候也會有團客搭遊覽車來。

▲在高雄市旗山區圓富社區有兩家老咖啡館，服務生都是七、八十歲的長者，手沖咖啡有模有樣，繞水柱又穩又平均，提供客人高品質的味覺享受。

南投茶博 九天80萬人次造訪

◀南投茶博以「千人齊聚、封藏有機茶」活動畫下完美句點，透過封茶，保存回憶，寫下期許。（南投縣政府提供）

（南投報導）南投世界茶業博覽會 16 日以「千人封茶」為壓軸活動，由南投縣長林明溱、立委許淑華與千名民眾各自寫下回憶及對未來期許信箋，封藏在茶甕裡，為活動畫上完美句點。林明溱開心指出，為期 9 天的茶博吸引超過 80 萬人次造訪，累計銷售金額逾 1.6 億元，締造新高峰。

「千人封茶」由慈心有機農業發展基金所承辦，展現南投人友善山林的意涵，參加民眾在信箋寫下回憶與祝福，丟進存放最優質的有機烏龍茶茶甕裡，最後貼上封箋，參加活動的南投縣副縣長陳正昇、農糧署主祕陳啟榮都說，「封」與「豐」同音，象徵豐收，經過歲月陳釀的台灣茶，未來開封分享時，將有說不盡、嘗不完的香醇。

林明溱說，今年不少農產品都無法外銷，縣府花 100 萬元採購中寮、集集盛產的山蕉，免費贈送給來逛茶博的消費者，不僅能提升蕉農的收益，推廣南投山蕉，也讓近年無法出口到中國逾 4 千公噸的南投好茶，有更多元的行銷管道與銷售業績。

許淑華表示，世界好茶在台灣，台灣好茶在南投，南投縣茶業種植面積全國最大、茶葉種類最多，未來一定努力讓南投世界茶博愈辦愈好，而廣受歡迎的南投巧克力咖啡節及動人的民歌演唱會也將持續舉辦。

文件發布通知
《環境影響報告草案》
洛杉磯空中快速纜車計畫

洛杉磯郡都會交通管理局 (Metro) 是洛杉磯空中快速纜車計畫的主導機構，依據《加州環境品質法案》(CEQA) 草擬了一份《環境影響報告草案》，以評估洛杉磯空中快速纜車計畫對環境所造成的潛在影響。計畫由 LA Aerial Rapid Transit Technologies LLC 贊助。該《環境影響報告草案》評估了擬建計畫對環境所造成的潛在影響，並適時提供緩解措施。此通知的目的是為發布《環境影響報告草案》並徵求意見。

計畫位置：擬建計畫位於洛杉磯市中心東北部的洛杉磯市中心。該計畫南起於毗鄰洛杉磯聯合車站（LAUS）和洛杉磯古城（El Pueblo），北止於道奇體育場，而中間車站側設於洛杉磯最南端的入口—洛杉磯州立歷史公園。擬建計畫將貫穿於公共通行權 (ROW) 範圍內及公共財產之上，沿著阿拉米達街 (Alameda Street)，至春天街 (Spring street) 向東北方延伸，穿過唐人街到達洛杉磯州最南端的歷史公園。該路線將繼續向東北發展，越過洛杉磯州立歷史公園和地鐵 L 線（金線）的西面邊緣，到達北百老匯 (North Broadway) 和主教街 (Bishops Road) 的交匯點。在這交匯點，該項目的路線將轉向，並繼續沿主教街 (Bishops Road) 向西北方向行駛，前往位於伊利森公園社區的道奇體育場為終點站。

計畫介紹：擬建項目將透過空中纜車系統將洛杉磯聯合車站（LAUS）連接到道奇體育場。項目內亦包括在洛杉磯州立歷史公園最南端入口處的一個中轉站。項目不但為往道奇體育場的遊客提供一個空中快速纜車 (ART) 的選項，亦將道奇體育場與周邊社區，包括唐人街 (China town)、Mission Junction、伊利森公園和索拉諾群峽谷 (Solano Canyon) 和洛杉磯州立歷史公園連結，期聚位於洛杉磯聯合車站（LAUS）的區域交通系統。空中纜車系統長約 1.2 英里，由電纜、三個客運站、一個非客運樞紐站、三個支撐塔和纜車艙組成。項目建成後，每小時最大容量為單向約 5,000 人次，屆時從洛杉磯聯合車站（LAUS）到道奇體育場的行程只需約 7 分鐘。擬建項目將會優化行人設施，包括人工景觀 (hardscape) 和自然景觀的改善措施，以及洛杉磯州立歷史公園的便利設施。空中快速纜車 (ART) 系統不僅可以克服洛杉磯聯合車站（LAUS）和道奇體育場之間的坡度和海拔問題，更為該區域提供安全、零排放、環保和高流量的交通連接，有助減少溫室氣體 (GHG) 排放之餘，又可以紓緩道奇球場周邊以及附近街道、主幹道和高速公路的車輛擁堵問題。擬建計畫將會每日運行，為洛杉磯的現有居民、工人、公園使用者和遊客提供服務。

在全球已建立的空中纜車運輸系統的地區之中，例如：在玻利維亞的拉巴斯 (La Paz) 和墨西哥的墨西哥城 (Mexico City)，正給它們用作為城市人口服務的快速交通系統。擬建計畫將採用三角可折卸纜車系統（也稱為 "3S"）。3S 纜車系統的車廂可乘載大約 30 至 40 名乘客。德國科佈倫茨、越南富國島和法國圖盧茲亦有使用類似系統。

對環境影響的總結：本草案作為一份向公眾發放的資料文件，乃用於評估擬建計畫在建設過程及使用時，可能對環境產生的潛在物理性影響，同時提出減輕或消除不利因素的緩解措施，及審查擬建計畫的可行替代方案等，另外，亦將內容在公告於地鐵、負責機構和公眾知道。草案評估了擬建計畫對環境產生的潛在物理性影響，並判定擬建計畫可能在後列領域產生重大和不可避免的影響：噪音和振動

草案的完成和實用性：地鐵於 2020 年 10 月 1 日發佈了草案的草擬備忘 (NOP)。擬建計畫的草案符合 CEQA（加利福尼亞州公共資源法典 §§21000 及以下）和州立 CEQA 指南（指南）（加利福尼亞州法規，標題 14，第 6 部分，第 3 章，§§ 15000 及以下）。擬建計畫的草案亦根據加州參議院法案 44 的司法精簡立法（加州環境品質法案：環境主導交通計畫），並將 CEQA 條款添加為公共資源代碼，第 21168.6.9 節，用於環境主導交通計畫。

從 2022 年 10 月 17 日起，到 2022 年 12 月 16 日為止，草案將在 60 天的意見徵集期內公開予公眾查閱。除上述內容外，根據第 21168.6.9 節的章程要求，公眾可以從以下網站瀏覽及下載草案和主導機構在編制草案時提交或補充的所有其他文件：https://www.metro.net/projects/aerial-rapid-transit/。亦可書面向地鐵提出要求該文件的電子副本，副本將郵寄予收件人，及收取材料和運輸費用。

草案的印刷版本（以及補充附錄和技術性文件的電子副本）將在以下儲存庫中供公眾查閱：中央圖書館 630 W. 第五街，洛杉磯，CA 90071; 唐人街圖書館，639 N Hill St，洛杉磯，CA 90012; 賽普拉斯公園圖書館，1150 Cypress Ave, Los Angeles, CA 90065; 地鐵總部，Dorothy Peyton Gray Library，One Gateway Plaza，洛杉磯，CA 90012. 去前列地點前，請先查詢各地點的開放時間。

此外，由主導機構準備或申請人在草案發佈日後才提交的文件，該文件亦作為記錄的一部分，將聯同收到有關草案的評論及建議，在第 21168.6.9 節規定的時間範圍內，可於同一網站上 (https://www.metro.net/projects/aerial-rapid-transit/)，以電子格式一同公開。

另外，除了根據第 21168.6.9 節的要求（需舉行一次資訊說明會和一次公開聽證會）之外，地鐵還將在草案發佈後 10 天內舉辦兩次資訊說明會，以告知公眾有關草案的主要分析和結論，並將在公眾意見咨詢期結束前 10 天內舉行兩次公開聽證會，以聽取有關草案的證詞。

關於草案的資訊說明會和公眾聽證會

有關草案的資訊說明會和公開聽證會的詳情，請瀏覽以下網站：https://www.metro.net/projects/aerial-rapid-transit/

地鐵將舉辦兩次資訊說明會，向公眾介紹草案的主要分析和結論：**在 2022 年 10 月 22 日 (星期六) 上午 10:00 至下午 12:00，將透過 Zoom 在線上舉辦資訊說明會。在 2022 年 10 月 25 日 (星期二)，下午 5:00 至 7:00，資訊說明會將在洛杉磯聯合車站售票大堂以實體形式舉行。（將根據都有關 COVID-19 的指引，資訊可能有所改動）。**

地鐵將舉行兩次公開聽證會，以徵集有關擬建計畫草案的證詞。**在 2022 年 12 月 10 日 (星期六) 上午 10:00 至下午 12:00，將在洛杉磯聯合車站售票大堂以實體形式舉行公開聽證會。**（將根據都有關 COVID-19 的指引，資訊可能有所改動）。**在 2022 年 12 月 13 日 (星期二) 下午 5:00 至 7:00，將透過 Zoom 在線上上舉行公開聽證會。**

所有資訊說明會和公開聽證會均將提供西班牙語、粵語和普通話 (國語) 的即時傳譯。

《美國殘疾人法案》要求：根據法例要求，所有以地鐵名義贊助的會議和活動均需向公眾提供手語翻譯、不同語言、形式、格式的資料和其他相關的便利設施。所有合理的住宿、傳譯服務及不同語言的資料要求，必須於會議日前最少 3 個工作天 (72 小時) 內內提出。並於在星期一至星期五上午 8:00 至下午 5:00 內致電 (323) 466-3876 提交申請。有聽力或語言障礙的人士可以使用加州中轉播服務 711+ 地鐵電話號碼。

此草案由地鐵發佈，並確認它準確及完整，可供公眾查閱。歡迎公眾對草案和擬建項目發表意見。提供意見不收取任何費用，地鐵將於決定擬建項目的最終方案及決策前，將所有收集到的意見納入考慮當中。對草案的意見應側重於擬建項目的所在區域和描述、充分討論對環境方面的物理性影響、將潛在不利影響最小化的可能性，以及根據 EIR 的宗旨對擬建項目的替代方案提供有用和準確的資料。

就草案提交意見。公眾可以在上述的公開聽證會上以書面、電話或口頭形式提交對草案的意見。要送交對草案的書面意見和電話意見可用電子郵件給 LARRT@metro.net, 或郵寄至：Cory Zelmer, Deputy Executive Officer, Los Angeles County Metropolitan Transportation Authority, One Gateway Plaza, Mail Stop 99-22-6, Los Angeles, CA 90012, 或打電話至：(213) 922-6913。所有意見必須在 2022 年 12 月 16 日 (星期五) 下午 5:00 之前提交。

在草案公眾審查期間收到的所有意見，將會是最終版本 EIR 的一部分而進行彙編和回覆。如果對此備忘或如何查看可供查閱文件有任何疑問，請致電 (213) 922-6913 聯繫地鐵有關單位。

Status

Aerial Rapid Transit Technology LLC submitted a proposal for this project to Metro's Office of Extraordinary Innovation in 2018. Metro and Aerial Rapid Transit Technology LLC kicked off the environmental review process in October 2020 with the release of the Notice of Preparation (NOP).

Metro released the Draft Environmental Impact Report (DEIR) for the project on October 17, 2022 for a 60-day public comment period ending on December 16, 2022. On November 15, 2022, Metro extended the public comment period an additional 30 days for a 90-day public comment period ending on January 17, 2023.

SUBMITTING COMMENTS ON THE DRAFT EIR. Comments on the Draft EIR may be submitted in writing, by phone, or orally during the public hearings described below. Written comments and comments by phone concerning the Draft EIR should be submitted to the below email address or to the below mailing address or below phone number. All comments must be received no later than 5:00 p.m. on Tuesday, January 17, 2023.

By email – LAART@metro.net

By mail – Cory Zelmer
Deputy Executive Officer
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza, Mail Stop 99-22-6
Los Angeles, CA 90012

By Phone – (213) 922-6913

All comments received during the Draft EIR public review period will be compiled and responded to as part of the Final EIR. If there are any questions regarding this notice, or how to review available documents, please contact Metro at (213) 922-6913.

Tell us what you think

On November 15, 2022, Metro announced an additional public hearing. Metro will hold five public meetings during the Draft EIR public review period.

Metro conducted two informational workshops to inform the public of the key analyses and conclusions of the Draft EIR:

Saturday, October 22, 2022, from 10am – 12pm, an informational workshop was held on-line via Zoom.

Tuesday, October 25, 2022, from 5 – 7 pm, an informational workshop was held in person at the Los Angeles Union Station Ticket Concourse.

Metro will conduct three public hearings to receive testimony on the Draft EIR for the proposed Project.

Saturday, December 10, 2022, from 10:00 am – 12:00 pm, a public hearing will be held in person at the Los Angeles Union Station Ticket Concourse. (*Subject to change depending on County guidance on COVID-19*).

Tuesday, December 13, 2022, from 5:00 pm – 7:00 pm, a public hearing will be held on-line via Zoom. Please see details to join below:

Project Timeline

Project Updates

This summer, the Draft Environmental Impact Report (EIR) is available for public review and comment for 60 days, from October 17 to December 16, 2022. This milestone document evaluates the proposed alternatives, as well as their potential impacts and mitigation measures.

The Draft EIR can be viewed online or at repository sites where printed copies will be available. Public hearings will also take place to provide a presentation and an opportunity for oral comments. Formal comments may also be submitted by mail, by phone, and online.

To learn more please visit metro.net/aerialrapidtransit

Public Involvement

Community Information Session

Prior to the release of the Draft EIR, Metro is hosting two community information sessions to share details on the project and options on how to comment and participate on the upcoming release of the Draft EIR.

Virtual: Wednesday, October 12, 2022, 5pm - 7pm
In-Person: Saturday, October 15, 2022, 10am - 12pm

Draft EIR Informational Workshop

Virtual: Saturday, October 22, 2022, 10am - 12pm
In-Person: Tuesday, October 25, 2022, 5pm - 7pm

Draft EIR Public Hearing

In-Person: Saturday, December 10, 2022, 10am - 12pm
Virtual: Tuesday, December 13, 2022, 5pm - 7pm

NEW

Public Comment Period Extended to January 17, 2023

Third Public Hearing (In Person)

Thursday, January 12, 2023, 5 pm – 7 pm

Cathedral High School Gymnasium

1253 Bishops Road, Los Angeles, CA 90012

Línea de Tiempo del Proyecto

Actualizaciones del Proyecto

Este verano, el Borrador del Informe de Impacto Ambiental (EIR) está disponible para revisión pública y comentarios durante 60 días, del 17 de octubre al 16 de diciembre de 2022. Este documento de hito evalúa las alternativas propuestas, así como sus potenciales impactos y medidas de mitigación.

El Borrador del EIR se puede ver en Internet o en los sitios del repositorio donde estarán disponibles copias impresas. También se llevarán a cabo audiencias públicas para proporcionar una presentación y una oportunidad para comentarios orales. Los comentarios formales también se pueden enviar por correo, por teléfono y por Internet. Para obtener más información, visite metro.net/aerialrapidtransit

Participación Pública

Sesión de Información a la Comunidad

Antes de la publicación del Borrador del EIR, Metro está organizando dos sesiones de información a la comunidad para compartir detalles sobre el proyecto y opciones sobre cómo comentar y participar en la próxima publicación del Borrador del EIR.

Virtual: miércoles, 12 de octubre de 2022, 5pm-7pm
En persona: sábado, 15 de octubre de 2022, 10am-12pm

Taller Informativo sobre el Borrador del EIR

Virtual: sábado, 22 de octubre de 2022, 10am-12pm
En persona: martes, 25 de octubre de 2022, 5pm-7pm

Audiencia Pública sobre el Borrador del EIR

En persona: sábado, 10 de diciembre de 2022, 10am-12pm
Virtual: martes, 13 de diciembre de 2022, 5-7pm

项目时间表

項目更新

從2022年10月17日至12月16日，環境影響報告草案 (EIR)在60天內可供公眾審查和評論。這份里程碑文件評估了擬議的替代方案，以及它們的潛在影響和緩解措施。

EIR 草案可以在線上查看，也可以在提供打印副本的存放處查閱。項目還將舉行公開聽證會，以提供說明和表達意見的機會。正式意見也可以通過郵件、電話和在線提交。

要了解更多信息，請瀏覽網站
metro.net/aerialrapidtransit

公眾參與方式

社區信息會議

在 EIR 草案發布之前，Metro 將舉辦兩場社區信息會議，以分享有關項目的詳細信息以及如何表達意見和參與即將發布的 EIR 草案的選項。

線上視訊會議：2022年10月12日，星期三，
下午5点至晚上7点
線下實體會議：2022年10月15日，星期六，
上午10點至中午12點

EIR草案信息研討會

Subject: Los Angeles Aerial Rapid Transit

LA ART: Metro to Hold Continued Public Hearing

LA Aerial Rapid Transit Technologies LLC is proposing the Los Angeles Aerial Rapid Transit Project, which would connect Los Angeles Union Station to the Dodger Stadium property with an intermediate station at the Los Angeles State Historic Park via a zero-emission aerial rapid transit gondola system in downtown Los Angeles. Los Angeles County Metropolitan Transportation Authority (Metro) is the lead agency under the California Environmental Quality Act (CEQA) and has prepared a Draft Environmental Impact Report (DEIR) to evaluate the potential for environmental impacts resulting from the proposed Project.

Today, Metro announced that it will be holding a continued public hearing from the January 12, 2023 public hearing on-line via Zoom on February 8, 2023. This continued public hearing is provided in recognition that interested members of the public may have been unable to provide testimony at the January 12, 2023 in person public hearing due to disruptions from certain attendees. This continued public hearing is for the sole purpose of receiving verbal public testimony on the Draft EIR for the proposed project. Verbal comments received at this continued public hearing will be deemed timely received for the purposes of the Draft EIR public comment period, which concluded on January 17, 2023.

Virtual Continued Public Hearing via Zoom:
February 8, 2023; 5pm to 7pm

Zoom Link: https://us06web.zoom.us/j/85673432272
Webinar ID: 856 7343 2272
Call-in: (669) 900-6833
Toll-Free Call-in: (888) 475-4499

Materials from the prior December 10, 2022, December 13, 2022, and January 12, 2023 public hearings are available here.

LA ART: Metro llevará a cabo una Continuación de Audiencia Pública

LA Aerial Rapid Transit Technologies LLC está proponiendo el Proyecto de Transporte Rápido Aéreo de Los Ángeles (Los Angeles Aerial Rapid Transit Project), que conectaría la estación Los Angeles Union Station con la propiedad del estadio Dodger Stadium, con una estación intermedia en el parque Los Angeles State Historic Park a través de un sistema de góndolas de transporte rápido elevado de cero emisiones en el centro de Los Ángeles. La autoridad de transporte Los Angeles County Metropolitan Transportation Authority (Metro) es la agencia líder, según la Ley de Calidad Ambiental de California (California Environmental Quality Act (CEQA)), y ha preparado un Borrador de Informe de Impacto Ambiental (DEIR) para evaluar el posible impacto ambiental resultante del proyecto propuesto.

Metro ha anunciado hoy que el 8 de febrero de 2023 llevará a cabo en línea vía Zoom una continuación de la audiencia pública del 12 de enero de 2023. Esta continuación de audiencia pública se ofrece reconociendo que pudo haber miembros interesados del público que no pudieron dar su testimonio en la audiencia pública presencial del 12 de enero de 2023 debido a las interrupciones de algunos asistentes. Esta continuación de audiencia pública tiene el único propósito de recibir testimonios verbales del público sobre el Borrador del EIR del proyecto propuesto. Los comentarios verbales recibidos en esta continuación de audiencia pública se considerarán recibidos a tiempo para los fines del período de comentarios públicos del Borrador del EIR, que concluyó el 17 de enero de 2023.

Continuación Virtual de Audiencia Pública vía Zoom:
8 de febrero de 2023; de 5pm a 7pm

洛杉矶空中快捷交通： 都会交通管理局将举办后续公众听证会

洛杉矶空中快捷交通科技有限责任公司提出了洛杉矶空中快捷交通计划，希望在洛杉矶市中心建设一套零排放的空中快捷交通索道系统，由此将洛杉矶联合车站与道奇体育场的场馆连接起来，途中在洛杉矶州立历史公园设置站点。洛杉矶县都会交通管理局（Metro）是加州环境质量法（CEQA）规定的领导机构。Metro起草了一份《环境

影响报告草案》（DEIR），用以评估这一拟议计划将会带来的潜在环境影响。

今日，都会交通管理局宣布，继2023年1月12日的公众听证会之后，将于2023年2月8日通过Zoom再举办一场后续的线上公众听证会。之所以会提供这次后续公众听证会，是因为认识到某些与会者的干扰或许致使感兴趣的公众成员未能在2023年1月12日的线下公众听证会上提供自己的证言。举办这一后续公众听证会的目标仅为收集公众对于拟议计划的环境影响报告草案的口头证言。本次后续公众听证会上所收集的口述评论将被认定为环境影响报告草案公示期内收到的有效意见，即便公示期已经于2023年1月17日结束。

Zoom 线上后续公众听证会：
2023 年2月8日；5pm至7pm
Zoom 链接: https://us06web.zoom.us/j/85673432272
网络研讨会ID: 856 7343 2272
电话参与: (669) 900-6833
免费电话参与: (888) 475-4499

先前在2022年12月10日、2022年12月13日及2023年1月12日举办的公众听证会的资料，可以在这里获取：https://www.dropbox.com/sh/trfpt09to0kp4a8/AAAWMSsj-gJWnORBp9kkK056a/Documents?dl=0&subfolder_nav_tracking=1

洛杉磯空中捷運系統（LA ART）：Metro 將舉辦延續公聽會
LA Aerial Rapid Transit Technologies LLC正在提議洛杉磯空中捷運項目，該項目計畫於市中心建立零排放空中快速纜車系統，連接洛杉磯聯合車站（Los Angeles Union Station）和道奇體育場（Dodger Stadium），並於洛杉磯州立歷史公園（Los Angeles State Historic Park）設立中轉站。洛杉磯郡都會運輸局（Metro）為《加州環境質量法案》（CEQA）的主導機構，已準備了一份環境影響報告草案（DIER），以評估該項目對環境可能造成之潛在影響。

Metro 今日宣布延續 2023 年 1 月 12 日的公聽會，將通過 Zoom 於 2023 年 2 月 8 日舉行延續的線上公聽會。本延續公聽會為有興趣參與但由於部分參加者干擾而無法參與 2023 年 1 月 12 日公聽會之公眾，能夠親自提出其意見證供。本延續公聽會的唯一目的為聽取關於擬議項目之環境衝擊報告草案的口頭公開證供。在本次延續公聽會中所蒐集之口頭意見將被視為於 2023 年 1 月 17 日的環境衝擊報告草案公眾意見徵詢期間所及時收到之意見。

Zoom 線上延續公聽會：
2023 年 2 月 8 日；下午5點至晚上7點
Zoom 連結: https://us06web.zoom.us/j/85673432272
網上會議登入碼: 856 7343 2272
即時交談電話號碼: (669) 900-6833
即時交談免付費電話號碼: (888) 475-4499

2022 年 12 月 10 日、2022 年 12 月 13 日和 2023 年 1 月 12 日公聽會的資料可於以下網址讀取：https://www.dropbox.com/sh/trfpt09to0kp4a8/AAAWMSsj-qJWnORBp9kkK056a/Documents?dl=0&subfolder_nav_tracking=1

Agenda

1. Purpose of Meeting
2. How to Participate in this Virtual Meeting
3. Overview
4. CEQA Process Overview
5. LA ART Project Overview
6. Draft EIR Public Comment Period
7. Question & Answer Session

Purpose of the Meeting

PROVIDE PRE-DRAFT EIR RELEASE INFORMATIONAL UPDATE

How to Participate in this Meeting

Q&A: Use the Q&A feature to type a question during the Question & Answer Session.

CEQA and Project Process Overview

CEQA

Required for all projects undertaken, funded, or requiring approval by a public agency

Informs the public and decision makers

Discloses potential environmental impacts resulting from a proposed project

Provides the opportunity to comment on environmental issues

Two Comment Periods: (1) Public Scoping Period and (2) Draft EIR Public Review

Los Angeles Aerial Rapid Transit Project Process Overview

- The Los Angeles Aerial Rapid Transit Project is proposed by Los Angeles Aerial Rapid Transit Technologies LLC
- Metro is the lead agency in the preparation of an Environmental Impact Report (EIR) under the California Environmental Quality Act (CEQA)
  - As the lead agency, Metro has the responsibility to ensure that:
    - The EIR adequately assesses the potential project impacts
    - The proposed mitigation measures are appropriate
    - The CEQA process has been complied with for public notices, public outreach, and distribution of documents
- The Draft EIR evaluates the potential environmental effects associated with construction and operation of the Project

SB 44 | Public Meetings During Public Comment Period

SB 44 Overview

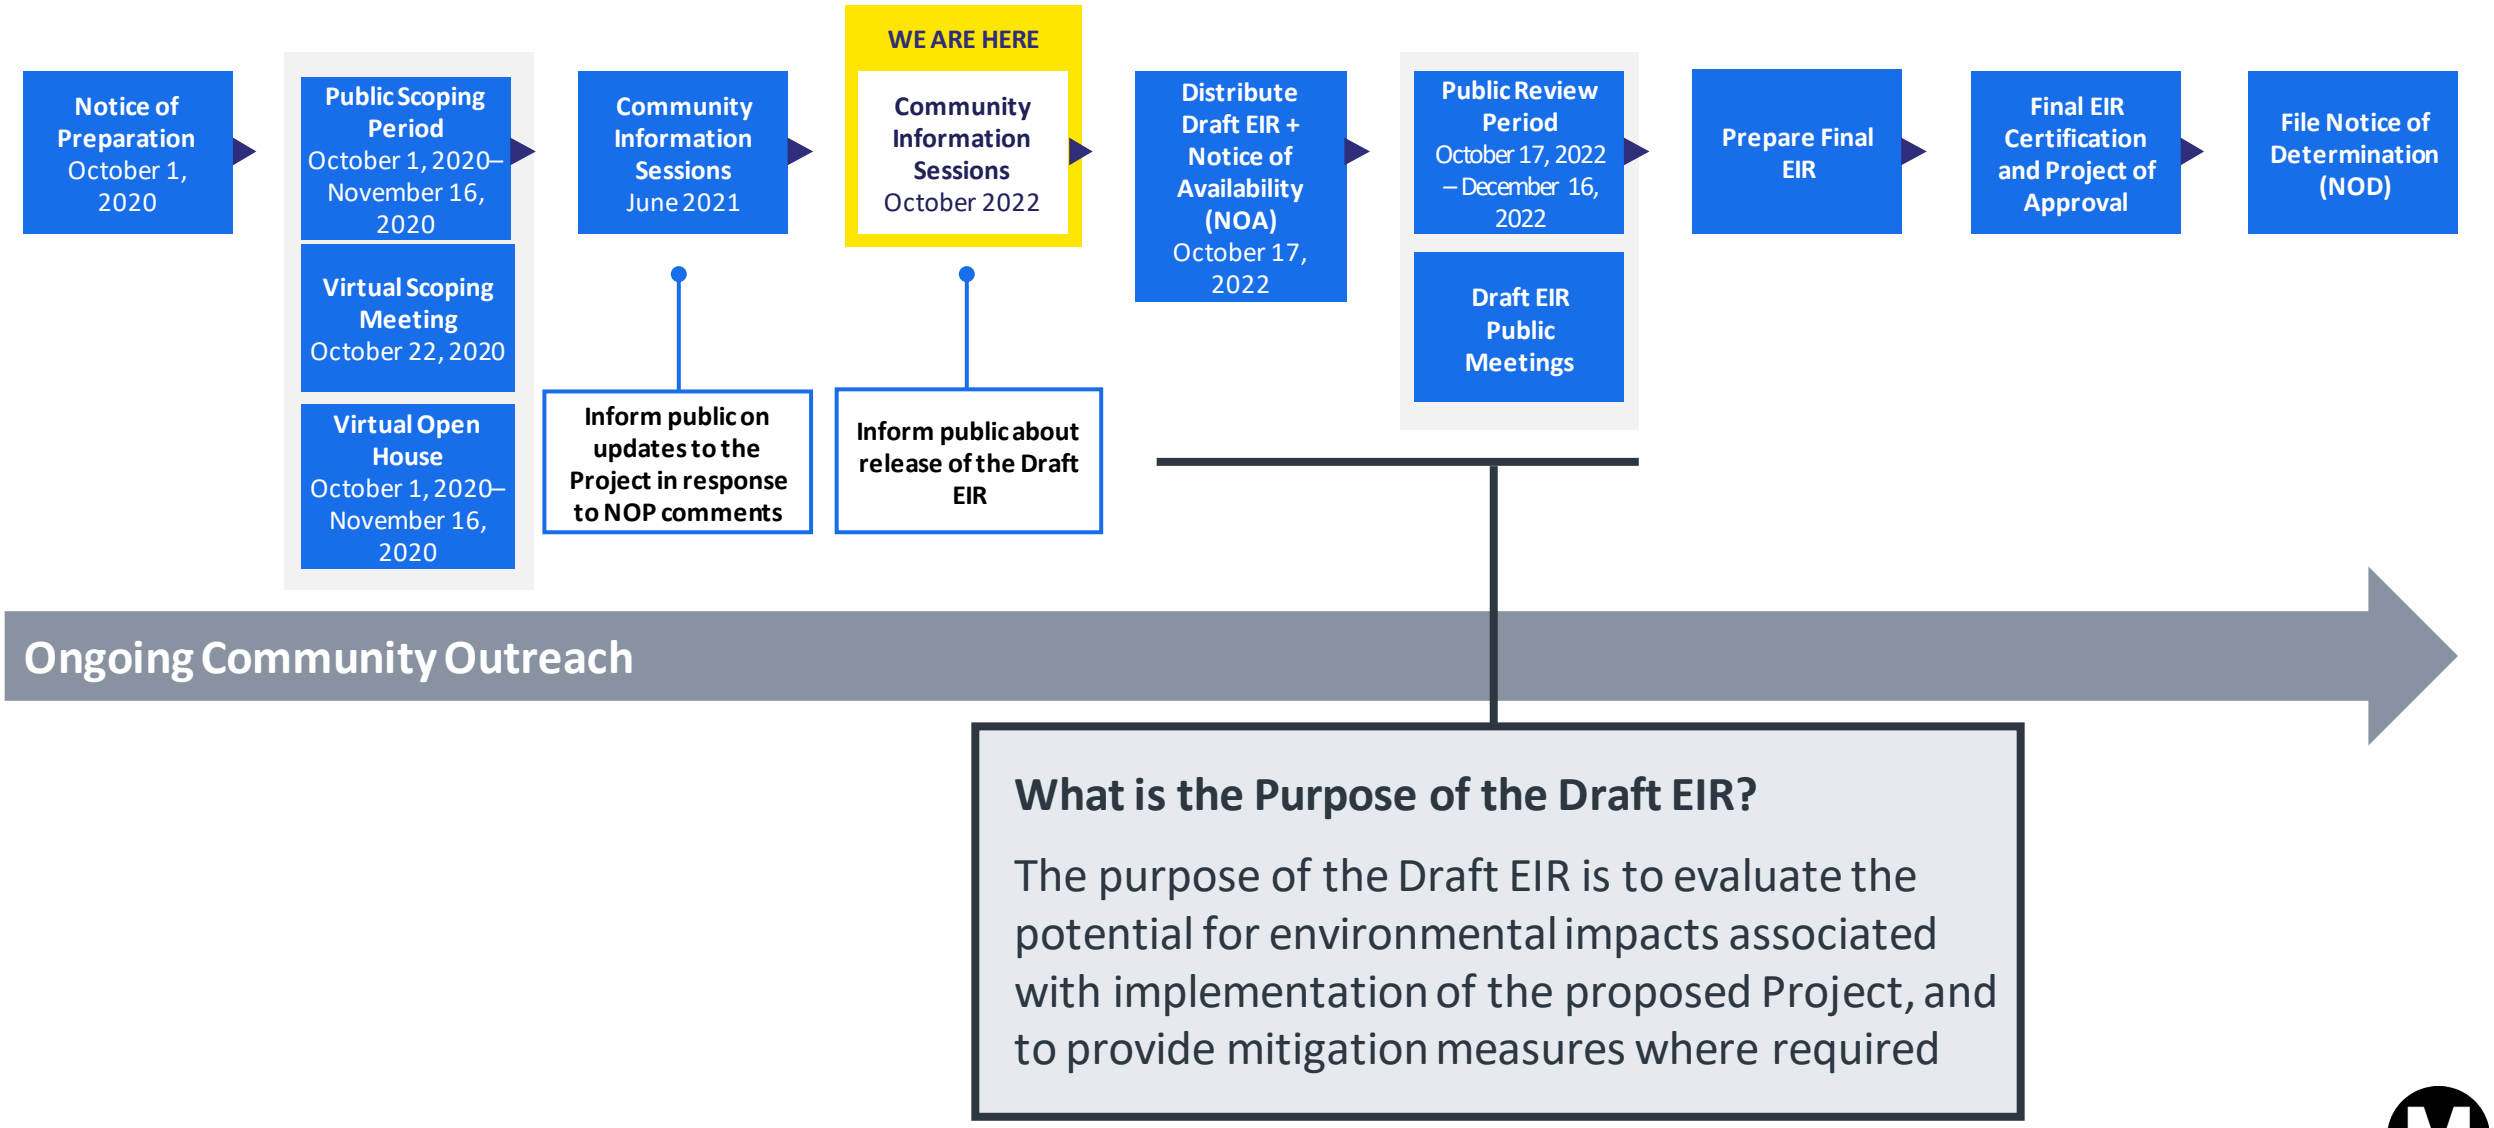
- SB 44, which was adopted in 2021, provides CEQA litigation streamlining for "environmental leadership transit projects"
- The Project qualifies under SB 44
  - The Project would operate at zero emissions
    - The electrical power would be supplied by LADWP through the utility's Green Power Program, with battery storage backup
    - Over the useful life of the Project and in the Project's corridor, the Project would:
      - Reduce emissions by no less than 50,000 metric tons of GHG, without using offsets
      - Reduce over 30 million VMTs

Public Meetings Under SB 44

- SB 44 requires one Informational Workshop and one Public Hearing during the public comment period
- The Project is providing two Informational Workshops (one in-person and one virtual) and two Public Hearings (one in-person and one virtual)

Draft EIR Informational Workshop No. 1	Saturday, October 22	Virtual
Draft EIR Informational Workshop No. 2	Tuesday, October 25	In-Person
Draft EIR Public Hearing No. 1	Saturday, December 10	In-Person
Metro EIR Public Hearing No. 2	Tuesday, December 13	Virtual

Timeline



What is the Purpose of the Draft EIR?

The purpose of the Draft EIR is to evaluate the potential for environmental impacts associated with implementation of the proposed Project, and to provide mitigation measures where required

Draft EIR Release Schedule

Draft EIR Release	Monday, October 17, 2022
End of Draft EIR Public Comment Period	Friday, December 16, 2022

The Draft EIR will be released for a 60-day comment period

Public Meetings During Draft EIR Comment Period

Informational Workshops

Draft EIR Informational Workshop No. 1	Saturday, October 22	Virtual
Draft EIR Informational Workshop No. 2	Tuesday, October 25	In-Person

Metro will host two Informational Workshops to inform the public of the key analysis and conclusions in the Draft EIR

Public Hearings

Draft EIR Public Hearing No. 1	Saturday, December 10	In-Person
Metro EIR Public Hearing No. 2	Tuesday, December 13	Virtual

Metro will host two Public Hearings to take public comment on the Draft EIR

Draft EIR – Environmental Topics

All Environmental Resource Topics per CEQA Guidelines Appendix G are addressed in the EIR:

- Aesthetics
- Agriculture/Forestry
- Air Quality
- Biological Resources
- Cultural/Historic Resources
- Energy
- Geology/Soils
- Greenhouse Gas Emissions
- Hazards/Hazardous Materials
- Hydrology/Water Quality
- Land Use/Planning
- Mineral Resources
- Noise and Vibration
- Population/Housing
- Public Services
- Recreation
- Transportation
- Tribal Cultural Resources
- Utilities/Service Systems
- Wildfire

Draft EIR – Alternatives | Design and Use Options | Other Additional Evaluations

- Alternatives
  - No Project Alternative
  - Spring Street Alignment Alternative
  - Transportation Systems Management Alternative (Enhanced Dodger Stadium Express)
- Design and Use Options
- Other Additional Evaluations in the Draft EIR
  - Los Angeles State Historic Park Usage
    - Kite Flying
    - Special Events
  - Airspace Evaluation

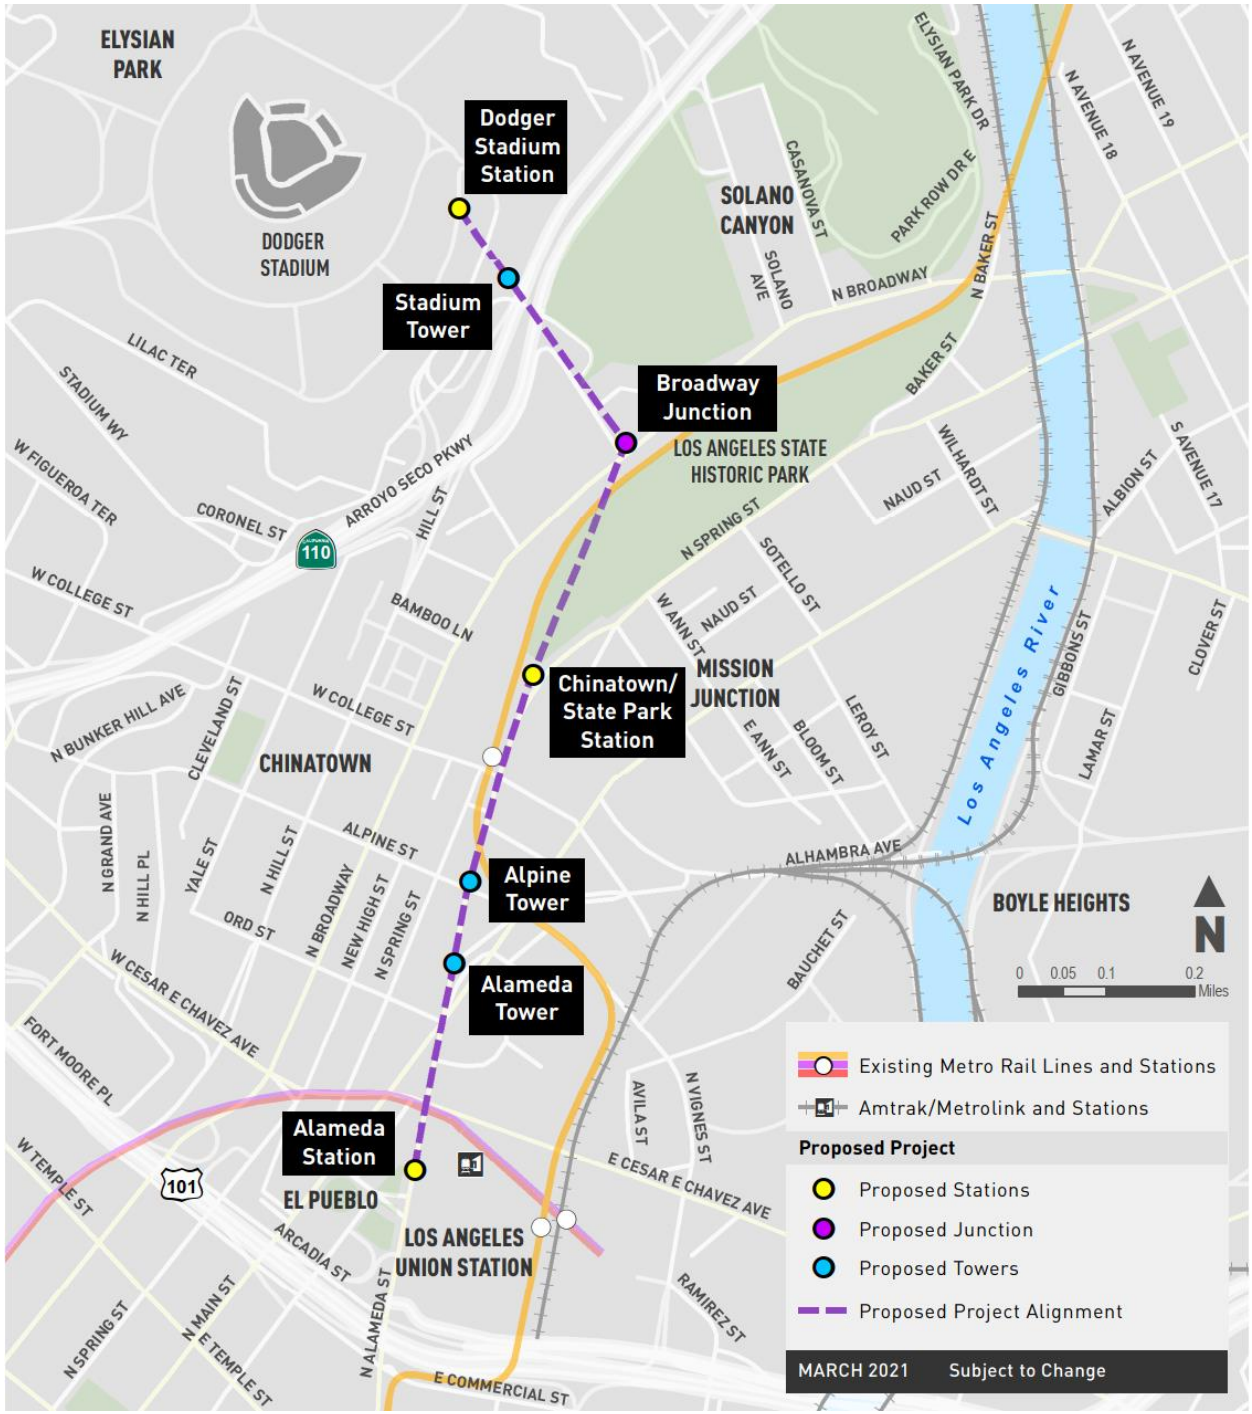
00:00.00

Project Overview

- Provide a permanent transit connection from Los Angeles Union Station (LAUS) to the Dodger Stadium property via a 1.2-mile aerial gondola system
  - Travel time from LAUS to Dodger Stadium would be approximately 7 minutes
- Capacity of approximately 5,000 people per hour per direction
- Operate daily to serve existing residents, workers, park users, and visitors to Los Angeles
- Provide access to the Los Angeles State Historic Park and surrounding communities via the intermediate Chinatown/State Park Station
- Zero emission, environmentally friendly rapid transit that would reduce GHG emissions as a result of reduced vehicle trips in and around Dodger Stadium and on neighborhood streets, arterial roadways, and freeways

Project Location and Alignment

- The Project would commence adjacent to LAUS and El Pueblo and terminate at Dodger Stadium, with an intermediate station at the southernmost entrance to the Los Angeles State Historic Park
- Connect surrounding communities of Chinatown, Mission Junction, Elysian Park, Echo Park, and Solano Canyon to the regional transit system accessible at Union Station
- The proposed Project alignment maximizes alignment along the public ROW and publicly owned property and minimizes aerial rights over private properties, taking into account existing and future adjacent land uses



Precedent for Aerial Transit Systems

- Aerial transit technology has been used for over 100 years
- Modern systems are a feasible mode of urban transit and are currently operating in numerous cities around the world
- Established gondola transit systems worldwide – such as La Paz, Bolivia and Mexico City, Mexico – are being used as rapid transit for the urban populations that they service
- Similar to the systems used in Koblenz, Germany, Phu Quoc, Vietman, and Toulouse, France, the proposed Project is a "3S" gondola
  - Cabins will carry approximately 30 to 40 passengers
  - System will provide a smooth, stable ride

Portland, Oregon

Roosevelt Island, New York

La Paz, Bolivia

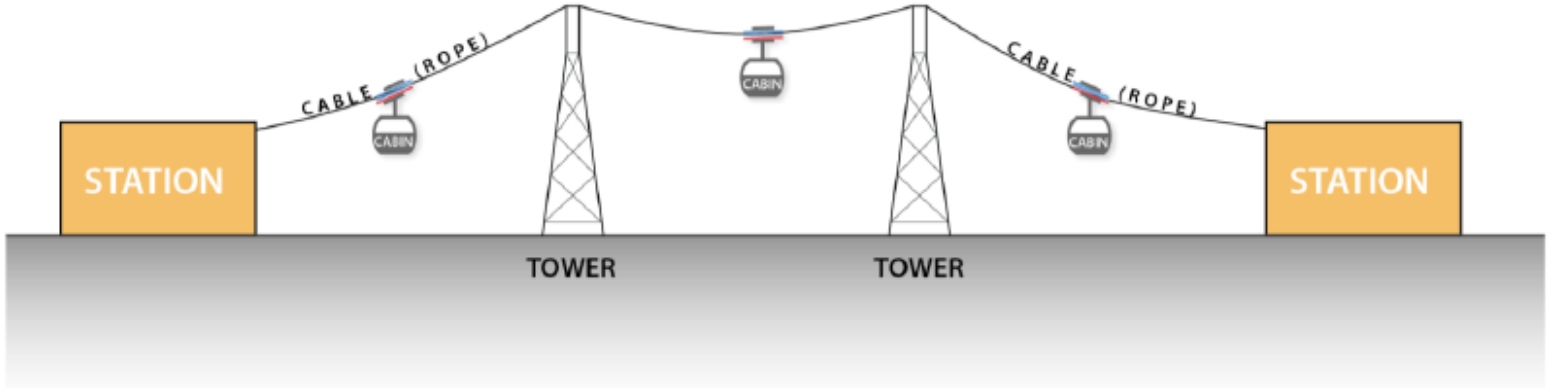
Mexico City, Mexico

Toulouse, France

Medellín, Colombia

Cables and Ropeway Technology

LA ART system proposes passenger stations, a non-passenger junction, and towers to support the aerial cables that carry the gondola cabins, which can each carry 30 - 40 passengers



- High passenger capacity: detachable cabins with “3S” system
  - “3S” system includes three cables: two “track ropes” for stability and a third “haul rope” to circulate the cabins
  - Capacity to move approximately 5,000 people per hour per direction with quiet, safe, environmentally friendly system
- Cabins detach from continuously circulating haul rope and slow down upon entering a station for passenger exit and entry, then reattach to haul rope
- Cabins allow for sitting or standing, are fully ADA accessible, and provide room for baby strollers and bicycles

Koblenz, Germany

Orden del día

1. Objetivo de la Reunión
2. Cómo Participar en esta Reunión Virtual
3. Generalidades
4. Resumen del Proceso de la CEQA
5. Generalidades del Proyecto LA ART
6. Periodo de Comentarios del Público sobre el Borrador del Informe del Impacto Ambiental (EIR)
7. Sesión de Preguntas y Respuestas

Propósito de la Reunión

PROPORCIONAR UNA ACTUALIZACIÓN INFORMATIVA SOBRE EL ANTEPROYECTO DEL INFORME DEL IMPACTO AMBIENTAL (EIR)

¿Cómo Participar en esta Reunión?

Q&A: Use la opción Q&A para hacer preguntas durante la Sesión de Preguntas y Respuestas.

Resumen de la ley ambiental CEQA y del proceso del proyecto

CEQA

Esto se requiere para todos los proyectos emprendidos, financiados o que requieran la aprobación de un organismo público

Informa al público y a los responsables de la toma de decisiones

Revela los posibles impactos ambientales resultantes de un proyecto propuesto

Da la oportunidad de hacer comentarios sobre cuestiones ambientales

Dos Periodos de Comentarios: (1) Periodo de Alcance Público y (2) Revisión Pública del Borrador del EIR

Generalidades del Proceso del Proyecto de Transporte Rápido Aéreo de Los Ángeles

- El Proyecto de Transporte Rápido Aéreo de Los Ángeles ha sido propuesto por Los Angeles Aerial Rapid Transit Technologies LLC
- Metro es la agencia principal en la preparación de un Informe de Impacto Ambiental (EIR) según la Ley de Calidad Ambiental de California (CEQA)
  - Como agencia principal, Metro tiene la responsabilidad de asegurarse de que:
    - El informe de impacto ambiental EIR evalúe adecuadamente los posibles impactos del proyecto
    - Las medidas de mitigación propuestas sean apropiadas
    - Se haya cumplido con el proceso de la CEQA en lo que respecta a las notificaciones públicas, la divulgación pública y la distribución de documentos
- El Borrador del EIR evalúa los posibles efectos ambientales asociados a la construcción y el funcionamiento del proyecto

SB 44 | Reuniones Públicas Durante el Periodo de Comentarios Públicos

Generalidades del SB 44

- SB 44 es un proyecto de ley del senado que se adoptó en 2021 y proporciona la agilización de litigios relacionados con la CEQA para "proyectos de transporte de liderazgo ambiental"
- El proyecto califica como cubierto por el SB 44
  - El proyecto funcionaría con cero emisiones
    - La energía eléctrica sería suministrada por el departamento de energía LADWP a través del Programa Green Power, con respaldo de almacenamiento con baterías
    - Durante la vida útil del proyecto y en su corredor, dicho proyecto:
      - Reduciría las emisiones de por lo menos de 50,000 toneladas métricas de gases de efecto invernadero (GEI), sin contar compensaciones
      - Reduciría más de 30 millones de millas viajadas en vehículos (VMT)

Reuniones Públicas de Conformidad con el SB 44

- SB 44 requiere un Taller Informativo y una Audiencia Pública durante el período de comentarios públicos
- El proyecto ofrece dos talleres informativos (uno presencial y otro virtual) y dos audiencias públicas (una presencial y otra virtual)

Taller Informativo sobre el Borrador del EIR No. 1	Sábado 22 de octubre	Virtual
Taller Informativo sobre el Borrador del EIR No. 2	Martes 25 de octubre	En Persona
Audiencia Pública sobre el Borrador del EIR No. 1	Sábado 10 de diciembre	En Persona
Audiencia Pública sobre el EIR de Metro No. 2	Martes 13 de diciembre	Virtual

Calendario

¿Cuál es el Objetivo del Borrador del EIR?

El propósito del Borrador del EIR es evaluar el potencial de los impactos ambientales asociados con la implementación del proyecto propuesto, y proporcionar medidas de mitigación cuando sea necesario

Calendario de Publicación del Borrador del EIR

Publicación del Borrador del EIR	Lunes 17 de Octubre de 2022
Fin del Período de Comentarios Públicos sobre el Borrador del EIR	Viernes 16 de Diciembre de 2022

El Borrador del EIR se publicará para un período de comentarios de 60 días

Reuniones Públicas durante el Período de Comentarios del Borrador del EIR

Talleres Informativos

Taller Informativo sobre el Borrador del EIR No. 1	Sábado 22 de octubre	Virtual
Taller Informativo sobre el Borrador del EIR No. 2	Martes 25 de octubre	En Persona

Metro organizará dos talleres informativos para dar a conocer al público los principales análisis y conclusiones del Borrador del EIR

Audiencias Públicas

Audiencia Pública sobre el Borrador del EIR No. 1	Sábado 10 de diciembre	En Persona
Audiencia Pública sobre el EIR de Metro No. 2	Martes 13 de diciembre	Virtual

Metro organizará dos audiencias públicas para recibir comentarios del público sobre el Borrador del EIR

Borrador del EIR – Temas Ambientales

Todos los Temas de Recursos Ambientales de conformidad con el Apéndice G de los Lineamientos de la CEQA se abordan en el EIR:

- Estética
- Agricultura/Silvicultura
- Calidad del Aire
- Recursos Biológicos
- Recursos Históricos/Culturales
- Energía
- Geología/Suelos
- Emisiones de Gases de Efecto Invernadero
- Peligros/Materiales Peligrosos
- Hidrología/Calidad del Agua
- Planificación/Uso de la Tierra
- Recursos Minerales
- Ruido y Vibraciones
- Población/Vivienda
- Servicios Públicos
- Recreación
- Transporte
- Recursos Culturales Tribales
- Sistemas de Servicios/Servicios Públicos
- Incendios Forestales

Borrador del EIR – Alternativas | Opciones de Uso y Diseño | Otras Evaluaciones Adicionales

- Alternativas
  - Alternativa Sin Proyecto
  - Alternativa de Alineación de la calle Spring Street
  - Alternativa de Gestión de Sistemas de Transporte (Dodger Stadium Express mejorado)
- Opciones de Uso y Diseño
- Evaluaciones Adicionales en el Borrador del EIR
  - Uso del parque Los Angeles State Historic Park
    - Vuelo de Cometas/Papalotes
    - Eventos Especiales
  - Evaluación del Espacio Aéreo

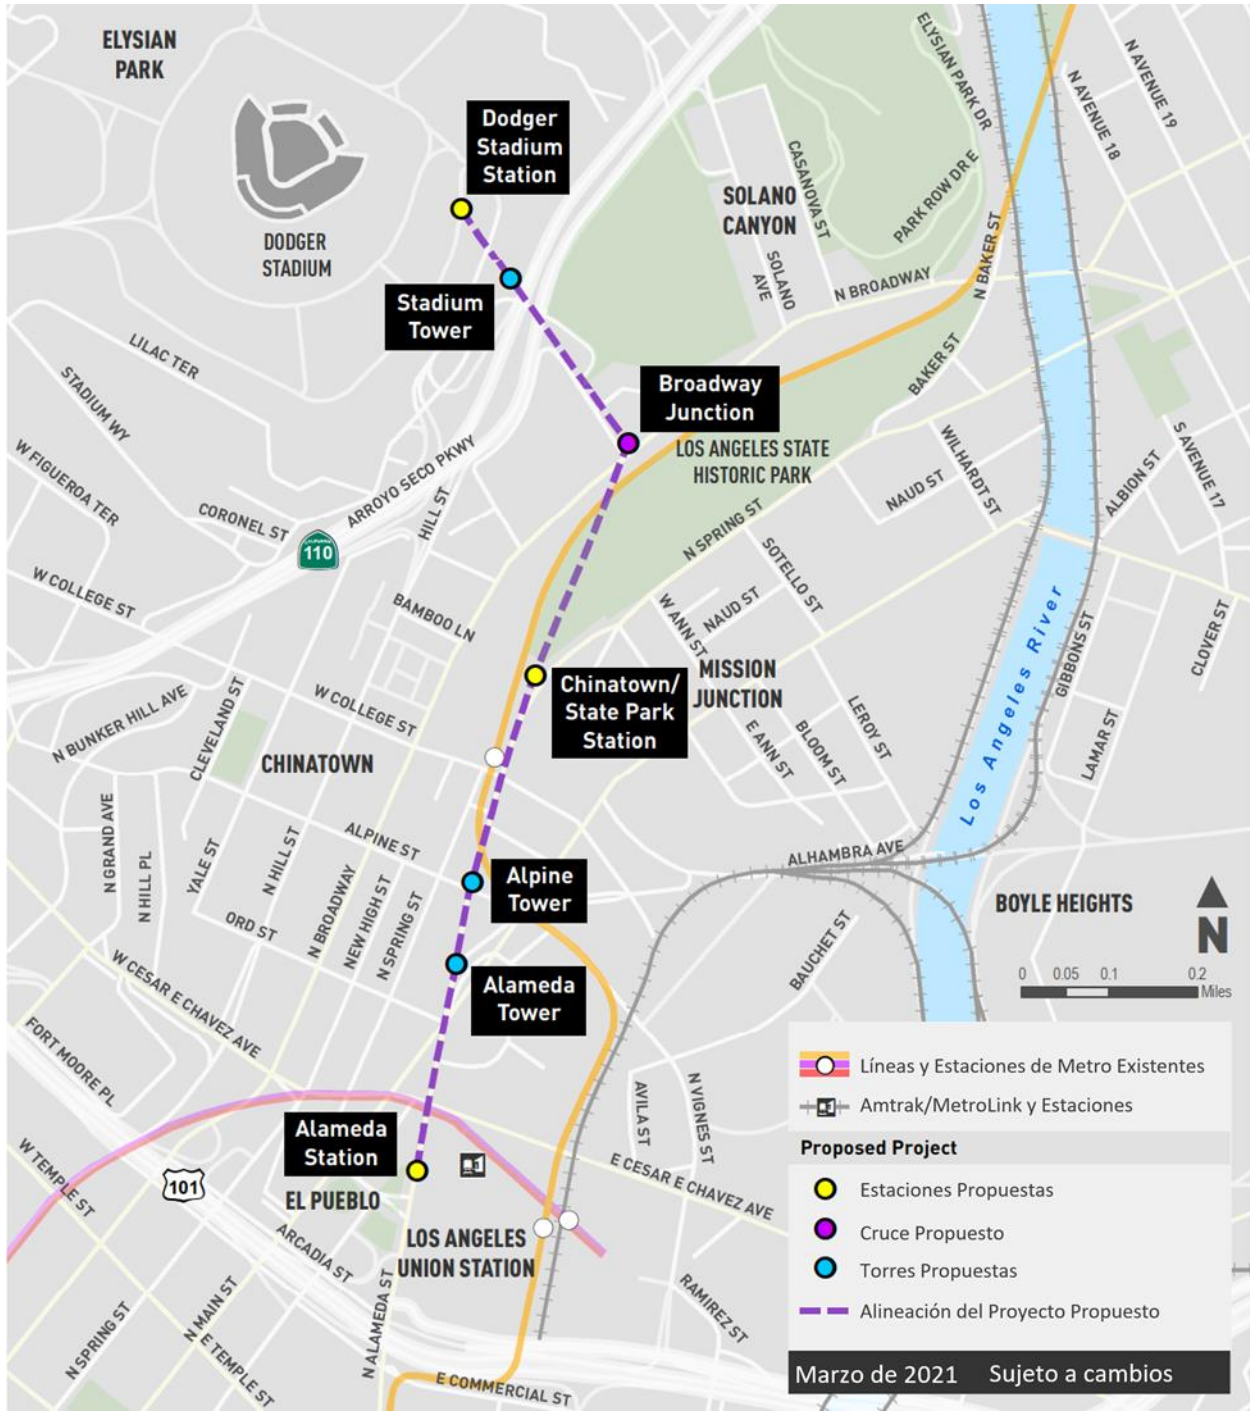
00:00.00

Generalidades del Proyecto

- Proporciona una conexión de transporte permanente desde la estación Los Angeles Union Station (LAUS) hasta la propiedad del estadio Dodger Stadium a través de un sistema de góndolas elevadas de 1.2 millas (1.93 km).
  - El tiempo de traslado desde la estación LAUS hasta el Dodger Stadium sería de aproximadamente 7 minutos
- Capacidad de aproximadamente 5,000 personas por hora y por dirección
- Funcionamiento diario para dar servicio a los residentes, trabajadores, usuarios del parque y visitantes de Los Ángeles
- Da acceso al parque Los Angeles State Historic Park y a las comunidades circundantes a través de la estación intermedia Chinatown/State Park
- Transporte rápido de cero emisiones, respetuoso del medio ambiente, que reduciría las emisiones de GEI gracias a la reducción de la congestión vehicular en el Dodger Stadium y sus alrededores y en las calles del vecindario, las carreteras arteriales y las autopistas.

Alineación y Ubicación del Proyecto

- El proyecto comenzaría junto a la estación LAUS y El Pueblo, y terminaría en el Dodger Stadium, con una estación intermedia en la entrada que está más al sur del parque Los Angeles State Historic Park.
- Conecta las comunidades circundantes de Chinatown, Mission Junction, Elysian Park, Echo Park y Solano Canyon con el sistema de transporte regional accesible en Union Station
- La alineación propuesta del proyecto maximiza la alineación a lo largo del derecho de paso (ROW) público y la propiedad pública y minimiza los derechos aéreos sobre las propiedades privadas, teniendo en cuenta los usos de la tierra adyacentes existentes y futuros



Precedentes de Sistemas de Transporte Aéreo

- La tecnología de transporte aéreo se ha usado durante más de 100 años
- Los sistemas modernos son un medio factible de transporte urbano y actualmente funcionan en varias ciudades alrededor del mundo
- Sistemas de transportes de góndolas establecidos en el mundo, como los de La Paz, Bolivia y de la Ciudad de México, México, se usan como sistema de transporte rápido para las poblaciones urbanas a las que sirven
- Al igual que los sistemas utilizados en Koblenz (Alemania), Phu Quoc (Vietnam) y Toulouse (Francia), el proyecto propuesto es de góndolas "3S".
  - Las cabinas transportarán aproximadamente de 30 a 40 pasajeros
  - El sistema proporcionará un viaje fluido y estable

Portland, Oregon

Roosevelt Island, New York

La Paz, Bolivia

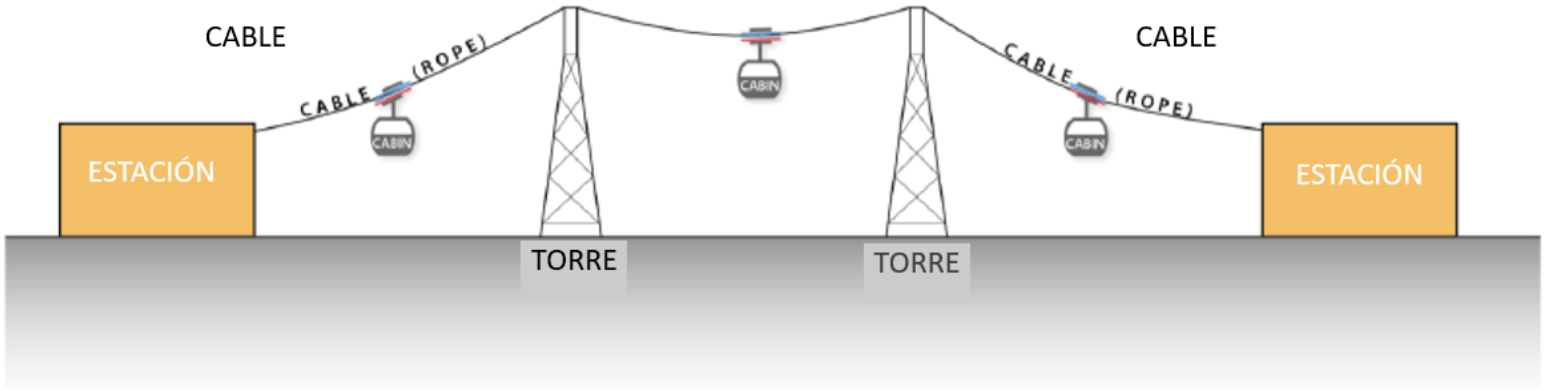
Ciudad de México, México

Toulouse, Francia

Medellín, Colombia

Tecnología de Transporte con Cables

El sistema LA ART propone estaciones de pasajeros, un cruce de vías sin pasajeros y torres para soportar los cables elevados que transportan las cabinas de las góndolas, cada una de las cuales puede transportar entre 30 y 40 pasajeros



- Gran capacidad de pasajeros: cabinas desmontables con sistema "3S"
  - El sistema "3S" incluye tres cables: dos "cables guía" para la estabilidad y un tercer "cable de arrastre" para la circulación de las cabinas
  - Capacidad para trasladar a unas 5,000 personas por hora y por dirección con un sistema silencioso, seguro y respetuoso del medio ambiente
- Las cabinas se desprenden del cable de arrastre que circula continuamente, se frenan al entrar en una estación para la salida y entrada de pasajeros, y luego se vuelven a unir al cable de arrastre
- Las cabinas permiten que las personas vayan sentadas o de pie, brindan acceso total requerido por la ADA y ofrecen espacio para carreolas para bebés y bicicletas

Koblenz, Alemania

議程

1. 會議目的
2. 如何參加此虛擬會議
3. 概述
4. CEQA 流程概述
5. 洛杉磯空中快速纜車計畫 概述
6. 環境影響報告草案公眾咨詢期
7. 答詢時段

會議目的

在《環境影響報告草稿》發佈前提供更新信息

如何參加這次會議

答詢: 在答詢時段內，使用 Q&A 功能輸入您的問題.

《加州環境質量法案》和計畫流程概覽

《加州環境品質法案》

要求公共機構承擔、資助或需要批准的所有開發計畫

通知公眾和決策者

披露擬建計畫會產生的潛在環境影響

提供對環境問題發表評論的機會

兩個咨詢期：(1) 公共範圍界定期和 (2) 《環境影響報告草案》公眾審查

洛杉磯空中快速纜車計畫概覽

- 洛杉磯空中快速纜車計畫由洛杉磯空中快速纜車交通技術有限公司提出
- 洛杉磯縣都會運輸局是根據《加州環境品質法案》（CEQA）編寫本環境影響報告的領導機構。
  - 作為領導機構，洛杉磯縣都會運輸局有責任確保：
    - 環境影響報告充分評估計畫的潛在影響
    - 當中所建議的緩解措施恰當
    - 已遵守 CEQA 流程以進行公告、公關宣傳和文件分發
- 《環境影響報告草案》評估了與計畫建設和運營相關的潛在環境影響

SB 44 | 公眾意見咨詢期間的公開會議

SB 44 | 概述

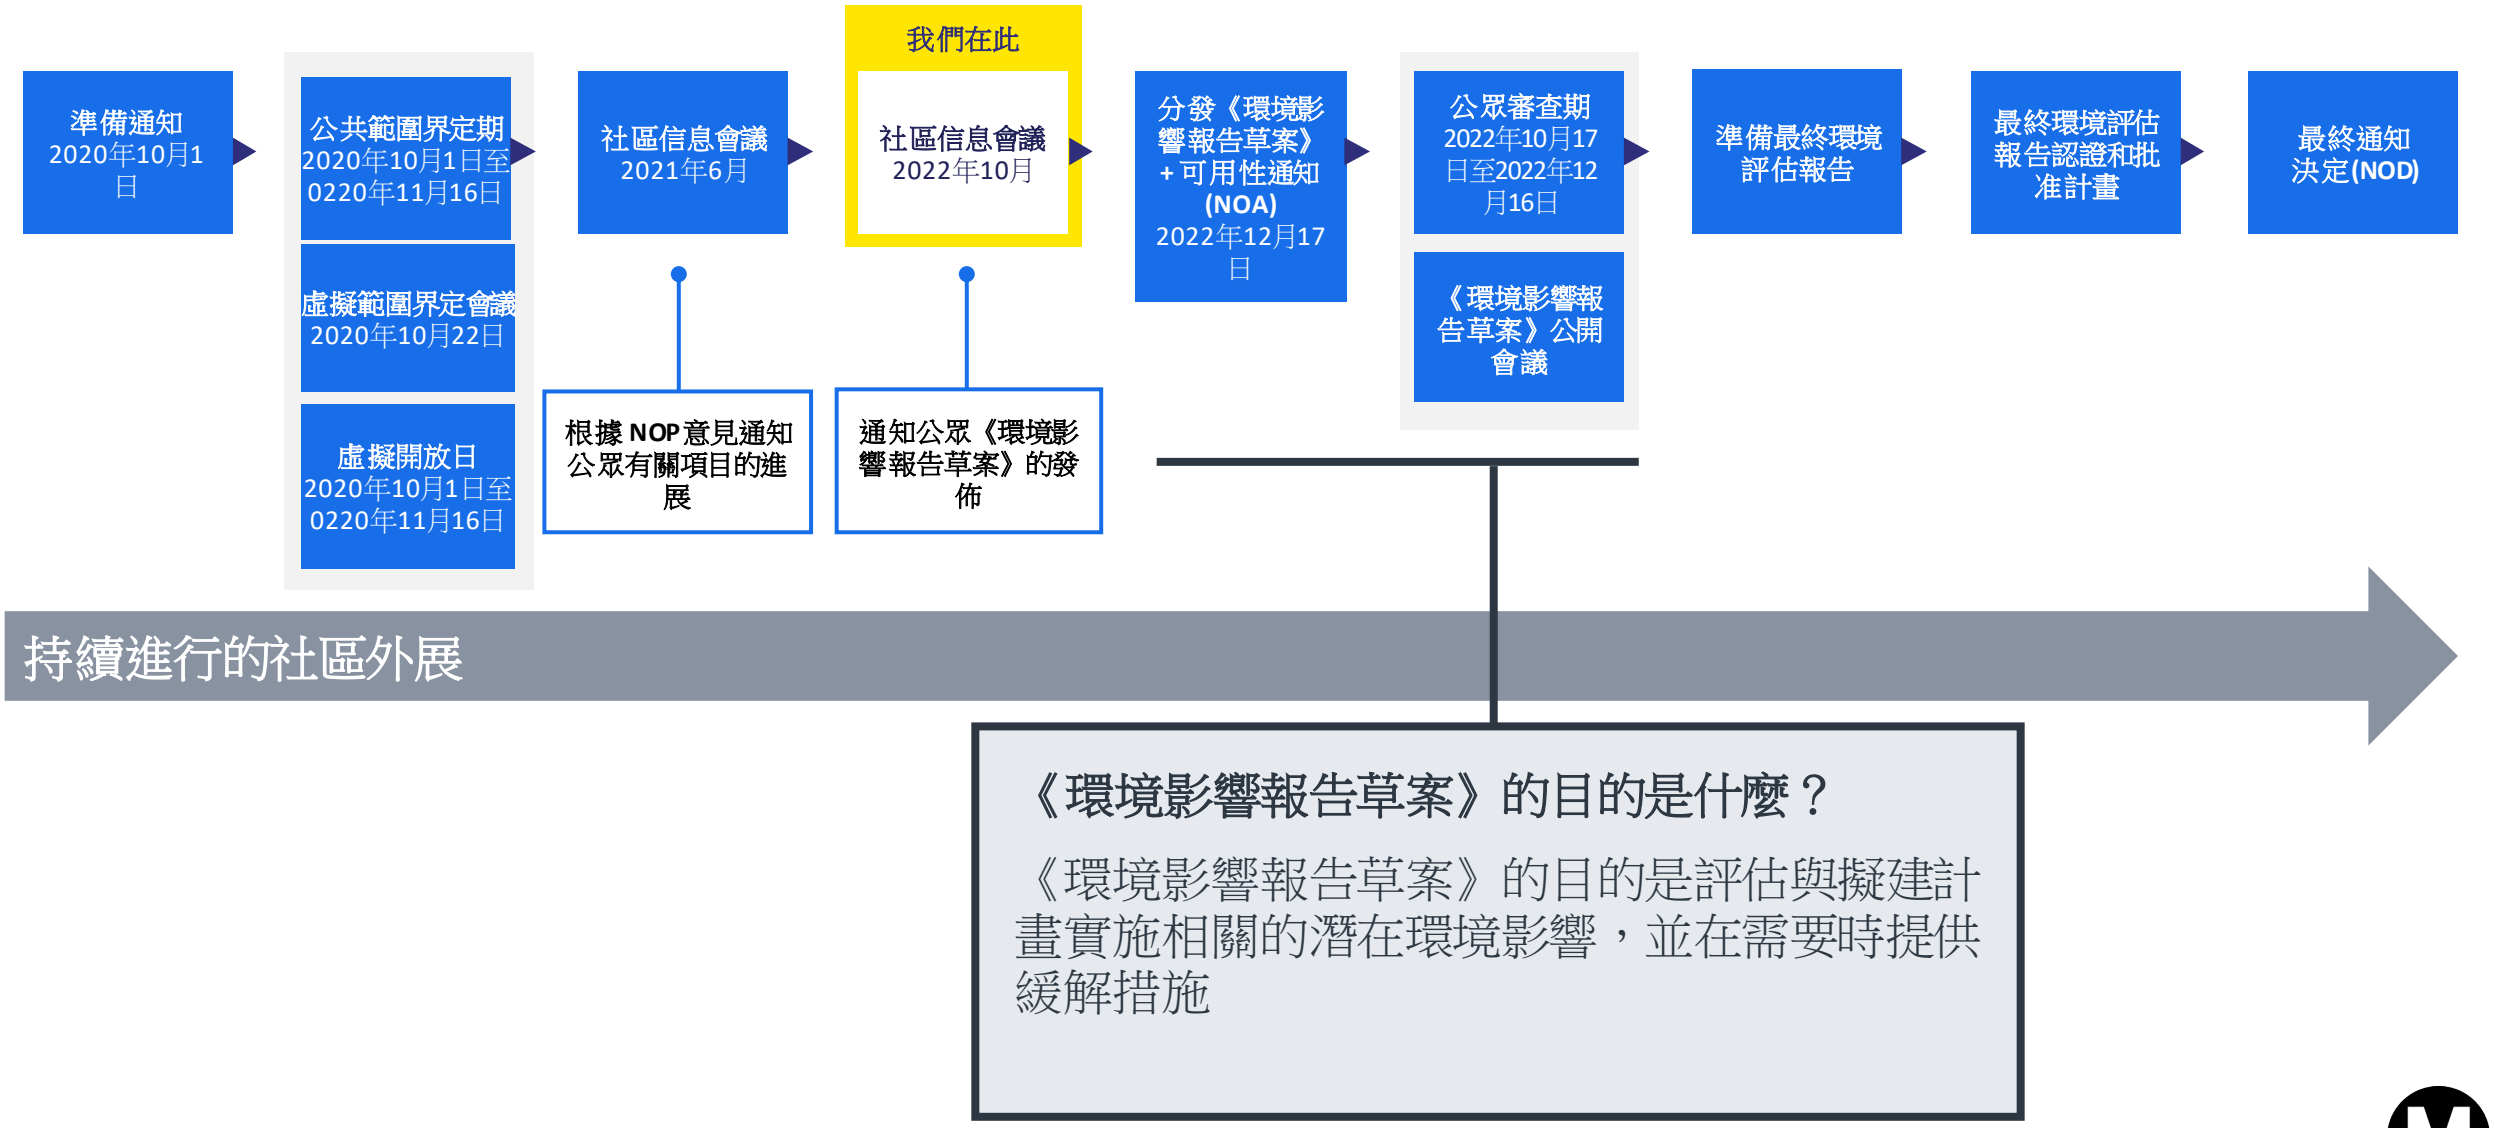
- SB 44 於 2021 年通過，為“環境領導過渡項目”提供 CEQA 訴訟簡化
- 該計畫符合 SB 44 的要求
  - 該計畫將以零排放方式運行
    - 電力將由 LADWP 透過公用事業公司的綠色電力計劃提供，並設有備用電池
    - 在項目的使用壽命和項目過程中，項目將：
      - 在不使用補償的情況下減低不少於 50,000 公噸的溫室氣體排放
      - 減少超過 3,000 萬個車輛行駛里程

在 SB 44下召開的公開會議

- SB 44 要求在公眾意見咨詢期內舉行一次資訊性研討會和一次公開聽證會
- 該項目將提供兩個資訊性研討會（一個現場和一個虛擬）和兩個公開聽證會（一個現場和一個虛擬）

第一次《環境影響報告草案》資訊性研討會	10月22日，星期六	虛擬
第二次《環境影響報告草案》資訊性研討會	10月25日(星期二)，下午5時至7時	現場
第一次《環境影響報告草案》公開聽證會	12月10日，星期六	現場
第二次運輸局環境影響評估公開聽證會	12月13日，星期二	虛擬

時間表



《環境影響報告草案》的目的是什麼？

《環境影響報告草案》的目的是評估與擬建計畫實施相關的潛在環境影響，並在需要時提供緩解措施

《環境影響報告草案》發佈時間表

《環境影響報告草案》發佈	2022年10月17日，星期一
《環境影響報告草案》公眾意見咨詢期結束	2022年12月16日，星期五

《環境影響報告草案》將發佈為期60天的評論期

《環境影響報告草案》意見咨詢期期間的公開會議

資訊性研討會

第一次《環境影響報告草案》資訊性研討會	10月22日，星期六	虛擬
第二次《環境影響報告草案》資訊性研討會	10月25日(星期二)，下午5時至7時	現場

運輸局將舉辦兩場資訊性研討會，讓公眾了解環境影響評估草案中的關鍵分析和結論

公開聽證會

第一次《環境影響報告草案》公開聽證會	12月10日，星期六	現場
第二次運輸局環境影響評估公開聽證會	12月13日，星期二	虛擬

運輸局將舉辦兩次公開聽證會，就環境影響評估草案咨詢公眾意見

環境影響評估草案 - 環境議題

每個 CEQA 指南附錄 G a的所有環境資源議題都在《環境影響報告草案》中得到處理：

- 美學
- 農業/林業
- 空氣品質
- 生物資源
- 文化/歷史資源
- 能源
- 地質/土壤
- 溫室氣體排放
- 危害/有害物質
- 水文/水質
- 土地使用/規劃
- 礦物資源
- 噪音和振動
- 人口/住屋
- 公共 服務
- 休閒娛樂
- 交通運輸
- 部落文化資源
- 公用事業/服務系統
- 野火

《環境影響報告草案》 - 替代方案 | 設計和使用方案 | 非 CEQA 附加評估

- 替代方案
  - 沒有項目替代方案
  - 春天街(Spring Street)路線替代方案
  - 交通系統管理替代方案（提升道奇體育場快車）
- 設計和使用方案
- 《環境影響報告草案》中的非 CEQA 附加評估
  - 洛杉磯州立歷史公園的使用情況
    - 放風箏
    - 特別活動
  - 空域評估

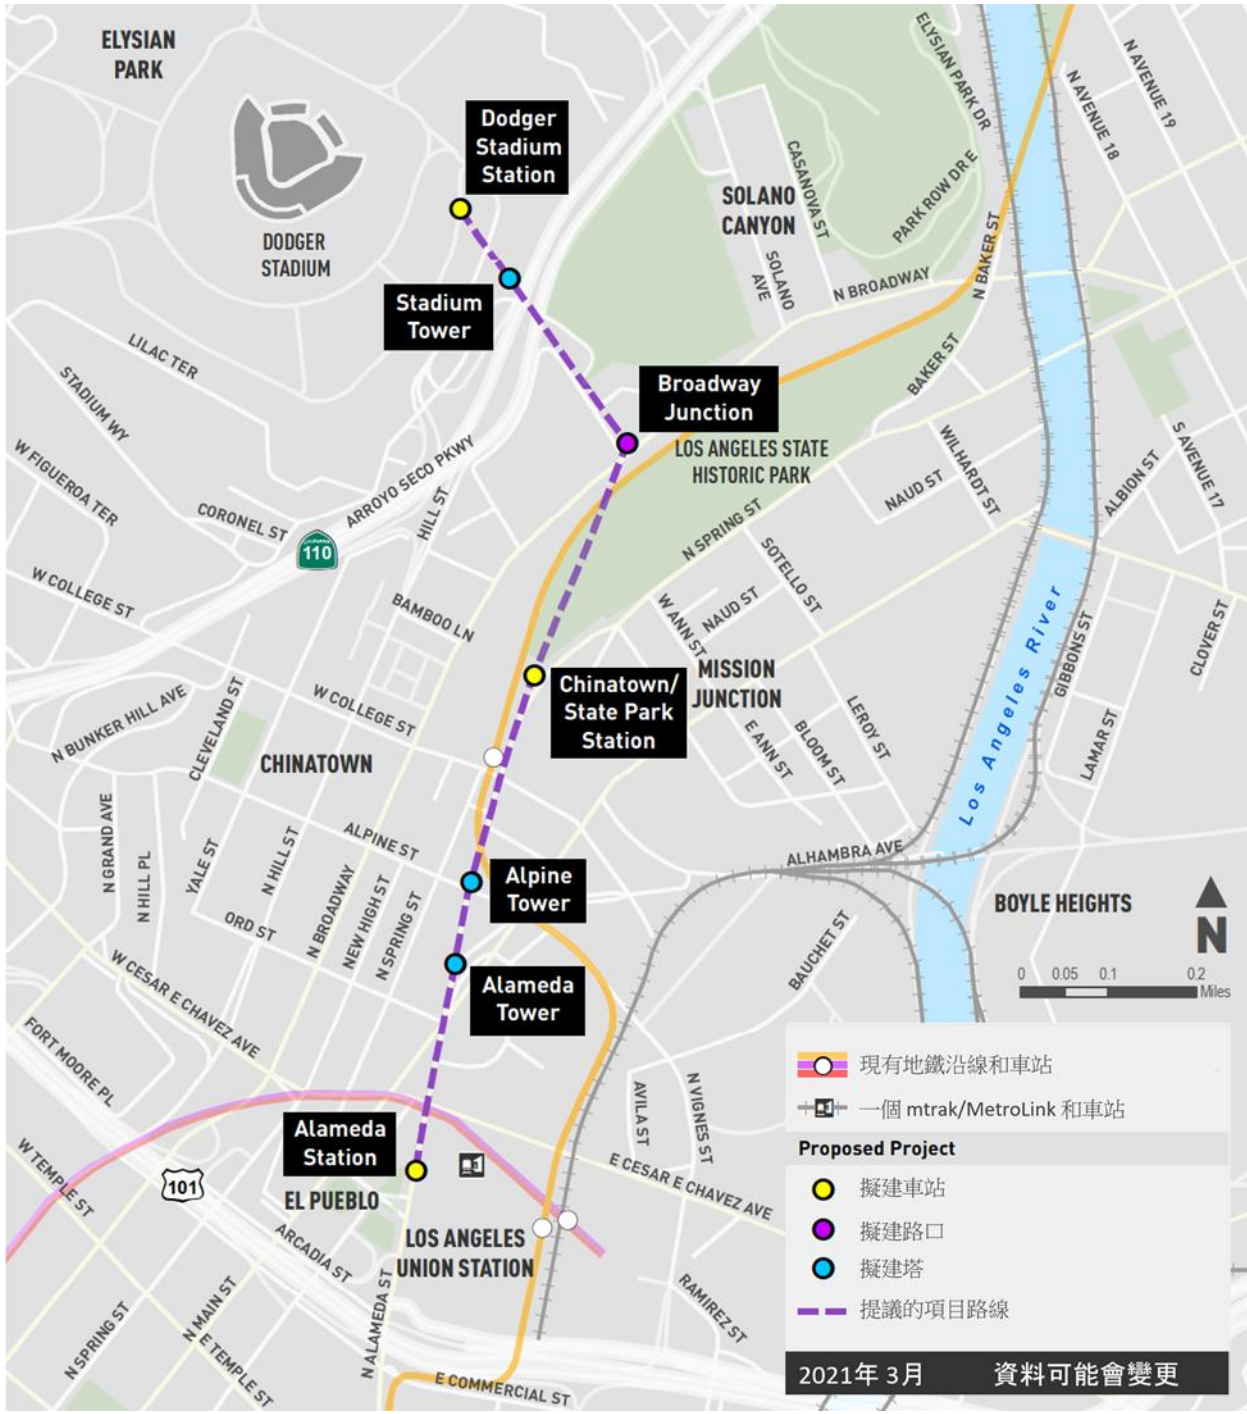
00:00.00

計畫概述

- 透過 1.2 公里的空中快速纜車系統能提供從洛杉磯聯合車站 (LAUS) 到道奇體育場的永久交通連接
  - 從洛杉磯聯合車站到道奇體育場的行車時間約為7分鐘
- 每個方向每小時可容納約5,000人次
- 每天運行，為洛杉磯的現有居民、工人、公園用戶和遊客提供服務
- 透過中間的唐人街/州立公園站提供前往洛杉磯州立歷史公園和周邊社區的通道
- 零排放、環保的空中快速纜車，由於減少了道奇體育場內和周圍以及附近街道、主幹道和高速公路上的車輛出行，將減少溫室氣體排放

計畫位置和路線

- 該計畫將在洛杉磯聯合車站和洛杉磯古城附近開始，並在道奇體育場結束，在洛杉磯州立歷史公園最南端的入口處設有一個中轉站
- 將唐人街、Mission Junction、伊利森公園(Elysian Park)、迴聲公園(Echo Park)和索拉諾郡峽谷(Solano Canyon)的周邊社區連接到聯合車站可到達的區域交通系統
- 擬建計畫路線最大限度地維護公共可行使通行權（ROW）和公有財產，以及減少使用在私人財產上空的空中權利，同時也考慮現有和未來的鄰近土地用途



空中快速纜車系統先例

- 空中快速纜車技術已經有100多年歷史
- **現代系統是一種可行的城市交通模式，目前在世界各地多個城市運行**
- 全球已建立的空中快速纜車系統——如玻利維亞的拉巴斯和墨西哥的墨西哥城——正給用作他們服務的城市人口的空中快速纜車系統
- 與德國科布倫茨、越南富國島和法國圖盧茲使用的系統類似，擬建計畫是“3S”纜車
  - 車廂可乘載約30至40名乘客
  - 系統將提供平穩、穩定的行駛

俄勒岡州波特蘭

紐約羅斯福島

玻利維亞拉巴斯

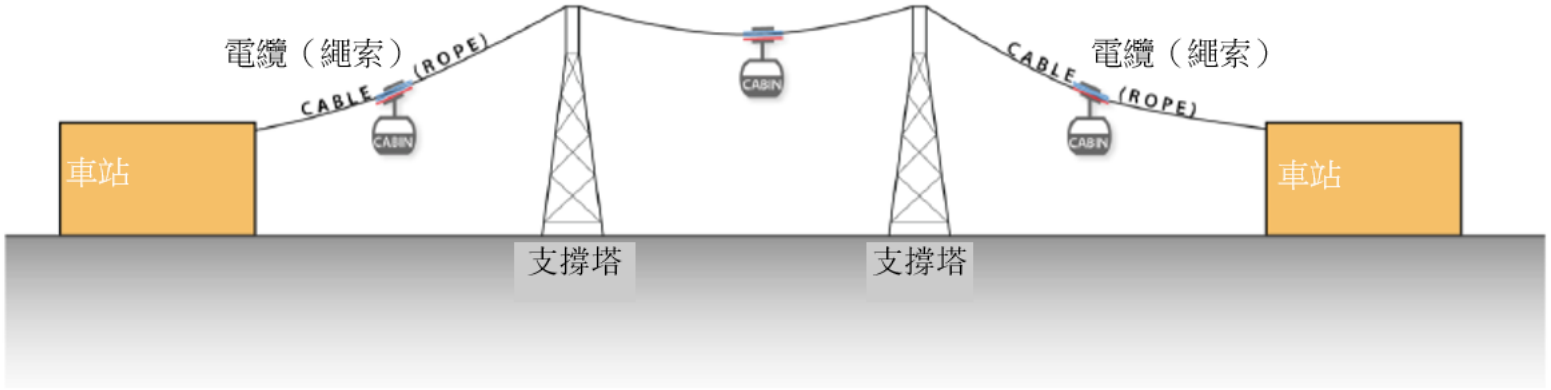
墨西哥墨西哥城

法國圖盧茲

哥倫比亞麥德林

電纜和索道技術

空中快速纜車系統建議客運站、非客運樞紐站和塔，以支撐車廂的架空電纜，每個車廂可搭載 30 - 40 名乘客



- 高載客量：“3S”系統的可拆卸車廂
  - “3S”系統包括三根電纜：兩根用於穩定的「軌道繩索」和第三根用於循環車廂的「牽引繩索」
  - 透過安靜、安全、環保的系統，每個方向每小時可運送約 5,000 人次
- 車廂從連續循環的「牽引繩索」分離並在進入車站供乘客出入時減速，然後重新連接至「牽引繩索」
- 客人可於車廂內坐下或站立，完全符合 ADA 的要求，並提供空間予嬰兒車和單車

议程

1. 会议目的
2. 如何参加本次虚拟会议
3. 概览
4. 加州环境质量法案（CEQA）流程概览
5. 洛杉矶空中快捷交通项目概览
6. 环境影响报告草案公众评议期
7. 问答环节

会议目的

在环境影响报告草案发布前
提供更新信息

如何参加这次会议

在答问时段内：使用Q&A功能
打入你的问题。

加州环境质量法案和项目流程概览

加州环境质量法案（CEQA）

所有由公共机构承办、资助或需要公共机构批准的项目概须

告知公众和决策者

披露拟建项目可能造成的环境影响

提供对环境问题发表意见的机会

两个评议期：(1) 公众范围界定期以及(2) 报告草案公众审查期

洛杉矶空中快捷交通项目流程概览

- 洛杉矶空中快捷交通技术有限公司提议洛杉矶空中快捷交通项目
- 洛杉矶都会交通局（Metro）是根据《加州环境质量法案》（CEQA）编制环境影响报告的领导机构。
  - 作为领导机构，都会交通局有责任确保：
    - 环境影响报告充分评估了项目的潜在影响
    - 提议的缓解措施是适当的
    - 在公告、公共宣传和文件分发方面遵守了CEQA流程
- 环境影响报告草案评估了与项目建设和运营相关的潜在环境影响

加州第44号参议院法案（SB 44）| 公众评议期间的公听会

SB 44法案概览

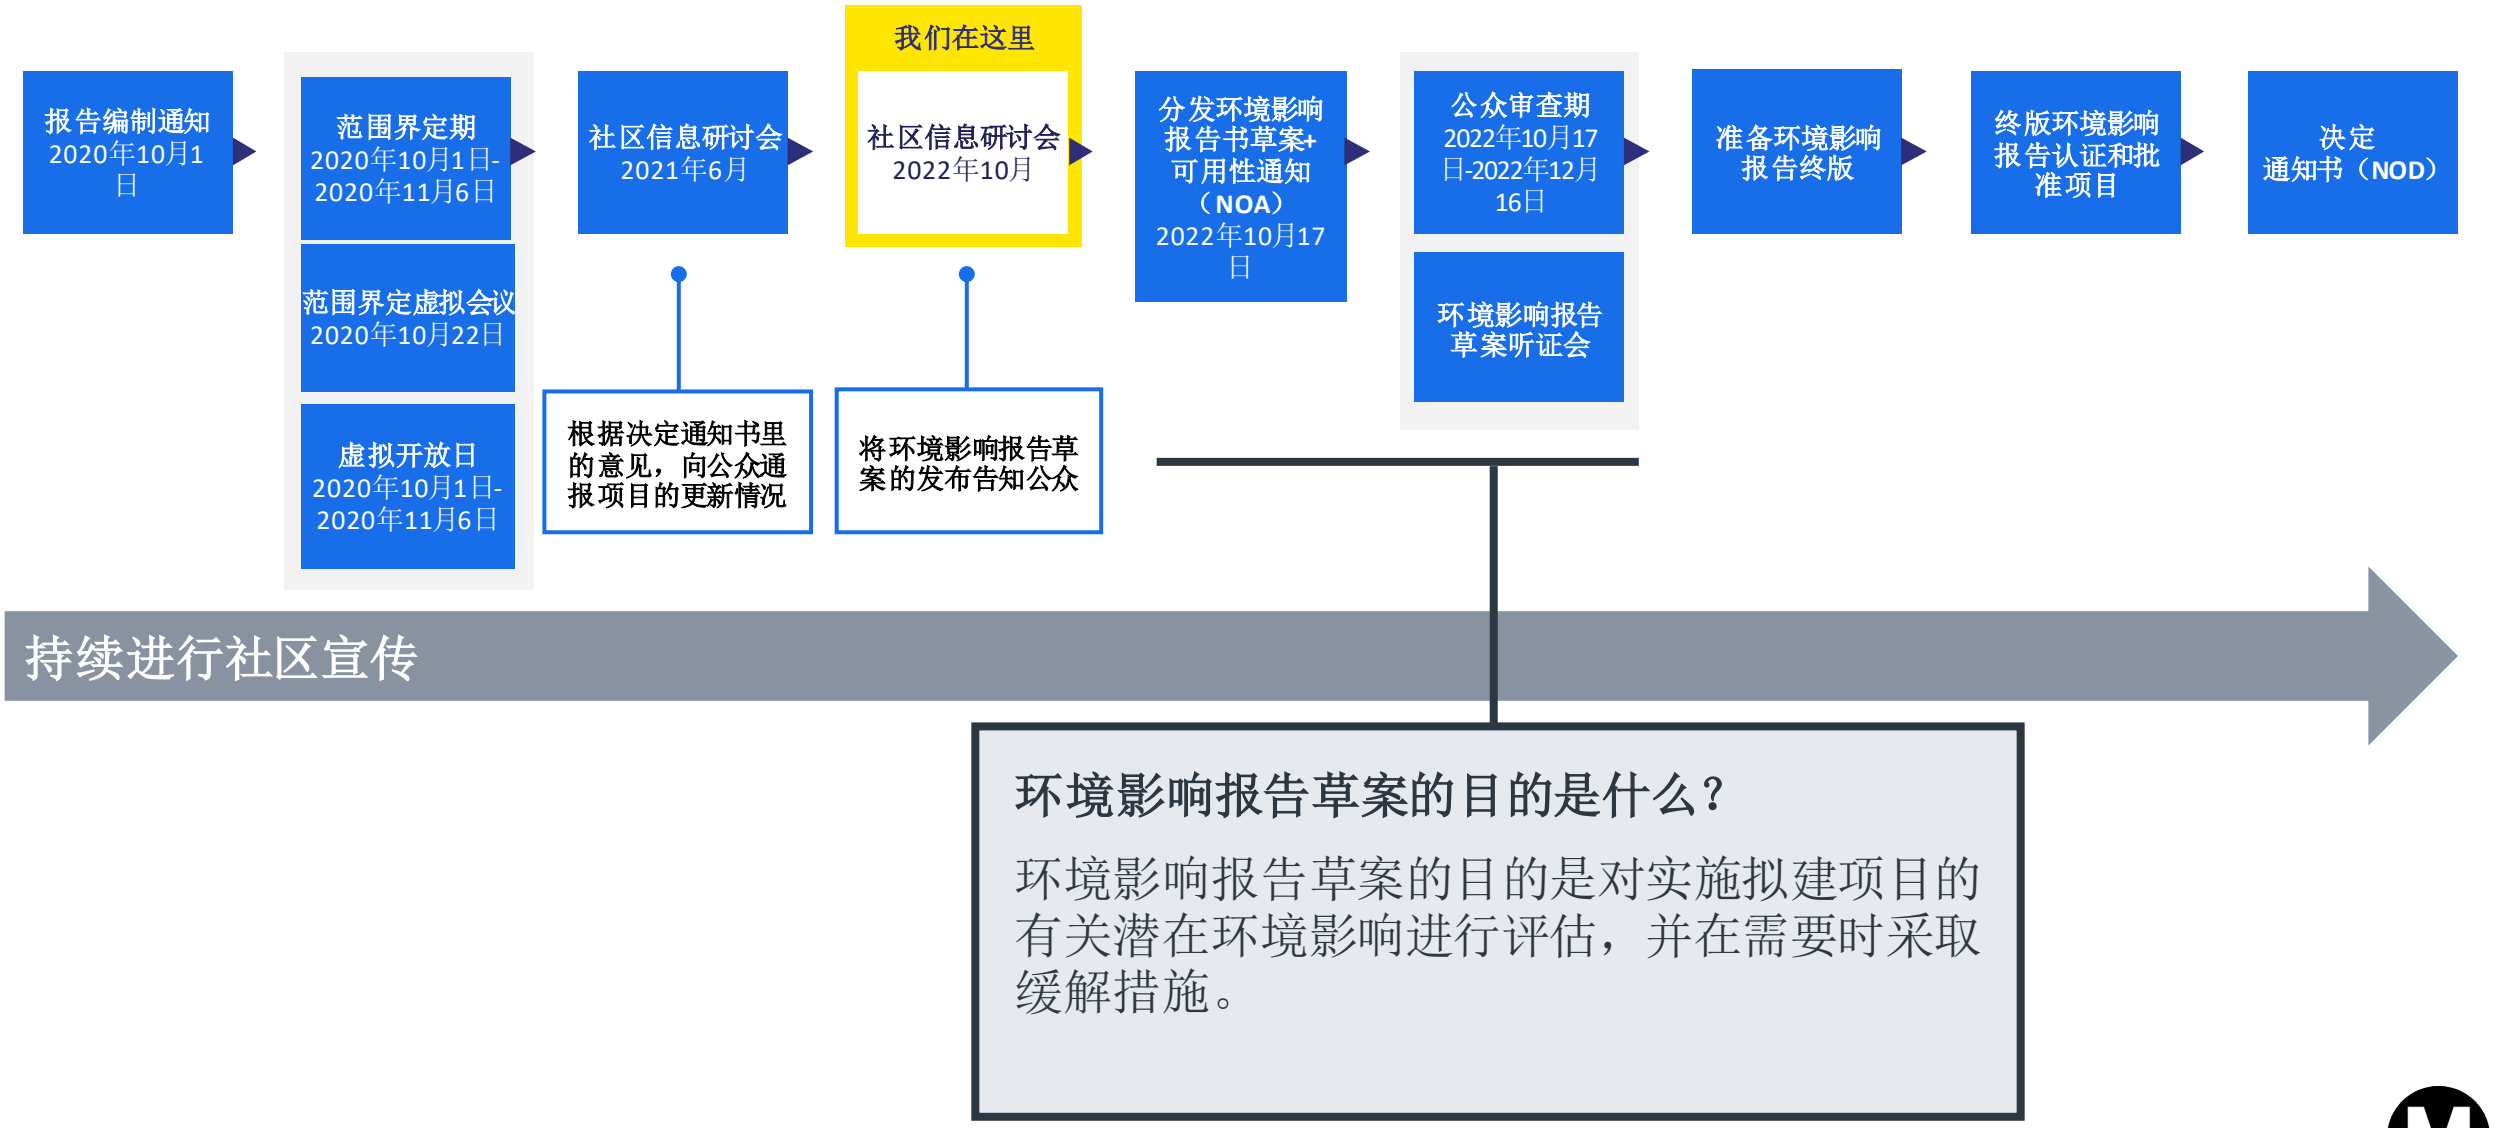
- 2021年通过的SB 44法案，为“环境领先交通项目”提供了CEQA诉讼精简程序
- 本项目符合SB 44法案的规定
  - 本项目将零排放运营
    - 电力将通过公用事业绿色电力计划由洛杉矶水电局（LADWP）供应，并配备了备用蓄电池
    - 在项目的使用期限内和项目路线内，项目将：
      - 在未抵消的情况下，减少的温室气体排放量多达50,000公吨
      - 减少超过3,000万英里的行车里程（VMT）

依据SB 44法案召开公听会

- SB 44法案要求在公众评议期举行一次信息研讨会和一次公开听证会
- 本项目将举办两次信息研讨会（一次现场会议，一次虚拟会议）和两次公众听证会（一次现场会议，一次虚拟会议）。

环境影响报告草案第1次信息研讨会	10月22日（周六）	虚拟会议
环境影响报告草案第2次信息研讨会	10月25日（周二）	现场会议
环境影响报告草案第1次公听会	12月10日（周六）	现场会议
都会交通局环境影响报告第2次公听会	12月13日（周二）	虚拟会议

时间线



环境影响报告草案的目的是什么？

环境影响报告草案的目的是对实施拟建项目的有关潜在环境影响进行评估，并在需要时采取缓解措施。

环境影响报告草案发布时间表

环境影响报告草案发布	2022年10月17日（周一）
环境影响报告草案公众评议期结束	2022年12月16日（周五）

环境影响报告草案将就为期60天的公众评议期予以发布

环境影响报告草案在公众评议期间的公听会

知情座谈会

环境影响报告草案第1次信息研讨会	10月22日（周六）	虚拟会议
环境影响报告草案第2次信息研讨会	10月25日（周二）	现场会议

都会交通局将举办两次信息研讨会，让公众了解环境影响报告草案中的主要分析和结论

公众听证会

环境影响报告草案第1次公听会	12月10日（周六）	现场会议
都会交通局环境影响报告第2次公听会	12月13日（周二）	虚拟会议

都会交通局将举办两次公听会，听取公众对环境影响报告草案的意见

环境影响报告草案 – 环境议题

根据CEQA指南附录G的所有环境资源议题a都已在环境影响报告中处理：

- 美学
- 农业/林业
- 空气质量
- 生物资源
- 文化/历史资源
- 能源
- 地质/土壤
- 温室气体排放
- 危害/危险物品
- 水文/水质
- 土地使用/规划
- 矿产资源
- 噪音与震动
- 人口/住房
- 公共服务
- 休闲娱乐
- 交通运输
- 部落文化资源
- 公用事业/服务系统
- 野生动植物

环境影响报告草案 – 备选方案|设计和使用选项|非CEQA附加评估

- 备选方案
  - 无项目工程备选方案
  - 春天街路线备选方案
  - 交通系统管理备选方案（增加道奇体育馆巴士快线车次）
- 设计和使用选项
- 非CEQA附加评估
  - 洛杉矶州立历史公园用途
    - 放风筝
    - 特别活动
  - 空域评估

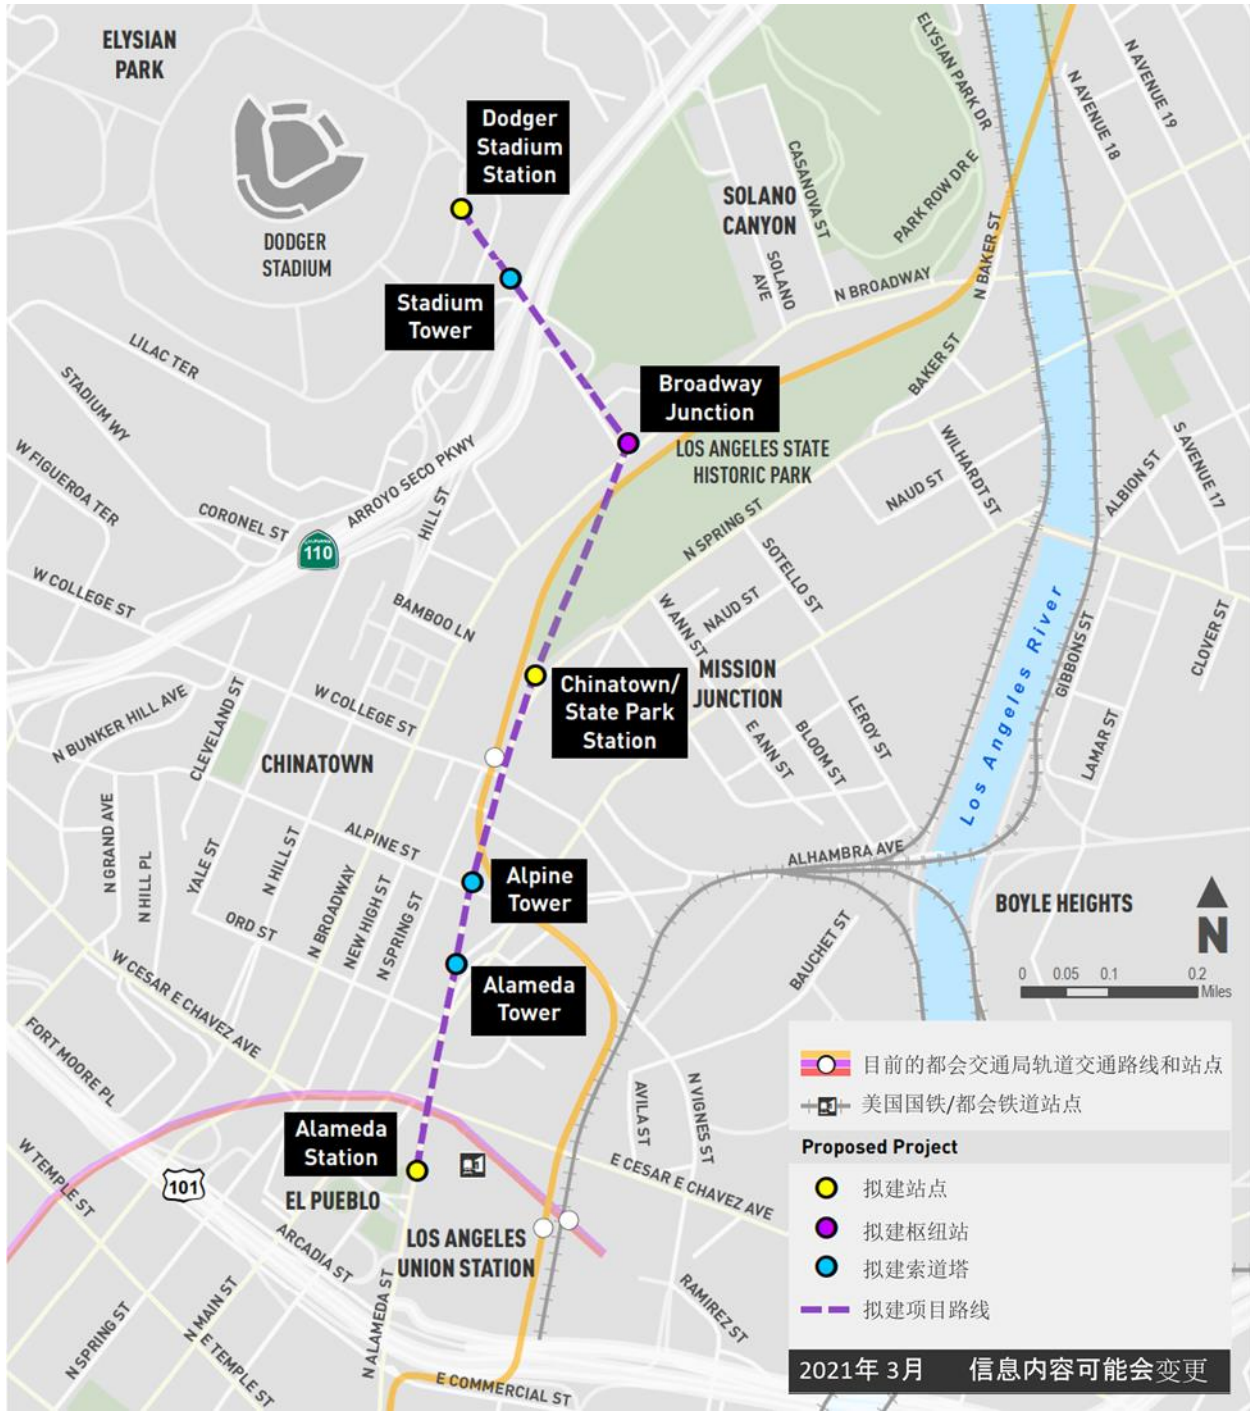
00:00.00

项目概况

- 通过1.2英里的空中缆车系统提供从洛杉矶联合车站（LAUS）到道奇体育馆的永久性交通连接
  - 从洛杉矶联合车站到道奇体育馆的旅程约为7分钟
- 运力约为每个方向每小时5,000人次
- 拟建项目将每天运作，为现有居民、上班族、公园使用者和洛杉矶的访客提供服务
- 可通过中间的唐人街/州立公园站前往洛杉矶州立历史公园和周边社区
- 零排放、环保的快速交通系统，由于减少了道奇体育馆内和周围以及附近街道、主要干道和高速公路上的车辆出行，将减少温室气体排放

项目地点和路线

- 拟建项目将以洛杉矶联合车站和洛杉矶古城(El Pueblo)附近为起点，以道奇体育馆为终点，还有一个中间站位于洛杉矶州立历史公园最南门入口处。
- 连接包括唐人街、Mission Junction社区、伊利森公园、回音（Echo）公园和索拉诺（Solano）峡谷的周边社区与联合车站的区域交通系统。
- 拟建的项目路线尽可能沿着沿公共通行权（ROW）和公有财产，并尽可能减少使用在私人财产上空的空中权利，同时考虑到现有和未来的邻近土地用途



空中交通系统的先例

- 空中交通技术已经使用了100多年
- 现代系统是一种可行的城市交通方式，目前正在世界各地的许多城市运行
- 世界各地如玻利维亚的拉巴斯和墨西哥的墨西哥城已有的空中缆车交通系统，正为相应的城市人口提供快速交通服务。
- 拟建项目与德国科布伦茨、越南富国岛和法国图卢兹所使用的系统类似，是一个“3S”空中缆车。
  - 车厢可搭载约30至40名乘客。
  - 系统将提供平稳流畅的乘车体验

俄勒冈州波特兰

纽约罗斯福岛

玻利维亚拉巴斯

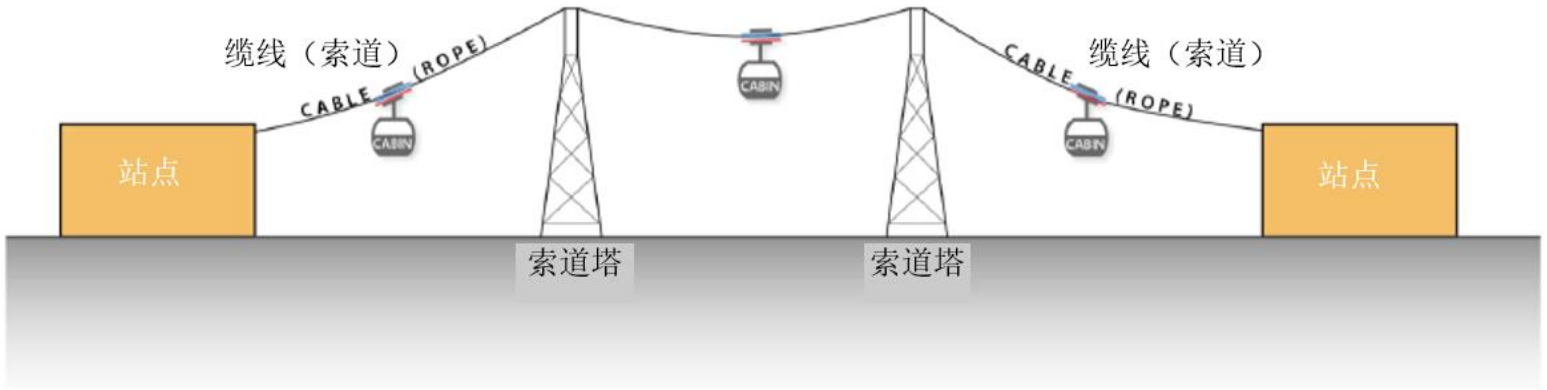
墨西哥的墨西哥城

法国图卢兹

哥伦比亚麦德林

缆线与索道技术

洛杉矶空中快速交通系统提议了几个客站、一个非客站以及为运输空中缆车的缆线提供支撑的几个索道塔，每个缆车可搭乘30-40名乘客



- 客运力高：“3S”系统可分离式缆车
  - “3S”系统包括三根缆线：两根“轨道索”用于稳定，第三根“牵引索”用于使缆车移动。
  - 每小时每个方向可运送约5000人，系统安静、安全、环保
- 车厢与连续循环的牵引索分离并减速进入车站以便乘客上下车，然后重新连接至牵引索上
- 车厢里可以坐着或站着，完全符合《美国残疾人法案》（ADA）标准，并为婴儿车和自行车提供了空间

CEQA and Project Process Overview

CEQA

Required for all projects undertaken, funded, or requiring approval by a public agency

Informs the public and decision makers

Discloses potential environmental impacts resulting from a proposed project

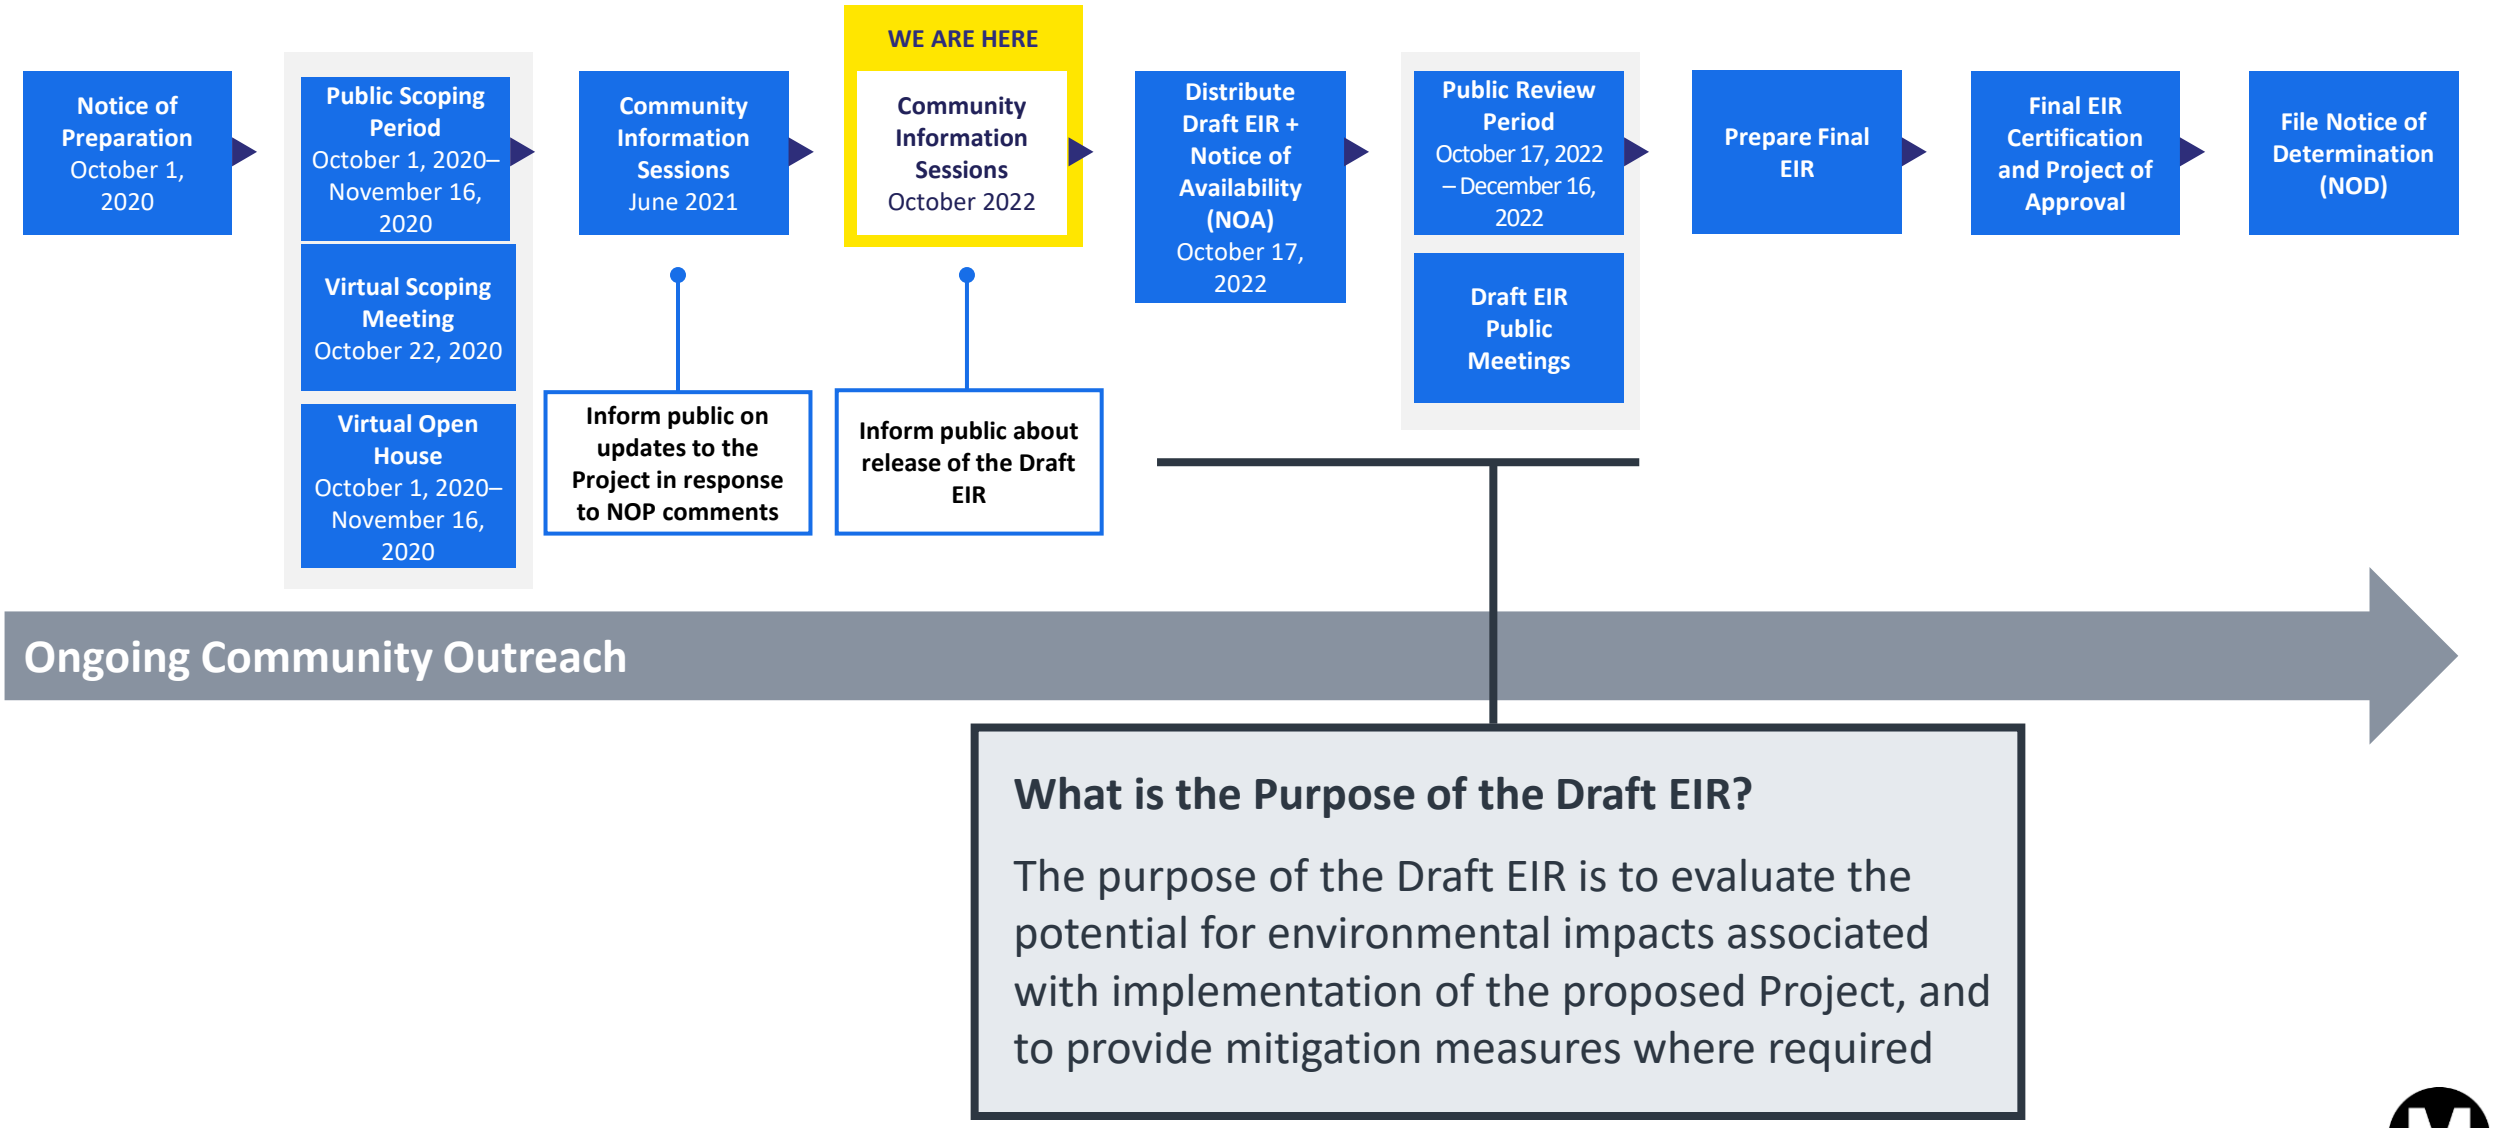
Provides the opportunity to comment on environmental issues

Two Comment Periods: (1) Public Scoping Period and (2) Draft EIR Public Review

Los Angeles Aerial Rapid Transit Project Process Overview

- The Los Angeles Aerial Rapid Transit Project is proposed by Los Angeles Aerial Rapid Transit Technologies LLC
- Metro is the lead agency in the preparation of an Environmental Impact Report (EIR) under the California Environmental Quality Act (CEQA)
  - As the lead agency, Metro has the responsibility to ensure that:
    - The EIR adequately assesses the potential project impacts
    - The proposed mitigation measures are appropriate
    - The CEQA process has been complied with for public notices, public outreach, and distribution of documents
- The Draft EIR evaluates the potential environmental effects associated with construction and operation of the Project

Timeline



What is the Purpose of the Draft EIR?

The purpose of the Draft EIR is to evaluate the potential for environmental impacts associated with implementation of the proposed Project, and to provide mitigation measures where required

SB 44 | Public Meetings During Public Comment Period

SB 44 Overview

- SB 44, which was adopted in 2021, provides CEQA litigation streamlining for “environmental leadership transit projects”
- The Project qualifies under SB 44
  - The Project would operate at zero emissions
    - The electrical power would be supplied by LADWP through the utility’s Green Power Program, with battery storage backup
    - Over the useful life of the Project and in the Project’s corridor, the Project would:
      - Reduce emissions by no less than 50,000 metric tons of GHG, without using offsets
      - Reduce over 30 million VMTs

Public Meetings Under SB 44

- SB 44 requires one Informational Workshop and one Public Hearing during the public comment period
- The Project is providing two Informational Workshops (one in-person and one virtual) and two Public Hearings (one in-person and one virtual)

Draft EIR Informational Workshop No. 1	Saturday, October 22	Virtual
Draft EIR Informational Workshop No. 2	Tuesday, October 25	In-Person
Draft EIR Public Hearing No. 1	Saturday, December 10	In-Person
Metro EIR Public Hearing No. 2	Tuesday, December 13	Virtual

Resumen de la ley ambiental CEQA y del proceso del proyecto

CEQA

Esto se requiere para todos los proyectos emprendidos, financiados o que requieran la aprobación de un organismo público

Informa al público y a los responsables de la toma de decisiones

Revela los posibles impactos ambientales resultantes de un proyecto propuesto

Da la oportunidad de hacer comentarios sobre cuestiones ambientales

Dos Periodos de Comentarios: (1) Periodo de Alcance Público y (2) Revisión Pública del Borrador del EIR

Generalidades del Proceso del Proyecto de Transporte Rápido Aéreo de Los Ángeles

- El Proyecto de Transporte Rápido Aéreo de Los Ángeles ha sido propuesto por Los Angeles Aerial Rapid Transit Technologies LLC
- Metro es la agencia principal en la preparación de un Informe de Impacto Ambiental (EIR) según la Ley de Calidad Ambiental de California (CEQA)
  - Como agencia principal, Metro tiene la responsabilidad de asegurarse de que:
    - El informe de impacto ambiental EIR evalúe adecuadamente los posibles impactos del proyecto
    - Las medidas de mitigación propuestas sean apropiadas
    - Se haya cumplido con el proceso de la CEQA en lo que respecta a las notificaciones públicas, la divulgación pública y la distribución de documentos
- El Borrador del EIR evalúa los posibles efectos ambientales asociados a la construcción y el funcionamiento del proyecto

Calendario

¿Cuál es el Objetivo del Borrador del EIR?

El propósito del Borrador del EIR es evaluar el potencial de los impactos ambientales asociados con la implementación del proyecto propuesto, y proporcionar medidas de mitigación cuando sea necesario

SB 44 | Reuniones Públicas Durante el Periodo de Comentarios Públicos

Generalidades del SB 44

- SB 44 es un proyecto de ley del senado que se adoptó en 2021 y proporciona la agilización de litigios relacionados con la CEQA para "proyectos de transporte de liderazgo ambiental"
- El proyecto califica como cubierto por el SB 44
  - El proyecto funcionaría con cero emisiones
    - La energía eléctrica sería suministrada por el departamento de energía LADWP a través del Programa Green Power, con respaldo de almacenamiento con baterías
    - Durante la vida útil del proyecto y en su corredor, dicho proyecto:
      - Reduciría las emisiones de por lo menos de 50,000 toneladas métricas de gases de efecto invernadero (GEI), sin contar compensaciones
      - Reduciría más de 30 millones de millas viajadas en vehículos (VMT)

Reuniones Públicas de Conformidad con el SB 44

- SB 44 requiere un Taller Informativo y una Audiencia Pública durante el período de comentarios públicos
- El proyecto ofrece dos talleres informativos (uno presencial y otro virtual) y dos audiencias públicas (una presencial y otra virtual)

Taller Informativo sobre el Borrador del EIR No. 1	Sábado 22 de octubre	Virtual
Taller Informativo sobre el Borrador del EIR No. 2	Martes 25 de octubre	En Persona
Audiencia Pública sobre el Borrador del EIR No. 1	Sábado 10 de diciembre	En Persona
Audiencia Pública sobre el EIR de Metro No. 2	Martes 13 de diciembre	Virtual

加州环境质量法案和项目流程概览

加州环境质量法案（CEQA）

所有由公共机构承办、资助或需要公共机构批准的项目概须

告知公众和决策者

披露拟建项目可能造成的环境影响

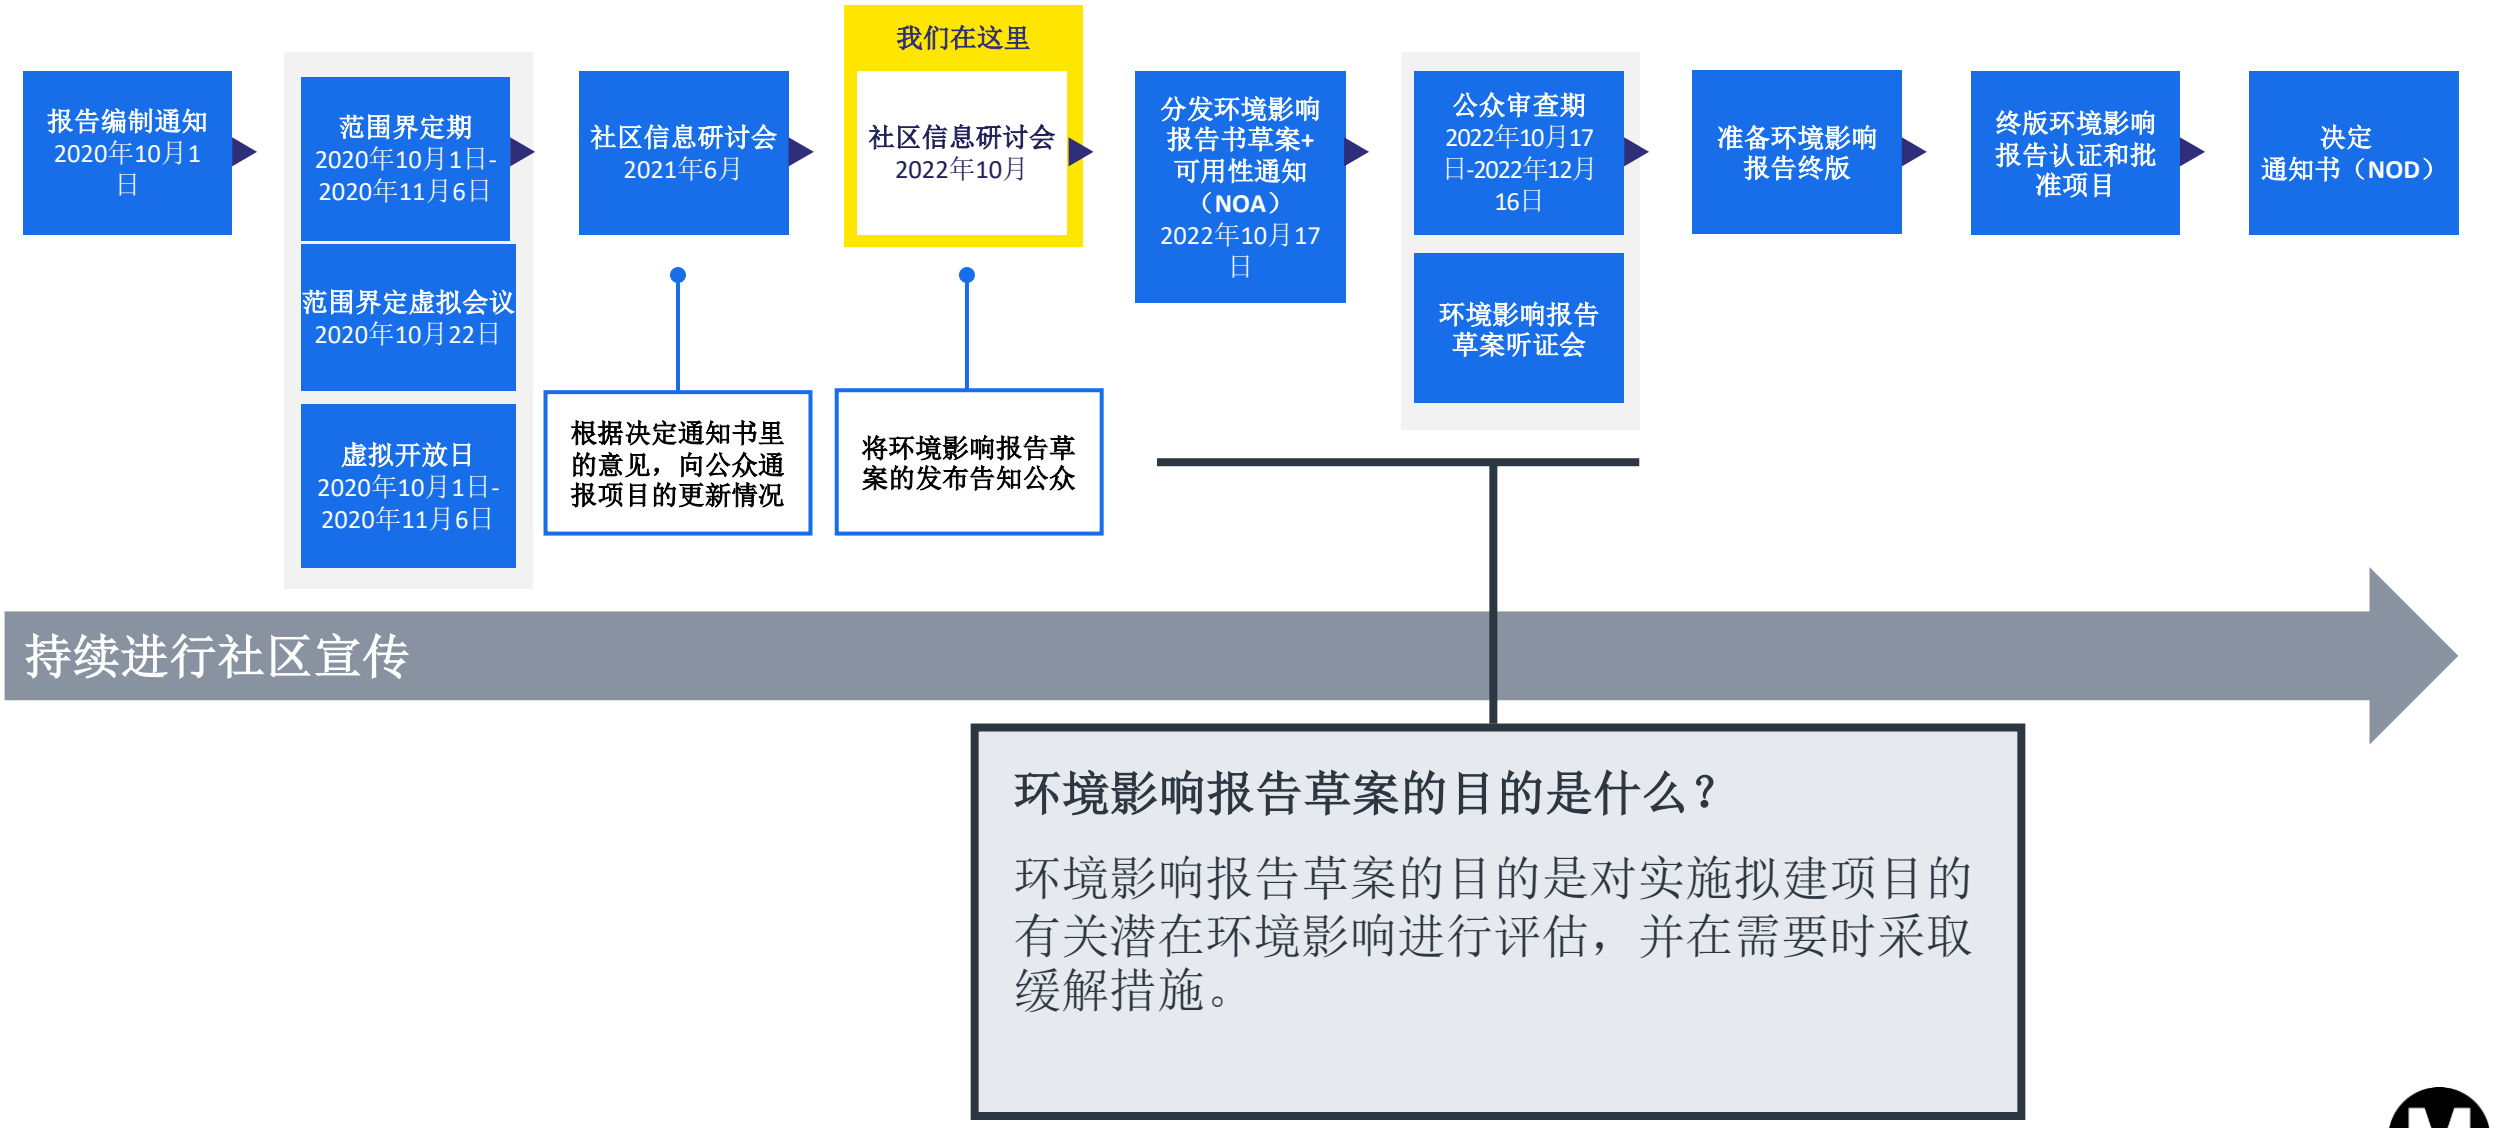
提供对环境问题发表意见的机会

两个评议期：(1) 公众范围界定期以及(2) 报告草案公众审查期

洛杉矶空中快捷交通项目流程概览

- 洛杉矶空中快捷交通技术有限公司提议洛杉矶空中快捷交通项目
- 洛杉矶都会交通局（Metro）是根据《加州环境质量法案》（CEQA）编制环境影响报告的领导机构。
  - 作为领导机构，都会交通局有责任确保：
    - 环境影响报告充分评估了项目的潜在影响
    - 提议的缓解措施是适当的
    - 在公告、公共宣传和文件分发方面遵守了CEQA流程
- 环境影响报告草案评估了与项目建设和运营相关的潜在环境影响

时间线



环境影响报告草案的目的是什么？

环境影响报告草案的目的是对实施拟建项目的有关潜在环境影响进行评估，并在需要时采取缓解措施。

加州第44号参议院法案（SB 44）| 公众评议期间的公听会

SB 44法案概览

- 2021年通过的SB 44法案，为“环境领先交通项目”提供了CEQA诉讼精简程序
- 本项目符合SB 44法案的规定
  - 本项目将零排放运营
    - 电力将通过公用事业绿色电力计划由洛杉矶水电局（LADWP）供应，并配备了备用蓄电池
    - 在项目的使用期限内和项目路线内，项目将：
      - 在未抵消的情况下，减少的温室气体排放量多达50,000公吨
      - 减少超过3,000万英里的行车里程（VMT）

依据SB 44法案召开公听会

- SB 44法案要求在公众评议期举行一次信息研讨会和一次公开听证会
- 本项目将举办两次信息研讨会（一次现场会议，一次虚拟会议）和两次公众听证会（一次现场会议，一次虚拟会议）。

环境影响报告草案第1次信息研讨会	10月22日（周六）	虚拟会议
环境影响报告草案第2次信息研讨会	10月25日（周二）	现场会议
环境影响报告草案第1次公听会	12月10日（周六）	现场会议
都会交通局环境影响报告第2次公听会	12月13日（周二）	虚拟会议

《加州環境質量法案》和計畫流程概覽

《加州環境品質法案》

要求公共機構承擔、資助或需要批准的所有開發計畫

通知公眾和決策者

披露擬建計畫會產生的潛在環境影響

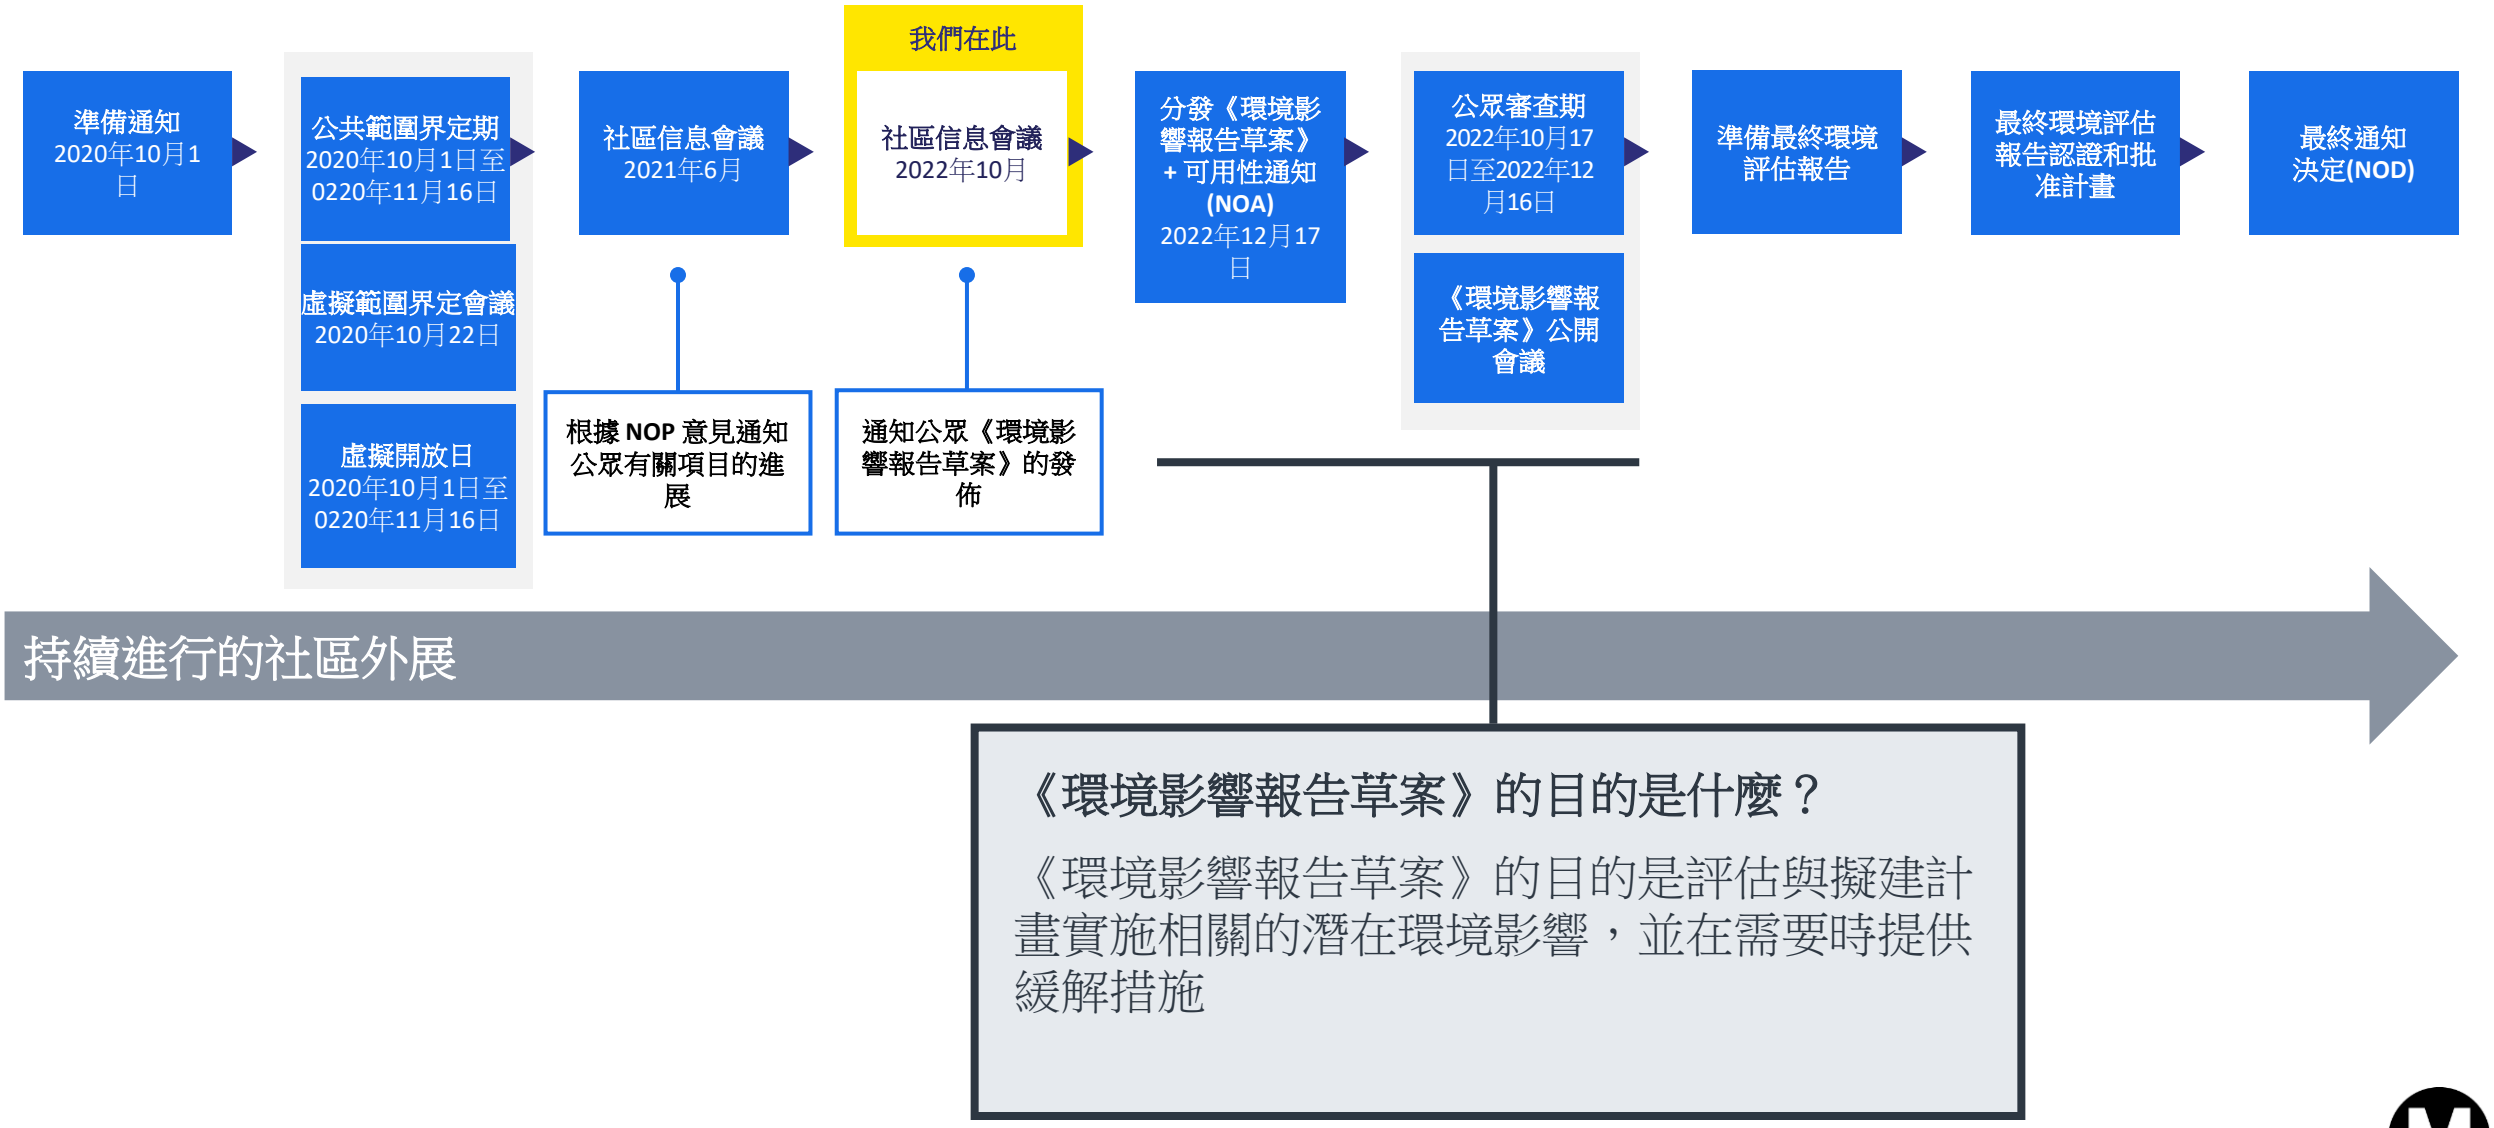
提供對環境問題發表評論的機會

兩個咨詢期：(1) 公共範圍界定期和 (2) 《環境影響報告草案》公眾審查

洛杉磯空中快速纜車計畫概覽

- 洛杉磯空中快速纜車計畫由洛杉磯空中快速纜車交通技術有限公司提出
- 洛杉磯縣都會運輸局是根據《加州環境品質法案》（CEQA）編寫本環境影響報告的領導機構。
  - 作為領導機構，洛杉磯縣都會運輸局有責任確保：
    - 環境影響報告充分評估計畫的潛在影響
    - 當中所建議的緩解措施恰當
    - 已遵守 CEQA 流程以進行公告、公關宣傳和文件分發
- 《環境影響報告草案》評估了與計畫建設和運營相關的潛在環境影響

時間表



《環境影響報告草案》的目的是什麼？

《環境影響報告草案》的目的是評估與擬建計畫實施相關的潛在環境影響，並在需要時提供緩解措施

SB 44 | 公眾意見咨詢期間的公開會議

SB 44 | 概述

- SB 44 於 2021 年通過，為“環境領導過渡項目”提供 CEQA 訴訟簡化
- 該計畫符合 SB 44 的要求
  - 該計畫將以零排放方式運行
    - 電力將由 LADWP 透過公用事業公司的綠色電力計劃提供，並設有備用電池
    - 在項目的使用壽命和項目過程中，項目將：
      - 在不使用補償的情況下減低不少於 50,000 公噸的溫室氣體排放
      - 減少超過 3,000 萬個車輛行駛里程

在 SB 44下召開的公開會議

- SB 44 要求在公眾意見咨詢期內舉行一次資訊性研討會和一次公開聽證會
- 該項目將提供兩個資訊性研討會（一個現場和一個虛擬）和兩個公開聽證會（一個現場和一個虛擬）

第一次《環境影響報告草案》資訊性研討會	10月22日，星期六	虛擬
第二次《環境影響報告草案》資訊性研討會	10月25日(星期二)，下午5時至7時	現場
第一次《環境影響報告草案》公開聽證會	12月10日，星期六	現場
第二次運輸局環境影響評估公開聽證會	12月13日，星期二	虛擬

Draft EIR – Environmental Topics

All Environmental Resource Topics per CEQA Guidelines Appendix G are addressed in the EIR:

- Aesthetics
- Agriculture/Forestry
- Air Quality
- Biological Resources
- Cultural/Historic Resources
- Energy
- Geology/Soils
- Greenhouse Gas Emissions
- Hazards/Hazardous Materials
- Hydrology/Water Quality
- Land Use/Planning
- Mineral Resources
- Noise and Vibration
- Population/Housing
- Public Services
- Recreation
- Transportation
- Tribal Cultural Resources
- Utilities/Service Systems
- Wildfire

Draft EIR – Alternatives | Design and Use Options | Other Additional Evaluations

- Alternatives
  - No Project Alternative
  - Spring Street Alignment Alternative
  - Transportation Systems Management Alternative (Enhanced Dodger Stadium Express)
- Design and Use Options
- Other Additional Evaluations in the Draft EIR
  - Los Angeles State Historic Park Usage
    - Kite Flying
    - Special Events
  - Airspace Evaluation

Borrador del EIR – Temas Ambientales

Todos los Temas de Recursos Ambientales de conformidad con el Apéndice G de los Lineamientos de la CEQA se abordan en el EIR:

- Estética
- Agricultura/Silvicultura
- Calidad del Aire
- Recursos Biológicos
- Recursos Históricos/Culturales
- Energía
- Geología/Suelos
- Emisiones de Gases de Efecto Invernadero
- Peligros/Materiales Peligrosos
- Hidrología/Calidad del Agua
- Planificación/Uso de la Tierra
- Recursos Minerales
- Ruido y Vibraciones
- Población/Vivienda
- Servicios Públicos
- Recreación
- Transporte
- Recursos Culturales Tribales
- Sistemas de Servicios/Servicios Públicos
- Incendios Forestales

Borrador del EIR – Alternativas | Opciones de Uso y Diseño | Otras Evaluaciones Adicionales

- Alternativas
  - Alternativa Sin Proyecto
  - Alternativa de Alineación de la calle Spring Street
  - Alternativa de Gestión de Sistemas de Transporte (Dodger Stadium Express mejorado)
- Opciones de Uso y Diseño
- Evaluaciones Adicionales en el Borrador del EIR
  - Uso del parque Los Angeles State Historic Park
    - Vuelo de Cometas/Papalotes
    - Eventos Especiales
  - Evaluación del Espacio Aéreo

环境影响报告草案 – 环境议题

根据CEQA指南附录G的所有环境资源议题a都已在环境影响报告中处理：

- 美学
- 农业/林业
- 空气质量
- 生物资源
- 文化/历史资源
- 能源
- 地质/土壤
- 温室气体排放
- 危害/危险物品
- 水文/水质
- 土地使用/规划
- 矿产资源
- 噪音与震动
- 人口/住房
- 公共服务
- 休闲娱乐
- 交通运输
- 部落文化资源
- 公用事业/服务系统
- 野生动植物

环境影响报告草案 – 备选方案|设计和使用选项|非CEQA附加评估

- 备选方案
  - 无项目工程备选方案
  - 春天街路线备选方案
  - 交通系统管理备选方案（增加道奇体育馆巴士快线车次）
- 设计和使用选项
- 非CEQA附加评估
  - 洛杉矶州立历史公园用途
    - 放风筝
    - 特别活动
  - 空域评估

環境影響評估草案 - 環境議題

每個 CEQA 指南附錄 G a的所有環境資源議題都在《環境影響報告草案》中得到處理：

- 美學
- 農業/林業
- 空氣品質
- 生物資源
- 文化/歷史資源
- 能源
- 地質/土壤
- 溫室氣體排放
- 危害/有害物質
- 水文/水質
- 土地使用/規劃
- 礦物資源
- 噪音和振動
- 人口/住屋
- 公共 服務
- 休閒娛樂
- 交通運輸
- 部落文化資源
- 公用事業/服務系統
- 野火

《環境影響報告草案》 - 替代方案 | 設計和使用方案 | 非 CEQA 附加評估

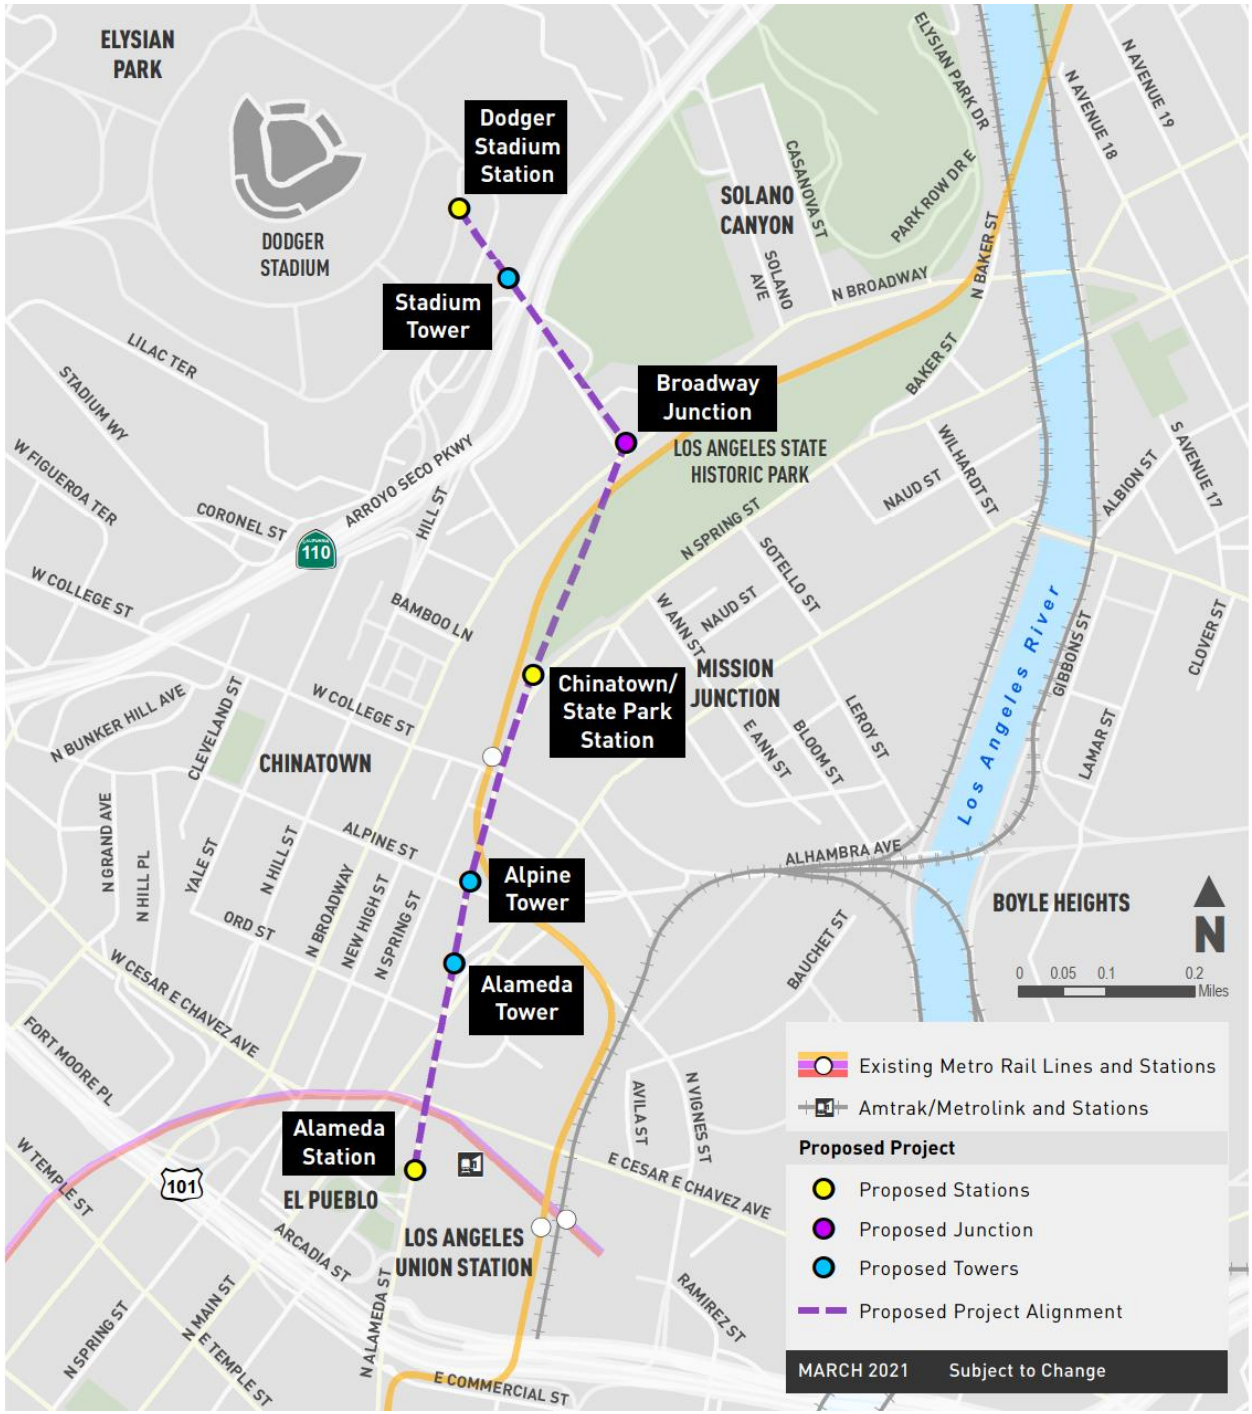
- 替代方案
  - 沒有項目替代方案
  - 春天街(Spring Street)路線替代方案
  - 交通系統管理替代方案（提升道奇體育場快車）
- 設計和使用方案
- 《環境影響報告草案》中的非 CEQA 附加評估
  - 洛杉磯州立歷史公園的使用情況
    - 放風箏
    - 特別活動
  - 空域評估

Project Overview

- Provide a permanent transit connection from Los Angeles Union Station (LAUS) to the Dodger Stadium property via a 1.2-mile aerial gondola system
  - Travel time from LAUS to Dodger Stadium would be approximately 7 minutes
- Capacity of approximately 5,000 people per hour per direction
- Operate daily to serve existing residents, workers, park users, and visitors to Los Angeles
- Provide access to the Los Angeles State Historic Park and surrounding communities via the intermediate Chinatown/State Park Station
- Zero emission, environmentally friendly rapid transit that would reduce GHG emissions as a result of reduced vehicle trips in and around Dodger Stadium and on neighborhood streets, arterial roadways, and freeways

Project Location and Alignment

- The Project would commence adjacent to LAUS and El Pueblo and terminate at Dodger Stadium, with an intermediate station at the southernmost entrance to the Los Angeles State Historic Park
- Connect surrounding communities of Chinatown, Mission Junction, Elysian Park, Echo Park, and Solano Canyon to the regional transit system accessible at Union Station
- The proposed Project alignment maximizes alignment along the public ROW and publicly owned property and minimizes aerial rights over private properties, taking into account existing and future adjacent land uses



Precedent for Aerial Transit Systems

- Aerial transit technology has been used for over 100 years
- Modern systems are a feasible mode of urban transit and are currently operating in numerous cities around the world
- Established gondola transit systems worldwide – such as La Paz, Bolivia and Mexico City, Mexico – are being used as rapid transit for the urban populations that they service
- Similar to the systems used in Koblenz, Germany, Phu Quoc, Vietman, and Toulouse, France, the proposed Project is a “3S” gondola
  - Cabins will carry approximately 30 to 40 passengers
  - System will provide a smooth, stable ride

Portland, Oregon

Roosevelt Island, New York

La Paz, Bolivia

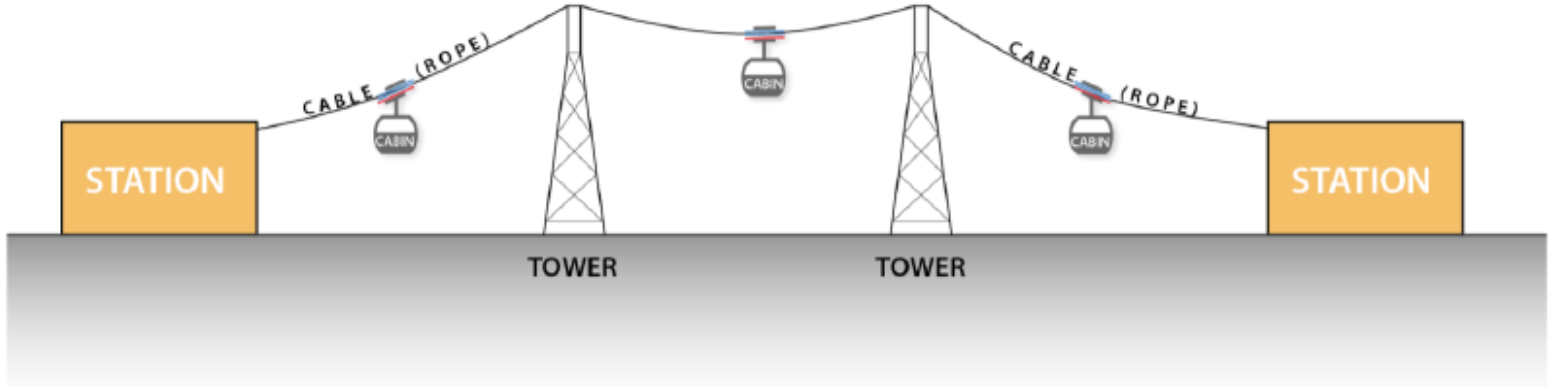
Mexico City, Mexico

Toulouse, France

Medellín, Colombia

Cables and Ropeway Technology

LA ART system proposes passenger stations, a non-passenger junction, and towers to support the aerial cables that carry the gondola cabins, which can each carry 30 - 40 passengers



- High passenger capacity: detachable cabins with “3S” system
  - “3S” system includes three cables: two “track ropes” for stability and a third “haul rope” to circulate the cabins
  - Capacity to move approximately 5,000 people per hour per direction with quiet, safe, environmentally friendly system
- Cabins detach from continuously circulating haul rope and slow down upon entering a station for passenger exit and entry, then reattach to haul rope
- Cabins allow for sitting or standing, are fully ADA accessible, and provide room for baby strollers and bicycles

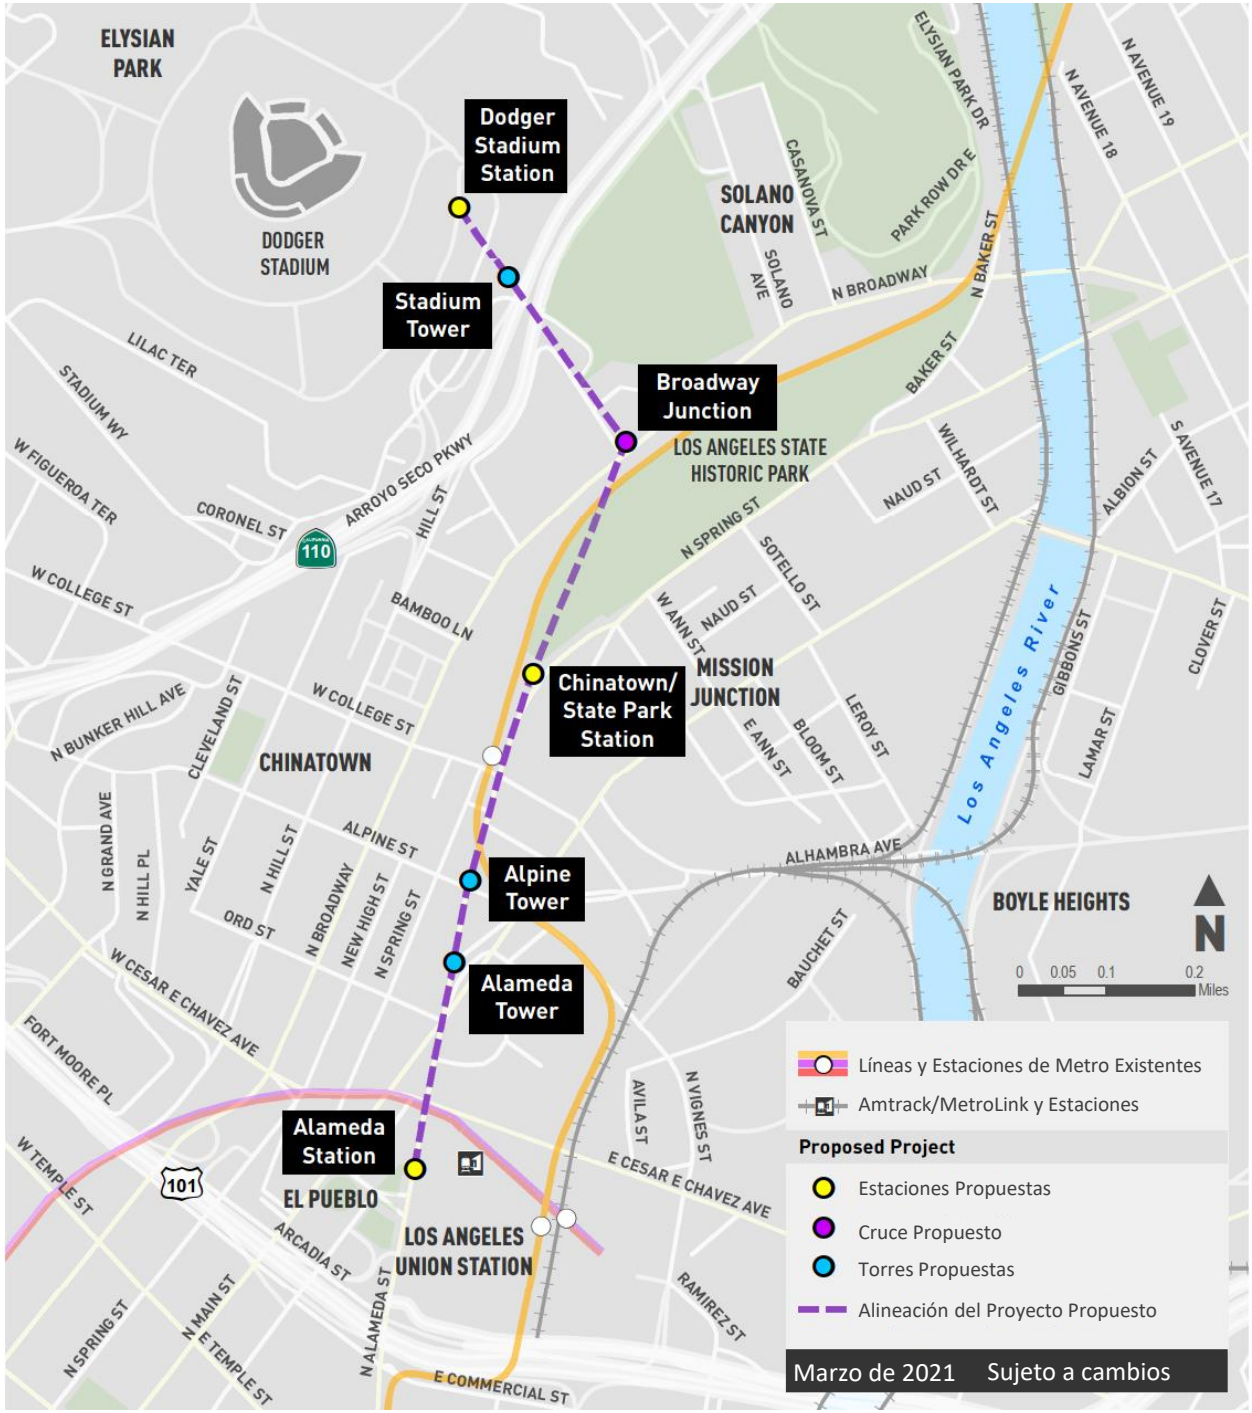
Koblenz, Germany

Generalidades del Proyecto

- Proporciona una conexión de transporte permanente desde la estación Los Angeles Union Station (LAUS) hasta la propiedad del estadio Dodger Stadium a través de un sistema de góndolas elevadas de 1.2 millas (1.93 km).
  - El tiempo de traslado desde la estación LAUS hasta el Dodger Stadium sería de aproximadamente 7 minutos
- Capacidad de aproximadamente 5,000 personas por hora y por dirección
- Funcionamiento diario para dar servicio a los residentes, trabajadores, usuarios del parque y visitantes de Los Ángeles
- Da acceso al parque Los Angeles State Historic Park y a las comunidades circundantes a través de la estación intermedia Chinatown/State Park
- Transporte rápido de cero emisiones, respetuoso del medio ambiente, que reduciría las emisiones de GEI gracias a la reducción de la congestión vehicular en el Dodger Stadium y sus alrededores y en las calles del vecindario, las carreteras arteriales y las autopistas.

Alineación y Ubicación del Proyecto

- El proyecto comenzaría junto a la estación LAUS y El Pueblo, y terminaría en el Dodger Stadium, con una estación intermedia en la entrada que está más al sur del parque Los Angeles State Historic Park.
- Conecta las comunidades circundantes de Chinatown, Mission Junction, Elysian Park, Echo Park y Solano Canyon con el sistema de transporte regional accesible en Union Station
- La alineación propuesta del proyecto maximiza la alineación a lo largo del derecho de paso (ROW) público y la propiedad pública y minimiza los derechos aéreos sobre las propiedades privadas, teniendo en cuenta los usos de la tierra adyacentes existentes y futuros



Precedentes de Sistemas de Transporte Aéreo

- La tecnología de transporte aéreo se ha usado durante más de 100 años
- Los sistemas modernos son un medio factible de transporte urbano y actualmente funcionan en varias ciudades alrededor del mundo
- Sistemas de transportes de góndolas establecidos en el mundo, como los de La Paz, Bolivia y de la Ciudad de México, México, se usan como sistema de transporte rápido para las poblaciones urbanas a las que sirven
- Al igual que los sistemas utilizados en Koblenz (Alemania), Phu Quoc (Vietnam) y Toulouse (Francia), el proyecto propuesto es de góndolas "3S".
  - Las cabinas transportarán aproximadamente de 30 a 40 pasajeros
  - El sistema proporcionará un viaje fluido y estable

Portland, Oregon

Roosevelt Island, New York

La Paz, Bolivia

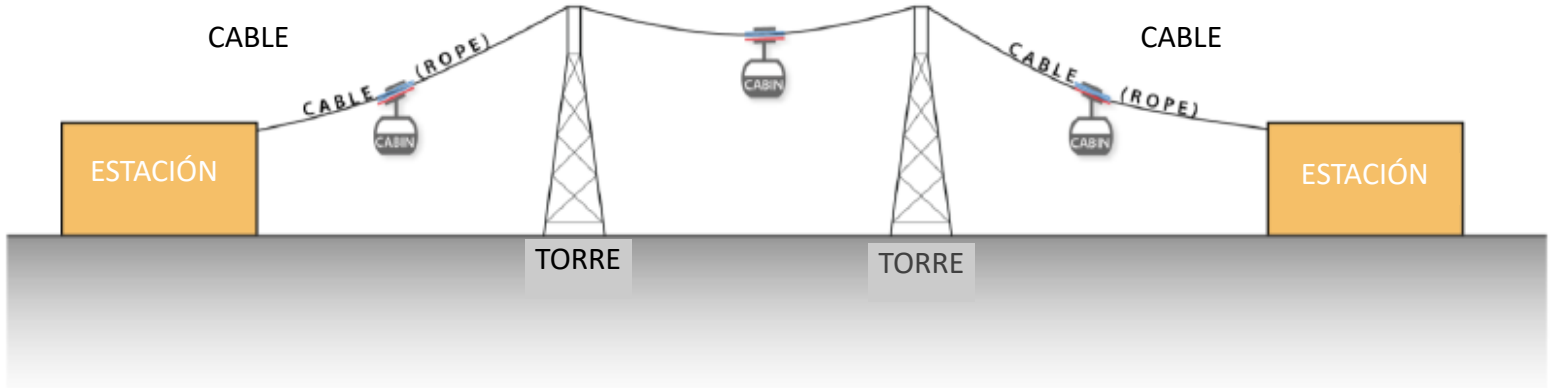
Ciudad de México, México

Toulouse, Francia

Medellín, Colombia

Tecnología de Transporte con Cables

El sistema LA ART propone estaciones de pasajeros, un cruce de vías sin pasajeros y torres para soportar los cables elevados que transportan las cabinas de las góndolas, cada una de las cuales puede transportar entre 30 y 40 pasajeros



- Gran capacidad de pasajeros: cabinas desmontables con sistema "3S"
  - El sistema "3S" incluye tres cables: dos "cables guía" para la estabilidad y un tercer "cable de arrastre" para la circulación de las cabinas
  - Capacidad para trasladar a unas 5,000 personas por hora y por dirección con un sistema silencioso, seguro y respetuoso del medio ambiente
- Las cabinas se desprenden del cable de arrastre que circula continuamente, se frenan al entrar en una estación para la salida y entrada de pasajeros, y luego se vuelven a unir al cable de arrastre
- Las cabinas permiten que las personas vayan sentadas o de pie, brindan acceso total requerido por la ADA y ofrecen espacio para carreolas para bebés y bicicletas

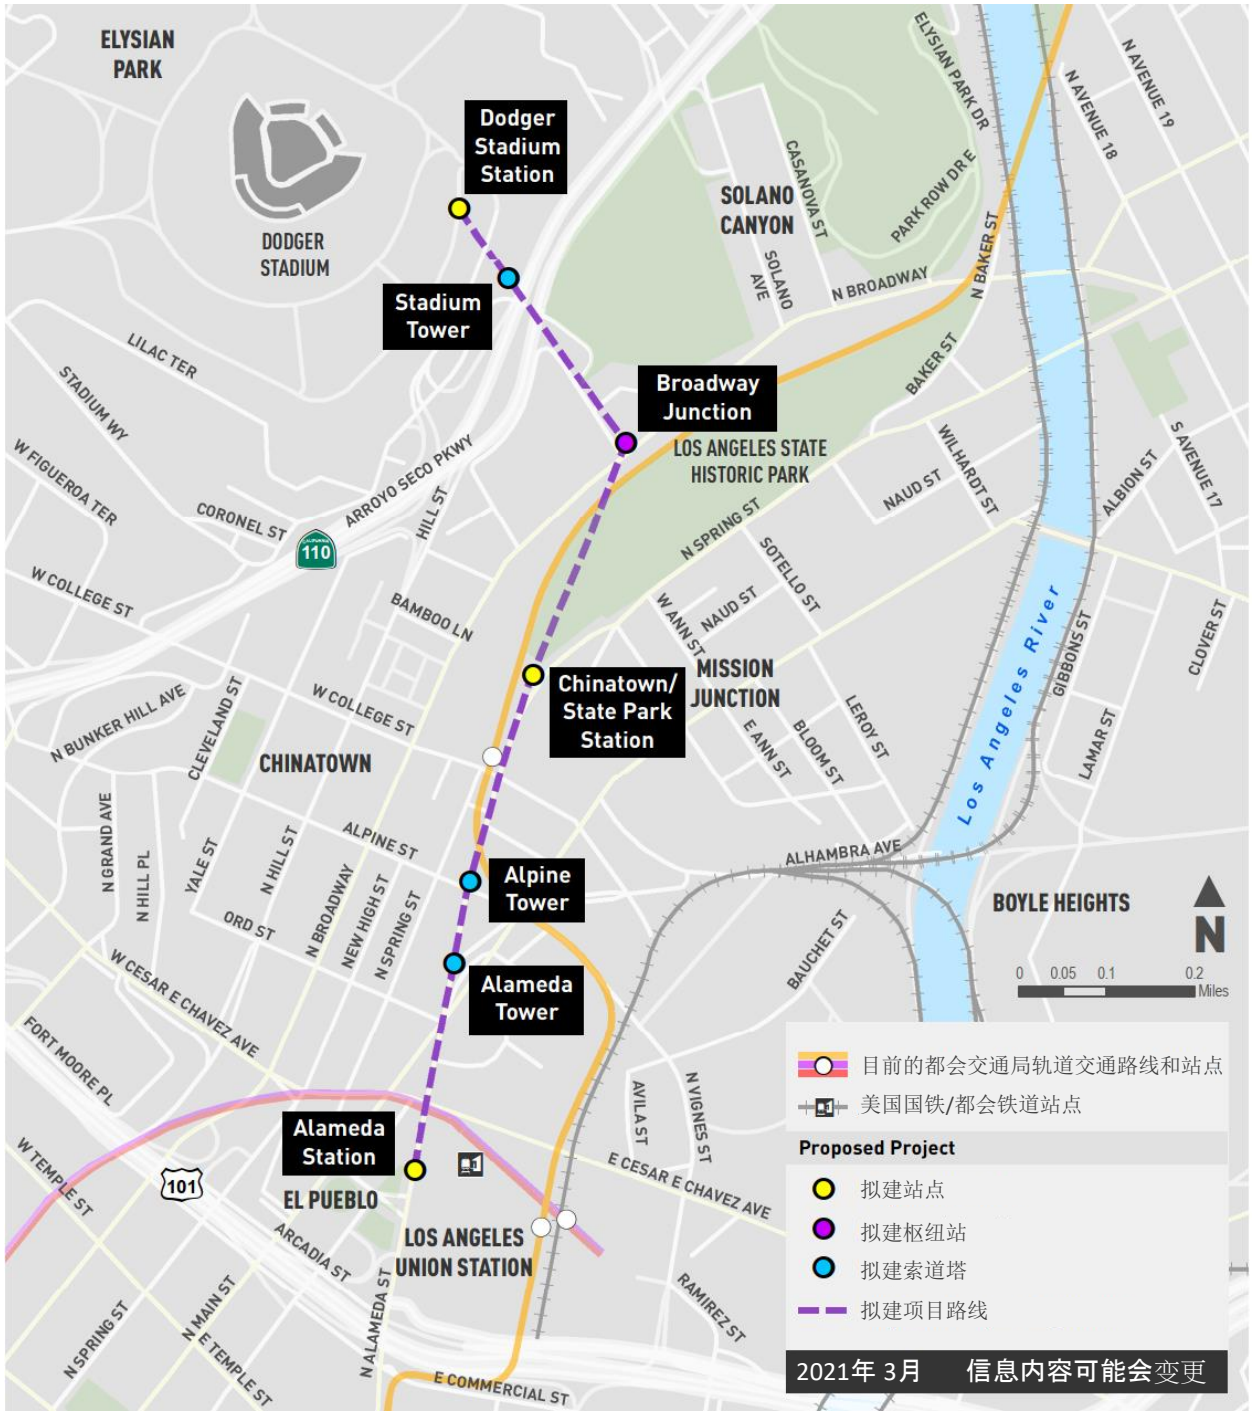
Koblenz, Alemania

项目概况

- 通过1.2英里的空中缆车系统提供从洛杉矶联合车站（LAUS）到道奇体育馆的永久性交通连接
  - 从洛杉矶联合车站到道奇体育馆的旅程约为7分钟
- 运力约为每个方向每小时5,000人次
- 拟建项目将每天运作，为现有居民、上班族、公园使用者和洛杉矶的访客提供服务
- 可通过中间的唐人街/州立公园站前往洛杉矶州立历史公园和周边社区
- 零排放、环保的快速交通系统，由于减少了道奇体育馆内和周围以及附近街道、主要干道和高速公路上的车辆出行，将减少温室气体排放

项目地点和路线

- 拟建项目将以洛杉矶联合车站和洛杉矶古城(El Pueblo)附近为起点，以道奇体育馆为终点，还有一个中间站位于洛杉矶州立历史公园最南门入口处。
- 连接包括唐人街、Mission Junction社区、伊利森公园、回音（Echo）公园和索拉诺（Solano）峡谷的周边社区与联合车站的区域交通系统。
- 拟建的项目路线尽可能沿着沿公共通行权（ROW）和公有财产，并尽可能减少使用在私人财产上空的空中权利，同时考虑到现有和未来的邻近土地用途



空中交通系统的先例

- 空中交通技术已经使用了100多年
- 现代系统是一种可行的城市交通方式，目前正在世界各地的许多城市运行
- 世界各地如玻利维亚的拉巴斯和墨西哥的墨西哥城已有的空中缆车交通系统，正为相应的城市人口提供快速交通服务。
- 拟建项目与德国科布伦茨、越南富国岛和法国图卢兹所使用的系统类似，是一个“3S”空中缆车。
  - 车厢可搭载约30至40名乘客。
  - 系统将提供平稳流畅的乘车体验

俄勒冈州波特兰

纽约罗斯福岛

玻利维亚拉巴斯

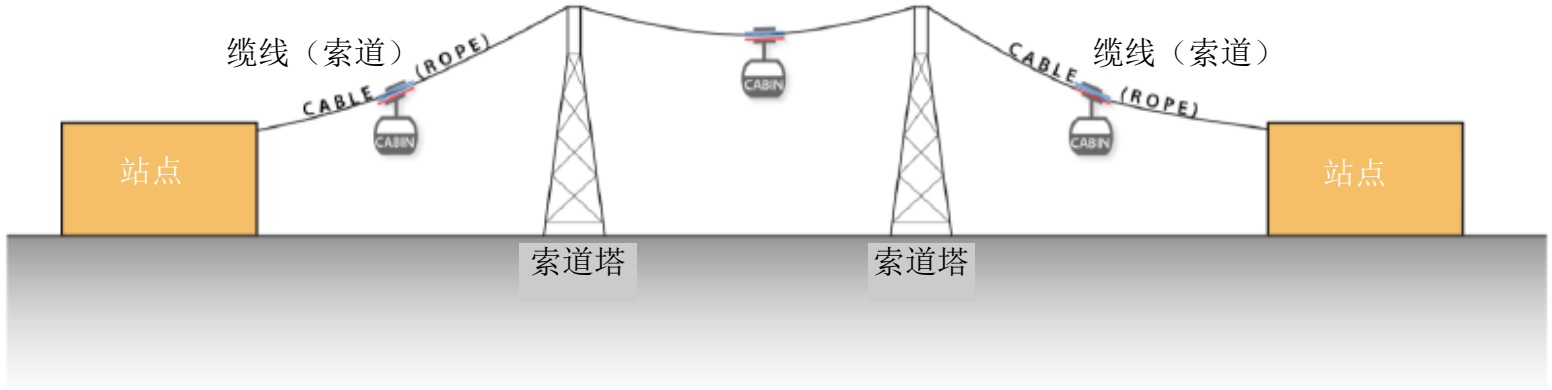
墨西哥的墨西哥城

法国图卢兹

哥伦比亚麦德林

缆线与索道技术

洛杉矶空中快速交通系统提议了几个客站、一个非客站以及为运输空中缆车的缆线提供支撑的几个索道塔，每个缆车可搭乘30-40名乘客



- 客运力高：“3S”系统可分离式缆车
  - “3S”系统包括三根缆线：两根“轨道索”用于稳定，第三根“牵引索”用于使缆车移动。
  - 每小时每个方向可运送约5000人，系统安静、安全、环保
- 车厢与连续循环的牵引索分离并减速进入车站以便乘客上下车，然后重新连接至牵引索上
- 车厢里可以坐着或站着，完全符合《美国残疾人法案》（ADA）标准，并为婴儿车和自行车提供了空间

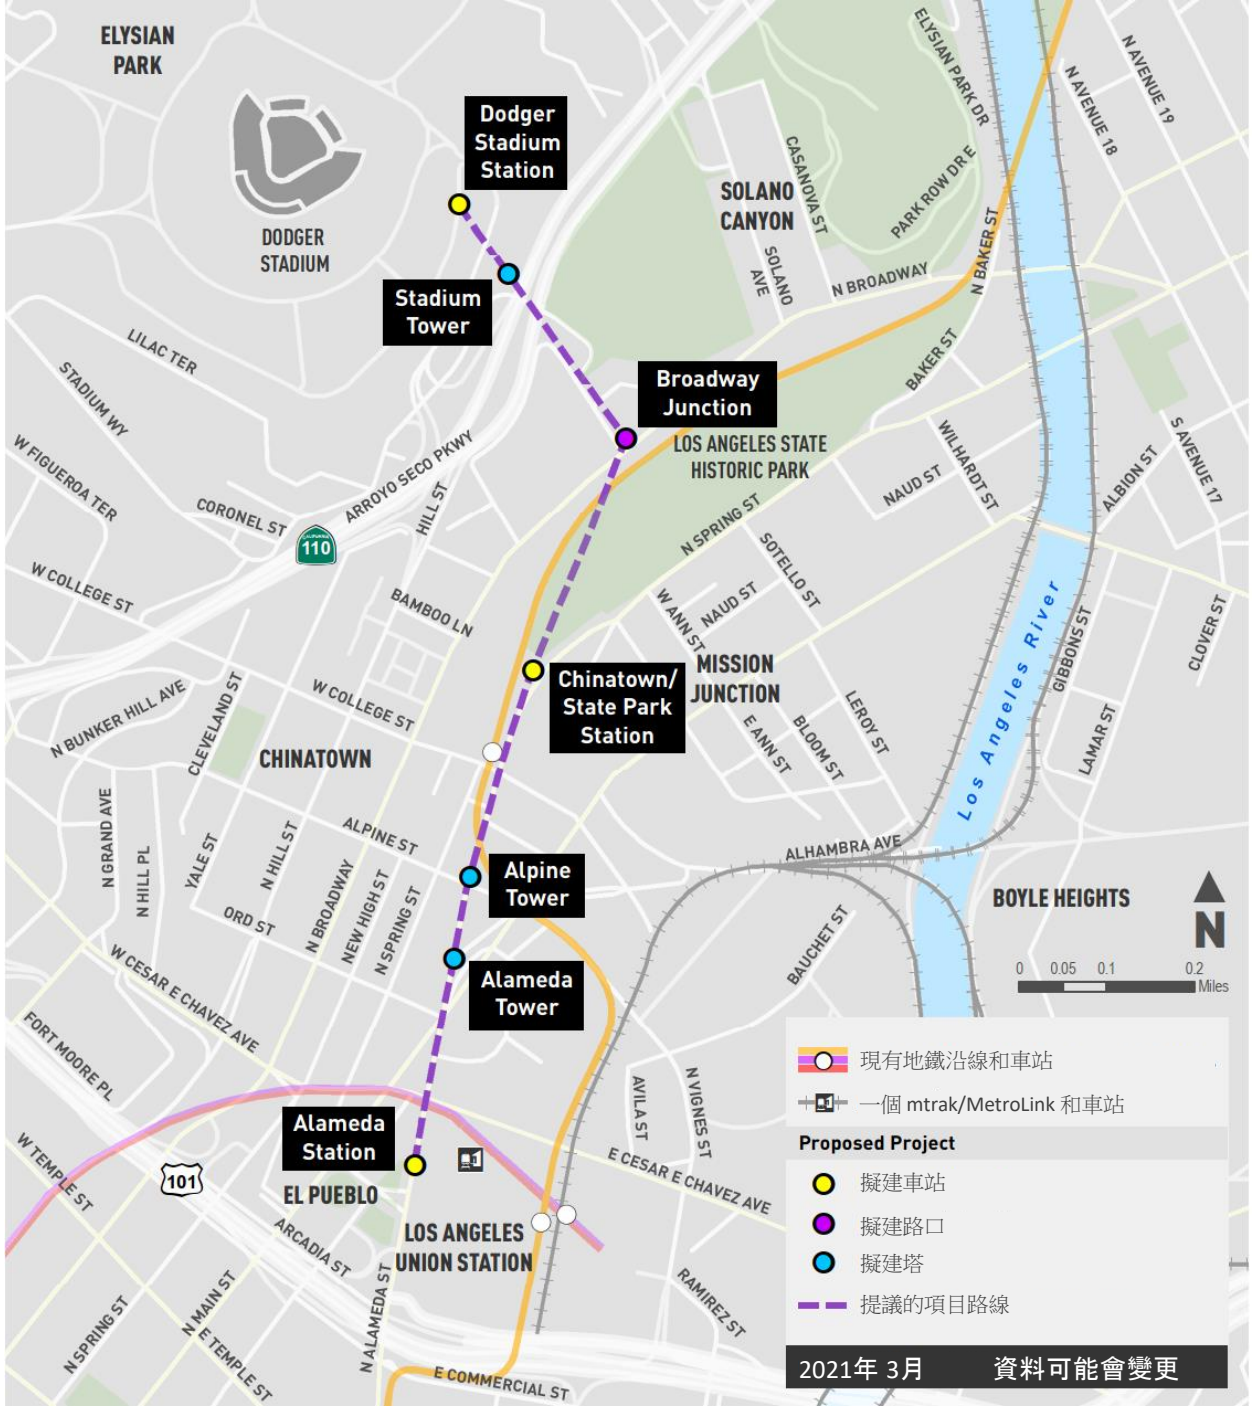
德国科布伦茨

計畫概述

- 透過 1.2 公里的空中快速纜車系統能提供從洛杉磯聯合車站 (LAUS) 到道奇體育場的永久交通連接
  - 從洛杉磯聯合車站到道奇體育場的行車時間約為7分鐘
- 每個方向每小時可容納約5,000人次
- 每天運行，為洛杉磯的現有居民、工人、公園用戶和遊客提供服務
- 透過中間的唐人街/州立公園站提供前往洛杉磯州立歷史公園和周邊社區的通道
- 零排放、環保的空中快速纜車，由於減少了道奇體育場內和周圍以及附近街道、主幹道和高速公路上的車輛出行，將減少溫室氣體排放

計畫位置和路線

- 該計畫將在洛杉磯聯合車站和洛杉磯古城附近開始，並在道奇體育場結束，在洛杉磯州立歷史公園最南端的入口處設有一個中轉站
- 將唐人街、Mission Junction、伊利森公園(Elysian Park)、迴聲公園(Echo Park) 和索拉諾郡峽谷(Solano Canyon)的周邊社區連接到聯合車站可到達的區域交通系統
- 擬建計畫路線最大限度地維護公共可行使通行權（ROW）和公有財產，以及減少使用在私人財產上空的空中權利，同時也考慮現有和未來的鄰近土地用途



空中快速纜車系統先例

- 空中快速纜車技術已經有100多年歷史
- **現代系統是一種可行的城市交通模式，目前在世界各地多個城市運行**
- 全球已建立的空中快速纜車系統——如玻利維亞的拉巴斯和墨西哥的墨西哥城——正給用作他們服務的城市人口的空中快速纜車系統
- 與德國科布倫茨、越南富國島和法國圖盧茲使用的系統類似，擬建計畫是“3S”纜車
  - 車廂可乘載約30至40名乘客
  - 系統將提供平穩、穩定的行駛

俄勒岡州波特蘭

紐約羅斯福島

玻利維亞拉巴斯

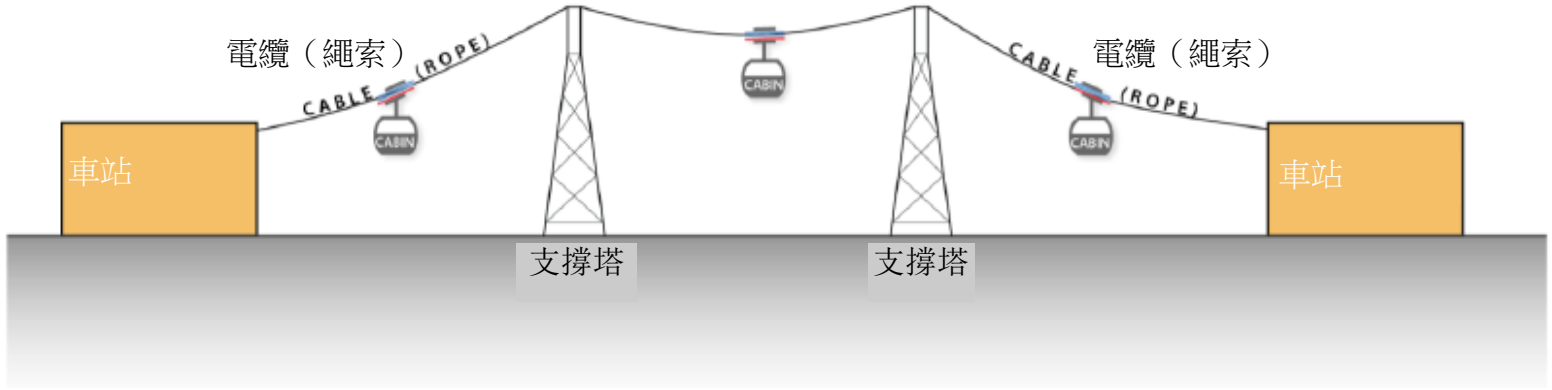
墨西哥墨西哥城

法國圖盧茲

哥倫比亞麥德林

電纜和索道技術

空中快速纜車系統建議客運站、非客運樞紐站和塔，以支撐車廂的架空電纜，每個車廂可搭載 30 - 40 名乘客



- 高載客量： “3S”系統的可拆卸車廂
  - “3S”系統包括三根電纜：兩根用於穩定的「軌道繩索」和第三根用於循環車廂的「牽引繩索」
  - 透過安靜、安全、環保的系統，每個方向每小時可運送約 5,000 人次
- 車廂從連續循環的「牽引繩索」分離並在進入車站供乘客出入時減速，然後重新連接至「牽引繩索」
- 客人可於車廂內坐下或站立，完全符合 ADA 的要求，並提供空間予嬰兒車和單車

德國科布倫茨

Draft EIR Release Schedule

Draft EIR Release	Monday, October 17, 2022
End of Draft EIR Public Comment Period	Friday, December 16, 2022

The Draft EIR will be released for a 60-day comment period

Public Meetings During Draft EIR Comment Period

Informational Workshops

Draft EIR Informational Workshop No. 1	Saturday, October 22	Virtual
Draft EIR Informational Workshop No. 2	Tuesday, October 25	In-Person

Metro will host two Informational Workshops to inform the public of the key analysis and conclusions in the Draft EIR

Public Hearings

Draft EIR Public Hearing No. 1	Saturday, December 10	In-Person
Metro EIR Public Hearing No. 2	Tuesday, December 13	Virtual

Metro will host two Public Hearings to take public comment on the Draft EIR

Calendario de Publicación del Borrador del EIR

Publicación del Borrador del EIR	Lunes 17 de Octubre de 2022
Fin del Período de Comentarios Públicos sobre el Borrador del EIR	Viernes 16 de Diciembre de 2022

El Borrador del EIR se publicará para un período de comentarios de 60 días

Reuniones Públicas durante el Período de Comentarios del Borrador del EIR

Talleres Informativos

Taller Informativo sobre el Borrador del EIR No. 1	Sábado 22 de octubre	Virtual
Taller Informativo sobre el Borrador del EIR No. 2	Martes 25 de octubre	En Persona

Metro organizará dos talleres informativos para dar a conocer al público los principales análisis y conclusiones del Borrador del EIR

Audiencias Públicas

Audiencia Pública sobre el Borrador del EIR No. 1	Sábado 10 de diciembre	En Persona
Audiencia Pública sobre el EIR de Metro No. 2	Martes 13 de diciembre	Virtual

Metro organizará dos audiencias públicas para recibir comentarios del público sobre el Borrador del EIR

¿Cómo Hacer Comentarios sobre el Borrador del EIR?

Agenda

1. Purpose of Meeting
2. How to Participate in this Virtual Meeting
3. Overview
4. CEQA Process Overview
5. LA ART Project Overview
6. Draft EIR Key Analyses and Conclusions
7. Question & Answer Session

For assistance with Zoom: please email mary.nooristani@aecom.com or call (619) 251-9180

Purpose of the Meeting

PRESENT DRAFT EIR KEY ANALYSES AND CONCLUSIONS

QUESTION + ANSWER SESSION

California Environmental Quality Act (CEQA) Process

TODAY!

Learn about the Draft EIR's key analyses and conclusions and ask questions.

No public comments will be accepted today.

How to Participate in this Meeting

TODAY!

Learn about the Draft EIR's key analyses and conclusions and ask questions.

No public comments will be accepted today.

Q&A: Use the Q&A feature to type a question during the Question & Answer Session.

Overview

Overview

- The Los Angeles Aerial Rapid Transit Project is proposed by LA Aerial Rapid Transit Technologies LLC
- Metro is the lead agency in the preparation of an Environmental Impact Report (EIR) under the California Environmental Quality Act (CEQA)
- The Draft EIR evaluates the potential environmental effects associated with construction and operation of the proposed Project

Overview

- As the lead agency, Metro has the responsibility to ensure that:
  - The EIR adequately assesses the potential project impacts
  - The proposed mitigation measures are appropriate
  - The CEQA process has been complied with for public notices, public outreach, and distribution of documents

Overview

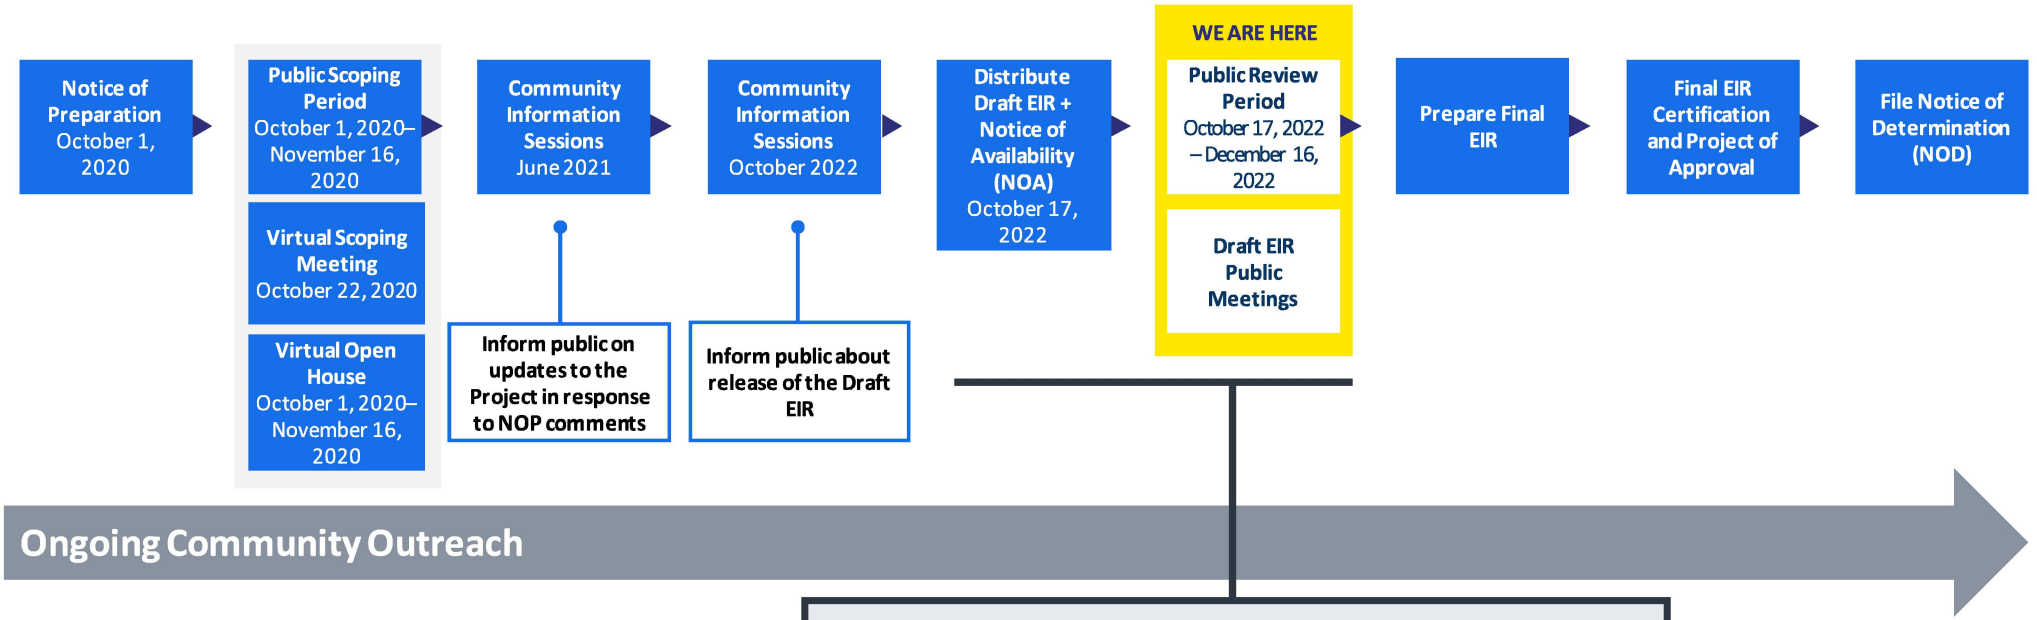
- We are currently accepting public comments on the Draft EIR under CEQA
  - Public Hearings
  - Email
  - Mail
  - Phone
- Senate Bill 44
  - Provides CEQA litigation streamlining for "environmental leadership transit projects"Los Angeles County
  - The proposed Project will be the first environmental leadership transit project under Senate Bill 44
  - Public Hearing Requirements
    - **Informational Workshop: within the first 10 calendar days of the public comment period to inform the public about the Draft EIR's key analyses and conclusions**
    - Public Hearing: within the last 10 calendar days of the public comment period to obtain public testimony

Overview of the California Environmental Quality Act (CEQA) Process

CEQA Process

- Required for all projects undertaken, funded, or requiring approval by a public agency
- Informs the public and decision makers
- Discloses potential environmental impacts resulting from a proposed project
- Provides the opportunity to comment on environmental issues
- Two public comment periods: Scoping Period and Draft EIR Public Review
- SB 44 requires two public meetings during Draft EIR Public Review: Informational Workshop and Public Hearing

Timeline



What is the Purpose of the Draft EIR?

The purpose of the Draft EIR is to evaluate the potential for environmental impacts associated with implementation of the proposed Project, and to provide mitigation measures where required

Public Meetings During Draft EIR Public Review Period

Informational Workshops

Draft EIR Informational Workshop No. 1	Saturday, October 22	Virtual
Draft EIR Informational Workshop No. 2	Tuesday, October 25	In-Person

Metro will host two Informational Workshops to inform the public of the key analyses and conclusions in the Draft EIR

Public Hearings

Draft EIR Public Hearing No. 1	Saturday, December 10	In-Person
Metro EIR Public Hearing No. 2	Tuesday, December 13	Virtual

Metro will host two Public Hearings to take public comment on the Draft EIR

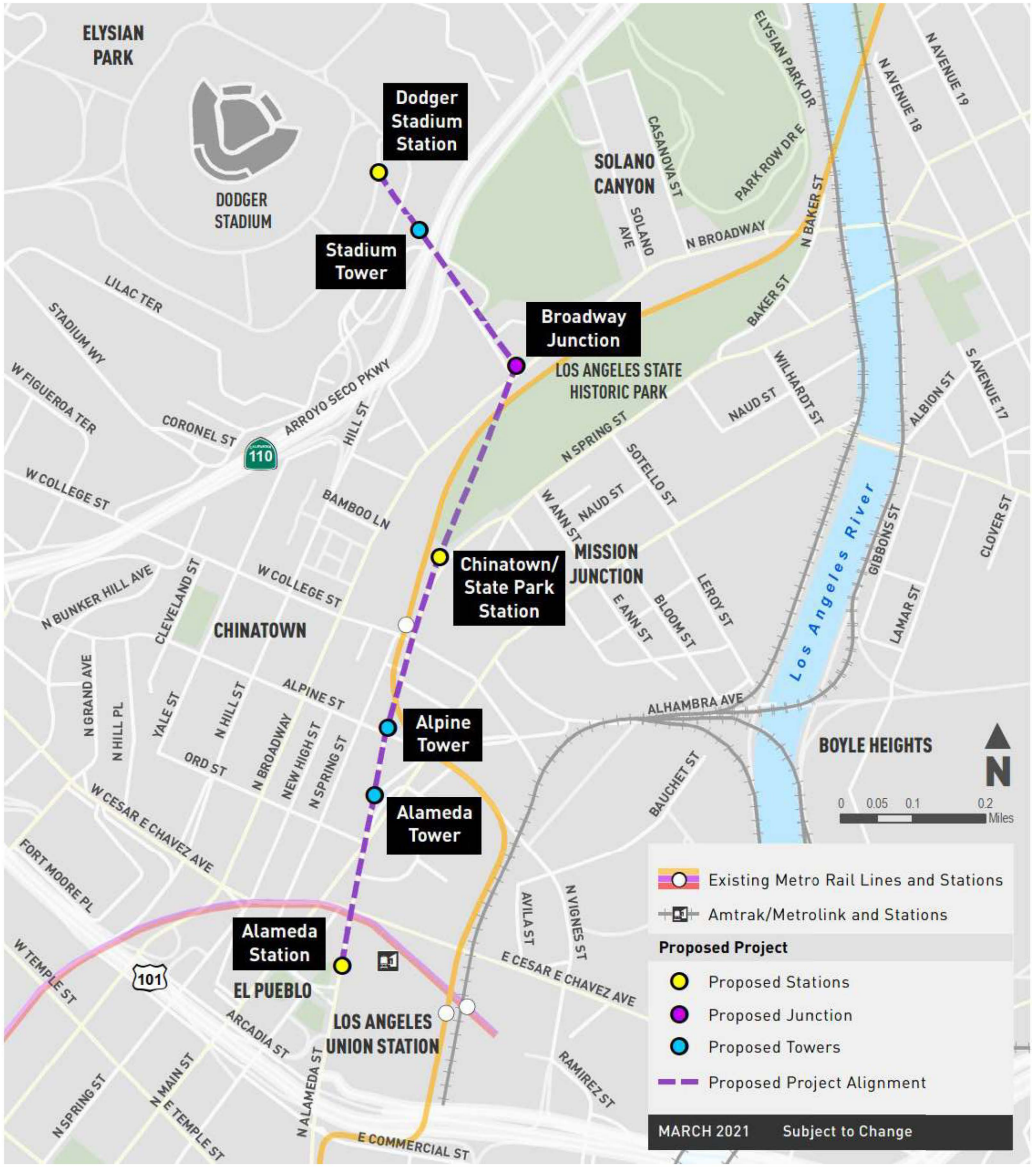
Project Description

Project Overview

- Provide a permanent transit connection from Los Angeles Union Station (LAUS) to the Dodger Stadium property via a 1.2-mile aerial gondola system
  - Travel time from LAUS to Dodger Stadium would be approximately 7 minutes
- Capacity of approximately 5,000 people per hour per direction
- Operate daily to serve existing residents, workers, park users, and visitors to Los Angeles
- Provide access to the Los Angeles State Historic Park and surrounding communities via the intermediate Chinatown/State Park Station
- Zero emission, environmentally friendly rapid transit that would reduce GHG emissions as a result of reduced vehicle trips in and around Dodger Stadium and on neighborhood streets, arterial roadways, and freeways

Project Location and Alignment

- The Project would commence adjacent to Union Station and El Pueblo and terminate at Dodger Stadium, with an intermediate station at the southernmost entrance to the Los Angeles State Historic Park
- Connect surrounding communities of Chinatown, Mission Junction, Elysian Park, Echo Park, and Solano Canyon to the regional transit system accessible at Union Station
- The proposed Project alignment maximizes alignment along the public ROW and publicly owned property and minimizes aerial rights over private properties, taking into account existing and future adjacent land uses



Precedent for Aerial Transit Systems

- Aerial transit technology has been used for over 100 years
- Modern systems are a feasible mode of urban transit and are currently operating in numerous cities around the world
- Established gondola transit systems worldwide – such as La Paz, Bolivia and Mexico City, Mexico – are being used as rapid transit for the urban populations that they service
- Similar to the systems used in Koblenz, Germany, Phu Quoc, Vietman, and Toulouse, France, the proposed Project is a "3S" gondola
  - Cabins will carry approximately 30 to 40 passengers
  - System will provide a smooth, stable ride

Portland, Oregon

Roosevelt Island, New York

La Paz, Bolivia

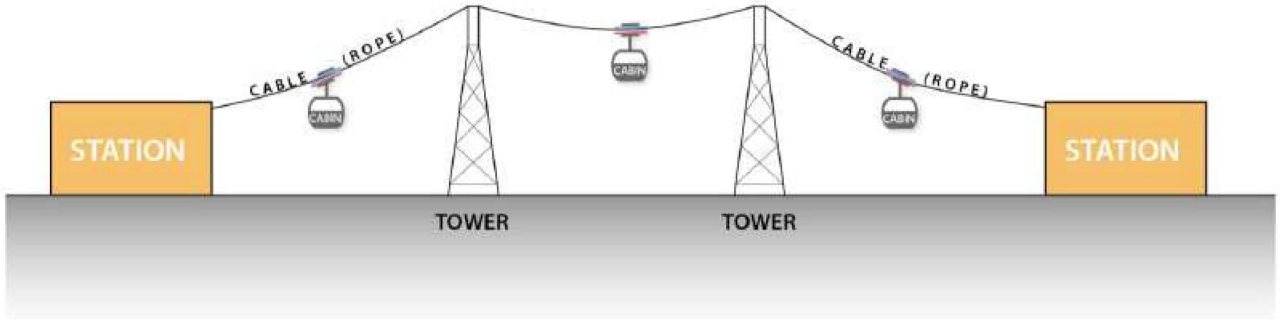
Mexico City, Mexico

Toulouse, France

Medellín, Colombia

Ropeway Technology

The ART system includes passenger stations, a non-passenger junction, and towers, which support the aerial cables that carry the gondola cabins



3 Passenger Stations

- Include mechanical, electrical, and plumbing systems, boarding platforms, and vertical circulation (e.g., stairs, escalators, and elevators)
- Include areas for ticketing, fare checking, and queueing; loading and unloading of passengers; operations; and system equipment

1 Non-Passenger Junction

- Required for the ART system to turn the cables and remain along the alignment

3 Towers to Support the Cables and Cabins

“3S” System and Gondola Cabins

“3S” System

- “3S” system includes three cables: two “track ropes” for stability and a third “haul rope” to circulate the cabins
- Cabins detach from continuously circulating haul rope and slow down upon entering a station for passenger exit and entry, then reattach to haul rope

Cabins

- 30 to 40 passengers each, depending on the exact configuration of seating and cabin amenities selected
- Fully ADA accessible and would accommodate wheelchairs
- Allow for sitting or standing
- Provide room for baby strollers and bicycles
- Would move at a maximum speed of 13.4 miles per hour during peak operations
- As they enter a station, the cabins would slow down to a speed of roughly one foot per second (less than one mile per hour) to allow passengers to enter and exit the moving cabin

Purpose and Need

- Provide a direct transit connection between Union Station and the Dodger Stadium property via an aerial gondola system
- Connect surrounding communities of Chinatown, Mission Junction, Los Angeles State Historic Park, Elysian Park, Echo Park, and Solano Canyon to the regional transit system accessible at Union Station
- Improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS
- Provide a mobility hub at the Chinatown/State Park Station
- Provide a sustainable form of transit by operating the ART system with the use of zero emission electricity with battery storage backup in order to reduce GHG emissions and improve air quality

Dodger Stadium: One of the Region's Most Visited Venues

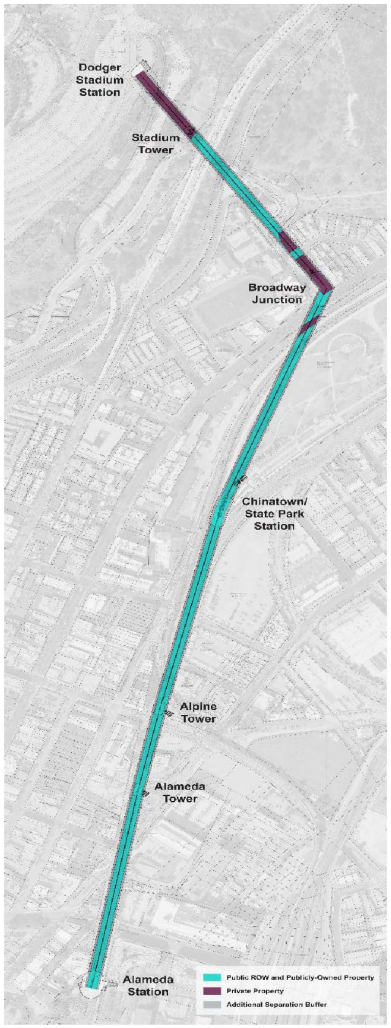
- Draws large regional crowds, with approximately 100 baseball games and other events each year
- Vast majority of visitors drive their personal vehicles
- Vehicles create congestion throughout the surrounding communities and nearby freeways
- Communities in the vicinity of the proposed Project alignment were identified as being in the 90 – 100 percentile of communities disproportionately burdened by multiple sources of pollution in the State (CalEnviroScreen 4.0 Map)

Project Objectives

- Expand mobility options for transit riders through a direct connection between LAUS and Dodger Stadium, a regional event center.
- Attract new transit riders to the Metro system through a unique experience of an aerial transit system and connecting to Dodger Stadium.
- Improve the Dodger Stadium visitor experience by providing efficient, high-capacity, and faster alternative access to Dodger Stadium.
- Enhance safety of neighborhoods adjacent to Dodger Stadium by reducing the number of vehicles in the area.
- Reduce transportation related pollution and greenhouse gas (GHG) emissions as a result of reduced vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days.
- Increase connectivity of people to the region's public transportation hub at LAUS and the Dodger Stadium property.
- Improve transit rider experience by providing unique scenic views of the Los Angeles area to ART passengers and Dodger fans.
- Bring a world class aerial transit system to the Los Angeles area.
- Enhance community connectivity by providing first/last mile transit and pedestrian access to areas that have historically been underserved, including the Los Angeles State Historic Park and Elysian Park.
- Identify comparable, affordable, and accessible fare opportunities for community and Los Angeles State Historic Park and Elysian Park access.
- Minimize the Project's environmental footprint through the integration of sustainability and environmentally-friendly design features into the materials, construction, operations, and maintenance of the proposed Project.
- Provide a sustainable form of transit by operating the ART system with the use of zero emission electricity with battery storage backup in order to reduce GHG emissions and improve air quality.
- Maximize the Project's alignment along the public ROW and publicly owned property and minimize aerial rights requirements over private properties, taking into account existing and future adjacent land uses.

Aerial Clearance | Alignment Over Public ROW/Publicly-Owned Property and Private Property

- Industry standards for the design and operation of ropeways and cabins are documented in the American National Standards Institute (ANSI) Standard B77.1, which is developed in coordination with manufacturers, consumers, and regulators
  - ANSI B77.1 regulates vertical and horizontal clearances between the ropeway and cabins to elements such as vehicles, pedestrians, vegetation, buildings, and other structures
- Alignment maximizes alignment along the public ROW and publicly owned property and minimizes aerial rights over private properties, taking into account existing and future adjacent land uses
- Additional considerations in selecting Project alignment:
  - Minimizing changes to travel lanes, parking lanes, and bicycle and pedestrian circulation
  - Minimizing utility relocations
  - Location of historic and archaeological resources
  - Minimize use of uneven or difficult topography
  - Technical considerations and feasibility

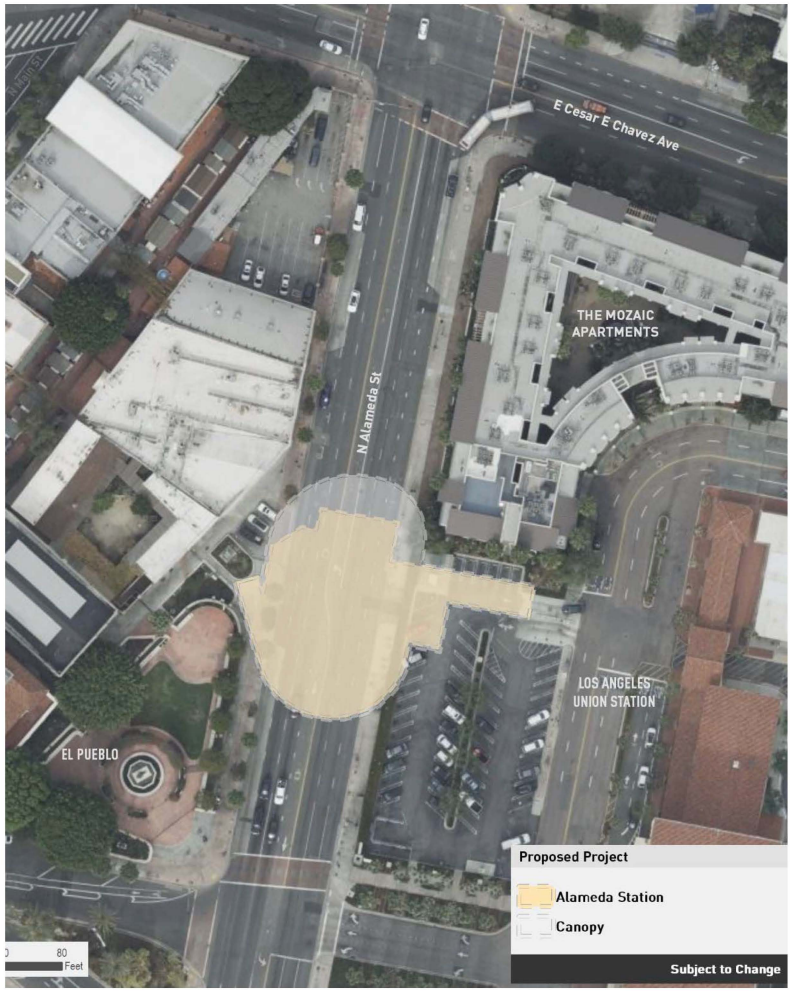


Design

- Design goal is to develop a common architectural design that unifies the overall aerial gondola system, while allowing for each major component to contribute to the respective localized urban condition
- Of equal importance is the desire to minimize the perceived scale and mass of the stations non-passenger junction, and towers
- The stations and junction take advantage of a simple barrel vault form to provide the minimum enclosure needed to protect the ropeway equipment and provide shade and weather protection to passengers on the boarding platform
- Each of the towers is designed so that their bases would not impede adjacent vehicular and pedestrian circulation, and the neutral light-tone gray is intended to conform with the surrounding urban environment

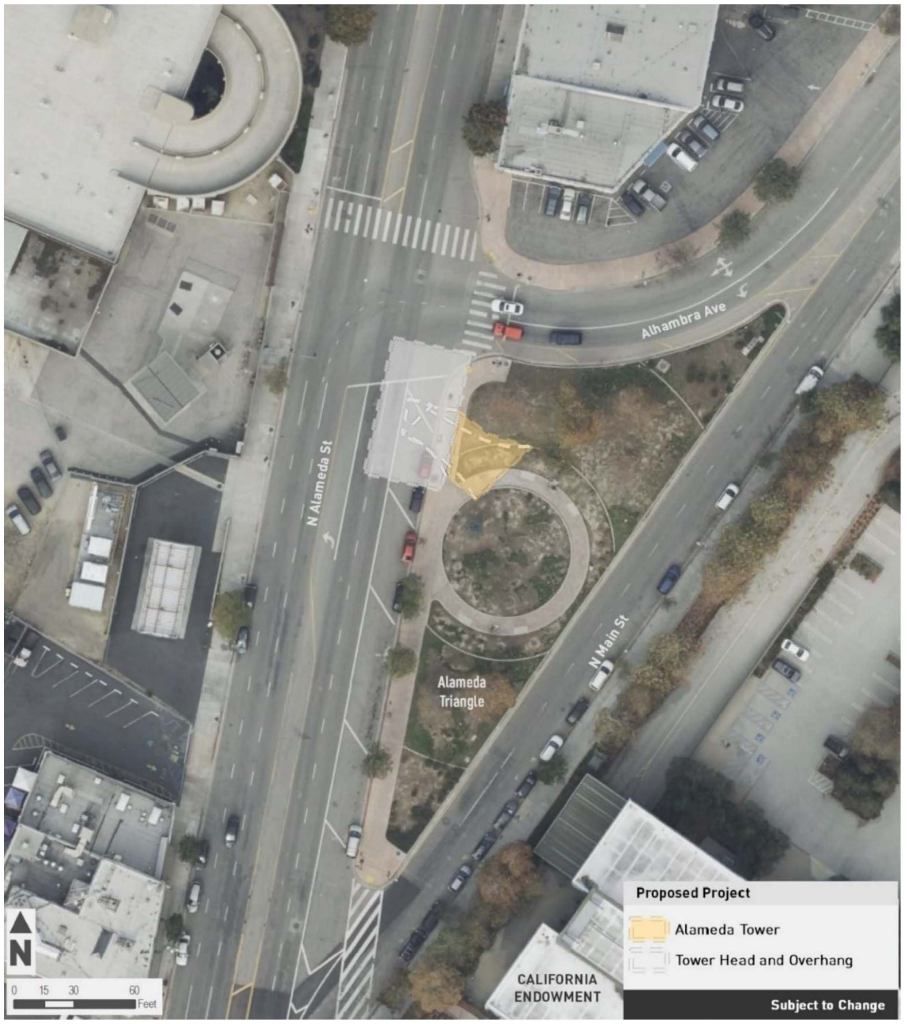
Alameda Station

- On Alameda Street adjacent to the planned LAUS Forecourt and Placita de Dolores between Los Angeles Street and Cesar Chavez Avenue
- Station would be approximately 173 feet long, 109 feet wide, and 78 feet high at its tallest point
- Passenger loading platform would be approximately 31 feet above Alameda Street
- Vertical circulation would be introduced on the north of the Placita de Dolores in a proposed new pedestrian plaza at El Pueblo and on the east from the planned LAUS Forecourt



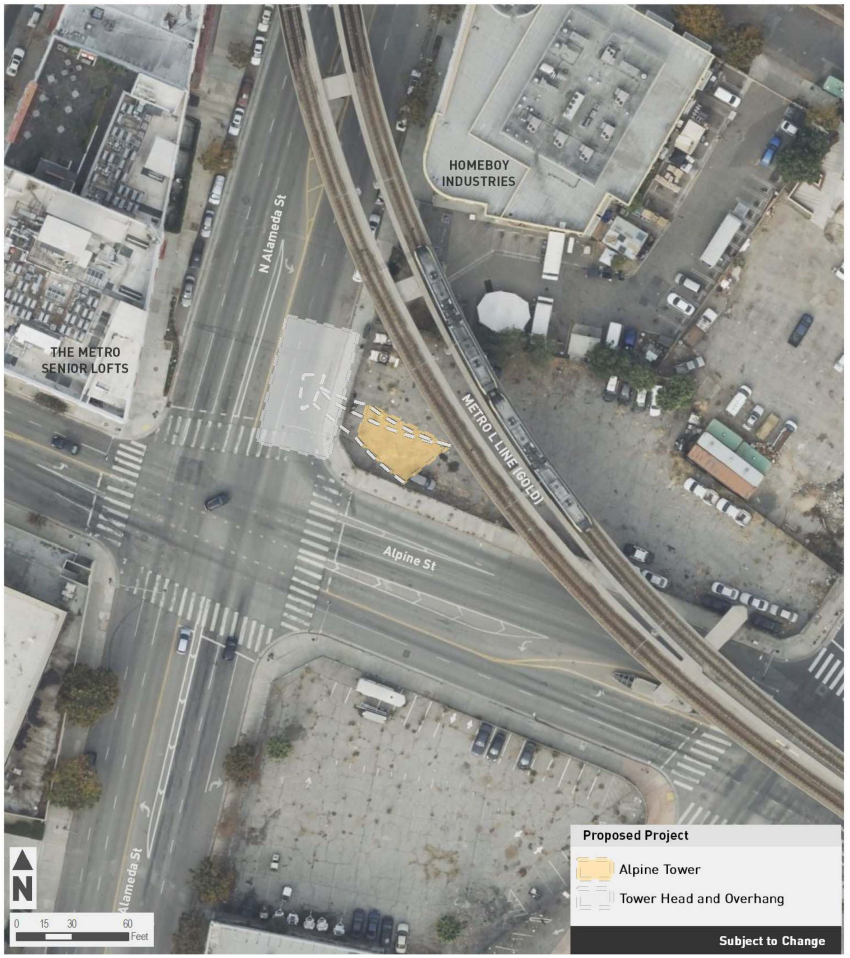
Alameda Tower

- Located on the Alameda Triangle, a City ROW between Alameda Street, North Main Street, and Alhambra Avenue
- 195 feet tall with the cable suspended 175 feet above ground
- Landscape and hardscape updates to the Alameda Triangle, including reuse and integration of existing pavers



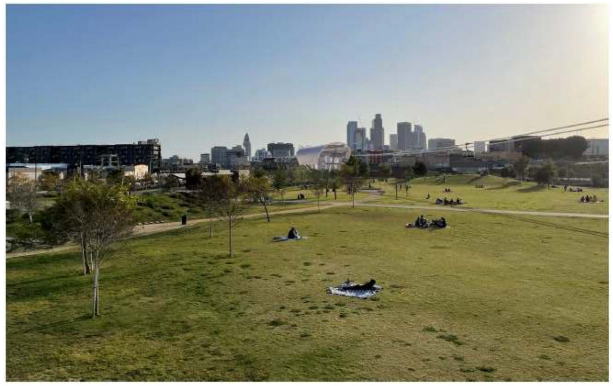
Alpine Tower

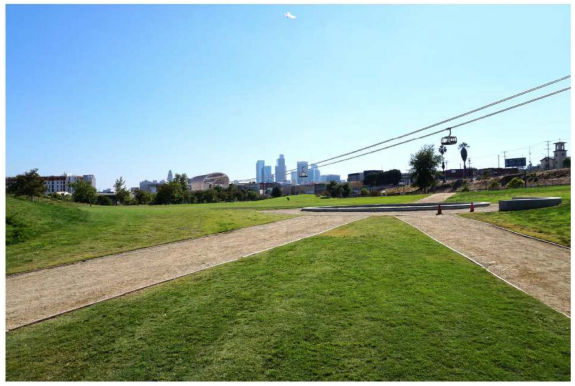
- Located northeast corner of Alameda Street and Alpine Street, adjacent to the Metro L Line (Gold)
- Site is City-owned parcel, currently being used as non-public parking storage for City vehicles
- 195 feet tall at tallest point, with the cable suspended 175 feet above ground
- Landscaping and hardscaping near the base of the tower



Chinatown/State Park Station

- Adjacent to Spring Street in the southernmost portion of the Los Angeles State Historic Park
- Southern portion would be located on City ROW, with northern portion integrated into the southern boundary of the Los Angeles State Historic Park
- Station would be approximately 200 feet long, 80 feet wide, and 98 feet tall at its tallest point
- Passenger boarding platform approximately 50 feet above-grade
- Access to the boarding platform would be from the mezzanine via elevators and stairs
- Would include the installation of landscaping and hardscaping, including integration of the granite pavers





Chinatown/State Park Station

Station Amenities

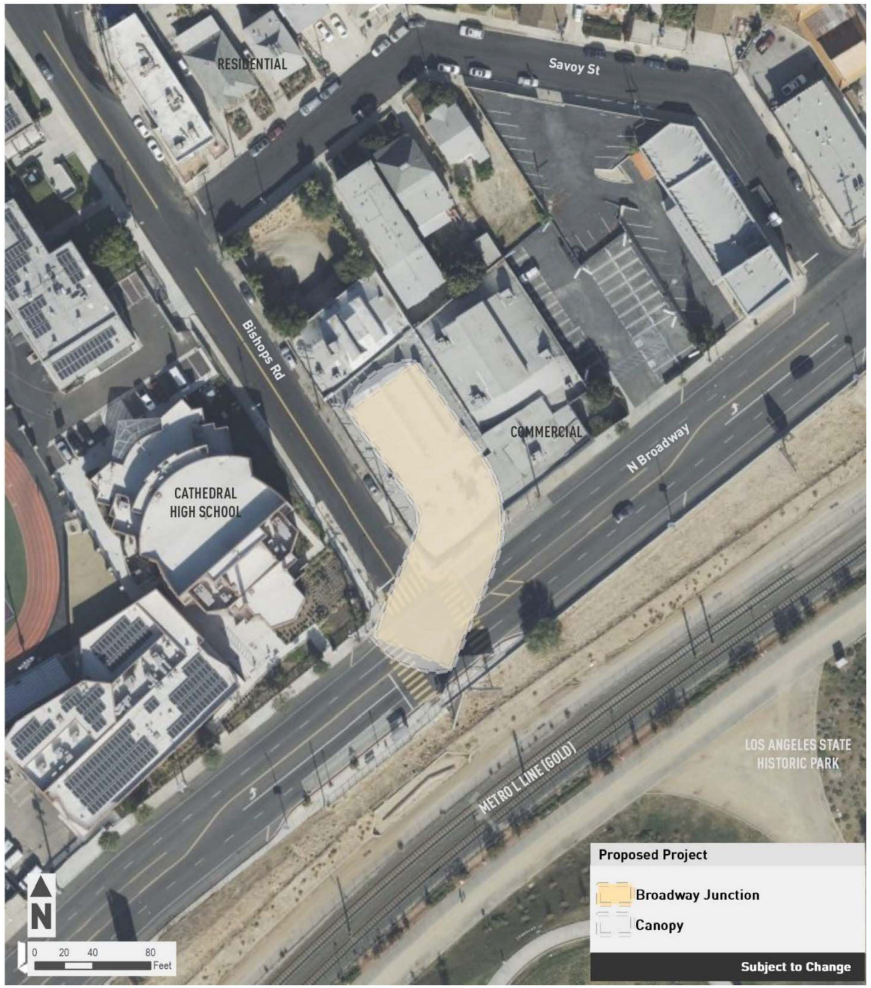
- Mobility hub where passengers would be able to access a suite of first and last mile multi-modal options, such as a bike share program
- Pedestrian improvements, including hardscape and landscape improvements, shade structures, and potential seating

Park Amenities

- 740 square feet of concessions
- 770 square feet of restrooms
- 220 square foot covered breezeway connecting concessions and restrooms

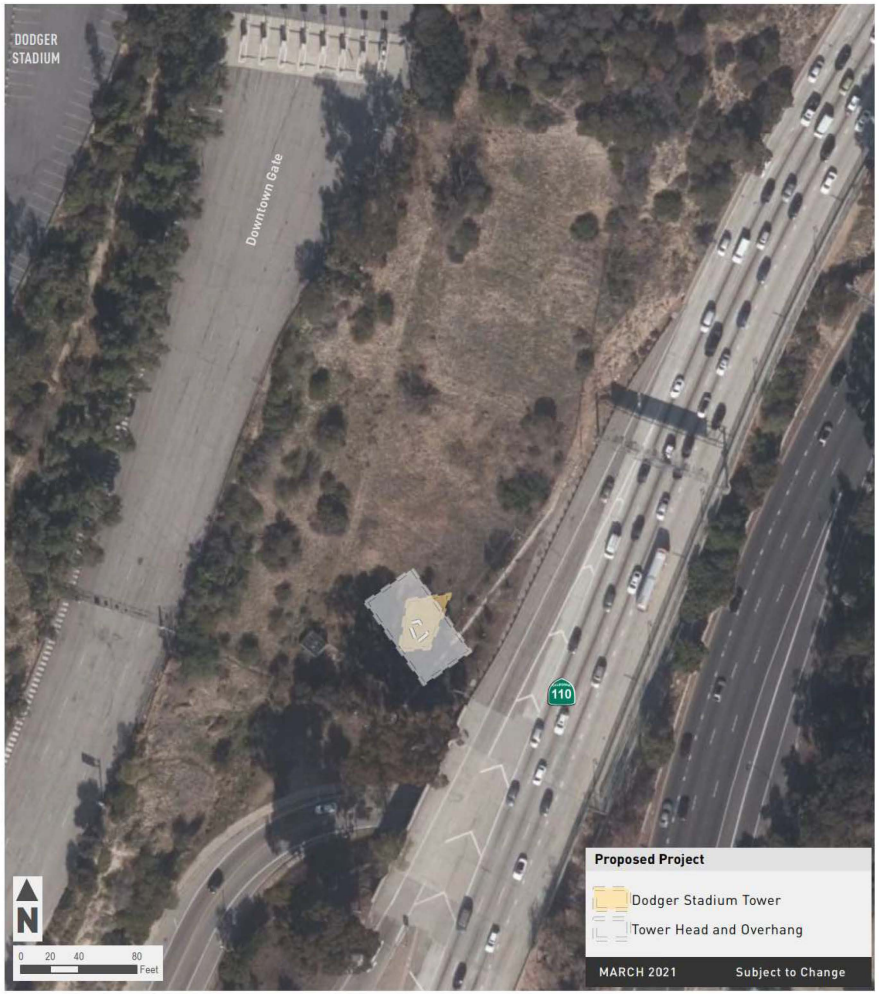
Broadway Junction

- Non-passenger junction that would be located at the intersection of North Broadway and Bishops Road
- Existing commercial building located at 1201 N. Broadway would be demolished
- Junction approximately 227 feet long, 60 feet wide, and 98 feet high at tallest point



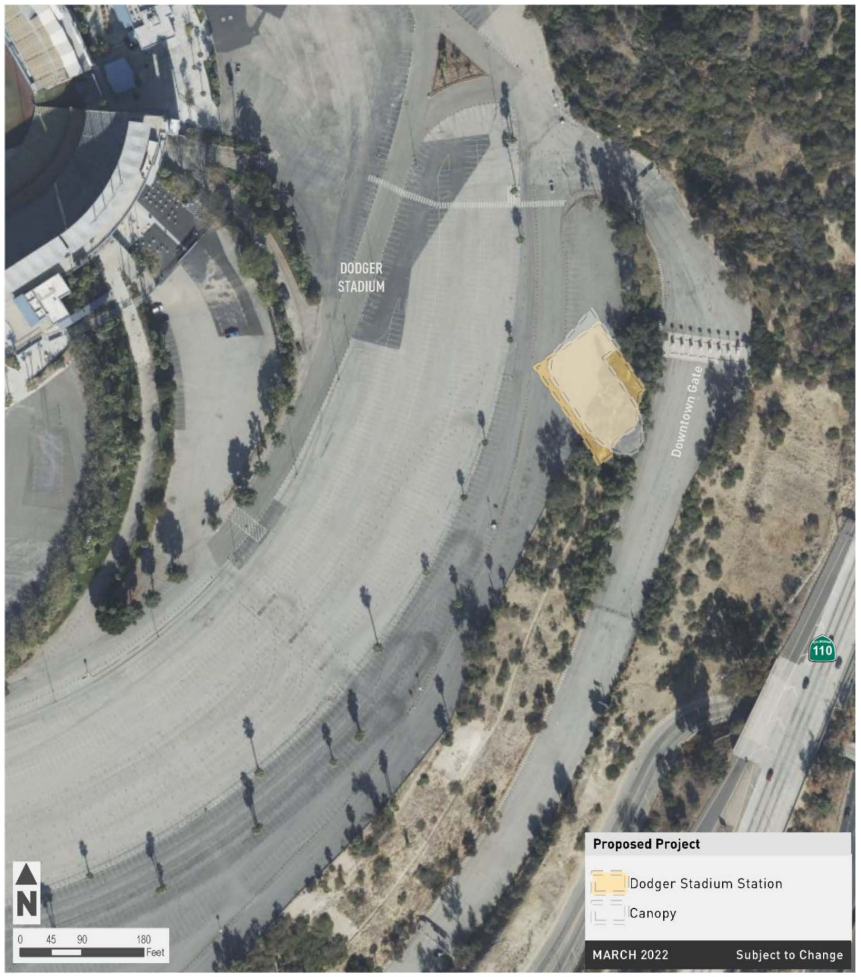
Stadium Tower

- Located on hillside private property north of Stadium Way between the Dodger Stadium Downtown Gate and SR-110
- 179 feet tall with the cable suspended 159 feet above-ground with landscaping near the base of the tower



Dodger Stadium Station

- Southeast portion of the Dodger Stadium property near the Downtown Gate



Dodger Stadium Station

- Station would be approximately 194 feet long, 80 feet wide, and 74 feet high at its tallest point
- Cabins at this station would arrive and depart from an at-grade boarding platform, with the passenger queuing area also at-grade
- Would include a subterranean area below the platform for storage and maintenance of cabins, as well as staff break rooms, lockers, and parts storage areas
  - Cabins would be returned to and stored at Dodger Stadium Station when the system is not in use (after hours)
- Restrooms for passenger use would be located at the station

Dodger Stadium Station would also include a pedestrian connection to Dodger Stadium, including hardscape and landscape improvements and potential seating

Sustainability

- The proposed Project's sustainability features would include features included in:
  - 2019 California Green Building Standards Code
  - United States Green Building Council Leadership in Energy and Environmental Design (LEED) for New Construction
  - Institute for Sustainable Infrastructure's Envision Rating System
- 100% of the power for the proposed Project would be provided by the City of Los Angeles Department of Water and Power's Green Power Program
- Backup battery storage at each station, tower, and junction to provide backup power, rather than diesel generators

The proposed Project would provide a sustainable, high-capacity zero emission ART option for visitors to Dodger Stadium, while also providing access between Dodger Stadium, the surrounding communities, and the regional transit system accessible at LAUS. ART technology is quiet, and the proposed Project would reduce VMT and congestion, leading to reduced GHG emissions and improved air quality.

Construction

Timeline

- Construction of the proposed Project is anticipated to begin as early as 2024 and take approximately 25 months, including construction, cable installation, and system testing

Working Hours

- Construction hours are anticipated for 10 hours a day, which would vary to meet special circumstances and restrictions
- While not anticipated, approval would be required from the City of Los Angeles Board of Police Commissioners for extended construction hours and possible construction on Sundays

Lane Closures

- Anticipated closures would include lane closures in which lanes would be closed 24-hours a day during certain phases of construction, or alternating closures during certain phases of construction, in which closures would occur during construction hours for approximately 10 hours a day, and roads would reopen during non-construction hours for approximately 14 hours a day
- For alternating closures, during non-construction hours, steel plates would be placed over construction sites to the extent feasible in order to allow for vehicular and pedestrian circulation.
- The closures and hours would vary between location and phase of construction
- The proposed Project would implement a Construction Traffic Management Plan that would include detours and ensure that emergency access is maintained throughout all construction activities

Detailed Construction Assumptions

- Detailed construction assumptions are included in Draft EIR Appendix B

Draft EIR Key Analyses and Conclusions

Environmental Resource Topics

All Environmental Resource Topics per CEQA Guidelines Appendix G are addressed in the Draft EIR

- Aesthetics
- Agriculture/Forestry
- Air Quality
- Biological Resources
- Cultural/Historic Resources
- Energy
- Geology/Soils
- Greenhouse Gas Emissions
- Hazards/Hazardous Materials
- Hydrology/Water Quality
- Land Use/Planning
- Mineral Resources
- Noise
- Population/Housing
- Public Services
- Recreation
- Transportation
- Tribal Cultural Resources
- Utilities/Service Systems
- Wildfire

Aesthetics

WHAT WAS STUDIED?

- Visual impacts of Project components surrounding the Project alignment
- Key observation points representing visual character, including presence or absence of landscaping, predominant land uses, the scale of buildings, or the major scenic vistas, scenic resources, and substantive visual elements that are available, such as open space resources, street trees, and building frontages
- Viewers and viewer response, including pedestrians and recreationalists (e.g., park users)
- While there are no designated scenic vistas, views of the downtown Los Angeles skyline, Union Station, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium, and the San Gabriel and San Bernardino Mountains
- Light and glare

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project would not significantly block scenic or panoramic views, such as views of the downtown Los Angeles skyline, Union Station, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium, and the San Gabriel and San Bernardino Mountains
- With the proposed Project's entitlements and approvals – which would include design standards to enhance the visual identity and character of the proposed Project and its surrounding communities – there would not be a conflict with applicable zoning or other regulations governing scenic quality
- The proposed Project would not create a substantial source of light or glare and would comply with applicable City lighting regulations

Existing and Simulation from State Historic Park Towards downtown Los Angeles skyline

Aesthetics

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Scenic Vista	Less Than Significant	Less Than Significant
Scenic Resources	No Impact	No Impact
Visual Character	Less Than Significant	Less Than Significant
Light and Glare	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction: Barriers and sound walls would include a privacy screen, and the Project would implement best management practices to reduce visual impacts. No mitigation is required.

Operation: Project design features, including for building lighting and sign lighting. No mitigation is required.

Agriculture and Forestry

WHAT WAS STUDIED?

- Whether the Project would conflict with agricultural zoning at the Stadium Tower and Dodger Stadium Station sites

KEY ANALYSIS AND CONCLUSIONS

- The Dodger Stadium property does not contain agriculture uses and is subject to a Conditional Use Permit, which allows for the operation of a Major League Baseball stadium and various ancillary structures and uses, including "mass transportation service" to the site; therefore, construction and operation of the proposed Project would not conflict with existing agricultural zoning

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Conversion of Farmland	No Impact	No Impact
Conflict with Forest Land Zoning	No Impact	No Impact
Loss of Forest Land	No Impact	No Impact
Agricultural Use	No Impact	No Impact
Agricultural Zoning and Williamson Act	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

No mitigation is required.

Air Quality

WHAT WAS STUDIED?

- Potential impacts on air quality at the regional and local scales from construction and operation of the proposed Project
- The characteristics and effects of air pollutants
- Regulations that have been adopted to govern air quality management
- A Health Risk Assessment (HRA) evaluating the estimated cancer risk and non-cancer chronic hazard index associated with construction of the Project

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project would be consistent with applicable air quality plans
- The estimated emissions for construction the proposed Project would be less than significance thresholds for pollutants and emissions
- The proposed Project would not expose sensitive receptors to substantial concentrations of pollutants during operations because the proposed Project does not include any land uses or operational emissions that would materially impact ambient air quality during operation
- The proposed Project would result in a net reduction in criteria pollutant emissions by reducing VMT and thereby decreasing emissions compared to existing conditions
- Based on the HRA results, the proposed Project would result in a less than significant impact related to exposing sensitive receptors to substantial pollutant concentrations from TACs

Air Quality

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Air Quality Plans	Less Than Significant	Less Than Significant
Increase Air Pollutants	Less Than Significant	Less Than Significant
Sensitive Receptors	Less Than Significant	Less Than Significant
Other Emissions	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction: Project design feature requiring that all off-road diesel-powered construction equipment greater than 50 horsepower shall meet the Tier 4 emission standards for nonroad diesel engines promulgated by the USEPA. No mitigation is required.

Operation: No mitigation is required.

Biological Resources

WHAT WAS STUDIED?

- Whether the Project would affect special-status species and their habitat
- Whether the Project would affect riparian habitat or protected wetlands
- The potential for the Project to interfere with wildlife movement along the alignment
- Whether the Project would conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance
- Whether the Project would conflict with adopted habitat conservation plans

KEY ANALYSIS AND CONCLUSIONS

- The Project area generally does not provide habitat for special-status species; however, removal of mature palm and eucalyptus trees during construction of the proposed Project could result in the removal of bat roost sites
- The Project area does not contain riparian habitat, other sensitive natural communities, or protected wetlands; therefore, there would be no impact
- The Project area does not serve as a regional wildlife corridor; however, construction activities may result in bat and bird species avoiding areas where active construction is occurring
- The Project would replace removed trees pursuant to the City's Native Tree Protection Ordinance, California Department of Parks and Recreation requirements, and other applicable requirements

Biological Resources

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Riparian Habitat	No Impact	No Impact
Protected Wetlands	No Impact	No Impact
Biological Plans or Policies	Less Than Significant	No Impact
Interfere with Species Movement	Less Than Significant with Mitigation	Less Than Significant
Habitat Modifications	Less Than Significant with Mitigation	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction:

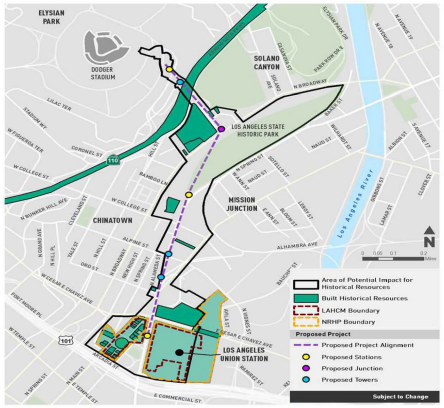
- Implement a project design feature to establish a Tree Protection zone to protect trees
- Pre-construction nesting surveys and measures to avoid and minimize impacts to nesting birds

Operation: No mitigation is required.

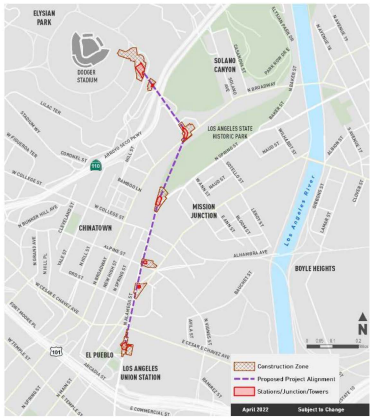
Cultural Resources

WHAT WAS STUDIED?

- Direct and indirect impacts to 29 built historic resources within the Area of Potential Impacts, including Los Angeles Union Station Passenger Terminal and Grounds, Los Angeles Plaza Historic District, Cathedral High School, and Arroyo Seco Parkway Historic District
- Impacts from ground disturbance to archaeological resources within the Area of Direct Impacts, including La Placita, the Zanja Madre, and Southern Pacific Railroad's River Station
- **KEY ANALYSIS AND CONCLUSIONS**
- Historic Resources
  - Construction of the proposed Alameda Station has the potential to result in both direct and indirect impacts to The Winery and the *El Grito* mural; however, impacts would be mitigated to less than significant
  - Construction-related and operational impacts to all other historical resources would be less than significant
- Archaeological Resources
  - Construction of the proposed Alameda Station, Alameda Triangle, Alpine Tower, and Chinatown/State Park Station have the potential to result in a substantial adverse change in the significance of an archaeologic resources; however, impacts would be mitigated to less than significant



Area of Potential Impacts for Built Historic Resources



Area of Direct Impacts for Archaeological Resources

Cultural Resources

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Historical Resource	Less Than Significant with Mitigation	Less Than Significant
Archaeological Resource	Less Than Significant with Mitigation	No Impact
Disturb Human Remains	Less Than Significant with Mitigation	No Impact

HOW WOULD IMPACTS BE MINIMIZED?

- Historic Resources
  - Project design features for pre- and post-construction documentation and protection of The Winery and *El Grito* mural, as well as protection of the *El Grito* mural during construction
  - Vibration monitoring and restrictions on force adjustable ground compaction devices during proposed Alameda Station construction
- Archaeological Resources
  - Preparation and implementation of a Cultural Resources Monitoring and Mitigation Plan and Archaeological Resources Worker Training Program
  - Pre-construction Archaeological Testing Plan for proposed Alameda Station and Chinatown/State Park Station
  - Potential redesign of Los Angeles State Historic Park amenities to avoid archaeological resources

Energy

WHAT WAS STUDIED?

- Overview of the federal, State, and local laws and regulations pertaining to energy
- Overview of California's energy production, supply, and consumption
- Evaluation of the energy resources related to construction and annual energy demands associated with Project operations

KEY ANALYSIS AND CONCLUSIONS

- The temporary energy consumption associated with the proposed Project's construction would allow for a long-term reduction in energy consumption associated with proposed Project operations
- The primary electricity usage associated would come from renewable resources through LADWP's Green Power Program
- The proposed Project would reduce VMT and increase the number of people using public transit, resulting in decreased use of fossil fuels for passenger vehicles

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Wasteful, Inefficient or Unnecessary Consumption	Less Than Significant	Less Than Significant
State or Local Energy Plans	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

No mitigation is required.

Geology and Soils

WHAT WAS STUDIED

- Whether the Project would be susceptible to seismic hazards, such as strong ground shaking, faulting, liquefaction, or landslides
- Whether the Project would be located on unstable geology, potentially resulting in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse.
- Whether the Project alignment would contain expansive soils that could create a substantial direct or indirect risks to life or property
- The potential for Project construction to directly or indirectly destroy a unique paleontological resource or site or unique geologic feature

KEY ANALYSIS AND CONCLUSIONS

- While the Project area is in a seismically active region of southern California, with compliance to existing standards and codes and implementation of mitigation, impacts related to the strong seismic ground shaking, seismic-related ground failure, and/or liquefaction during construction of the proposed Project would be reduced to less than significant
- The Project's Emergency Operations Plan would include emergency response protocols, and would state that in the event of a major earthquake, the system would be fully evacuated and shut down, and would not operate
- With compliance to existing standards and codes and implementation of mitigation, impacts related to lateral spreading, subsidence, liquefaction, or collapse during grading and construction of the Project components would be less than significant
- With compliance to existing standards and codes and implementation of mitigation, impacts related to soil corrosion during construction would be less than significant
- The northern portion of the proposed Project near the approach to Dodger Stadium Station has potential to encounter paleontological resources; however, impacts would be mitigated to less than significant

Geology and Soils

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	**Operations**
Adverse Effects: Earthquakes, Seismic-Related Ground Shaking, Liquefaction or Landslides	Less Than Significant with Mitigation	Less Than Significant
Support Wastewater Systems	No Impact	No Impact
Destroy Unique Paleontological or Geologic Features	Less Than Significant with Mitigation	No Impact
Soil Erosion/Loss of Topsoil	Less Than Significant	Less Than Significant
Unstable Geologic Unit or Soil	Less Than Significant with Mitigation	Less Than Significant
Expansive soil	Less Than Significant with Mitigation	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction:

- Preparation and implementation of a Site-Specific Final Geotechnical Report
- Preparation of and compliance with a Paleontological Resources Monitoring and Mitigation Plan

Operation: No mitigation is required

Greenhouse Gas Emissions (GHGs)

WHAT WAS STUDIED?

- Relevant federal, State, and local laws and regulations
- An overview of the science of GHGs
- Methodology used to evaluate GHG emissions related to the proposed Project

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project would not result in an incremental contribution of GHG emissions compared to existing conditions and would reduce GHG emissions compared to existing conditions

The lifetime emissions of the Project would be a reduction of 166,653 metric tons of GHGs.

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	**Operations**
Generate GHGs	Less Than Significant	Less Than Significant
GHG Reduction Plans or Policies	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

No mitigation is required.

Hazards and Hazardous Materials

WHAT WAS STUDIED?

- Project activities were assessed to determine their potential impact on creating conditions hazardous to the public or the environment during construction and operation
- Potential impacts due to hazards and hazardous materials were then analyzed against applicable significance criteria

KEY ANALYSIS AND CONCLUSIONS

- While the proposed Project would use, transport, and dispose of limited amounts of hazardous substances during construction, the proposed Project would comply with federal, State, and local health and safety requirements; and would comply with all codes, standards, and regulations during operation
- The proposed Project would comply with OSHA, Cal/OSHA, and Division 71 of the Los Angeles Municipal Code, and would implement a Soil and Groundwater Management Plan, which would limit the potential for hazardous materials and waste spills to occur
- The proposed Project would conduct hazardous materials abatement by a licensed abatement contractor prior to demolition, which would ensure that that schools are not adversely impacted
- Construction and operation of the proposed Project would not interfere with LAPD access to the Hooper Heliport, and heliport operations would not be impacted by construction activities
- Five properties were identified as hazardous materials sites in the Project area; however, the Project would implement a Soil and Groundwater Management Plan to reduce impacts from these sites
- Construction of the proposed Project would not substantially impair the implementation of, or physically interfere with, an adopted emergency response plan or emergency evacuation plan; and daily operation of the project would not affect emergency response

Hazards and Hazardous Materials

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	**Operations**
Hazardous Sites	Less Than Significant with Mitigation	No Impact
Airport Land Use Plan	No Impact	No Impact
Hazard to Public or Environment	Less Than Significant with Mitigation	Less Than Significant
Emergency and Evacuation Plans	Less Than Significant	Less Than Significant
Hazards Near Schools	Less Than Significant with Mitigation	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction:

- Preparation and implementation of a Soil and Groundwater Management Plan to specify methods for handling and disposal in the event contaminated groundwater, contaminated soil, or structures, are encountered during Project construction
- Hazardous Materials Abatement for demolition of the existing building at 1201 North Broadway

Operation: No mitigation is required.

Hydrology and Water Quality

WHAT WAS STUDIED?

- The potential for the proposed Project to violate any water quality standards, decrease groundwater supplies, or result in substantial erosion or siltation on- or off-site
- The potential for the proposed Project to substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite
- The potential for the proposed Project to create or contribute to runoff water which would exceed the capacity of existing or planned stormwater drainage systems, or impede or redirect flood flows
- The potential for the proposed Project to risk release of pollutants during project inundation in flood hazard, tsunami, or seiche zones
- The potential for the proposed Project to conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project would comply with all applicable federal, State, regional, and local agency water quality protection laws and regulations, water quality control and/or sustainable groundwater management plans
- The proposed Project would incorporate best management practices and implement a low impact development plan to reduce hydrology and water quality impacts
- The proposed Project is not susceptible to release of pollutants due to project inundation in flood hazard, tsunami, or seiche zones

Hydrology and Water Quality

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Decrease Groundwater Supply	Less Than Significant	No Impact
Water Quality Standards or Plans	Less Than Significant	Less Than Significant
Alter Drainage	Less Than Significant	Less Than Significant
Flood, Tsunami or Seiche	Less Than Significant	Less Than Significant
Conflict with Plans	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction and Operation: The proposed Project would comply with applicable federal, State, regional, and local laws and regulations, including compliance with applicable stormwater permits, wastewater permits, and other water quality regulations. No mitigation is required.

Land Use and Planning

WHAT WAS STUDIED?

- The proposed Project's potential to physically divide an established community
- The proposed Project's potential to conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect

KEY ANALYSIS AND CONCLUSIONS

- Though temporary closures during construction would disrupt vehicular, pedestrian, and bicycle access within and between communities, there would be a variety of options available for connections and access within the Project area
  - Communities will remain accessible from other surrounding streets, and pedestrian detours would be provided, which would prevent closures from physically dividing established communities.
- The proposed Project would enhance community connectivity by providing first/last mile transit and pedestrian access and enhancements, including a mobility hub and support for the future Los Angeles State Historic Park bike and pedestrian bridge
- The proposed Project is consistent with policies, regulations, goals, and/or objectives of local Plans, codes, and ordinances
- State Parks considers there to be an inconsistency between the proposed Project and the Los Angeles State Historic Park General Plan and therefore a potentially significant impact because the Los Angeles State Historic Park General Plan does not identify transit as a use for the Park
  - With implementation of Mitigation Measure LUP-A, which would require the proposed Project to obtain a LASHP General Plan Amendment, impacts would be less than significant

Land Use and Planning

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Physically Divide Community	Less Than Significant	No Impact
Conflict with Land Use Plans or Policies	Less Than Significant with Mitigation	Less Than Significant with Mitigation

HOW WOULD IMPACTS BE MINIMIZED?

Construction (Physically Divide Community): While construction impacts are less than significant, implementation of the Construction Traffic Management Plan would include street closure information, detour plans, haul routes, and a staging plan

Construction and Operation: The proposed Project would obtain a Los Angeles State Historic Park General Plan Amendment to allow transit uses within the Los Angeles State Historic Park General Plan

Mineral Resources

WHAT WAS STUDIED?

- Whether construction of the Project would result in the loss of availability of a known mineral resources resource that would be of value to the region and the residents of the state.
- Whether the Project would result in the loss of availability of a locally- important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

KEY ANALYSIS AND CONCLUSIONS

- The Project is not located in an area of known mineral resources
- Much of the area within the City of Los Angeles was developed with structures prior to the MRZ classifications and is unavailable for extraction
- The Project alignment is located in an urbanized area of the City of Los Angeles, and the mining of such materials in an urbanized environment is not practical

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Loss of Available Mineral Resources	No Impact	No Impact

HOW WOULD IMPACTS BE MINIMIZED?

No mitigation is required.

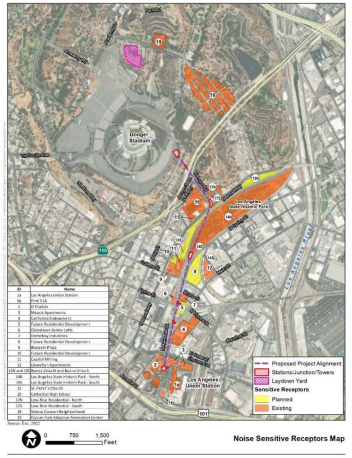
Noise

WHAT WAS STUDIED?

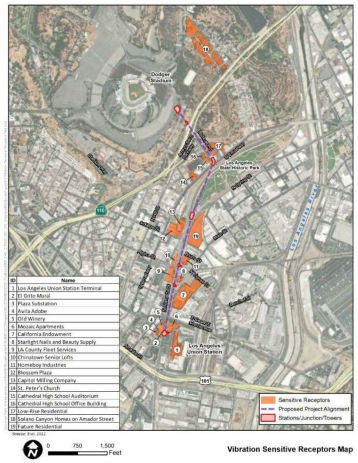
- Existing condition noise survey with measurements conducted at sites representative of noise-sensitive receptors along the proposed Project alignment, including locations of existing and future residential developments, schools, parks, and other areas with frequent outdoor human use
- Potential construction noise impacts were evaluated by calculating the Project related construction noise levels
- Operational noise impacts were evaluated by identifying the noise levels that would be generated by Project operation noise sources, including stations, junction, towers, cabins passing along the support sheaves at towers, cabins, and passengers at stations waiting to board the system
- Ground-borne vibration impact analysis for both building damage and human annoyance

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project's significant and unavoidable on-site construction noise impacts would be a function of the noise generated by construction equipment, the location of the equipment, the timing and duration of the noise-generating construction activities, and the relative distance to noise-sensitive receptors
- Noise generated from off-site construction-related traffic would be less than significant
- Noise generated from Project operations under the worst-case scenario would be less than significant
- Vibration generated from on-site construction activity would have significant and unavoidable human annoyance impacts; potential building damage impacts would be less than significant with mitigation
- Vibration generated from Project operations would be less than significant



Noise Sensitive Receptors Map



Vibration Sensitive Receptors Map

Noise

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Expose Public Near Airport	No Impact	No Impact
Generation or Increase in Ambient Noise Levels	Significant and Unavoidable	Less Than Significant
Generation of Excessive Vibration or Noise Levels	Significant and Unavoidable	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Operational Noise: Cabin project design features related to interior-to-exterior noise reduction and power sound levels of HVAC units. No mitigation is required.

Construction Noise: Implementation of a Construction Noise Management Plan, including

- Noise barriers
- Equipment maintenance
- Community outreach, including a Noise Disturbance Coordinator

Construction Vibration:

- Placement of vibration monitoring equipment for the Avila Adobe (1970s addition), *El Grito* mural, and The Winery
- Restrictions on the use of force-adjustable ground compaction devices

Population and Housing

WHAT WAS STUDIED?

- The potential for the proposed Project to cause substantial population growth, or accelerate growth that exceeds projected or planned levels
- Whether implementation of the proposed Project would displace substantial numbers of existing people or housing

KEY ANALYSIS AND CONCLUSIONS

- As a first/last mile transit connection to Dodger Stadium, the proposed Project would not induce substantial population growth either directly or indirectly
  - Designed to meet the area's transit needs and improve the efficiency of the existing transportation network
  - Support the City's goals from the Housing Element and Community Plans of providing transit near already planned residential development
- The proposed Project would not displace existing people or housing

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Induce Unplanned Population Growth	Less Than Significant	Less Than Significant
Displace People or Housing	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

No mitigation is required.

Public Services

WHAT WAS STUDIED?

- Whether the proposed Project would result in adverse physical impacts associated with the provision of new or physically altered public facilities, the construction of which could cause significant environmental impacts, including fire and police protection, schools, and other public facilities such as libraries, senior centers, homeless shelters, and daycare facilities
- Whether the Project would affect response times for emergency service

KEY ANALYSIS AND CONCLUSIONS

- While construction activities associated with the proposed Project would create a temporary increase in demand for emergency services, the implementation of mitigation measures and project design features, and compliance with applicable State and local regulations, including coordination with LAFD and LAPD prior to construction of the Project, would ensure that construction of the Project would not create additional demand for emergency services that would result in the need to add new—or physically alter existing—public facilities facilities
- LAFD and LAPD would have adequate access during construction
- While the proposed Project would create an increased demand for emergency services during Project operation, with adherence to the applicable regulations, coordination with LAFD and LAPD, and implementation of an Emergency Operations Plan, operation of the proposed Project would not create additional demand for emergency services that would result in the need to add new—or physically alter public facilities
- The proposed Project does not include housing, which could increase demand for school services or other public facilities

Public Services

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Need for new or altered Fire, Police, Schools or other Public Services	Less Than Significant with Mitigation	Less Than Significant
Service Ratios and Response Times	Less Than Significant with Mitigation	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction: The Construction Traffic Management Plan would reduce impacts related to emergency access

Operation: The proposed Project would comply with applicable regulations, would implement security features such as staff and cameras, and would implement an Emergency Operations Plan. No mitigation is required.

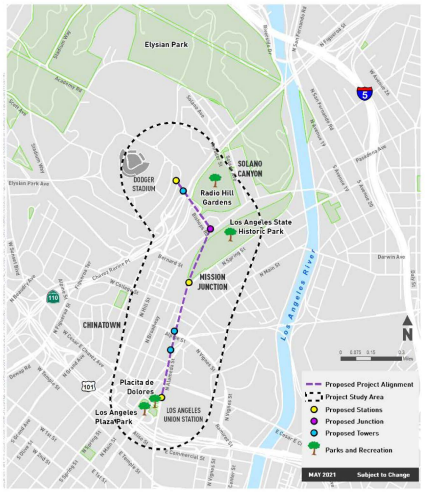
Parks and Recreation

WHAT WAS STUDIED?

- Potential to impact parks and recreational facilities during construction and operation, including Los Angeles Plaza Park and Placita de Dolores, Los Angeles State Historic Park, and Elysian Park

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project would not increase in the demand for parks, or generate new permanent residents that would result in an increase in the use of existing parks and recreational facilities, such that substantial deterioration of parks would occur or be accelerated or would result in the provision of new park facilities, or the need for new or physically altered park facilities
- The proposed Project would improve mobility and accessibility for the region by providing high capacity aerial rapid transit connecting the regional transit system at LAUS and the Los Angeles State Historic Park and Elysian Park



IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Deterioration of a Public Facility	Less Than Significant	Less Than Significant
Expansion of Recreational Facilities	Less Than Significant	Less Than Significant
Service Ratios and Performance Objectives	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

No mitigation is required.

Transportation

WHAT WAS STUDIED?

- Utilized both the CEQA Guidelines and LADOT's established screening criteria, analysis methodology, and threshold criteria through the City's TAG
- The analysis of VMT for the proposed Project employed a variety of data, methodologies, and models in order to estimate Project ridership, vehicle trips reduced, vehicle trip lengths, and ultimately the VMT benefit of the proposed Project
- Ridership estimates for Dodger Stadium game and event attendees, employees, tourists, neighborhood riders, and Los Angeles State Historic Park visitors and event attendees
- Location of the proposed Project stations, junction, and towers and whether these components substantially increase hazards due to a geometric design feature
- The proposed Project's construction conceptual traffic detour plans and haul route

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project would be consistent with PPOPs – programs, plans, ordinances, and policies – addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities
- The proposed Project would not introduce any unsafe physical conditions with the implementation of mitigation measures for the Alameda Tower and Chinatown/State Park Station
- With implementation of mitigation measures, emergency access would be maintained during proposed Project construction

The lifetime VMT reduction of the Project would be 129,629,500 VMT.

Transportation

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Vehicle Miles Traveled (VMT)	No Impact	No Impact
Conflict with Plan or Policies	Less Than Significant	Less Than Significant
Increase Hazards through Design	Less Than Significant with Mitigation	Less Than Significant with Mitigation

HOW WOULD IMPACTS BE MINIMIZED?

Construction:

- Implementation of a City approved and detailed Construction Traffic Management Plan, including street closure information, detour plans, haul routes, and a staging plan
- Implementation of a City approved Temporary Disaster Route Plan, which would include street closure information and detour plans in order to facilitate the movement of emergency vehicles through the study area and minimize effects on emergency response during a disaster

Construction and Operation:

- Visibility enhancements – such as high visibility crosswalk treatments, advanced crossing warning signs, flashing beacons, upgraded lighting, and new or upgraded traffic controls – at the proposed Alameda Tower and Chinatown/State Park Station

Tribal Cultural Resources

WHAT WAS STUDIED?

- Substantial adverse changes to significant tribal cultural resources
- Consulted with eight California Native American Tribes pursuant to Assembly Bill 52

KEY ANALYSIS AND CONCLUSIONS

- Resources exist in the area and require implementation of mitigation, including archaeological testing and data recovery
- Previously unidentified resources have potential to be encountered during construction; if the Native American Monitor identifies potential resources, the monitor may temporarily halt construction

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Change to Tribal Cultural Resource	Less Than Significant with Mitigation	No Impact

HOW WOULD IMPACTS BE MINIMIZED?

Construction:

- Implement the Cultural Resources Monitoring and Mitigation Program and Archaeological Testing Plan for LAUS Forecourt
- Retain a Native American monitor to monitor ground-disturbing construction activities at the location of the Alameda Station

Operation: No mitigation is required.

Utilities and Service Systems

WHAT WAS STUDIED?

- The relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities
- The effect of the Project on water supplies
- Whether the Project would require expansion of wastewater treatment capacity
- Whether area landfills would have sufficient capacity for solid waste generated by the Project

KEY ANALYSIS AND CONCLUSIONS

- Construction of the proposed Project would not require the construction of new or expanded utilities
- Construction of the proposed Project would require relocations of existing utilities, which would be coordinated with the utility providers and conducted in compliance with the applicable State and local codes and regulations
  - To minimize the potential interference with existing utilities associated with utility relocations during construction, the proposed Project would implement a Utility Relocation Plan
- Operation of the proposed Project would require connections to existing utilities systems
- Primary electricity usage would come from renewable resources and the existing power supply should be sufficient Project operations
- Construction and operation of the proposed Project would have sufficient water supply
- Construction and operation would generate potential wastewater, which would be treated per regulations
- Solid waste would not be generated in excess of State or local standards or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals

Utilities and Service Systems

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	**Operations**
Sufficient Water Supplies	Less Than Significant	Less Than Significant
Demand and Capacity on Wastewater Systems	Less Than Significant	Less Than Significant
Solid Waste Goals	Less Than Significant with Mitigation	Less Than Significant
Relocation or Construction of Utilities	Less Than Significant with Mitigation	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction:

- Develop and implement a Utility Relocation Plan in coordination with utility companies to minimize impacts to services throughout the Project construction
- Prepare a Soil and Groundwater Management Plan

Operation: No mitigation is required.

Wildfire

WHAT WAS STUDIED?

- Whether the proposed Project would result in potential significant impacts related to wildfire if located in or near State Responsibility Areas (SRAs) or lands classified as Very High Fire Hazard Severity Zones (VHFHSZ)
- Potential wildfire behavior within the Project area based on topography, weather, and fuels
- Substantially impair an adopted emergency response plan or emergency evacuation plan
- Whether the proposed Project would require installation or maintenance of associated infrastructure that may exacerbate fire risk or result in temporary or ongoing impacts to the environment
- Whether the proposed Project exposes people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post fire slope instability, or drainage changes
- Whether the proposed Project would expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires

KEY ANALYSIS AND CONCLUSIONS

- The portion of the proposed alignment containing the Broadway Junction, Stadium Tower, and Dodger Stadium Station are within the VHFHSZ
- Construction and operation of the proposed Project would not inhibit access to identified disaster routes and would not substantially impair implementation of an emergency response or evacuation plan
- The Project would adhere to applicable codes and regulations and best construction practices and would not exacerbate wildfire risks
- Implementation of project design features would further reduce these risks

Wildfire

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Impair Emergency or Evacuation Plans	Less Than Significant	Less Than Significant
Exacerbate Wildfire Risks	Less Than Significant	Less Than Significant
Install/Maintain Associated Infrastructure	Less Than Significant	Less Than Significant
Expose People or Structures to Wildfire Risks	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction: Implement project design features, including Fire Protection Plan and a fuel modification zone surrounding the Stadium Tower construction site. No mitigation is required.

Operation: Implement a project design features during operation of the Broadway Junction, Stadium Tower, and Dodger Stadium Station related to security monitoring by staff and cameras and the identification and reporting of fire safety hazards. No mitigation is required.

Alternatives

WHAT WAS STUDIED?

- A reasonable range of alternatives were selected to explore potential means to mitigate or avoid the significant environmental impacts associated with implementation of the proposed Project, while still achieving the Project's primary objectives
  - No Project Alternative – No New Development
  - Spring Street Alignment Alternative – Alignment Alternative to the proposed Project
  - Transportation Systems Management Alternative – Enhanced Union Station Dodger Stadium Express Service
- Several alternatives were considered but dismissed from detailed analysis for failure to meet most of the basic project objectives, infeasibility, or inability to avoid significant environmental impacts, including the Broadway Station Alignment Alternative, the Combined Metro L Line (Gold) Station and College Street Station Alignment Alternative, and Direct Alignment Alternatives.

KEY ANALYSIS AND CONCLUSIONS

- The No Project Alternative would not improve transit access or provide connections between communities. Additionally, VMT and vehicle congestion would not be reduced, and the associated reduction in GHG emissions and air quality improvements would not take place.
- The Spring Street Alignment Alternative would provide a direct transit connection and improve connectivity for surrounding communities. This Alternative would require a larger footprint and wouuld not reduce significant environmental impacts.
- The TSE Alternative would not provide a direct transit connection or improve connectivity for surrounding communities and would not provide the same reduction in VMT, GHG emissions, or improvements in air quality.

Alternatives

ALTERNATIVE CONCLUSIONS

Alternatives	Finding	
	Ability to Fulfill Project Objectives	**Ability to Reduce Significant Impacts**
No Project Alternative	Would Not Fulfill Project Objectives	Less Impacts than the Project
Spring Street Alignment Alternative	Would Fulfill All Project Objectives	Similar Impacts to the Project
Transportation Systems Management Alternative	Would Not Fulfill Most Project Objectives	Less Impacts than the Project

WHAT IS THE ENVIRONMENTALLY SUPERIOR ALTERNATIVE?

The TSM Alternative would be considered the environmentally superior alternative because it it would not result in a CEQA determination of a significant and unavoidable impact and would result in the fewest environmental impacts overall. However, the TSM Alternative's impact would be greater for air quality, energy, greenhouse gas emissions, hydrology and water quality, and transportation and traffic. In addition, the TSM Alternative would not meet the majority of the Project's Objectives in full or in part.

Other Additional Evaluations in the Draft EIR

LOS ANGELES STATE HISTORIC PARK

Kites: Due to the location of the proposed Project alignment – which traverses over along the western edge of the Park adjacent to the Metro L Line and pedestrian pathway – the proposed Project does not significantly reduce the safe kite flying area within the Park

Special Events: Due to the location of the proposed Project alignment, which crosses over a small portion of the park not typically used for screens and stages, and because events can still take place under the majority of the proposed Project alignment, the proposed Project does not significantly reduce the event space area within the Park

LOCATION OF THE ALAMEDA STATION AND CHINATOWN/STATE PARK STATION

HELIPORTS

- The proposed Project alignment is not located within an area covered by an airport land use plan, nor within two miles of a public airport
- An airspace evaluation of the heliports in the proposed Project alignment's vicinity concluded that the construction and operation of the proposed Project will be clear of the airspace associated with the existing heliports in the proposed Project's vicinity, resulting in no potential for air navigation hazards and, therefore, no impacts to aeronautical activity, including to heliports in the proposed Project's vicinity

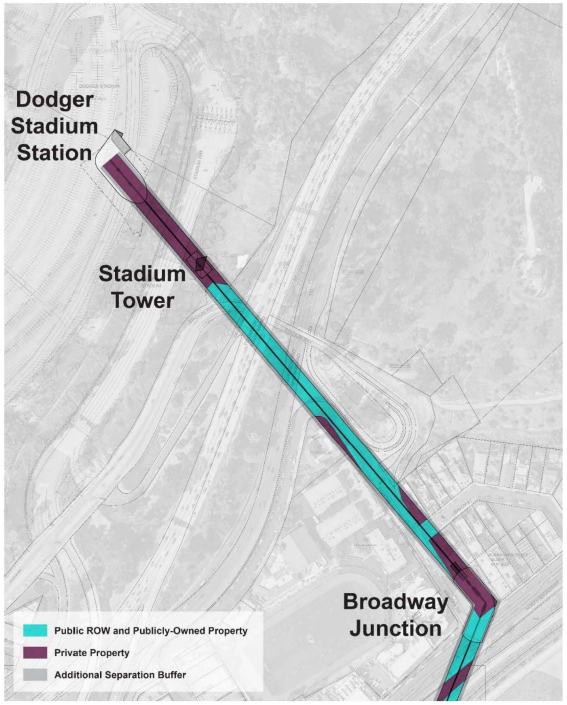
Typical Locations for Event Stages and Screens at the Los Angeles State Historic Park with Proposed Project Alignment

Design Option A

BROADWAY JUNCTION SHIFT TO AVOID 451 E. SAVOY

- Includes a shift in the overall Project alignment between the Broadway Junction and Dodger Stadium Station to avoid aerial rights requirements over 451 E. Savoy Street
- Shift would result in the alignment crossing over a small portion of Cathedral High School adjacent to Bishops Road
- Includes changes to the Project components of Broadway Junction, Stadium Tower, and Dodger Stadium Station
  - Would result in utility relocations and additional construction durations at both the Stadium Tower and Dodger Stadium Station
  - Would require a longer walk for proposed Project passengers to travel between the Dodger Stadium Station and Dodger Stadium

Proposed Project Alignment

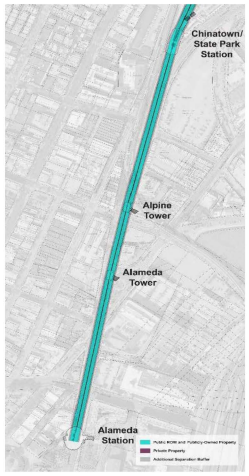


Design Option A

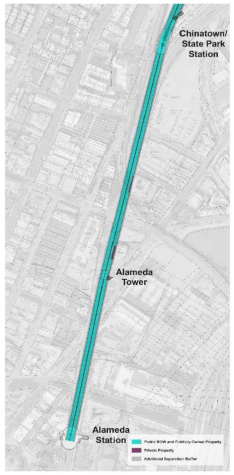
Design Option B

SINGLE TOWER ALONG ALAMEDA STREET

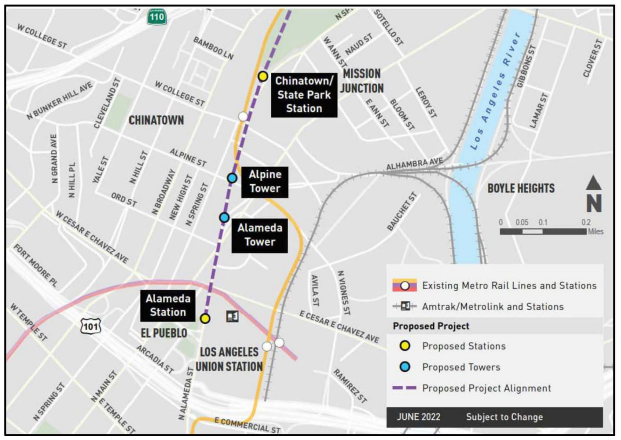
- In response to stakeholder feedback, who asked the Project Sponsor to assess the potential to reduce the number of towers along Alameda Street from two to one
- Consists of a 50-foot overall height increase at the Alameda Tower and the removal of Alpine Tower from the proposed Project between the Alameda Station and the Chinatown/State Park Station
- The increased tower height coincides with additional construction activities
- Would result in potential technical constraints
- Would result in the need for additional private aerial rights requirements



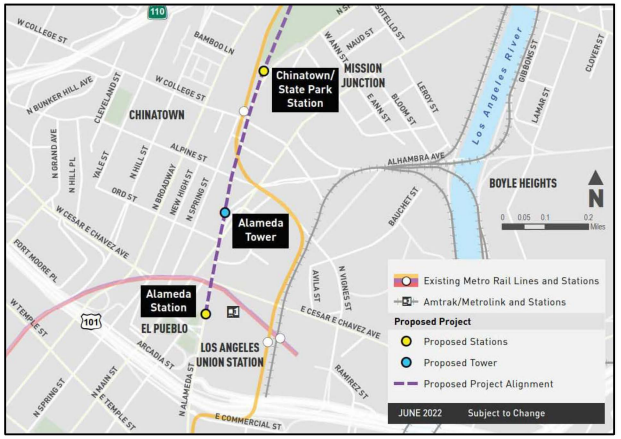
Proposed Project Alignment



Design Option B



Proposed Project Alignment

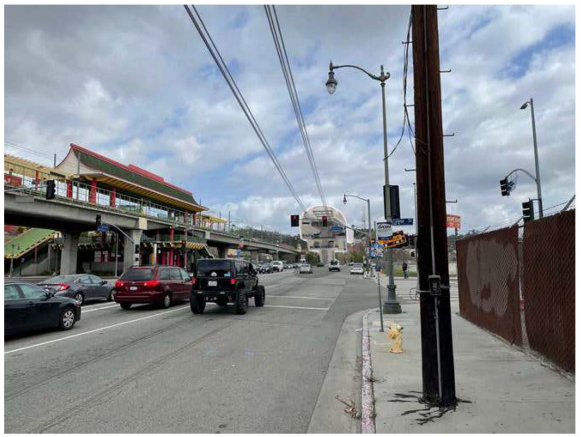


Design Option B

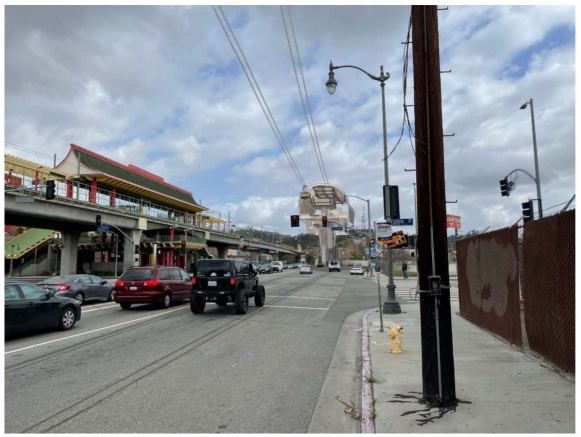
Design Option C

CHINATOWN/STATE PARK STATION WITH INCREASED HEIGHT

- In response to stakeholder feedback, who asked the Project Sponsor to consider a taller Chinatown/State Park Station
- Design Option C consists of a 35-foot overall height increase at the Chinatown/State Park Station
- The increased height coincides with additional construction activities
- Has the potential to reduce passenger experience due to the height, which also results in the boarding platform being raised, requiring additional vertical circulation to access and ascend the platform



Proposed Project Alignment



Design Option C

Use Option D

CHINATOWN/STATE PARK STATION AS A NON-PASSENGER JUNCTION

- In response to stakeholder feedback, who asked the Project Sponsor to consider no passenger access at the Chinatown/State Park Station, to increase the height of the cabins entering and exiting the station along Spring Street
- Use Option D includes substituting a non-passenger junction for the proposed Chinatown/State Park Station
- Would have the same location, height, width, length, and architectural finish as the proposed Project
- Would not enhance community connectivity to the Los Angeles State Historic Park, Chinatown, and the Mission Junction Neighborhood

Design and Use Option E

PEDESTRIAN BRIDGE AT THE LOS ANGELES STATE HISTORIC PARK

- The Los Angeles State Historic Park has proposed an ADA accessible pedestrian bridge that would gently slope from the central portion of the Park to North Broadway
- While the pedestrian bridge is not proposed as part of the proposed Project, the Draft EIR includes an analysis of the pedestrian bridge for the Park
- As noted in the Los Angeles State Historic Park General Plan and Final EIR and the Bike and Pedestrian Bridger Study, the bridge would provide safe pedestrian and bike access from the Chinatown and Solano Canyon communities into the Park

Source: Bridge Feasibility Study

Overview of the Parking Study

PROPOSED PROJECT PARKING STUDY

- Although CEQA does not require analysis of parking, a comprehensive Parking Study was conducted for the Project, which Metro had peer reviewed
- The Parking Study has been available on Metro's website since September 9, 2022

WHAT WAS STUDIED?

- Most proposed Project riders are expected to shift to transit to get to the Project
- There are approximately 10,290 spaces in publicly available lots and garages and in on-street spaces within ½ mile of the proposed Project's Alameda Station and Chinatown/State Park Station

Overview of the Parking Study

PARKING STUDY CONCLUSIONS

Parking Type	Game Day Parking			
	Parking Supply	Parked Vehicles	Occupancy	Available Supply
Off-Street Publicly Available Spaces	6,876	2,173	32%	4,703
On Street Spaces	3,417	2,017	59%	1,400
TOTAL				
Proposed Project Parking Demand (2042)	-	307 – 790		
Total Available Off-Street Spaces with Project	6,876	2,963	43%	3,913

*Counts were taken on September 10, 2021, on an evening when the Los Angeles Dodgers hosted the San Diego Padres; the paid attendance was 48,403, which was higher than the 2019 Los Angeles Dodgers season average for weekday evening games. In coordination with Metro and LADOT, the Parking Study applied a 46% increase to off-street publicly available spaces to account for the COVID-19 pandemic.

With the addition of the proposed Project's potential parking demand, there is plenty of available parking spaces within the proposed Project's walkshed. Even if some existing parking lots get redeveloped, there is plenty of off-street parking supply to accommodate all of the proposed Project's parking demand.

THE PROJECT IS COMMITTED TO ENCOURAGE TRANSIT RIDERSHIP

- Implement business to business partnerships with local businesses to pre-sell bundled packages that include patronage at local businesses and available off-street parking
- Support implementation/expansion of various management strategies including time limit parking restrictions and parking meters during game times to discourage riders from parking in the community and keeping spaces available for residents and local businesses

Question & Answer Session

Question + Answer Session

- Purpose: Allow the public an opportunity to ask questions about the project and the Draft EIR

TODAY!

Propósito de la Reunión

ANÁLISIS Y CONCLUSIONES CLAVE DEL PRESENTE BORRADOR DEL EIR

SESIÓN DE PREGUNTAS Y RESPUESTAS

Proceso de la Ley de Calidad Ambiental de California (CEQA)

¡HOY!

Infórmese sobre los Análisis y Conclusiones Clave del Borrador del EIR, y haga preguntas.

No se aceptarán comentarios del público hoy.

¿Cómo Participar en esta Reunión?

¡HOY!

Infórmese sobre los Análisis y Conclusiones Clave del Borrador del EIR, y haga preguntas.

No se aceptarán comentarios del público hoy.

Preguntas y Respuestas (Q&A): Utilice la función de Preguntas y Respuestas (Q&A) para escribir una pregunta durante la sesión de Preguntas y Respuestas.

Generalidades

Generalidades

- El Proyecto de Transporte Rápido Aéreo de Los Ángeles ha sido propuesto por LA Aerial Rapid Transit Technologies LLC
- Metro es la agencia principal en la preparación de un Informe de Impacto Ambiental (EIR) según la Ley de Calidad Ambiental de California (CEQA)
- El Borrador del EIR evalúa los posibles efectos ambientales asociados a la construcción y el funcionamiento del proyecto propuesto

Generalidades

- Como agencia principal, Metro tiene la responsabilidad de asegurarse de que:
  - El informe de impacto ambiental EIR evalúe adecuadamente los posibles impactos del proyecto
  - Las medidas de mitigación propuestas sean apropiadas
  - Se haya cumplido con el proceso de la CEQA en lo que respecta a las notificaciones públicas, la divulgación pública y la distribución de documentos

Generalidades

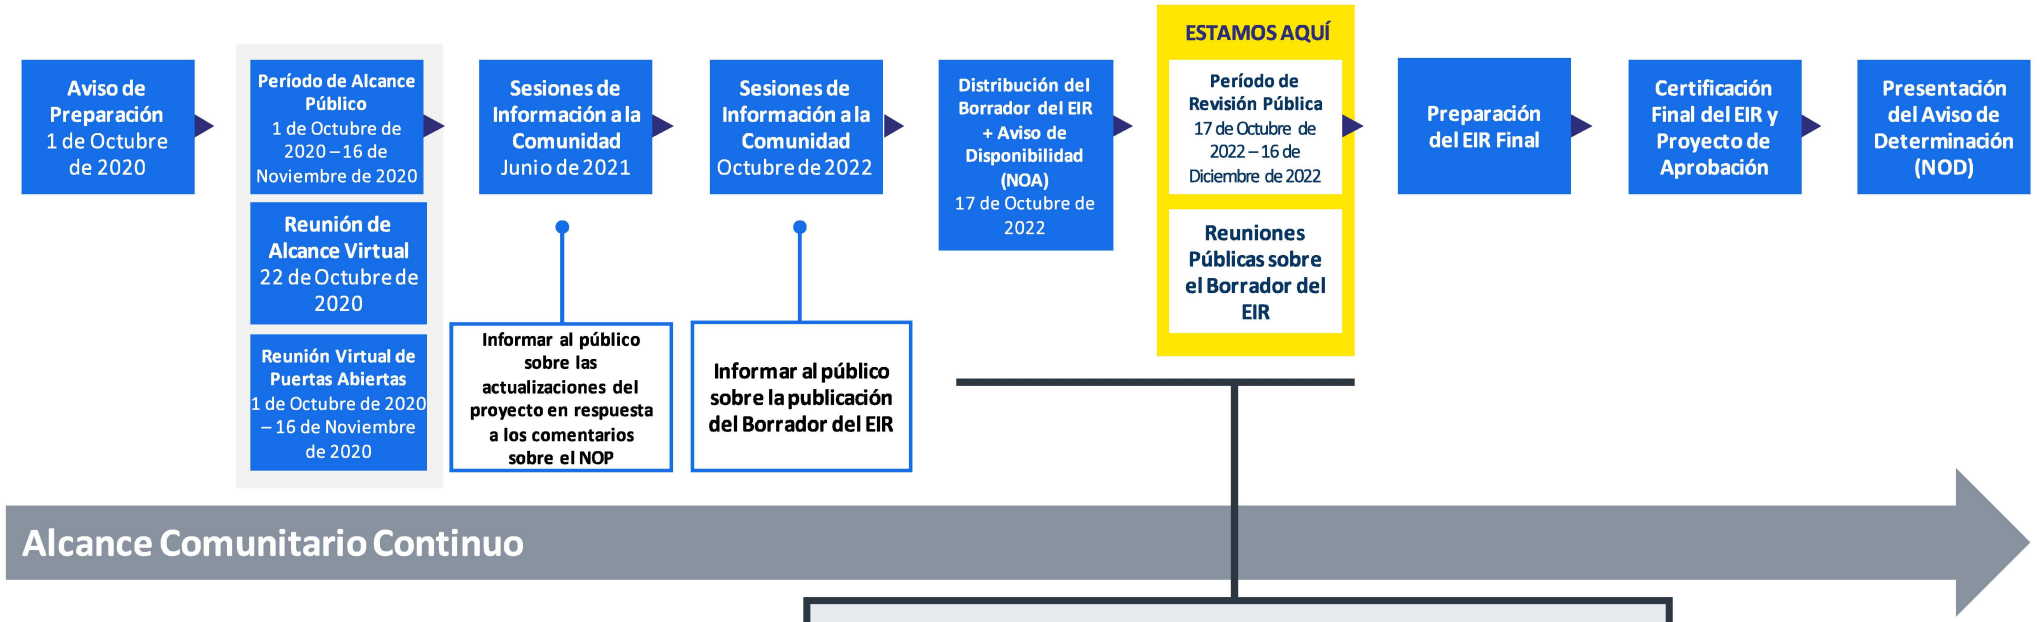
- Actualmente estamos aceptando comentarios del público sobre el borrador del EIR en virtud de la CEQA
  - Audiencias Públicas
  - Email
  - Correo postal
  - Teléfono
- Proyecto de Ley 44 del Senado
  - Adoptada para agilizar la revisión de los proyectos de transporte de liderazgo ambiental en el Condado de Los Ángeles en virtud de la CEQA
  - El proyecto propuesto será el primer proyecto de transporte de liderazgo ambiental en virtud del Proyecto de Ley 44 del Senado
  - Requisitos de la Audiencia Pública
    - **Taller Informativo: dentro de los primeros 10 días calendario del período de comentarios del público para informar al público sobre los análisis y conclusiones clave del Borrador del EIR**
    - Audiencia Pública: dentro de los últimos 10 días calendario del periodo de comentarios del público para obtener el testimonio del público

Generalidades del Proceso de la Ley de Calidad Ambiental de California (CEQA)

Proceso de la CEQA

- Esto se requiere para todos los proyectos emprendidos, financiados o que requieran la aprobación de un organismo público
- Informa al público y a los responsables de la toma de decisiones
- Revela los posibles impactos ambientales resultantes de un proyecto propuesto
- Da la oportunidad de hacer comentarios sobre cuestiones ambientales
- Dos periodos de comentarios del público: Periodo de Alcance Público y Revisión Pública del Borrador del EIR
- SB 44 requiere dos reuniones públicas durante la Revisión Pública del Borrador del EIR: Taller Informativo y Audiencia Pública

Calendario



¿Cuál es el Objetivo del Borrador del EIR?

El propósito del Borrador del EIR es evaluar el potencial de los impactos ambientales asociados con la implementación del proyecto propuesto, y proporcionar medidas de mitigación cuando sea necesario

Reuniones públicas durante el Periodo de Revisión Pública del Borrador del EIR:

Talleres Informativos

Taller Informativo sobre el Borrador del EIR No. 1	Sábado 22 de octubre	Virtual
Taller Informativo sobre el Borrador del EIR No. 2	Martes 25 de octubre	En Persona

Metro organizará dos talleres informativos para dar a conocer al público los principales análisis y conclusiones del Borrador del EIR

Audiencias Públicas

Audiencia Pública sobre el Borrador del EIR No. 1	Sábado 10 de diciembre	En Persona
Audiencia Pública sobre el EIR de Metro No. 2	Martes 13 de diciembre	Virtual

Metro organizará dos audiencias públicas para recibir comentarios del público sobre el Borrador del EIR

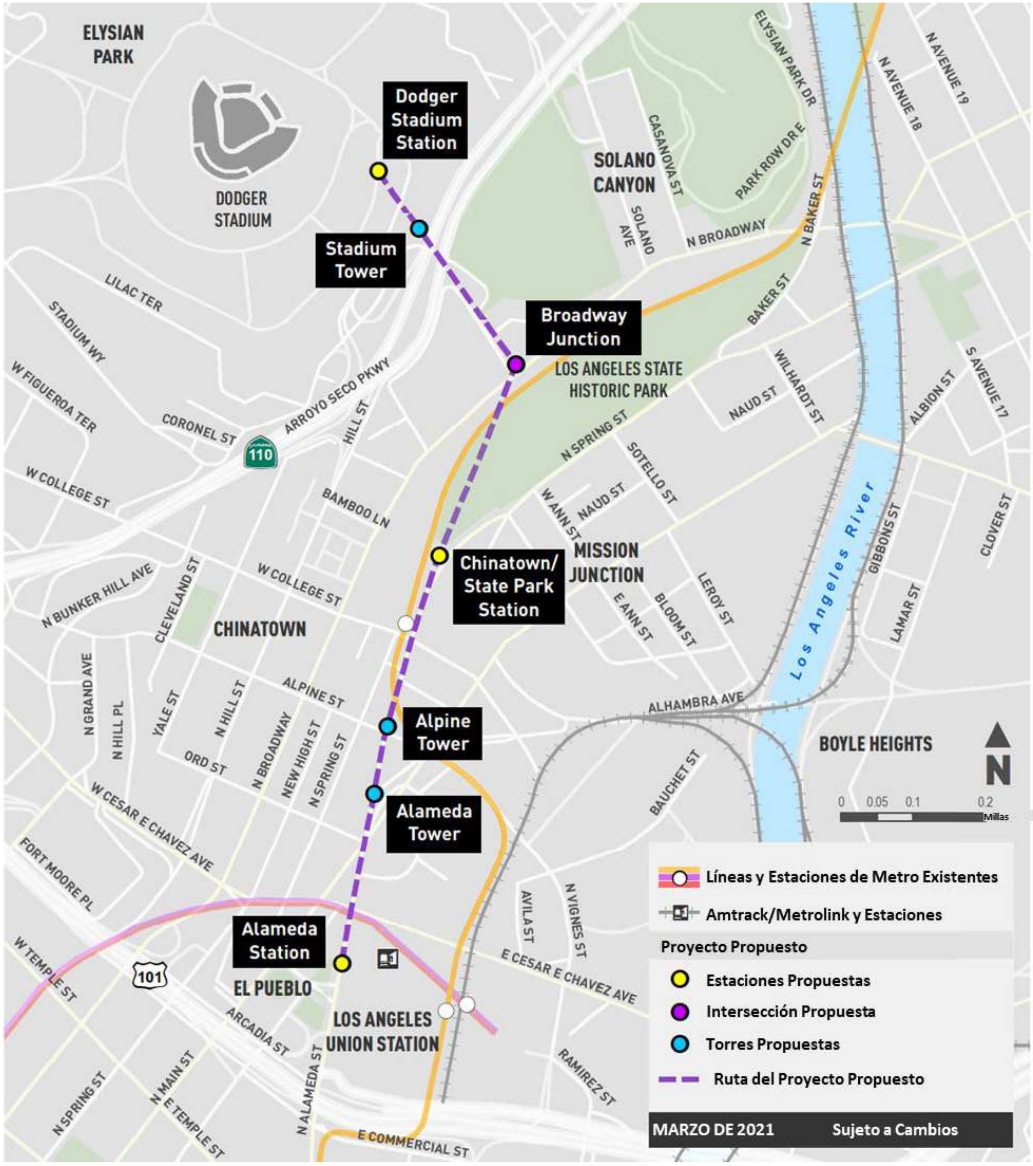
Descripción del Proyecto

Generalidades del Proyecto

- Proporciona una conexión de transporte permanente desde la estación Los Angeles Union Station (LAUS) hasta la propiedad del estadio Dodger Stadium a través de un sistema de góndolas aéreas de 1.2 millas (1.93 km).
  - El tiempo de traslado desde la estación LAUS hasta el Dodger Stadium sería de aproximadamente 7 minutos
- Capacidad de aproximadamente 5,000 personas por hora y por dirección
- Funcionamiento diario para dar servicio a los residentes, trabajadores, usuarios del parque y visitantes de Los Ángeles
- Da acceso al parque Los Angeles State Historic Park y a las comunidades circundantes a través de la estación intermedia de Chinatown/State Park
- Transporte rápido de cero emisiones, respetuoso del medio ambiente, que reduciría las emisiones de GEI gracias a la reducción de la congestión vehicular en el Dodger Stadium y sus alrededores y en las calles del vecindario, las carreteras arteriales y las autopistas.

Ruta y Ubicación del Proyecto

- El proyecto comenzaría junto a Union Station y El Pueblo, y terminaría en el Dodger Stadium, con una estación intermedia en la entrada que está más al sur del parque Los Angeles State Historic Park.
- Conecta las comunidades circundantes de Chinatown, Mission Junction, Elysian Park, Echo Park y Solano Canyon con el sistema de transporte regional accesible en Union Station
- La ruta propuesta del proyecto maximiza la ruta a lo largo del derecho de paso (ROW) público y la propiedad pública y minimiza los derechos aéreos sobre las propiedades privadas, teniendo en cuenta los usos de la tierra adyacentes existentes y futuros



Precedentes de Sistemas de Transporte Aéreo

- La tecnología de transporte aéreo se ha usado durante más de 100 años
- Los sistemas modernos son un medio factible de transporte urbano y actualmente funcionan en varias ciudades alrededor del mundo
- Sistemas de transportes de góndolas establecidos en el mundo, como los de La Paz, Bolivia y de la Ciudad de México, México, se usan como sistema de transporte rápido para las poblaciones urbanas a las que sirven
- Al igual que los sistemas utilizados en Koblenz (Alemania), Phu Quoc (Vietnam) y Toulouse (Francia), el proyecto propuesto es de góndolas "3S".
  - Las cabinas transportarán aproximadamente de 30 a 40 pasajeros
  - El sistema proporcionará un viaje fluido y estable

Portland, Oregon

Roosevelt Island, New York

La Paz, Bolivia

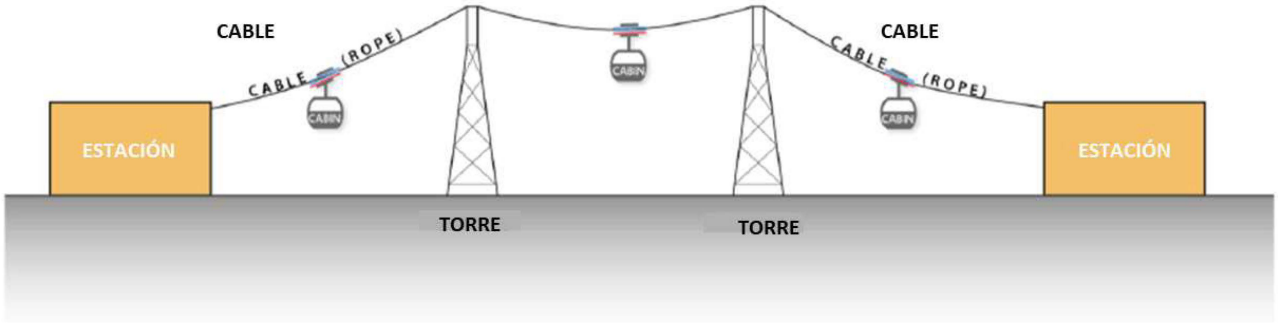
Ciudad de México, México

Toulouse, Francia

Medellín, Colombia

Tecnología de Transporte con Cables

El sistema ART incluye estaciones de pasajeros, una intersección que no es para pasajeros y torres para soportar los cables aéreos que transportan las cabinas



3 Estaciones de Pasajeros

- Incluyen sistemas mecánicos, eléctricos y de plomería, andenes de abordaje, y circulación vertical (por ejemplo, escaleras, escaleras mecánicas y ascensores)
- Incluyen áreas para la venta de boletos, la revisión de boletos y la formación de colas; el abordaje y desembarque de pasajeros; las operaciones; y los equipos del sistema

1 Intersección que no es para pasajeros

- Necesario para que el sistema ART gire los cables y permanezca a lo largo de la ruta del Proyecto

3 Torres para Soportar los Cables y las Cabinas

Sistema "3S" y Cabinas de Góndola

Sistema "3S"

- El sistema "3S" incluye tres cables: dos "cables guía" para la estabilidad y un tercer "cable de arrastre" para la circulación de las cabinas
- Las cabinas se desprenden del cable de arrastre que circula continuamente, se frenan al entrar en una estación para la salida y entrada de pasajeros, y luego se vuelven a unir al cable de arrastre

Cabinas

- De 30 a 40 pasajeros cada una, dependiendo de la configuración exacta de los asientos y las comodidades de las cabinas seleccionadas
- Totalmente accesibles para la ADA y con capacidad para sillas de ruedas
- En ellas se pueden sentar o estar de pie
- Ofrece espacio para carriola de bebé y bicicletas
- Se movería a una velocidad máxima de 13.4 millas por hora (21.6 km/h) durante las horas pico
- Al entrar en una estación, las cabinas reducirían su velocidad a aproximadamente 1 pie por segundo (0.3 m/seg) que equivale a menos de 1 milla por hora (1.6 km/h) para dejar que los pasajeros entren o salgan de la cabina en movimiento

Propósito y Necesidad

- Proporcionar una conexión de transporte directa entre Union Station y la propiedad del Dodger Stadium a través de un sistema de góndolas aéreas
- Conectar las comunidades circundantes de Chinatown, Mission Junction, Los Angeles State Historic Park, Elysian Park, Echo Park y Solano Canyon con el sistema de transporte regional accesible en Union Station
- Mejorar la movilidad y la accesibilidad en la región proporcionando una conexión diaria de transporte rápido aéreo de alta capacidad entre el sistema de transporte regional en LAUS
- Proporcionar un centro de movilidad en la Estación Chinatown/State Park
- Proporcionar un medio de transporte sostenible al operar el sistema ART usando electricidad de cero emisiones con almacenamiento de baterías de respaldo a fin de reducir las emisiones de GEI y mejorar la calidad del aire

Dodger Stadium: Uno de los Lugares Más Visitados de la Región

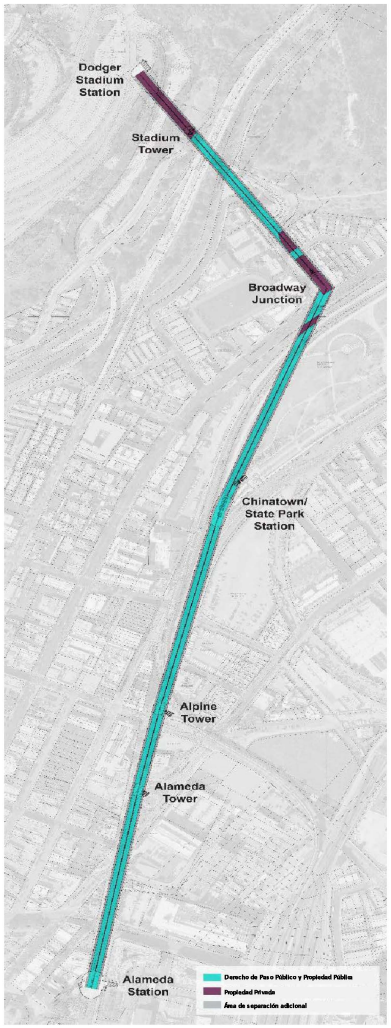
- Atrae a grandes multitudes de la región, con aproximadamente 100 partidos de béisbol y otros eventos cada año
- La gran mayoría de los visitantes se desplazan en sus vehículos personales
- Los vehículos ocasionan congestionamientos en las comunidades circundantes y en las autopistas cercanas
- Las comunidades cercanas a la ruta del proyecto propuesto fueron identificadas como en el percentil 90 – 100 de las comunidades desproporcionadamente cargadas por varias fuentes de contaminación en el Estado (Mapa CalEnviroScreen 4.0)

Objetivos del Proyecto

- Ampliar las opciones de movilidad para los usuarios del transporte público a través de una conexión directa entre la estación LAUS y Dodger Stadium, un centro de eventos regional.
- Atraer a nuevos usuarios de transporte público al sistema de Metro a través de una experiencia única de un sistema de transporte aéreo y brindar una conexión con el Dodger Stadium.
- Mejorar la experiencia de los visitantes del Dodger Stadium proporcionando un acceso alternativo eficiente, de gran capacidad y más rápido al Dodger Stadium.
- Mejorar la seguridad de los barrios adyacentes al Dodger Stadium reduciendo el número de vehículos en la zona.
- Reducir la contaminación relacionada con el transporte y las emisiones de gases de efecto invernadero (GEI) gracias a la reducción de la congestión vehicular en el Dodger Stadium y sus alrededores y en las calles del vecindario, las carreteras arteriales y las autopistas.
- Aumentar la conectividad de las personas con el centro de transporte público de la región de la estación LAUS y las instalaciones del Dodger Stadium.
- Mejorar la experiencia de los pasajeros del transporte público proporcionando vistas escénicas únicas del área de Los Ángeles a los pasajeros del ART y a los seguidores de los Dodgers.
- Llevar un sistema de transporte aéreo de clase mundial al área de Los Ángeles.
- Mejorar la conectividad de la comunidad proporcionando acceso peatonal y de transporte de primera/última milla a áreas que han estado históricamente desatendidas, incluyendo los parques Los Angeles State Historic Park y Elysian Park.
- Identificar oportunidades de tarifas comparables, asequibles y accesibles para la comunidad y el acceso a Los Angeles State Historic Park y Elysian Park.
- Minimizar la huella en el medio ambiente del proyecto mediante la integración de características de sostenibilidad y diseño respetuoso del medio ambiente en los materiales, la construcción, las operaciones y el mantenimiento del proyecto propuesto.
- Proporcionar un medio de transporte sostenible al operar el sistema ART usando electricidad de cero emisiones con almacenamiento de baterías de respaldo a fin de reducir las emisiones de GEI y mejorar la calidad del aire.
- Maximizar la ruta del proyecto a lo largo del derecho de paso (ROW) público y la propiedad pública y minimizar los requisitos de los derechos aéreos sobre las propiedades privadas, teniendo en cuenta los usos de la tierra adyacentes existentes y futuros

Espacio Aéreo | Ruta sobre Derecho de Paso Público/Propiedad Pública y Propiedad Privada

- Las normas de la industria para el diseño y el funcionamiento del transporte por cables y las cabinas están documentadas en la Norma B77.1 del American National Standards Institute (ANSI), el cual se desarrolla en coordinación con fabricantes, consumidores y reguladores
  - La Norma ANSI B77.1 regula las distancias verticales y horizontales entre el transporte por cables y las cabinas y elementos tales como vehículos, peatones, vegetación, edificios y otras estructuras
- La ruta maximiza la alineación a lo largo del derecho de paso (ROW) público y la propiedad pública y minimiza los derechos aéreos sobre las propiedades privadas, teniendo en cuenta los usos de la tierra adyacentes existentes y futuros
- Consideraciones adicionales en la selección de la ruta del proyecto:
  - Minimizar los cambios en los carriles de circulación, los carriles de estacionamiento y la circulación de bicicletas y peatones
  - Minimizar la reubicación de servicios públicos
  - La ubicación de recursos históricos y arqueológicos
  - Minimizar el uso de topografía irregular o difícil
  - Consideraciones técnicas y factibilidad

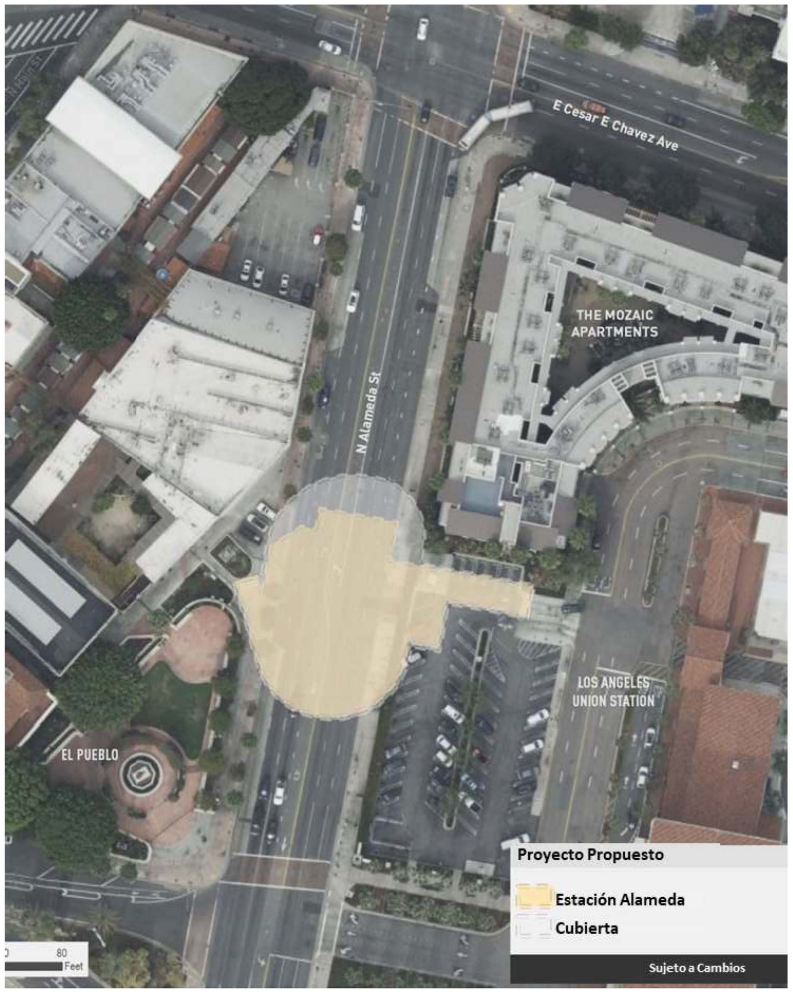


Diseño

- El objetivo del diseño es desarrollar un diseño arquitectónico común que unifique el sistema general de góndolas aéreas, permitiendo al mismo tiempo que cada componente principal contribuya a su respectiva condición urbana localizada
- De igual importancia es el deseo de minimizar la masa y la escala percibida de las estaciones, la intersección que no es para pasajeros y las torres.
- Las estaciones y la intersección aprovechan la forma de una bóveda de cañón simple para proporcionar el mínimo espacio cerrado necesario para proteger el equipo de transporte por cables y proporcionar sombra y protección contra la intemperie a los pasajeros en el andén de abordaje
- Cada una de las torres está diseñada para que sus bases no impidan la circulación adyacente de vehículos y peatones, y su color gris neutro de tono claro busca adaptarse al entorno urbano circundante

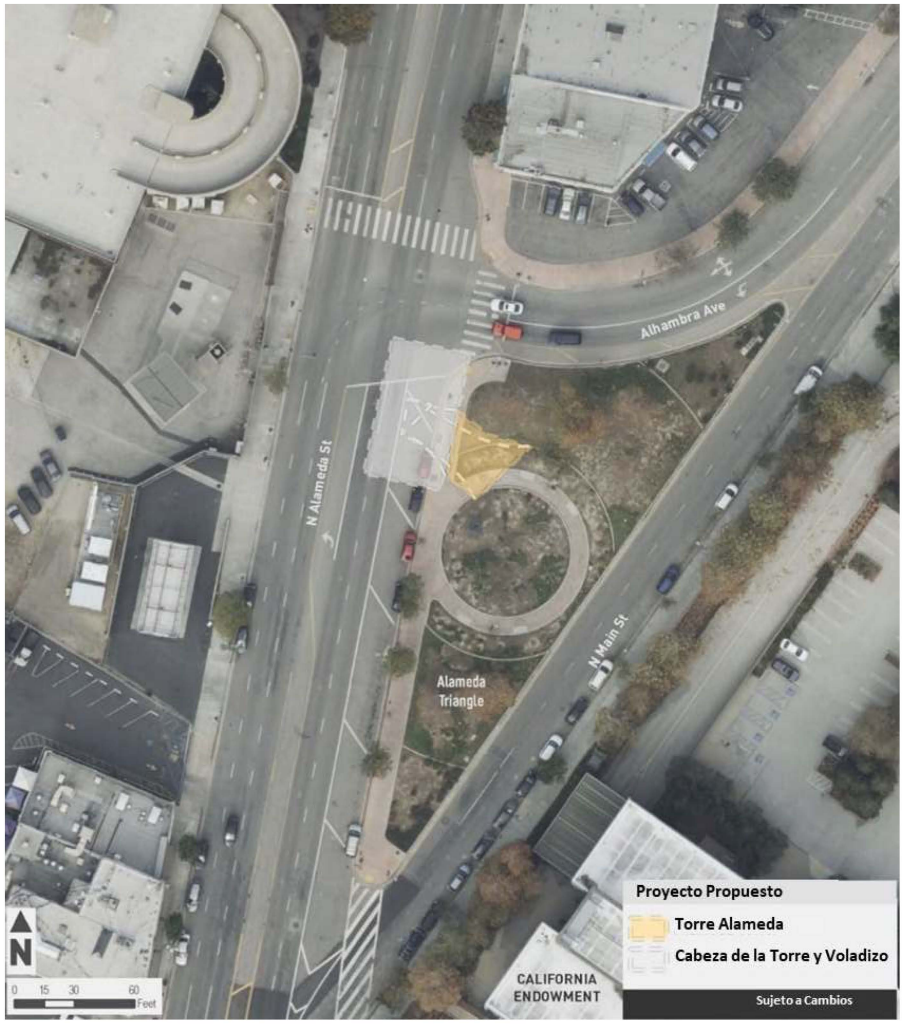
Estación Alameda

- En Alameda Street, junto a la explanada planeada de LAUS y la Placita de Dolores, entre Los Angeles Street y Cesar Chavez Avenue
- Esta estación tendría aproximadamente 173 pies (52 m) de largo, 109 pies (33 m) de ancho y 78 pies (24 m) de alto en su punto más alto.
- El andén de abordaje de pasajeros estaría aproximadamente a 31 pies (9.5 m) sobre la calle Alameda
- La circulación vertical se introduciría al norte de la Placita de Dolores, en una nueva plaza peatonal propuesta en El Pueblo y este de la zona prevista de la explanada de LAUS



Torre Alameda

- Situada en el Triángulo de la Alameda, un derecho de paso de la Ciudad entre Alameda Street, North Main Street y Alhambra Avenue
- 195 pies (59 m) de altura y el cable estaría suspendido a 175 pies (53 m) sobre el suelo
- Actualizaciones del paisaje y las instalaciones del Triángulo de la Alameda, incluyendo la reutilización e integración de los adoquines existentes

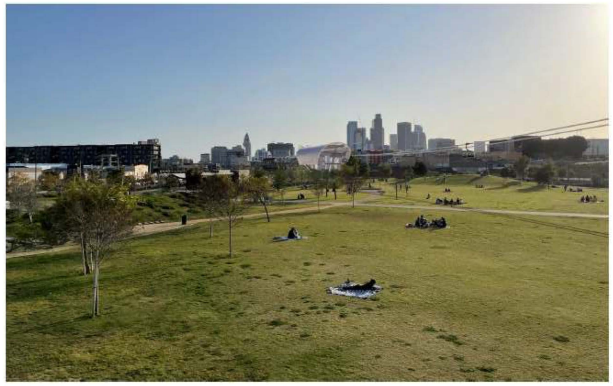


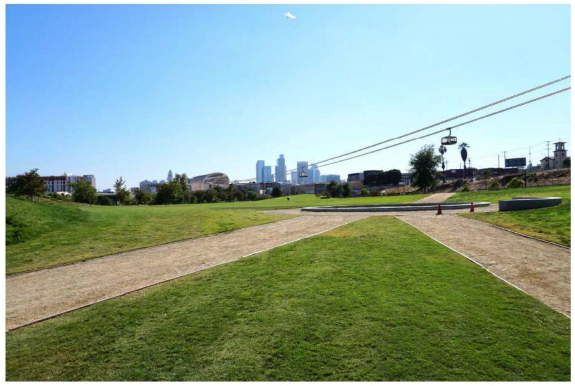
Torre Alpine

- Situada en la esquina noreste de Alameda Street y Alpine Street, junto a la Línea L del Metro (Dorada)
- Es un terreno propiedad de la Ciudad, que actualmente se utiliza como estacionamiento no público para vehículos de la Ciudad
- 195 pies (59 m) de altura en el punto más alto y el cable estaría suspendido a 175 pies (53 m) sobre el suelo
- Paisajismo e instalaciones cerca de la base de la torre

Estación Chinatown/State Park

- Adyacente a Spring Street, en la parte que está más al sur del parque Los Angeles State Historic Park
- La parte sur de la estación se situaría en el derecho de paso de la Ciudad, con la parte norte integrada al límite sur del parque Los Angeles State Historic Park
- La estación tendría aproximadamente 200 pies (61 m) de largo, 80 pies (24 m) de ancho y 98 pies (30 m) de alto en su punto más alto.
- El andén de abordaje de pasajeros estaría aproximadamente a 50 pies (15 m) sobre el nivel del suelo
- El acceso al andén de abordaje se realizaría desde el mezzanine, mediante ascensores y escaleras
- Incluiría la creación de jardines e instalaciones, incluyendo la integración de los adoquines de granito





Estación Chinatown/State Park

Servicios de la Estación

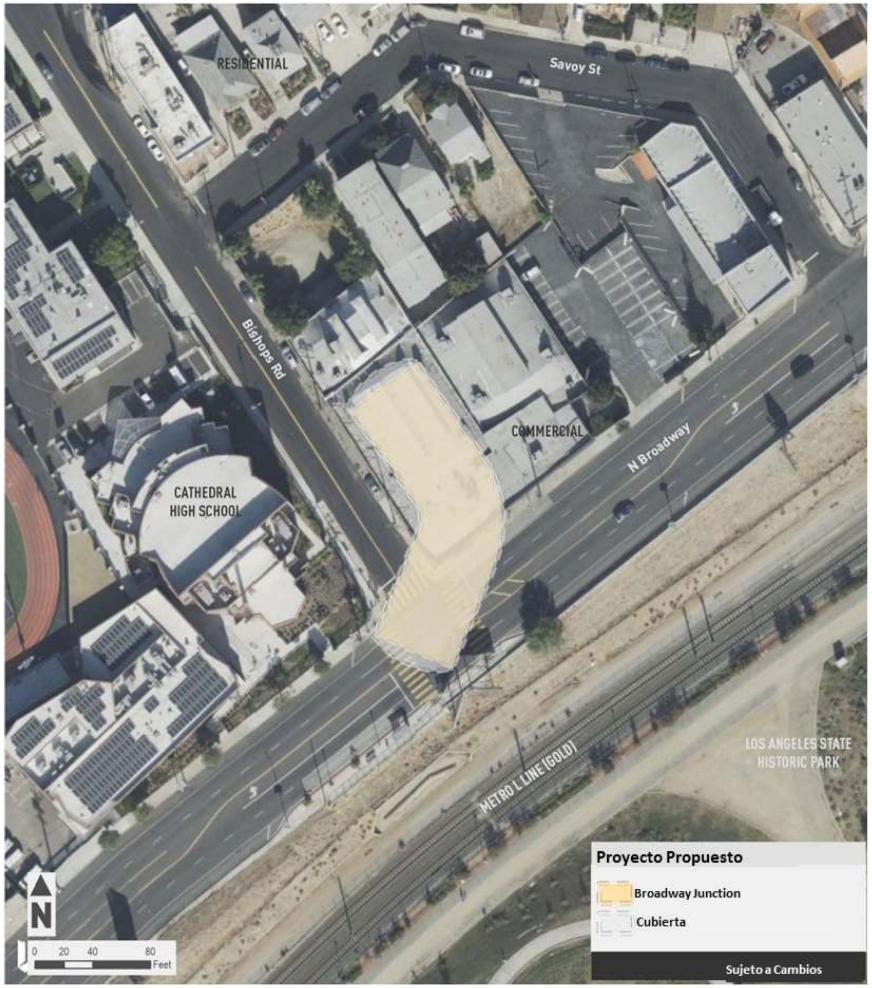
- Centro de movilidad donde los pasajeros podrían tener acceso a un conjunto de opciones multimodales de primera y última milla, como un programa de bicicletas compartidas
- Mejoras peatonales, incluyendo mejoras paisajísticas y en las instalaciones, estructuras de sombra y posibles asientos

Servicios del Parque

- 740 pies cuadrados (69 m2) de concesiones
- 770 pies cuadrados (72 m2) de baños
- Paso cubierto de 220 pies cuadrados (20 m2) que conecta las concesiones y los baños

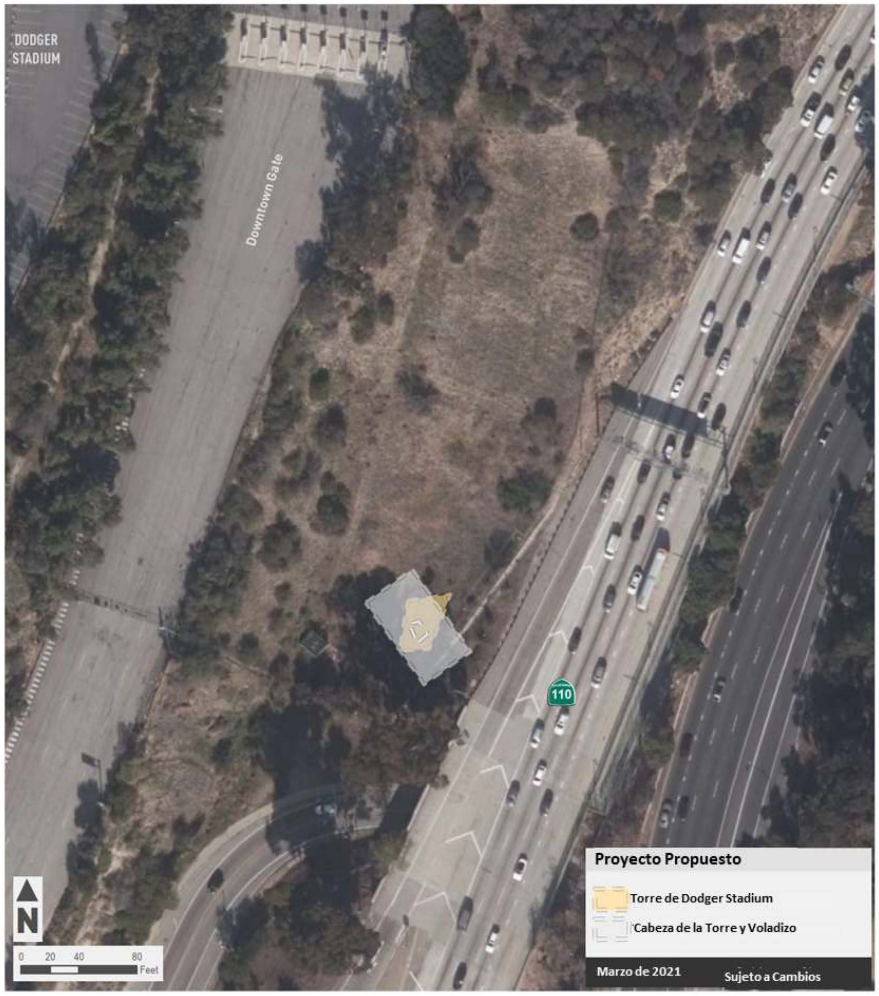
Broadway Junction

- Intersección o entronque que no es para pasajeros y que se localizaría donde se cruzan North Broadway y Bishops Road
- El edificio comercial existente situado en el 1201 de N. Broadway sería demolido
- La intersección tendría aproximadamente 227 pies (69 m) de largo, 60 pies (18 m) de ancho y 98 pies (30 m) de alto en su punto más alto



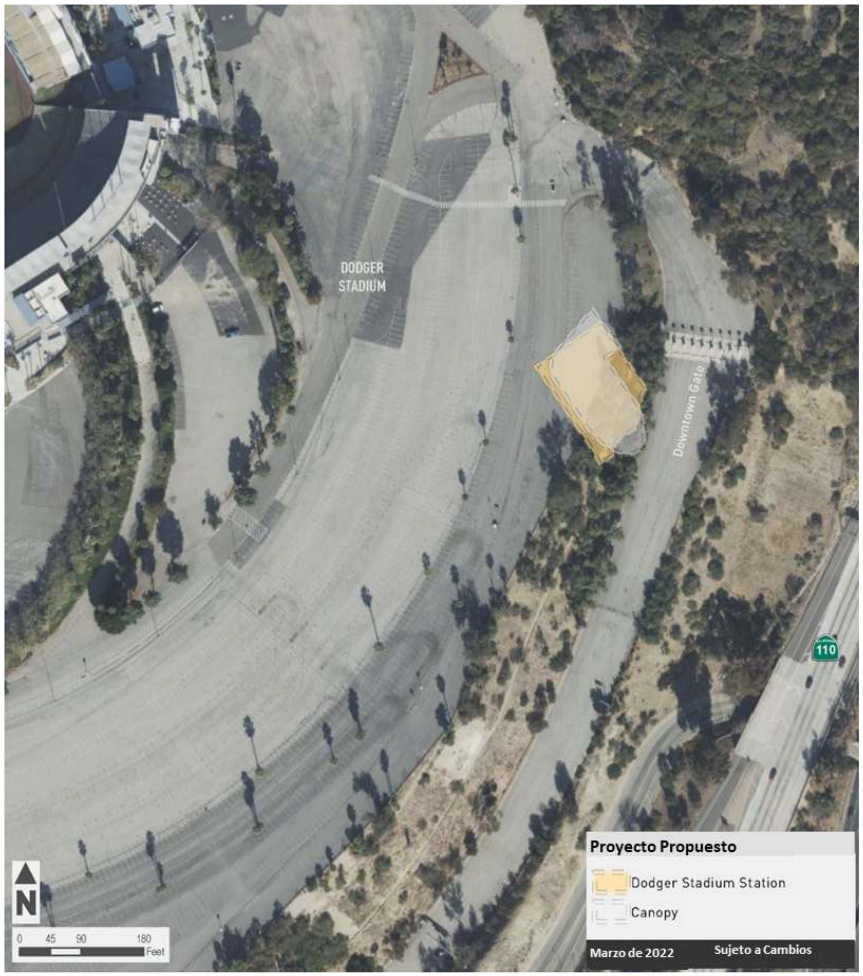
Torre del Estadio

- Ubicada en una ladera de propiedad privada al norte de Stadium Way, entre la entrada de Dodger Stadium Downtown Gate y la SR-110
- 179 pies (55 m) de altura con el cable suspendido 159 pies (48 m) por encima del suelo y con jardines cerca de la base de la torre



Estación Dodger Stadium

- Parte sureste de la propiedad del Dodger Stadium, cerca de la entrada Downtown Gate



Estación Dodger Stadium

- La estación tendría aproximadamente 194 pies (59 m) de largo, 80 pies (24 m) de ancho y 74 pies (23 m) de alto en su punto más alto
- Las cabinas de esta estación llegarían y saldrían de un andén de abordaje a nivel, con la zona de filas de pasajeros también a nivel
- Incluiría una zona subterránea bajo el andén para el almacenamiento y el mantenimiento de las cabinas, así como salas de descanso para el personal, taquillas y zonas de almacenamiento de repuestos
  - Cuando el sistema no esté en uso, las cabinas se devolverían a la Estación Dodger Stadium y ahí se almacenarían (en las horas en las que no operarían)
- Los baños para uso de los pasajeros estarían en la estación

La Estación Dodger Stadium también incluiría una conexión peatonal con el Dodger Stadium, incluyendo mejoras paisajísticas y de las instalaciones, así como posibles asientos

Sustentabilidad

- Las características de sostenibilidad del proyecto propuesto incluirían características contenidas en:
  - El Código de Normas de Construcción Ecológica de California de 2019
  - Liderazgo en Energía y Diseño Ambiental (LEED) para nuevas construcciones del Consejo de Construcción Verde de los Estados Unidos
  - Sistema de Clasificación Envision del Instituto para la Infraestructura Sostenible
- El 100% de la energía para el proyecto propuesto sería suministrada por el Programa Green Power del Departamento de Agua y Energía de la Ciudad de Los Ángeles
- Almacenamiento de baterías de respaldo en cada estación, torre e intersección para proporcionar energía de reserva, en lugar de generadores diesel

Al igual que el proyecto, la alternativa de ruta de la calle Spring Street proporcionaría una opción de ART para los visitantes del Dodger Stadium, además del acceso entre el Dodger Stadium, las comunidades aledañas y el sistema de transporte regional disponible en Los Angeles Union Station. La tecnología del ART es silenciosa, y el proyecto propuesto reduciría las VMT y la congestión, lo que llevaría a reducir las emisiones de GEI y a mejorar la calidad del aire.

Construcción

Calendario

- Se prevé que la construcción del proyecto propuesto comience en 2024 y dure aproximadamente 25 meses, incluyendo la construcción, la instalación de los cables y las pruebas del sistema

Horario de los Trabajos

- Se prevé que el horario de construcción sea de 10 horas al día, que variará en función de las circunstancias y restricciones especiales
- Si bien no está anticipada, la aprobación de la Junta de Comisionados de Policía de la Ciudad de Los Ángeles se requeriría para ampliar las horas de construcción y los posibles trabajos de construcción en domingo.

Cierre de Carriles

- Los cierres anticipados incluirían cierres donde los carriles estarían cerrados las 24 horas del día durante ciertas fases de la construcción, o cierres alternos durante ciertas fases de la construcción, en los que los cierres se producirían durante las horas de construcción durante aproximadamente 10 horas al día, y las vialidades se reabrirían durante las horas en las que no hay trabajos de construcción, durante aproximadamente 14 horas al día
- En el caso de los cierres alternativos, durante las horas en las que no hay trabajos de construcción, se colocarían placas de acero en las obras en la medida de lo posible para permitir la circulación de vehículos y peatones.
- Los cierres y las horas variarán según el lugar y la fase de construcción
- El proyecto propuesto implementaría un Plan de Gestión del Tráfico de la Construcción que incluirá desvíos y asegurará que el acceso para emergencias se mantenga durante todas las actividades de construcción

Supuestos Detallados de la Construcción

- Los supuestos detallados de la construcción se incluyen en el Apéndice B del Borrador del EIR

Análisis y Conclusiones Clave del Borrador del EIR

Temas de Recursos Ambientales

Todos los Temas de Recursos Ambientales de conformidad con el Apéndice G de las Directrices de la CEQA se abordan en el Borrador del EIR:

- Estética
- Agricultura/Silvicultura
- Calidad del Aire
- Recursos Biológicos
- Recursos Históricos/Culturales
- Energía
- Geología/Suelos
- Emisiones de Gases de Efecto Invernadero
- Peligros/Materiales Peligrosos
- Hidrología/Calidad del Agua
- Planificación/Uso de la Tierra
- Recursos Minerales
- Ruido
- Población/Vivienda
- Servicios Públicos
- Recreación
- Transporte
- Recursos Culturales Tribales
- Sistemas de Servicios/Servicios Públicos
- Incendios Forestales

Estética

¿QUÉ SE ESTUDIÓ?

- Impactos visuales de los componentes del proyecto que rodean la ruta del proyecto
- Puntos de observación clave que representan el carácter visual, incluyendo la presencia o ausencia de jardines, los usos predominantes del suelo, la escala de los edificios o las principales vistas escénicas, los recursos escénicos y los elementos visuales sustanciales disponibles, como los recursos de espacios abiertos, los árboles de las calles y las fachadas de los edificios
- La respuestas de quienes perciben estas vistas, incluyendo los peatones y quienes realizan actividades recreativas (por ejemplo, los usuarios de los parques)
- Aunque no hay vistas escénicas designadas, las vistas del horizonte del centro de Los Ángeles, Union Station, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium y las montañas de San Gabriel y San Bernardino
- Luz y Deslumbramiento

ANÁLISIS Y CONCLUSIONES CLAVE

- El proyecto propuesto no bloquearía de manera significativa las vistas panorámicas o escénicas, como las vistas del horizonte del centro de Los Ángeles, Union Station, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium, y las montañas de San Gabriel y San Bernardino
- Con las autorizaciones y aprobaciones del proyecto propuesto – que incluirían normas de diseño para mejorar la identidad visual y el carácter del proyecto propuesto y sus comunidades circundantes – no habría conflicto con la zonificación aplicable u otras regulaciones que rigen la calidad escénica
- El proyecto propuesto no crearía una fuente sustancial de luz o deslumbramiento y cumpliría con la normativa de iluminación de la Ciudad

Vista Actual y Simulada desde el State Historic Park hacia el Centro - Horizonte de Los Ángeles

Estética

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Vista Escénica	Menos que significativo	Menos que significativo
Recursos Escénicos	Sin impacto	Sin impacto
Carácter Visual	Menos que significativo	Menos que significativo
Luz y Deslumbramiento	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción: Las barreras y los muros contra ruido incluirían una pantalla de privacidad, y el proyecto recurriría a las mejores prácticas de gestión para reducir los impactos visuales. No se requiere mitigación.

Operación: Características del diseño del proyecto, incluyendo la iluminación de edificios y la iluminación de los letreros. No se requiere mitigación.

Agricultura y Silvicultura

¿QUÉ SE ESTUDIÓ?

- Si el proyecto entraría en conflicto con la zonificación agrícola en los sitios de la Torre del Estadio y la Estación Dodger Stadium

ANÁLISIS Y CONCLUSIONES CLAVE

- La propiedad del Dodger Stadium no contiene usos agrícolas y está sujeta a un Permiso de Uso Condicional, que permite la operación de un estadio de Grandes Ligas de Béisbol y varias estructuras y usos auxiliares, incluyendo "servicio de transporte masivo" al sitio; por lo tanto, la construcción y operación del proyecto propuesto no entraría en conflicto con la zonificación agrícola existente

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Conversión de Tierras Agrícolas	Sin impacto	Sin impacto
Conflicto con la Zonificación de Tierras Forestales	Sin impacto	Sin impacto
Pérdida de Tierras Forestales	Sin impacto	Sin impacto
Uso Agrícola	Sin impacto	Sin impacto
Zonificación Agrícola y Ley Williamson	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

No se requiere mitigación.

Calidad del Aire

¿QUÉ SE ESTUDIÓ?

- Impactos potenciales en la calidad del aire a escala regional y local de la construcción y operación del proyecto propuesto
- Características y efectos de los contaminantes atmosféricos
- Normativas adoptadas para la gestión de la calidad del aire
- Una Evaluación de Riesgos para la Salud (HRA) que evalúe el riesgo estimado de cáncer y el índice de peligro crónico no cancerígeno asociado a la construcción del proyecto

ANÁLISIS Y CONCLUSIONES CLAVE

- El proyecto propuesto sería coherente con los planes de calidad del aire aplicables
- Las emisiones estimadas de la construcción del proyecto propuesto serían inferiores a los niveles significativos de contaminantes y emisiones
- El proyecto propuesto no expondría a los receptores sensibles a concentraciones sustanciales de contaminantes durante las operaciones, puesto que el proyecto propuesto no incluye ningún uso del suelo ni emisiones operativas que pudieran afectar materialmente a la calidad del aire del ambiente durante su funcionamiento
- El proyecto propuesto traería consigo a una reducción neta de las emisiones de contaminantes de los criterios al reducir las VMT, reduciendo así las emisiones en comparación con las condiciones existentes
- Basándose en los resultados de la HRA, el proyecto propuesto tendría un impacto menos que significativo relativo a la exposición de los receptores sensibles a concentraciones substanciales de contaminantes procedentes de los TAC.

Calidad del Aire

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Planes de Calidad del Aire	Menos que significativo	Menos que significativo
Aumento de los Contaminantes del Aire	Menos que significativo	Menos que significativo
Receptores Sensibles	Menos que significativo	Menos que significativo
Otras Emisiones	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción: Característica del proyecto que requiere que todos los equipos de construcción todo terreno que funcionen con diésel y tengan más de 50 caballos de fuerza deberán respetar las normas de emisiones de nivel 4 para motores diésel todo terreno establecidas por la Agencia de Protección Ambiental de los Estados Unidos (USEPA). No se requiere mitigación.

Operación: No se requiere mitigación.

Recursos Biológicos

¿QUÉ SE ESTUDIÓ?

- Si el proyecto afectaría a las especies con estatus especial y su hábitat
- Si el proyecto afectaría al hábitat ribereño o a los humedales protegidos
- El potencial de que el proyecto interfiera con el movimiento de la vida silvestre a lo largo de la ruta
- Si el proyecto entraría en conflicto con alguna política u ordenanza local que proteja los recursos biológicos, tal como una política u ordenanza de preservación de árboles
- Si el proyecto entraría en conflicto con los planes adoptados para la conservación del hábitat

ANÁLISIS Y CONCLUSIONES CLAVE

- El área del proyecto generalmente no alberga un hábitat para especies de estatus especial; sin embargo, el retiro de palmeras y eucaliptos maduros durante la construcción del proyecto propuesto podría traer consigo el retiro de sitios de descanso para murciélagos
- El área del proyecto no contiene hábitats ribereños, ni otras comunidades naturales sensibles o humedales protegidos; por lo tanto, no habría ningún impacto
- El área del proyecto no sirve como un corredor regional de vida silvestre; sin embargo, las actividades de construcción pueden provocar que especies de murciélagos y aves eviten las áreas de construcción activa
- El proyecto reemplazaría los árboles retirados de acuerdo con la Ordenanza de Protección de Árboles Nativos de la Ciudad, los requisitos del Departamento de Parques y Recreación de California y otros requisitos aplicables

Recursos Biológicos

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Hábitat Ribereño	Sin impacto	Sin impacto
Humedales Protegidos	Sin impacto	Sin impacto
Políticas o Planes Biológicos	Menos que significativo	Sin impacto
Interferencia en el Movimiento de las Especies	Menos que significativo con mitigación	Menos que significativo
Modificaciones del Hábitat	Menos que significativo con mitigación	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción:

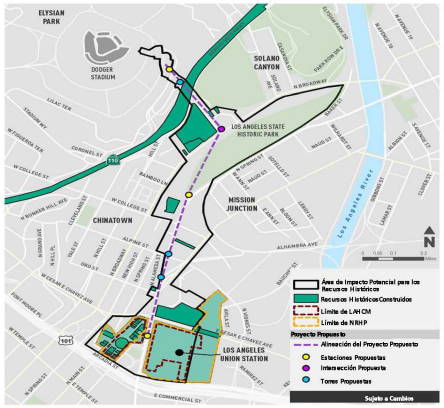
- Implementación de una característica de diseño del proyecto para establecer una Zona de Protección de Árboles para protegerlos
- Estudios de anidación previos a la construcción y medidas para evitar y minimizar los impactos para las aves que aniden

Operación: No se requiere mitigación.

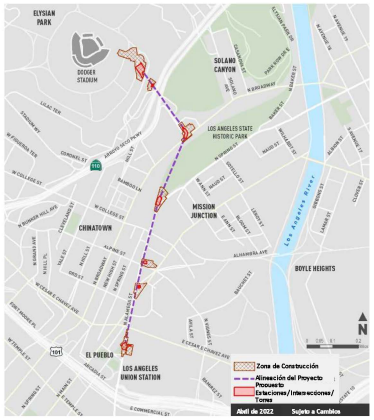
Recursos Culturales

¿QUÉ SE ESTUDIÓ?

- Impactos directos e indirectos a 29 recursos históricos construidos dentro de el Área de Impactos Potenciales, incluyendo la Terminal de Pasajeros de Los Angeles Union Station y sus terrenos, el Distrito Histórico de la Plaza de Los Ángeles, la escuela secundaria Cathedral High School y el Distrito Histórico de Arroyo Seco Parkway
- Impactos de la alteración del suelo para los recursos arqueológicos dentro del Área de Impactos Directos, incluyendo La Placita, la Zanja Madre y la estación ferroviaria Southern Pacific Railroad's River Station
- **ANÁLISIS Y CONCLUSIONES CLAVE**
- Recursos Históricos
  - La construcción de la Estación Alameda propuesta tiene el potencial de tener impactos directos e indirectos en la bodega de vinos The Winery y en el mural de *El Grito*; sin embargo, los impactos se mitigarían hasta hacerlos menos que significativos
  - Impactos relacionados con la construcción y las operaciones en todos los demás recursos históricos serían menos que significativos
- Recursos Arqueológicos
  - La construcción de la Estación Alameda, el Triángulo de Alameda, la Torre Alpine y la Estación Chinatown/State Park tienen el potencial de resultar en un cambio sustancial adverso en la importancia de un recurso arqueológico; sin embargo, los impactos serían mitigados para hacerlos menos que significativos



Área de Impactos Potenciales para los Recursos Históricos Construidos



Área de Impactos Directos en los Recursos Arqueológicos

Recursos Culturales

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Recurso Histórico	Menos que significativo con mitigación	Menos que significativo
Recurso Biológico	Menos que significativo con mitigación	Sin impacto
Alteración de Restos Humanos	Menos que significativo con mitigación	Sin impacto

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

- Recursos Históricos
  - Características del diseño del proyecto para la documentación de pre-construcción y de post-construcción y la protección de la bodega de vinos The Winery y el mural de *El Grito*, y la protección del mural de *El Grito* durante la construcción
  - Supervisión de vibraciones y restricciones de los dispositivos de compactación del suelo ajustables a la fuerza durante la construcción de la Estación Alameda propuesta
- Recursos Arqueológicos
  - Preparación e implementación de un Plan de Supervisión y Mitigación para Recursos Culturales y un Programa de Implementación de Trabajadores de Recursos Arqueológicos
  - Plan de Pruebas Arqueológicas Previas a la Construcción de la Estación Alameda y de la Estación Chinatown/State Park propuestas
  - Posible rediseño de los servicios del parque Los Angeles State Historic Park para evitar los recursos arqueológicos

Energía

¿QUÉ SE ESTUDIÓ?

- Generalidades de las leyes y los reglamentos federales, estatales y locales relativos a la energía
- Generalidades de la producción, el suministro y el consumo de energía en California
- Evaluación de los recursos energéticos relacionados con la construcción y la demanda anual de energía asociada a las operaciones del proyecto

ANÁLISIS Y CONCLUSIONES CLAVE

- El consumo temporal de energía asociado a la construcción del proyecto propuesto permitiría una reducción del consumo de energía a largo plazo asociado a las operaciones del proyecto propuesto
- El uso principal de electricidad asociado provendría de recursos renovables a través del Programa Green Power del LADWP
- El proyecto propuesto reduciría las VMT y aumentaría el número de personas que utilizan el transporte público, lo que resultaría en una disminución del uso de combustibles fósiles de los vehículos de pasajeros

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Consumo Innecesario, Ineficaz o Derrochador	Menos que significativo	Menos que significativo
Planes Energéticos Estatales o Locales	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

No se requiere mitigación.

Geología y Suelos

QUÉ SE ESTUDIÓ

- Si el proyecto sería susceptible a riesgos sísmicos, como fuertes sacudidas del suelo, fallas, licuefacción o deslizamientos de tierra
- Si el proyecto estaría ubicado en una unidad geológica o suelo inestable, lo que potencialmente daría lugar a un deslizamiento de tierra, expansión lateral, hundimiento, licuefacción o colapso dentro o fuera del sitio.
- Si la ruta del proyecto incluiría suelos expansivos que podrían crear un riesgo sustancial directo o indirecto para la vida o la propiedad
- El potencial de que el proyecto destruiría, directa o indirectamente, un recurso o recurso paleontológico único o una característica geológica única

ANÁLISIS Y CONCLUSIONES CLAVE

- Si bien el área del proyecto se encuentra en una región sísmica activa del sur de California, con el cumplimiento de las normas y los códigos existentes y la implementación de medidas de mitigación, los impactos relacionados con fuertes sacudidas sísmicas del suelo, fallas del suelo relacionadas con sismos y/o licuefacción durante la construcción del proyecto propuesto se reducirían a menos que significativos
- El Plan de Operaciones de Emergencia del proyecto incluiría protocolos de respuesta a emergencias y establecería que en caso de un terremoto de gran magnitud, el sistema sería evacuado y apagado por completo, y no se realizarían operaciones
- Con el cumplimiento de las normas y los códigos existentes y la aplicación de medidas de mitigación, los impactos relacionados con algún hundimiento, expansión lateral, licuefacción o colapso durante la nivelación y la construcción de los componentes del proyecto, serían menos que significativos
- Con el cumplimiento de los códigos y normas existentes y la aplicación de medidas de mitigación, los impactos relacionados con la corrosión del suelo durante la construcción serían menos que significativos
- En la parte norte del proyecto propuesto, cerca de la aproximación a la Estación Dodger Stadium, existe el potencial de encontrar recursos paleontológicos; sin embargo, los impactos serían mitigados para hacerlos menos que significativos

Geología y Suelos

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	**Operaciones**
Efectos Adversos: Terremotos, Sacudidas Sísmicas del Terreno, Licuefacción o Deslizamientos de Tierra	Menos que significativo con mitigación	Menos que significativo
Sistemas de Aguas Residuales de Apoyo	Sin impacto	Sin impacto
Destrucción de Características Paleontológicas o Geológicas Únicas	Menos que significativo con mitigación	Sin impacto
Erosión del Suelo/Pérdida de la Capa Superior	Menos que significativo	Menos que significativo
Unidad Geológica o Suelo Inestable	Menos que significativo con mitigación	Menos que significativo
Suelo Expansivo	Menos que significativo con mitigación	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción:

- Preparación e Implementación de un Informe Geotécnico Final Específico para el Emplazamiento
- Preparación de un Plan de Supervisión y Mitigación de los Recursos Paleontológicos y cumplimiento del mismo

Operación: No se requiere mitigación

Emisiones de Gases de Efecto Invernadero (GEI)

¿QUÉ SE ESTUDIÓ?

- Leyes y Reglamentos Federales, Estatales y Locales Pertinentes
- Generalidades de la Ciencia sobre los GEI
- Metodología utilizada para evaluar las emisiones de GEI relacionadas con el proyecto propuesto

ANÁLISIS Y CONCLUSIONES CLAVE

- El proyecto propuesto no traería consigo una contribución incremental de emisiones de GEI en comparación con las condiciones existentes, y reduciría las emisiones de GEI en comparación con las condiciones existentes

Las emisiones a lo largo de la vida del proyecto supondrían una reducción de 166,653 toneladas métricas de GEI.

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	**Operaciones**
Generación de GEI	Menos que significativo	Menos que significativo
Políticas o Planes de Reducción de GEI	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

No se requiere mitigación.

Peligros y Materiales Peligrosos

¿QUÉ SE ESTUDIÓ?

- Se evaluaron las actividades del proyecto para determinar su impacto potencial en la generación de condiciones peligrosas para el público o el medio ambiente durante la construcción y las operaciones
- A continuación se analizaron los posibles impactos ocasionados por los riesgos y materiales peligrosos en función de los criterios de importancia aplicables

ANÁLISIS Y CONCLUSIONES CLAVE

- Si bien el proyecto propuesto utilizaría, transportaría y eliminaría cantidades limitadas de sustancias peligrosas durante la construcción, el proyecto propuesto cumpliría con los requisitos federales, estatales y locales de salud y seguridad; y cumpliría con todos los códigos, normas y reglamentos durante la operación
- El proyecto propuesto cumpliría con lo dispuesto por la OSHA, Cal/OSHA, y la División 71 del Código Municipal de Los Ángeles, y aplicaría un Plan de Manejo de Suelos y Aguas Subterráneas, que limitaría el potencial de derrames de materiales y residuos peligrosos
- El proyecto propuesto llevaría a cabo la reducción de materiales peligrosos a través de un contratista de reducción con licencia antes de la demolición, lo que garantizaría que las escuelas no se vieran afectadas negativamente
- La construcción y operación del proyecto propuesto no interferiría con el acceso del LAPD al Helipuerto Hooper, y las operaciones del helipuerto no serían impactadas por las actividades de construcción
- Se identificaron cinco propiedades como sitios de materiales peligrosos en el área del proyecto; sin embargo, el proyecto implementaría un Plan de Manejo de Suelos y Aguas Subterráneas para reducir los impactos de estos sitios
- La construcción del proyecto propuesto no perjudicaría sustancialmente la implementación de un plan de respuesta a emergencias adoptado o un plan de evacuación de emergencias, ni interferiría físicamente con dichos planes; y la operación diaria del proyecto no afectaría las respuestas ante emergencias

Peligros y Materiales Peligrosos

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	**Operaciones**
Lugares Peligrosos	Menos que significativo con mitigación	Sin impacto
Plan de Uso del Suelo del Aeropuerto	Sin impacto	Sin impacto
Peligro para el Público o el Medio Ambiente	Menos que significativo con mitigación	Menos que significativo
Planes de Emergencia y Evacuación	Menos que significativo	Menos que significativo
Peligros cerca de Escuelas	Menos que significativo con mitigación	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción:

- Preparación e implementación de un Plan de Gestión de Suelos y Aguas Subterráneas para especificar métodos de manejo y eliminación en caso de presentarse una situación de aguas subterráneas contaminadas, suelos contaminados o estructuras contaminadas durante la construcción del proyecto
- Reducción de Materiales Peligrosos para la demolición del edificio existente en 1201 North Broadway

Operación: No se requiere mitigación.

Hidrología y Calidad del Agua

¿QUÉ SE ESTUDIÓ?

- El potencial de que el proyecto propuesto infrinja las normas de calidad del agua, disminuya los suministros de agua subterránea o provoque una erosión o sedimentación substancial dentro o fuera del sitio
- El potencial de que el proyecto propuesto aumente sustancialmente el índice o la cantidad de escorrentía superficial de manera que se produzcan inundaciones dentro o fuera del sitio
- El potencial de que el proyecto propuesto cree o contribuya a una escorrentía que supere la capacidad de los sistemas de drenaje de aguas pluviales existentes o previstos o que impida o redirija flujos
- El potencial de que el proyecto propuesto suponga un riesgo de liberación de contaminantes durante una inundación del proyecto en zonas con riesgo de inundación, tsunami u oscilación del agua
- El potencial de que el proyecto propuesto obstaculice o entre en conflicto con la aplicación de un plan de control de la calidad del agua o un plan de gestión sostenible de las aguas subterráneas

ANÁLISIS Y CONCLUSIONES CLAVE

- El proyecto propuesto cumpliría con todos los reglamentos y leyes de protección de la calidad del agua aplicables de los organismos federales, estatales, regionales y locales, el control de la calidad del agua y/o los planes de gestión sostenible de las aguas subterráneas
- El proyecto propuesto incorporaría las mejores prácticas de gestión y aplicaría un plan de desarrollo de bajo impacto para reducir los impactos sobre la hidrología y la calidad del agua
- El proyecto propuesto no es susceptible a la liberación de contaminantes debido a una inundación del proyecto en zonas con riesgo de inundación, tsunami u oscilación del agua

Hidrología y Calidad del Agua

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Reducción del Suministro de Agua del Suelo	Menos que significativo	Sin impacto
Planes o Normas de Calidad del Agua	Menos que significativo	Menos que significativo
Alteración del Drenaje	Menos que significativo	Menos que significativo
Inundación, Tsunami u Oscilación de Agua	Menos que significativo	Menos que significativo
Conflicto con los Planes	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción y Operaciones El proyecto propuesto cumpliría con los reglamentos y leyes federales, estatales, regionales y locales aplicables, incluyendo el cumplimiento de los permisos de aguas pluviales, permisos de aguas residuales y otros reglamentos sobre calidad del agua aplicables. No se requiere mitigación.

Planificación y Uso de la Tierra

¿QUÉ SE ESTUDIÓ?

- El potencial de que el proyecto dividiera físicamente a alguna comunidad establecida
- El potencial de que el proyecto entrara en conflicto con algún plan, política o reglamento de uso del suelo adoptado con el fin de evitar o mitigar algún efecto ambiental

ANÁLISIS Y CONCLUSIONES CLAVE

- Aunque los cierres temporales durante la construcción interrumpirían el acceso vehicular, peatonal y en bicicleta dentro y entre las comunidades, habría una variedad de opciones disponibles para las conexiones y el acceso dentro del área del proyecto
  - Las comunidades seguirán siendo accesibles desde otras calles circundantes, y se proporcionarán desvíos peatonales, lo que evitará que los cierres dividan físicamente a las comunidades establecidas.
- El proyecto propuesto mejoraría la conectividad de la comunidad al proporcionar acceso y mejoras al transporte público y a los peatones en los tramos de primera/última milla, incluyendo un centro de movilidad y apoyo al futuro puente para bicicletas y peatones de Los Angeles State Historic Park.
- El proyecto propuesto es coherente con los reglamentos, políticas, metas y/u objetivos de los planes, códigos y ordenanzas locales
- El organismo de parques estatales State Parks considera que hay una inconsistencia entre el proyecto propuesto y el Plan General de Los Angeles State Historic Park, y por ende considera un impacto potencialmente significativo porque el Plan General de Los Angeles State Historic Park no identifica al transporte como un uso del parque
  - Con la implementación de la Medida de Mitigación LUP-A, que requeriría que el proyecto propuesto obtuviera una Enmienda al Plan General de LASHP, los impactos serían menos que significativos

Planificación y Uso de la Tierra

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
División Física de la Comunidad	Menos que significativo	Sin impacto
Conflicto con Políticas o Planes de Uso de la Tierra	Menos que significativo con mitigación	Menos que significativo con mitigación

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción (División Física de la Comunidad): Si bien los impactos de la construcción son menos que significativos, la implementación del Plan de Gestión del Tráfico de la Construcción incluiría información sobre el cierre de calles, planes de desvío, rutas de transporte y un plan de preparación

Construcción y Operaciones El proyecto propuesto obtendría una Enmienda al Plan General de Los Angeles State Historic Park para permitir los usos de traslado dentro del Plan General de Los Angeles State Historic Park

Recursos Minerales

¿QUÉ SE ESTUDIÓ?

- Si la construcción del proyecto provocaría la pérdida de disponibilidad de recursos minerales conocidos que serían de valor para la región y los residentes del estado
- Si el proyecto provocaría la pérdida de disponibilidad de un sitio de recuperación de recursos minerales de importancia local delineado en un plan general local, plan específico u otro plan de uso del suelo

ANÁLISIS Y CONCLUSIONES CLAVE

- El proyecto no está ubicado en un área de recursos minerales conocidos
- Gran parte del área dentro de la Ciudad de Los Ángeles fue desarrollada con estructuras antes de las clasificaciones de MRZ y no está disponible para la extracción
- La ruta del proyecto está ubicada en un área urbanizada de la Ciudad de Los Ángeles, y la extracción de dichos materiales en un entorno urbanizado no es práctica

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Pérdida de Recursos Minerales Disponibles	Sin impacto	Sin impacto

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

No se requiere mitigación.

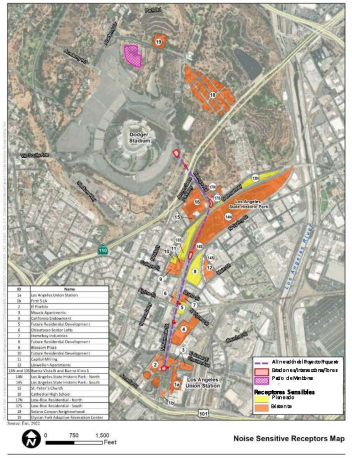
Ruido

¿QUÉ SE ESTUDIÓ?

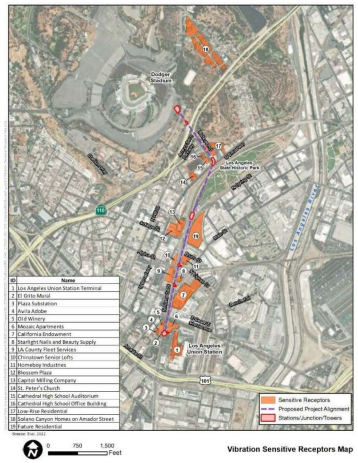
- Sondeo del ruido en las condiciones existentes con mediciones realizadas en lugares representativos de los receptores sensibles al ruido a lo largo de la ruta del proyecto propuesto, incluyendo lugares de desarrollos residenciales existentes y futuros, escuelas, parques y otras áreas con uso frecuente de humanos al aire libre
- Los impactos potenciales del ruido de la construcción se evaluaron calculando los niveles de ruido de la construcción relacionados con el proyecto
- Los impactos del ruido de las operaciones se evaluaron identificando los niveles de ruido que serían generados por las fuentes de ruido de las operaciones del proyecto, incluyendo las estaciones, la intersección, las torres, las cabinas que pasan a lo largo de las poleas de soporte en las torres, las cabinas y los pasajeros en las estaciones que esperan para abordar el sistema
- Análisis del impacto de las vibraciones transmitidas por el suelo en lo que respecta a daños a los edificios y a molestias a las personas

ANÁLISIS Y CONCLUSIONES CLAVE

- Los impactos significativos e inevitables de la construcción del proyecto propuesto serían una función del ruido generado por el equipo de construcción, la ubicación del equipo, el momento y la duración de las actividades de construcción que generan el ruido, y la distancia en relación con los receptores sensibles al ruido
- El ruido generado por el tráfico relacionado con la construcción fuera del sitio de obras sería menos que significativo
- El ruido generado por las operaciones del proyecto, en el peor de los casos, sería menos que significativo
- La vibración generada por las actividades de construcción en el sitio tendría impactos significativos e inevitables en cuanto a molestias a las personas; los impactos potenciales de daños a edificios serían menos que significativos con mitigación
- La vibración generada por las operaciones del proyecto sería menos que significativa



Mapa de Receptores Sensibles al Ruido



Mapa de Receptores Sensibles a la Vibración

Ruido

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Exposición al Público cerca del Aeropuerto	Sin impacto	Sin impacto
Generación o aumento de los niveles de ruido ambiental	Significativo e Inevitable	Menos que significativo
Generación de Niveles Excesivos de Vibración o Ruido	Significativo e Inevitable	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Ruido de las Operaciones: Características del diseño de la cabina relacionadas con la reducción del ruido entre el interior y el exterior y los niveles sonoros de las unidades de calefacción, ventilación y aire acondicionado (HVAC). No se requiere mitigación.

Ruido de la Construcción: Implementación de un plan de gestión del ruido de la construcción, que incluya:

- Barreras contra el ruido
- Mantenimiento del equipo
- Alcance a la comunidad, incluyendo un Coordinador de Perturbaciones Acústicas

Vibración de la Construcción:

- Colocación de equipos de supervisión de vibraciones para Avila Adobe (adición de los años 1970), el mural de *El Grito* y la bodega de vinos The Winery
- Restricciones al uso de dispositivos de compactación del suelo ajustables a la fuerza

Población y Vivienda

¿QUÉ SE ESTUDIÓ?

- El potencial de que el proyecto propuesto provoque un crecimiento sustancial de la población, o acelere un crecimiento que supere los niveles proyectados o planificados
- Si la implementación del proyecto propuesto desplazaría un número substancial de personas o viviendas existentes

ANÁLISIS Y CONCLUSIONES CLAVE

- Como conexión de traslado de primera/última milla al Dodger Stadium, el proyecto propuesto no induciría un crecimiento substancial de la población, ni directa ni indirectamente
  - Está diseñado para satisfacer las necesidades de transporte de la zona y mejorar la eficiencia de la red de transporte existente
  - Apoya los objetivos de la Ciudad en cuanto al Elemento de Vivienda del Plan General y los Planes Comunitarios de proporcionar transporte público cerca del desarrollo residencial ya planificado
- El proyecto propuesto no desplazará a personas o viviendas existentes

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Inducir un Crecimiento Demográfico No Planificado	Menos que significativo	Menos que significativo
Desplazamiento de personas o viviendas	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

No se requiere mitigación.

Servicios Públicos

¿QUÉ SE ESTUDIÓ?

- Si el proyecto propuesto traería consigo impactos físicos adversos asociados con la provisión de instalaciones públicas nuevas o alteradas físicamente, cuya construcción podría causar impactos ambientales significativos, incluyendo ~~en~~ la protección de los bomberos y la policía, las escuelas y otras instalaciones públicas como bibliotecas, centros de ancianos, refugios para personas sin hogar y guarderías
- Si el proyecto afectaría a los tiempos de respuesta de los servicios de emergencia

ANÁLISIS Y CONCLUSIONES CLAVE

- Si bien las actividades de construcción asociadas con el proyecto propuesto crearían un aumento temporal en la demanda de servicios de emergencia, la implementación de medidas de mitigación y características de diseño del proyecto, y el cumplimiento de las regulaciones estatales y locales aplicables, incluyendo la coordinación con el LAFD y el LAPD antes de la construcción del proyecto, asegurarían que la construcción del proyecto no crearía una demanda adicional de servicios de emergencia que resultaría en la necesidad de añadir nuevas instalaciones públicas o alterar físicamente las existentes
- LAFD y LAPD tendrían acceso adecuado durante la construcción
- Si bien el proyecto propuesto crearía una mayor demanda de servicios de emergencia durante las operaciones del proyecto, con el cumplimiento de los reglamentos aplicables, la coordinación con el LAFD y el LAPD y la implementación de un Plan de Operaciones de Emergencia, las operaciones del proyecto propuesto no crearían una demanda adicional de servicios de emergencia que resultara en la necesidad de agregar instalaciones públicas nuevas o alterarlas físicamente
- El proyecto propuesto no incluye viviendas, lo que podría aumentar la demanda de servicios escolares u otras instalaciones públicas

Servicios Públicos

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Necesidad de servicios de bomberos, policía, escuelas u otros servicios públicos que sean nuevos o modificados	Menos que significativo con mitigación	Menos que significativo
Tasas de Servicio y Tiempos de Respuesta	Menos que significativo con mitigación	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción: El Plan de Gestión del Tráfico de la Construcción reduciría los impactos relacionados con el acceso en caso de emergencias

Operación: El proyecto propuesto cumpliría con las regulaciones aplicables, implementaría elementos de seguridad como personal y cámaras, e implementaría un Plan de Operaciones de Emergencia. No se requiere mitigación.

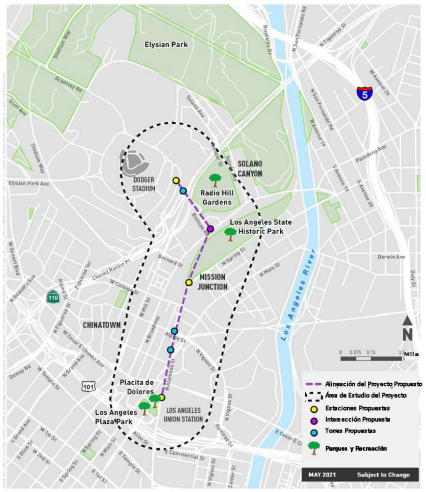
Parques y Recreación

¿QUÉ SE ESTUDIÓ?

- El potencial de afectar a los parques y las instalaciones recreativas durante la construcción y las operaciones, incluyendo los parques de Los Angeles State Historic Park, Elysian Park, Los Angeles Plaza Park y la Placita de Dolores

ANÁLISIS Y CONCLUSIONES CLAVE

- El proyecto propuesto no aumentaría la demanda de parques, ni generaría nuevos residentes permanentes que traerían consigo un aumento del uso de los parques e instalaciones recreativas existentes, de tal manera que se produjera o acelerara un deterioro sustancial de los parques o que resultara en la provisión de nuevas instalaciones de parques, o en la necesidad de instalaciones de parques nuevas o alteradas físicamente
- El proyecto propuesto mejoraría la movilidad y la accesibilidad de la región proporcionando un transporte rápido aéreo de gran capacidad que conectaría al sistema de transporte regional en la estación LAUS con Los Angeles State Historic Park y Elysian Park



CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Deterioro de una Instalación Pública	Menos que significativo	Menos que significativo
Ampliación de las Instalaciones Recreativas	Menos que significativo	Menos que significativo
Tasas de Servicio y Objetivos de Rendimiento	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?
No se requiere mitigación.

Transporte

¿QUÉ SE ESTUDIÓ?

- Se utilizaron las Directrices de la CEQA y los criterios de selección establecidos por el LADOT, la metodología de análisis y los criterios del umbral a través de las directrices TAG de la Ciudad
- El análisis de VMT para el proyecto propuesto empleó una variedad de datos, metodologías y modelos para estimar el número de pasajeros del proyecto, la reducción de viajes de vehículos, la distancia de los viajes de vehículos y, en última instancia, el beneficio de VMT del proyecto propuesto
- Estimaciones del número de pasajeros para los asistentes a los partidos y eventos del Dodger Stadium, empleados, turistas, transeúntes del vecindario y visitantes y asistentes a eventos de Los Angeles State Historic Park
- Ubicación de las estaciones, las torres y la intersección del proyecto propuesto y si estos componentes aumentan sustancialmente los peligros debido a una característica de diseño geométrico
- Los planes conceptuales de desvío de tráfico del proyecto propuesto y la ruta de transporte

ANÁLISIS Y CONCLUSIONES CLAVE

- El proyecto sería consistente con los PPOPs – programas, planes, ordenanzas o políticas – que aborden el sistema de circulación, incluyendo las instalaciones de transporte público, carreteras, bicicletas y peatones
- El proyecto propuesto no introduciría ninguna condición física insegura en la implementación de medidas de mitigación para la Torre Alameda y la Estación Chinatown/State Park
- Con la implementación de las medidas de mitigación, el acceso de emergencia se mantendría durante la construcción del proyecto propuesto

La reducción de VMT a lo largo de la vida del Proyecto sería de 129,629,500 VMT.

Transporte

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Millas Viajadas en Vehículos (VMT)	Sin impacto	Sin impacto
Conflicto con el Plan o las Políticas	Menos que significativo	Menos que significativo
Riesgos que Aumentan a Través del Diseño	Menos que significativo con mitigación	Menos que significativo con mitigación

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción:

- Implementación de un Plan de Gestión del Tráfico de la Construcción detallado y aprobado por la Ciudad, que incluya información sobre el cierre de calles, planes de desvío, rutas de transporte y un plan de preparación
- Implementación de un plan de ruta temporal en caso de desastre aprobado por la Ciudad, que incluiría información sobre el cierre de calles y planes de desvío a fin de facilitar el movimiento de vehículos de emergencia a través del área de estudio y minimizar los efectos en la respuesta de emergencia durante un desastre

Construcción y Operaciones

- Mejoras en la visibilidad – como tratamientos de alta visibilidad en los pasos de peatones, señales avanzadas de advertencia de cruces, luces intermitentes, iluminación mejorada y controles de tráfico nuevos o mejorados – en la Torre Alameda propuesta y en la Estación Chinatown/State Park

Recursos Culturales Tribales

¿QUÉ SE ESTUDIÓ?

- Cambios adversos sustanciales en recursos culturales tribales significativos
- Se ha consultado a ocho tribus de nativos americanos de California en virtud del Proyecto de Ley 52 de la Asamblea

ANÁLISIS Y CONCLUSIONES CLAVE

- Existen recursos en el área y requieren la implementación de mitigación, incluyendo pruebas arqueológicas y recuperación de datos
- Durante la construcción hay un potencial de que se encuentren recursos que no hayan sido identificados previamente; si el Supervisor Nativo Americano identifica recursos potenciales, dicho Supervisor puede detener temporalmente la construcción

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Cambio a los Recursos Culturales Tribales	Menos que significativo con mitigación	Sin impacto

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción:

- Implementar el Programa de Supervisión y Mitigación de Recursos Culturales y el Plan de Pruebas Arqueológicas de la Explanada de LAUS
- Mantener un Supervisor Nativo Americano para supervisar las actividades de construcción que perturban el suelo en el sitio de la Estación Alameda

Operación: No se requiere mitigación.

Sistemas de Servicios y Servicios Públicos

¿QUÉ SE ESTUDIÓ?

- La reubicación o construcción de instalaciones nuevas o ampliadas de agua, tratamiento de aguas residuales o drenaje de aguas pluviales, energía eléctrica, gas natural o telecomunicaciones
- El efecto del proyecto en el suministro de agua
- Si el proyecto requerirá la ampliación de la capacidad de tratamiento de aguas residuales
- Si los sitios para depósito de basura del área tendrían capacidad suficiente para los residuos sólidos generados por el proyecto

ANÁLISIS Y CONCLUSIONES CLAVE

- La construcción del proyecto propuesto no requeriría la construcción de servicios públicos nuevos o ampliados
- La construcción del proyecto propuesto requeriría la reubicación de servicios públicos existentes, que se coordinaría con los proveedores de los servicios públicos y se llevaría a cabo de conformidad con los códigos y reglamentos estatales y locales aplicables
    - Para minimizar la interferencia potencial con los servicios públicos existentes asociada con la reubicación de servicios públicos durante la construcción, el proyecto propuesto implementaría un Plan de Reubicación de Servicios Públicos
- El funcionamiento del proyecto propuesto requerirá conexiones a los sistemas de servicios públicos existentes
- El uso principal de electricidad provendría de recursos renovables, y el suministro de energía existente debería ser suficiente para las operaciones del proyecto
- La construcción y las operaciones del proyecto propuesto tendrían suficiente suministro de agua
- La construcción y las operaciones generarían posibles aguas residuales, las cuales se tratarían de conformidad con las normativas
- No se generarían residuos sólidos que superen los niveles de las normas estatales o locales, o que superen la capacidad de la infraestructura local, o que perjudicarían de alguna otra manera el cumplimiento de las metas de reducción de residuos sólidos

Sistemas de Servicios y Servicios Públicos

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	**Operaciones**
Suministro de Agua Suficiente	Menos que significativo	Menos que significativo
Demanda y Capacidad de los Sistemas de Aguas Residuales	Menos que significativo	Menos que significativo
Objetivos en Materia de Residuos Sólidos	Menos que significativo con mitigación	Menos que significativo
Reubicación o Construcción de Servicios Públicos	Menos que significativo con mitigación	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción:

- Desarrollo e implementación de un Plan de Reubicación de Servicios Públicos en coordinación con las compañías de servicios públicos para minimizar los impactos a los servicios durante la construcción del proyecto
- Elaboración de un Plan de Gestión de Suelos y Aguas Subterráneas.

Operación: No se requiere mitigación.

Incendios Forestales

¿QUÉ SE ESTUDIÓ?

- Si el proyecto propuesto resultaría en impactos potenciales significativos relacionados con incendios forestales si se ubicara en Áreas de Responsabilidad Estatal (SRAs) o tierras clasificadas como Zonas de Muy Alto Riesgo de Incendio (VHFHSZ), o cerca de ellas
- Potencial de comportamiento de incendios forestales dentro del área del proyecto en función de la topografía, el clima y los combustibles
- Afectación substancial de la aplicación de un plan de respuesta a emergencias o un plan de evacuación de emergencias adoptado
- Si el proyecto propuesto requeriría la instalación o el mantenimiento de infraestructura asociada que podría exacerbar el riesgo de incendio o tener impactos temporales o continuos para el medio ambiente
- Si el proyecto expondría a las personas o estructuras a riesgos significativos, incluyendo inundaciones o deslizamientos de tierra, como resultado de una escorrentía, la inestabilidad de las laderas después de un incendio, o cambios en el drenado
- Si el proyecto expondría a las personas o estructuras, de manera directa o indirecta, a un riesgo significativo de pérdida, lesión o muerte que involucre incendios forestales

ANÁLISIS Y CONCLUSIONES CLAVE

- La porción de la ruta propuesta que contiene la intersección de Broadway Junction, la Torre del Estadio y la Estación Dodger Stadium están dentro de la VHFHSZ
- La construcción y operación del proyecto propuesto no inhibiría el acceso a las rutas de desastre identificadas y no perjudicaría sustancialmente la implementación de un plan de respuesta a emergencias o de evacuación
- El proyecto cumpliría con los códigos y las normativas aplicables y las mejores prácticas de la construcción, y no exacerbaría los riesgos de incendios forestales
- La aplicación de las características de diseño del proyecto reduciría aún más estos riesgos

Incendios Forestales

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Dificultar los Planes de Emergencia o Evacuación	Menos que significativo	Menos que significativo
Exacerbar los Riesgos de Incendios Forestales	Menos que significativo	Menos que significativo
Instalar/Mantener la Infraestructura Asociada	Menos que significativo	Menos que significativo
Exponer a Personas o Estructuras a Riesgos de Incendios Forestales	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción: Implementación de las características de diseño del proyecto, incluyendo el Plan de Protección contra Incendios y una zona de modificación de combustible que rodea el sitio de construcción de la Torre del Estadio. No se requiere mitigación.

Operación: Implementación de características del diseño del proyecto durante las operaciones de la intersección de Broadway Junction, la Torre del Estadio y la Estación Dodger Stadium relacionadas con la supervisión de la seguridad por parte del personal y las cámaras, y la identificación y notificación de riesgos de seguridad por incendios. No se requiere mitigación.

Alternativas

¿QUÉ SE ESTUDIÓ?

- Se seleccionó una gama razonable de alternativas para explorar los medios potenciales para mitigar o evitar los impactos ambientales significativos asociados con la implementación del proyecto propuesto, sin dejar de lograr los objetivos principales del proyecto
  - Alternativa Sin Proyecto – Sin Desarrollo Nuevo
  - Alternativa de la Ruta de Spring Street – Alternativa de Ruta al Proyecto Propuesto
  - Alternativa de Gestión de Sistemas de Transporte – Union Station Dodger Stadium Express Mejorado
- Se tuvieron en consideración varias alternativas pero se descartaron del análisis detallado por no cumplir con la mayoría de los objetivos básicos del proyecto, por ser inviables o por no poder evitar impactos ambientales significativos, incluyendo la Alternativa de Ruta de la Estación Broadway, la Alternativa de Ruta de la Estación de la Línea L (Dorada) del Metro y la Estación de College Street, y las Alternativas de Ruta Directa.

ANÁLISIS Y CONCLUSIONES CLAVE

- La Alternativa Sin Proyecto no mejoraría el acceso al transporte ni proporcionaría conexiones entre comunidades. Además no se reducirían las VMT ni la congestión vehicular, y no se reducirían las emisiones de GEI, ni mejoraría la calidad del aire.
- La Alternativa de Ruta de Spring Street proveería una conexión directa de transporte y mejoraría la conectividad de las comunidades circundantes. Esta alternativa requeriría una mayor huella y no reduciría los impactos ambientales significativos.
- La Alternativa TSE no proporcionaría una conexión de transporte directa, ni mejoraría la conectividad de las comunidades circundantes y no proporcionaría la misma reducción de VMT ni emisiones de GEI, y por ende, tampoco mejoras en la calidad del aire.

Alternativas

CONCLUSIONES DE LAS ALTERNATIVAS

Alternativas	Resultado	
	Capacidad para Cumplir con los Objetivos del Proyecto	Capacidad de Reducir los Impactos Significativos
Alternativa Sin Proyecto	No Cumpliría con los Objetivos del Proyecto	Menos Impactos que el Proyecto
Alternativa de Ruta de la calle Spring Street	Cumpliría con Todos Los Objetivos del Proyecto	Impactos Similares a los del Proyecto
Alternativa de Gestión de Sistemas de Transporte	No Cumpliría la Mayoría de los Objetivos del Proyecto	Menos Impactos que el Proyecto

¿CUÁL ES LA ALTERNATIVA AMBIENTALMENTE SUPERIOR?

La Alternativa TSM se consideraría la alternativa superior desde el punto de vista medioambiental porque no daría lugar a una determinación de la CEQA de un impacto significativo e inevitable y tendría el menor número de impactos medioambientales en general. Sin embargo, el impacto de la alternativa TSM sería mayor en cuanto a la calidad del aire, la energía, las emisiones de gases de efecto invernadero, la hidrología y la calidad del agua, y el transporte y el tráfico. Además, la Alternativa de TSM no permitiría que se alcancen total o parcialmente la mayoría de los Objetivos del Proyecto.

Otras Evaluaciones Adicionales en el EIR

LOS ANGELES STATE HISTORIC PARK

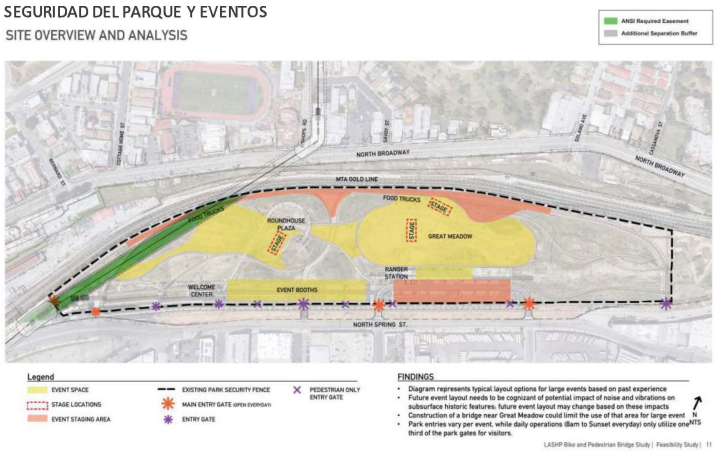
Cometas: Debido a la ubicación de la ruta del proyecto propuesto – que atraviesa el borde poniente del parque adyacente a la Línea L del Metro y al camino peatonal – el proyecto propuesto no reduce significativamente el área segura para volar cometas dentro del parque

Eventos Especiales: La ubicación de la ruta del proyecto propuesto cruza sobre una pequeña porción del parque que no se usa típicamente para pantallas ni escenarios, y los eventos aún pueden celebrarse bajo la mayor parte de la ruta del proyecto propuesto, por lo que el proyecto propuesto no reduce significativamente el área de espacio para eventos dentro del parque

UBICACIÓN DE LA ESTACIÓN ALAMEDA Y DE LA ESTACIÓN CHINATOWN/STATE PARK

HELIPUERTOS

- La ruta del proyecto propuesto no se encuentra dentro de un área cubierta por un plan de uso de suelo del aeropuerto, ni dentro de 2 millas (3.2 km) de distancia de un aeropuerto público
- Una evaluación del espacio aéreo de los helipuertos en las cercanías del proyecto propuesto concluyó que la construcción y la operación del proyecto propuesto estarán fuera del espacio aéreo asociado con los helipuertos existentes en las cercanías del proyecto propuesto, por lo que no hay ningún potencial de peligros para la navegación aérea y, por lo tanto, ningún impacto a la actividad aeronáutica, incluyendo a los helipuertos en las cercanías del proyecto propuesto



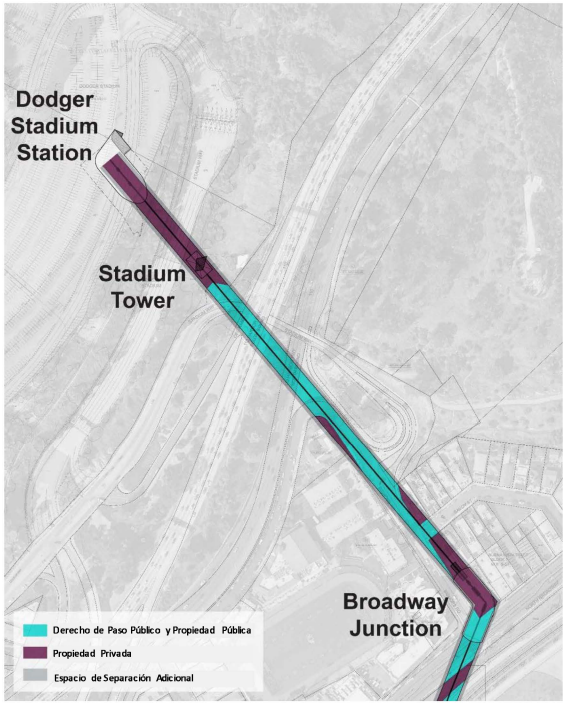
Ubicaciones Típicas para Pantallas y Escenarios de Eventos en Los Angeles State Historic Park con la Ruta del Proyecto Propuesto

Opción de Diseño A

CAMBIO EN LA INTERSECCIÓN DE BROADWAY JUNCTION PARA EVITAR LA UBICACIÓN DE 451 E. SAVOY

- Incluye un cambio en la ruta general del proyecto entre la intersección de Broadway Junction y la Estación Dodger Stadium para evitar los requisitos de derechos aéreos sobre 451 E. Savoy Street
- El cambio daría lugar a que la ruta cruzara sobre una pequeña porción de la secundaria Cathedral High School adyacente a Bishops Road
- Incluye cambios en los componentes del proyecto en Broadway Junction, la Torre del Estadio y la Estación Dodger Stadium
  - Resultaría en la reubicación de servicios públicos y tiempo adicional de construcción, tanto en la Torre del Estadio como en la Estación Dodger Stadium
  - Requeriría una caminata más larga de los pasajeros del proyecto propuesto para trasladarse entre la Estación Dodger Stadium y el estadio

Ruta del Proyecto Propuesto

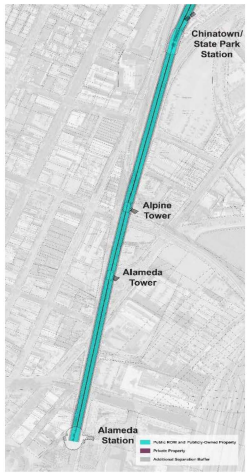


Opción de Diseño A

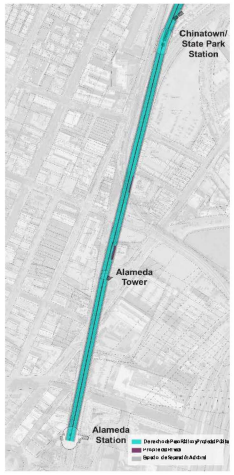
Opción de Diseño B

TORRE ÚNICA A LO LARGO DE ALAMEDA STREET

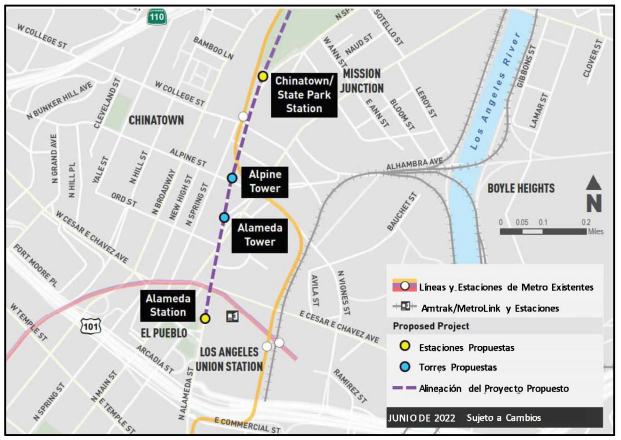
- En respuesta a los comentarios de las partes interesadas, que pidieron al Patrocinador del Proyecto que evalúe la posibilidad de reducir el número de torres a lo largo de Alameda Street de dos a una
- Consiste en un aumento de la altura total de 50 pies (15 m) en la Torre Alameda y la eliminación de la Torre Alpine del proyecto propuesto entre la Estación Alameda y la Estación Chinatown/State Park
- El aumento de la altura de la torre coincide con actividades de construcción adicionales
- Daría lugar a posibles limitaciones técnicas
- Daría lugar a la necesidad de requisitos adicionales de derechos aéreos privados



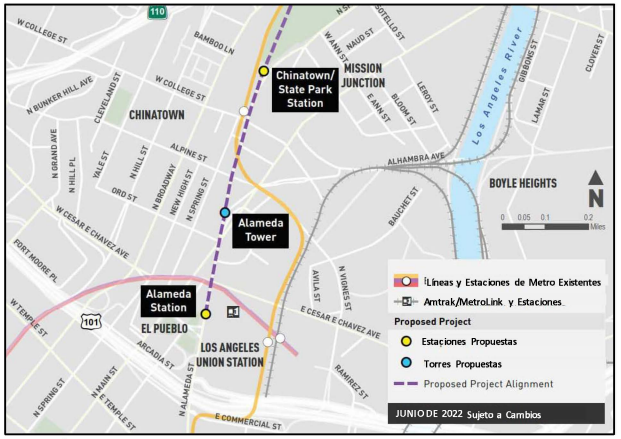
Ruta del Proyecto Propuesto



Opción de Diseño B



Ruta del Proyecto Propuesto

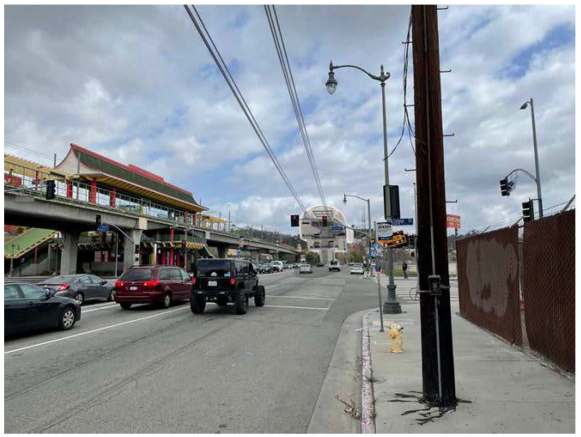


Opción de Diseño B

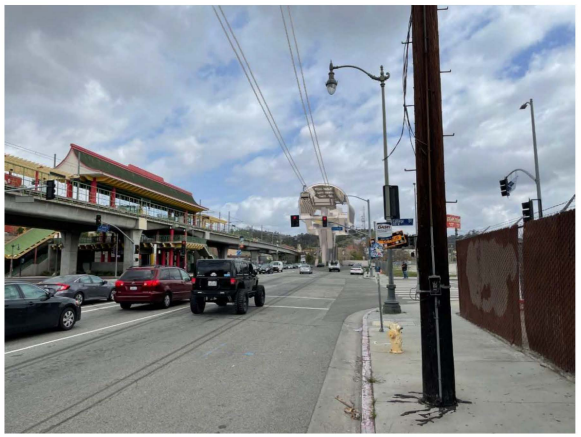
Opción de Diseño C

ESTACIÓN CHINATOWN/STATE PARK CON MAYOR ALTURA

- En respuesta a los comentarios de las partes interesadas, que pidieron al Patrocinador del Proyecto que considerara una estación de Chinatown/State Park más alta
- La Opción de Diseño C consiste en un aumento de la altura total de 35 pies (11 m) en la Estación Chinatown/State Park.
- El aumento de la altura coincide con actividades de construcción adicionales
- Tiene el potencial de aminorar la experiencia de los pasajeros debido a la altura, que también hace que el andén de abordaje esté elevado, lo que requiere una circulación vertical adicional para acceder y ascender al andén



Ruta del Proyecto Propuesto



Opción de Diseño C

Opción de Uso D

ESTACIÓN CHINATOWN/STATE PARK COMO INTERSECCIÓN SIN PASAJEROS

- En respuesta a los comentarios de las partes interesadas, que pidieron al Patrocinador del Proyecto que considerara la posibilidad de que no hubiera acceso a los pasajeros en la estación Chinatown/State Park, para aumentar la altura de las cabinas que entrarían y saldrían de la estación a lo largo de Spring Street
- La Opción de Uso D incluye substituir la intersección que no sería para pasajeros por la Estación Chinatown/State Park propuesta
- Tendría la misma ubicación, altura, anchura, longitud y acabado arquitectónico que el proyecto propuesto
- No mejoraría la conectividad de la comunidad con Los Angeles State Historic Park, Chinatown y el barrio de Mission Junction

Opción de Uso y Diseño E

PUENTE PEATONAL DEL LOS ANGELES STATE HISTORIC PARK

- Los Angeles State Historic Park ha propuesto un puente peatonal con acceso requerido por la ADA que se inclinaría suavemente, desde la parte central del parque hasta North Broadway
- Aunque el puente peatonal no se propone como parte del proyecto propuesto, el Borrador del EIR incluye un análisis del puente peatonal para el parque
- Como se señala en el EIR Final y Plan General del Los Angeles State Historic Park y en el Estudio del Puente para Bicicletas y Peatones; el puente proporcionaría un acceso seguro para peatones y bicicletas desde las comunidades de Chinatown y Solano Canyon al Parque

Fuente: Estudio de Factibilidad del Puente

Generalidades del Estudio de Estacionamiento

ESTUDIO DE ESTACIONAMIENTO DEL PROYECTO PROPUESTO

- Aunque la CEQA no exige un análisis del estacionamiento, se realizó un exhaustivo Estudio de Estacionamiento para el proyecto, el cual fue revisado por Metro.
- El Estudio de Estacionamiento ha estado disponible en la página web de Metro desde el 9 de septiembre de 2022

¿QUÉ SE ESTUDIÓ?

- Se espera que la mayoría de los usuarios del proyecto propuesto utilicen el transporte público para llegar al proyecto
- Hay aproximadamente 10,290 lugares en lotes y garajes públicos y en espacios en la calle a menos de ½ milla (800 m) de la Estación Alameda del proyecto propuesto y la Estación Chinatown/State Park

Generalidades del Estudio de Estacionamiento

CONCLUSIONES DEL ESTUDIO DE ESTACIONAMIENTO

Tipo de estacionamiento	Estacionamiento para un Día de Partido			
	Oferta de Estacionamiento	Vehículos Aparcados	Ocupación	Oferta Disponible
Lugares de Estacionamiento Público Disponibles Fuera de la Vía Pública	6,876	2,173	32%	4,703
Lugares en las Calles	3,417	2,017	59%	1,400
TOTAL				
Demanda de Estacionamiento con el Proyecto Propuesto (2042)	-	307 – 790		
Total de Lugares Disponibles Fuera de la Vía Pública con el Proyecto	6,876	2,963	43%	3,913

*Los conteos se realizaron el 10 de septiembre de 2021, en una noche en la que los Dodgers de Los Ángeles recibieron a los Padres de San Diego; la asistencia pagada fue de 48,403, que fue más alta que el promedio de la temporada 2019 de los Dodgers de Los Ángeles para los juegos nocturnos entre semana. En coordinación con Metro y LADOT, el Estudio de Estacionamiento aplicó un aumento del 46% a los espacios públicos disponibles fuera de la vía pública para tener en cuenta la pandemia de COVID-19.

Con la adición de la demanda potencial de estacionamiento del proyecto propuesto, hay muchos lugares de estacionamiento disponibles dentro de los alrededores del proyecto propuesto. Incluso si algunos de los estacionamientos existentes se reurbanizan, hay suficiente oferta de estacionamiento fuera de la vía pública para dar cabida a toda la demanda de estacionamiento del proyecto propuesto.

EL PROYECTO SE COMPROMETE A FOMENTAR EL USO DEL TRANSPORTE PÚBLICO

- Estableciendo asociaciones de empresa a empresa con los negocios locales para la preventa de paquetes que incluyan el consumo en los negocios locales y el estacionamiento disponible fuera de la vía pública
- Apoyar la implementación/expansión de varias estrategias de gestión, incluyendo restricciones de estacionamiento con límite de tiempo y parquímetros durante las horas de los partidos para disuadir a los pasajeros de aparcar en la comunidad y mantener espacios disponibles para los residentes y los negocios locales

Sesión de Preguntas y Respuestas

Sesión de Preguntas y Respuestas

- Propósito: Dar al público la oportunidad de hacer preguntas sobre el proyecto y el Borrador del EIR

¡HOY!

Haga preguntas.

No se aceptarán comentarios del público hoy.

Preguntas y Respuestas (Q&A): Utilice la función de preguntas y respuestas (Q&A) para escribir una pregunta.

議程

1. 會議目的
2. 如何參加此虛擬會議
3. 概述
4. 加州環境品質法案(CEQA)流程概述
5. 洛杉磯空中快速纜車計畫 概述
6. 《環境影響報告草案》主要分析及結論
7. 問答環節

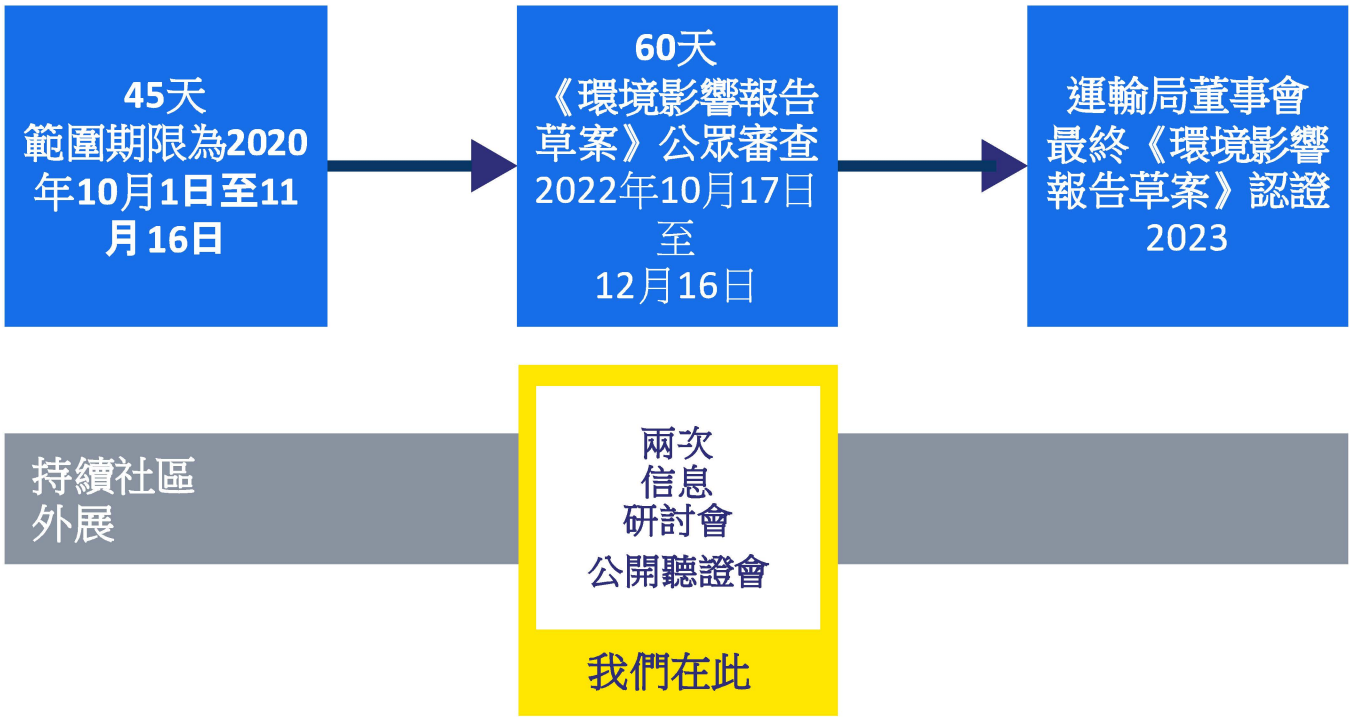
如需有關Zoom的協助，請電郵至 mary.nooristani@aecom.com 或致電(619) 251-9180

會議目的

介紹《環境影響報告草案》
主要分析及結論

問答環節

加州環境質量法案(CEQA)流程



今天!

讓我們一同了解《環境影響報告草案》主要分析及結論以及提出問題吧。

沒有公眾意見會於今天給接納。

如何參加此虛擬會議

今天!

讓我們一同了解《環境影響報告草案》主要分析及結論以及提出問題吧。

沒有公眾意見會於今天給接納。

問答時段於問答時段中，使用問答功能輸入問題，或舉手提問。

概述

概述

- 洛杉磯空中快速纜車計畫由洛杉磯空中快速纜車交通技術有限公司提出
- 洛杉磯縣都會運輸局是根據《加州環境品質法案》（CEQA）編寫環境影響報告的主導機構。
- 《環境影響報告草案》評估了與計畫建設和營運相關的潛在環境影響

概述

- 作為主導機構，洛杉磯縣都會運輸局有責任確保：
  - 《環境影響報告》充分評估計畫的潛在影響
  - 當中建議的緩解措施恰當
  - 已遵守《加州環境品質法案》（CEQA）流程，以進行公告、公關宣傳和文件分發

概述

- 我們目前正在收集公眾對《加州環境品質法案》（CEQA）轄下有關《環境影響報告草案》的意見
  - 公開聽證會
  - 電郵
  - 郵寄
  - 電話
- 參議院第44號法案
  - 透過《加州環境品質法案》（CEQA）優化洛杉磯縣環境主導交通計畫的審查
  - 擬建計畫將是參議院第44號法案下的第一個環境主導交通計畫
  - 公眾聽證會要求
    - **資訊研討會：於為期10天的公眾意見咨詢期間，向公眾匯報《環境影響報告草案》的主要分析和結論**
    - 公開聽證會：在公眾意見咨詢期的最後10天內取得公開聲明

《加州環境品質法案》（CEQA）概覽

《加州環境品質法案》（CEQA）程序

所有計畫均需由一家公共機構承擔、資助或審批

通知公眾和決策者

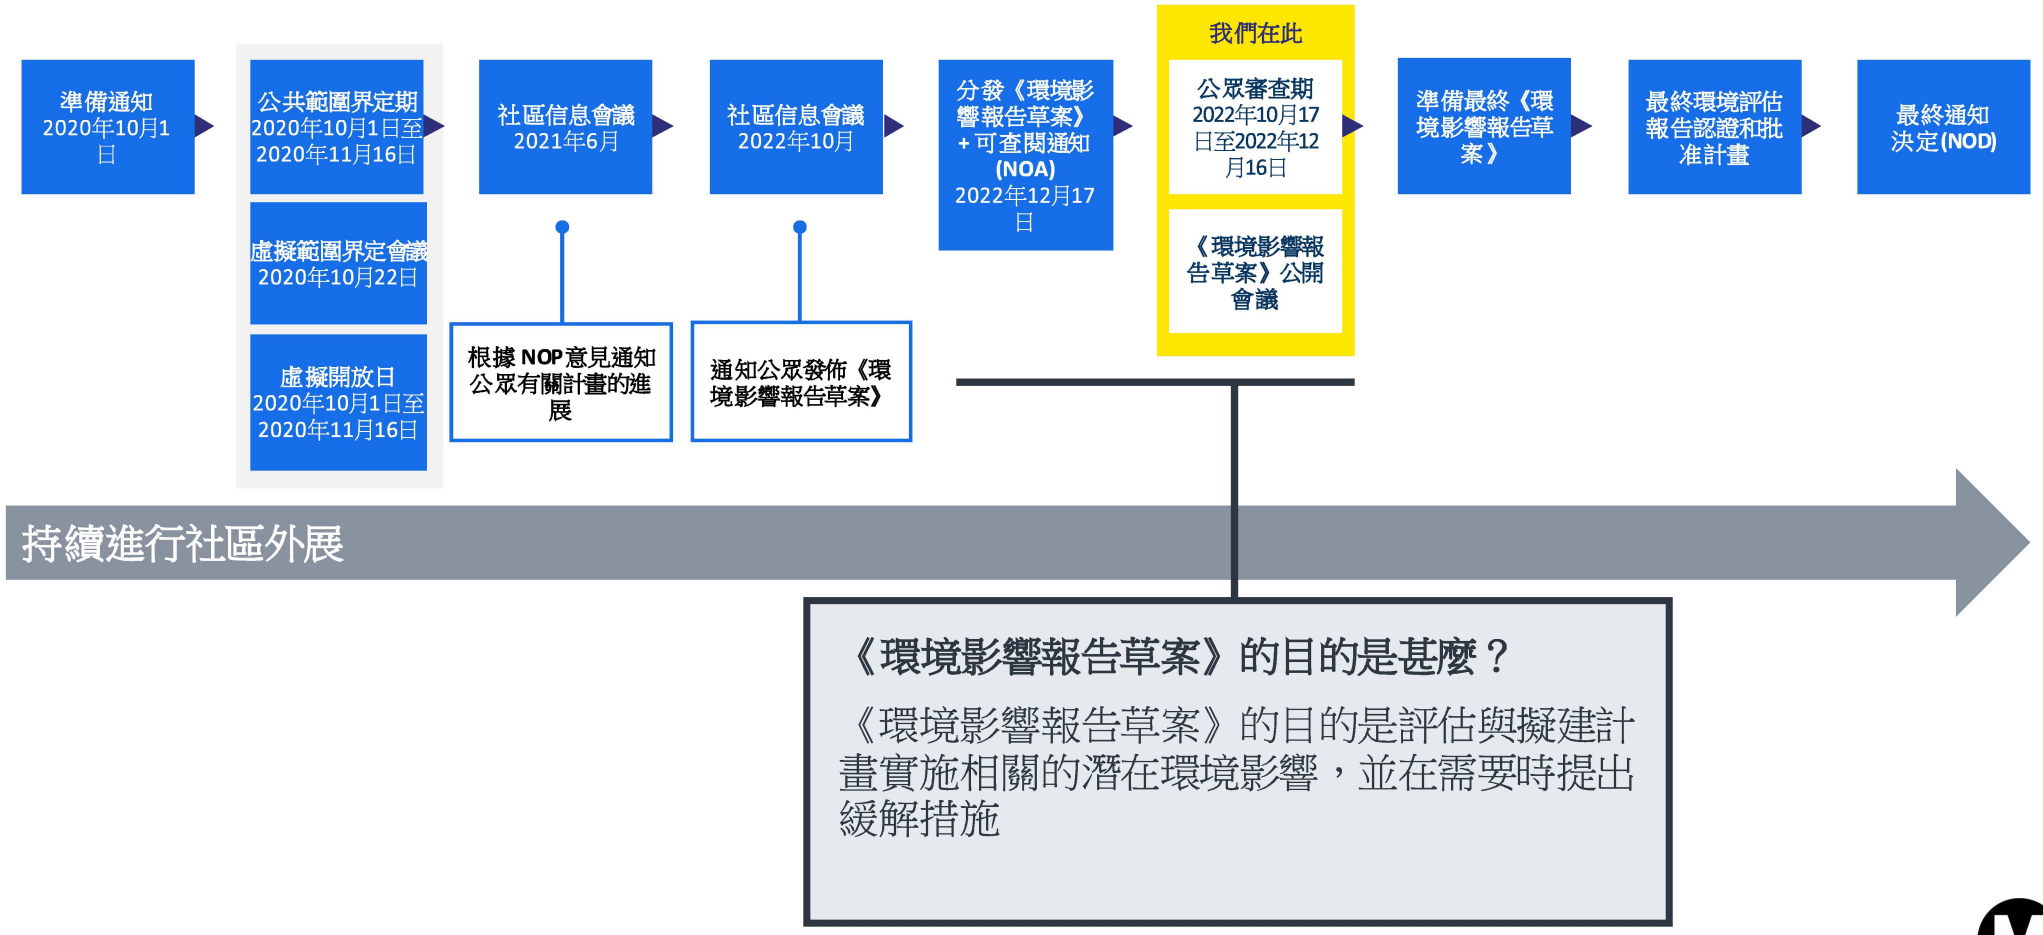
披露擬建計畫會產生的潛在環境影響

提供對環境問題發表評論的機會

兩個公眾意見咨詢期：(1) 公共範圍界定期和 (2) 《環境影響報告草案》公眾審查

SB 44 需要在 《環境影響報告草案》 公開評論期間召開兩次公開會議：
資訊說明會與公眾聽證會

時程線



《環境影響報告草案》的目的是甚麼？

《環境影響報告草案》的目的是評估與擬建計畫實施相關的潛在環境影響，並在需要時提出緩解措施

《環境影響報告草案》意見咨詢期間的公開會議

資訊性研討會

第一次《環境影響報告草案》資訊說明會	10月22日，星期六	虛擬
第二次《環境影響報告草案》資訊說明會	10月25日(星期二)，下午5時至7時	現場

運輸局將舉辦兩場資訊說明會，讓公眾了解《環境影響報告草案》中的關鍵分析和結論

公開聽證會

第一次《環境影響報告草案》公開聽證會	12月10日，星期六	現場
第二次運輸局《環境影響報告草案》公開聽證會	12月13日，星期二	虛擬

運輸局將舉辦兩次公開聽證會，就《環境影響報告草案》咨詢公眾意見

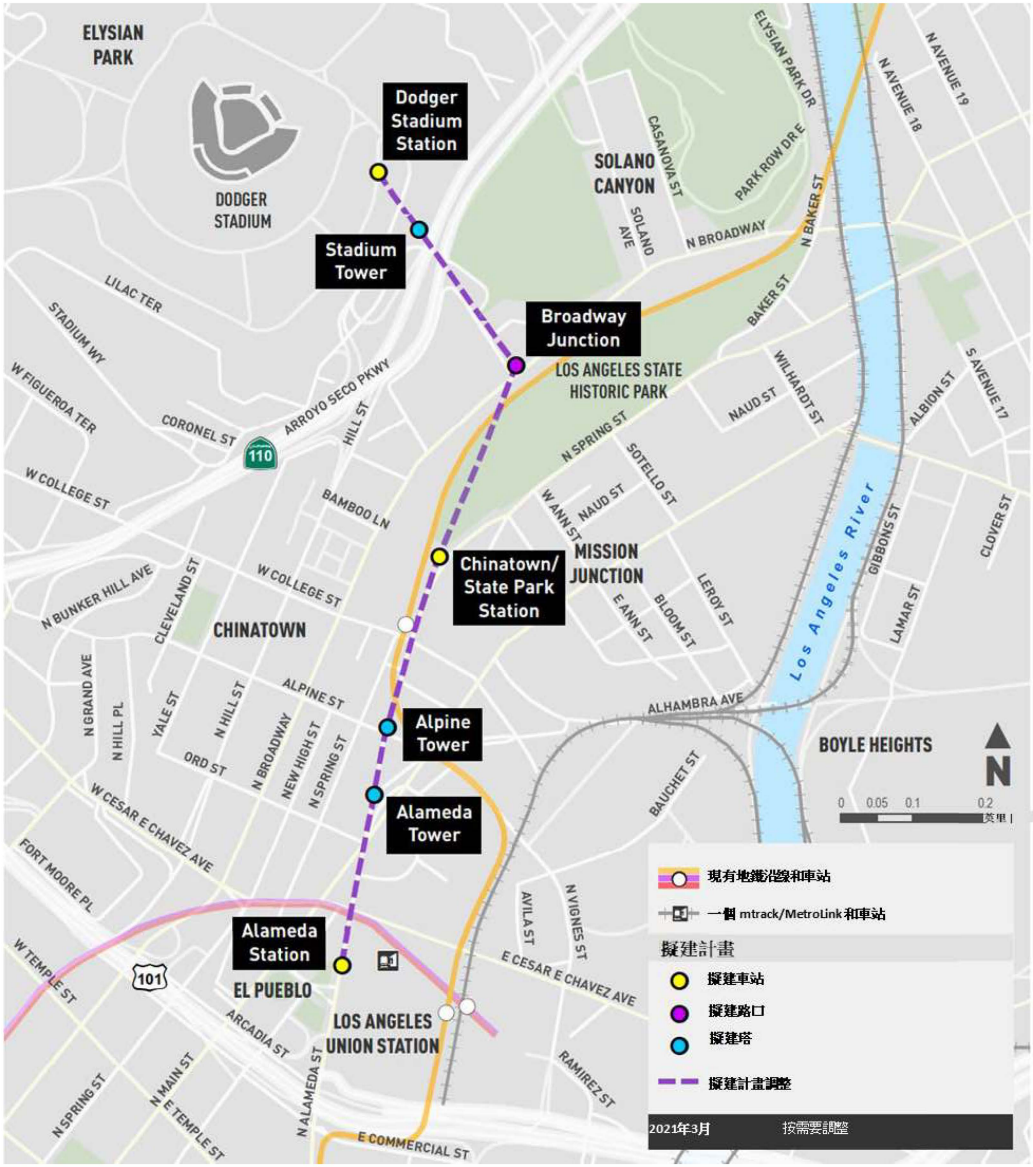
計畫介紹:

計畫概覽

- 透過 1.2 英里的空中快速纜車系統，能提供從洛杉磯聯合車站 (LAUS) 到道奇體育場的永久交通連接
  - 從洛杉磯聯合車站到道奇體育場的行車時間約為7分鐘
- 每個方向每小時可容納約5,000人次
- 為洛杉磯的現有居民、工人、公園用戶和遊客每天提供服務
- 透過唐人街/州立公園中轉站，提供前往洛杉磯州立歷史公園和周邊社區的通道
- 由於減少了道奇體育場內和周圍以及附近街道、主要幹道和高速公路上的車輛行駛，溫室氣體排放將減少，達至零排放、環保的空中快速纜車

計畫位置和路線

- 計畫將在洛杉磯聯合車站和洛杉磯古城旁邊開始，並在道奇體育場結束，中途於洛杉磯州立歷史公園最南端的入口處設置一個中轉站
- 將唐人街、Mission Junction、伊利森公園(Elysian Park)、迴聲公園(Echo Park)和索拉諾郡峽谷(Solano Canyon)的周邊社區連接到聯合車站可到達的區域交通系統
- 擬建計畫路線最大限度地維護公共可行使通行權（ROW）和公有財產，以及減少使用在私人財產上空的空中權利，計畫同時亦顧及現有和未來的鄰近土地用途



空中快速纜車系統先例

- 空中快速纜車技術已經有100多年歷史
- 現代系統是一種可行的城市交通模式，目前在世界各地多個城市運行
- 全球已建立的空中快速纜車系統——如:玻利維亞的拉巴斯和墨西哥的墨西哥城——空中快速纜車系統正為該地的城市人口服務
- 擬建計畫是“3S”纜車，與德國科布倫茨、越南富國島和法國圖盧茲使用的系統類似
  - 車廂可乘載約30至40名乘客
  - 系統將提供平穩、穩定的行駛

俄勒岡州波特蘭

紐約羅斯福島

玻利維亞拉巴斯

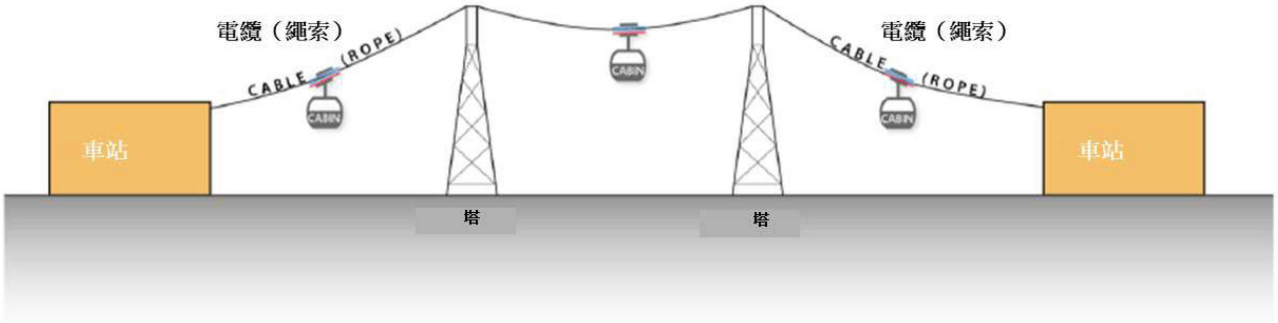
墨西哥墨西哥城

法國圖盧茲

哥倫比亞麥德林

索道技術

空中快速纜車系統包括客運站、非客運樞紐和塔，這些塔用作支撐車廂的架空電纜



三個客運站

- 包括機械、電力以及管道系統、登車平台和垂直流動設備（例如樓梯、自動扶梯和電梯）
- 包括售票處、檢票區和排隊區；乘客上落車廂；營運以及系統設備

一個非客運樞紐站

- 空中快速纜車系統的運作需電纜轉動並維持在路線上

三個用以支撐車廂的架空電纜的塔

“3S”系統和纜車車廂

“3S”系統

- “3S”系統包括三根電纜：兩根用於穩定的「軌道繩索」和第三根用於循環車廂的「牽引繩索」
- 車廂從連續循環的「牽引繩索」分離並在進入車站供乘客出入時減速，然後重新連接至「牽引繩索」

車廂

- 每個車廂可容納30至40名乘客，實際數量取決於所選座位的配置和所選用的車廂設備
- 完全無障礙及可容納輪椅上落
- 設有立位及坐位
- 為嬰兒車及單車提供停泊位置
- 於繁忙時間可以每小時 13.4 英里的最高速度移動
- 進入車站時，列車會減速至大約每秒一英尺（每小時不足一英里）的速度，允許乘客上落正在行駛的列車

目的及需要

- 透過空中快速纜車系統，提供從洛杉磯聯合車站 (LAUS) 到道奇體育場的交通連接
- 將唐人街、Mission Junction、伊利森公園(Elysian Park)、迴聲公園(Echo Park) 和索拉諾郡峽谷(Solano Canyon)的周邊社區連接到聯合車站可到達的區域交通系統
- 透過每日提供高容量的空中快速纜車(ART)服務，提高洛杉磯聯合車站(LAUS)的區域交通系統之間的流動性和可達性
- 在唐人街/州立公園站提供交通樞紐
- 透過使用零排放電力和備用電池運作，提供資源永續的交通方式，有效減少溫室氣體排放, 及改善空氣品質

道奇體育場：該區其中一個訪客量最大的場地

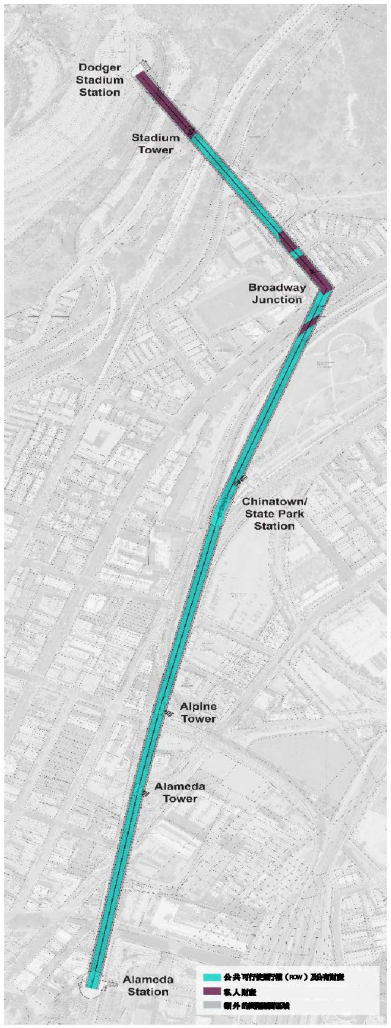
- 每年舉辦約100場棒球比賽和其他活動，吸引大量觀眾
- 大部份的觀眾使用私家車到達體育場
- 車輛令周邊社區及附近的高速公路造成交通擠塞
- 擬建計畫所經路線附近的社區，給認定會為該州帶來不同途徑的污染源頭，佔其不成比例的社區負擔的90-100%（CalEnviroScreen 4.0 地圖）

計畫目標

- 為洛杉磯聯合車站(LAUS)和區域活動中心道奇體育場提供直接連繫，為乘坐公共交通的乘客提供更多交通選擇。
- 空中快速纜車(ART)系統為新的乘客提供獨特的交通體驗，吸引他們乘坐鐵路系統，並連接他們到道奇體育場。
- 為到訪道奇體育場的遊客提供高效、高容量和更快捷的替代交通工具，改善遊客的體驗。
- 擬建計畫將減少該地區的車輛數目，從而提高毗鄰道奇體育場的社區的安全性
- 減少球賽日及特別活動的影響，使道奇體育場的周邊地方、鄰近社區、主要幹道和高速公路的車輛堵塞問題改善，這亦使因相關交通空氣污染和溫室氣體(GHG)排放相對減少
- 增加人們與洛杉磯聯合車站(LAUS)與道奇體育場建設的公共交通樞紐之間的連繫。
- 沿途為乘客和道奇隊球迷提供洛杉磯地區獨有的風景，改善乘客的乘車體驗。
- 將世界一流的空中交通系統帶到洛杉磯地區。
- 擬建計畫為以往交通服務不足的區域（包括洛杉磯州立歷史公園和伊利森公園）的一英里範圍內和行人通道提供交通系統，從而改善社區之間的連繫。
- 為社區和洛杉磯州立歷史公園和 Elysian 公園作出比較、為能負擔購買,及容易購得車票作比較。
- 將資源永續性和環保設計特徵整合到擬建計畫的選材、施工、營運和維修，能最大限度地減少計畫對環境的影響。
- 空中快速纜車(ART)系統以零排放電力和備用電池運作，提供可永續的交通方式，減少溫室氣體排放，並改善空氣品質。
- 擬建計畫路線最大限度地維護公共可行使通行權（ROW）道路及公有財產，以及減少使用在私人財產上空的通過權利，同時顧及現有和未來的鄰近土地用途

路線將建於公共通行權（ROW）範圍內或公共土地上

- 美國國家標準協會(ANSI)標準第B77.1項中記錄了纜車索道和車廂設計和運作及專業準則，該準則與製造商、消費者和監管機構共同協力研發
  - 美國國家標準協會(ANSI)標準第B77.1項對索道和車廂與車輛、行人、植物、建築物和其他結構等元素之間的垂直和水平間距作出了規範
- 擬建計畫路線最大限度地維護公共通行權（ROW）和公有土地，以及減少使用在私人財產上空的通過權利，同時,顧及現有和未來的鄰近土地用途方面
- 選擇計畫路線的其他注意事項：
  - 盡量減少擬建計畫對行車道、停車道以及單車和行人流通產生的變化
  - 盡可能減低搬遷公用事業管線設施的需要
  - 歷史和考古資源的位置
  - 盡量減少使用不平或崎嶇的地形
  - 技術考慮及其可行性



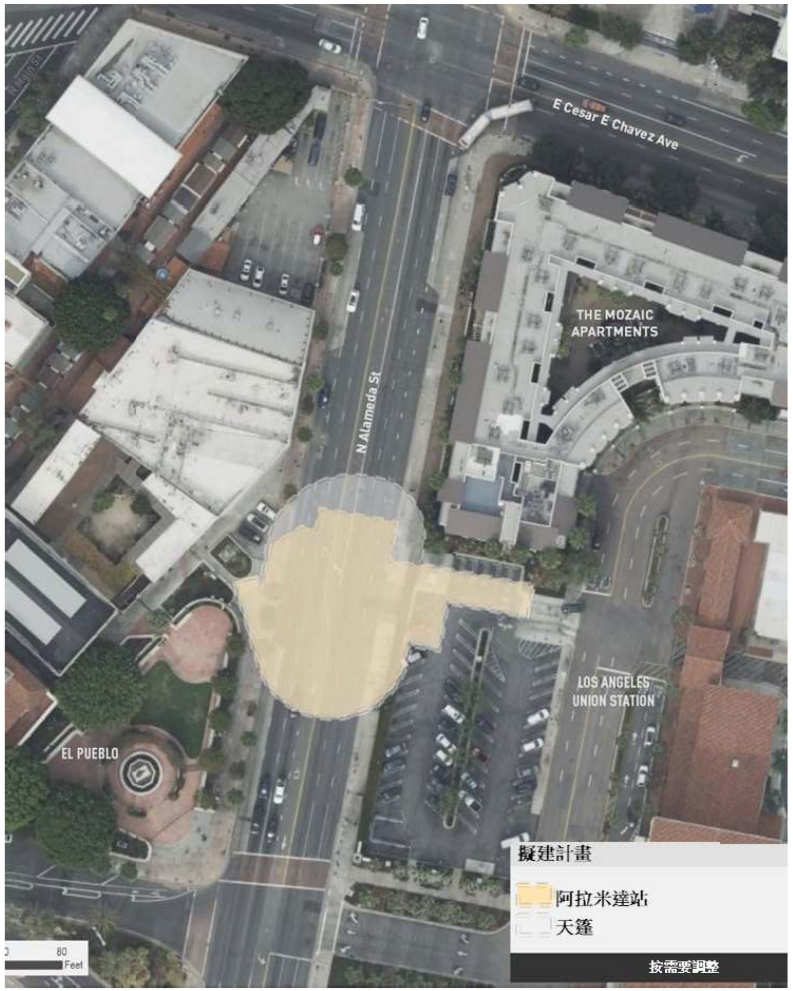
設計

- 設計目標是以一般的建築設計，統一整個空中纜車系統，同時,令每個主要元素按城市的狀況融入該市
- 非客運樞紐站,和支撐塔所承受的壓力與人流最小化亦同樣重要
- 車站和路口建有簡單的筒型拱頂，用以保護索道，並為登車平台上的乘客提供有蓋遮蔭處以以應對不同天氣狀況
- 支撐塔的設計採用簡約的淺灰色，與周邊城市環境融合，其設計令底部不會阻礙相鄰的車輛和行人流通

阿拉米達站

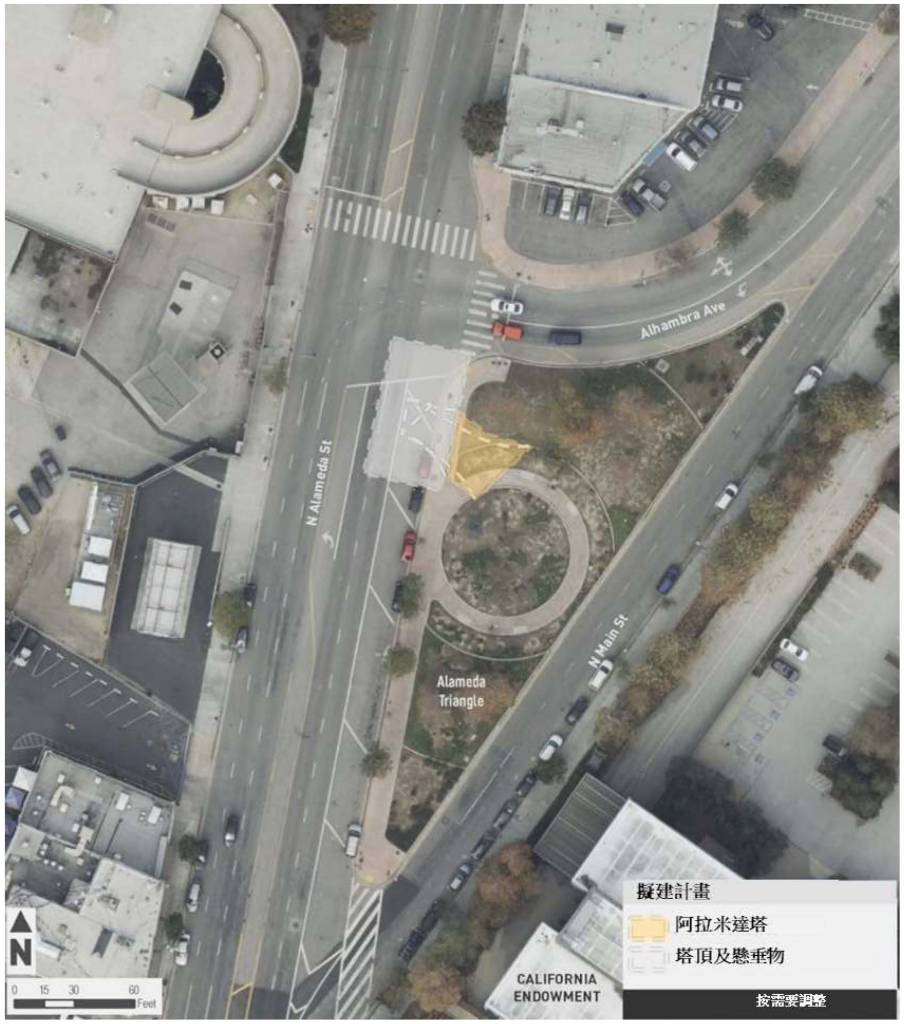
- 阿拉米達站將位於阿拉米達街，毗鄰正在計劃中的洛杉磯大學前院,和洛杉磯街,與塞薩爾查韋斯大道之間的加利福尼亞洛杉磯的公園(Placita de Dolores)。
- 該站大約長194英尺，寬80英尺，最高點高74英尺。
- 上落客平台高度約為阿拉米達街地面上方31英尺處

- 洛杉磯古城擬建的新步行廣場位於 Placita de Dolores 以北，該處與洛杉磯聯合車站(LAUS)前院以東位置將計劃引入垂直流通設備



阿拉米達塔

- 位於阿拉米達三角區，該區由阿拉米達街、北大街和阿爾罕布拉大道之間的公共可行使通行權道路（ROW）組成
- 高195英尺，電纜懸掛在地面上方175英尺處
- 更新阿拉米達三角區的自然景觀和人工景觀，包括現有攤舖機的重用和整合

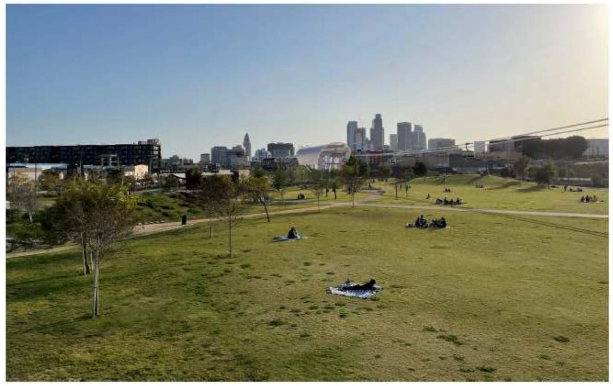


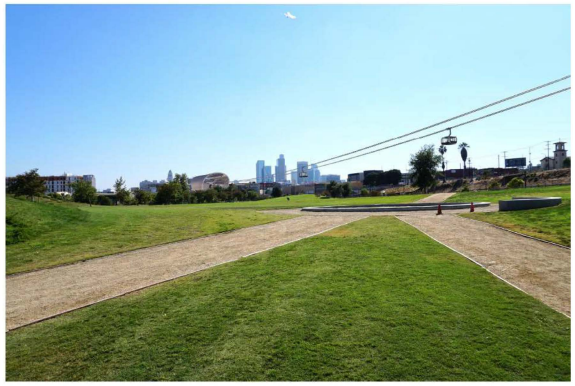
阿爾卑斯塔

- 位於阿拉米達街和阿爾卑斯街東北角，毗鄰地鐵L線(金)
- 地點屬城市擁有的地段，目前用作城市車輛的非公共停車庫
- 最高點為 195 英尺，電纜懸空 175 英尺
- 塔底附近的景觀美化與人造景觀美化

唐人街/州立公園站

- 毗鄰洛杉磯州立歷史公園最南端的春天街
- 南部將位於城市通行道路上， 北部與洛杉磯州立歷史公園的南部邊界結合
- 該站大約長194英尺，寬80英尺，最高點高74英尺。
- 乘客登車平台位於地面上方約50英尺處
- 以電梯和樓梯從夾層進入登車平台。
- 將包括安裝景觀美化和人工景觀美化，包括整合花崗岩攤舖機





唐人街/州立公園站

車站設施

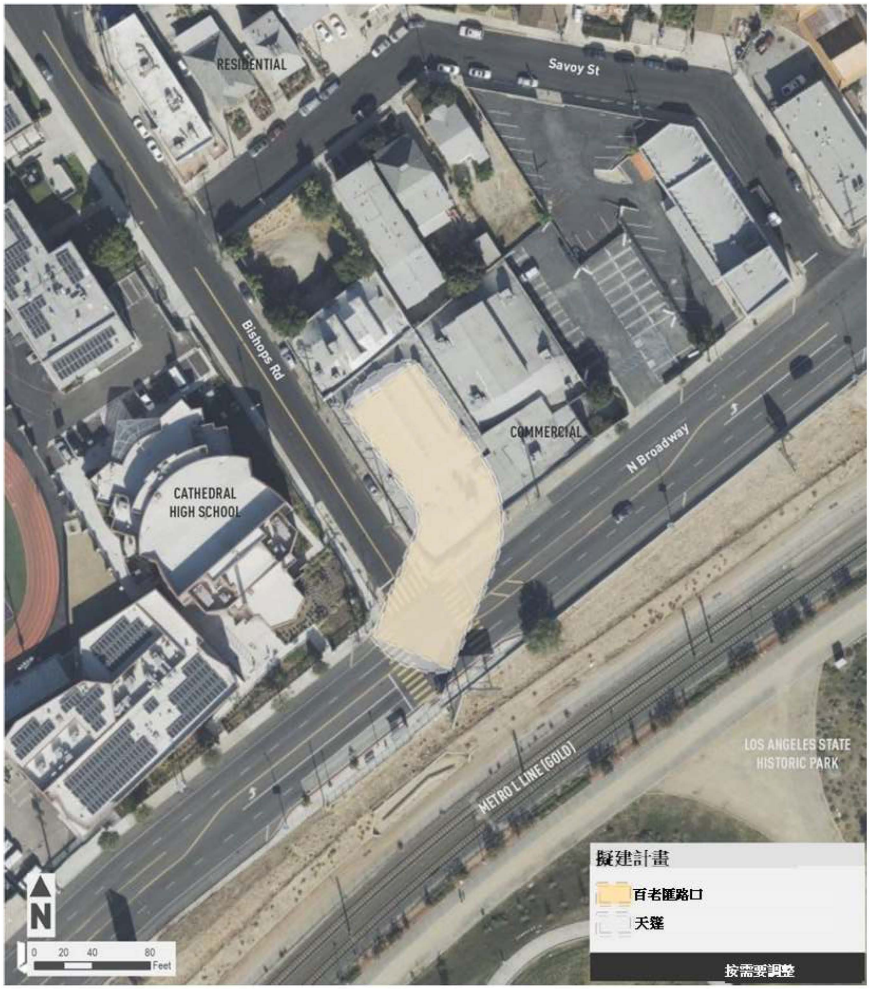
- 讓乘客可以在車站的中心樞紐一英里的範圍內選擇多種交通工具，例如:單車共享計劃
- 改善行人路措施，包括人工景觀和自然景觀改善、遮光設備和潛在興建的座位

公園設備

- 740平方英尺的特別用地
- 770平方英尺的洗手間
- 一條連接特別用地和洗手間長達220平方英尺的遮頂走廊

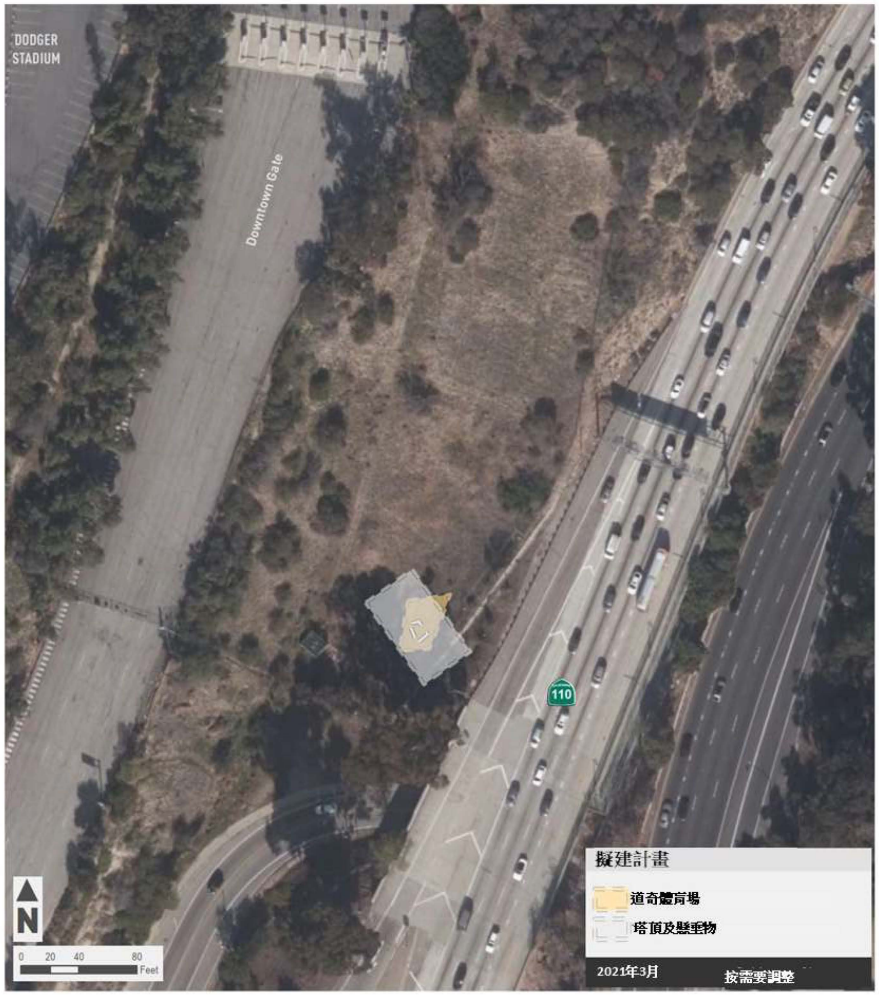
百老匯路口

- 百老匯路口是一個非客運路口，將位於北百老匯和主教路的交匯處
- 位於百老匯北部1201 N 的現有商業大廈將給拆除
- 路口約長 227 英尺，寬 60 英尺，最高點為 98 英尺



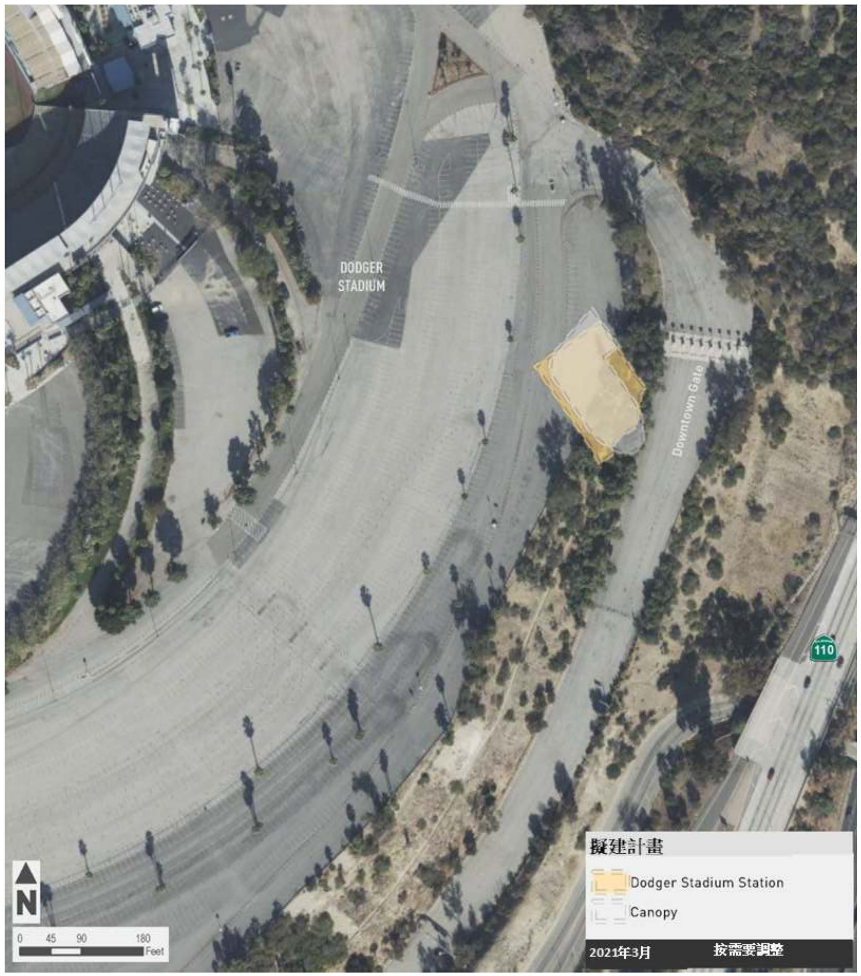
球場塔

- **位於道奇體育場市中心大門與** SR-110 之間的體育場路以北的私人物業的山坡上
- 高 **179** 英尺，電纜懸空 **159** 英尺，於塔底附近進行景觀美化



道奇體育場站

- 道奇體育場東南部,近市中心入口大門



道奇體育場站

- 該站大約長194英尺，寬80英尺，最高點高74英尺
- 車廂抵達該站時，乘客將在同一層上落車，乘客排隊等候區也在同一層。
- 將包括平台下方的地下區域，用於儲存和維護車廂，以及員工休息室、儲物櫃和零件儲存區。
    - 當系統數小時內不作使用，列車會給送回道奇體育場站
- 站內設有供乘客使用的洗手間

道奇體育場站還將包括與道奇體育場的行人連接道，包括人工景觀和自然景觀的改善,及將會興建的座位

可持續發展

- 擬建建計畫的永續性特徵將於以下包括在內：
  - 2019年加州綠色建築標準規範
  - 美國綠色建築委員會在新建築能源與環境設計(LEED)方面的領導計劃
  - 永續基礎設施研究所的設想評級系統
- 擬建計畫需要的電力將100%由洛杉磯市水電部的綠色電力計劃提供
- 每個站、塔和路口將使用存儲備用電池以提供備用電源，而不是使用柴油發電機

擬建計畫將為道奇體育場的訪客提供一個環境永續、高運力、零排放的空中快速纜車選擇，，同時也為道奇體育場、周邊社區和聯合車站的區域交通系統之間提供通道。空中快速纜車技術十分安靜，擬建計畫將減少車輛行駛里程（VMT）和堵塞問題，從而減少溫室氣體排放並改善空氣品質。

營建工程：

時間線

- 擬建計畫的營建工程預計最早於2024年開始，大約需要25個月，包括建設、電纜安裝和系統測試。

工時

- 預計施工時間為每天10小時，時間長短將因應特殊情況和限制而有變動
- 不在預定的延長施工時間和周日假期施工需由洛杉磯市警察委員會批准

車道封閉

- 擬建計畫預計將封閉某些車道，當中車道將在某些施工階段全天 24小時封閉，或在某些施工階段期間作時段封閉，約在施工期間每天封閉約10小時，而道路將在非施工時間每天開放約14小時
- 道路於時段封閉並在非施工時間，將盡可能於施工現場放置在鋼板，允許車輛和行人流通。
- 封閉時間將因應施工地點和階段而異
- 擬建計畫將實施施工交通管理計劃，當中包括設立繞道，以及確保其在所有施工活動中保持緊急通道

詳細工程假設

- 詳細工程假設包括在《環境影響報告草案》附錄B中

詳細工程假設

環境資源專題

每個 CEQA 指南附錄 G 的所有環境資源議題
在《環境影響報告草案》中得到處理：

- 美學
- 農業/林業
- 空氣品質
- 生物資源
- 文化/歷史資源
- 能源
- 地質/土壤
- 溫室氣體排放
- 危害/有害物質
- 水文/水質
- 土地使用/規劃
- 礦物資源
- 噪音
- 人口/住屋
- 公共服務
- 康樂日
- 交通運輸
- 部落文化資源
- 公用事業/服務系統
- 野火

美學

研究範圍是甚麼？

- 圍繞計畫路線的計畫組件對視覺上的影響
- 體現視覺個性的主要觀察點，包括景觀的存在與否、主要土地用途、建築規模或主要景觀、景觀資源和可用的重要視覺元素，例如:開放空間資源、街道上的樹木和建築物前的空地等
- 觀賞者及其反應，包括行人和康樂設施使用者（例如:公園使用者）
- 縱使沒有指定的風景區，人們仍可以欣賞到洛杉磯市中心的天際線、聯合車站、洛杉磯古城、洛杉磯州立歷史公園、阿羅約塞科公園大道、道奇體育場,及聖蓋博和聖貝納迪諾山脈的景觀
- 光線與強光

主要分析及結論

- 擬建計畫不會特別阻礙風景或全景，包括洛杉磯市中心天際線、聯合車站、洛杉磯古城、洛杉磯州立歷史公園、阿羅約塞科公園大道、道奇體育場,及聖加布里埃爾和聖貝納迪諾山脈的景觀
- 擬建計畫的權利和批准將不會與相關分區或其他管理風景質素的法規互相衝突, 當其中包括設計標準，以增強擬建計畫及其周邊社區的視覺識別和特色
- 擬建計畫將不會產生大量光線或強光，並符合相關城市照明法規

現時與模擬從州立歷史公園到洛杉磯市中心天際線的景觀

美學

影響總結

主題	發現	
	營建工程：	**操作**
優美景觀	影響不大。	影響不大。
風景資源	沒有影響。	沒有影響。
視覺特徵	影響不大。	影響不大。
光線與強光	影響不大。	影響不大。

如何可將影響降至最低?

營建工程：一個隱私屏幕將加設於屏障和隔音牆中，使計畫的視覺影響減低。無需採取緩解措施。

營運:計畫設計特徵，包括建築燈光和標示牌上的燈光。無需採取緩解措施。

農林資源

研究範圍是甚麼？

- 計畫會否與體育場塔和道奇體育場站的農業區劃互相衝突

主要分析及結論

- 道奇體育場不包括其農業用途，並受有條件使用許可證的約束，許可證只允許該處作為美國職業棒球大聯盟體育場,和各種附屬結構和用途，包括到達現場的「公共交通服務」；因此，擬建計畫的建設和營運不會與現有的農業區有互相衝突

影響總結

主題	發現	
	營建工程：	操作
耕地轉用	沒有影響。	沒有影響。
與林地區劃衝突	沒有影響。	沒有影響。
喪失林地	沒有影響。	沒有影響。
農業用途	沒有影響。	沒有影響。
農業區劃及威廉姆森法案	影響不大。	影響不大。

如何可將影響降至最低?

無需採取緩解措施。

空氣品質

研究範圍是甚麼？

- 擬建計畫的建設和營運對地區和空氣品質的潛在影響
- 空氣污染物的特徵和影響
- 已通過的管理空氣品質法規
- 評估與計畫建設相關的健康風險評估 (HRA)，包括預計的致癌風險和非致癌慢性危害指數

主要分析及結論

- 擬建計畫將符合適用的空氣品質計劃
- 擬建計畫的建設所引起的排放量預計將低於污染物和排放量的重要閾值
- 擬項建目在營運期間不會將敏感受體暴露於高濃度的污染物，因為計畫不包括任何對環境空氣品質產生重大影響的土地使用，或營運排放
- 與現有情況相比，擬建計畫將透過減少車輛行駛里程（VMT）而減少污染物排放量，從而減少淨標準污染物的排放
- 根據健康風險評估 (HRA) 結果，擬建計畫對敏感受體暴露於來自 TAC 的大量污染物濃度問題上帶來不太顯著的影響

空氣品質

影響總結

主題	發現	
	營建工程：	**操作**
空氣品質	影響不大。	影響不大。
增加空氣污染物	影響不大。	影響不大。
敏感受體	影響不大。	影響不大。
其他排放	影響不大。	影響不大。

如何可將影響降至最低?

營建工程：所有超過50馬力的非道路柴油動力建築設備,應至少滿足美國環保署頒布的非道路柴油發動機的第四級別排放標準。無需採取緩解措施。

營運:無需採取緩解措施。

生物資源

研究範圍是甚麼？

- 計畫是否會影響特殊物種及其棲息地
- 計畫是否會影響河岸棲息地或受保護的濕地
- 計畫干擾沿線野生動物活動的可能性
- 計畫是否會與保護生物資源的任何當地政策或法令（例如:樹木保護政策或法令）產生衝突？
- 計畫會否與已通過的棲息地保護計劃產生衝突

主要分析及結論

- 計畫區域中一般不包括特別物種棲息地；然而，在擬建計畫的建設過程中移除成熟的棕櫚樹和桉樹可能會移除蝙蝠棲息地
- 計畫區不包括河岸棲息地、其他敏感的自然群落或受保護的濕地； 因此計畫對生態不會有影響
- 計畫區域不會作為區域野生動物活動路線；但是，建築活動可能會導致蝙蝠和鳥類避開正在施工的地區。
- 計畫會根據城市原生樹木保護條例、加州公園和娛樂部的要求以及其他適用要求，去更換給砍伐的樹木

生物資源

影響總結

主題	發現	
	營建工程：	**操作**
河岸棲息地	沒有影響。	沒有影響。
受保育濕地	沒有影響。	沒有影響。
生物計劃或政策（營運）	影響不大。	沒有影響。
干擾物種活動	經緩解後影響不大。	影響不大。
改變棲息地（營運）	經緩解後影響不大。	影響不大。

如何可將影響降至最低?

營建工程：

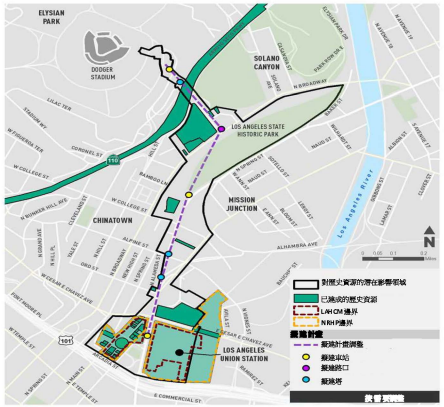
- 採用一個設有建立樹木保護區的設計方案以保護樹木
- 施工前進行築巢調查和採取措施，避免和盡量減少對築巢鳥類的影響

營運:無需採取緩解措施。

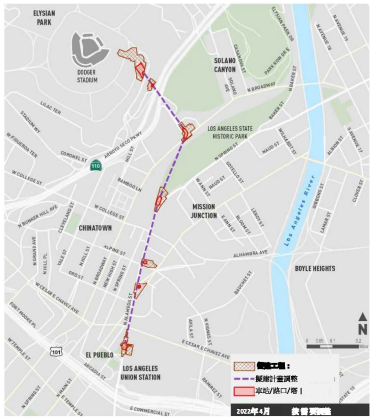
文化資源

研究範圍是甚麼？

- 在潛在影響的區域內,29個已建成的歷史資源受到直接和間接的影響,當中包括洛杉磯聯合車站客運站和場地、洛杉磯廣場歷史街區、大教堂高中和 Arroyo Seco Parkway 歷史街區
- 地面擾動對區域內考古資源有直接的影響，包括 La Placita、Zanja Madre,和南太平洋鐵路的河站
- **主要分析及結論**
- 歷史資源
  - 擬建的阿拉米達站的施工有可能對酒廠和El Grito壁畫造成直接和間接的影響，但影響將給減輕到不太顯著的水平
  - 施工計畫對所有其他歷史資源的相關建設,和營運的影響將不太顯著
- 考古資源
  - 擬建的阿拉米達站、阿拉米達三角區、阿爾卑斯塔和唐人街/州立公園站的施工有可能導致考古資源的重要性產生重大不良的影響；然而，影響將給減輕至不太顯著的水平



建築歷史資源的潛在影響區域



對考古資源的直接影響區域

文化資源

影響總結

主題	發現	
	營建工程：	**操作**
歷史資源	經緩解後影響不大。	影響不大。
考古資源	經緩解後影響不大。	沒有影響。
干擾人類遺骸	經緩解後影響不大。	沒有影響。

如何可將影響降至最低?

- 歷史資源
  - 用於施工前和施工後的文件，以及保護酒廠和《吶喊》(El Grito) 壁畫，以及在施工期間保護 El Grito 壁畫的計畫設計特點
  - 於擬建阿拉米達站施工期間，實施可調地面壓實裝置的震動監測與限制
- 考古資源
  - 制定和實施文化資源監測和緩解計劃，以及考古資源工作者推行計劃
  - 施工前考古測試計劃將在擬建的阿拉米達站和唐人街/州立公園站的實施
  - 為避開考古資源，洛杉磯州立歷史公園設施存在重新設計的潛在機會

能源

研究範圍是甚麼？

- 與能源有關的聯邦、州和地方法律法規概述
- 加州能源生產、供應和消耗概覽
- 評估與建設相關的能源資源，以及與計畫營運有關的年度能源需求

主要分析及結論

- 與擬建計畫的建設相關的臨時能源消耗將減少將來興建計畫營運的相關能源消耗
- LADWP的綠色電力計劃為擬建計畫的相關主要電力使用提供可再生資源
- 擬建計畫將減少車輛行駛里程（VMT),並增加使用公共交通的人數，從而減少車輛使用的化石燃料

影響總結

主題	發現	
	營建工程：	**操作**
浪費、低效或不必要的消耗	影響不大。	影響不大。
州或地方能源計劃	影響不大。	影響不大。

如何可將影響降至最低?

無需採取緩解措施。

地質和土壤

研究範圍是甚麼？

- 計畫是否容易受到地震災害的影響，例如:強烈的地震動、斷層、液化或土石流
- 計畫是否位於不穩定的土壤上，而有機會導致施工現場或非現場山泥傾瀉、橫向擴展、沉降、液化或坍塌。
- 計畫路線是否包括可能對生命或財產造成重大直接或間接風險的土壤膨脹
- 計畫會直接或間接破壞獨特的古生物資源或遺址，或獨特的地質特徵嗎？

主要分析及結論

- 雖然計畫區域位於加利福尼亞州南部的地震活躍區，但在遵守現有標準和規範並實施緩解措施的前提下，與擬建計畫施工期間的強烈地面震動、與地震相關的地面破壞和/或液化相關的影響將減少至不太顯著的水平
- 計畫的應急行動計劃將包括應急響應協議，並規定在發生大地震時，將纜車系統完全疏散並關閉，以及停止運作
- 在遵守現有標準和規範，並實施緩解措施的前提下，於計畫組成部分的分級和施工過程所帶來的橫向擴展、沉降、液化或崩塌相關的 影響將達至不太顯著的水平
- 在遵守現有標準和規範，並實施緩解措施的前提下,施工期間與土壤腐蝕相關的影響將達至不太顯著的水平
- 擬建計畫的北部靠近道奇體育場站的入口處可能存在古生物資源；然而，對資源的影響將給減輕到不太顯著的程度

地質和土壤

影響總結

主題	發現	
	營建工程：	操作
不良影響:地震、與地震相關的地面震動、液化或土石流（營運）	經緩解後影響不大。	影響不大。
支持污水系統	沒有影響。	沒有影響。
破壞獨特的古生物或地質特徵	經緩解後影響不大。	沒有影響。
土壤侵蝕/表土流失	影響不大。	影響不大。
不穩定的地質單元或土壤	經緩解後影響不大。	影響不大。
膨脹土壤	經緩解後影響不大。	影響不大。

如何可將影響降至最低?

營建工程：

- 準備和推行特定地點最終岩土工程報告
- 準備和遵守古生物資源監測和緩解計劃（PRMMP）

營運:無需採取緩解措施。

溫室氣體排放

研究範圍是甚麼？

- 相關的聯邦、州和地方法律法規
- 溫室氣體科學概述
- 用作評估與擬建計畫相關的溫室氣體排放的方法

主要分析及結論

- 與現時情況相比，擬建計畫不會增加溫室氣體排放量，反而將減少溫室氣體排放量

計畫的總溫室氣體排放量將減少 166,653 公噸

影響總結

主題	發現	
	營建工程：	操作
產生溫室氣體	影響不大。	影響不大。
溫室氣體減排計劃或政策	影響不大。	影響不大。

如何可將影響降至最低?

無需採取緩解措施。

危害和有害物質

研究範圍是甚麼？

- **對計畫活動進行評估，確定其在施工和營運期間危害公眾或環境的潛在影響**
- **分析特定地點所**產生的潛在危害和有害物質造成的潛在影響

主要分析及結論

- 擬建計畫將在施工期間使用、運輸和處置有限數量的有害物質，因此計畫將需符合**聯邦、州和地方的健康和安全**要求；並在施工過程中遵守所有規範、標準和法規
- 擬建計畫將遵守OSHA、Cal/OSHA，以及洛杉磯市政法規第71條，並實施土壤和地下水管理計劃，從而限制危險材料和廢物洩漏的可能性
- 擬建計畫將在拆卸前，將由持有執照的減排承建商進行有害物質減排，確保學校不會受到不良影響
- 擬建計畫的施工和營運不會干擾洛杉磯警察局進入胡珀直升機場，直升機場的營運將不會受到建築活動所影響
- 擬建計畫區內共有五處物業給認定為有害物質場地；然而計畫將實施土壤和地下水管理計劃，以減少這些地點所帶來的影響
- 擬建計畫的施工不會對已通過的應急響應計劃或應急疏散計劃的實施造成重大影響或實際干擾；計畫日常運作及施工將不影響應急響應活動

危害和有害物質

影響總結

主題	發現	
	營建工程：	**操作**
危險場地	經緩解後影響不大。	沒有影響。
機場土地使用計劃	沒有影響。	沒有影響。
危害公眾或環境	經緩解後影響不大。	影響不大。
應急和疏散計劃	影響不大。	影響不大。
學校附近的災害	經緩解後影響不大。	影響不大。

如何可將影響降至最低?

營建工程：

- 制定和實行土壤和地下水管理計劃，以 表明在計畫建設期間遇到受污染的地下水、土壤或建築物時，應採取的處理和處置方法。
- 拆除北百老匯1201號現有建築物期間的有害物質減排

營運:無需採取緩解措施。

水文和水質

研究範圍是甚麼？

- 擬建計畫有可能違反水質標準、減少地下水供應、或導致施工現場或場外發生嚴重侵蝕或淤積
- 擬建計畫有可能大幅增加地表徑流的速率或數量，從而導致施工現場或淹水的風險
- 擬建計畫有可能產生或增加徑流水，這將超過現有或規劃內的雨水排放系統的容量，以及阻礙或將洪水流改向
- 擬建計畫在洪水災害、海嘯或**震盪潮**期間釋放污染物的可能性
- 擬建計畫與水質控制計劃或可持續地下水管理計劃的實施發生衝突或阻礙該計劃的可能性

主要分析及結論

- 擬建計畫將遵守所有適用的聯邦、州、地區和地方機構的水質保護法律法規、水質控制和/或可持續地下水管理計劃
- 擬建計畫將採用最佳管理方式，並以低影響開發計劃進行，以減少水文和水質影響
- 擬建計畫不易因洪水災害、海嘯或**震盪潮**而排放污染物

水文和水質

影響總結

主題	發現	
	營建工程：	**操作**
減少地下水供應（營運）	影響不大。	沒有影響。
水質標准或計劃	影響不大。	影響不大。
改變排水	影響不大。	影響不大。
洪水、海嘯或震盪潮	影響不大。	影響不大。
與計劃衝突	影響不大。	影響不大。

如何可將影響降至最低?

工程與營運：擬建計畫將遵守**相關的聯邦、州、地區和地方法律法規，包括遵守有關雨水許可證、廢水許可證和其他水質法規。無需採取緩解措施。**

土地利用和規劃

研究範圍是甚麼？

- 計畫會劃分出一個已建立的社區嗎？
- 計畫是否會因為避免,或減輕對環境影響而採用的任何土地用途計劃、政策或法規相衝突而造成重大環境影響？

主要分析及結論

- 縱使計畫施工期間將臨時關閉通往各社區之間的車輛、行人和單車通道，但在計畫區域內將提供多種交通模式可供選擇
  - 其他周邊街道仍提供入口進入社區，並設有行人繞道，防止已建立的社區給分割。
- 擬建計畫t 將改善一英里範圍內的地區的交通和行人通道，以增強社區連通性，包括交通樞紐和對未來洛杉磯州立歷史公園單車和人行天橋的支援
- 擬建計畫符合政策、規定、目標和/或當地計劃、法規及條例的目的
- 州立公園認為擬建計畫與洛杉磯州立歷史公園總體規劃之間存在不一致，因此，計畫可能會對公園產生重大影響，因為洛杉磯州立歷史公園總體規劃並未將公共交通列入為公園用途
  - **擬建議計畫需獲取 LASSHP 總體規劃修正案，繼而推行 LUP-A 緩解措施，這將令計畫對公園的影響減低**

土地利用和規劃

影響總結

主題	發現	
	營建工程：	**操作**
物理上劃分社區	影響不大。	沒有影響。
與土地使用計劃或政策衝突	經緩解後影響不大。	經緩解後影響不大。

如何可將影響降至最低?

工程（物理劃分社區）：雖然施工影響不大，但施工交通管理計劃的實施將包括封閉街道、繞道計劃、運輸路線和分階段計劃

工程與營運：根據公共資源法典 5002.2，擬建計畫應獲得對洛杉磯州立歷史公園總體規劃的修訂，以允許將洛杉磯州立歷史公園總體規劃範圍內的土地作為交通用途。

礦物資源

研究範圍是甚麼？

- 計畫是否會導致對該地區和該州居民有價值的已知礦物資源喪失可用性？
- 計畫是否會導致當地總體規劃、具體規劃,或其他土地用途規劃中所包括的當地重要礦物資源回收場的可用性喪失？

主要分析及結論

- 計畫不位於已知礦產資源區內
- 洛杉磯市內的大部分地區都是在土地區分類之前開發的，因此無法開採該等地區
- 計畫路線位於洛杉磯市的城市地區，於城市開採此類材料並不可行

影響總結

主題	發現	
	營建工程：	**操作**
損失可用礦產資源	沒有影響。	沒有影響。

如何可將影響降至最低?

無需採取緩解措施。

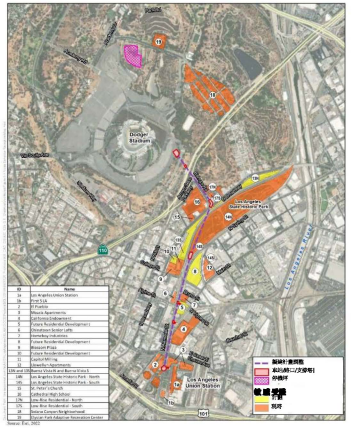
噪音

研究範圍是甚麼？

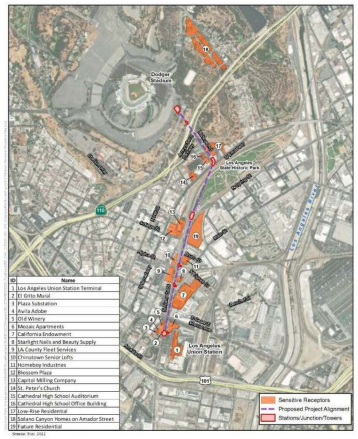
- 在擬建計畫路線沿線的噪音敏感受體代表地點進行測量，以計算現有噪音水平，包括現有和未來住宅開發、學校、公園和其他供人使用的戶外地方
- 透過計算與計畫相關的施工噪音水平，評估施工產生的潛在噪音影響
- 為評估計畫施工帶來的噪音影響，將計算計畫施工期間的噪音源頭，包括車站、路口、塔架、沿塔架支撐滑輪的車廂、車廂和車站上等待登車乘客
- 針對建築物損壞和人類干擾地面震動進行影響分析

主要分析及結論

- 擬建計畫對施工現場施工噪音的重大和不可避免的影響將取決於施工設備產生的噪音、設備的位置、施工活動的時間和工時長短，以及與噪音敏感受體區域的距離
- 施工場外的交通產生的噪音不太顯著
- 即使在最壞的情況下，計畫 施工所產生的噪音將不太顯著
- 現場施工活動產生的震動會產生重大且不可避免的人為滋擾；潛在的建築損壞在緩解後將變得不太顯著
- 計畫營運產生的震動將e 不太顯著



噪音敏感受體地圖



震動敏感受體地圖

噪音

影響總結

主題	發現	
	營建工程：	**操作**
暴露於機場附近	沒有影響。	沒有影響。
產生或增加噪音水平	嚴重且不能避免。	影響不大。
產生過度震動或噪音水平	嚴重且不能避免。	影響不大。

如何可將影響降至最低?

營運噪音：車廂設計的特色包括與 HVAC 單元內部到外部的降低噪音和電源聲級無需採取緩解措施。

施工噪音：實施施工噪音管理計劃，包括

- **噪音屏障：**
- **設備維修：**
- 社區外展，包括一名噪音干擾協調員

施工震動

- 於Avila Adobe（1970 年代添加）、El Grito 壁畫和 酒廠放置震動監測設備
- 使用可調整力度的地面壓實裝置的限制

人口和住屋

研究範圍是甚麼？

- 擬建計畫導致人口大幅增長或加速增長超過預期或計劃水平的可能性
- 推行擬建計畫是否會取代大量現有人口或住房

主要分析及結論

- 作為與道奇體育場的第一英里/最後一英里的連接交通，擬建計畫不會直接或間接引致大量人口增長
  - 計畫旨在滿足該地區的交通需求,並提高現有交通網絡的效率
  - 計畫在已規劃的住宅開發計畫附近提供交通工具，以達到住屋元素和社區計劃的城市目標，
- 擬建計畫不會取代現有的人口或住房

影響總結

主題	發現	
	營建工程：	**操作**
引致計劃以外的人口增長	影響不大。	影響不大。
流浪者或居民	影響不大。	影響不大。

如何可將影響降至最低?

無需採取緩解措施。

公共服務

研究範圍是甚麼？

- 擬建計畫是否會因提供新的或經過物理改造的公共設施而產生不良物理影響，建設這些設施可能會造成重大的環境影響，包括消防和警察保護、學校和其他公共設施，如:圖書館、老人院、流浪者收容所和托兒設施
- 計畫是否會影響緊急服務的回應時間

主要分析及結論

- 與擬建計畫相關的建設活動將暫時增加對緊急服務的需求，但在緩解措施和計畫設計特點的前提下，以及遵守適用的州份和地方法規，包括在計畫施工前與 LAFD 和 LAPD 進行協調時，將確保計畫的建設不會產生對緊急服務的額外需求，從而導致需要增加新的,或實際改變現有的公共設施
- LAFD 和 LAPD 在施工期間將有足夠的通道行駛
- 擬建計畫將在計畫營運期間增加對緊急服務的需求，在遵守適用法規與 LAFD和 LAPD 協調，並實施緊急行動計劃前提下，計畫的營運不會對緊急服務產生額外需求，從而導致需要增加新的或實際改變公共設施
- 擬建計畫內不包括興建住屋，這可能會增加對學校服務或其他公共設施的需求

公共服務

影響總結

主題	發現	
	營建工程：	**操作**
需要新的或改造的消防、警察、學校或其他公共服務	經緩解後影響不大。	影響不大。
服務比率和響應時間	經緩解後影響不大。	影響不大。

如何可將影響降至最低?

營建工程：施工交通管理計劃將減少緊急通道有關的影響

營運:擬建計畫將遵從相關法規，當中包括施工人員和攝像頭等保安措施，並會實行緊急營運計劃。無需採取緩解措施。

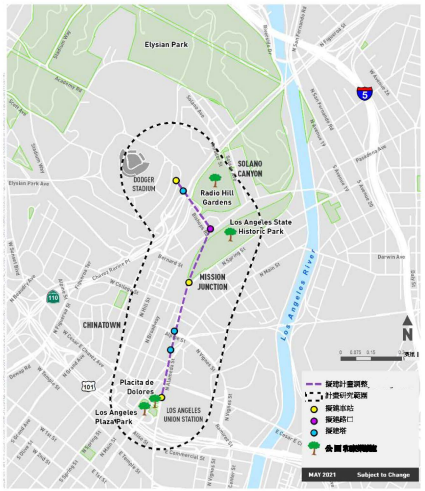
公園和康樂設施

研究範圍是甚麼？

- 擬建計畫在施工和營運期間對公園和康樂設施的潛在影響，包括洛杉磯廣場公園和多洛雷斯廣場、洛杉磯州立歷史公園和伊利森公園

主要分析及結論

- 擬建計畫不會增加對公園的需求，也不會產生新的永久居民，從而增加現有公園和康樂設施的使用。因此，計畫不會導致公園的嚴重老化問題發生或加速，或導致有需要建設新的公園設施，或需要新的或實質改變公園的設施
- 擬建的計畫提供連接洛杉磯聯合車站(LAUS)和洛杉磯州立歷史公園和伊利森公園，高容量的空中快速交通有助改善該地區的流動性和可達性



影響總結

主題	發現	
	營建工程：	**操作**
公共設施的老化	影響不大。	影響不大。
擴建康樂設施	影響不大。	影響不大。
服務比率和績效目標	影響不大。	影響不大。

如何可將影響降至最低?
無需採取緩解措施。

交通運輸

研究範圍是甚麼？

- 透過城市 TAG 使用《加州環境質量法案》(CEQA)和 LADOT 既定的篩選標準、分析方法和閾值標準
- 對擬建計畫的車輛行駛里程（VMT）以各種數據、方法和模型進行分析，以估計計畫載客量、減少的車輛行程、車輛行車時間，並最終估算擬建計畫的 VMT 收益
- 道奇體育場比賽和活動參加者、員工、遊客、乘客和洛杉磯州立歷史公園遊客和活動參加者的乘車人數估算
- 擬建計畫車站、路口和支撐塔的位置，以及這些組成部份是否因為幾何設計的特徵而令危險顯著增加
- 擬建計畫的建設概念交通繞道圖與運輸路線

主要分析及結論

- 擬建計畫將與 PPOPs（程序、計劃、條例和政策）一致，當中涉及流動系統，包括交通、道路、單車和行人設施
- 在阿拉米達塔和唐人街/州立公園站實施緩解措施時，擬建計畫不會引入任何不安全的物理條件
- 實施緩解措施，令擬建計畫施工期間保持緊急通道暢通

計畫的總車輛行駛里程（VMT）減少量為129,629,500。

交通運輸

影響總結

主題	發現	
	營建工程：	**操作**
減少車輛行駛里程	沒有影響。	沒有影響。
與計劃或政策衝突	影響不大。	影響不大。
計畫設計令危險增加	經緩解後影響不大。	經緩解後影響不大。

如何可將影響降至最低?

營建工程：

- 實施經市政府批准的詳細建設交通管理計劃,當中包括封閉街道、繞道計劃、運輸路線和分階段計劃
- 實施經市政府批准的臨時災害路線計劃，當中包括封閉街道資料和繞道計劃，讓應急車輛透過研究區域並最大限度地減少災害期間對應急回應的影響

工程與營運：

- 增強擬建阿拉米達塔和唐人街/州立公園站的能見度——例如:高能見度行人通道、優化交叉路口警告標示、閃光燈、升級照明以及新的或已升級的交通控制裝置

部落文化資源

研究範圍是甚麼？

- 對重要部落文化資源的重大不良影響
- 根據第52號議會法案諮詢了八個加州美洲原住民部落

主要分析及結論

- 該地區存在部落文化資源，並需實施緩解措施，包括考古測試和數據恢復
- 在建設過程中可能會遇到未給發現的資源；如果美洲原住民監視流程發現潛在資源，可能會暫停施工

影響總結

主題	發現	
	營建工程：	**操作**
改變部落文化資源	經緩解後影響不大。	沒有影響。

如何可將影響降至最低?

營建工程：

- 實施洛杉磯聯合車站(LAUS)前院文化資源監測和緩解計劃及考古測試計劃
- 保留一名美洲原住民監測員，以監測阿拉米達站所在地於施工期間的干擾地面的活動情況

營運:無需採取緩解措施。

公用事業和服務系統

研究範圍是甚麼？

- 搬遷、建造或擴建水、廢水處理或雨水排放、電力、天然氣或電訊設備
- 計畫對供水的影響
- 計畫是否需要增加污水處理能力
- 堆填區是否有足夠的容量處理計畫產生的固體廢物

主要分析及結論

- 擬建計畫的建設不需要建造新的或擴建的公用設施
- 擬建計畫需要搬遷現有公用事業，因此需與公用事業供應商協調並按照相關的州和地方法規和法規進行
  - 擬建計畫將實施公用事業搬遷計劃，從而盡量減少施工期間對現有公用事業的潛在干擾
- 擬建計畫的營運將需要連接到現有的公用事業系統
- 主要電力將來自可再生能源，現有電力供應量應足夠供給計畫營運
- 擬建計畫的建設和營運將有充足的供水
- 建設和營運期間所產生的污水將按規定進行處理
- 計畫是否會產生超過州或地方標準的固體廢物，或超過當地基礎設施的容量，或以其他方式影響減少固體廢物目標的實踐？

公用事業和服務系統

影響總結

主題	發現	
	營建工程：	**操作**
供水量充足	影響不大。	影響不大。
廢水系統的需求和容量	影響不大。	影響不大。
固體廢物目標	經緩解後影響不大。	影響不大。
公用事業搬遷或建設	經緩解後影響不大。	影響不大。

如何可將影響降至最低?

營建工程：

- 與公用事業公司合作制定並實施公用事業搬遷計劃，以盡量減少對整個計畫建設過程中對有關服務的影響
- *準備土壤和地下水管理計劃。*

營運:無需採取緩解措施。

野火

研究範圍是甚麼？

- 若擬建計畫位於州責任區 (SRA) 或屬於火災危險嚴重區 (VHFHSZ) 的土地或附近土地，是否會引致與發生火警相關的潛在重大影響
- 基於地形、天氣和燃料的計畫區域內潛在的野火特性
- 計畫是否會嚴重損害已通過的應急應變計劃或緊急疏散計劃？
- 擬建計畫是否需要安裝或維護可能加劇火災風險或對環境造成暫時或持續影響的相關基礎設施
- 擬建計畫是否會因為徑流、火災後邊坡不穩定或排水變化，使人或建築物面臨重大風險，包括下坡或下游洪水或土石流?
- 計畫是否會直接或間接地使人或建築物暴露於與火災有關的重大損失、傷害或死亡風險？

主要分析及結論

- 百老匯路口、體育場塔和道奇體育場站的擬定路線部分位於 VHFHSZ 內
- 擬建計畫的建設和營運不會阻礙進入已確定的災害路線，因此不會嚴重影響應急響應或疏散計劃
- 計畫將遵守相關規範和法規，不會令野火風險增加
- 計畫的設計將進一步降低這些風險

野火

影響總結

主題	發現	
	營建工程：	**操作**
對緊急情況或疏散計劃構成影響	影響不大。	影響不大。
增加野火風險	影響不大。	影響不大。
安裝/維護相關基建	影響不大。	影響不大。
令人或結構暴露於野火風險之中	影響不大。	影響不大。

如何可將影響降至最低?

營建工程：計畫設計包括消防計劃和體育場塔施工現場周圍的燃料改造區。無需採取緩解措施。

營運:在百老匯路口、體育場塔和道奇體育場站的營運期推行施計畫設計特色，該設計特色與工作人員和攝影系統的安全監控以及消防安全隱患的識別和報告有關。無需採取緩解措施。

替代方案

研究範圍是甚麼？

- 選擇了一系列替代方案，以找出減輕或避免與擬建計畫實施期間引起的重大環境影響的潛在方法，同時令計畫可以實現其主要目標
  - 沒有替代計畫——沒有新的發展
  - 春天街路線替代方案 – 擬建計畫的路線替代方案
  - 交通系統管理替代方案（提升道奇體育場快車）
- 基於幾個替代方案未能滿足大多數基本計畫目標、方案不可行、或無法避免重大的環境影響，該等替代方案已給排除在詳細分析之外，當中包括包括百老匯站路線替代方案、地鐵 L 線（金）聯合車站和學院街站路線替代方案以及直接路線替代方案。

主要分析及結論

- 無計畫替代方案不會改善公共交通通道或提供社區之間的聯繫。此外，車輛行駛里程和車輛擁擠問題不會減少，溫室氣體排放量亦將不會減少，空氣品質亦得不到改善。
- 將春天街替代方案提供直接的交通連接，並改善周邊社區的連通性。然而，替代方案需要更大的佔地面積，並且不會減少顯著的環境影響。
- TSE 替代方案不會提供直接的交通連接或改善周邊社區的連接，亦不會減少 車輛行駛里程（VMT）、溫室氣體排放或改善空氣品質。。

替代方案

替代方案總結

替代方案	發現	
	實現計畫目標的能力	減少重大影響的替代方案
沒有計畫替代方案	不能實現計畫目標	較計畫產生的影響少
春天街路線替代方案	能夠實現計畫目標	與計畫產生的影響相約
運輸系統管理替代方案	不能實現大部份計畫目標	較計畫產生的影響少

環境優越替代方案

TSM替代方案是較理想的環境替代方案，因為它不會產生加州環境品**質法案(CEQA)確認為重大和不可避免的影響，而且此方案整體**產生最小的環境影響。可是，**TSM替代方案對空氣品質、能源、溫室氣體排放、水文和水質以及運輸和交通的影響會較大。然而，道奇體育場快車替代方案不能完全或部分**滿足計畫的大部分目標。

《環境影響報告草案》中的非 CEQA 附加評估

洛杉磯州立歷史公園的使用情況

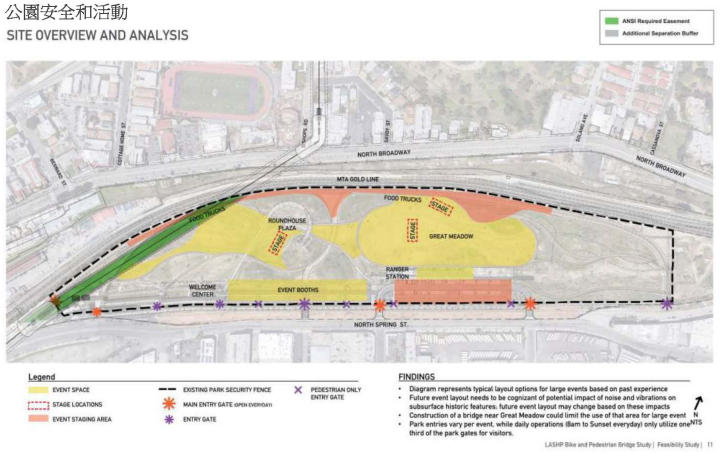
風箏由於擬建計畫路線的位置，即沿公園的西部邊緣，毗鄰地鐵 L 線和人行道，擬建計畫不會顯著減低公園內的安全放風箏範圍

特別活動擬建計畫不會顯著減少公園內的活動空間區域，因為擬建計畫路線的位置橫跨了公園不常用作屏幕和舞台的範圍，而且在擬建計畫路線的大部分情況下仍然可以舉辦活動

阿拉米達站和唐人街/州立公園站的位置

直升機場

- 擬建計畫路線不在機場土地使用計劃覆蓋的區域內，亦不屬於公共機場兩英里範圍內
- 從擬建計畫路線附近直升機場的空域評估所得出的結論如下:擬議計畫的建設和營運將避開與擬議計畫附近現有直升機場相關的空域，不會帶來潛在的空中航行危險，因此不會影響航空活動，包括擬建計畫附近的直升機場



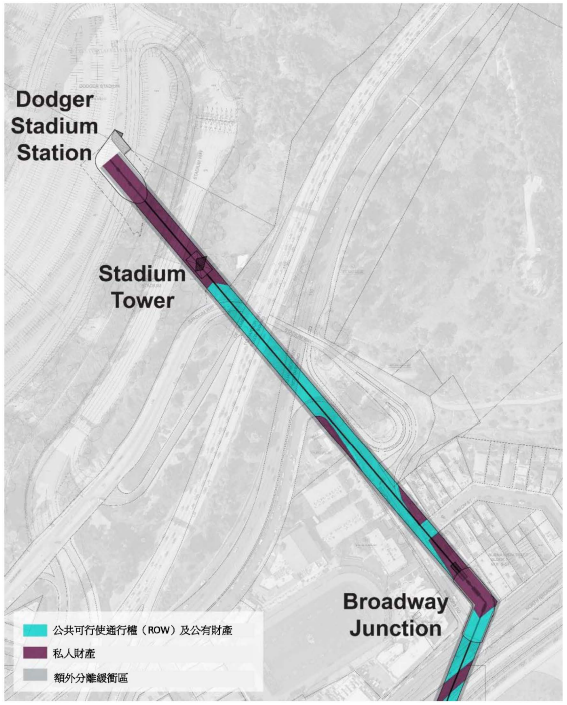
洛杉磯州立歷史公園活動舞台和屏幕的位置及擬建的計畫路線

設計方案A

移動百老匯路口以避開451 E. SAVOY

- 設計方案 A 將包括改變百老匯路口和道奇體育場站之間的整體計畫路線，以避免在451 E.Savoy Street上的空中權限要求。
- 移動百老匯路口將導致路線穿過主教路附近的大教堂高中的一小部分
- 此設計選項包括對百老匯路口、體育場塔和道奇體育場的計畫元素更改。
  - 這將導致體育場塔和道奇體育場站的公用設施需要搬遷和額外的施工時間
  - 擬建計畫乘客來往道奇體育場站和道奇體育場之間需更長的步行時間

擬建計畫調整

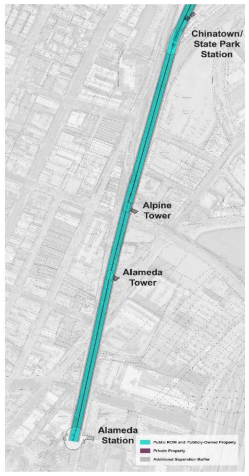


設計方案A

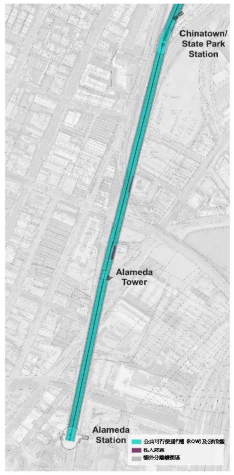
設計方案B

沿阿拉米達街的單棟塔樓

- 回應持份者的意見，他們要求計畫發起人評估將阿拉米達街沿線的塔樓數量從兩座減少到一座的潛力
- 當中包括將阿拉米達塔的總高度增加50英尺，以及從阿拉米達站和唐人街/州立公園站之間的擬建計畫中將阿爾卑斯塔拆除
- 塔樓高度增加與額外的建築活動相符
- 這樣將導致潛在的技術限制
- 以及需要額外的私人空中權限要求



擬建計畫調整



設計方案B

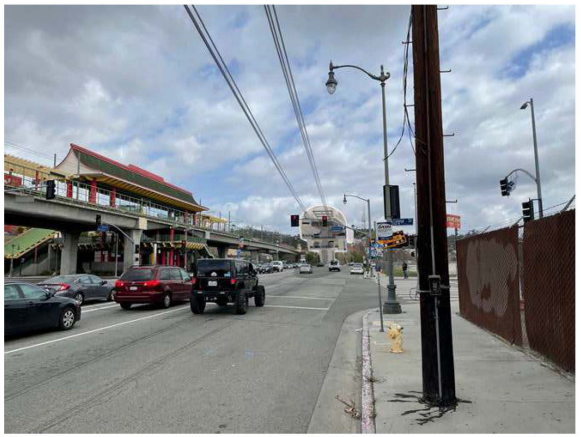
擬建計畫調整

設計方案B

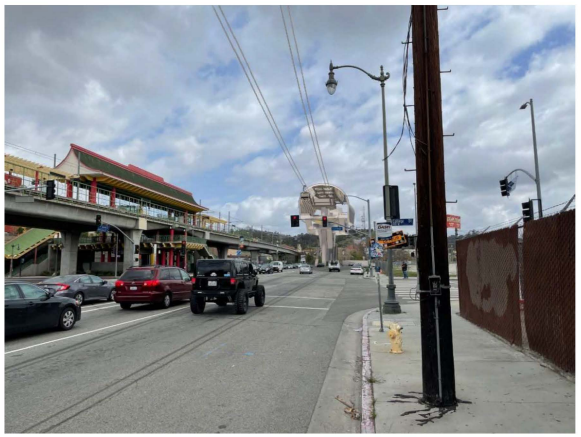
設計方案C

增加唐人街/州立公園站的高度

- 回應持份者的意見，他們要求計畫發起人考慮將唐人街/州立公園站加高
- 設計方案C將包括將唐人街/州立公園站的總高度增加35英尺
- 車站高度增加與額外的建築活動相符
- 由於高度可能會對乘客體驗有影響，也會導致登平台升高，因此需要額外的垂流動設備去進入和升高平台



擬建計畫調整



設計方案C

設計方案D

唐人街/州立公園站作為非客運樞紐站

- 回應持份者的意見，他們要求計畫發起人考慮在唐人街/州立公園站不設立乘客通道，從而增加沿春天街進出車站的車廂高度
- 使用方案D將涉及用擬建的唐人街/州立公園站代替非客運樞紐站。
- 此設計使用選項將具有與擬建計畫相同的位置、高度、寬度、長度和建築裝飾。
- 不會改善洛杉磯州立歷史公園、唐人街和 Mission Junction社區之間的連通性

設計使用方案E

洛杉磯州立歷史公園行人天橋

- 設計和使用方案E將包括一座ADA無障礙行人天橋，該天橋將從洛杉磯州立歷史公園的中心部分緩坡，越過地鐵 L 線（金線），直至北百老匯。
- 雖然行人天橋不屬擬建計畫的一部分，但《環境影響報告草案》中包括了對公園行人天橋的分析
- 洛杉磯州立歷史公園總體規劃和最終《環境影響報告》以及單車和行人天橋研究中提及，這座天橋將從唐人街和索拉諾群峽谷社區進入公園的行人和單車徑提供安全的通道

資料來源:天橋可行性研究

車輛停泊研究概述

擬建計畫車位需求 (2042)

- 加州環境品質法案(CEQA)並無要求對車輛停泊問題進行分析，但計畫進行了全面的泊車研究，並已獲得運輸局評審
- 車輛停泊研究自2022年9月9日起於運輸局網站上可供查閱

研究範圍是甚麼？

- 大多數乘客預計將轉乘公共交通工具到達計畫
- 在擬建的阿拉米達站和唐人街/州立公園站 ½ 英里範圍內，公共泊車位和車庫以及街道上約提供共 10,290 個車位

車輛停泊研究概述

車輛停泊研究結論

車位類型	比賽日泊車			
	車位供應	停泊車數	用量	車位供應量
室內車位	6,876	2,173	32%	4,703
街頭車位	3,417	2,017	59%	1,400
總數				
擬建計畫車位需求 (2042)	-	(213) 922-6913		
可供計畫使用的總室內車位數量	6,876	2,963	43%	3,913

*數據根據2021年9月10日洛杉磯道奇隊主場迎戰聖地牙哥教士隊的晚上進行；當天付費出席人數為48,403，超過2019年洛杉磯道奇隊平日晚間比賽的平均水平。與運輸局和 LADOT 合作，車輪停泊研究將室內公共泊車位置增加46%，以應對COVID-19疫情對車位需求。

對於擬建計畫的潛在停車需求，擬建計畫的行人路上有大量可用車位供應。即使某些現有的停車場需重新開發，附近也有大量的室內車位供應,以滿足擬建計畫對車位的需求。

計畫鼓勵乘客使用公共交通工具

- 與當地企業建立企業間的合作夥伴關係以預售捆綁套餐，當中包括企業顧客可使用路邊停車位
- 支持實施/擴展各種管理策略，包括限時停車限制和比賽期間的停車計時器，以阻止騎手在社區停車並為居民和當地企業保留可用空間

答詢時段

問答環節

- **目的**讓公眾有機會就計畫和<環境影響報告草案>>提出問題
- 注意：請將您的問題限制在30秒內

今天!

請隨便發問。。

沒有公眾意見會於今天給接納。

答詢時段使用問答功能輸入問題。或舉手提問

议程

1. 会议目的
2. 如何参加本次虚拟会议
3. 概览
4. 加州环境质量法案（CEQA）流程概览
5. 洛杉矶空中快捷交通项目概览
6. 环境影响报告草案重点分析及总结
7. 问答环节

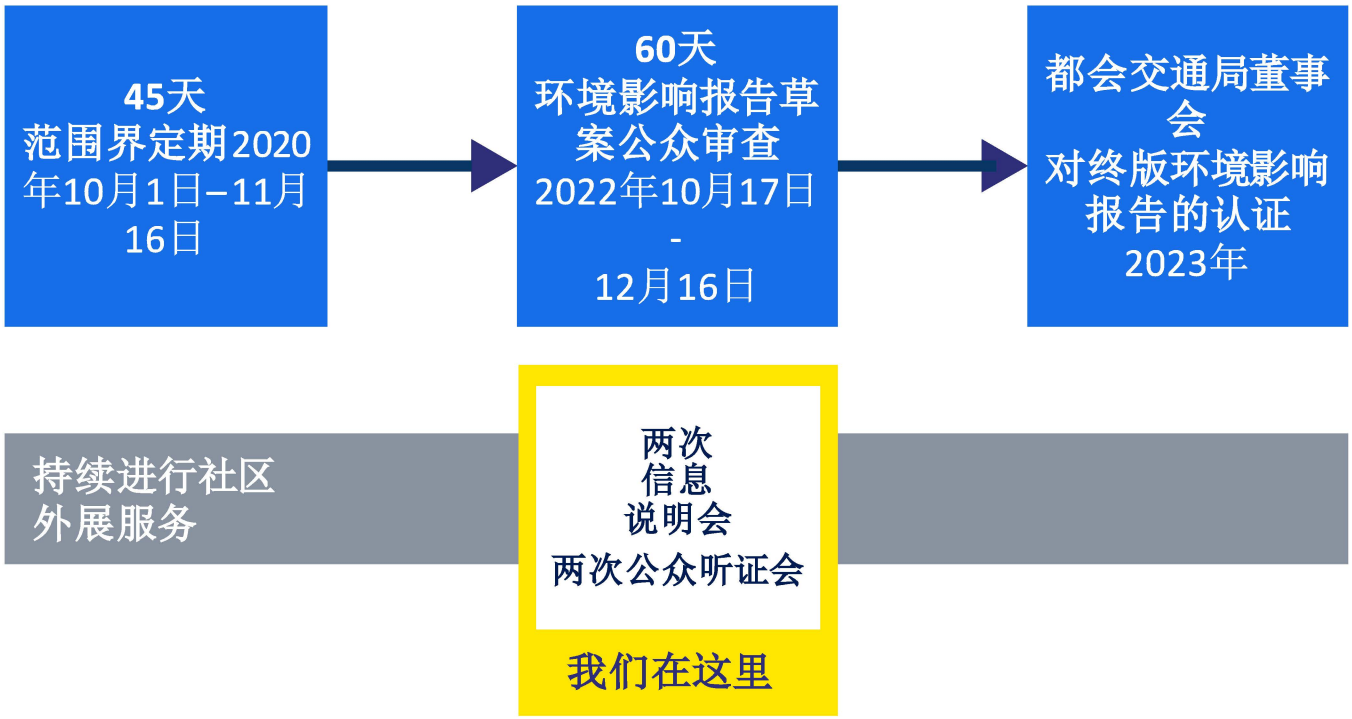
如需Zoom方面的帮助：请发电子邮件到 mary.nooristani@aecom.com 或致电(619) 251-9180

会议目的

环境影响报告草案重点分析及总结

问答环节

《加州环境质量法案》（CEQA）流程



今天！

了解
环境影响报告草案的重点分析及总结，以及进行提问。

今天不接受公众的意见提交。

如何参加本次会议

今天！

了解
环境影响报告草案的重点分析及总结，以及进行提问。

今天不接受公众的意见提交。

问答：使用问答功能输入一个问题进行提问
或举手提问。

概览

概览

- 洛杉矶空中快捷交通技术有限公司提议洛杉矶空中快捷交通项目
- 洛杉矶都会交通局（交通局）是本案的主导机构，根据《加州环境质量法案》（CEQA）编制环境影响报告
- 环境影响报告草案评估了与项目施工和运营相关的潜在环境影响

概览

- 作为领导机构，都会交通局有责任确保：
  - 环境影响报告充分评估了项目的潜在影响
  - 提议的缓解措施是适当的
  - 在公告、公共宣传和文件分发方面均遵守了CEQA流程

概览

- 目前我们正在根据CEQA要求，征集公众对环境影响报告草案的意见
  - 公众听证会
  - 电子邮件
  - 邮件
  - 电话
- 参议院第44号方案
  - 旨在简化对洛杉矶县环保先锋交通项目的CEQA审查
  - 拟建项目将是参议院第44号法案下的第一个环保先锋交通项目
  - 公证听证会要求
    - **信息说明会：在公众评议期的头10个日历日内，向公众介绍环境影响报告草案的主要分析及结论**
    - 公众听证会：在公众评议期的最后10个日历日内，获得公众证词

《加州环境质量法案》（CEQA）流程概览

CEQA流程

所有由公共机构承办、资助或需要公共机构批准的项目概须

告知公众和决策者

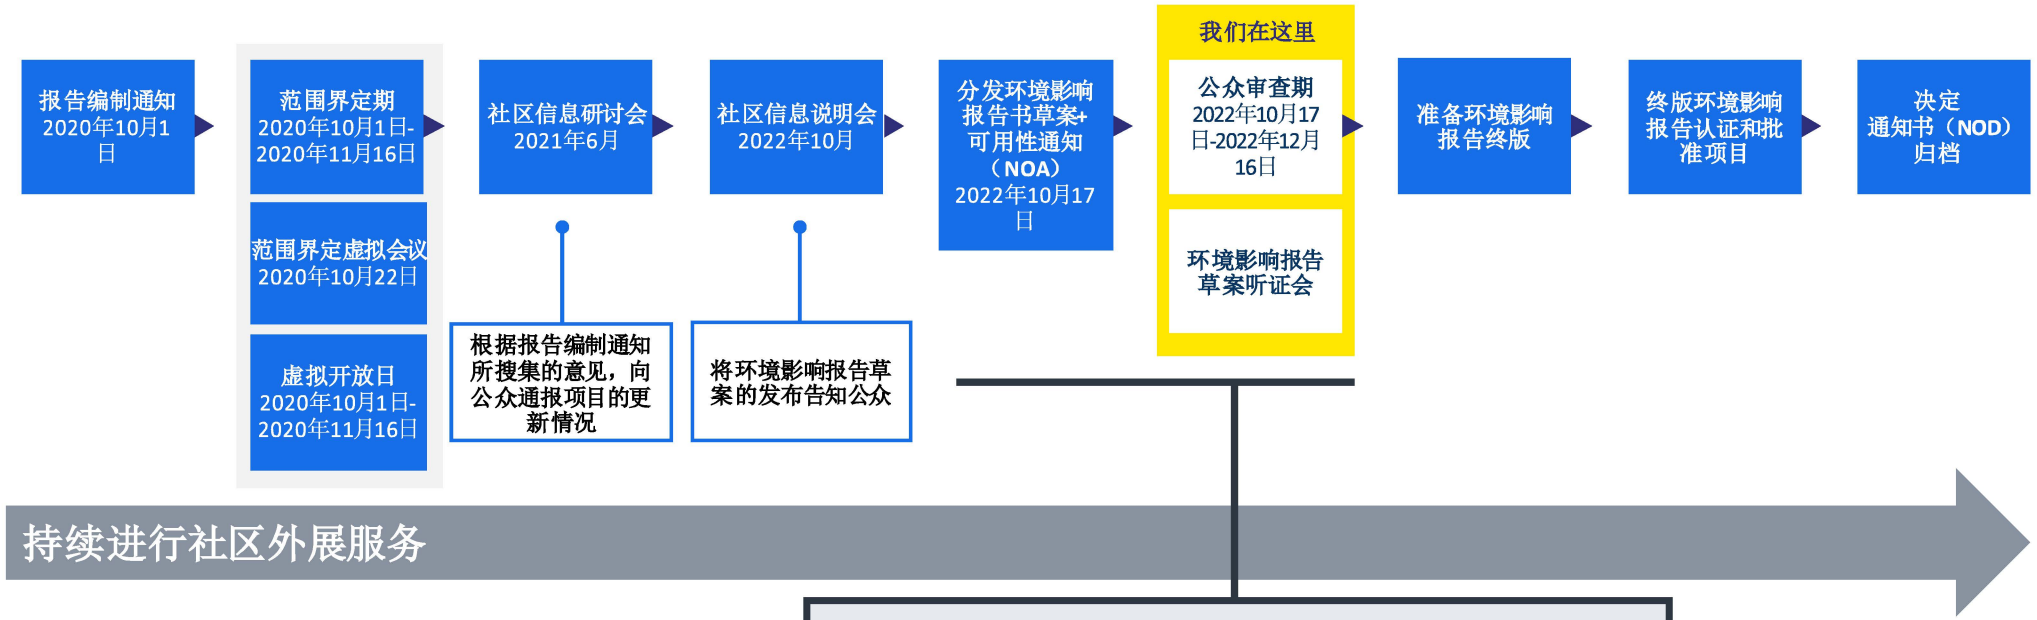
披露拟建项目可能造成的环境影响

提供对环境问题发表意见的机会

两个公众评议期：公众范围界定期以及报告草案公众审查期

参议院第44号法案要求在环境影响报告草案的公众审查期间举行两次公众会议：信息研讨会与公众听证会

时间线



环境影响报告草案的目的是什么？

环境影响报告草案的目的是对实施拟建项目的有关潜在环境影响进行评估，并在需要时采取缓解措施

在环境影响报告草案的公众审查期间举行多次公众会议

信息说明会

环境影响报告草案第一次信息说明会	10月22日（周六）	虚拟会议
环境影响报告草案第二次信息说明会	10月25日（周二）	现场会议

都会交通局将举办两次信息说明会，让公众了解环境影响报告草案中的主要分析和结论

公众听证会

环境影响报告草案第二次公听会	12月10日（周六）	现场会议
都会交通局环境影响报告第二次公听会	12月13日（周二）	虚拟会议

都会交通局将举办两次公听会，听取公众对环境影响报告草案的意见

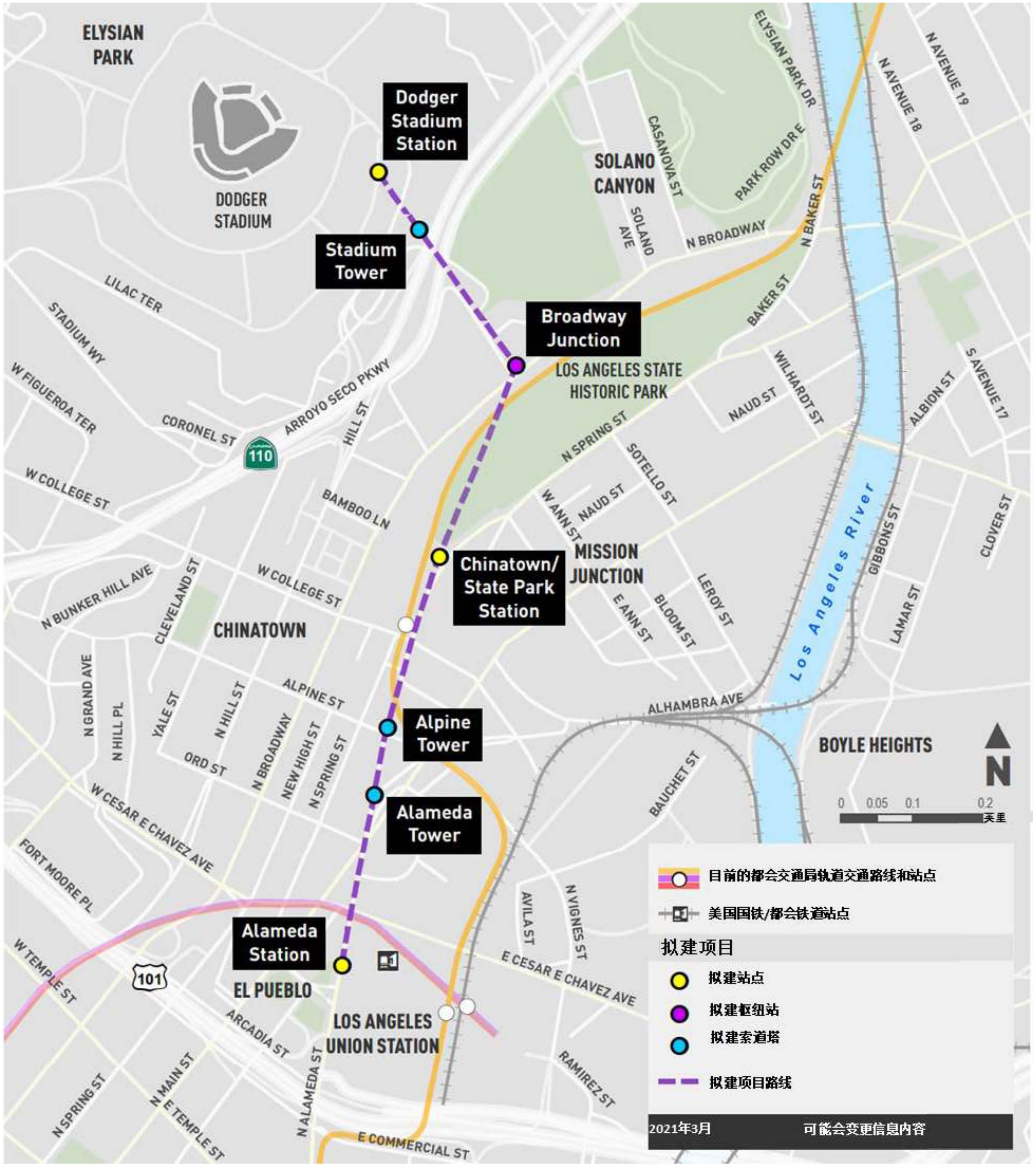
项目描述

项目概况

- 通过1.2英里长的空中缆车系统，提供从洛杉矶联合车站（LAUS）到道奇体育馆的永久性交通连接
  - 从洛杉矶联合车站到道奇体育馆的旅程约为7分钟
- 运力约为每个方向每小时5,000人次
- 拟建项目将每天运作，为现有居民、上班族、公园使用者和洛杉矶的访客提供服务
- 可通过中间的唐人街/州立公园站前往洛杉矶州立历史公园和周边社区
- 零排放且环保的快速交通系统，由于减少了道奇体育馆内和周围以及附近街道、主要干道和高速公路上的车辆出行，将减少温室气体排放

项目地点和路线

- 本项目将以洛杉矶联合车站和洛杉矶古城(El Pueblo)附近为起点，以道奇体育馆为终点，还有一个中间站位于洛杉矶州立历史公园最南门入口处
- 连接包括唐人街、Mission Junction社区、伊利森公园、回音（Echo）公园和索拉诺（Solano）峡谷的周边社区与联合车站的区域交通系统。
- 拟建的项目路线尽可能沿着沿公共通行权（ROW）和公有土地，并尽可能减少使用在私人地产上空的空中权利，同时考虑到现有和未来的邻近土地用途



空中交通系统的先例

- 空中交通技术已经使用了100多年
- 现代系统是一种可行的城市交通方式，目前正在世界各地的许多城市运行
- 世界各地如玻利维亚的拉巴斯和墨西哥的墨西哥城已有的空中缆车交通系统，正为相应的城市人口提供快速交通服务
- 拟建项目与德国科布伦茨、越南富国岛和法国图卢兹所使用的系统类似，是一个“3S”空中缆车
  - 车厢可搭载约30至40名乘客
  - 系统将提供平稳流畅的乘车体验

俄勒冈州波特兰

纽约罗斯福岛

玻利维亚拉巴斯

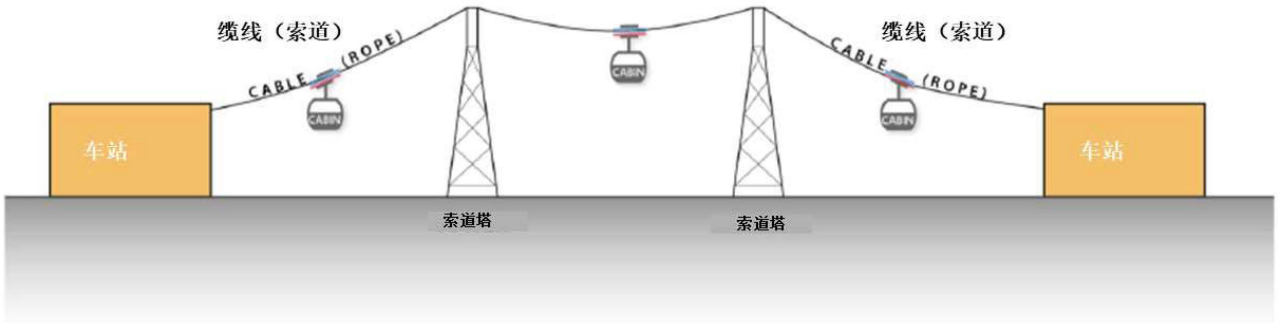
墨西哥的墨西哥城

法国图卢兹

哥伦比亚麦德林

索道技术

拟建项目将包括几个客站、一个非客枢纽站，以及为输送空中缆车的缆线提供支撑的三个索道塔



三个客站

- 包括机械、电气和管道系统、乘车站台和垂直流通（如楼梯、自动扶梯和电梯）
- 包括售票、检票和排队的区域；乘客的上下车；运营；和系统设备

一个非客枢纽站

- 要求空中快捷交通系统转过缆线并继续沿路线行驶

为缆线和缆车提供支撑的三个索道塔

“3S”系统与缆车车厢

“3S”系统

- “3S”系统包括三根缆索：两根“轨道索”用于稳定，第三根“牵引索”用于使车厢移动。
- 车厢与持续循环的牵引索分离并减速进入车站，以便乘客上下车，然后车厢再重新连接至牵引索上

缆车车厢

- 每个车厢可容纳30至40名乘客，具体取决于座位和车厢便利设施的具体配置
- 符合《美国残疾人法案》（ADA）的无障碍通道，可以放置轮椅
- 车厢里可以坐着或站着
- 为婴儿车和自行车的放置提供了空间
- 在运营高峰期，将以每小时13.4英里的最高速度行驶
- 车厢进站时，速度将降到大约每秒一英尺（低于每小时一英里），以便乘客能够登上和离开移动中的车厢

目的和需求

- 通过空中缆车系统提供从联合车站到道奇体育馆物业的直接交通连接
- 连接包括唐人街、Mission Junction社区、洛杉矶州立历史公园、伊利森公园、回音公园和索拉诺峡谷的周边社区与联合车站的区域交通系统
- 通过在洛杉矶联合车站的区域交通系统之间提供日常的高运力空中快捷交通连接，改善该地区的流动性和可及性
- 在唐人街/州立公园站提供一个交通转换点
- 使用零排放的电力和蓄电池，通过运营空中快捷交通系统提供具有环境永续性的交通方式，以减少温室气体排放及改善空气质量

道奇体育馆：该地区到访次数最多的场所之一

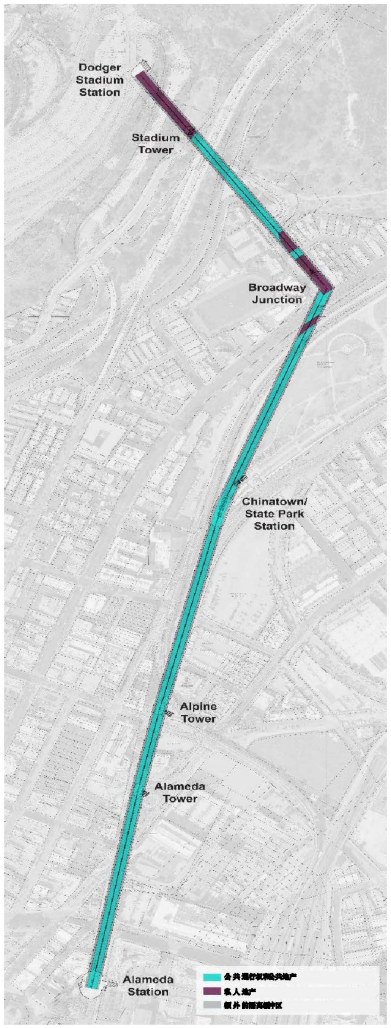
- 每年大约有100场棒球比赛和其它活动，吸引了大量的本地区人群
- 绝大多数访客都是自驾
- 车辆在周边社区和附近的高速公路上造成拥堵
- 拟建项目路线附近的社区被确定为受加州多种污染源不同程度影响的社区，并处于该类社区的第90-100百分位（CalEnviroScreen 4.0地图）。

项目目标

- 通过直接连接联合车站和作为区域活动中心的道奇体育馆，为需要转换交通方式的乘客提供更多出行选择。
- 通过空中交通系统的独特体验以及连通至道奇体育馆的交通服务，吸引新的交通乘客乘坐都会交通局交通系统。
- 为人们提供前往道奇体育馆的高效、高运力和更快捷的交通，从而改善交通体验。
- 减少该地区的车辆数量，以提高道奇体育馆附近社区的安全性
- 在球赛和特别活动期间，由于减少了道奇体育馆及其周围、社区街道、主干道和高速公路上的车辆拥堵，因而减少了与交通相关的污染和温室气体排放。
- 加强人们与联合车站和道奇体育馆的区域公共交通枢纽的连通性。
- 改善乘客交通体验,为使用空中快捷交通的乘客和道奇队球迷提供洛杉矶地区的独特风景。
- 为洛杉矶地区带来世界级的空中交通系统。
- 为过去曾经交通服务不足的区域（包括洛杉矶州立历史公园和伊利森公园），通过提供通往这些区域的第一英里/最后一英里的交通工具和和步行通道，加强社区连通性。
- 为社区以及洛杉矶州立历史公园和伊利森公园的交通确定可类比的、可负担的、易得到的票价机会。
- 通过在拟建项目的材料、施工、运营和维护中融入可持续和环境友好型设计特点，尽量减少项目的环境足迹。
- 使用零排放的电力和蓄电池，通过空中快捷交通系统提供具有可持续性的交通方式，以减少温室气体排放及改善空气质量。
- 拟建的项目路线尽可能沿着沿公共通行权（ROW）和公有地产，并尽量减少使用在私人地产上空的空中权利，同时考虑到现有和未来的邻近土地用途。

空中净空 | 路线跨越了公共通行权/公有地产和私有地产上空

- 美国国家标准协会（ANSI）标准第B77.1条中记载了索道和缆车车厢的设计和操作行业标准，该标准是与制造商、消费者和监管机构协调制定的
  - ANSI第B77.1条规定了索道和缆车车厢与车辆、行人、植被、建筑物和其它结构等元素之间的垂直和水平净空距离
- 拟建的项目路线尽可能沿着沿公共通行权和公有地产，并尽量减少使用在私人地产上空的空中权利，同时考虑到现有和未来的邻近土地用途
- 选择项目路线时所考虑的其它因素：
  - 尽量减少对行车道、停车道以及自行车和步行通道的改变
  - 尽量减少公用事业设施的搬迁
  - 历史与考古资源的位置
  - 尽量减少使用不平坦或困难的地形
  - 技术考虑和可行性



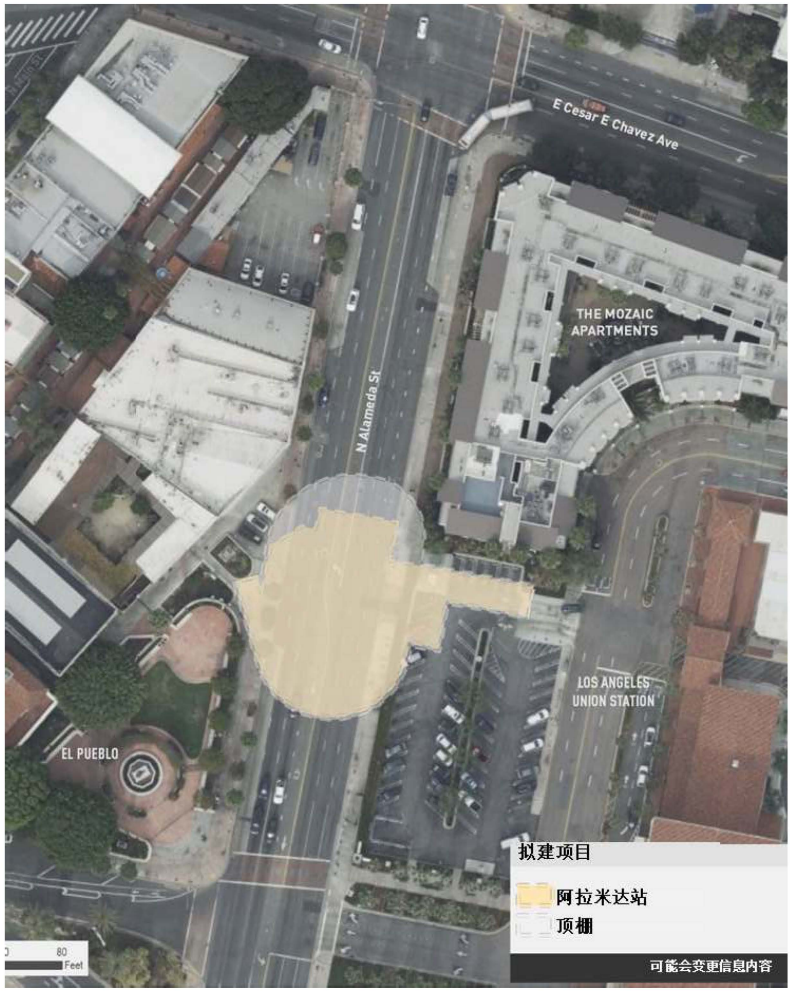
设计

- 设计目标是制定一个共用的建筑设计，使整个空中交通索道系统联合起来，同时让每个主要组成部分对各自所在位置的城市状况作出贡献
- 同样重要的是，要尽量减少车站、非客运枢纽站和索道塔的感知规模和感知质量
- 车站和枢纽站采用简单的桶形拱顶形式，提供保护索道设备所需的最小封闭空间，并为乘车站台上的乘客提供遮荫和风雨防护
- 每个索道塔均设计为不妨碍附近车辆与行人通行，并且塔身涂成中性的浅灰色，与周围的城市环境保持一致

阿拉米达站

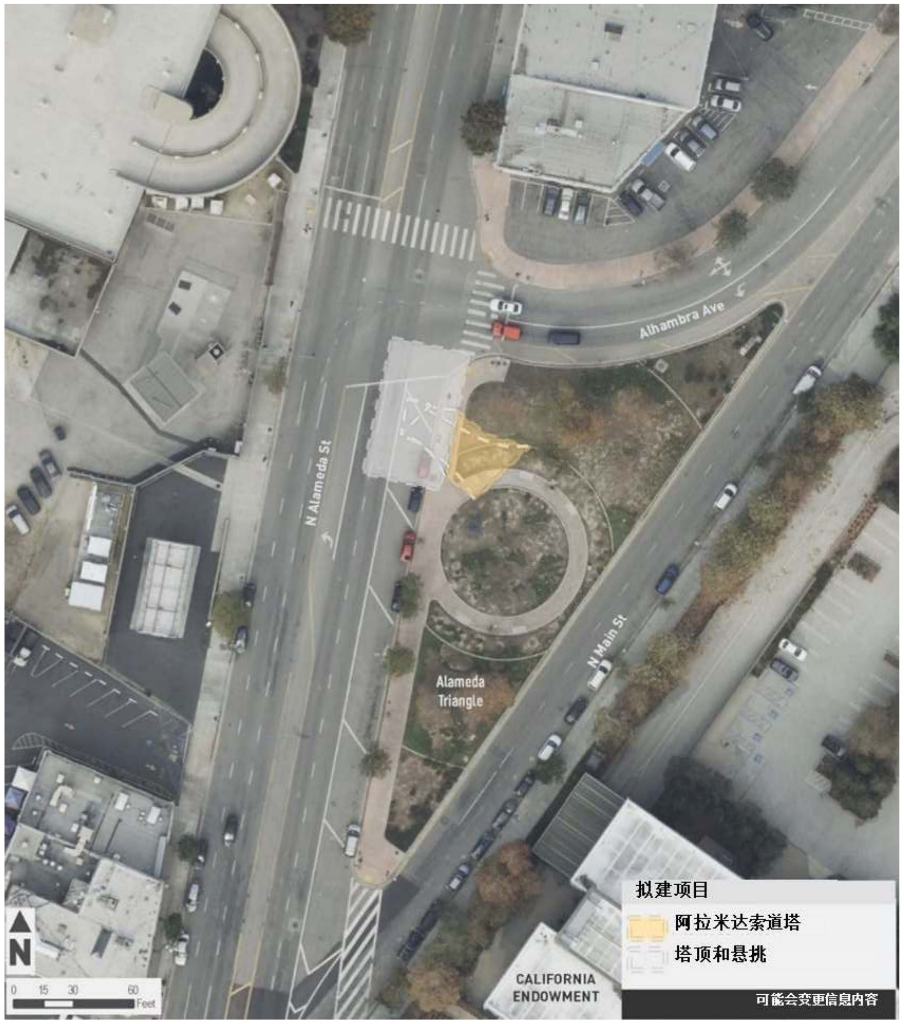
- 位于阿拉米达街，毗邻规划中的联合车站前广场以及洛杉矶街与塞萨尔查韦斯（Cesar Chaves）大道之间的Placita de Dolores
- 这个车站大约有173英尺长，109英尺宽，最高点离地面78英尺
- 乘车站台将高出阿拉米达街约31英尺

- 将从Placita de Dolores北边、在洛杉矶古城的拟建的新行人广场上引入垂直流通设施，东边是规划中的联合车站前广场



阿拉米达索道塔

- 位于阿拉米达三角区，阿拉米达街、北主街和阿罕布拉大道之间的公共通行权范围
- 高度将为195英尺，缆线悬挂在离地面175英尺处
- 对阿拉米达三角带的自然景观和硬景观进行美化升级，包括重新使用和整合现有的路面铺面

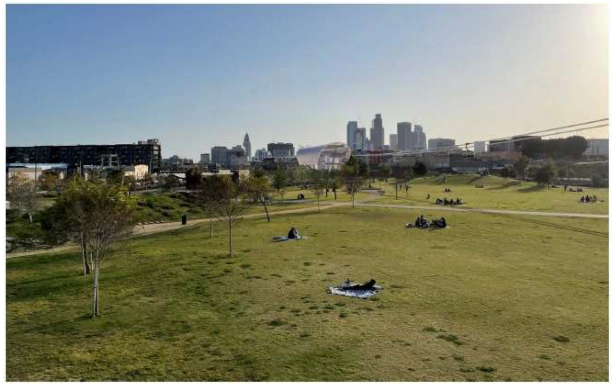


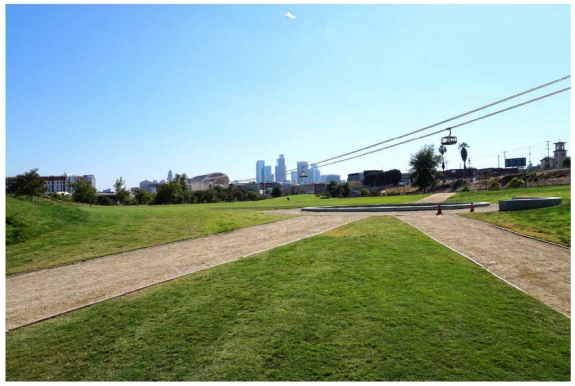
高山街索道塔

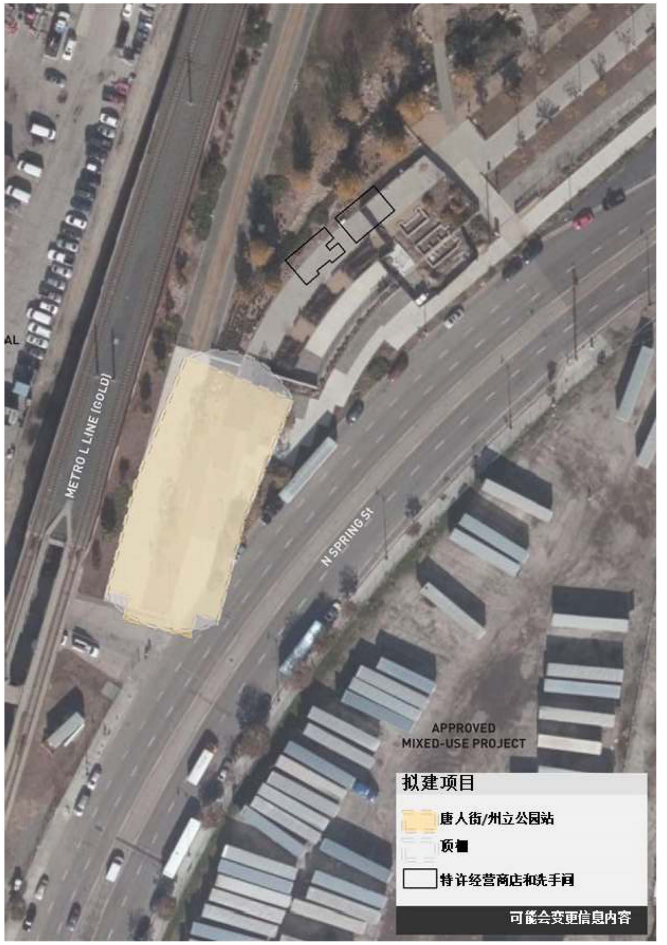
- 位于阿拉米达街和高山街的东北角，与轻轨L线（金线）相邻
- 该地块为市属地块，目前为城市车辆的私人停车场
- 最高点将为195英尺，缆线悬挂在离地面175英尺处
- 索道塔附近的自然景观和硬景观美化

唐人街/州立公园站

- 车站将位于洛杉矶州立历史公园最南端的春天街附近
- 车站的南半部分将位于公共通行权范围，而北半部分将与洛杉矶州立历史公园的南部边界融为一体
- 这个车站大约有200英尺长，80英尺宽，最高点离地面98英尺
- 乘车站台高出地面约50英尺
- 通过电梯和楼梯，可以从中层楼进入乘车站台
- 将包含自然景观以及硬景观的安装，包括使用花岗岩铺面







唐人街/州立公园站

车站休闲设施

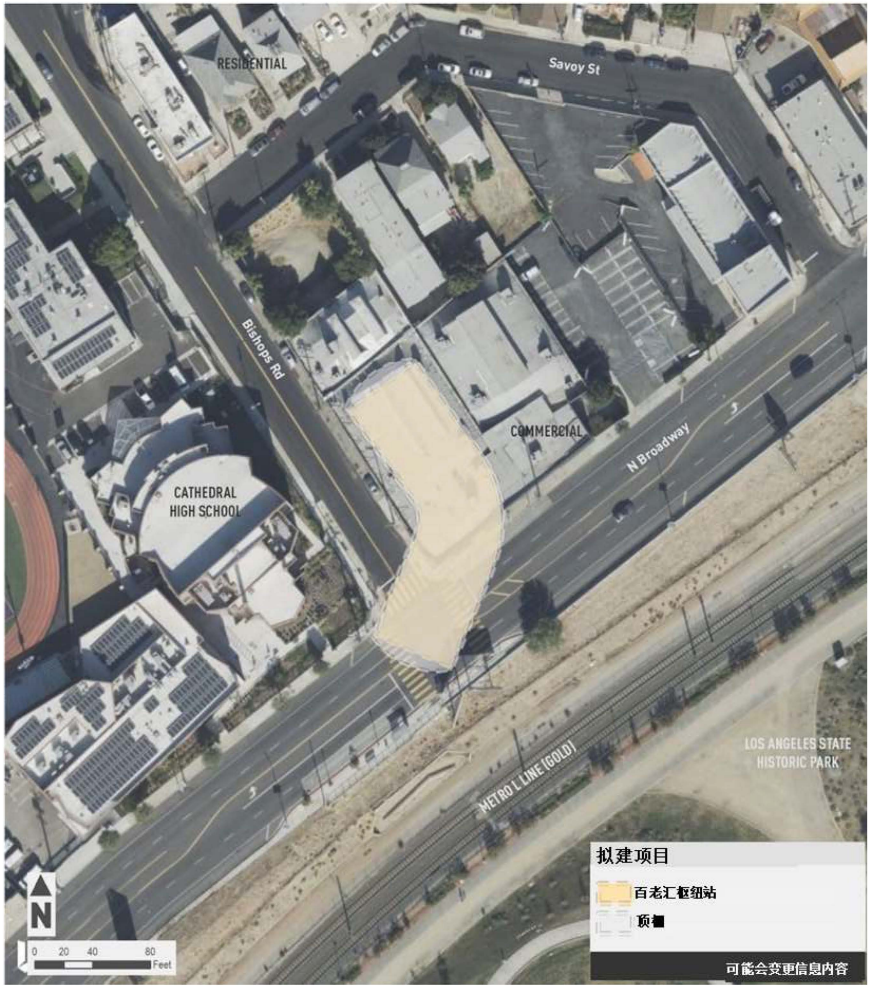
- 交通转换点为乘客提供第一英里和最后一英里的多种形式选择，如自行车共享计划
- 步行通道升级，包括硬景观与自然景观的美化、安装遮阳结构和潜在的座位

公园休闲设施

- 740平方英尺的特许经营商店
- 770平方英尺的洗手间
- 220平方英尺的有顶走廊，连接特许经营商店区和洗手间

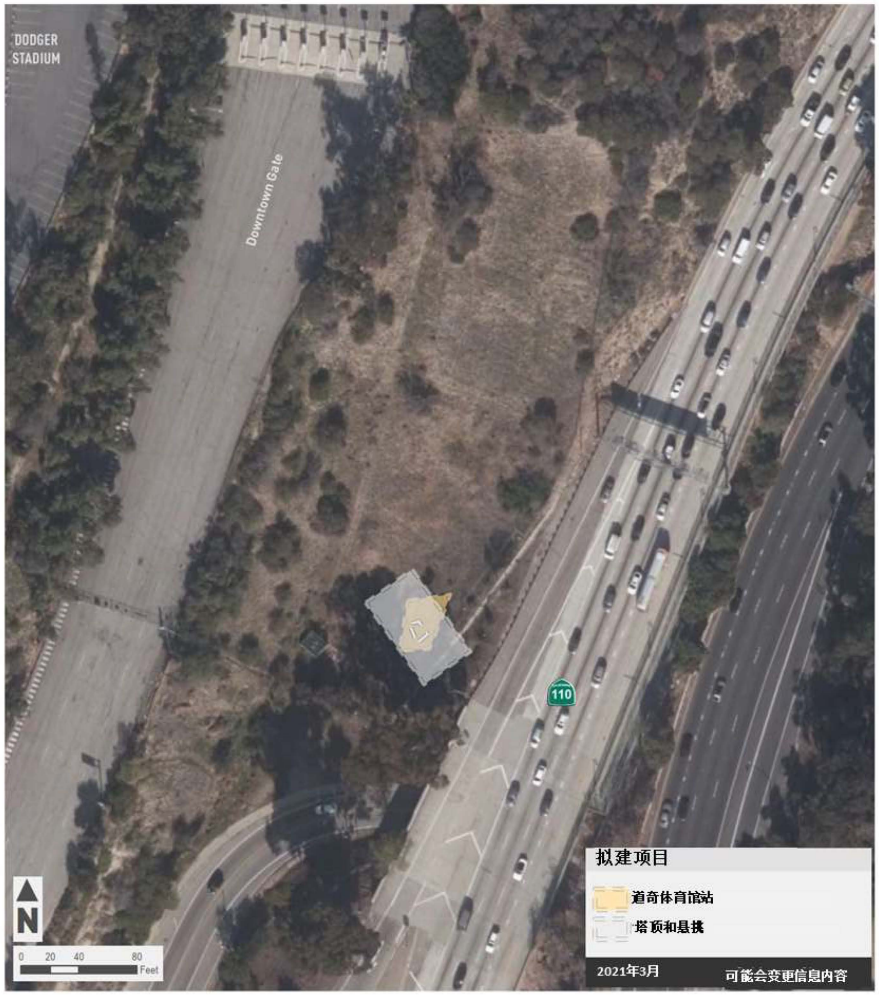
百老汇枢纽站

- 百老汇枢纽站是一个非客运枢纽站，将位于北百老汇和主教路的交叉路口
- 位于1201 N.百老汇街的现有商业建筑将被拆除
- 车站大约将有227英尺长，60英尺宽，最高点离地98英尺



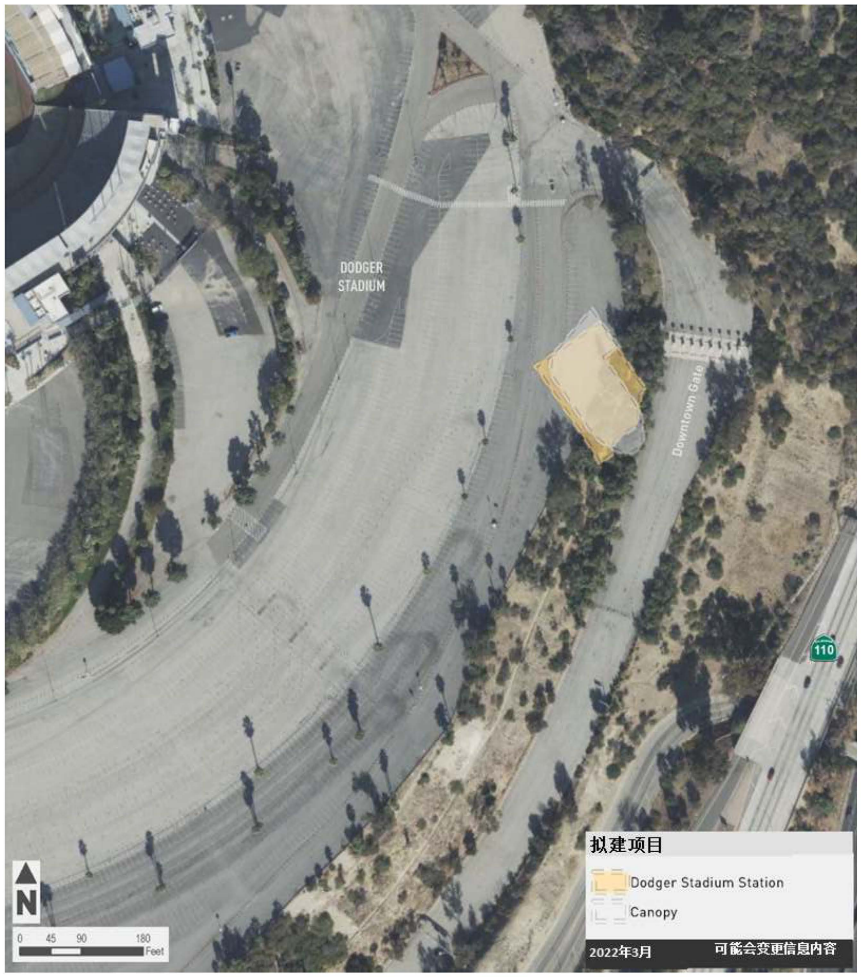
体育馆索道塔

- 位于体育馆路以北的山坡上的私人物业，夹在道奇体育馆市中心大门和SR-110州道之间
- 高179英尺，缆线悬挂在距离地面159英尺处，塔底附近有景观



道奇体育馆站

- 位于道奇体育馆物业西南部分，靠近市中心的大门处



道奇体育馆站

- 这个车站大约有194英尺长，80英尺宽，最高点离地面74英尺
- 在该站的缆车车厢将在同一水平面上让乘客抵达和离开，乘客排队等候区也将在同一水平面
- 道奇体育馆站将包括站台下方的地下区域，用于储存和维护车厢，以及用作工作人员的休息室、储物柜和零件储存区
  - 当系统不使用时（运营时间结束后），缆车车厢将返回道奇体育馆站并存放在该站
- 供乘客使用的洗手间将设在车站内

道奇体育馆站还将包括通往道奇体育馆的步行通道，包括硬景观和自然景观美化措施以及增加潜在的座位

永续性

- 拟建项目的永续性特点将包括以下法规中的特点：
  - 2019年加州绿色建筑标准规范
  - 美国绿色建筑委员会面向新建筑的能源与环境设计先锋（LEED）认证体系
  - 永续基础设施研究所的远景（Envision）评级体系
- 拟建项目的电力将100%由洛杉矶市水电部门的绿色电力计划供应
- 每个车站、索道塔和枢纽站均由备用电池储蓄电力，而非由柴油发电机提供备用电力

拟建项目将为道奇体育馆的访客提供一个可持续、高运力、零排放的空中快捷交通索道选择，同时也连通道奇体育馆、周边社区和可由洛杉矶联合车站进入的区域交通系统。空中快捷交通索道技术很安静，拟建项目将减少行车里程（VMT）和交通拥堵，从而减少温室气体排放并改善空气质量。

建筑施工

时间线

- 预计最早将于2024年开始拟建项目的施工，工期大约需要25个月，包括施工、缆线安装和系统测试。

施工时间

- 预计施工时间为每天10小时，并可能为了满足特殊情况和限制要求而有所改动
- 施工时间如发生变动，包括延长施工时间和可能在周日施工，都需要获得洛杉矶市警察专员委员会的批准

车道封闭

- 预期的封闭措施将包括车道封闭，车道将在某些施工阶段实施一天24小时封闭，或者在某些施工阶段实施时段封闭，即道路每天将于施工时段封闭约10小时，并在非施工时段每天重新开放约14小时
- 至于时段封闭，在非施工时段时，会在可行时在建筑工地上方放置钢板，以便车辆和行人通行。
- 封闭地点和时间将因各施工场地与施工阶段而异
- 拟建项目将实施施工交通管理计划，其中包括绕行路线，并确保在所有施工活动中保留应急通道

详细的施工假设

- 详细的施工假设载于环境影响报告草案附录B中

环境影响报告草案重点分析及结论

环境资源议题

根据CEQA指南附录G的所有环境资源议题
都已在环境影响报告中获得处理

- **美学**

- **野生**动植物

美学

研究内容

- 围绕项目路线的项目组成部分的视觉影响
- 代表视觉特征的主要观察点，包括是否有景观美化、主要土地用途、建筑物的规模，或主要的自然风景、风景资源和可用的实质性视觉元素，如开放空间资源、行道树和建筑物正面
- 观看者及观看者反应，包括行人和休闲者（如公园使用者）
- 虽然没有指明的自然风景，但可以看到洛杉矶市中心的天际线、联合车站、洛杉矶古城、洛杉矶州立历史公园、阿罗约·塞科（Arroyo Seco）林荫大道、道奇体育馆以及圣加布里埃尔（San Gabriel）山脉和圣贝纳迪诺（San Bernardino）山脉的风景
- 光线与眩光

重点分析及总结

- 拟建项目不会严重阻挡风景和全景景观，例如洛杉矶市中心的天际线、联合车站、洛杉矶古城、洛杉矶州立历史公园、阿罗约·塞科林荫大道、道奇体育馆以及圣加布里埃尔山脉和圣贝纳迪诺山脉的风景
- 拟建项目获得的资格与批准 - 其中包括提高拟建项目及其周边社区的视觉特性及特点的设计标准 - 不会与适用的分区或其它管理风景质量的法规发生冲突
- 拟建项目不会发出大量光线或眩光，并将遵守适用的城市照明法规

从州立历史公园向洛杉矶市区天际线看去的现有视图和模拟视图

美学

影响总结

主题	查找	
	建筑施工	**运营**
自然风景	影响不重大	影响不重大
景观资源	无影响	无影响
视觉特征	影响不重大	影响不重大
光线与眩光	影响不重大	影响不重大

如何尽量减少影响？

建筑施工：屏障和隔音墙将包括一个隐私屏。本项目将实行最佳管理做法，以减少视觉影响。无须采取缓解措施。

运营：项目设计特点，包括建筑照明和指示牌照明。无须采取缓解措施。

农林资源

研究内容

- 项目位于体育馆索道塔和道奇体育馆站的场地是否会与农业分区冲突

重点分析及总结

- 道奇体育馆的土地性质不包含农业用途，并受到有条件使用许可的限制，该许可允许运营美国职业棒球大联盟体育馆和各种附属建筑和各种用途，包括到该地点的“大众交通服务”；因此，拟建项目的建设和运营不会与现有的农业分区相冲突

影响总结

主题	查找	
	建筑施工	运营
农田转换	无影响	无影响
与林地分区冲突	无影响	无影响
林地损失	无影响	无影响
农业用途	无影响	无影响
农业分区与威廉姆森法案	影响不重大	影响不重大

如何尽量减少影响？

无须采取缓解措施。

空气质量

研究内容

- 拟建项目的施工和运营对区域和地方范围内的空气质量的潜在影响
- 空气污染物的特点和影响
- 已获通过的管理空气质量的法规
- 健康风险评估（HRA），评估与本项目建设相关的预计癌症风险和非癌症慢性危害指数

重点分析及总结

- 拟建项目将符合适用的空气质量计划要求
- 拟建项目因施工导致的预计排放量应低于污染物和排放物的显著性阈值
- 拟建项目在运营期间不会让敏感受体暴露于大量污染物，原因是拟建项目不包含任何会在运营期间导致对环境空气质量产生重大影响的土地用途或运营排放
- 与现状相比，拟建项目将通过减少行车里程（VMT）从而减少排放，使相关标准的空气污染物排放出现净减少
- 根据健康风险评估（HRA）的结果，拟建项目将导致敏感受体受到与暴露在毒性空气污染物（TACs）的大量污染物浓度中相关的影响，影响未及重大程度

空气质量

影响总结

主题	查找	
	建筑施工	运营
空气质量计划	影响不重大	影响不重大
空气污染物增多	影响不重大	影响不重大
敏感受体	影响不重大	影响不重大
其他排放	影响不重大	影响不重大

如何尽量减少影响？

建筑施工：项目设计特点要求所有大于50马力的非道路柴油动力施工设备应符合美国环保局（USEPA）颁布的非道路柴油发动机的第4级排放标准。无须采取缓解措施。

运营：无须采取缓解措施。

生物资源

研究内容

- 本项目是否会影响处于特殊状态的物种及其栖息地
- 本项目是否会影响河边栖息地或受保护的湿地
- 本项目干扰路线沿线的野生动物移动的可能性
- 本项目是否会与保护生物资源的本地政策或条例（例如树木保育政策或条例）相冲突
- 本项目是否会与已通过的栖息地保护计划相冲突

重点分析及总结

- 项目区域一般不为特殊物种提供栖息地；然而，在拟建项目施工期间移除成熟的棕榈树和桉树，可能会导致蝙蝠栖息地遭到移除
- 项目区域不包含河边栖息地、其他敏感的自然群落或受保护的湿地；因此，不会产生影响
- 项目区域不作区域野生动物走廊之用；然而，施工活动可能会导致蝙蝠和鸟类避开正在施工中的区域
- 本项目将根据市政府的《原生树木保护条例》、加州公园和休闲局的要求以及其它适用的要求，对移走的树木进行补种

生物资源

影响总结

主题	查找	
	建筑施工	运营
河边栖息地	无影响	无影响
受保护的湿地	无影响	无影响
生物计划或政策	影响不重大	无影响
干扰物种移动	采取缓解措施后无重大影响	影响不重大
栖息地改造	采取缓解措施后无重大影响	影响不重大

如何尽量减少影响？

建筑施工：

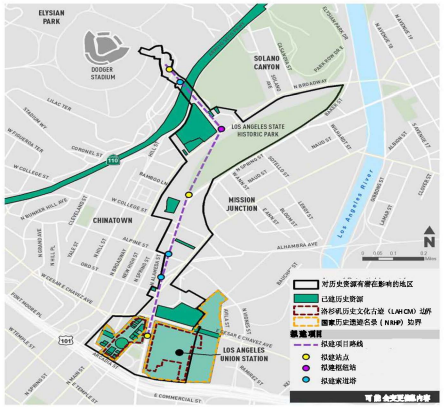
- 实施项目设计特点，建立树木保护区以保护树木
- 施工前进行筑巢调查及采取措施以避免并尽量减少对筑巢鸟类的影响

运营：无须采取缓解措施。

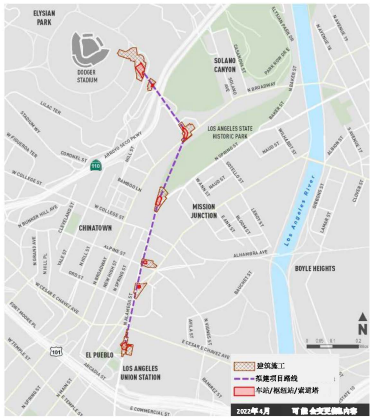
文化资源

研究内容

- 对“潜在影响区”内的29项已建历史资源产生直接或间接影响，包括洛杉矶联合车站总站及其场地、洛杉矶广场历史区、大教堂（Cathedral）高中、以及阿罗约·塞科（Arroyo Seco）林荫大道历史区
- 对“直接影响区”内的考古资源（包括La Placita、Zanja Madre和南太平洋铁路的河边车站）因地面干扰造成的影响
- **重点分析及总结**
- 历史资源
  - 计划中的阿拉米达站的建设有可能会对酿酒厂和El Grito壁画造成直接和间接影响；但是，影响将会被减轻到未及重大程度
  - 对所有其它历史资源，与施工和运营有关的影响将未及重大程度
- 考古资源
  - 计划中阿拉米达站、阿拉米达三角区、高山街索道塔和唐人街/州立公园站的建设有可能对考古资源的意义造成实质性的不利变化；但是，影响将被减轻到未及重大程度



对已建历史资源有潜在影响的地区



对考古资源有直接影响的地区

文化资源

影响总结

主题	查找	
	建筑施工	运营
历史资源	采取缓解措施后无重大影响	影响不重大
考古资源	采取缓解措施后无重大影响	无影响
扰乱人类遗迹	采取缓解措施后无重大影响	无影响

如何尽量减少影响？

- 历史资源
  - 项目设计特点是在施工前和施工后对酿酒厂和El Grito壁画进行记录和保护，以及在施工期间对El Grito壁画进行保护
  - 在拟建的阿拉米达站施工期间，对振动进行监测并限制使用可调节的地面压实装置
- 考古资源
  - 制定和实施文化资源监测与缓解计划以及考古资源工作者实施方案
  - 拟建的阿拉米达站和唐人街/州立公园站的施工前考古测试计划
  - 可能重新设计洛杉矶州立历史公园便利设施的位置，以避开该地的考古资源

能源

研究内容

- 与能源相关的联邦、州和地方法律和法规之概述
- 加州的能源生产、供应和消费之概况
- 与施工有关的能源资源以及与项目运营有关的年度能源需求的评估

重点分析及总结

- 与拟建项目施工相关的临时能源消耗，将导致与拟建项目运营相关的能源消耗长期减少
- 相关的主要用电将来自可再生资源，通过洛杉矶水电局的绿色电力计划供应
- 拟建项目将减少机动车流量，增加乘坐公共交通的人次，进而减少客运车辆对化石燃料的消耗

影响总结

主题	查找	
	建筑施工	运营
浪费、低效或不必要的消费	影响不重大	影响不重大
国家或地方能源计划	影响不重大	影响不重大

如何尽量减少影响？

无须采取缓解措施。

地质和土壤

研究内容

- 项目是否容易受到地震灾害影响，如强烈的地面震动、地质断层、土壤液化或山体滑坡等
- 项目是否位于不稳定的、可能导致场内或场外的滑坡、横向扩展、地陷、土壤液化或坍塌的地质上。
- 项目路线是否含有可能对生命或财产造成重大的直接或间接风险的膨胀土
- 项目施工直接或间接破坏独特的古生物资源或遗址或独特的地质特征的可能性

重点分析及总结

- 虽然项目区域位于南加州地震活跃区，但如果遵守现有标准和规范并采取缓解措施，在拟建项目的施工过程中，与强震地面震动、地震相关的地面破坏和/或土壤液化有关的影响将降低至不重大的程度
- 项目的应急行动计划将包括应急响应协议，并将规定在发生大地震时，系统将全部疏散和关闭，不会运行
- 在遵守现有标准和规范以及实施缓解措施的情况下，在项目组成部分的土地整平与施工过程中，与横向扩展、地陷、土壤液化或坍塌有关的影响将减轻至不重大的水平
- 在遵守现有标准和规范以及实施缓解措施的情况下，施工期间与土壤腐蚀有关的影响将减轻至不重大的水平
- 拟建项目的北部靠近道奇体育场站的地方有可能遇到古生物资源；但是，影响将减轻至不重大的程度

地质和土壤

影响总结

主题	查找	
	建筑施工	**运营**
不利影响：地震、与地震有关的地面震动、土壤液化或山体滑坡	采取缓解措施后无重大影响	影响不重大
支持污水处理系统	无影响	无影响
破坏独特的古生物特征或地质特征	采取缓解措施后无重大影响	无影响
土地侵蚀/表土流失	影响不重大	影响不重大
不稳定的地质单元和土壤	采取缓解措施后无重大影响	影响不重大
膨胀土	采取缓解措施后无重大影响	影响不重大

如何尽量减少影响？

建筑施工：

- 编制和执行针对各个工地的岩土工程最终报告
- 制定及遵守古生物资源监测和缓解计划

运营： 无须采取缓解措施

温室气体排放

研究内容

- 相关的联邦、州和地方法律和法规
- 温室气体科学概述
- 用于评估与拟建项目相关的温室气体排放的方法

重点分析及总结

- 与现状相比，拟建项目不会导致对温室气体的增量作用，反而相对现状会减少温室气体排放

本项目整个使用期的排放量将减少166,653公吨温室气体。

影响总结

主题	查找	
	建筑施工	运营
产生温室气体	影响不重大	影响不重大
温室气体减排计划或政策	影响不重大	影响不重大

如何尽量减少影响？

无须采取缓解措施。

危害及危险物品

研究内容

- 对项目活动进行了评估，以确定施工和运营期间项目活动对公众或环境造成危险环境的潜在影响
- **然后根据适用的**显著性标准分析了危险和危险材料的潜在影响

重点分析及总结

- 虽然拟建项目将在施工期间使用、运输和处置有限数量的有害物质，但拟建项目将遵守联邦、州和地方的健康和安全要求；并在运营期间遵守所有的法规、标准和条例
- 拟建项目将遵守美国职业安全健康管理局（OSHA）、加州职业安全健康管理局（Cal/OSHA）和洛杉矶市政法典第71条要求，并实施土壤和地下水管理计划，该计划将限制发生危险材料和废物泄漏的可能性
- 拟建项目将在拆除现有建筑前，由持牌的危险物品消除承包商将危险物品消除，确保学校不会受到不利影响
- 拟建项目的施工和运营将不会干扰洛杉矶警察局进入胡珀（Hooper）直升机停机坪，而直升机停机坪的运营也不会受到施工活动的影响
- 在项目区域内，有五处物业被确定为危险物品场地；然而，项目将实施土壤和地下水管理计划，以减少来自这些场地的影响
- 拟建项目的施工不会严重损害已通过的应急计划或紧急疏散计划的实施，也不会对其造成实际干扰；项目的日常运作不会影响应急响应

危害及危险物品

影响总结

主题	查找	
	建筑施工	运营
危险场所	采取缓解措施后无重大影响	无影响
机场土地使用计划	无影响	无影响
对公众或环境的危害	采取缓解措施后无重大影响	影响不重大
应急和疏散计划	影响不重大	影响不重大
学校附近的危险	采取缓解措施后无重大影响	影响不重大

如何尽量减少影响？

建筑施工：

- 制定和实施《土壤和地下水管理计划》，以明确在项目建设过程中遇到受污染的地下水、受污染的土壤或建筑物时的处理和处置方法
- 北百老汇1201号现楼拆除中的危险物质消除

运营：无须采取缓解措施。

水文水质

研究内容

- 拟建项目违反任何水质标准、减少地下水供应，或在工地内外造成严重侵蚀或淤积的可能性
- 拟建项目大幅增加地表径流的速率或流量，从而在工地内外造成淹水的可能性
- 制造或导致超出现有或规划的雨水排放系统容量的径流，或阻碍或改变洪水流向的可能性
- 拟建项目被洪水或海啸淹没时或位于地震区时，释放污染物的潜在风险
- 拟建项目与水质控制计划或可持续地下水管理计划相冲突或妨碍其实施的可能性

重点分析及总结

- 拟建项目将遵守所有适用的联邦、州、区域和地方机构的水质保护法律和法规、水质控制和/或可持续地下水管理计划
- 拟建项目将结合最佳管理实践，并执行低影响开发计划，以减少对水文和水质的影响
- 拟建项目不易遭受被洪水或海啸淹没或位于地震区释放污染物的潜在风险

水文水质

影响总结

主题	查找	
	建筑施工	运营
减少地下水供应	影响不重大	无影响
水质标准或计划	影响不重大	影响不重大
改变排水系统	影响不重大	影响不重大
洪水、海啸或震荡潮	影响不重大	影响不重大
与计划冲突	影响不重大	影响不重大

如何尽量减少影响？

施工与运营拟建项目将符合**适用的**联邦、州、地区和地方法律法规，包括符合适用的雨水许可证、废水许可证**和其它水**质法规。无须采取缓解措施。

土地使用与规划

研究内容

- 拟建项目在物理上分隔出一个已建立的社区的潜在可能
- 拟建项目与任何为避免或减轻环境影响而采取的土地用途计划、政策或规例相冲突的潜在可能

重点分析及总结

- 尽管施工期间的临时封闭会影响社区内部和社区之间的车辆、行人和自行车通行，但项目区域内的连接和通行仍有多种选择
  - 社区将保持与周围其它街道的连通，并将提供步行绕行路线，以防止道路的封闭令现有社区遭到物理分割
- 拟建项目将通过提供第一/最后一英里的交通和步行通道和一些改造升级措施，包括交通转换点以及为未来的洛杉矶州立历史公园自行车和人行天桥提供支持，加强社区的连通性
- 拟建项目与当地规划、法典和条例的政策、法规、目的和/或目标一致
- 州立公园认为，拟建项目与洛杉矶州立历史公园总体规划之间存在不一致之处，因此可能会产生重大影响，原因是洛杉矶州立历史公园的总体规划并未将交通确定为公园用途之一
  - **随着**缓解措施LUP-A（**即要求**拟建项目获得对洛杉矶州立历史公园总体规划的修正）的实施，影响将未及重大的程度

土地使用与规划

影响总结

主题	查找	
	建筑施工	运营
物理分隔社区	影响不重大	无影响
与土地用途规划或政策相冲突	采取缓解措施后无重大影响	采取缓解措施后无重大影响

如何尽量减少影响？

施工（物理分隔社区）：当施工影响不重大时，施工交通管理计划的实施将包括道路封闭信息、绕行计划、工地运输路线和分段运输计划

施工与运营拟建项目应获得对洛杉矶州立历史公园总体规划的修正，以允许将洛杉矶州立历史公园总体规划范围内的土地作为交通用途

矿产资源

研究内容

- 项目的施工是否会导致无法获得对该地区和该州居民有价值的已知矿产资源？
- 本项目是否会导致当地总体规划、具体规划或其它土地使用规划中标明的当地重要的矿产资源回收场地失去可用性？

重点分析及总结

- 项目并未位于已知的矿产资源地区
- 洛杉矶市内的大部分地区在矿产资源分区分类之前便已开发盖楼，无法进行开采
- 项目路线位于洛杉矶市的城市化地区，在城市化环境中开采此类矿产是不切实际的

影响总结

主题	查找	
	建筑施工	运营
损失可利用的矿产资源	无影响	无影响

如何尽量减少影响？

无须采取缓解措施。

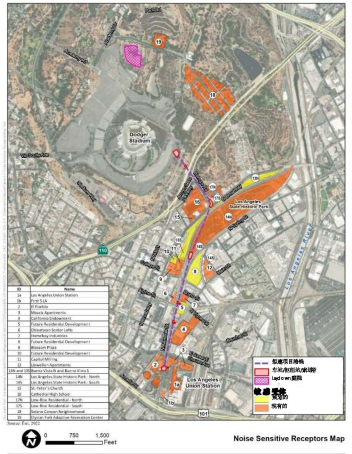
噪音

研究内容

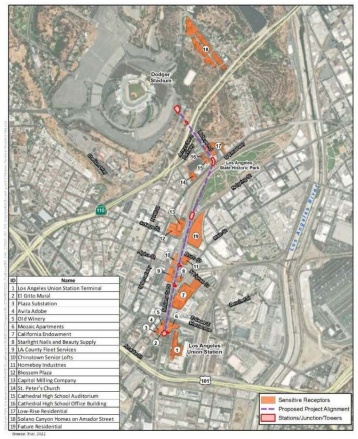
- 对拟建项目路线沿线有代表性的噪音受体，包括现有及未来的住宅开发、学校、公园及其它经常有人在户外活动的地方，进行现状噪音调查及测量
- 对潜在的施工噪音影响的评估是通过对项目相关的施工噪音水平进行计算而得出
- 对运营噪音影响的评估是确定项目运营的噪音源（包括车站、枢纽站、索道塔、索道塔塔支撑轮上通过的车厢、车厢和车站候车乘客）可能产生的噪音水平而得出
- 地面振动对建筑物的破坏和对人的干扰的影响之分析

重点分析及总结

- 拟建项目的重大和不可避免的现场施工噪音影响是由施工设备产生的噪音、设备的位置、产生噪音的施工活动的时间和持续时间以及与噪声敏感受体的相对距离决定的
- 场外施工产生的相关交通噪音无重大影响
- 最坏的情况下，项目运营产生的噪音将低于显著水平
- 现场施工活动产生的振动将对人类产生重大且不可避免的影响；潜在的建筑破坏影响在采取缓解措施后应为不重大
- 项目运营产生的振动将低于显著水平



噪音敏感受体地图



振动敏感受体地图

噪音

影响总结

主题	查找	
	建筑施工	运营
机场附近的公开暴露	无影响	无影响
产生或增加环境噪音水平	影响重大且不可避免	影响不重大
产生超标的振动或噪音水平	影响重大且不可避免	影响不重大

如何尽量减少影响？

营运噪音：车厢项目设计特点与暖通空调机组从内到外的降噪和功率声级相关无须采取缓解措施。

施工噪音：实施施工噪音管理计划，包括

- 噪音屏障
- 设备维修保养
- 社区外展服务，含一位噪音干扰协调员

施工振动：

- 为Avila土砖房（1970年代扩建）、El Grito壁画和酿酒厂放置振动监测设备
- 限制使用压力可调的地面压实装置

人口与住房

研究内容

- 拟建项目有可能导致人口大幅增长，或增长速度超过预期或规划水平
- 实施拟建项目是否会导致大量人口迁移和住房搬迁

重点分析及总结

- 作为通往道奇体育馆的第一/最后一英里的交通连接，拟建项目不会直接或间接导致大量人口增长
  - 旨在满足该地区的交通需求，以及提高现有交通网络的效率
  - 支持市政府关于住房要素和社区计划的目标，即在已规划的住宅开发附近提供交通服务
- 拟建项目不应导致现有的人口迁移或住房搬迁

影响总结

主题	查找	
	建筑施工	运营
导致计划外的人口增长	影响不重大	影响不重大
人口迁移或居民搬迁	影响不重大	影响不重大

如何尽量减少影响？
无须采取缓解措施。

公共服务

研究内容

- 拟建项目是否会导致与提供新的或改造的公共设施有关的不利有形影响，这些设施的建设可能会造成重大的环境影响，包括消防和警察保护、学校和其它公共设施，例如图书馆、老年中心、无家可归者收容所和日托设施等
- 本项目是否会影响应急服务的响应时间

重点分析及总结

- 虽然与拟建项目有关的施工活动会造成暂时增加对应急服务的需求，但缓解措施和项目设计特点的实施，以及适用的国家和地方法规的遵守，包括在项目施工前与洛杉矶消防局和洛杉矶警察局协调，将确保项目施工不会造成额外的应急服务需求以致于需要增加新的或实际改变现有的公共设施
- 洛杉矶消防局和洛杉矶警察局将在施工中有充分的通道
- 虽然拟建项目在项目运营期间会增加对应急服务的需求，但在遵守适用的法规，与洛杉矶消防局和洛杉矶警察局协调，以及实施应急行动计划的情况下，拟建项目的运营不会造成额外的应急服务需求以致于需要增加新的或实际改变公共设施
- 拟建项目不包括住房，住房可能会增加对学校服务或其它公共设施的需求

公共服务

影响总结

主题	查找	
	建筑施工	运营
需要新建或改建消防站、警察局、学校或其它公共服务设施	采取缓解措施后无重大影响	影响不重大
服务比率和响应时间	采取缓解措施后无重大影响	影响不重大

如何尽量减少影响？

建筑施工：施工交通管理计划将减少与应急通道相关的影响

运营：拟建项目将遵守适用的法规，将贯彻安全特点（如工作人员和摄像机），并将实施应急行动计划。 无须采取缓解措施。

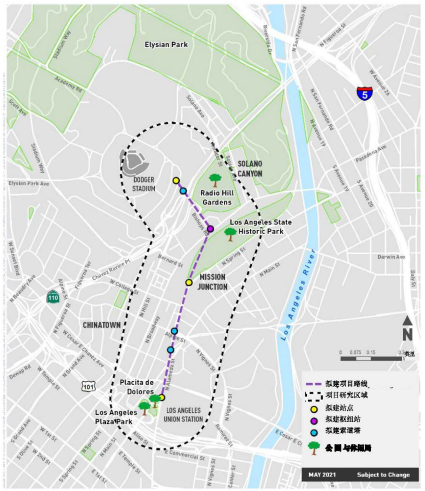
公园与休闲设施

研究内容

- 在施工和运营期间可能对公园和休闲设施产生影响的可能性，包括对洛杉矶广场公园和 Placita de Dolores、洛杉矶州立历史公园和伊利森公园的影响

重点分析及总结

- 拟建项目不会导致对公园的需求增加，或产生新的长期居民，从而导致现有公园和休闲设施的使用量增加，继而使公园设施出现实质性损坏，或导致需要提供新的公园设施，或导致需要新的或实质改变的公园设施
- 拟建项目将提供高运力的空中快捷交通服务，将洛杉矶联合车站的区域交通系统与洛杉矶州立历史公园及伊利森公园的相连，以改善本区域的流动性和可及性



影响总结

主题	查找	
	建筑施工	运营
公共设施的损坏	影响不重大	影响不重大
扩建休闲设施	影响不重大	影响不重大
服务比率和业绩目标	影响不重大	影响不重大

如何尽量减少影响？
无须采取缓解措施。

交通运输

研究内容

- 利用了CEQA指南和洛杉矶交通局通过城市标签建立的筛选标准、分析方法和阈值标准
- 对拟建项目的行车里程（VMT）采用了各种数据、方法和模型，以便能估计项目的乘客量、减少车辆行程数量、车辆行程长度进行分析，并最终估计出拟建项目的行车里程效益
- 道奇体育馆比赛和活动的参与者、员工、游客、附近的乘客，以及洛杉矶州立历史公园的游客和活动参与者，两者的乘客量预估
- 拟建的项目车站、枢纽站和索道塔的位置，以及这些组成部分是否会因其几何设计特征而大大增加了危险
- 拟建项目施工概念交通绕行方案及运输路线

重点分析及总结

- 拟建项目将符合PPOPs - 方案、计划、条例和政策 - 处理包括交通、道路、自行车和步行设施的流通系统
- 由于阿拉米达索道塔和唐人街/国家公园站采取了缓解措施，拟建项目不会带来任何不安全的实际状况
- 随着缓解措施的实施，在拟建项目施工期间将保留紧急通道

项目整个使用周期减少的行车里程将为129,629,500英里。

交通运输

影响总结

主题	查找	
	建筑施工	运营
行车里程（VMT）	无影响	无影响
与计划或政策相冲突	影响不重大	影响不重大
设计增加了危险性	采取缓解措施后无重大影响	采取缓解措施后无重大影响

如何尽量减少影响？

建筑施工：

- 执行经市政府批准的详细的施工交通管理计划，包括道路封闭信息、绕行计划、工地运输路线和分段运输计划
- 执行经市政府批准的临时救灾路线计划，其中将包括道路封闭的信息和绕行计划，以方便应急车辆通过研究区域，并尽量减少灾害期间对应急响应的影响

施工与运营

- 为拟建的阿拉米达索道塔和唐人街/州立公园车站加强能见度 - 例如高能见度的人行横道处理、先进十字路口警告标志、闪烁的信号灯、升级的照明以及新的或升级的交通管制

部落文化资源

研究内容

- 对重要的部落文化资源的实质性不利变化
- 按照大会第52号法案的要求，向八大加州原住民部落咨询

重点分析及总结

- 存在于该地区的资源以及需要采取缓解措施，包括考古测试和数据恢复
- 有可能在施工中遇到以前未发现的资源；如果美国原住民监测员发现了潜在的资源，监测员可以暂时停止施工

影响总结

主题	查找	
	建筑施工	运营
对部落文化资源的改变	采取缓解措施后无重大影响	无影响

如何尽量减少影响？

建筑施工：

- 实施文化资源监测和缓解计划以及洛杉矶联合车站前广场的考古测试计划
- 保留一名美国原住民监测员，监测阿拉米达站所在地的地面扰动施工活动

运营：无须采取缓解措施。

公用事业和服务系统

研究内容

- 搬迁或建造新的或扩建的水、废水处理或雨水排放、电力、天然气或电信设施
- 本项目对供水的影响
- 本项目是否需要扩大废水处理能力
- 该地的垃圾填埋场是否有足够的能力处理本项目所产生的固体废物

重点分析及总结

- 拟建项目的施工将不需要兴建新的或扩建的公用事业设施
- 拟建项目的施工将需要迁移现有的公共设施，这将与公共设施供应商协调，并遵守适用的国家和地方法规和条例
  - 为了尽量减少施工期间对现有公共设施的潜在干扰，拟建项目将实施一个公共设施搬迁计划
- 拟建项目的运营将需要连接到现有的公用事业系统
- 主要的电力使用将来自于可再生资源，现有的电力供应应能满足项目运营的需要
- 拟建项目的施工和运营将有足够的水供应
- 施工和运营将产生潜在的废水，这些废水将按照规定进行处理
- 本项目产生的固体废弃物不应超过国家或地方标准，或超出当地基础设施的能力，或以其它方式妨碍固体废物减少目标的实现

公用事业和服务系统

影响总结

主题	查找	
	建筑施工	运营
充足的供水	影响不重大	影响不重大
对污水系统的需求量及其污水处理能力	影响不重大	影响不重大
固体废弃物	采取缓解措施后无重大影响	影响不重大
搬迁或建造公用事业设施	采取缓解措施后无重大影响	影响不重大

如何尽量减少影响？

建筑施工：

- 与公用事业公司协调，制定并实施一项公用事业搬迁计划，以尽量减少在整个项目施工过程中对公用事业服务的影响
- 制定一份土壤和地下水管理计划

运营：无须采取缓解措施。

野生动植物

研究内容

- 如果位于州责任区(SRAs)或被划分为火灾非常高危险严重区(VHFHSZ)的土地内或附近，拟建项目是否会导致与野火相关的潜在重大影响
- 根据地形、天气和燃料，项目区域内潜在的野火风险
- 对已通过的应急计划或紧急疏散计划造成严重损害
- 拟建项目是否需要安装或维护相关的基础设施，从而可能加剧火灾风险或导致对环境的临时或持续影响
- 拟建项目是否会使人或建筑物面临重大风险，包括由于径流、火灾后的斜坡失稳或排水变化而导致的下坡或下游洪水或山崩？
- 拟建项目是否会使人们或建筑物直接或间接地暴露于涉及野地火灾的重大损失、伤害或死亡风险中

重点分析及总结

- 拟建路线的一部分，包括百老汇枢纽站、体育馆索道塔和道奇体育馆站位于火灾非常高危险严重区(VHFHSZ)内
- 拟建项目的施工和运营不会妨碍进入已确定的避灾路线，也不会严重影响应急反应或疏散计划的实施
- 本项目将遵守适用的法规和条例以及最佳施工实践，不会加剧野火风险
- 贯彻项目设计特点将进一步减少这些风险

野生动植物

影响总结

主题	查找	
	建筑施工	运营
破坏应急或疏散计划	影响不重大	影响不重大
加剧野火风险	影响不重大	影响不重大
安装/维护相关基础设施	影响不重大	影响不重大
使人们或建筑物面临野火风险	影响不重大	影响不重大

如何尽量减少影响？

建筑施工：贯彻项目设计特点，包括消防计划和体育馆塔建筑工地周围的燃料改造分区。无须采取缓解措施。

运营：在百老汇枢纽站、体育场索道塔以及道奇体育馆站运营期间，贯彻有关的项目设计特点，通过工作人员和摄像头进行安全监控，识别和报告消防安全隐患。无须采取缓解措施。

备选方案

研究内容

- 我们选择了一系列合理的替代方案，以探讨可能的方法，以减轻或避免因实施拟建项目而造成的重大环境影响，同时仍能实现本项目的主要目标
  - 无项目备选方案 - 无新的开发项目
  - 春天街备选方案 - 拟建项目的备选路线
  - 交通系统管理备选方案 - 增加道奇体育馆巴士快线服务
- 有几个备选方案经过考虑，由于未能满足大部分基本项目目标，或不可行，或无法避免重大环境影响，被排除在详细分析之外。这几个备选方案包括百老汇站路线备选方案、轻轨L线(金线)站与学院街站合并路线备选方案，以及直接路线备选方案。

重点分析及总结

- 无项目备选方案不会改善交通或为社区之间提供连接。此外，行车里程和车辆拥堵不会减少，相应地也不会发生温室气体排放减少和空气质量改善。
- 春天街路线备选方案将提供直接的交通连接，并改善周围社区的连通性。这一备选方案需要更大的占地面积，并且不会减少对环境的重大影响。
- TSE备选方案不会为周围社区提供直接的过境连接或改善连接，也不会同等程度地减少行车里程（VMT）、温室气体排放或改善空气质量。

备选方案

备选方案总结

备选方案	查找	
	实现项目目标的能力	减少重大影响的能力
无项目工程备选方案	不会实现项目目标	比项目的影响少
春天街路线备选方案	将会实现项目目标	与项目的影响相似
交通系统管理备选方案	无法实现大部分项目目标	比项目的影响少

什么是更环保的备选方案？

TSM备选方案被认为是对环境更友好的备选方案，原因是它不会导致CEQA**确定的重大和不可避免的影响，并且**总体上将产生最少的环境影响。然而，TSM备选方案对空气质量、能源、温室气体排放、水文和水质、以及运输**和交通的影响会更大。此外，**TSM备选方案不能完全或部分地实现项目的大部分目标。

环境影响报告草案中其它的附加评估

洛杉矶州立历史公园

风筝：由于拟建项目路线位于公园的西部边缘，毗邻轻轨L线和行人通道，因此不会明显减少在公园内放飞风筝的安全面积

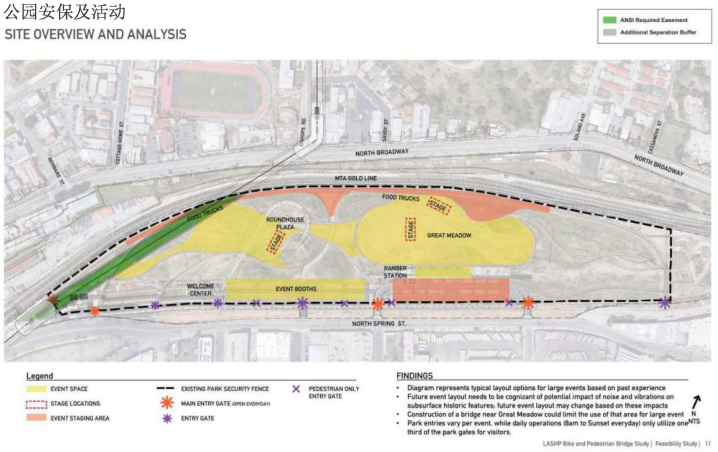
特别活动：由于拟建项目路线的位置，跨越了公园中通常不用于屏幕和舞台的一小部分，并且由于仍然可以在拟建项目路线的大部分下空进行活动，因此拟建项目并没有明显减少公园内的活动空间面积

阿拉米达站和唐人街/州立公园站的所在地

直升机停机坪

- 拟建的项目路线并未在机场土地使用计划所覆盖的区域内，也不在公共机场的两英里范围内
- 对拟建项目路线附近的直升机停机坪进行的空域评估认为，拟建项目的施工和运营将避开与项目附近现有直升机停机坪有关的空域，不会造成空中导航危险，因此不会对航空活动（包括对拟建项目附近的直升机停机坪）造成影响

公园安保及活动
SITE OVERVIEW AND ANALYSIS



洛杉矶州立历史公园的活动舞台和屏幕的典型位置，以及拟建项目路线

设计方案A

改变百老汇枢纽站的位置以避开451 E. SAVOY街

- 将包括对百老汇枢纽站和道奇体育馆站之间的整体项目路线的改变，以避免在451 E. Savoy街上空的空中权利要求
- 位置改变将导致路线穿过毗邻主教（Bishops）路旁边的大教堂高中的一小部分
- 包括对百老汇枢纽站、体育馆索道塔和道奇体育馆站等项目组成部分的改变
  - 可能会导致体育馆索道塔和道奇体育馆站两处场地的公用事业设施搬迁以及增加额外的施工期
  - 将需要拟建项目的乘客在道奇体育馆站和道奇体育馆直接走更长的路

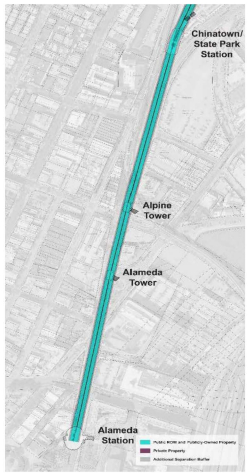
拟建项目路线

设计方案A

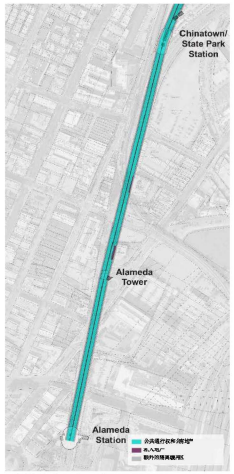
设计方案B

沿着阿拉米达街的单个索道塔

- 利益相关者的反馈意见要求项目主办方评估将阿拉米达街沿路的索道塔数量从两个减少到一个的可能性，作为回应
- 包括将阿拉米达索道塔的整体高度增加50英尺，并将阿拉米达站和唐人街/州立公园站之间高山街索道塔从拟建项目中移除
- 增加的索道塔高度将需要增加相应的施工
- 将导致潜在的技术限制
- 将导致需要额外的私人地产上空的空中权利



拟建项目路线



设计方案B

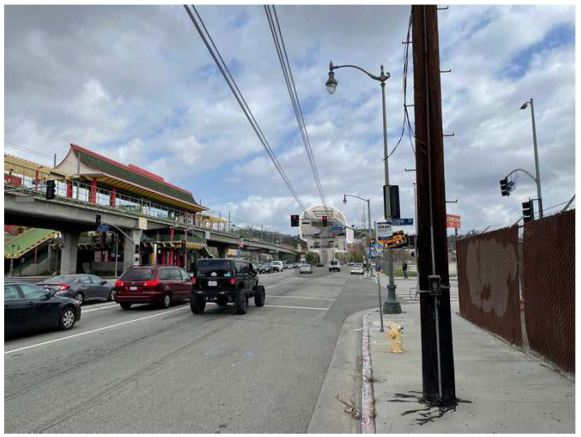
拟建项目路线

设计方案B

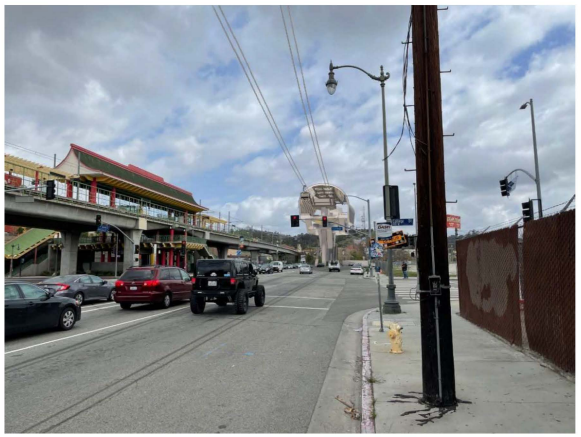
设计方案C

将唐人街/州立公园站的高度增加

- 利益相关者的反馈意见要求项目主办方考虑建造更高的唐人街/国家公园站，作为回应
- 设计方案C包括将唐人街/州立公园站的总高度增加35英尺。
- 增加的车站高度将需要增加相应的施工
- 由于高度的原因，可能会降低乘客体验，这也将导致乘车站台被抬高，需要额外的垂直流通设施才能进入和登上站台



拟建项目路线



设计方案C

使用设计方案D

唐人街/州立公园站作为非客枢纽站

- 利益相关者的反馈意见要求项目主办方考虑在唐人街/州立公园站不设乘客通道，以增加沿着春天街进出车站的缆车高度
- 使用方案D将涉及用一个非客枢纽站取代计划中的唐人街/州立公园站。
- 将具有与拟建项目相同的地点、高度、宽度、长度和建筑外观。
- 将不会加强洛杉矶州立历史公园、唐人街和Mission Junction社区之间的社区连接

设计和使用方案E

洛杉矶州立历史公园人行天桥

- 洛杉矶州立历史公园提出建设一座符合《美国残疾人法案》（ADA）的无障碍人行天桥，桥将从公园的中部平缓上升，一直连接到北百老汇
- 虽然并未提出将该人行天桥作为拟建项目的一部分，但本环境影响报告草案包含对公园人行天桥的分析
- 正如洛杉矶州立历史公园总体规划和最终环境影响报告，以及在自行车和人行天桥研究中所指出的，该桥将提供从唐人街和索拉诺峡谷社区进入公园的安全的行人和自行车通道

来源：人行天桥可行性研究

停车研究概览

拟建项目停车位研究

- 即使CEQA不要求对停车进行分析，也对本项目进行了全面的停车研究，对此都会交通局已对停车研究进行了同行评议
- 停车研究报告已于2022年9月9日在都会交通局的网站上公布

研究内容

- 预计大多数拟搭乘项目的乘客将转乘交通工具前往本项目
- 在拟建项目的阿拉米达站和唐人街/州立公园站的半英里范围内，公共可用停车位和车库以及街道上的停车位约有10,290个

停车研究概览

停车研究结论

停车类型	比赛日停车			
	停车位供应	停泊的车辆	停车位占用率	可用的停车位数
非街道可停车的公共空间	6,876	2,173	32%	4,703
路边停车位	3,417	2,017	59%	1,400
总计				
拟建项目停车需求（2042年）	-	307 – 790		
项目可用的街外停车位总数	6,876	2,963	43%	3,913

*统计时间是2021年9月10日，当天晚上洛杉矶道奇队主场迎战圣地亚哥教士队；付费入场人数为48,403人，高于2019年洛杉矶道奇队工作日晚间比赛的赛季平均水平。在与都会交通局和洛杉矶交通局的协调下，本停车研究将非街道公共可用停车位增加了46%，以应对新冠肺炎疫情。

考虑到拟建项目的潜在停车需求，故在拟建项目的步行可及范围内提供了大量可用的停车位。即使一些现有的停车场被重新改建，也有大量的非街道停车位供应，以满足拟建项目的所有停车需求。

本项目致力于鼓励人们乘坐公共交通

- 与本地商业建立商业合作关系，预售捆绑套餐，包括惠顾本地商业的客户和可用的非街道停车位
- 支持实施/扩大各种管理策略，包括比赛期间的限时停车限制和咪表收费，以劝阻乘客将车停在社区内，并为居民和本地商业提供停车位

问答环节

问答环节

- 目的：让公众有机会询问与项目及环境影响报告草案有关的问题
- 注：请将您的提问时长限制在**30秒**以内

问答：使用问答功能输入问题或举手提问

今天！

提问。

今天不接受公众的意见提交。

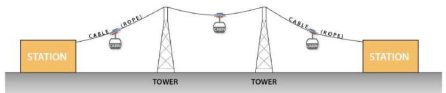
What is Aerial Rapid Transit

¿Qué es el Transporte Rápido Aéreo?

PRECEDENT FOR AERIAL TRANSIT SYSTEMS

- Aerial transit technology has been used for over 100 years
- Aerial rapid transit (ART) is a proven, zero emission, safe, sustainable, high-capacity, and highly efficient form of transportation
- Modern systems are a feasible mode of urban transit and are currently operating in numerous cities around the world

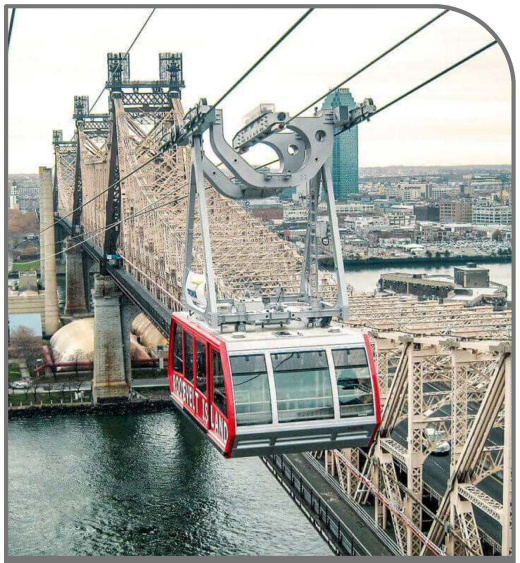


OVERVIEW

- In an aerial transit system, cabins are suspended above grade by cables strung between stations and towers
- The proposed Project would include three passenger stations, a non-passenger junction, and three towers, which support the aerial cables that carry the gondola cabins
- The cabins would allow for sitting or standing; would accommodate wheelchairs, baby strollers, and bicycles; and would be fully ADA accessible
- Each cabin would have a security camera on board with a feed to the control room as well as a "push to talk" button

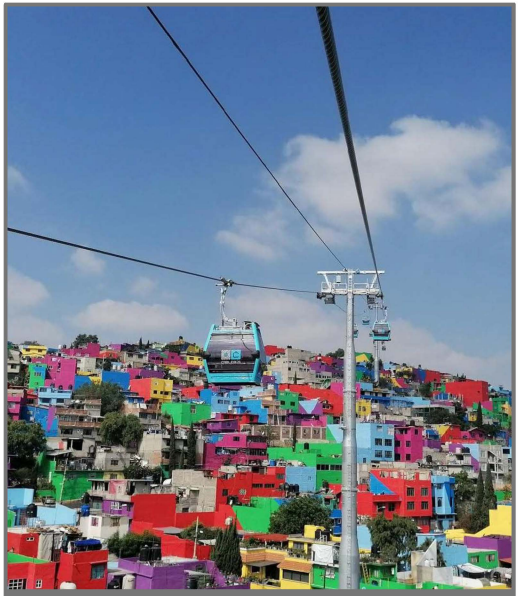
Portland, Oregon - Reversible Tramway

Portland, Oregon - Tranvía Reversible



Roosevelt Island, New York - Reversible Tramway

Roosevelt Island, New York - Tranvía Reversible



Mexico City, Mexico - Monocable Detachable Gondola

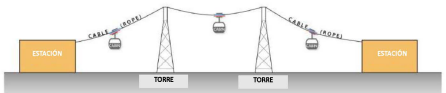
Ciudad de México, México - Góndola Monocable Desprendible

Toulouse, France – 3S

Toulouse, Francia – 3S

PRECEDENTES DE SISTEMAS DE TRANSPORTE AÉREO

- *La tecnología de transporte aéreo se ha usado durante más de 100 años*
- *El Transporte Rápido Aéreo (ART) es una forma de transporte probada, con cero emisiones, segura, sostenible, de gran capacidad y altamente eficiente.*
- *Los sistemas modernos son un medio factible de transporte urbano y actualmente funcionan en varias ciudades alrededor del mundo*



GENERALIDADES

- *En un sistema de transporte aéreo como éste, las cabinas se suspenden por encima del nivel del suelo mediante cables extendidos entre las estaciones y las torres*
- *El proyecto propuesto incluye tres estaciones de pasajeros, una intersección que no es para pasajeros y tres torres para soportar los cables aéreos que transportan las cabinas de las góndolas*
- *En las cabinas, los pasajeros pueden sentarse o estar de pie; podrían acomodar sillas de ruedas, carreolas para bebé y bicicletas, y serían totalmente accesibles de conformidad con la ADA.*
- *Cada cabina tendría una cámara de seguridad a bordo con una transmisión a la sala de control, así como un botón para "pulsar para hablar".*

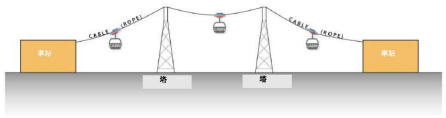
甚麼是空中快速纜車系統

什么是空中快捷交通

空中快速纜車系統先例

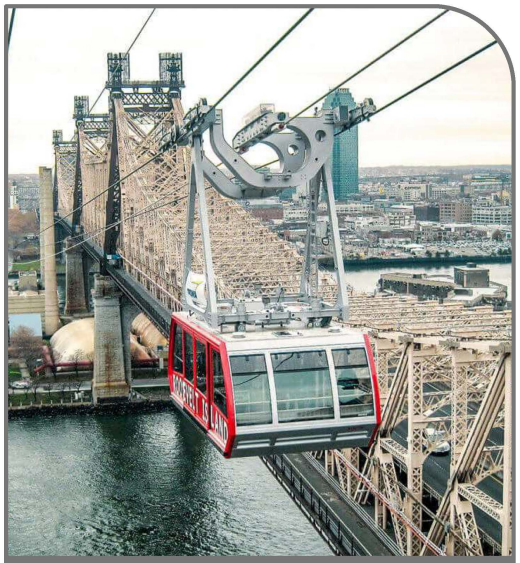
- 空中快速纜車技術已經有100多年歷史
- 空中快速纜車系統是經過實證為零排放、安全、環境永續、高容量和高效能的交通運輸模式
- 現代系統是一種可行的城市交通模式，目前在世界各地多個城市運作



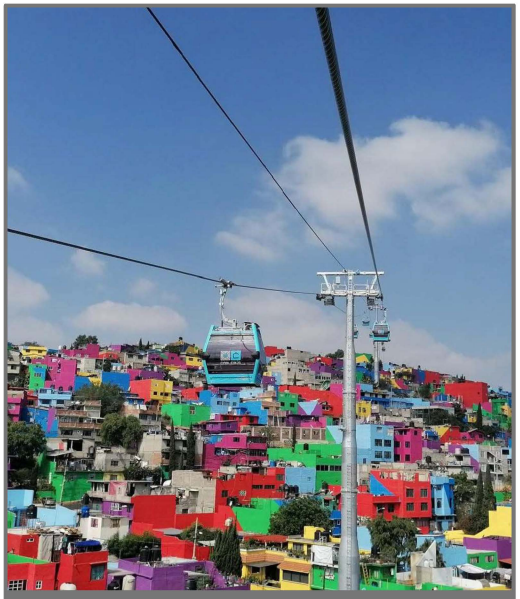
概述

- 空中纜車系統中，車廂以車站與塔之間的電纜懸掛在地面上
- 擬建計畫將包括三個客運站、一個非客運樞紐站和三個支撐塔，這些塔用作支撐空中纜車的電纜
- 乘客可在車廂內站立或坐著；車廂支援輪椅、嬰兒車及單車上落；車廂可讓《美國殘疾人法案》中的殘疾人士使用
- 每卡車廂中設有保安監控鏡頭及「通話」按鈕，二者均連接到控制室

俄勒岡州波特蘭 - 可逆駛電車 *俄勒冈州波特兰 - 往复式索道*



羅斯福島，紐約 - 可逆駛電車 *纽约市罗斯福岛 - 往复式索道*

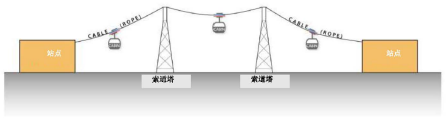


墨西哥墨西哥城 - 可卸除單軌電纜纜車 *墨西哥墨西哥城 - 单索可分离式缆车*

法國圖盧茲 *法国图卢兹 - 3S缆车*

空中交通系统的先例

- *空中交通技术已经使用了100多年*
- *空中快捷交通（ART）是一种经验证的零排放、安全、具有环境永续性且高运力的的高效交通形式*
- *现代的空中交通系统是一种可行的城市交通方式，目前正在世界各地的许多城市运行*



概览

- *在空中交通系统中，车站和索道塔之间的缆线将缆车悬挂在地面上方*
- *拟建项目将包括三个客站、一个非客枢纽站，以及为输送空中缆车的缆线提供支撑的三个索道塔*
- *车厢里可以坐或站，也可以放置轮椅、婴儿车和自行车；并提供了符合《美国残疾人法案》（ADA）的无障碍通道*
- *每个车厢里均安装了将信号传输至控制室的安全摄像头，并配有“一键通”按钮*

CEQA Process and Timeline

Calendario y Proceso de la CEQA

CEQA OVERVIEW AND TIMELINE | CALENDARIO Y GENERALIDADES DE LA CEQA

What is the Purpose of the EIR?

The purpose of the Draft EIR is to evaluate the potential for environmental impacts associated with implementation of the proposed Project, and to provide mitigation measures where required

¿Cuál es el Propósito del Borrador del EIR?

El propósito del Borrador del EIR es el de evaluar los potenciales impactos ambientales asociados con la implementación del proyecto propuesto, y proporcionar medidas de mitigación cuando sea necesario

CEQA PROCESS

- Required for all projects undertaken, funded, or requiring approval by a public agency
- Informs the public and decision makers
- Discloses potential environmental impacts resulting from a proposed project
- Provides the opportunity to comment on environmental issues
- Two public comment periods: Scoping Period and Draft EIR Public Review
- SB 44 requires 2 Public Meetings during Draft EIR Public Review: Informational Workshop and Public Hearing

PROCESO DE LA CEQA

- *Esto se requiere para todos los proyectos emprendidos, financiados o que requieran la aprobación de un organismo público*
- *Informa al público y a los responsables de la toma de decisiones*
- *Revela los posibles impactos ambientales resultantes de un proyecto propuesto*
- *Da la oportunidad de hacer comentarios sobre cuestiones ambientales*
- *Dos periodos de comentarios del público: Periodo de Alcance Público y Revisión Pública del Borrador del EIR*
- *SB 44 requiere 2 reuniones públicas durante la Revisión Pública del Borrador del EIR: Taller Informativo y Audiencia Pública*

《環境影響報告草案》的目的是甚麼？

《環境影響報告草案》的目的是評估與擬建計畫實施相關的潛在環境影響，並在需要時提供緩解措施

环境影响报告的目的是什么？

环境影响报告草案的目的是对实施拟建项目的有关潜在环境影响进行评估，并在必要时采取缓解措施。

加州環境品質法案(CEQA)程序

- 要求公共機構承擔、資助或需要批准的所有計畫
- 通知公眾和決策者
- 披露擬建計畫會產生的潛在環境影響
- 提供對環境問題發表評論的機會
- 兩個公眾意見咨詢期：(1) 公共範圍界定期和 (2)《環境影響報告草案》公眾審查
- SB 44 需要在《環境影響報告草案》公開評論期間召開兩次公開會議：資訊說明會與公眾聽證會

《加州环境质量法案》（CEQA）流程

- *所有由公共机构承办、资助或须由公共机构批准的项目概须*
- *告知公众和决策者*
- *披露拟建项目可能造成的环境影响*
- *提供对环境问题发表意见的机会*
- *两个公众评议期：公众范围界定期以及报告草案公众审查期*
- *SB 44号法案要求在环境影响报告草案的公众审查期间举行两次公众会议：信息说明会与公众听证会*

Summary of Impacts

Topic	No Impact	Less Than Significant	Less Than Significant with Mitigation	Significant and Unavoidable
Aesthetics	• Scenic Resources (Construction and Operations)	• Scenic Vista (Construction and Operations) • Visual Character (Construction and Operations) • Light and Glare (Construction and Operations)		
Agriculture and Forestry	• Conversion of Farmland • Conflict with Forest Land Zoning • Loss of Forest Land • Agricultural Use	• Agricultural Zoning and Williamson Act		
Air Quality		• Air Quality Plans (s/b Standards) • Increase Air Pollutants • Sensitive Receptors • Other Emissions		
Biological Resources	• Riparian Habitat • Protected Wetlands • Biological Plans or Policies (Operations)	• Habitat Modifications (Operations) • Biological Plans or Policies (Construction) • Interfere with Species Movement (Operations)	• Habitat Modifications (Construction) • Interfere with Species Movement (Construction)	
Cultural Resources	• Archaeological Resource (Operations) • Disturb Human Remains (Operations)	• Historical Resource (Operations)	• Historical Resource (Construction) • Archaeological Resource (Construction) • Disturb Human Remains (Construction)	
Energy		• Wasteful, Inefficient or Unnecessary Consumption (Construction and Operations) • State or Local Energy Plans (Construction and Operations)		
Geology and Soils	• Support Wastewater Systems (Construction and Operations) • Destroy Unique Paleontological or Geologic Features (Operations)	• Adverse Effects: Earthquakes, Seismic-Related Ground Shaking, Liquefaction or Landslides (Operations) • Soil Erosion/Loss of Topsoil (Construction and Operations) • Unstable Geologic Unit or Soil (Operations) • Expansive soil (Operations)	• Adverse Effects: Earthquakes, Seismic-Related Ground Shaking, Liquefaction or Landslides (Construction) • Destroy Unique Paleontological or Geologic Features (Construction) • Unstable Geologic Unit or Soil (Construction) • Expansive soil (Construction)	
Greenhouse Gas Emissions (GHGs)		• Generate GHGs (Construction and Operations) • GHG Reduction Plans or Policies (Construction and Operations)		
Hazards and Hazardous Materials	• Hazardous Sites (Operations) • Airport Land Use Plan (Construction and Operations)	• Hazard to Public or Environment (Operations) • Emergency and Evacuation Plans (Construction and Operations) • Hazards Near Schools (Operations)	• Hazardous Sites (Construction) • Hazard to Public or Environment (Construction) • Hazards Near Schools (Construction)	
Hydrology and Water Quality	• Decrease Groundwater Supply (Operations)	• Decrease Groundwater Supply (Construction) • Water Quality Standards or Plans (Construction and Operations) • Alter Drainage (Construction and Operations) • Flood, Tsunami or Seiche (Construction and Operations) • Conflict with Plans (Construction and Operations)		

Topic	No Impact	Less Than Significant	Less Than Significant with Mitigation	Significant and Unavoidable
Land Use and Planning	• Physically Divide Community (Operations)	• Physically Divide Community (Construction)	- Conflict with Land Use Plans or Policies (Construction and Operations)	
Mineral Resources	• Loss of Available Mineral Resources (Construction and Operations)			
Noise	• Expose Public Near Airport (Construction and Operations)	• Generation or Increase in Ambient Noise Levels (Operations) • Generation of Excessive Vibration or Noise Levels (Operations)		• Generation or Increase in Ambient Noise Levels (Construction) • Generation of Excessive Vibration or Noise Levels (Construction)
Population and Housing		• Induce Unplanned Population Growth (Construction and Operations) • Displace People or Housing (Construction and Operations)		
Public Services		• Need for New or Altered Fire, Police, Schools, or other Public Services (Operations) • Service Ratios and Response Times (Operations)	• Need for New or Altered Fire, Police, Schools, or other Public Services (Construction) • Service Ratios and Response Times (Construction)	
Parks and Recreation		• Deterioration of a Public Facility (Construction and Operations) • Expansion of Recreational Facilities (Construction and Operations) • Service Ratios and Performance Objectives (Construction and Operations)		
Transportation	• Vehicle Miles Traveled (VMT) (Construction and Operations)	• Conflict with Plan or Policies (Construction and Operations)	• Increase Hazards through Design (Construction and Operations)	
Tribal Cultural Resources	Change to Tribal Cultural Resource (Operations)		• Change to Tribal Cultural Resource (Construction)	
Utilities and Service Systems		• Sufficient Water Supplies (Construction and Operations) • Demand and Capacity on Wastewater Systems (Construction and Operations) • Solid Waste Goals (Operations) • Relocation or Construction of Utilities (Operations)	• Solid Waste Goals (Construction) • Relocation or Construction of Utilities (Construction)	
Wildfire		• Impair Emergency or Evacuation Plans (Construction and Operations) • Exacerbate Wildfire Risks (Construction and Operations) • Installation/Maintenance of Infrastructure (Construction and Operations) • Expose People or Structures to Wildfire Risks (Construction and Operations)		

Resumen de los Impactos

Tema	Sin impacto	Menos que significativo	Menos que significativo con mitigación	Significativo e inevitable
Estética	• Recursos Escénicos (Construcción y Operaciones)	• Vista Escénica (Construcción y Operaciones) • Carácter Visual (Construcción y Operaciones) • Luz y Deslumbramiento (Construcción y Operaciones)		
Agricultura y Silvicultura	• Conversión de Tierras Agrícolas • Conflicto con la Zonificación de Tierras Forestales • Pérdida de Tierras Forestales • Uso Agrícola	• Zonificación Agrícola y Ley Williamson		
Calidad del Aire		• Calidad del Aire Planes (s/b Normas) • Aumento de los Contaminantes del Aire • Receptores Sensibles • Otras Emisiones		
Recursos Biológicos	• Hábitat Ribereño • Humedales Protegidos • Políticas o Planes Biológicos (Operaciones)	• Modificaciones del Hábitat (Operaciones) • Políticas o Planes Biológicos (Construcción) • Interferencia en el Movimiento de las Especies (Operaciones)	• Modificaciones del Hábitat (Construcción) • Interferencia en el Movimiento de las Especies (Construcción)	
Recursos Culturales	• Recursos Arqueológicos (Operaciones) • Alteración de Restos Humanos (Operaciones)	• Recurso Histórico (Operaciones)	• Recurso Histórico (Construcción) • Recurso Arqueológico (Construcción) • Alteración de Restos Humanos (Construcción)	
Energía		• Consumo Innecesario, Ineficaz o Derrochador (Construcción y Operaciones) • Planes Energéticos Estatales o Locales (Construcción y Operaciones)		
Geología y Suelos	• Apoyo a los Sistemas de Aguas Residuales (Construcción y Operaciones) • Destrucción de Características Paleontológicas o Geológicas Únicas (Operaciones)	• Efectos Adversos: Terremotos, Sacudidas Sísmicas del Terreno, Licuefacción o Deslizamientos de Tierra (Operaciones) • Erosión del Suelo/Pérdida De La Capa Superior (Construcción y Operaciones) • Unidad Geológica o Suelo Inestable (Operaciones) • Suelo Expansivo (Operaciones)	• Efectos Adversos: Terremotos, sacudidas sísmicas del suelo, licuefacción o deslizamientos de tierra (Construcción) • Destrucción de Características Geológicas o Paleontológicas Únicas (Construcción) • Suelo o Unidad Geológica Inestable (Construcción) • Suelo Expansivo (Construcción)	
Emisiones de Gases de Efecto Invernadero (GEI)		• Generación de GEI (Construcción y Operaciones) • Políticas o Planes de Reducción de GEI (Construcción y Operaciones)		
Peligros y Materiales Peligrosos	• Sitios Peligrosos (Operaciones) • Plan de Uso de Suelo del Aeropuerto (Construcción y Operaciones)	• Peligro para el Público o el Medio Ambiente (Operaciones) • Planes de Emergencia y Evacuación (Construcción y Operaciones) • Peligros cerca de Escuelas (Operaciones)	• Sitios Peligrosos (Construcción) • Peligros para el Público o el Medio Ambiente (Construcción) • Peligros cerca de Escuelas (Construcción)	
Hidrología y Calidad del Agua	• Reducción del Suministro de Agua Subterránea (Operaciones)	• Reducción del Suministro de Agua Subterránea (Construcción) • Planes o Normas de Calidad del Agua (Construcción y Operaciones) • Alteración del Drenaje (Construcción y Operaciones) • Inundación, Tsunami u Oscilaciones de Agua (Construcción y Operaciones) • Conflicto con Planes (Construcción y Operaciones)		

Tema	Sin impacto	Menos que significativo	Menos que significativo con mitigación	Significativo e inevitable
Planificación y Uso de la Tierra	• División Física de la Comunidad (Operaciones)	• División Física de la Comunidad (Construcción)	- Conflicto con Políticas o Planes de Uso de la Tierra (Construcción y Operaciones)	
Recursos Minerales	• Pérdida de Recursos Minerales Disponibles (Construcción y Operaciones)			
Ruido	• Exposición al Público cerca del Aeropuerto (Construcción y Operaciones)	• Generación o Aumento de los Niveles de Ruido Ambiental (Operaciones) • Generación de Niveles Excesivos de Vibración o Ruido (Operaciones)		• Generación o Aumento de los Niveles de Ruido Ambiental (Construcción) • Generación de Niveles Excesivos de Vibración o Ruido (Construcción)
Población y Vivienda		• Inducir un Crecimiento Demográfico No Planificado (Construcción y Operaciones) • Desplazamiento de Personas Viviendas (Construcción y Operaciones)		
Servicios Públicos		• Necesidad de Servicios de Bomberos, Policía, Escuelas u Otros Servicios Públicos que Sean Nuevos o Modificados (Operaciones) • Tasas de Servicio y Tiempos de Respuesta (Operaciones)	• Necesidad de Servicios de Bomberos, Policía, Escuelas u Otros Servicios Públicos que Sean Nuevos o Modificados (Construcción) • Tasas de Servicio y Tiempos de Respuesta (Construcción)	
Parques y Recreación		• Deterioro de una Instalación Pública (Construcción y Operaciones) • Ampliación de las Instalaciones Recreativas (Construcción y Operaciones) • Tasas de Servicio y Objetivos de Rendimiento (Construcción y Operaciones)		
Transporte	• Millas Viajadas en Vehículos (VMT) (Construcción y Operaciones)	• Conflicto con Planes o Políticas (Construcción y Operaciones)	• Riesgos que Aumentan a Través del Diseño (Construcción y Operaciones)	
Recursos Culturales Tribales	Cambio a los Recursos Culturales Tribales (Operaciones)		• Cambio a los Recursos Culturales Tribales (Construcción)	
Sistemas de Servicios y Servicios Públicos		• Suministro de Agua Suficiente (Construcción y Operaciones) • Demanda y Capacidad de los Sistemas de Aguas Residuales (Construcción y Operaciones) • Objetivos en Materia de Residuos Sólidos (Operaciones) • Reubicación o Construcción de Servicios Públicos (Operaciones)	• Objetivos en Materia de Residuos Sólidos (Construcción) • Reubicación o Construcción de Servicios Públicos (Construcción)	
Incendios Forestales		• Dificultar los Planes de Emergencia o Evacuación (Construcción y Operaciones) • Exacerbar los Riesgos de Incendios Forestales (Construcción y Operaciones) • Instalción/Mantenimiento de Infraestructura (Construcción y Operaciones) • Exponer a Personas o Estructuras a Riesgos de Incendios Forestales (Construcción y Operaciones)

影響總結

主題	沒有影響。	影響不大。	經緩解後影響不大。	嚴重且不能避免。
美學	• 景觀資源 (工程與營運)	• 優美景觀 (工程與營運) • 視覺特徵 (工程與營運) • 光線與強光 (工程與營運)		
農林資源	• 耕地轉用 • 與林地區劃衝突 • 喪失林地 • 農業用途	• 農業區劃及威廉姆森法案		
空氣質量		• 空氣質量計劃 (s/b 級別) • 增加空氣污染物 • 敏感受體 • 其他排放物		
生物資源	• 河岸棲息地 • 受保育濕地 • 生物計劃或政策（營運）	• 改變棲息地（營運） • 生物計劃或政策（工程） • 干擾物種移動（營運）	• 改變棲息地（工程） • 干擾物種移動（營運）	
文化資源	• 考古資源（營運） • 干擾人類遺骸（營運）	• 歷史資源（營運）	• 歷史資源（工程） • 考古資源（工程） • 干擾人類遺骸（工程）	
能源		• 浪費、低效或不必要的用途（工程與營運） • 州或地方能源計劃（工程與營運）		
地質和土壤	• 污水支援系統（工程與營運） • 破壞獨特的古生物或地質特徵（營運）	• 不良影響:地震、與地震相關的地面震動、液化或山泥傾瀉（營運） • 土壤侵蝕/表土流失（工程與營運） • 不穩定的地質單元或土壤（營運） • 膨脹土壤（營運）	• 不良影響:地震、與地震相關的地面震動、液化或山泥傾瀉（營運） • 破壞獨特的古生物或地質特徵（營運） • 不穩定的地質單元或土壤（營運） • 膨脹土壤（營運）	
溫室氣體排放		• 產生溫室氣體（工程與營運） • 溫室氣體減排計劃或政策（工程與營運）		
危害和有害物質	• 有害工地（營運） • 機場土地運用（工程與營運）	• 對公眾及環境有害（營運） • 應急及疏散計劃（工程與營運） • 學校附近的災害（營運）	• 有害工地（工程） • 對公眾及環境有害（工程） • 學校附近的災害（工程）	
水文和水質	• 減少地下水供應（營運）	• 減少地下水供應（工程） • 水質標准或計劃（工程與營運） • 改變排水（工程與營運） • 水浸、海嘯或塞切（工程與營運） • 與計劃衝突（工程與營運）		

主題	沒有影響。	影響不大。	經緩解後影響不大。	嚴重且不能避免。
土地利用和規劃	• 物理上劃分社區	• 工程（物理劃分社區）：	- 與土地使用計劃或政策衝突（工程和營運）	
礦物資源	• 損失可用礦物資源（工程和營運）			
噪音	• 公眾暴露於機場附近（工程和營運）	• 產生或增加噪音水平（營運） • 產生過度震動或噪音水平（營運）		• 產生或增加噪音水平（工程） • 產生過度震動或噪音水平（工程）
人口和住屋		• 導致計劃以外的人口增長（建設和營運） • 流浪者或住屋（建設和營運）		
公共服務		• 需要新的或改造的消防、警察、學校或其他公共服務 • 服務比率和響應時間	• 需要新的或改造的消防、警察、學校或其他公共服務 • 服務比率和響應時間(工程)	
公園和康樂設施		• 公共設施老化（工程和營運） • 擴建康樂設施（工程和營運） • 服務比率和績效目標（工程和營運）		
交通運輸	• 車輛行駛里程（VMT）（工程和營運）	• 與計劃或政策衝突（工程與營運）	• 設計令危險增加（工程與營運）	
部落文化資源	改變部落文化資源(營運)		• 改變部落文化資源(工程)	
公用事業和服務系統		• 充足供水（工程與營運） • 污水系統的需求與容量（工程與營運） • 固體廢物目標(營運) • 公用事業搬遷或建設(營運)	• 固體廢物目標(工程) • 公用事業搬遷或建設(工程)	
野火		• 應急及疏散計劃（工程與營運） • 加劇野火風險（工程與營運） • 安裝/維護基建設施（工程與營運） • 公眾或結構暴露於野火風險之中（工程與營運）

Metro

Project Description

Descripción del Proyecto

PROJECT LOCATION AND ALIGNMENT

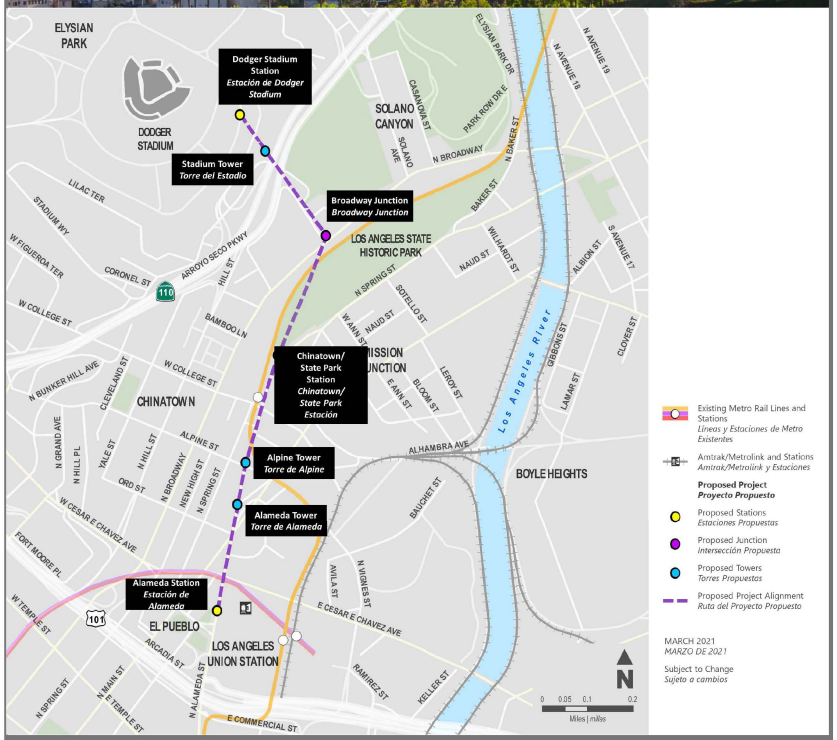
- The Project would commence adjacent to Union Station and El Pueblo and terminate at Dodger Stadium, with an intermediate station at the southernmost entrance to the Los Angeles State Historic Park
- The proposed Project alignment maximizes alignment along the public ROW and publicly owned property and minimizes aerial rights over private properties, taking into account existing and future adjacent land uses

PURPOSE AND NEED

- Provide a direct transit connection from Los Angeles Union Station (LAUS) to the Dodger Stadium property via an aerial gondola system
- Connect surrounding communities of Chinatown, Mission Junction, Los Angeles State Historic Park, Elysian Park, Echo Park, and Solano Canyon to the regional transit system accessible at Union Station
- Improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS
- Provide a mobility hub at the Chinatown/State Park Station
- Provide a sustainable form of transit by operating the ART system with the use of zero emission electricity with battery storage backup in order to reduce GHG emissions and improve air quality

PROJECT OVERVIEW

- Provide a permanent transit connection from Los Angeles Union Station (LAUS) to the Dodger Stadium property via a 1.2-mile aerial gondola system
- Travel time from LAUS to Dodger Stadium would be approximately 7 minutes
- Capacity of approximately 5,000 people per hour per direction
- Operate daily to serve existing residents, workers, park users, and visitors to Los Angeles
- Provide access to the Los Angeles State Historic Park and surrounding communities via the intermediate Chinatown/State Park Station
- Zero emission, environmentally friendly rapid transit that would reduce GHG emissions as a result of reduced vehicle trips in and around Dodger Stadium and on neighborhood streets, arterial roadways, and freeways



Project location and alignment

Ruta y ubicación del proyecto

RUTA Y UBICACIÓN DEL PROYECTO

- *El proyecto comenzaría junto a Union Station y El Pueblo, y terminaría en el Dodger Stadium, con una estación intermedia en la entrada que está más al sur del Los Angeles State Historic Park.*
- *La ruta propuesta del proyecto maximiza la ruta a lo largo del derecho de paso (ROW) público y la propiedad pública y minimiza los derechos aéreos sobre las propiedades privadas, teniendo en cuenta los usos de la tierra adyacentes existentes y futuros*

PROPÓSITO Y NECESIDAD

- *Proporcionar una conexión de transporte directa desde la estación Los Angeles Union Station (LAUS) hasta la propiedad del Dodger Stadium a través de un sistema de góndolas aéreas*
- *Conectar las comunidades circundantes de Chinatown, Mission Junction, Los Angeles State Historic Park, Elysian Park, Echo Park y Solano Canyon con el sistema de transporte regional accesible en Union Station*
- *Mejorar la movilidad y la accesibilidad en la región proporcionando una conexión diaria de transporte rápido aéreo de alta capacidad entre el sistema de tránsito regional en LAUS*
- *Proporcionar un centro de movilidad en la Estación de Chinatown/State Park*
- *Proporcionar un medio de transporte sostenible al operar el sistema ART usando electricidad de cero emisiones con almacenamiento de baterías de respaldo a fin de reducir las emisiones de GEI y mejorar la calidad del aire*

GENERALIDADES DEL PROYECTO

- *Proporciona una conexión de transporte permanente desde la estación Los Angeles Union Station (LAUS) hasta la propiedad del Dodger Stadium a través de un sistema de góndolas aéreas de 1.2 millas (1.9 km)*
- *El tiempo de traslado desde la estación LAUS hasta el Dodger Stadium sería de aproximadamente 7 minutos*
- *Capacidad de aproximadamente 5,000 personas por hora y por dirección*
- *Funcionamiento diario para dar servicio a los residentes, trabajadores, usuarios del parque y visitantes de Los Ángeles*
- *Da acceso al Los Angeles State Historic Park y a las comunidades circundantes a través de la estación intermedia de Chinatown/State Park*
- *Transporte rápido de cero emisiones, respetuoso del medio ambiente, el cual reduciría las emisiones de GEI al reducir los desplazamientos de vehículos en el Dodger Stadium y sus alrededores, así como en las calles de los barrios, las vías arteriales y las autopistas cercanas*

Metro

計畫介紹:

项目描述

計畫位置和路線

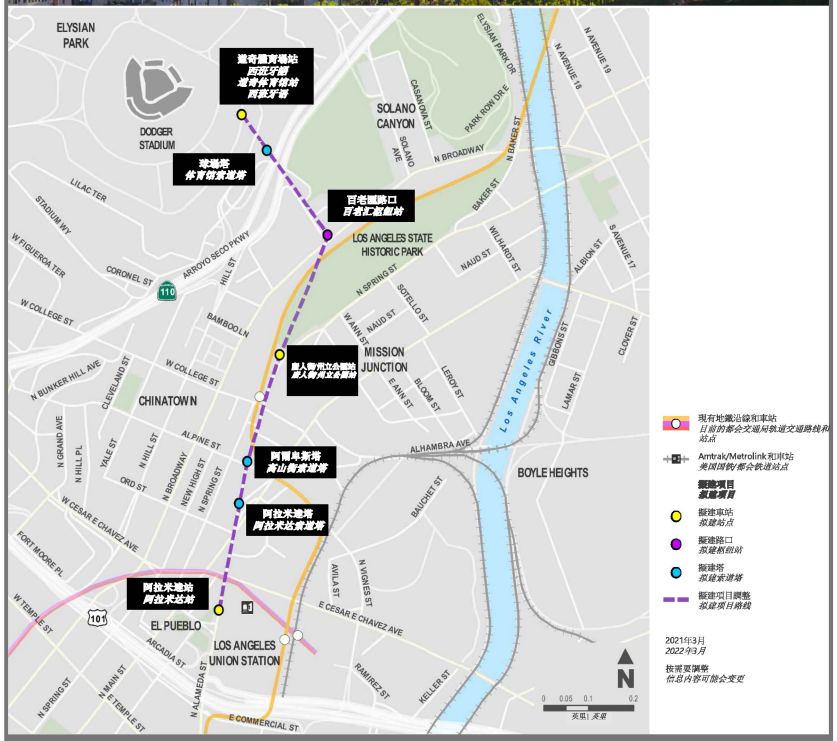
- 該計畫將在洛杉磯聯合車站和洛杉磯古城附近開始，並在道奇體育場結束，在洛杉磯州立歷史公園最南端的入口處設有一個中轉站
- 擬建計畫目路線最大限度地維護公共可行使通行權（ROW）和公有財產，以及減少使用在私人財產上空的空中權利，同時也考慮現有和未來的鄰近土地用途

目的及需要

- 透過空中快速纜車系統能提供從洛杉磯聯合車站 (LAUS) 到道奇體育場的永久交通連接
- 將唐人街、Mission Junction、伊利森公園(Elysian Park)、迴聲公園(Echo Park)和索拉諾郡峽谷(Solano Canyon)的周邊社區連接到聯合車站可到達的區域交通系統
- 透過在洛杉磯聯合車站 (LAUS) 的區域交通系統，每日提供高容量的空中快速交通，從而提高該地區的流動性和可達性
- 為唐人街/州立公園站提供交通樞紐
- 空中快速纜車系統提供一個可持續的交通方式，系統採用零排放電力和備用電池，以減少溫室氣體排放並改善空氣質量

計畫目概述

- 透過 1.2 公里的空中快速纜車系統能提供從洛杉磯聯合車站 (LAUS) 到道奇體育場的永久交通連接
- 從洛杉磯聯合車站到道奇體育場的行車時間約為7分鐘
- 每個方向每小時可容納約5,000人次
- 每天運作，為洛杉磯的現有居民、工人、公園用戶和遊客提供服務
- 透過中間的唐人街/州立公園站提供前往洛杉磯州立歷史公園和周邊社區的通道
- 零排放、環保的空中快速纜車，由於減少了道奇體育場內和周圍以及附近街道、主幹道和高速公路上的車輛出行，將減少溫室氣體排放



計畫位置和路線

项目位置和路线

项目位置和路线

- *本项目将以洛杉矶联合车站和洛杉矶古城(El Pueblo)附近为起点，以道奇体育馆为终点，还有一个中间站位于洛杉矶州立历史公园最南门入口处*
- *拟建的项目路线尽可能沿着公共通行权（ROW）和公有财产，并尽可能减少使用在私人财产上空的空中权利，同时考虑到现有和未来的邻近土地用途*

目的和需求

- *通过空中缆车系统提供从洛杉矶联合车站（LAUS）到道奇体育馆的直接交通连接*
- *连接包括唐人街、Mission Junction社区、洛杉矶州立历史公园、伊利森公园、回音（Echo）公园和索拉诺（Solano）峡谷的周边社区与联合车站的区域交通系统*
- *通过在洛杉矶联合车站的区域交通系统之间提供日常的高运力空中快捷交通连接，改善该地区的流动性和可及性*
- *在唐人街/州立公园站提供交通转换点*
- *通过空中快捷交通系统，使用零排放的电力和蓄电池，提供具有可持续性的交通方式，以减少温室气体排放及改善空气质量*

项目概况

- *通过延续1.2英里的空中缆车系统，提供从洛杉矶联合车站到道奇体育馆物业的永久性交通连接*
- *从洛杉矶联合车站到道奇体育馆的旅程约为7分钟*
- *运力为每个方向每小时约5,000人次*
- *拟建项目将每天运作，为现有居民、上班族、公园使用者和洛杉矶的访客提供服务*
- *可通过中间的唐人街/州立公园站，前往洛杉矶州立历史公园和周边社区*
- *零排放、环保的快捷交通系统，由于减少了道奇体育馆内和周围以及附近街道、主要干道和高速公路上的车辆出行，所以将减少温室气体排放*

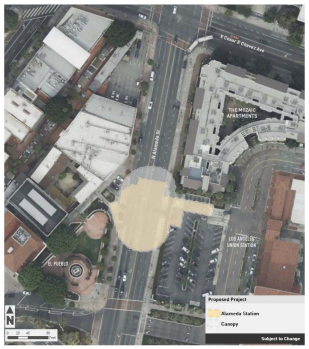
项目位置和路线

Project Description – Stations

Descripción del Proyecto – Estaciones

ALAMEDA STATION

- On Alameda Street adjacent to the planned LAUS Forecourt and Placita de Dolores between Los Angeles Street and Cesar Chavez Avenue
- Station would be approximately 173 feet long, 109 feet wide, and 78 feet high at its tallest point
- Passenger loading platform would be approximately 31 feet above Alameda Street
- Vertical circulation would be introduced on the north of the Placita de Dolores in a proposed new pedestrian plaza at El Pueblo and on the east from the planned LAUS Forecourt



ESTACIÓN ALAMEDA

- *En Alameda Street, junto a la explanada planeada de LAUS y la Placita de Dolores, entre Los Angeles Street y Cesar Chavez Avenue*
- *Esta estación tendría aproximadamente 173 pies (52 m) de largo, 109 pies (33 m) de ancho y 78 pies (24 m) de alto en su punto más alto.*
- *El andén de abordaje de pasajeros estaría aproximadamente a 31 pies (9.5 m) sobre la calle Alameda Street*
- *La circulación vertical se introduciría al norte de la Placita de Dolores, en una nueva plaza peatonal propuesta en El Pueblo y en el este desde la zona prevista de la explanada de LAUS*

CHINATOWN/STATE PARK STATION

- Adjacent to Spring Street in the southernmost portion of the Los Angeles State Historic Park
- Southern portion would be located on City ROW, with northern portion integrated into the southern boundary of the Los Angeles State Historic Park
- Station would be approximately 200 feet long, 80 feet wide, and 98 feet tall at its tallest point
- Passenger boarding platform approximately 50 feet above-grade
- Access to the boarding platform would be from the mezzanine via elevators and stairs
- Would include the installation of landscaping and hardscaping, including integration of the granite pavers

ESTACIÓN CHINATOWN/STATE PARK

- *Adyacente a Spring Street, en la parte que está más al sur del parque Los Angeles State Historic Park.*
- *La parte sur de la estación se situaría en el derecho de paso de la Ciudad, con la parte norte integrada al límite sur del Los Angeles State Historic Park.*
- *La estación tendría aproximadamente 200 pies (61 m) de largo, 80 pies (24 m) de ancho y 98 pies (30 m) de alto en su punto más alto.*
- *El andén de abordaje de pasajeros estaría aproximadamente a 50 pies (15 m) sobre el nivel del suelo*
- *El acceso al andén de abordaje se realizaría desde el entrepiso, mediante ascensores y escaleras*
- *Incluiría la creación de jardines e instalaciones, incluyendo la integración de los adoquines de granito*

DODGER STADIUM STATION

- Southeast portion of the Dodger Stadium property near the Downtown Gate
- Station would be approximately 194 feet long, 80 feet wide, and 74 feet high at its tallest point
- Cabins at this station would arrive and depart from an at-grade boarding platform, with the passenger queuing area also at-grade
- Would include a subterranean area below the platform for storage and maintenance of cabins, as well as staff break rooms, lockers, and parts storage areas
  - Cabins would be returned to and stored at Dodger Stadium Station when the system is not in use (after hours)
- Restrooms for passenger use would be located at the station
- Dodger Stadium Station would also include a pedestrian connection to Dodger Stadium, including hardscape and landscape improvements and potential seating

ESTACIÓN DODGER STADIUM

- *Parte sureste de la propiedad del Dodger Stadium, cerca de la entrada Downtown Gate*
- *La estación tendría aproximadamente 194 pies (59 m) de largo, 80 pies (24 m) de ancho y 74 pies (23 m) de alto en su punto más alto*
- *Las cabinas de esta estación llegarían y saldrían de un andén de abordaje a nivel, con la zona de cola de pasajeros también a nivel*
- *Incluiría una zona subterránea bajo el andén para el almacenamiento y el mantenimiento de las cabinas, así como salas de descanso para el personal, taquillas y zonas de almacenamiento de repuestos*
  - *Cuando el sistema no esté en uso, las cabinas se devolverían a la Estación Dodger Stadium y ahí se almacenarían (en las horas en las que no operarían)*
- *Los baños para uso de los pasajeros estarían en la estación*
- *La Estación Dodger Stadium también incluiría una conexión peatonal con el Dodger Stadium, incluyendo mejoras paisajísticas y de las instalaciones, así como posibles asientos*

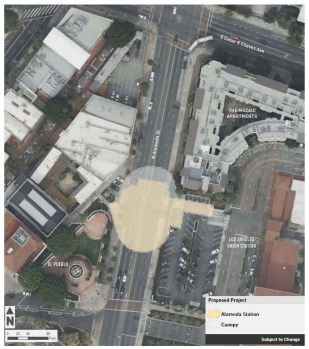
Metro

計畫描述 - 車站

项目描述 - 车站

阿拉米達站

- 阿拉米達站將位於阿拉米達街，毗鄰計劃中的洛杉磯大學前院和洛杉磯街與塞薩爾查韋斯大道之間的加利福尼亞洛杉磯的公園(Placita de Dolores)。
- 該站大約長194英尺，寬80英尺，最高點高74英尺。
- 上下客平台高度約為阿拉米達街上方 31 英尺處
- El Pueblo 擬建的新步行廣場位於Placita de Dolores 以北，該處與洛杉磯聯合車站(LAUS)前院以東位置將計劃引入垂直流通設備



阿拉米达站

- *阿拉米达站将位于阿拉米达街，与计划中的联合车站前广场和洛杉矶街与塞萨尔查韦斯大道之间的Placita de Dolores相邻*
- *车站大约将有173英尺长，109英尺宽，最高点离地面78英尺*
- *乘车平台将高出阿拉米达街约31英尺*
- *将从Placita de Dolores的北部、在洛杉矶古城的拟建的新行人广场上引入垂直流通设施，东边是规划中的联合车站前广场*

唐人街/州立公園站

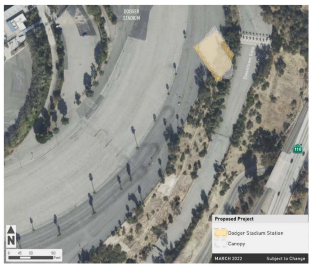
- 毗鄰洛杉磯州立歷史公園最南端的春天街
- 南部將位於城市通行道路上，北部與洛杉磯州立歷史公園的南部邊界結合
- 該站大約長194英尺，寬80英尺，最高點高74英尺
- 乘客月台比地面高約 50 英尺
- 透過電梯和樓梯從夾層進入月台
- 將包括安裝景觀美化和人工景觀美化，包括整合花崗岩鋪面機

唐人街/州立公园站

- *车站将位于洛杉矶州立历史公园最南端的春天街附近*
- *车站的南半部分将位于公共通行权范围，而北半部分将与洛杉矶州立历史公园的南部边界融为一体*
- *车站将有大约200英尺长，80英尺宽，最高点离地面98英尺*
- *乘车平台高出地面约50英尺*
- *通过电梯和楼梯，可以从中层楼进入乘客站台*
- *将包括安装自然景观以及硬景观，包括使用花岗岩铺面*

道奇體育場站

- 道奇體育場東南部,近市中心入口大門
- 該站大約長194英尺，寬80英尺，最高點高74英尺。
- 該站的列車將在同一鐵道上的月月台到達和離開，乘客排隊等候區也在同一鐵道上。
- 道奇體育場站將包括平台下方的地下區域，用於儲存和維護車廂，以及成為員工休息室、儲物櫃和零件儲存區。
  - 當系統不在使用時，車廂將被送回並存放在道奇體育場站。
- 站內設有供乘客使用的洗手間。
- 道奇體育場站還將包括與道奇體育場的行人連接道，包括人工景觀和自然景觀改善以及潛在的座位。



道奇体育馆站

- *位于道奇体育馆物业西南部分，靠近市中心的大门处*
- *车站大约将有194英尺长，80英尺宽，最高点离地面74英尺*
- *在该站的缆车车厢将在同一水平面上让乘客抵达和离开，乘客排队等候区也在同一水平面*
- *车站将包括站台下方的地下区域，用于储存和维护缆车车厢，以及用作工作人员的休息室、储物柜和零件储存区*
  - *当系统不使用时（运营时间结束后），缆车车厢将返回道奇体育馆站并存放在该站*
- *供乘客使用的洗手间将设在车站内*
- *道奇体育馆站还将包括通往道奇体育馆的步行通道，包括硬景观和自然景观美化措施以及增加潜在的座位*

Metro

Project Description – Towers and Junction

Descripción del Proyecto – Torres e Intersección

ALAMEDA TOWER

- Located on the Alameda Triangle, a City ROW between Alameda Street, North Main Street, and Alhambra Avenue
- 195 feet tall with the cable suspended 175 feet above ground
- Landscape and hardscape updates to the Alameda Triangle, including reuse and integration of existing pavers

TORRE ALAMEDA

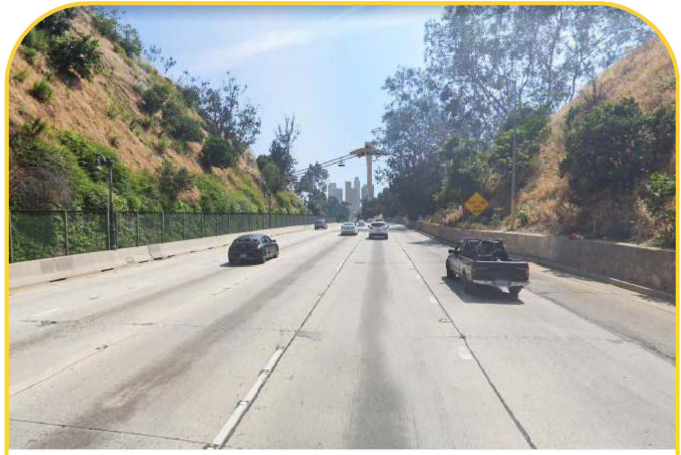
- *Situada en el Triángulo de la Alameda, un derecho de paso de la Ciudad entre Alameda Street, North Main Street y Alhambra Avenue*
- *195 pies (59 m) de altura y el cable estaría suspendido a 175 pies (53 m) sobre el suelo*
- *Actualizaciones del paisaje y las instalaciones del Triángulo de la Alameda, incluyendo la reutilización e integración de los adoquines existentes*

ALPINE TOWER

- Located northeast corner of Alameda Street and Alpine Street, adjacent to the Metro L Line (Gold)
- Site is City-owned parcel, currently being used as non-public parking storage for City vehicles
- 195 feet tall at tallest point, with the cable suspended 175 feet above ground
- Landscaping and hardscaping near the base of the tower

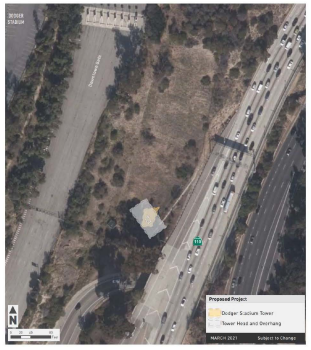
TORRE ALPINE

- *Situada en la esquina noreste de Alameda Street y Alpine Street, junto a la Línea L del Metro (Dorada)*
- *Es un terreno propiedad de la Ciudad, que actualmente se utiliza como estacionamiento no público para vehículos de la Ciudad.*
- *195 pies (59 m) de altura en el punto más alto y el cable estaría suspendido a 175 pies (53 m) sobre el suelo*
- *Paisajismo e instalaciones cerca de la base de la torre*



STADIUM TOWER

- Located on hillside private property north of Stadium Way between the Dodger Stadium Downtown Gate and SR-110
- 179 feet tall with the cable suspended 159 feet above-ground with landscaping near the base of the tower

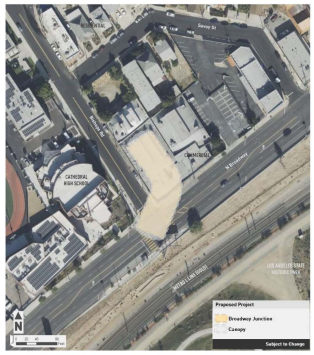


TORRE DEL ESTADIO

- *Ubicada en una propiedad privada al norte de Stadium Way, entre la entrada del Dodger Stadium Downtown Gate y la SR-110.*
- *179 pies (55 m) de altura con el cable suspendido 159 pies (48 m) por encima del suelo y con jardines cerca de la base de la torre*

BROADWAY JUNCTION

- Non-passenger junction that would be located at the intersection of North Broadway and Bishops Road
- Existing commercial building located at 1201 N. Broadway would be demolished
- Junction approximately 227 feet long, 60 feet wide, and 98 feet high at tallest point



INTERSECCIÓN BROADWAY

- *Intersección o entronque que no es para pasajeros y que estaría localizada donde se cruzan North Broadway y Bishops Road*
- *El edificio comercial existente situado en el 1201 de N. Broadway sería demolido*
- *La intersección tendría aproximadamente 227 pies (69 m) de largo, 60 pies (18 m) de ancho y 98 pies (30 m) de alto en su punto más alto.*

Metro

計畫描述 - 支撐塔和路口

项目描述 - 索道塔和枢纽站

阿拉米達塔

- 位於阿拉米達三角區，阿拉米達街、北大街和阿爾罕布拉大道之間的城市通行道路上
- 高 195 英尺，電纜懸掛於地面以上 175 英尺處
- 阿拉米達三角區的景觀和人工景觀更新，包括重用和整合現有攤舖機

阿爾卑斯塔

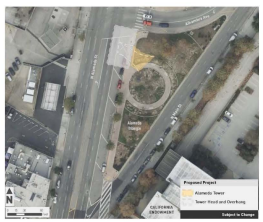
- 位於阿拉米達街和阿爾卑斯街東北角，毗鄰地鐵L線（金）
- 地點屬城市擁有的地段，目前用作城市車輛的非公共停車場
- 最高點為 195 英尺，電纜懸空 175 英尺
- 塔底附近的景觀美化與人造景觀美化

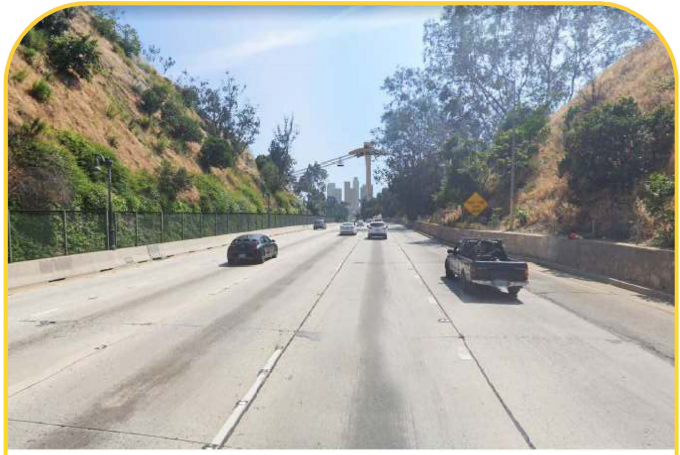
阿拉米达索道塔

- *位于阿拉米达三角区，是阿拉米达街、北主街和阿罕布拉大道之间的公共通行权范围*
- *索道塔将有195英尺高，缆线悬挂在离地面175英尺处*
- *对阿拉米达三角带的自然景观和硬景观进行美化升级，包括重新使用和整合现有的路面铺面*

高山街索道塔

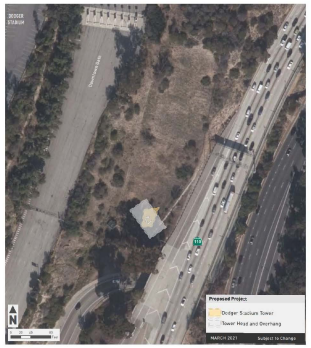
- *位于阿拉米达街和高山街的东北角，与轻轨L线（金线）相邻*
- *该地块为市属地块，目前为城市车辆的非公共停车场*
- *索道塔最高点将为195英尺，缆线悬挂在离地面175英尺处*
- *索道塔附近的自然景观和硬景观美化*





球場塔

- 位於道奇體育場市中心大門與 SR-110 之間的體育場路以北的私人物業的山坡上
- 高 179 英尺，電纜懸空 159 英尺，於塔底附近進行景觀美化

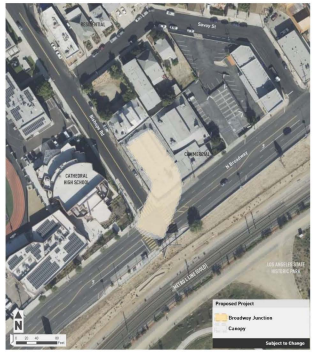


体育馆索道塔

- *位于体育馆路以北的山坡上的私人物业，夹在道奇体育馆市中心大门和SR-110州道之间*
- *高179英尺，缆线悬挂在距离地面159英尺处，塔底附近有景观*

百老匯路口

- 百老匯路口是一個非客運路口，將位於北百老匯和主教路的交匯處。
- 位於百老匯北部1201的現有商業大廈將被拆除。
- 路口約長 227 英尺，寬 60 英尺，最高點為 98 英尺



百老汇枢纽站

- *是一个非客运枢纽站，将位于北百老汇和主教路的交叉路口*
- *位于1201 N. 百老汇街的现有商业建筑将被拆除*
- *车站大约将有227英尺长，60英尺宽，最高点离地98英尺*

Metro

Aesthetics

Estética

WHAT WAS STUDIED?

- Visual impacts of Project components surrounding the Project alignment
- Key observation points representing visual character, including presence or absence of landscaping, predominant land uses, the scale of buildings, or the major scenic vistas, scenic resources, and substantive visual elements that are available, such as open space resources, street trees, and building frontages
- Viewers and viewer response, including pedestrians and recreationalists (e.g., park users)
- While there are no designated scenic vistas, views of the downtown Los Angeles skyline, Union Station, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium, and the San Gabriel and San Bernardino Mountains
- Light and glare

KEY ANALYSIS AND IMPACT CONCLUSIONS

- The proposed Project would not significantly block scenic or panoramic views, such as views of the downtown Los Angeles skyline, Union Station, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium, and the San Gabriel and San Bernardino Mountains
- With the proposed Project's entitlements and approvals – which would include design standards to enhance the visual identity and character of the proposed Project and its surrounding communities – there would not be a conflict with applicable zoning or other regulations governing scenic quality
- The proposed Project would not create a substantial source of light or glare and would comply with applicable City lighting regulations

Topic	Finding	
	Construction	Operations
Scenic Vista	Less Than Significant	Less Than Significant
Scenic Resources	No Impact	No Impact
Visual Character	Less Than Significant	Less Than Significant
Light and Glare	Less Than Significant	Less Than Significant

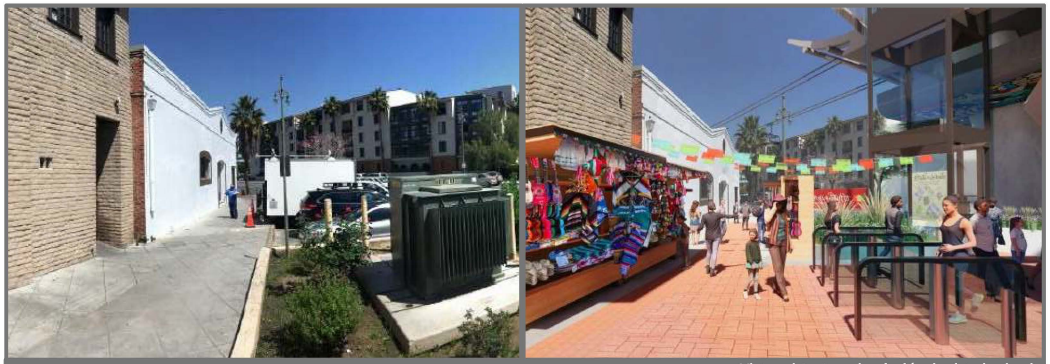
HOW WOULD IMPACTS BE MINIMIZED?

- Construction: Barriers and sound walls would include a privacy screen, and the Project would implement best management practices to reduce visual impacts. No mitigation is required.
- Operation: Project design features, including for building lighting and sign lighting. No mitigation is required.

Metro

Existing and simulation looking northwest from LAUS

Vista existente y simulación de vista hacia el noroeste desde LAUS



Existing and simulation looking northwest from new pedestrian plaza west of Alameda Station

Vista existente y simulación de vista hacia el noroeste desde la nueva plaza peatonal al oriente de la Estación de Alameda

Existing and simulation looking North on Alameda Street from Main Street

Vista existente y simulación de vista hacia el norte en Alameda Street desde Main Street

¿QUÉ SE ESTUDIÓ?

- *Impactos visuales de los componentes del proyecto que rodean la ruta del proyecto*
- *Puntos de observación clave que representan el carácter visual, incluyendo la presencia o ausencia de jardines, los usos predominantes del suelo, la escala de los edificios o las principales vistas escénicas, los recursos escénicos y los elementos visuales sustanciales disponibles, como los recursos de espacios abiertos, los árboles de las calles y las fachadas de los edificios*
- *La respuestas de quienes perciben estas vistas, incluyendo los peatones y quienes realizan actividades recreativas (por ejemplo, los usuarios de los parques)*
- *Aunque no hay vistas escénicas designadas, las vistas del horizonte del centro de Los Ángeles, Union Station, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium y las montañas de San Gabriel y San Bernardino*
- *Luz y Deslumbramiento*

ANÁLISIS Y CONCLUSIONES CLAVE DEL IMPACTO

- *El proyecto propuesto no bloquearía de manera significativa las vistas panorámicas o escénicas, como las vistas del horizonte del centro de Los Ángeles, Union Station, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium, y las montañas de San Gabriel y San Bernardino*
- *Con las autorizaciones y aprobaciones del proyecto propuesto – que incluirían normas de diseño para mejorar la identidad visual y el carácter del proyecto propuesto y sus comunidades circundantes – no habría conflicto con la zonificación aplicable u otras regulaciones que rigen la calidad escénica*
- *El proyecto propuesto no crearía una fuente sustancial de luz o deslumbramiento y cumpliría con la normativa de iluminación de la Ciudad*

Tema	*Resultado*	
	Construcción	*Operaciones*
Vista Escénica	*Menos que significativo*	*Menos que significativo*
Recursos Escénicos	*Sin impacto*	*Sin impacto*
Carácter Visual	*Menos que significativo*	*Menos que significativo*
Luz y Deslumbramiento	*Menos que significativo*	*Menos que significativo*

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

- *Construcción: Las barreras y los muros contra ruido incluirían una pantalla de privacidad, y el proyecto recurriría a las mejores prácticas de gestión para reducir los impactos visuales. No se requiere mitigación.*
- *Operación: Características del diseño del proyecto, incluyendo la iluminación de edificios y la iluminación de los letreros. No se requiere mitigación.*

美學

美学

研究範圍是甚麼？

- 圍繞計畫路線的計畫組件對視覺上的影響
- 體現視覺個性的主要觀察點，包括景觀的存在與否、主要土地用途、建築規模或主要景觀、景觀資源和可用的重要視覺元素，例如:開放空間資源、街道上的樹木和建築物前的空地等
- 觀賞者與其反應，包括行人和康樂設施使用者（例如:公園使用者）
- 縱使沒有指定的風景區，人們仍可以欣賞到洛杉磯市中心的天際線、聯合車站、洛杉磯古城、洛杉磯州立歷史公園、阿羅約塞科公園大道、道奇體育場以及聖蓋博和聖貝納迪諾山脈的景觀
- 光線與強光

關鍵分析和影響總結

- 擬建計畫不會顯著阻礙風景或全景，包括洛杉磯市中心天際線、聯合車站、洛杉磯古城、洛杉磯州立歷史公園、阿羅約塞科公園大道、道奇體育場以及聖加布里埃爾和聖貝納迪諾山脈的景觀
- 擬議計畫目的權利和批准將不會與相關分區或其他管理風景質量的法規互相衝突---當其中包括設計標準，以增強擬建計畫及其周邊社區的視覺識別和特徵
- 擬建計畫將不會產生大量光線或強光，並符合相關城市照明法規

主題	發現	
	建築工程：	操作
優美景觀	影響不大。	影響不大。
風景資源	沒有影響。	沒有影響。
視覺特徵	影響不大。	影響不大。
光線與強光	影響不大。	影響不大。

如何可將影響降至最低?

- 建築工程：一個隱私屏幕將加設於屏障和隔音牆中，使計畫的視覺影響減低。無需採取緩解措施。
- **營運:計畫設計特徵，包括建築燈光和標示牌上的燈光。無需採取緩解措施。**

研究内容

- *围绕项目路线的项目组成部分的视觉影响*
- *代表视觉特征的主要观察点，包括是否有景观美化、主要土地用途、建筑物的规模，或主要的自然景观、风景资源和可用的实质性视觉元素，如开放空间资源、行道树和建筑物正面*
- *观看者及观看者反应，包括行人和休闲者（如公园使用者）*
- *虽然没有指明的自然风景，但可以看到洛杉矶市中心的天际线、联合车站、洛杉矶古城、洛杉矶州立历史公园、阿罗约·塞科（Arroyo Seco）林荫大道、道奇体育馆以及圣加布里埃尔（San Gabriel）山脉和圣贝纳迪诺（San Bernardino）山脉的风景*
- *光线与眩光*

重点分析与影响总结

- *拟建项目不会严重阻挡风景和全景景观，例如洛杉矶市中心的天际线、联合车站、洛杉矶古城、洛杉矶州立历史公园、阿罗约·塞科林荫大道、道奇体育馆以及圣加布里埃尔山脉和圣贝纳迪诺山脉的风景*
- *拟建项目获得的资格与批准 - 其中包括提高拟建项目就以周边社区的视觉特性及特点的设计标准 - 不会与适用的分区或其他管理风景质量的法规发生冲突*
- *拟建项目不会发出大量光线或眩光，并将遵守适用的城市照明法规*

主题	查找

自然风景	影响不重大	影响不重大
景观资源	无影响	无影响
视觉特征	影响不重大	影响不重大
光线与眩光	影响不重大	影响不重大

如何最大限度地减少影响？

- *建筑施工：屏障和隔音墙将包括一个隐私屏。本项目将实行最佳管理做法，以减少视觉影响。无须采取缓解措施。*
- ***运营**：项目设计特点，包括建筑照明和指示牌照明。无须采取缓解措施。*

Metro

Aesthetics

Estética

OVERALL DESIGN GOAL

- Design goal is to develop a common architectural design that unifies the overall aerial gondola system, while allowing for each major component to contribute to the respective localized urban condition
- Of equal importance is the desire to minimize the perceived scale and mass of the stations non-passenger junction, and towers

STATION & JUNCTION DESIGN SYSTEM

- Colors for the material finishes at each station and junction will be selected to be complementary to each of the respective sites and surrounding urban fabric
- Each station could also provide an opportunity for site specific pertaining to community involvement artist collaboration, and certain components of rail including station design, trees and other landscaping, signage, street and pedestrian lighting, and public art
- Pedestrian access enhancements, including hardscape and landscape improvements, are proposed at each of the station locations

TOWER DESIGN STRATEGY

- The towers would be designed as monopoles and would support the steel cables required for the 3S system
- Mechanical equipment would provide rope control and maintenance functions. The track ropes are supported by the profile beams. Between the profile beams, the haul rope rides on a series of wheels, or sheaves, which maintain the rope position
- Each of the towers is designed so that their bases would not impede adjacent vehicular and pedestrian circulation
- Towers painted a neutral light-tone gray color for consistency with the surrounding urban environment

Alameda Station, viewed from Los Angeles Union Station

Estación Alameda vista desde Los Angeles Union Station

Broadway Junction

Intersección Broadway

Alameda and Alpine Tower

Torre Alameda y Alpine

Dodger Stadium Station

Estación Dodger Stadium

OBJETIVO GENERAL DEL DISEÑO

- El objetivo del diseño es desarrollar un diseño arquitectónico común que unifique el sistema general de góndolas aéreas, permitiendo al mismo tiempo que cada componente principal contribuya a su respectiva condición urbana localizada
- De igual importancia es el deseo de minimizar la masa y la escala percibida de las estaciones, la intersección que no es para pasajeros y las torres.

SISTEMA DE DISEÑO DE ESTACIONES E INTERSECCIÓN

- *Los colores de los acabados de los materiales de cada estación y la intersección se seleccionarán de manera que se complementen con cada uno de los emplazamientos respectivos y el tejido urbano circundante*
- *Cada estación también podría ofrecer una oportunidad para la colaboración artística con la comunidad y ciertos componentes de las vías de movimiento, como el diseño de la estación, los árboles y otros elementos paisajísticos, la señalización, la iluminación peatonal y de las calles, y el arte público.*
- *En cada una de las estaciones se proponen mejoras en los accesos peatonales, incluyendo las mejoras paisajísticas y de las instalaciones.*

ESTRATEGIA DEL DISEÑO DE LAS TORRES

- *Las torres se diseñarán como monopostes y soportarán los cables de acero necesarios para el sistema 3S*
- *Los equipos mecánicos se encargarían de las funciones de control y mantenimiento de los cables. Los cables de las vías de movimiento se apoyan en las vigas de perfil. Entre las vigas de perfil, el cable de tracción se desplaza sobre una serie de ruedas, o poleas, que mantienen la posición del cable*
- *Cada una de las torres está diseñada para que sus bases no impidan la circulación adyacente de vehículos y peatones*
- *Las torres se pintan de un color gris claro neutro para que armonicen con el entorno urbano.*

Metro

美學

美学

整體設計目標

- 設計目標是以通用的建築設計，統一整個空中纜車系統，同時令每個主要部份按城市的狀況融入該市
- 非客運樞紐站和支撐塔所承受的壓力與人流最小化的問題同樣重要

車站和路口設計系統

- 將細心挑選每個站點和路口的飾面材料與顏色，讓車站點與其周圍的城市面貌互相融合
- 車站可為社區參與藝術家提供相關場地的合作機會，以及鐵路的某些組成部分，包括車站設計、樹木和其他景觀、標示、街道和行人照明以及公共藝術
- 建議在每個車站位置加強行人通道，包括人工景觀和自然景觀改善

塔樓設計策略

- 這些塔將採取單桿設計，並將支撐 3S 系統所需的鋼纜
- 機械設備將提供繩索控制和維護功能。承載鋼索由吊樑支撐。吊樑之間，牽引繩索繫於一系列輪子或滑輪上，這些輪子或滑輪穩定繩索位置
- 每座塔的設計都確保其基座不會阻礙相鄰的車輛及行人通道
- 房屋塗上了淡淺灰色，使其與周邊城市環境保持一致，

從洛杉磯聯合車站看阿拉米達車站的景觀

从洛杉矶联合车站看去的阿拉米达站

百老匯路口

百老汇枢纽站

阿拉米達和阿爾卑斯塔

阿拉米达索道塔和高山街索道塔

道奇體育場站

道奇体育馆站

总体设计目标

- 设计目标是开发一个共用的建筑设计，使整个空中交通索道系统联合起来，同时让每个组成部分对各自所在地的城市状况作出贡献
- 同样重要的是，要尽量减少车站、非客运枢纽站和和索道塔的感知规模和感知质量

车站及枢纽站设计系统

- 每个车站和枢纽站口的材料饰面将选择与每个相应的地点和周围的城市结构互补的颜色
- 每个车站还可以为各个地方特定的社区参与艺术家合作提供机会。索道的若干组成部分包括车站设计、树木和其它景观美化、指示牌、街道和行人照明以及公共艺术
- 拟议在各个车站地点对人行道进行升级，包括硬景观和自然景观美化

索道塔设计策略

- 索道塔将设计成单极，并将支持3S系统所须的钢索
- 机械设备将提供缆线控制和维护功能。轨道索由型材横梁支撑。型材横梁之间，牵引索由一系列轮子或滑轮驱动并且使其维持位置。
- 每个索道塔均设计为不妨碍邻近的车辆与行人通行
- 塔楼涂成中性的浅灰色，与周围的城市环境保持一致

Metro

Air Quality, Greenhouse Gas, and Energy - Operation

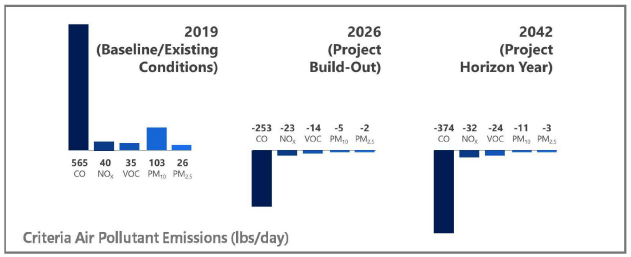
Calidad del Aire, Gases de Efecto Invernadero y Energía - Operación

WHAT WAS STUDIED?

- Project Operation
  - Maximum daily operational emissions (pounds per day [lb/day])
  - Greenhouse gas emissions from operation (metric tons/year [MT/yr])
  - Operational energy usage

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project is expected to result in a net reduction in vehicle miles traveled thereby decreasing the associated criteria air pollutant emissions compared to existing conditions



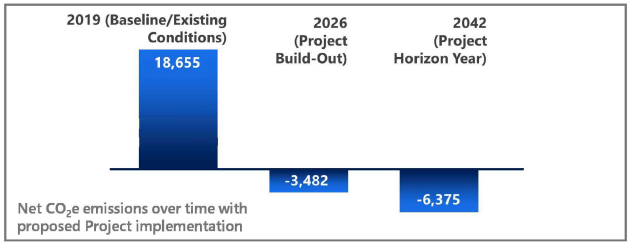
Criteria Air Pollutant Emissions (lbs/day)

IMPACT CONCLUSIONS

Topic	Finding
	Operation
Mass Daily Operational Emissions	Less Than Significant
Operational Greenhouse Gas Impacts	Less Than Significant
Operational Energy Usage	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

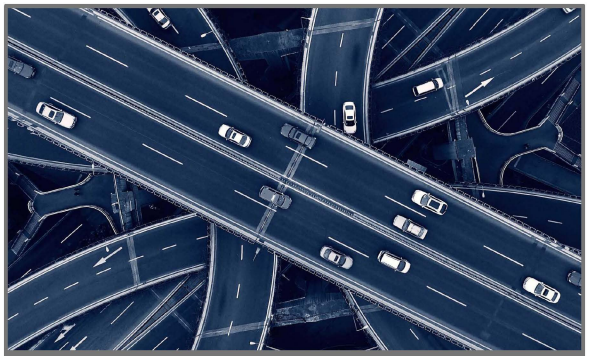
- Operation:
  - Open-air station design to allow for passive ventilation strategies
  - Rely on City of Los Angeles Department of Water and Power's Green Power Program
  - Back-up power supplied by batteries rather than diesel generators
  - Innovative transportation alternative reduces vehicle miles traveled and achieves a net reduction in emissions



Net CO_2e emissions over time with proposed Project implementation

Los Angeles Department of Water and Power's Green Power Program uses a combination of wind and solar energy.

El Programa Green Power del Departamento de Agua y Energía de Los Ángeles utiliza una combinación de energía eólica y solar.



Reduced vehicle miles traveled

Menos Millas Viajadas en Vehículos

The lifetime emissions of the Project would be a reduction of 166,653 metric tons of GHGs.

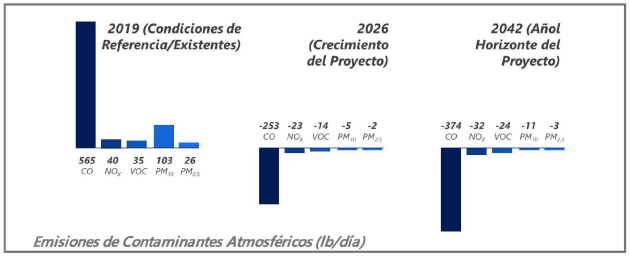
Las emisiones a lo largo de la vida del proyecto supondrían una reducción de 166,653 toneladas métricas de GEI.

¿QUÉ SE ESTUDIÓ?

- Operación del Proyecto
  - Emisiones diarias máximas de las operaciones (libras por día [lb/día])
  - Emisiones de gases de efecto invernadero de las operaciones (toneladas métricas/año [TM/año])
  - Uso de energía de las operaciones

ANÁLISIS Y CONCLUSIONES CLAVE

- Se espera que el proyecto propuesto traiga consigo a una reducción neta de las millas viajadas en vehículos (VMT), reduciendo así las emisiones de contaminantes atmosféricos correspondientes en comparación con las condiciones existentes



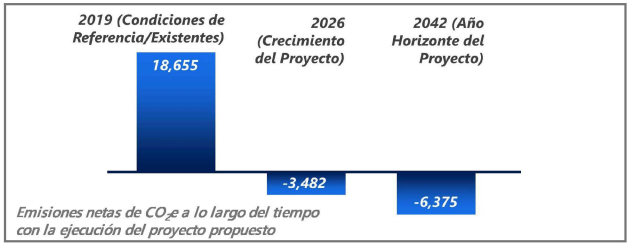
Emisiones de Contaminantes Atmosféricos (lb/día)

CONCLUSIONES SOBRE EL IMPACTO

Tema	*Resultado*
	Operación
Emisiones Masivas Diarias de las Operaciones	*Menos que significativo*
Impacto de los Gases de Efecto Invernadero de las Operaciones	*Menos que significativo*
Uso de Energía de las Operaciones	*Menos que significativo*

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

- Operación:
  - Diseño de la estación al aire libre para permitir estrategias de ventilación pasiva
  - Utilizando el programa de energía verde Green Power del Departamento de Agua y Energía de la Ciudad de Los Ángeles
  - Energía de reserva suministrada por baterías en lugar de generadores de diesel
  - Innovadora alternativa de transporte que reduce las millas viajadas en vehículos y logra una reducción neta de emisiones



Emisiones netas de CO_2e a lo largo del tiempo con la ejecución del proyecto propuesto

Metro

空氣品質、溫室氣體和能源 - 營運

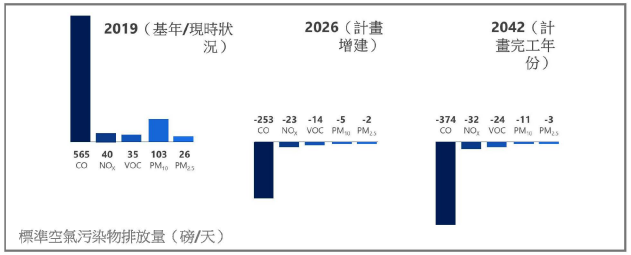
空气质量、温室气体和能源 - 运营

研究範圍是甚麼？

- 計畫目營運
  - 每日最高營運排放量（磅/天）
  - 營運產生的溫室氣體排放量（公噸/年）
  - 營運能源使用

主要分析及結論

- 與現時情況相比，擬議項目預計將令車輛行駛淨里程減少，從而減少相關標準空氣污染物排放



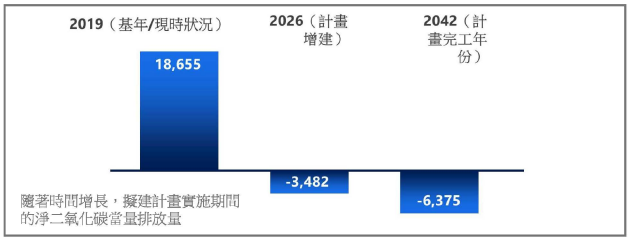
標準空氣污染物排放量（磅/天）

影響總結

主題	發現
	營運:
營運帶來的大量日常排放	影響不大。
營運帶來的溫室氣體影響	影響不大。
營運能源使用	影響不大。

如何可將影響降至最低?

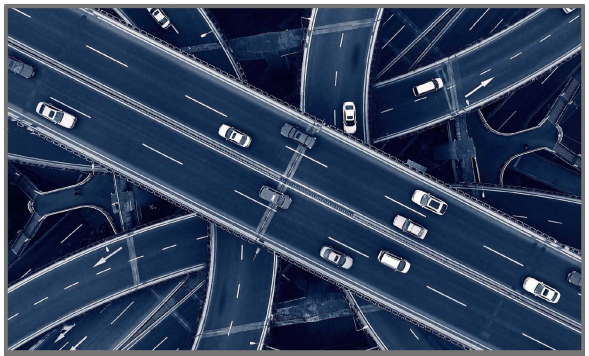
- **營運:**
  - 以露天車站設計採用被動式通風策略
  - 跟隨洛杉磯市水電局的綠色電力計劃
  - 使用電池而非柴油發電機提供的備用電源
  - 創新的交通方式減少車輛行駛里程，並減少淨排放量



隨著時間增長，擬建計畫實施期間的淨二氧化碳當量排放量

洛杉磯水電部的綠色電力計劃使用風能和太陽能。

洛杉矶市水电局的绿色电力计划使用风力发电与太阳能发电相结合的方式。



減少車輛行駛里程

减少的行车里程

項目的總溫室氣體排放量將減少 166,653 公噸。

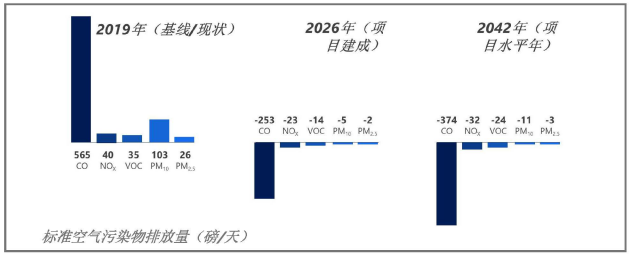
*该项目整个使用期的排放量将减少**166,653 公吨温室气体。***

研究内容

- 项目运营
  - 运营的每日排放量上限（磅/天）
  - 运营中的温室气体排放（公吨/年）
  - 运营的能源使用

重点分析及总结

- 与现状相比，预计拟建项目将使得行车里程（VMT）出现净减少，从而减少相关标准的空气污染物排放



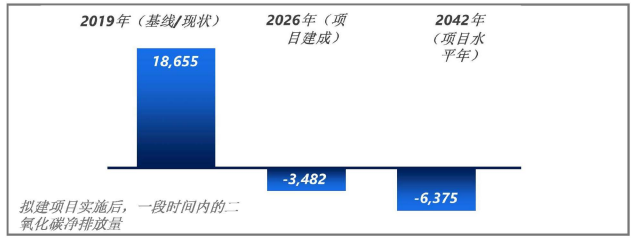
标准空气污染物排放量（磅/天）

影响总结

主题	*查找*
	运营
大规模日常运营排放	*影响不重大*
运营导致的温室气体影响	*影响不重大*
运营能源使用	*影响不重大*

如何最大限度地减少影响？

- 运营：
  - 露天的车站设计，实现被动通风策略
  - 依托洛杉矶市水电局的绿色电力计划
  - 由电池而非柴油发电机提供备用电力
  - 创新的交通方式减少了行车里程，实现了净减排



拟建项目实施后，一段时间内的二氧化碳净排放量

Metro

Archaeology

Arqueología

WHAT WAS STUDIED?

- The Area of Direct Impacts (a three-dimensional area of potential ground disturbance in the maximum Project footprint) for archaeological resources
- Studied both maps of known resources discovered by other projects and potential resources based on historic maps, soil maps and Native American Consultation. Also conducted surveys

KEY ANALYSIS AND CONCLUSIONS

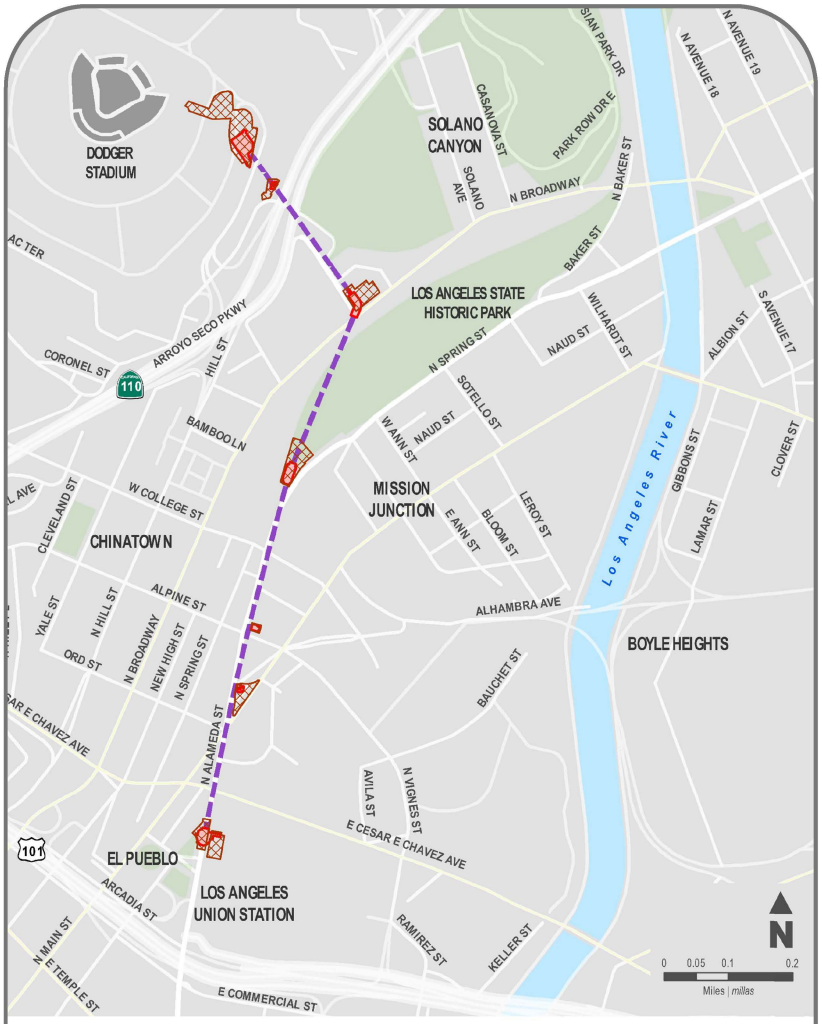
- Nine archaeological resources had been previously recorded within the Area of Direct Impacts, including one multi-component (prehistoric and historic) and eight historic-age archaeological sites that are currently paved over
- No new surface-visible archaeological resources were revealed in the Area of Direct impacts from the pedestrian survey
- Avoidance/preservation of significant resources is always the first choice, but where avoidance is not possible, other measures are necessary to minimize impacts to a level that is less than significant. These include:
  - CUL-A: Cultural Resources Monitoring and Mitigation Plan
  - CUL-B: Archaeological Resources Worker Training Program
  - CUL-C: Archaeological Testing Plan for 19-000887 and 19-004320 (Alameda Station)
  - CUL-D: Archaeological Testing Plan for LAUS Forecourt
  - CUL-E: Archaeological Testing Plan for Los Angeles State Historic Park
  - CUL-F: Redesign of Placement of Park Amenity Structures to Avoid Archaeological Features at Los Angeles State Historic Park Station

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Archaeological Resource	Less Than Significant with Mitigation	No Impact
Disturb Human Remains	Less Than Significant with Mitigation	No Impact

HOW WOULD IMPACTS BE MINIMIZED?

- A Cultural Resources Monitoring and Mitigation Plan and a Paleontological Monitoring and Mitigation Plan prepared by qualified archaeologist prior to construction to lay out protocols for monitoring during construction
- Archaeological Resources Worker Training Program to mitigate unknown historical resources within Area of Direct Impacts conducted with input from El Pueblo and Los Angeles State Historic Park staff prior to start of ground-disturbing activities
- Archaeological Testing Plan for certain resources at Alameda Station and Chinatown/State Park Station prepared prior to ground-disturbing activities
- Potential Redesign of Placement of Park Amenity Structures to Avoid Archaeological Features at Los Angeles State Historic Park



Ground Disturbance and Staging Areas | *Áreas de Preparación y Alteración del Suelo*

Proposed Project Alignment | *Ruta del Proyecto Propuesto*

Stations/Junction/Towers | *Estaciones/Intersecciones/Torres*

APRIL 2022 | *ABRIL DE 2022*

Subject to Change | *Sujeto a cambios*

Area of Direct Impacts for Broadway Alignment Alternative

Área de Impactos Directos para la Ruta Alternativa de Broadway

¿QUÉ SE ESTUDIÓ?

- *El Área de Impactos Directos (un área tridimensional de alteración potencial del suelo en la huella máxima del proyecto) para los recursos arqueológicos*
- *Se estudiaron tanto los mapas de recursos conocidos descubiertos por otros proyectos como los recursos potenciales basados en mapas históricos, mapas de suelos y consultas con nativos americanos. También se realizaron sondeos*

ANÁLISIS Y CONCLUSIONES CLAVE

- *Se habían registrado previamente nueve recursos arqueológicos dentro del Área de Impactos Directos, incluyendo un sitio multicomponente (prehistórico e histórico) y ocho sitios arqueológicos de edad histórica que actualmente están pavimentados*
- *No se han detectado nuevos recursos arqueológicos visibles en superficie en el Área de Impactos Directos a partir del sondeo peatonal.*
- *Evitar/preservar los recursos significativos es siempre la primera opción, pero cuando no es posible evitarlos, son necesarias otras medidas para minimizar los impactos a un nivel menos que significativo. Entre estas se encuentran:*
  - *CUL-A: Plan de Supervisión de los Recursos Culturales y Mitigación*
  - *CUL-B: Programa de Capacitación de Trabajadores sobre Recursos Arqueológicos.*
  - *CUL-C: Plan de Pruebas Arqueológicas para 19-000887 y 19-004320 (Estación de Alameda).*
  - *CUL-D: Plan de Pruebas Arqueológicas para la Explanada de LAUS.*
  - *CUL-E: Plan de Pruebas Arqueológicas para el Los Angeles State Historic Park.*
  - *CUL-F: Rediseño de la Ubicación de las Estructuras de Servicios del Parque para Evitar los Elementos Arqueológicos en la Estación de Los Angeles State Historic Park.*

CONCLUSIONES SOBRE EL IMPACTO

Tema	*Resultado*	
	Construcción	*Operaciones*
Recurso Biológico	*Menos que significativo con mitigación*	*Sin impacto*
Alteración de Restos Humanos	*Menos que significativo con mitigación*	*Sin impacto*

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

- *Un Plan de Supervisión y Mitigación de los Recursos Culturales y un Plan de Supervisión y Mitigación de los Recursos Paleontológicos preparados por un arqueólogo calificado antes de la construcción para establecer los protocolos de supervisión durante la misma.*
- *Programa de Capacitación de trabajadores de recursos arqueológicos para mitigar los recursos históricos desconocidos dentro del Área de Impactos Directos, realizado con la aportación del personal de El Pueblo y de Los Angeles State Historic Park antes de iniciar las actividades de alteración del suelo*
- *Plan de Pruebas Arqueológicas para determinados recursos en la Estación de Alameda y en la Estación de Chinatown/Parque Estatal preparado antes de las actividades de alteración del suelo*
- *Rediseño Posible de la Ubicación de las Estructuras de Servicios del Parque para Evitar los Elementos Arqueológicos en Los Angeles State Historic Park.*

Metro

考古

考古学

研究範圍是甚麼？

- 對考古資源有直接影響的區域（最大項目中對地面產生潛在干擾的三維立體區域範圍）
- 根據歷史地圖、土壤地圖及對美洲原住民的諮詢，研究出其他項目中所發現的已知資源地圖和潛在資源。此外，還進行了調查

主要分析及結論

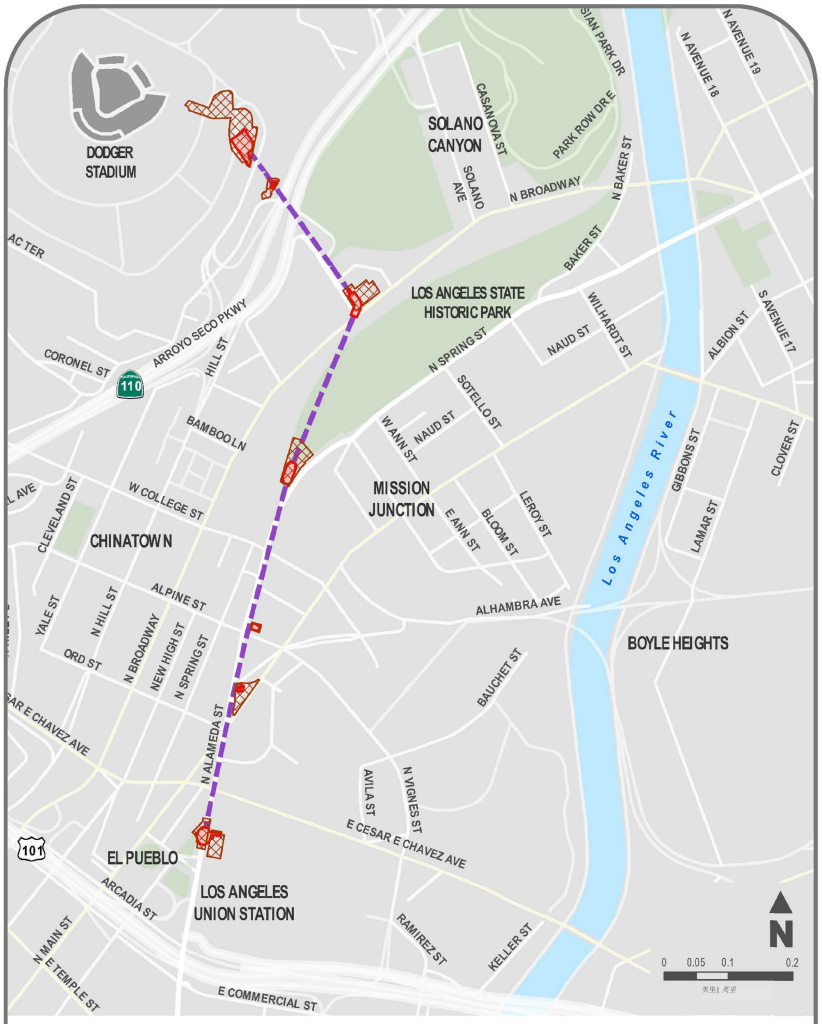
- 早前記錄了直接影響區域內的 9 個考古資源，當中包括一個多元組成部分（史前和歷史）及 8 個目前已鋪設的歷史時期考古遺址
- 行人調查結果顯示直接影響區域中沒有發現新的地表可見考古資源
- 避免/保護重要資源始終是優先選擇，但在無法避免的情況下，需要採取其他措施將影響降至一個較低的水平。當中包括:
  - CUL-A:**文化資源監測和緩解計劃。**
  - CUL-B:**考古資源工作者培訓計劃。**
  - CUL-C:19-000887 **和** 19-004320**（阿拉米達站）考古測試計劃。**
  - CUL-D:**洛杉磯聯合車站前院考古測試計劃。**
  - CUL-E:**洛杉磯州立歷史公園的考古測試計劃。**
  - CUL-F:**重新設計公園便利設施的佈局，以避免洛杉磯州立歷史公園站的考古特徵。**

影響總結

主題	發現	
	建築工程：	操作
考古資源	經緩解後影響不大。	沒有影響。
擾亂人類遺骸	經緩解後影響不大。	沒有影響。

如何可將影響降至最低?

- 由合資格的考古學家需在施工前準備文化資源監測和緩解計劃，以及古生物監測和緩解計劃，以制定施工期間的監測協定
- 在開始地面干擾活動之前，考古資源工作者的培訓計劃將按照洛杉磯古城和洛杉磯州立歷史公園工作人員的意見進行，從而減輕直接影響區域內未知的歷史資源
- 在地面干擾活動進行前，於阿拉米達站和唐人街/州立公園站某些資源的考古實施測試計劃
- **重新設計公園便利設施的佈局，以避免洛杉磯州立歷史公園站的考古特徵。**



百老匯路口替代路線的直接影響區域

百老汇路线备选方案的直接影响区

研究内容

- *考古资源的直接影响区（项目最大覆盖区内的潜在地面干扰的三维区域）*
- *研究了其它项目发现的已知资源地图和以历史地图、土壤地图和美国原住民协商为根据的潜在资源。也进行了调查*

重点分析及总结

- *在直接影响区内，以前记录了9项考古资源，包括1项多成分（史前和历史）和8个历史时代的考古遗址，目前已铺设路面*
- *通过行人调查，在直接影响区内未发现新的地表可见考古资源*
- *避开/保护重要资源始终是首选，但在无法避开的情况下，有必要采取其它措施，将影响降至不重大的水平。这些措施包括：*
  - *文化-A：文化资源监测与缓解措施计划*
  - *文化-B:施工人员考古资源培训计划*
  - *文化-C：第19-000887号和19-004320号资源（阿拉米达站）的考古测试计划*
  - *文化-D：联合车站前广场的考古测试计划*
  - *文化-E：洛杉矶州立历史公园考古测试计划*
  - *文化-F：重新设计公园便利设施的位置，以避开洛杉矶州立历史公园站的考古特征*

影响总结

主题	查找	
	建筑施工	运营
考古资源	*采取缓解措施后无重大影响*	*无影响*
扰乱人类遗迹	*采取缓解措施后无重大影响*	*无影响*

如何尽量减少影响？

- *由合资格考古学家在施工前制定文化资源监测与缓解措施计划，以及古生物监测与缓解措施计划，以制定施工期间的监测方案*
- *在进行地面干扰活动之前，实施施工人员考古资源培训计划，并采纳由洛杉矶古城和洛杉矶州立历史公园工作人员提供的建议，以减轻对直接影响区内的未知历史资源的影响*
- *在进行地面干扰活动之前，先为阿拉米达站和唐人街/州立公园站的若干资源制定考古测试计划*
- *可能重新设计公园便利设施的位置，以避开洛杉矶州立历史公园站的考古特征*

Metro

Historical Resources

Recursos Históricos

WHAT WAS STUDIED?

- Direct, indirect, and cumulative impacts on historical resources from Project components
- Historical resources may include building, structures objects, sites, and districts
- Historical resources are properties listed or formally determined eligible for listing in National and California Registers and designated as Los Angeles Historic-Cultural Monuments
- Properties identified in a historical resource survey such as SurveyLA were treated as historical resources for the purposes of the study
- 29 historical resources were identified along the proposed Project alignment including 2 districts with numerous contributing elements

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project would not result in the demolition, destruction, or relocation of any historical resources
- The proposed Project would introduce modern features in the form of cables, cabins, towers, junctions, and stations in the vicinity of historical resources; however, the change would not constitute a significant impact due to the mixed character of the alignment
- Alameda Station would be located within the boundary of the Los Angeles Union Station Passenger Terminal and Grounds. However, the proposed location of the new vertical circulation elements is Parking Lot B, which is not a character-defining feature of the historical resource
- Alameda Station would also be located within the boundary of the Los Angeles Plaza Historic-Cultural Monument. However, the proposed location of the new vertical circulation elements and pedestrian plaza is Placita de Dolores, which is not a character-defining feature of the historical resource
- Due to the proximity of construction to the Winery building and El Grito Mural mitigation measures are recommended in the Noise and Vibration section of the Draft EIR

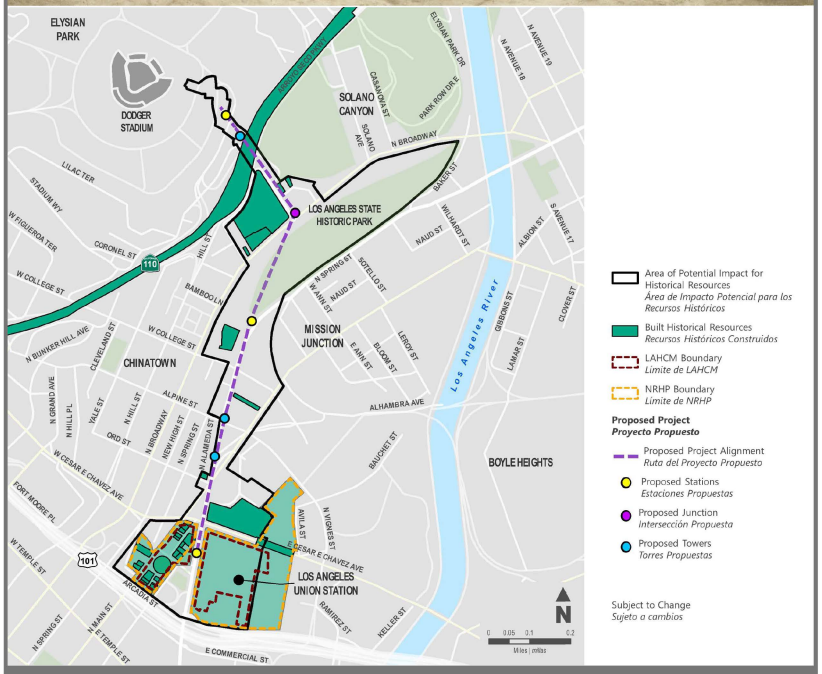
IMPACT CONCLUSIONS

- 15 historical resources less than significant indirect impacts
- 4 historical resources less than significant direct impacts

Topic	Finding	
	Construction	Operations
Historical Resource	Less Than Significant with Mitigation	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

- Project design features for pre- and post-construction documentation and protection of The Winery and El Grito mural, as well as protection of the El Grito mural during construction
- Vibration monitoring and restrictions on force adjustable ground compaction devices during proposed Alameda Station construction



Built Historical Resources

Recursos Históricos Construidos

¿QUÉ SE ESTUDIÓ?

- *Impactos directos, indirectos y acumulativos de los componentes del proyecto sobre los recursos históricos*
- *Los recursos históricos pueden incluir edificios, estructuras, objetos, sitios y distritos*
- *Los recursos históricos son propiedades inscritas en los Registros Nacionales y de California o que han sido designadas como Monumentos Histórico-Culturales de Los Ángeles.*
- *Las propiedades identificadas en un sondeo de recursos históricos como SurveyLA fueron tratadas como recursos históricos para efectos del estudio*
- *Se identificaron 29 recursos históricos a lo largo de la ruta del proyecto propuesto, incluyendo 2 distritos con numerosos elementos contribuyentes*

ANÁLISIS Y CONCLUSIONES CLAVE

- *El proyecto propuesto no daría ligar a la demolición, destrucción o reubicación de ningún recurso histórico*
- *El proyecto propuesto introduciría elementos modernos en forma de cables, cabinas, torres, intersecciones y estaciones en las proximidades de recursos históricos; sin embargo, el cambio no constituiría un impacto significativo debido al carácter mixto de la ruta*
- *La Estación Alameda estaría situada dentro de los límites de la terminal de pasajeros de la estación Los Angeles Union Station y sus terrenos. Sin embargo, la ubicación propuesta de los nuevos elementos de circulación vertical es el estacionamiento B, que no es una característica definitoria del recurso histórico*
- *La Estación Alameda también estaría situada dentro de los límites del Monumento Histórico-Cultural de Los Angeles Plaza. Sin embargo, la ubicación propuesta de los nuevos elementos de circulación vertical y la plaza peatonal es la Placita de Dolores, que no es un elemento que defina el carácter del recurso histórico*
- *Debido a la proximidad de la construcción al edificio de la bodega de vinos The Winery y al mural de El Grito, se recomiendan medidas de mitigación en la sección de Ruido y Vibración del Borrador del EIR*

CONCLUSIONES SOBRE EL IMPACTO

- *15 recursos históricos con impactos indirectos menos que significativos*
- *4 recursos históricos con impactos directos menos que significativos*

Tema	*Resultado*	
	Construcción	*Operaciones*
Recurso Histórico	*Menos que significativo con mitigación*	*Menos que significativo*

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

- *Características del diseño del proyecto para la documentación de pre-construcción y de post-construcción y la protección de la bodega de vinos The Winery y el mural de El Grito, y la protección del mural de El Grito durante la construcción*
- *Supervisión de vibraciones y restricciones de los dispositivos de compactación del suelo ajustables a la fuerza durante la construcción de la Estación Alameda propuesta*

Metro

歷史資源

历史资源

研究範圍是甚麼？

- 計畫組成部份對於歷史資源的直接、間接和累積的影響
- 歷史資源可能包括建築物、結構物、地點和地區
- 歷史資源是是指國家和加利福尼亞登記冊中列入，或正式確定為有資格列入並指定為洛杉磯歷史文化古蹟的財產
- 為達到研究目的，在歷史資源調查（如： SurveyLA）中獲確定的資源被視為歷史資源
- 擬建項目的路線沿途共確定了 29 個歷史資源，包括兩個具有眾多貢獻元素的地區

主要分析及結論

- 擬建計畫不會導致任何歷史資源的拆卸、破壞或搬遷
- 擬建計畫將在歷史資源附近以電纜、車廂、塔、路口和車站等形式加入現代特色元素；但由於路線的混合特性，這種變化將不會構成重大影響
- 阿拉米達站將建於洛杉磯聯合車站客運站和地面的邊界內然而，新的垂直流通設備的建議位置在停車場 B 位，這裡並不符合歷史資源的定義特徵
- 阿拉米達站將建於洛杉磯廣場歷史文化紀念碑的邊界內。然而，新的垂直流通設備與步行廣場的擬建位置為多洛雷斯廣場，該處並不符合歷史資源的定義特徵
- 由於建築靠近酒廠大樓與El Grito 壁畫，因此在《環境影響報告草案》中建議採取噪音和震動舒緩措施

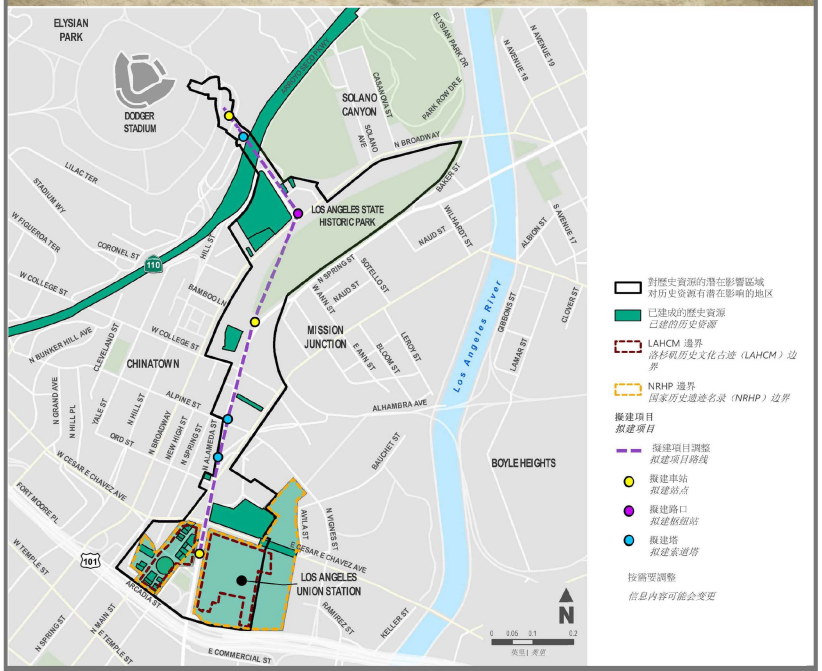
影響總結

- 15 個歷史資源的間接影響不顯著
- 4個歷史資源的直接影響不顯著

主題	發現	
	建築工程：	操作
歷史資源	經緩解後影響不大。	影響不大。

如何可將影響降至最低?

- 計畫設計特點建基於酒廠與 El Grito 壁畫於施工前及施工後的文件記錄和保護，以及於施工期間保護 El Grito 壁畫的
- 在擬建阿拉米達站的施工其間，監測震動與限制可調整力度的地面壓實裝置



已建成的歷史資源 *已建的历史资源*

研究内容

- 项目组成部分对历史资源的直接、间接和累积影响
- 历史资源可能包括建筑物、结构物、遗址和地区
- 历史资源是指被列入或正式确定有资格列入国家和加州登记册以及被指定为洛杉矶历史文化遗址的财产
- 就研究目的而言，在历史资源调查如SurveyLA调查中确定的财产，视为历史资源
- 沿着拟建项目路线，已经确定了29项历史资源，其中包括2项具有众多贡献元素的地区

重点分析及总结

- 拟建项目不会导致任何历史资源遭拆除、破坏或搬迁
- 拟议项目将在历史资源附近引入缆线、缆车、索道楼、枢纽站和车站等现代特征；但由于路线的混合特征，这一变化不会构成重大影响
- 阿拉米达站将位于洛杉矶联合车站总站及其场地的边界内。然而，新的垂直流通设施的计划位置是停车场地块B，此地块不是历史资源的定义特征
- 阿拉米达站也将位于洛杉矶广场历史文化遗址的边界内。然而，新的垂直流通设施和行人广场的计划位置是Placita de Dolores，此地块不是历史资源的定义特征
- 由于施工接近酿酒厂建筑和El Grito壁画，在环境影响报告草案中的对噪音和振动部分的缓解措施作出了建议

影响总结

- 15项历史资源受到不重大的间接影响
- 4项历史资源受到不重大的直接影响

主题	查找	
	建筑施工	运营
历史资源	采取缓解措施后无重大影响	影响不重大

如何尽量减少影响？

- 项目设计特点是在施工前和施工后记录和保护酿酒厂和El Grito壁画，以及在施工期间保护El Grito壁画
- 在拟建的阿拉米达站施工期间，对振动进行监测并限制使用可调节的地面压实装置

Metro

Parks and Recreation

Parques y Recreación

WHAT WAS STUDIED?

- The proposed Project's potential to impact parks and recreational facilities during construction and operation, including Los Angeles Plaza Park and Placita de Dolores, Los Angeles State Historic Park, and Elysian Park
- A study area of a ¼ -mile buffer around the proposed Project alignment was established as an operational baseline to evaluate potential impacts
- Potential of the proposed Project to impact recreational facilities by:
  - Increasing the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated
  - Including recreational facilities or requiring the construction or expansion of recreational facilities which might have an adverse physical effect on the environment
- Potential of proposed Project to impact parks by resulting in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, or a need for new or physically altered government facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any parks

KEY ANALYSIS AND CONCLUSIONS

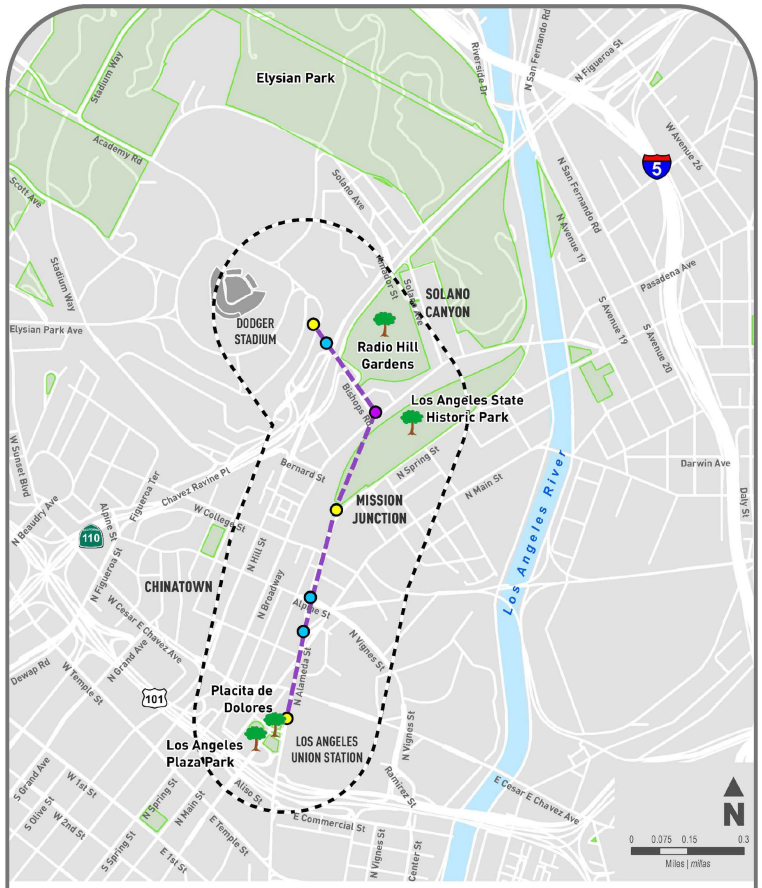
- The proposed Project would not result in an increase in the use of parks such that substantial physical deterioration would occur or be accelerated
  - The Los Angeles State Historic Park, which accommodates events with attendance ranging from 6,000 to 22,500 attendees, would be able to accommodate additional visitation
- The proposed Project would not include the construction or expansion of recreational facilities and increased access to parks are not expected to increase the use of existing parks or other recreational facilities such that new or expanded facilities would be required
- Construction and operations of the proposed Project would not result in the provision of new park facilities, or the need for new or physically altered park facilities during construction
  - During construction of the Chinatown/State Park Station, options for pedestrian access, including the provision of pedestrian detours during construction, would allow for continued pedestrian access within the Project area such that park patrons would have access to approximately 30 acres of the 32-acre Los Angeles State Historic Park, including all the recreational areas, during construction activities within the park.

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Increase use of parks or recreational facilities accelerating substantial facility deterioration	Less Than Significant	Less Than Significant
Include or require construction or expansion of recreational facilities with potential for adverse effect on environment	Less Than Significant	Less Than Significant
Provide or require new or physically altered governmental facilities the construction of which could cause significant environmental impacts to maintain acceptable performance objectives for parks	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

- No mitigation is required
- During construction of the Chinatown/State Park Station, options for pedestrian access, including the provision of pedestrian detours during construction, would allow for continued pedestrian access within the Project area such that park patrons would have access to approximately 30 acres of the 32-acre Los Angeles State Historic Park, including all the recreational areas, during construction activities within the park



Existing Parks and Recreational Facilities in Project Study Area

Parques e Instalaciones Recreativas Existentes en el Área de Estudio del Proyecto

¿QUÉ SE ESTUDIÓ?

- *El potencial del proyecto propuesto de afectar a los parques y las instalaciones recreativas durante la construcción y las operaciones, incluyendo los parques de Los Angeles State Historic Park, Elysian Park, Los Angeles Plaza Park y la Placita de Dolores*
- *Se estableció una zona de estudio de ¼ de milla (400 m) alrededor de la ruta del proyecto propuesto como línea de base de las operaciones para evaluar los impactos potenciales*
- *Potencial del proyecto propuesto para impactar las instalaciones recreativas al:*
  - *Provocar un aumento en el uso de los parques vecinales y regionales existentes o de otras instalaciones recreativas de manera que se produjera o acelerara un deterioro físico sustancial de las instalaciones*
  - *Incluir instalaciones recreativas o requerir la construcción o ampliación de instalaciones recreativas que pudieran tener un efecto físico adverso sobre el medio ambiente*
- *Impacto potencial del proyecto propuesto que podría tener impactos físicos adversos sustanciales asociados con la provisión de instalaciones gubernamentales nuevas o alteradas físicamente, o la necesidad de instalaciones gubernamentales nuevas o alteradas físicamente, cuya construcción podría causar impactos ambientales significativos, para mantener aceptables las tasas de servicio, los tiempos de respuesta u otros propósitos de rendimiento para cualquiera de los parques*

ANÁLISIS Y CONCLUSIONES CLAVE

- *El proyecto propuesto no provocaría un aumento en el uso de los parques de manera que se produjera o acelerara un deterioro físico sustancial*
  - *Los Angeles State Historic Park, donde se celebran eventos con una asistencia que de entre 6,000 y los 22,500 asistentes, podría recibir visitas adicionales*
- *El proyecto propuesto no incluiría la construcción o ampliación de instalaciones recreativas y no se espera que el mayor acceso a los parques aumente el uso de los parques existentes u otras instalaciones recreativas de manera que se requieran instalaciones nuevas o ampliadas*
- *La construcción y las operaciones del proyecto propuesto no darían lugar a la provisión de nuevas instalaciones de parques, ni a la necesidad de instalaciones de parques nuevas o alteradas físicamente durante la construcción*
  - *Durante la construcción de la Estación Chinatown/State Park, las opciones para el acceso peatonal, incluyendo la provisión de desvíos peatonales durante la construcción, permitirían el acceso peatonal continuo dentro del área del proyecto de manera que los usuarios del parque tendrían acceso a aproximadamente 30 acres (12.15 hectáreas) del Los Angeles State Historic Park de 32 acres (12.95 hectáreas), incluyendo todas las áreas recreativas, durante las actividades de construcción dentro del parque.*

CONCLUSIONES SOBRE LOS IMPACTOS

Tema	*Resultado*	
	Construcción	*Operaciones*
Aumenta del uso de parques o instalaciones recreativas, acelerando el deterioro sustancial de las instalaciones	*Menos que significativo*	*Menos que significativo*
Inclusión o necesidad de construir o ampliar instalaciones recreativas con efecto adverso potencial en el medio ambiente	*Menos que significativo*	*Menos que significativo*
Se proporcionan o requieren instalaciones gubernamentales nuevas o alteradas físicamente cuya construcción podría causar impactos ambientales significativos para mantener objetivos de rendimiento aceptables para los parques	*Menos que significativo*	*Menos que significativo*

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

- *No se requiere mitigación*
- *Durante la construcción de la Estación de Chinatown/State Park, las opciones para el acceso peatonal, incluyendo la provisión de desvíos peatonales durante la construcción, permitirían el acceso peatonal continuo dentro del área del proyecto de manera que los usuarios del parque tendrían acceso a aproximadamente 30 acres (12.15 hectáreas) del Los Angeles State Historic Park de 32 acres (12.95 hectáreas), incluyendo todas las áreas recreativas, durante las actividades de construcción dentro del parque*

Metro

公園及康樂設施

公园及休闲设施

研究範圍是甚麼？

- 擬建計畫在施工和營運期間對公園和康樂設施的潛在影響，包括洛杉磯廣場公園和多洛雷斯廣場、洛杉磯州立歷史公園和伊利森公園
- 於擬建計畫路線周邊 ¼ 英里位置建立一個研究區域，作為操作基線以評估項目的潛在影響
- 擬建計畫有機會透過以下形式影響康樂設施：
  - 計畫是否會導致現有社區和區域公園或其他休閒設施的使用增加，從而導致設施退化或加速其退化？
  - 計畫會否包括康樂設施或需要興建或擴建可能對環境造成不良影響的康樂設施？
- 若需保持現有公共服務的可接受的服務比率、響應時間或其它表現目標，計畫是否會因為提供新的或實質改動的政府設施，或因需要興建新的或實質改動的政府設施，而對環境造成重大的不良影響:

主要分析及結論

- 擬建計畫不會令公園使用量增加，從而引致嚴重的物理老化，或加速其老化
  - 洛杉磯州立歷史公園所舉辦的活動將能夠容納更多的參加者，現時可容納的人數約為 6,000 至 22,500 人
- 擬建計畫不會因為增加現有公園或其他康樂設施的使用而興建或擴建康樂設施，亦不會增加進入公園的入口，因此，需要興建新的，或擴建現有設施
- 擬建計畫的工程營運不會帶來提供新的公園設施，或在建設期間需要新的或改建現有的公園設施
  - 在唐人街/州立公園站施工期間，行人通道的選擇，包括在施工期間提供行人繞道，將在項目區域中繼續提供行人通道。這樣，洛杉磯州立歷史公園的遊客就可以在公園內的施工活動進行其間使用大約32英畝中的30的英畝，包括所有的休閒區。

影響總結

主題	發現	
	建築工程：	操作
增加公園或娛樂設施的使用，加速設施老化	影響不大。	影響不大。
包括或要求興建或擴建可能對環境產生不良影響的康樂設施	影響不大。	影響不大。
為保持公園可接受的績效目標，需提供或需要新的或經改造的政府設施，而興建該等設施可能會對環境造成重大影響	影響不大。	影響不大。

如何將影響減到最低?

- 無需採取緩解措施。
- 在唐人街/州立公園站施工期間，行人通道的選擇，包括在施工期間提供行人繞道，將在項目區域中繼續提供行人通道。這樣，洛杉磯州立歷史公園的遊客就可以在公園內的施工活動進行其間使用大約32英畝中的30的英畝，包括所有的休閒區。

西班牙語翻譯

研究内容

- 拟建项目在施工和运营期间可能对公园和休闲设施产生影响，包括对洛杉矶广场公园和Placita de Dolores、洛杉矶州立历史公园和伊利森公园的影响
- 在拟建项目路线周围建立了一个1/4英里的缓冲区作为运营基准，以评估潜在的影响
- 拟建项目对休闲设施的影响如下：
  - 导致现有的社区及区域公园或其它休闲设施的使用增加，以致设施出现实质性损坏或加速损坏
  - 包含休闲设施，或要求兴建或扩建休闲设施，从而可能导致对环境造成不良影响
- 为维持公园的可接受的服务比率、响应时间或其它表现目标，拟建项目可能会对公园造成影响，导致产生与新的或实际变动的政府设施的供应有关的实质性不利影响，或导致需要兴建新的或实际改造的政府设施，其建设可能会造成重大环境影响

主要分析及结论

- 拟建项目不会使公园使用量增加，因而不会导致实质物理损坏或使其加速发生
  - 洛杉矶州立历史公园能够接纳更多的到访，活动可容纳的参观者人数从6000人到22,500人不等。
- 拟建项目不包括兴建或扩建娱乐设施，而预计的增加进入公园的通道也不会增加现有公园或其它休闲设施的使用量，以致须新建或扩建设施
- 拟建项目的施工与运营不会导致须兴建新的公园设施，亦不会引致在建造期间需要新的或实质改动的公园设施
  - 在唐人街/州立公园站施工期间，包括在施工期间提供绕行路线的步行通道方案将在项目区域内为行人持续提供通道，这样在公园内施工期间，公园使用者将能进入32英亩的洛杉矶州立历史公园中约30英亩的土地，包括所有的休闲区域。

影响总结

主题	查找	
	建筑施工	运营
公园或休闲设施的使用量增加，加速了设施的实质损坏	影响不重大	影响不重大
包括或要求兴建或扩建有可能对环境产生不利影响的休闲设施	影响不重大	影响不重大
提供或需要新的或物理改造过的政府设施(这些设施的施工可能造成重大的环境影响）以维持可接受的公园绩效目标	影响不重大	影响不重大

如何尽量减少影响？

- 无须采取缓解措施
- 在唐人街/州立公园站施工期间，包括在施工期间提供绕行路线的步行通道方案将在项目区域内为行人持续提供通道，这样在公园内施工期间，公园使用者将能进入32英亩的洛杉矶州立历史公园中约30英亩的土地，包括所有的休闲区域。

Metro

Aerial Rights Over Park

Derechos Aéreos Sobre el Parque

LOCATION

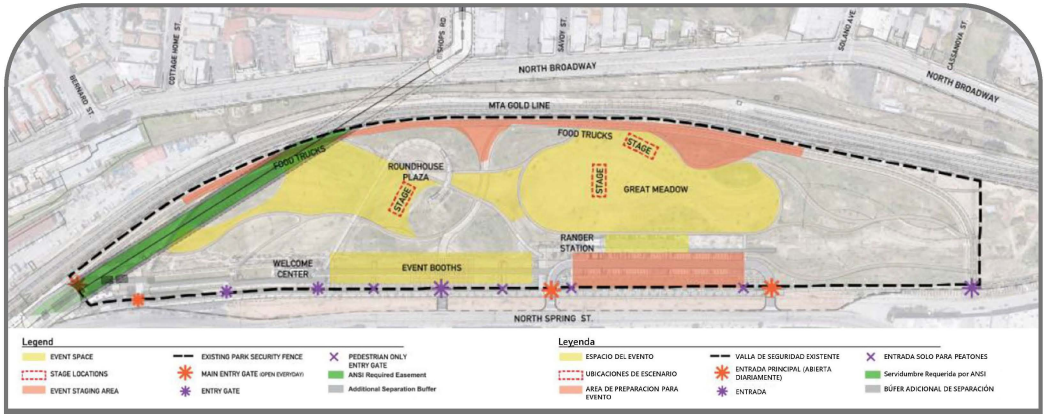
- The proposed Project alignment crosses over the westernmost edge of the Los Angeles State Historic Park, adjacent to the existing Metro L Line (Gold) and the associated overhead catenary system
- The proposed Project's location in the park and required aerial clearance would not increase the usage of the park such that substantial physical deterioration of the facility would occur or be accelerated

KITES

- Due to the location of the proposed Project alignment – which traverses over along the western edge of the Park adjacent to the Metro L Line and pedestrian pathway – the proposed Project does not significantly reduce the safe kite flying area within the Park

SPECIAL EVENTS

- The proposed Project's vertical clearance to the bottom of the cabins would range from 26 to 53 feet with an average of approximately 40 feet from ground level over the park
- Given these clearances, it will continue to be possible for events to take place both under the majority of the alignment within the park and adjacent to the alignment



Typical Locations for Event Stages and Screens at the Los Angeles State Historic Park with Proposed Project Alignment

Ubicaciones Típicas para Pantallas y Escenarios de Eventos en Los Angeles State Historic Park con la Ruta del Proyecto Propuesto

Existing and simulation view looking Southwest from Roundhouse within Los Angeles State Historic Park

Vista existente y simulación de vista al suroeste desde Roundhouse, dentro de Los Angeles State Historic Park

Existing and simulation view looking Southwest from within Los Angeles State Historic Park

Vista existente y simulación de vista al suroeste desde dentro de Los Angeles State Historic Park

UBICACIÓN

- *La ruta del proyecto propuesto cruza el borde del extremo poniente del Los Angeles State Historic Park, junto a la Línea L (Dorada) del Metro y el sistema catenario elevado asociado*
- *La ubicación del proyecto propuesto en el parque y el espacio aéreo requerido no aumentarán el uso del parque de manera que se produzca o acelere un deterioro físico sustancial de las instalaciones*

COMETAS

- *Debido a la ubicación de la ruta del proyecto propuesto – que atraviesa el borde poniente del parque adyacente a la Línea L del Metro y al camino peatonal – el proyecto propuesto no reduce significativamente el área segura para volar cometas dentro del parque*

EVENTOS ESPECIALES

- *La distancia vertical del proyecto propuesto hasta la parte inferior de las cabinas sería de entre 26 y 53 pies (8 y 16 m), con un promedio de aproximadamente 40 pies (12 m) desde el nivel del suelo del parque*
- *Dadas estas distancias, seguirá siendo posible celebrar eventos bajo la mayor parte de la ruta dentro del parque y junto a dicha ruta*

Metro

公園空中權利

公园上方的空中权利

地點

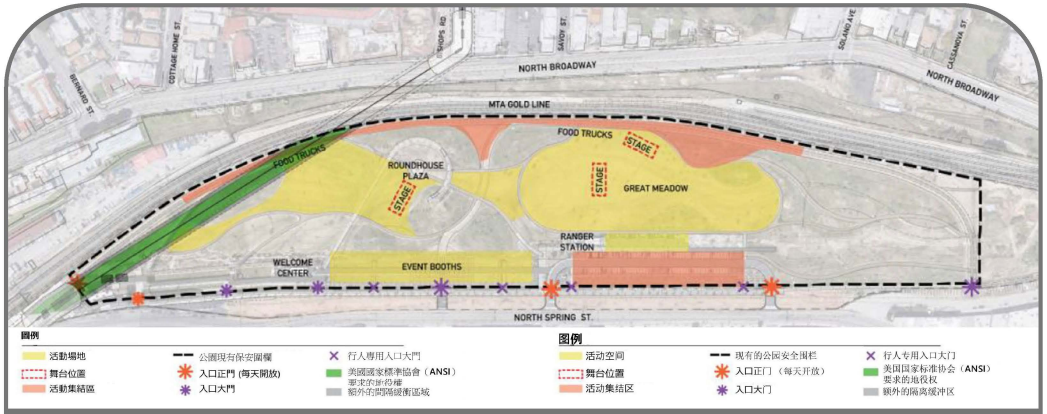
- 擬建計畫路線橫跨洛杉磯州立歷史公園的最西端，毗鄰現有的地鐵 L 線（金線）及相關的架空懸鏈線系統
- 擬建計畫在公園內的位置，和所需進行的淨空活動將不會增加公園的使用量，從而引致設施老化，或加速其老化

風箏

- 由於擬建計畫路線的位置——沿著公園的西部邊緣，毗鄰地鐵 L 線和行人路——擬建計畫將不會顯著減少公園內可供安全放風箏的區域

特別活動

- 從擬建計畫至車廂底部的垂直淨空範圍為 26 至 53 英尺，平均距離公園地面約 40 英尺
- 在這情況下，活動將可以繼續在公園內的大部分路線下和與路線相鄰的地方舉行



洛杉磯州立歷史公園活動舞台和屏幕的獨有位置與擬建項目路線

洛杉矶州立历史公园的活动舞台和屏幕的典型位置，以及拟建项目路线

現時與模擬從洛杉磯州立歷史公園內的 Roundhouse 向西南看的景觀

从洛杉矶州立历史公园内的圆屋朝西南方向看的现有视图和模拟视图

現時與模擬從洛杉磯州立歷史公園內向西南看的景觀

从洛杉矶州立历史公园内朝西南方向看的现有视图和模拟视图

位置

- *拟建项目路线穿过洛杉矶州立历史公园的最西边缘，毗邻现有的轻轨L线(金线)及其相关的高架悬链系统*
- *拟建项目在公园内的位置和所须的空中净空不会增加公园的使用量，因而不会导致或加速设施的实质性损坏*

风筝

- *由于拟建项目路线位于公园的西部边缘，毗邻轻轨L线和行人通道，因此不会明显减少在公园内放飞风筝的安全面积*

特别活动

- *拟建项目到缆车底部的垂直净空范围为26至53英尺，公园上空平均距地面约40英尺*
- *鉴于这些净空，将继续有可能在公园内的大部分索道线路下方和附近举行活动。*

Metro

Benefits of Chinatown/ State Park Station

Beneficios de la Estación Chinatown/ State Park

DISTANCE FROM METRO L LINE (GOLD) STATION

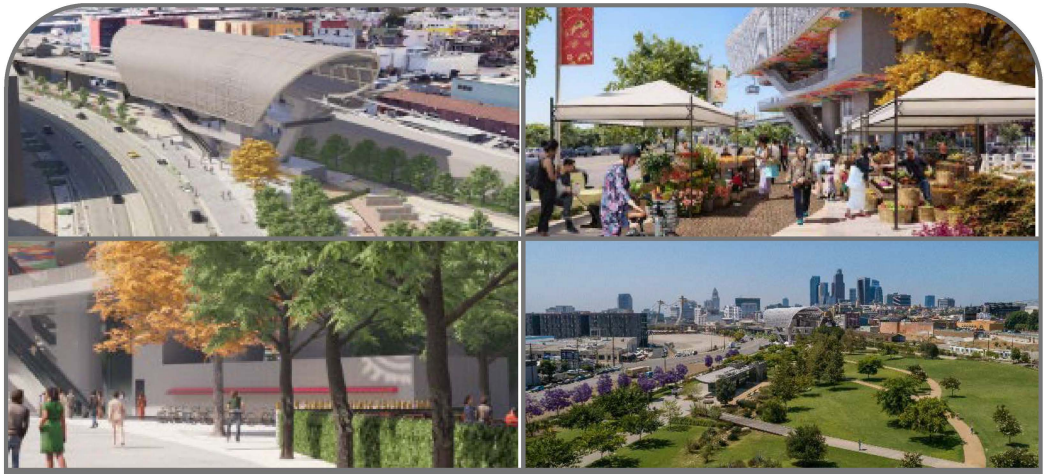
- The LA ART Chinatown / State Park Station and Metro's L Line Chinatown Station are approximately 500 feet apart
- With that distance, ground level walk would take ~3 minutes and does not require crossing any streets
- Pedestrian access enhancements could include pedestrian improvements between Metro's L Line (Gold) Station and the Chinatown/State Park Station consistent with the Connect US Action Plan, including hardscape and landscape improvements, shade structures, and potential seating, as well as support for the future Los Angeles State Historic Park bike and pedestrian bridge

PARK AMENITIES

- 740 square feet of concessions
- 770 square feet of restrooms
- 220 square foot covered breezeway connecting concessions and restrooms
- Mobility hub to access a suite of first and last mile multi-modal options, such as a bike share program

THE LOS ANGELES STATE HISTORIC PARK PEDESTRIAN BRIDGE

- Currently the northern edge of the Los Angeles State Historic Park adjacent is bordered by the Metro L Line (Gold) tracks, forming a barrier and restricting direct visitor access to the park from North Broadway
- In 2019, the Los Angeles State Historic Park conducted a Bike and Pedestrian Bridge Study to explore the feasibility of providing pedestrian and bicycle access from the park to neighborhoods and land uses north of Broadway, including Chinatown, Cathedral High School, the Savoy neighborhood, Elysian Park, and the Solano Canyon neighborhood
- The Draft EIR evaluates the Park's pedestrian bridge as Design and Use Option E



Chinatown/State Park Station

Vista existente y simulación de vista hacia el noreste desde Spring Street adyacente a la Línea L del Metro (Dorada)

Park Amenities

Servicios del Parque

Potential Broadway-State Historic Park Pedestrian Bridge

Puente Peatonal Potencial Broadway-State Historic Park

DISTANCIA DE LA ESTACIÓN DE LA LÍNEA L DEL METRO (DORADA)

- *La Estación Chinatown/State Park del ART y la Estación Chinatown de la Línea L de Metro están a unos 500 pies (152 m) de distancia*
- *Con esa distancia, el recorrido a pie a nivel del suelo tomaría ~3 minutos y no se requiere cruzar ninguna calle*
- *Entre las mejoras en el acceso peatonal se podrían incluir mejoras peatonales entre la estación de la Línea L (Dorada) del Metro y la Estación Chinatown/State Park, en concordancia con el plan Connect US Action Plan, incluyendo mejoras en las instalaciones y el paisaje, estructuras de sombra y posibles asientos, así como elementos de apoyo al futuro puente peatonal y para bicicletas de Los Angeles State Historic Park*

SERVICIOS DEL PARQUE

- *740 pies cuadrados (69 m2) de concesiones*
- *770 pies cuadrados (72 m2) de baños*
- *Paso cubierto de 220 pies cuadrados (20 m2) que conecta las concesiones y los baños*
- *Centro de movilidad para tener acceso a un conjunto de opciones multimodales de primera y última milla, como un programa de bicicletas compartidas*

PUENTE PEATONAL DE LOS ANGELES STATE HISTORIC PARK

- *Actualmente, el borde norte de Los Angeles State Historic Park que está adyacente limita con las vías de la Línea L (Dorada) del Metro, formando una barrera y restringiendo el acceso directo de los visitantes al parque desde North Broadway*
- *En 2019, Los Angeles State Historic Park llevó a cabo un Estudio de Puentes para Bicicletas y Peatones para explorar la factibilidad de proporcionar acceso peatonal y para bicicletas desde el parque a los barrios y los usos del suelo al norte de Broadway, incluyendo Chinatown, Cathedral High School, el barrio de Savoy, Elysian Park y el barrio de Solano Canyon*
- *El Borrador del EIR evalúa el puente peatonal del parque como la Opción de Uso y Diseño E*

Metro

唐人街的好處/州立公園站的好處

唐人街/州立公园站的益处

距離地鐵L線（金）站

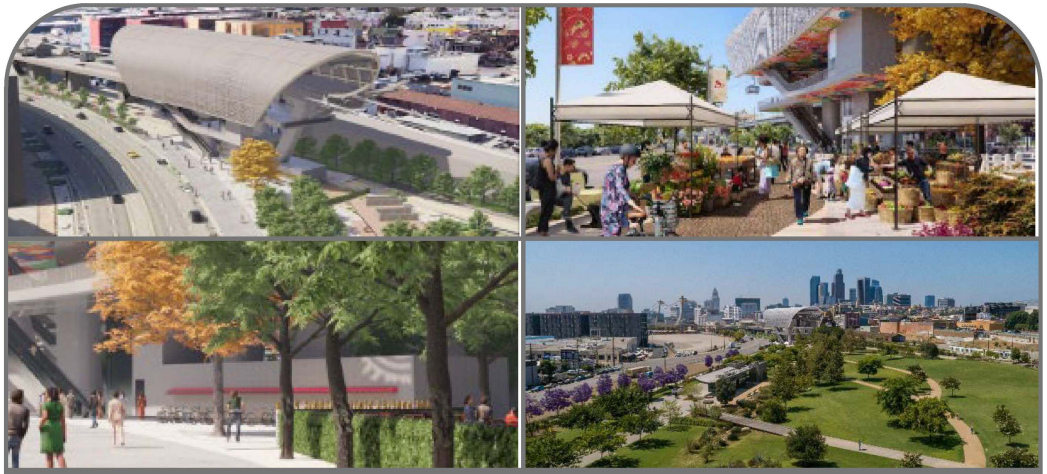
- 洛杉磯空中快速纜車唐人街/州立公園站和地鐵 L 線唐人街站相距約 500 英尺
- 這距離需在在地面步行約3分鐘，當中不需要穿越任何街道
- 行人通道的改進可能包括地鐵 L 線（金線）站和唐人街/州立公園站之間的行人道的改善，此將符合 Connect US 的行動計劃，包括人工景觀和自然景觀的改善、遮陽地方和潛在座位的興建，以及支持未來洛杉磯州立歷史公園單車和行人天橋的興建。

公園設施

- 740平方英尺的特權土地
- 770平方英尺的洗手間
- 220 平方英尺的有蓋走廊連接特權土地和洗手間
- 乘客可以在交通樞紐裡使用一套第一英里和最後一英里的多模式選項，例如;單車共享計劃。

洛杉磯州立歷史公園行人天橋

- 目前，毗鄰洛杉磯州立歷史公園的北部邊緣與地鐵 L 線（金）軌道接壤，二者組成一道屏障，限制遊客從北百老匯直接進入公園
- 2019 年，洛杉磯州立歷史公園進行了一項單車和行人天橋研究，以探索提供從公園到社區與百老匯以北的土地，包括唐人街、大教堂高中、薩沃伊社區、伊利森公園和索拉諾群峽谷社區的行人和單車通道的可行性。
- 《環境影響報告草案》根據設計及用途方案E對公園的行人天橋作出評估



唐人街/州立公園站

唐人街/州立公园站

公園設施

公园休闲设施

潛在百老匯國家歷史公園行人天橋

潜在的百老汇-国家历史公园人行天桥

与轻轨L线（金线）车站的距离

- *洛杉矶空中快捷交通唐人街/州立公园站与轻轨L线（金线）唐人街站的距离约为500英尺*
- *按照这个距离，地面步行大约需要3分钟，不需要穿越任何街道*
- *人行道的优化升级可能包括与“连接美国行动计划”一致的、在轻轨L线（金线）站和唐人街/州立公园站之间的人行道优化升级措施，包括硬景观和自然景观美化、增加遮阳设施和潜在的座位，以及对未来洛杉矶州立历史公园自行车和人行天桥的支持*

公园休闲设施

- *740平方英尺的特许经营商店*
- *770平方英尺的洗手间*
- *220平方英尺的有顶走廊，连接特许经营商店区和洗手间*
- *交通转换点，以提供第一英里和最后一英里的多种形式选择，如自动车共享计划*

洛杉矶州立历史公园人行天桥

- *目前，毗邻的洛杉矶州立历史公园的北部边缘与轻轨L线(金线)轨道相接，形成了一道屏障，限制了游客从北百老汇直接进入公园*
- *2019年，洛杉矶州立历史公园进行了一项自行车和人行天桥研究，以探索为百老汇以北的社区和土地用途，包括唐人街、大教堂高中、Savoy社区、伊利森公园和索拉诺峡谷社区，提供步行和自行车通道的可行性*
- *环境影响报告草案评估了公园人行天桥的设计和使用方案E*

Metro

Noise

Ruido

WHAT WAS STUDIED?

- Noise impacts of Project construction on noise-sensitive receptors near the proposed Project alignment and truck routes
- Vibration impacts of Project construction on vibration-sensitive receptors related to both building damage and human annoyance
- Noise and vibration impacts from operation of the aerial gondola

KEY ANALYSIS AND CONCLUSIONS

- Operation of the aerial gondola would not have a significant noise or vibration impact
- Mitigation can reduce noise from Project construction but not to a less-than-significant level
- Noise from off-site construction related traffic would be less-than-significant
- Mitigation would protect historic buildings from vibration damage
- Because of the low threshold, human annoyance vibration impacts would be significant and unavoidable

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	**Operations**
Substantial increase in ambient noise levels	On-Site: Significant and Unavoidable	Less Than Significant
	Off-Site: Less Than Significant	
Excessive ground-borne vibration	Building Damage: Less Than Significant with Mitigation	Less Than Significant
	Human Annoyance: Significant and Unavoidable	
Exposure to airport noise	No Impact	No Impact

HOW WOULD IMPACTS BE MINIMIZED?

- Construction Noise
  - Robust noise barriers program with varying heights and designs depending upon the phase and location of work
  - Use of equipment with noise reduction features
  - Community outreach, including a Noise Disturbance Coordinator
- Construction Vibration
  - Monitoring of vibration equipment
  - Use of non-vibrating equipment or hand tools near sensitive structures

Sound Walls — *Muros contra Ruido*

¿QUÉ SE ESTUDIÓ?

- *Impactos del ruido de la construcción del proyecto a los receptores sensibles al ruido cerca de la ruta del proyecto propuesto y las rutas de los camiones*
- *Impactos de la vibración de la construcción del proyecto a los receptores sensibles a la vibración relacionados con los daños a los edificios y con las molestias a las personas*
- *Impactos de ruido y vibración de la operación de las góndolas aéreas*

ANÁLISIS Y CONCLUSIONES CLAVE

- *La operación de la góndolas aéreas no tendría un impacto significativo de ruido o vibración*
- *Las medidas de mitigación pueden reducir el ruido de la construcción del proyecto, pero no hasta un nivel no significativo.*
- *El ruido del tráfico relacionado con la construcción fuera del sitio de obras sería menos que significativo*
- *La mitigación protegería a los edificios históricos de los daños causados por las vibraciones*
- *Debido al bajo umbral, los impactos de las vibraciones en cuanto a molestias a las personas serían significativos e inevitables*

CONCLUSIONES SOBRE EL IMPACTO

Tema	*Resultado*	
	Construcción	***Operaciones***
Aumento sustancial de los niveles de ruido ambiental	*En el Sitio de Obras: Significativo e Inevitable*	*Menos que significativo*
	Fuera del Sitio de Obras: Menos que significativo	
Vibración en el suelo excesiva	*Daños en Edificios: Menos que significativo con mitigación*	*Menos que significativo*
	Molestia a Personas: Significativo e Inevitable	
Exposición al ruido del aeropuerto	*Sin impacto*	*Sin impacto*

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

- *Ruido de la Construcción*
  - *Programa de barreras robustas contra el ruido con alturas y diseños variables, según la fase y la ubicación de las obras*
  - *Uso de equipos con características de reducción del ruido*
  - *Alcance a la comunidad, incluyendo un Coordinador de Perturbaciones Acústicas*
- *Duración de la Construcción*
  - *Supervisión de los Equipos de Vibración*
  - *Uso de herramientas manuales o equipos no vibratorios cerca de las estructuras sensibles*

噪音

研究範圍是甚麼？

- 施工對計畫路線和貨車路線附近的噪音敏感受體的影響
- 計畫施工對與建築物損毀和人為滋擾相關的震動敏感受體的震動影響
- 空中纜車運行期間所產生的噪音和震動影響

主要分析及結論

- 空中纜車的操作不會產生明顯的噪音或震動影響
- 緩解措施可以降低項目施工的噪音，但水平不會十分顯著
- 場外施工相關交通的噪音將不會十分顯著
- 緩解措施將保護歷史建築，免其受震動損毀
- 由於界限低，人為滋擾的震動影響將為顯著而且不能避免

影響總結

主題	發現	
	建築工程：	操作
環境噪音水平大幅增加	現場:嚴重且不能避免。	影響不大。
	場外:影響不大。	
地面震動過大	建築物損壞：經緩解後影響不大。	影響不大。
	人類滋擾:嚴重且不能避免。	
暴露於機場噪音中	沒有影響。	沒有影響。

如何可將影響降至最低?

- 施工噪音
  - 根據工作階段和位置，裝置不同高度與設計的強大隔音屏障設備
  - 使用具有降噪功能的設備
  - 社區外展，包括一名噪音干擾協調員
- 施工震動
  - 震動監測設備
  - 在敏感結構附近使用非震動設備或手動工具

研究内容

- 项目施工对计划项目路线和货车路线附近的噪音敏感受体的影响
- 项目施工对振动敏感受体的振动影响，包括对建筑物的破坏和对人类的干扰
- 空中索道运行的噪音和振动影响

重点分析及总结

- 空中索道的运行不会产生大的噪音或振动影响
- 缓解措施可以将项目施工的噪音降至无重大影响的水平
- 与场外施工相关的交通噪音无重大影响
- 缓解措施将保护历史建筑免受振动破坏
- 由于阈值低，振动对人的干扰影响将是重大且不可避免的

影响总结

主题	查找	
	建筑施工	运营
环境噪音水平大幅增加	在现场：有重大影响且不可避免	影响不重大
	在场外：影响不重大	
过度的经地面传送的振动	建筑损坏：采取缓解措施后无重大影响	影响不重大
	对人的干扰：有重大影响且不可避免	
暴露于机场噪音	无影响	无影响

如何尽量减少影响？

- 施工噪音
  - 根据不同施工阶段和位置而作不同高度和设计的坚固的隔音屏障计划
  - 使用具有降噪功能的设备
  - 包括一个噪音干扰协调员的社区外展服务
- 施工振动
  - 监控振动设备
  - 在敏感结构附近使用无振动设备或手工工具

Metro

Transportation

Transporte

WHAT WAS STUDIED?

- Utilized both the CEQA Guidelines and LADOT's established screening criteria, analysis methodology, and threshold criteria through the City's TAG
- The analysis of VMT for the proposed Project employed a variety of data, methodologies, and models in order to estimate Project ridership, vehicle trips reduced, vehicle trip lengths, and ultimately the VMT benefit of the proposed Project
- Ridership estimates for Dodger Stadium game and event attendees, employees, tourists, neighborhood riders, and Los Angeles State Historic Park visitors and event attendees
- Location of the proposed Project stations, junction, and towers and whether these components substantially increase hazards due to a geometric design feature
- The proposed Project's construction conceptual traffic detour plans and haul route

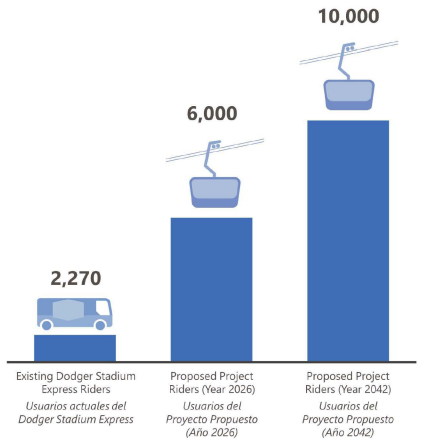
KEY ANALYSIS AND CONCLUSIONS IN THE EIR

- The proposed Project would be consistent with PPOPs – programs, plans, ordinances, and policies – addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities
- The proposed Project would not introduce any unsafe physical conditions with the implementation of mitigation measures for the Alameda Tower and Chinatown/State Park Station
- With implementation of mitigation measures, emergency access would be maintained during proposed Project construction

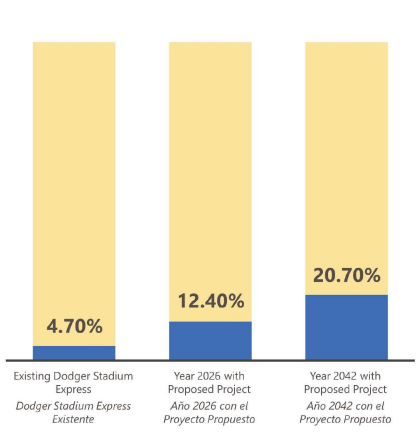
Topic	Finding	
	Construction	Operations
Vehicle Miles Travelled	No impact	No impact
Conflict with Plan or Policies	Less Than Significant	Less Than Significant
Increase Hazards through Design	Less Than Significant with Mitigation	Less Than Significant with Mitigation

HOW WOULD IMPACTS BE MINIMIZED?

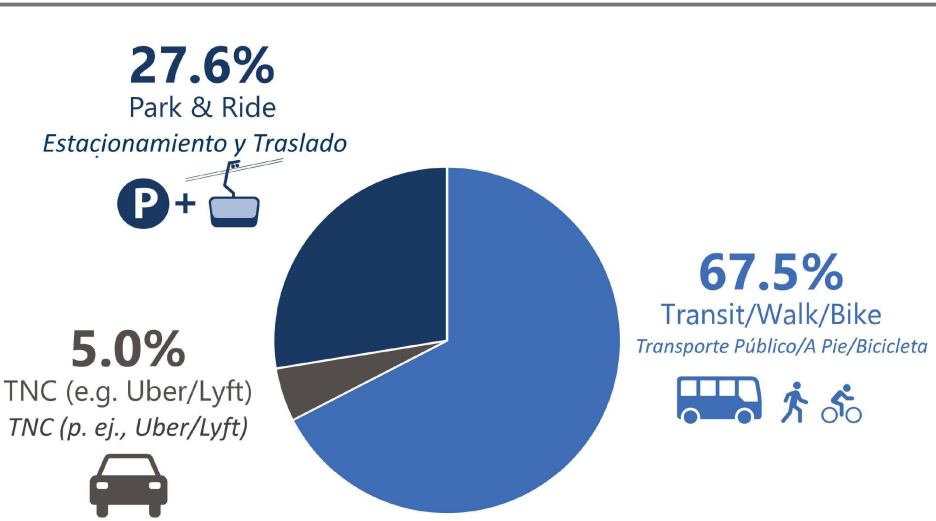
- Construction: Implementation of a City approved and detailed Construction Traffic Management Plan, including street closure information, detour plans, haul routes, and a staging plan
- Implementation of a City approved Temporary Disaster Route Plan, which would include street closure information and detour plans in order to facilitate the movement of emergency vehicles through the study area and minimize effects on emergency response during a disaster
- Visibility enhancements – such as high visibility crosswalk treatments, advanced crossing warning signs, flashing beacons, upgraded lighting, and new or upgraded traffic controls – at the proposed Alameda Tower and Chinatown/State Park Station



Dodger Stadium Transit Riders — *Usuarios del Transporte del Dodger Stadium*



Dodger Stadium Transit Mode Split — *Medios de Transporte Divididos del Dodger Stadium*



Proposed Project Mode of Access (%) — *Medio de Acceso al Proyecto Propuesto (%)*

¿QUÉ SE ESTUDIÓ?

- *Se utilizaron las Directrices de la CEQA y los criterios de selección establecidos por el LADOT, la metodología de análisis y los criterios del umbral a través de las directrices TAG de la Ciudad*
- *El análisis de VMT para el proyecto propuesto empleó una variedad de datos, metodologías y modelos para estimar el número de pasajeros del proyecto, la reducción de viajes de vehículos, la distancia de los viajes de vehículos y, en última instancia, el beneficio de VMT del proyecto propuesto*
- *Estimaciones del número de pasajeros para los asistentes a los partidos y eventos del Dodger Stadium, empleados, turistas, transeúntes del vecindario y visitantes y asistentes a eventos de Los Angeles State Historic Park*
- *Ubicación de las estaciones, las torres y la intersección del proyecto propuesto y si estos componentes aumentan sustancialmente los peligros debido a una característica de diseño geométrico*
- *Los planes conceptuales de desvío de tráfico del proyecto propuesto y la ruta de transporte*

ANÁLISIS Y CONCLUSIONES CLAVE DEL EIR

- *El proyecto sería consistente con los PPOPs – programas, planes, ordenanzas o políticas – que aborden el sistema de circulación, incluyendo las instalaciones de transporte público, carreteras, bicicletas y peatones*
- *El proyecto propuesto no introduciría ninguna condición física insegura en la implementación de medidas de mitigación para la Torre Alameda y la Estación Chinatown/State Park*
- *Con la implementación de las medidas de mitigación, el acceso de emergencia se mantendría durante la construcción del proyecto propuesto*

Tema	*Resultado*	
	Construcción	*Operaciones*
Millas Viajadas en Vehículos	*Sin impacto*	*Sin impacto*
Conflicto con el Plan o las Políticas	*Menos que significativo*	*Menos que significativo*
Riesgos que Aumentan a Través del Diseño	*Menos que significativo con mitigación*	*Menos que significativo con mitigación*

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

- *Construcción: Implementación de un Plan de Gestión de Tráfico de la Construcción detallado y aprobado por la Ciudad, que incluya información sobre el cierre de calles, planes de desvío, rutas de transporte y un plan de preparación*
- *Implementación de un plan de ruta temporal en caso de desastre aprobado por la Ciudad, que incluiría información sobre el cierre de calles y planes de desvío a fin de facilitar el movimiento de vehículos de emergencia a través del área de estudio y minimizar los efectos en la respuesta de emergencia durante un desastre*
- *Mejoras en la visibilidad – como tratamientos de alta visibilidad en los pasos de peatones, señales avanzadas de advertencia de cruces, luces intermitentes, iluminación mejorada y controles de tráfico nuevos o mejorados – en la Torre Alameda propuesta y en la Estación Chinatown/State Park*

Metro

交通運輸

交通运输

研究範圍是甚麼？

- 透過城市 TAG 使用加州環境品質法案(CEQA)和 LADOT 既定的篩選標準、分析方法和界限標準
- 對擬建計畫的車輛行駛里程（VMT）以各種數據、方法和模型進行分析，以估計項目載客量、減少的車輛行程、車輛行車時間，並最終估算擬議項目的 VMT 收益
- 道奇體育場比賽和活動參加者、員工、遊客、乘客,和洛杉磯州立歷史公園遊客和活動參加者的乘車人數估算
- 擬建計畫車站、路口和支撐塔的位置，以及這些組成部份是否因幾何設計特徵而令危險顯著增加
- 擬建計畫的建設概念交通繞道圖與運輸路線

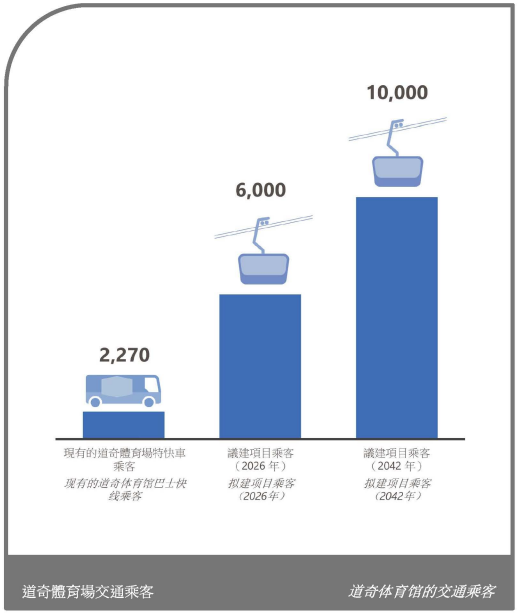
《環境影響報告》的主要分析及結論

- 擬建項目將與 PPOPs（程序、計劃、條例和政策）一致，當中涉及運輸系統，包括交通、道路、單車和行人設施
- 在阿拉米達塔和唐人街/州立公園站實施緩解措施時，擬建計畫不會引起任何不安全的物理條件
- 緩解措施實施時，在擬建計畫施工期間將保持緊急通道暢通

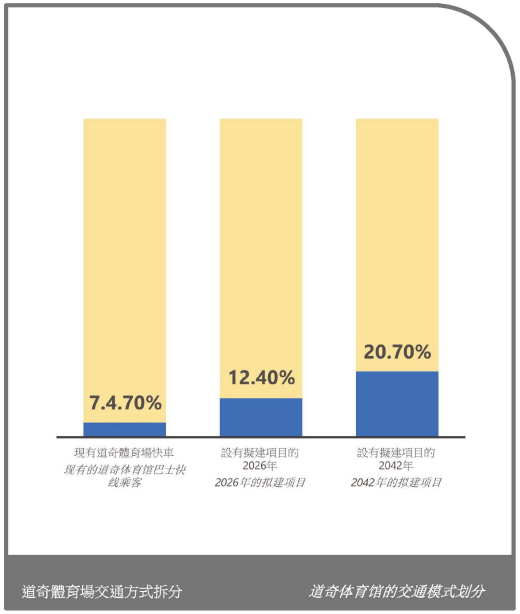
主題	發現	
	建築工程：	操作
車輛行駛里程	沒有影響。	沒有影響。
與計劃或政策衝突	影響不大。	影響不大。
設計令危險增加	經緩解後影響不大。	影響不大。緩解

如何可將影響降至最低?

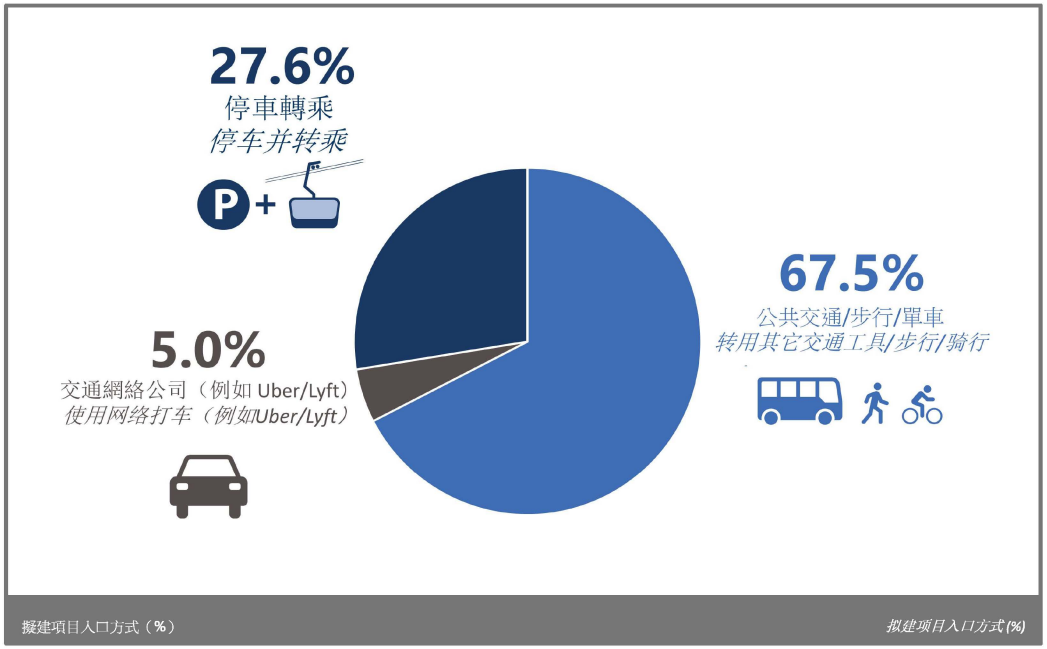
- 建築工程：實施經市批准的詳細建設交通管理計劃，當中包括封閉街道資料、繞道計劃、運輸路線和分階段計劃
- 實施經市政府批准的臨時災害路線計劃，當中包括封閉街道資料和繞道計劃，令應急車輛透過研究區域並最大限度地減少災害期間對應急響應的影響
- 增強擬建阿拉米達塔和唐人街/州立公園站的能見度——例如:高能見度行人通道、優化交叉路口警告標示、閃光燈、升級照明以及新的或已升級的交通控制裝置



道奇體育場交通乘客　　道奇体育馆的交通乘客



道奇體育場交通方式拆分　　道奇体育馆的交通模式划分



擬建項目入口方式（%）　　拟建项目入口方式(%)

研究内容

- *利用了《加州环境质量法案》（CEQA）指南和洛杉矶交通局通过城市标签建立的筛选标准、分析方法和阈值标准*
- *对拟建项目的行车里程（VMT）采用了各种数据、方法和模型，以便能估计项目的乘客量、减少车辆行程数量、车辆行程长度进行分析，并最终估计出拟建项目的行车里程效益*
- *道奇体育馆比赛和活动的参与者、员工、游客、附近的乘客，以及洛杉矶州立历史公园的游客和活动参与者，两者的乘客量预估*
- *拟建的项目车站、枢纽站和索道塔的位置，以及这些组成部分是否会因其几何设计特征而大大增加了危险*
- *拟建项目施工概念交通绕行方案及运输路线*

环境影响报告的主要分析与结论

- *拟建项目将符合PPOPs - 方案、计划、条例和政策 - 处理包括交通、道路、自行车和步行设施的流通系统*
- *由于阿拉米达索道塔和唐人街/国家公园站采取了缓解措施，拟建项目不会带来任何不安全的实际状况*
- *随着缓解措施的实施，在拟建项目施工期间将保留紧急通道*

主题	查找	
	建筑施工	运营
行车里程	无影响	无影响
与计划或政策相冲突	影响不重大	影响不重大
设计增加了危险性	采取缓解措施后无重大影响	影响不重大缓解措施

如何尽量减少影响？

- *建筑施工：执行经市政府批准的详细的施工交通管理计划，包括道路封闭信息、绕行计划、工地运输路线和分段运输计划*
- *执行经市政府批准的临时救灾路线计划，其中将包括道路封闭的信息和绕行计划，以方便应急车辆通过研究区域，并尽量减少灾害期间对应急响应的影响*
- *为拟建的阿拉米达索道塔和唐人街/州立公园车站加强能见度 - 例如高能见度的人行横道处理、高级十字路口警告标志、闪烁的信号灯、升级的照明以及新的或升级的交通管制*

Metro

Parking

Estacionamiento

WHAT WAS STUDIED?

- Most proposed Project riders are expected to shift to transit to get to the Project
- There are approximately 10,290 spaces in publicly available lots and garages and in on-street spaces within ½ mile of the proposed Project's Alameda Station and Chinatown/State Park Station

Parking Type	Game Day Parking			
	Parking Supply	Parked Vehicles	Occupancy	Remaining Supply
Off-Street Publicly Available Spaces	6,876	2,173	32%	4,703
On-Street Spaces	3,417	2,017	59%	1,400
TOTAL				
Proposed Project Parking Demand (2042)	-	**307-790**		
Total Available Off-Street Spaces with Project	**6,876**	**2,963**	**43%**	**3,913**

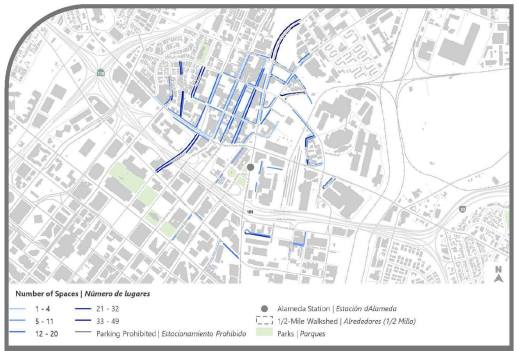
*Counts were taken on September 10, 2021, on an evening when the Los Angeles Dodgers hosted the San Diego Padres; the paid attendance was 48,403, which was higher than the 2019 Los Angeles Dodgers season average for weekday evening games. In coordination with Metro and LADOT, the Parking Study applied a 46% increase to off-street publicly available spaces to account for the COVID-19 pandemic.

PARKING STUDY CONCLUSIONS

- With the addition of the proposed Project's potential parking demand, there is plenty of available parking spaces within the proposed Project's walkshed. Even if some existing parking lots get redeveloped, there is plenty of off-street parking supply to accommodate all of the proposed Project's parking demand.

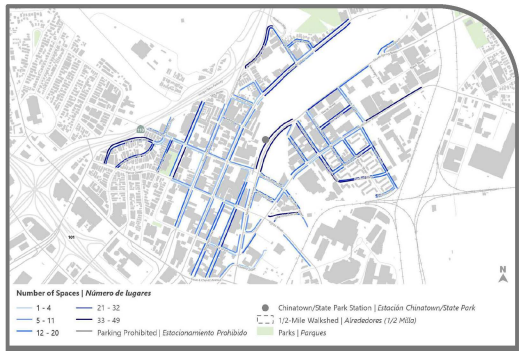
THE PROJECT IS COMMITTED TO ENCOURAGE TRANSIT RIDERSHIP

- Implement business to business partnerships with local businesses to pre-sell bundled packages that include patronage at local businesses and available off-street parking
- Support implementation/expansion of various management strategies including time limit parking restrictions and parking meters during game times to discourage riders from parking in the community and keeping spaces available for residents and local businesses



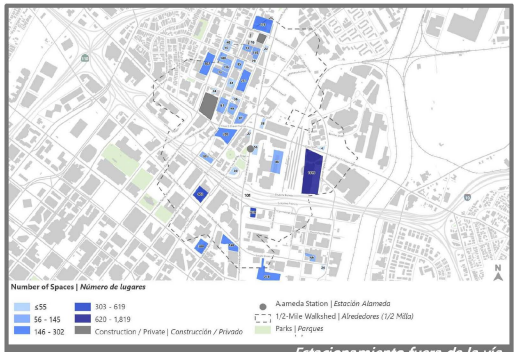
On-Street Parking - Number of Spaces - Alameda Station Walkshed

Estacionamiento en las Calles - Número de Lugares - Alrededores de la Estación de Alameda



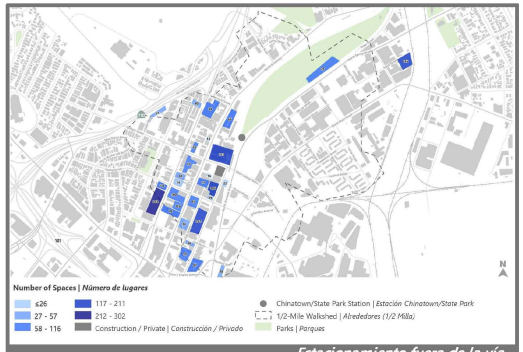
On-Street Parking - Number of Spaces - Chinatown/State Park Station Walkshed

Estacionamiento en las Calles - Número de Lugares - Alrededores de la Estación de Chinatown/State Park



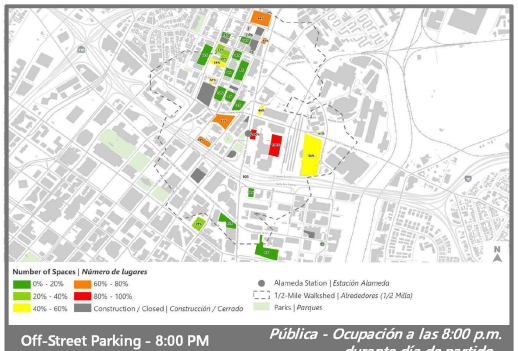
Off-Street Parking - Number of Spaces - Alameda Station Walkshed

Estacionamiento fuera de la vía pública - Número de Lugares - Alrededores de la Estación de Alameda



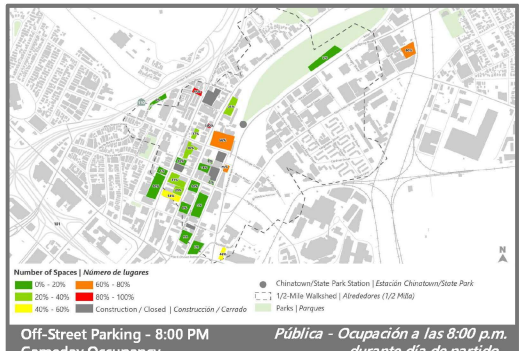
Off-Street Parking - Number of Spaces - Chinatown/State Park Station Walkshed

Estacionamiento fuera de la vía pública - Número de Lugares - Alrededores de la Estación de Chinatown/State Park



Off-Street Parking - 8:00 PM Gameday Occupancy - Alameda Station Walkshed

Pública - Ocupación a las 8:00 p.m. durante día de partido - Alrededores de la Estación de Alameda



Off-Street Parking - 8:00 PM Gameday Occupancy - Chinatown/State Park Station Walkshed

Pública - Ocupación a las 8:00 p.m. durante día de partido - Alrededores de la Estación de Chinatown/State Park

¿QUÉ SE ESTUDIÓ?

- *Se espera que la mayoría de los usuarios del proyecto propuesto utilicen el transporte público para llegar al proyecto*
- *Hay aproximadamente 10,290 lugares en lotes y garajes públicos y en espacios en la calle a menos de ½ milla (800 m) de la Estación Alameda del proyecto propuesto y la Estación Chinatown/State Park*

Tipo de Estacionamiento	*Estacionamiento para un Día de Partido*			
	Oferta de Estacionamiento	*Vehículos Estacionados*	*Ocupación*	*Oferta Restante*
Lugares de Estacionamiento Público Disponibles Fuera de la Vía Pública	*6,876*	*2,173*	*32%*	*4,703*
Lugares en las Calle	*3,417*	*2,017*	*59%*	*1,400*
TOTAL				
Demanda de Estacionamiento con el Proyecto Propuesto (2042)	-	***307-790***		
Total de Lugares Disponibles Fuera de la Vía Pública con el Proyecto	***6,876***	***2,963***	***43%***	***3,913***

**Los conteos se realizaron el 10 de septiembre de 2021, en una noche en la que los Dodgers de Los Ángeles recibieron a los Padres de San Diego; la asistencia pagada fue de 48,403, que fue más alta que el promedio de la temporada 2019 de los Dodgers de Los Ángeles para los juegos nocturnos entre semana. En coordinación con Metro y LADOT, el Estudio de Estacionamiento aplicó un aumento del 46% a los espacios públicos disponibles fuera de la vía pública para tener en cuenta la pandemia de COVID-19.*

CONCLUSIONES DEL ESTUDIO DE ESTACIONAMIENTO

- *Con la adición de la demanda potencial de estacionamiento del proyecto propuesto, hay muchos lugares de estacionamiento disponibles dentro de los alrededores del proyecto propuesto. Incluso si algunos de los estacionamientos existentes se reurbanizan, hay suficiente oferta de estacionamiento fuera de la vía pública para dar cabida a toda la demanda de estacionamiento del proyecto propuesto.*

EL PROYECTO SE COMPROMETE A FOMENTAR EL USO DEL TRANSPORTE PÚBLICO

- *Estableciendo asociaciones de empresa a empresa con los negocios locales para la preventa de paquetes que incluyan el consumo en los negocios locales y el estacionamiento disponible fuera de la vía pública*
- *Apoyar la implementación/expansión de varias estrategias de gestión, incluyendo restricciones de estacionamiento con límite de tiempo y parquímetros durante las horas de los partidos para disuadir a los pasajeros de estacionar en la comunidad y mantener espacios disponibles para los residentes y los negocios locales*

Metro

停車

停车

研究範圍是甚麼？

- 預計大多數讓建計畫的乘客將轉乘公共交通以到達項目
- 在擬建的阿拉米達站和唐人街/州立公園站 ½ 英里範圍內，公共停車位和車庫以及街道上約提供共 10,290 個車位

車位類型	比賽日停車			
	車位供應	停泊車輛	用量	空位
室內車位	6,876	2,173	32%	4,703
街頭車位	3,417	2,017	59%	1,400
總數				
擬建計畫車位需求 (2042)	-	307-790		
可供計畫使用的總室內車位數量	6,876	2,963	43%	3,913

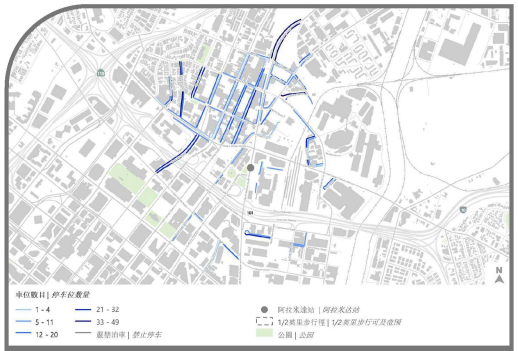
*數據根據 2021年9月10日 洛杉磯道奇隊主場迎戰聖地牙哥教士隊的晚上進行；當天付費出席人數為 48,403，高於 2019 年洛杉磯道奇隊平日晚間比賽的平均水平。與運輸局和 LADOT 合作，車輛停泊研究將室內公共泊車位置增加 46%，以應對 COVID-19 疫情對車位需求。

停車研究結論

- 對於擬建計畫的潛在停車需求，擬建項目的行人路上有大量可用車位供應。即使某些現有的停車場需重新開發，附近也有大量的室內車位供應,以滿足擬建計畫對車位的需求。

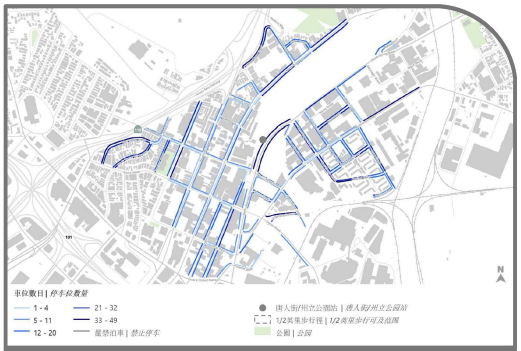
項目鼓勵乘客使用公共交通工具

- 與當地企業建立企業間的合作夥伴關係以預售捆綁套餐，當中包括企業顧客可使用路邊停車位
- 支持實施/擴展各種管理策略，包括限時停車限制和比賽期間的停車計時器，從而阻止駕車人士在社區停車並為居民和當地企業保留可用空間



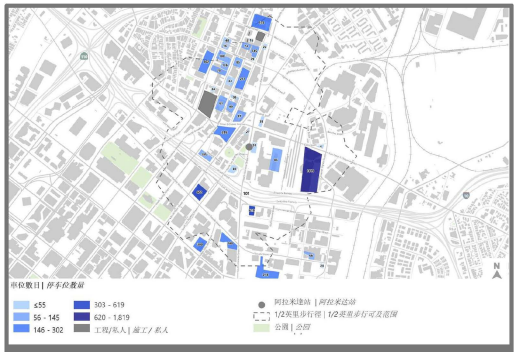
路邊車位 - 車位數量 - 阿拉米達站步行區

路边停车位 - 停车位数量 - 阿拉米达站步行可及范围



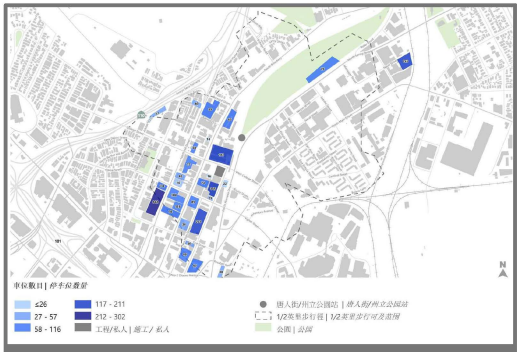
路邊車位 - 車位數量 - 唐人街/州立公園站步行區

路边停车场位- 停车位数量 - 唐人街/州立公园站步行可及范围



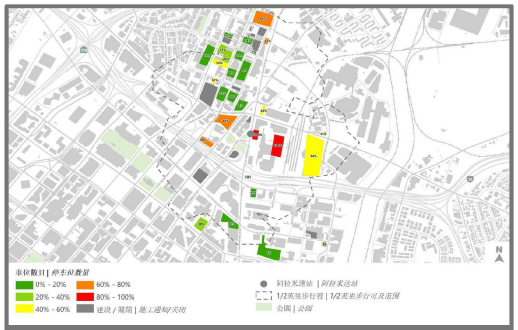
室內車位 - 車位數量 - 阿拉米達站步行區

非街道停车场 - 停车位数量 - 阿拉米达站步行可及范围



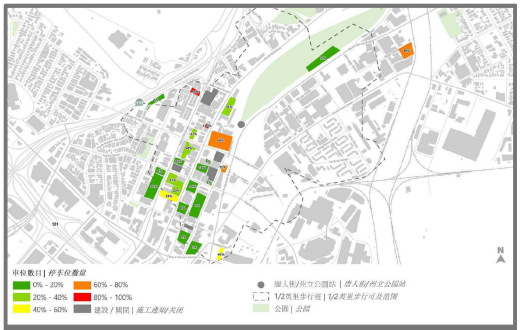
室內泊車 - 車位數量 - 唐人街/州立公園站步行區

非街道停车场 - 停车位数量 - 唐人街/州立公园站步行可及范围



室內泊車 - 比賽日晚上8時空置率 - 阿拉米達站步行區

非街道停车场 - 比赛日下午8:00点车位占有率 - 阿拉米达站步行可及范围



室內泊車 - 比賽日晚上8時空置率 - 唐人街/州立公園站步行區

非街道停车场 - 比赛日下午8:00点车位占有率 - 唐人街/州立公园站步行可及范围

研究内容？

- 预计大多数拟搭乘项目的乘客将转乘交通工具前往本项目
- 在拟建项目的阿拉米达站和唐人街/州立公园站的半英里范围内，公共可用停车位和车库以及街道上的停车位约有10,290个

停车类型	比赛日停车			
	停车位供应	停泊的车辆	停车位占用率	剩余的停车位
非街道可停车的公共空间	6,876	2,173	32%	4,703
路边停车空间	3,417	2,017	59%	1,400
总计				
拟建项目的停车需求（2042年）	-	307-790		
项目可用的非街道停车位总数量	6,876	2,963	43%	3,913

*统计时间是2021年9月10日，当天晚上洛杉矶道奇队主场迎战圣地亚哥教士队；付费入场人数为48,403人，高于2019年洛杉矶道奇队工作日晚间比赛的赛季平均水平。在与都会交通局和洛杉矶交通局的协调下，本停车研究将非街道公共可用停车位增加了46%，以应对新冠肺炎疫情。

停车场研究结论

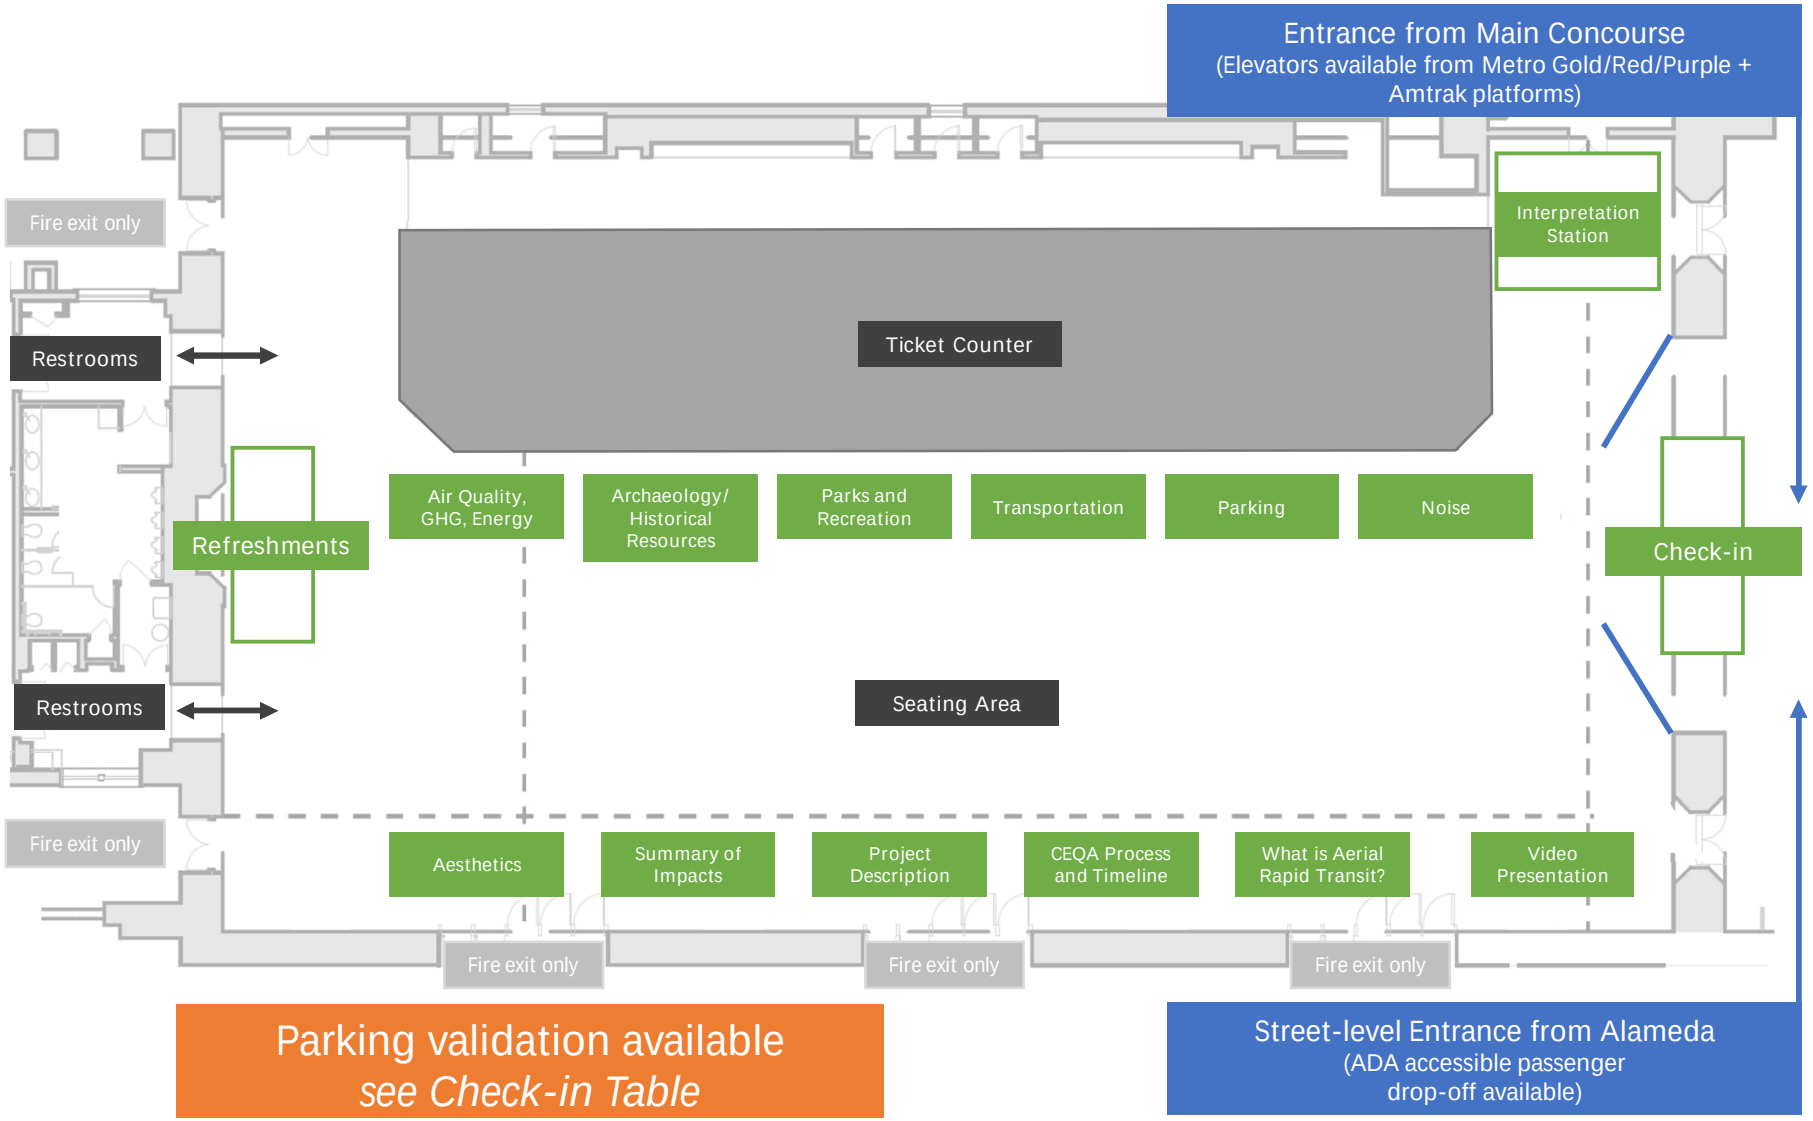
- 考虑到拟建项目的潜在停车需求，故在拟建项目的步行可及范围内提供了大量可用的停车位。即使一些现有的停车场被重新改建，也有大量的非街道停车位供应，以满足拟建项目的所有停车需求。

本项目致力于鼓励乘坐公共交通

- 与本地商业建立商业合作关系，预售捆绑套餐，包括惠顾本地商业的客户和可用的非街道停车位
- 支持实施/扩大各种管理策略，包括比赛期间的限时停车限制和咪表收费，以劝阻乘客将车停在社区内，并为居民和本地商业提供停车位

Metro

Draft Environmental Impact Report (EIR) Informational Workshop



GET THERE BY AIR

www.metro.net/aerialrapidtransit

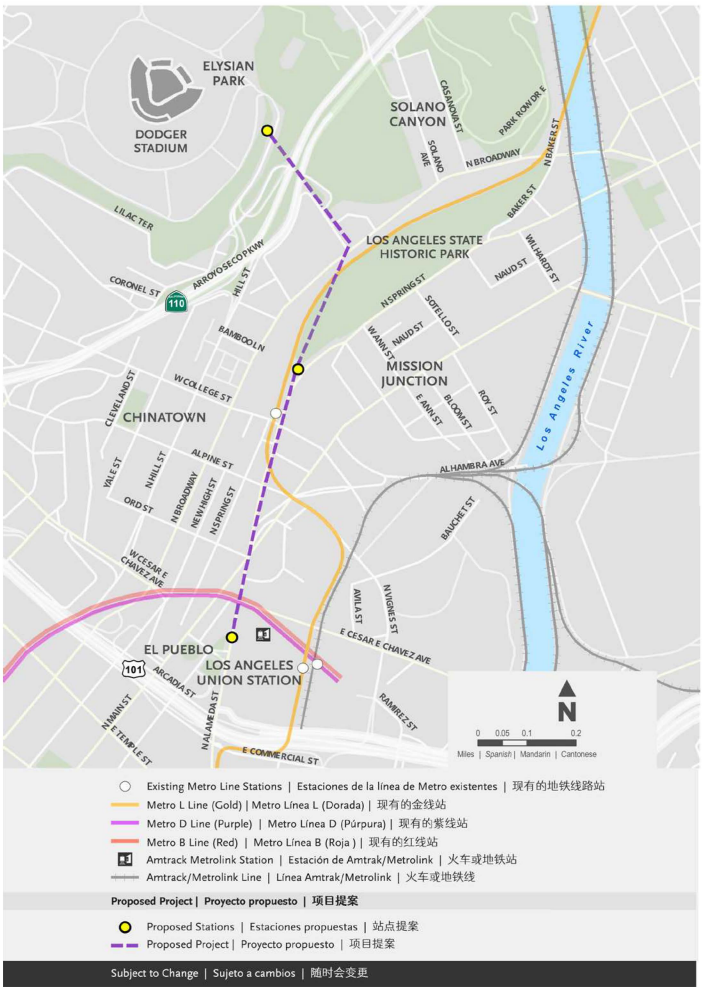
LOS ANGELES AERIAL RAPID TRANSIT
FACT SHEET

Metro

Project Overview

Los Angeles Aerial Rapid Transit Technologies LLC is proposing the Los Angeles Aerial Rapid Transit Project, which would connect Los Angeles Union Station to the Dodger Stadium property with an intermediate station at the Los Angeles State Historic Park via a zero emission aerial rapid transit gondola system in downtown Los Angeles.

- Zero Emissions
- 1 Mile Distance
- 7 Minute Ride
- 3,000 Cars off the road on game days
- 5,000 passengers per hour per direction
- Free for Dodger ticket holders and community members who live and work along the route.



LA ART proposes to serve all Dodger home games and events at the stadium, and is also anticipated to operate daily to serve community members, park visitors, and visitors to Los Angeles. LA ART would:

- Reduce transportation related pollution and greenhouse gas (GHG) emissions as a result of reduced vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days.

- Improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the region's transit hub and one of it's largest event centers.
- Attract new transit riders to the Metro system through the unique experience of an aerial transit system connected to Dodger Stadium.
- Connect surrounding communities of Chinatown, Mission Junction, Los Angeles State Historic Park, Elysian Park, Echo Park, and Solano Canyon to the regional transit system accessible at Union Station.
- Enhance safety of neighborhoods adjacent to Dodger Stadium by reducing the number of vehicles in the area.
- Improve the Dodger Stadium visitor experience by providing efficient, high-capacity, and faster alternative access to Dodger Stadium.
- Improve transit rider experience by providing unique scenic views of the Los Angeles area.

Overview of Technology

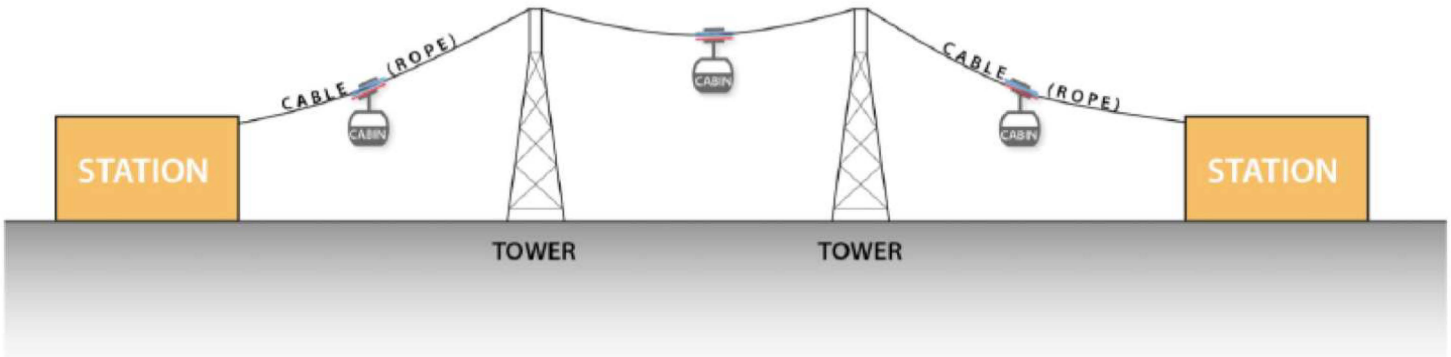
Aerial rapid transit (ART) is a proven, zero emission, safe, sustainable, high-capacity, and highly efficient form of transportation. In an aerial transit system, cabins are suspended above grade by cables strung between stations and towers. Modern applications have seen the evolution of aerial transit technology as a feasible mode of urban rapid transit.

The proposed Project would include three passenger stations, a non-passenger junction, three towers, and gondola cabins. The cabins would allow for sitting or standing; would accommodate wheelchairs, baby strollers, and bicycles; and would be air conditioned and fully ADA accessible. Each cabin would have a security camera on board with a feed to the control room as well as a "push to talk" button.

Environmental Impact Report

Los Angeles County Metropolitan Transportation Authority (Metro) is the lead agency under the California Environmental Quality Act (CEQA) and is preparing a Draft Environmental Impact Report (DEIR) to evaluate the potential for environmental impacts resulting from the proposed project. Topics analyzed and included in the DEIR include:

- Aesthetics
- Agriculture and Forestry
- Air Quality
- Biological Resources
- Cultural Resources
- Energy
- Geology and Soils
- Greenhouse Gas Emissions (GHGs)
- Land Use and Planning
- Mineral Resources
- Noise
- Parks and Recreation
- Population and Housing
- Public Services
- Transporation



Project Timeline

Project Updates

This summer, the Draft Environmental Impact Report (EIR) is available for public review and comment for 60 days, from October 17 to December 16, 2022. This milestone document evaluates the proposed alternatives, as well as their potential impacts and mitigation measures.

The Draft EIR can be viewed online or at repository sites where printed copies will be available. Public hearings will also take place to provide a presentation and an opportunity for oral comments. Formal comments may also be submitted by mail, by phone, and online.

To learn more please visit metro.net/aerialrapidtransit

Public Involvement

Community Information Session

Prior to the release of the Draft EIR, Metro is hosting two community information sessions to share details on the project and options on how to comment and participate on the upcoming release of the Draft EIR.

Virtual: Wednesday, October 12, 2022, 5pm - 7pm
In-Person: Saturday, October 15, 2022, 10am - 12pm

Draft EIR Informational Workshop

Virtual: Saturday, October 22, 2022, 10am - 12pm
In-Person: Tuesday, October 25, 2022, 5pm - 7pm

Draft EIR Public Hearing

In-Person: Saturday, December 10, 2022, 10am - 12pm
Virtual: Tuesday, December 13, 2022, 5pm - 7pm

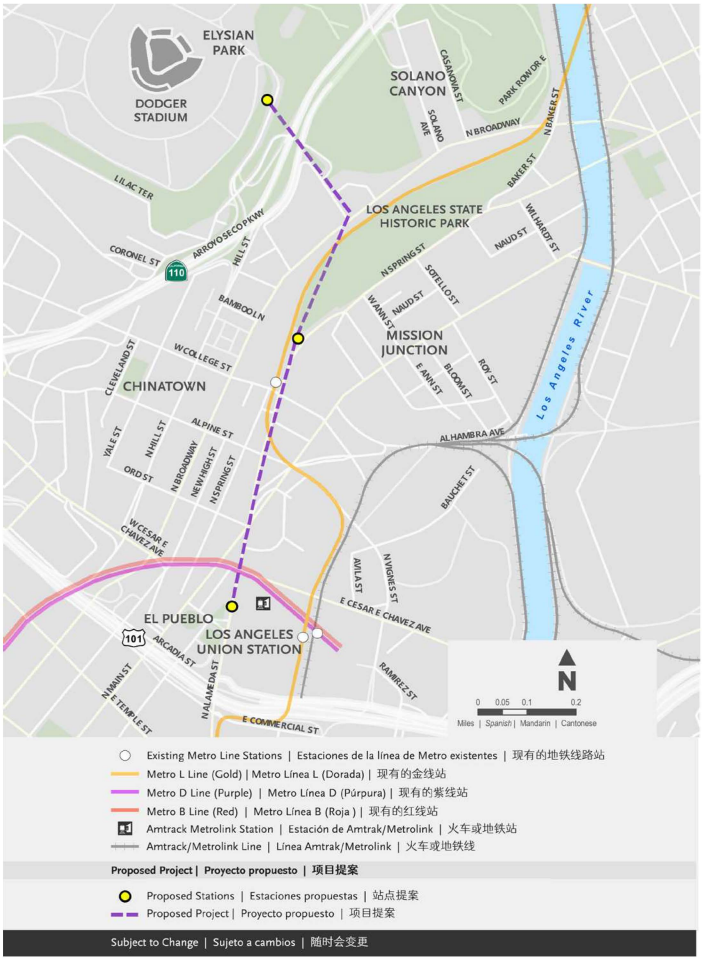
TRÁNSITO RÁPIDO AÉREO DE LOS ÁNGELES
HOJA INFORMATIVA

Metro®

Descripción General del Proyecto

Los Angeles Aerial Rapid Transit Technologies LLC está proponiendo el Proyecto de Tránsito Rápido Aéreo de Los Ángeles (LA ART, por sus siglas en ingles), que conectaría Los Angeles Union Station con la propiedad del Dodger Stadium con una estación intermedia en el Parque Histórico Estatal de Los Ángeles a través de un sistema de góndolas aéreas de tránsito rápido de cero emisiones en el centro de Los Ángeles.

- Cero emisiones
- Distancia de 1 milla
- Viaje de 7 minutos
- 3.000 coches fuera de la carretera en los días de partidos
- 5.000 pasajeros por hora por dirección
- Gratis para los poseedores de boletos de los Dodgers y miembros de la comunidad que viven y trabajan a lo largo de la ruta.



LA ART propone dar servicio para todos los partidos y eventos en el estadio, y también se prevé que opere diariamente para servir a los miembros de la comunidad, visitantes del parque y visitantes de Los Ángeles. LA ART:

- Reduciría la contaminación relacionada con el transporte y las emisiones de gases de efecto invernadero (GHG, por sus siglas en inglés) como resultado de la reducción de la congestión vehicular en y alrededor del Dodger Stadium, en las calles de los vecindarios, las

carreteras arteriales y las autopistas durante los días de partidos y eventos especiales.

- Mejoraría la movilidad y la accesibilidad para la región al proporcionar una conexión de tránsito rápido aéreo diario y de alta capacidad entre el centro de tránsito de la región y uno de sus centros de eventos más grandes.
- Atraería a nuevos pasajeros de tránsito al sistema Metro a través de la experiencia única de un sistema de transporte aéreo conectado al Dodger Stadium.
- Conectaría las comunidades circundantes de Chinatown, Mission Junction, Los Angeles State Historic Park, Elysian Park, Echo Park y Solano Canyon con el sistema de tránsito regional accesible en Union Station.
- Mejoraría la seguridad de los vecindarios adyacentes al Dodger Stadium al reducir el número de vehículos en el área.
- Mejoraría la experiencia del visitante del Dodger Stadium al proporcionar un acceso alternativo eficiente, de alta capacidad y más rápido al Dodger Stadium.
- Mejoraría la experiencia de los pasajeros de tránsito al proporcionar vistas panorámicas únicas del área de Los Ángeles.

Visión General de la Tecnología

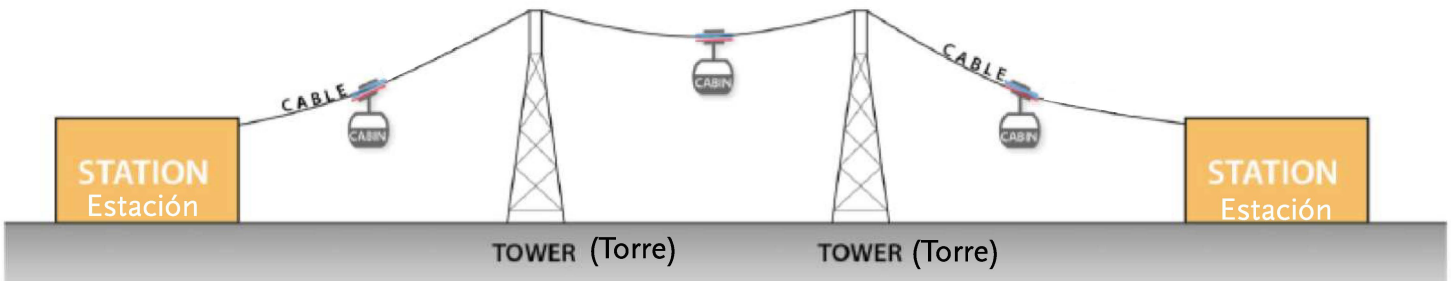
El tránsito aéreo rápido (ART, por sus siglas en inglés) es una forma de transporte comprobada, de cero emisiones, segura, sostenible, de alta capacidad y altamente eficiente. En un sistema de tránsito aéreo, las cabinas están suspendidas por encima del nivel por cables tendidos entre estaciones y torres. Las aplicaciones modernas han visto la evolución de la tecnología de tránsito aéreo como un modo factible de tránsito rápido urbano.

El proyecto propuesto incluiría tres estaciones de pasajeros, un cruce sin pasajeros, tres torres y cabinas de góndolas. Las cabinas permitirían sentarse o pararse; acomodarían sillas de ruedas, cochecitos de bebé y bicicletas; y tendrían aire acondicionado y serían totalmente accesible para la ADA [Ley de Estadounidenses con Discapacidades, por sus siglas en inglés]. Cada cabina tendría una cámara de seguridad a bordo con una transmisión a la sala de control, así como un botón de “presionar para hablar”.

Informe de Impacto Ambiental

La Autoridad de Transporte Metropolitano del Condado de Los Ángeles (Metro) es la agencia líder bajo la Ley de Calidad Ambiental de California (CEQA, por sus siglas en inglés) y está preparando un Borrador del Informe de Impacto Ambiental (DEIR, por sus siglas en inglés) para evaluar el potencial de impactos ambientales resultantes del proyecto propuesto. Los temas analizados e incluidos en el DEIR incluyen:

- Estética
- Agricultura y Silvicultura
- Calidad del aire
- Recursos biológicos
- Recursos culturales
- Energía
- Geología y suelos
- Emisiones de Gases de Efecto Invernadero (GHG)
- Uso y planificación de la tierra
- Recursos minerales
- Ruido
- Parques y recreación
- Población y vivienda
- Servicios públicos
- Transporte



Línea de Tiempo del Proyecto

Actualizaciones del Proyecto

Este verano, el Borrador del Informe de Impacto Ambiental (EIR) está disponible para revisión pública y comentarios durante 60 días, del 17 de octubre al 16 de diciembre de 2022. Este documento de hito evalúa las alternativas propuestas, así como sus potenciales impactos y medidas de mitigación.

El Borrador del EIR se puede ver en Internet o en los sitios del repositorio donde estarán disponibles copias impresas. También se llevarán a cabo audiencias públicas para proporcionar una presentación y una oportunidad para comentarios orales. Los comentarios formales también se pueden enviar por correo, por teléfono y por Internet. Para obtener más información, visite metro.net/aerialrapidtransit

Participación Pública

Sesión de Información a la Comunidad

Antes de la publicación del Borrador del EIR, Metro está organizando dos sesiones de información a la comunidad para compartir detalles sobre el proyecto y opciones sobre cómo comentar y participar en la próxima publicación del Borrador del EIR.

Virtual: miércoles, 12 de octubre de 2022, 5pm-7pm
En persona: sábado, 15 de octubre de 2022, 10am-12pm

Taller Informativo sobre el Borrador del EIR

Virtual: sábado, 22 de octubre de 2022, 10am-12pm
En persona: martes, 25 de octubre de 2022, 5pm-7pm

Audiencia Pública sobre el Borrador del EIR

En persona: sábado, 10 de diciembre de 2022, 10am-12pm
Virtual: martes, 13 de diciembre de 2022, 5-7pm

PÓNGASE EN CONTACTO CON NOSOTROS
Manténgase involucrado y comparta sus reacciones.

乘坐高空纜車

www.metro.net/aerialrapidtransit

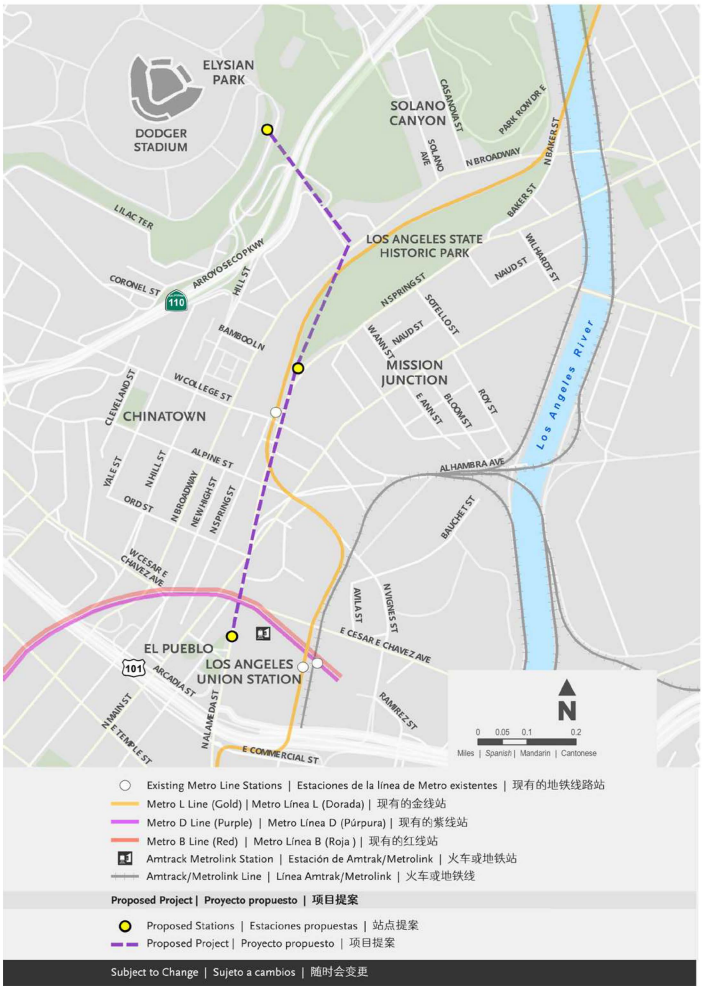
洛杉磯空中捷運
項目說明書

Metro

項目概況

洛杉磯空中捷運交通技術有限公司（Los Angeles Aerial Rapid Transit Technologies LLC，LA ART）正提議建設洛杉磯空中快捷纜車項目，該項目將通過快捷的淨零排放高空纜車系統將洛杉磯聯合車站與道奇球場連接起來，並於洛杉磯州立歷史公園設立一個中轉站。

- 淨零排放
- 全程約一英里
- 約七分鐘車程
- 球賽日可減少3000輛車
- 纜車可每小時單向乘載5000名乘客
- 道奇球隊門票持有者及沿途居住和工作的社區人士可免費搭乘。



LA ART計劃爲所有道奇球隊主場比賽日和球場特別活動日提供服務，也預計每天爲社區人士、公園遊客和洛杉磯遊客提供服務。LA ART 將可：

- 在球賽日和特別活動日期間，由於減少了道奇球場內和周圍、鄰里街道、交通主幹道和高速公路上的車輛擁堵，因此也可減少與交通有關的污染和溫室氣體 (GHG) 排放。

- 通過每日在洛市的交通樞紐和最大的活動中心之間，提供高容量的空中纜車服務，可提高該地區的流動性和可達性。
- 希望通過與道奇球場相連的空中纜車的獨特體驗，可吸引到新乘客使用大都會公共交通工具。
- 通過聯合車站連接到周邊社區的交通系統，包括中國城，Mission Junction, 洛杉磯州立歷史公園，Elysian Park，回音公園和索拉諾山谷。
- 通過減少道奇體球場區域的車輛來加強附近社區的安全。
- 通過提供高效、高容量和快捷的方式進入道奇球場，以提升道奇球場的遊客體驗。
- 通過提供洛杉磯地區獨特的風景來提升公交乘客的體驗。

技術概述

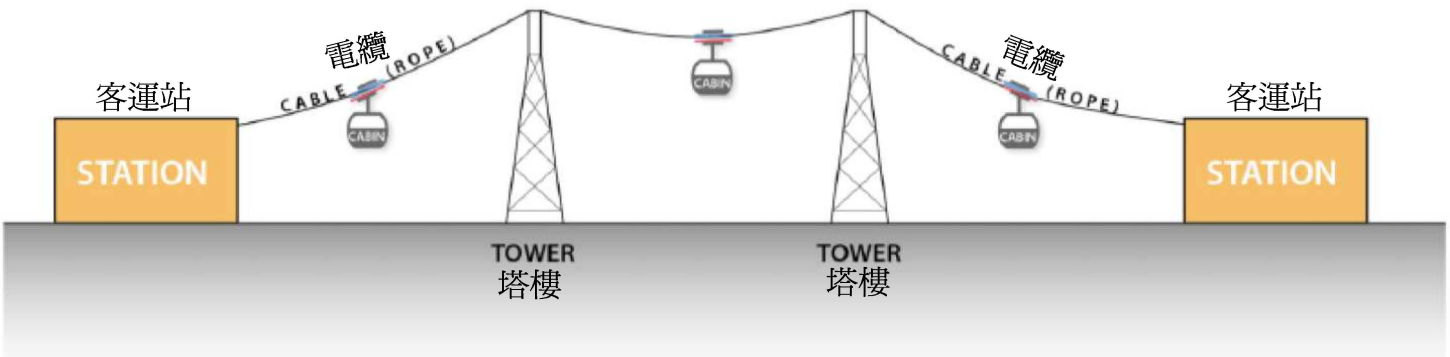
空中快捷纜車(ART) 是一種經過驗證的、淨零排放、安全、具可持續、高容量和高效的運輸方式。在空中快捷纜車系統中，座艙通過在車站和塔樓之間的電纜懸掛在地面之上。現代應用見證了空中快捷纜車作爲城市交通發展的可行模式。

擬建項目將包括三個客運站、一個非客運樞紐站、三座塔樓和客艙。客艙可以坐或站；可容納輪椅、嬰兒車和自行車；並且裝有空調並符合無障礙設施標準。每個客艙都將配備一個監控攝像頭，用於向控制室提供信號，及一個通話按鈕。

環境影響報告

洛杉磯縣大都會交通管理局 (Metro) 是加州環境質量法案 (CEQA)的領導機構，正在擬寫環境影響報告草案 (DEIR)，以評估擬議項目可能造成的環境影響。 DEIR 中分析和包含的主題包括：

- 美觀
- 農林業
- 空氣質量
- 生物資源
- 文化資源
- 能源
- 地質和土壤
- 溫室氣體排放
- 土地利用和規劃
- 礦物資源
- 噪音污染
- 公園和社區娛樂場
- 人口和住房
- 公共服務
- 交通



项目时间表

項目更新

從2022年10月17日至12月16日，環境影響報告草案 (EIR)在60天內可供公眾審查和評論。這份里程碑文件評估了擬議的替代方案，以及它們的潛在影響和緩解措施。

EIR 草案可以在線上查看，也可以在提供打印副本的存放處查閱。項目還將舉行公開聽證會，以提供說明和表達意見的機會。正式意見也可以通過郵件、電話和在線提交。

要了解更多信息，請瀏覽網站
metro.net/aerialrapidtransit

公眾參與方式

<u>社區信息會議</u>

在 EIR 草案發布之前，Metro 將舉辦兩場社區信息會議，以分享有關項目的詳細信息以及如何表達意見和參與即將發布的 EIR 草案的選項。

線上視訊會議：2022年10月12日，星期三，
下午5点至晚上7点
線下實體會議：2022年10月15日，星期六，
上午10點至中午12點

<u>EIR草案信息研討會</u>

線上會議：2022年10月22日，星期六，
上午10點至中午12點
線下會議：2022年10月25日，星期二，
下午5点至晚上7点

<u>EIR草案公開聽證會</u>

線下會議：2022年12月10日，星期六，
上午10點至中午12點
線上會議：2022年12月13日，星期二，
下午5点至晚上7点

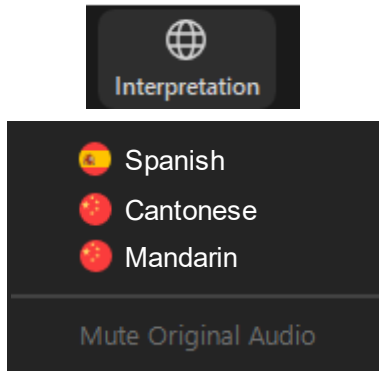
Public Hearing Materials

Powerpoint Presentation (multiple languages)

Los Angeles Aerial Rapid Transit Project
Draft EIR Public Hearing

December 13, 2022

Language Accommodations* (Asistencia de Lenguaje / 語言選項 / 语言选项)



Click on the interpretation button.

Select Spanish, Cantonese, or Mandarin.

You are welcome to download a translated version of the Presentation at metro.net/aerialrapidtransit

*Note that if you are calling in via phone, the interpretation feature is not available in Zoom for phone-only participants. Please log in to Zoom to access interpretation if you can.

Español

Haga clic en el botón de interpretación.

Seleccione: Español, Cantonés o Mandarín.

Puede descargar una versión traducida de la presentación en metro.net/aerialrapidtransit

*Nota. Si llama vía telefónica, la opción de interpretación no estará disponible en Zoom. Si es posible, favor de ingresar a Zoom para tener acceso a la interpretación.

粵語

點擊傳譯按鈕。

選擇西班牙語、粵語或普通話。

歡迎您在 metro.net/aerialrapidtransit 下載簡報的翻譯版本

*注意: 如果您是打電話參加，口譯的選項無法使用。如有可能，請用電腦的Zoom 軟體連結口譯功能。

普通话

点击口译按钮。

选择西班牙语、粤语或普通话。

欢迎在 metro.net/aerialrapidtransit 下载演示文稿翻译版本。

Agenda

1. Purpose of Meeting
2. How to Participate in this Virtual Meeting
3. Overview
4. CEQA Process Overview
5. LA ART Project Overview
6. Draft EIR Key Analyses and Conclusions
7. Public Comment Session

For assistance with Zoom: please email mary.nooristani@aecom.com or call (619) 251-9180

Purpose of the Meeting

PRESENT DRAFT EIR KEY ANALYSES AND CONCLUSIONS

PUBLIC COMMENT SESSION

California Environmental Quality Act (CEQA) Process

45-Day Scoping Period
October 1–November 16, 2020

90-Day Draft EIR Public Review
October 17–January 17, 2023

Metro Board of Directors Certification of Final EIR
2023

TODAY!

Learn about the Draft EIR's key analyses and conclusions and provide verbal public comment.

There will be no Q&A today.

Ongoing Community Outreach

Two Informational Workshops

Three Public Hearings

WE ARE HERE

Communications typed into the Zoom chat will not be considered a formal public comment.

How to Comment on Draft EIR through January 17, 2023

Additional Public Hearing

Downtown LA/Chinatown
Thursday, January 12, 2023, 5:00 – 7:00 pm
Cathedral High School
1253 Bishops Road, Los Angeles, CA 90012

How to Participate in this Meeting

TODAY!

Learn about the Draft EIR's key analyses and conclusions and provide verbal public comment.

There will be no Q&A today.

During Public Comment Session: Raise your hand and you will be called on to unmute yourself and provide public comment.

Overview

Overview

- The Los Angeles Aerial Rapid Transit Project is proposed by LA Aerial Rapid Transit Technologies LLC
- Metro is the lead agency in the preparation of an Environmental Impact Report (EIR) under the California Environmental Quality Act (CEQA)
- The Draft EIR evaluates the potential environmental effects associated with construction and operation of the proposed Project

Overview

- As the lead agency, Metro has the responsibility to ensure that:
  - The EIR adequately assesses the potential project impacts
  - The proposed mitigation measures are appropriate
  - The CEQA process has been complied with for public notices, public outreach, and distribution of documents

Overview

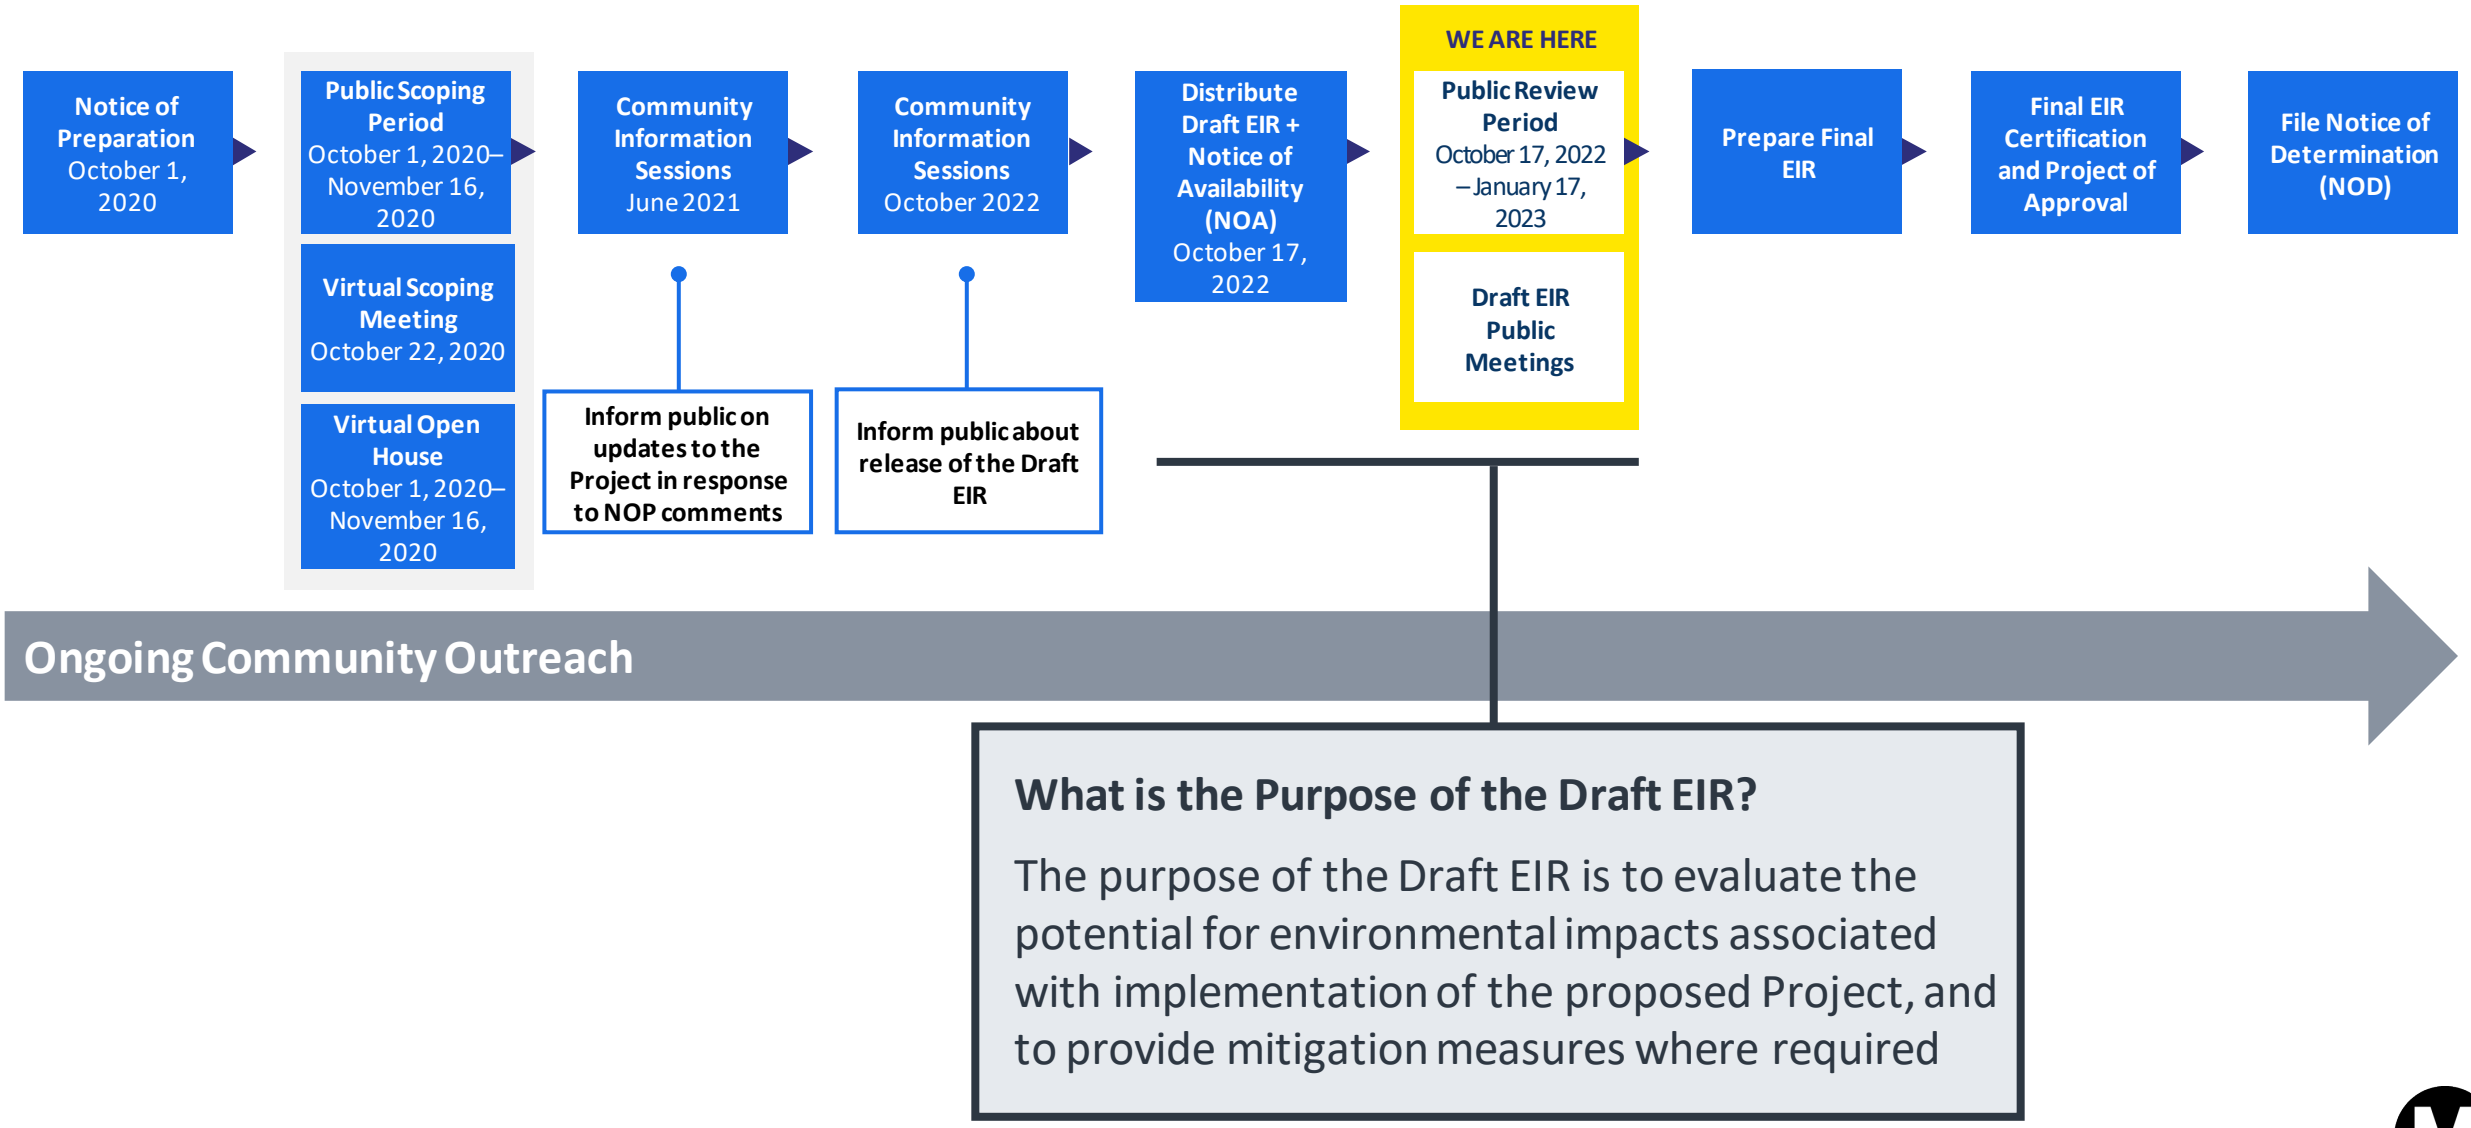
- We are currently accepting public comments on the Draft EIR under CEQA
  - Public Hearings
  - Email
  - Mail
  - Phone
- Senate Bill 44
  - Provides CEQA litigation streamlining for “environmental leadership transit projects” in Los Angeles County
  - The proposed Project will be the first environmental leadership transit project under Senate Bill 44
  - Public Hearing Requirements
    - Informational Workshop: within the first 10 calendar days of the public comment period to inform the public about the Draft EIR’s key analyses and conclusions
    - Public Hearing: within the last 10 calendar days of the public comment period to obtain public testimony

Overview of the California Environmental Quality Act (CEQA) Process

CEQA Process

- Required for all projects undertaken, funded, or requiring approval by a public agency
- Informs the public and decision makers
- Discloses potential environmental impacts resulting from a proposed project
- Provides the opportunity to comment on environmental issues
- Two public comment periods: Scoping Period and Draft EIR Public Review
- SB 44 requires two public meetings during Draft EIR Public Review: Informational Workshop and Public Hearing

Timeline



What is the Purpose of the Draft EIR?

The purpose of the Draft EIR is to evaluate the potential for environmental impacts associated with implementation of the proposed Project, and to provide mitigation measures where required

Public Meetings During Draft EIR Public Review Period

Informational Workshops

Draft EIR Informational Workshop No. 1	Saturday, October 22	Virtual
Draft EIR Informational Workshop No. 2	Tuesday, October 25	In-Person

Metro hosted two Informational Workshops to inform the public of the key analyses and conclusions in the Draft EIR

Public Hearings

Draft EIR Public Hearing No. 1	Saturday, December 10	In-Person
Draft EIR Public Hearing No. 2	Tuesday, December 13	Virtual
Draft EIR Public Hearing No. 3	Tuesday, January 12	In-Person

Metro will host three Public Hearings to take public comment on the Draft EIR

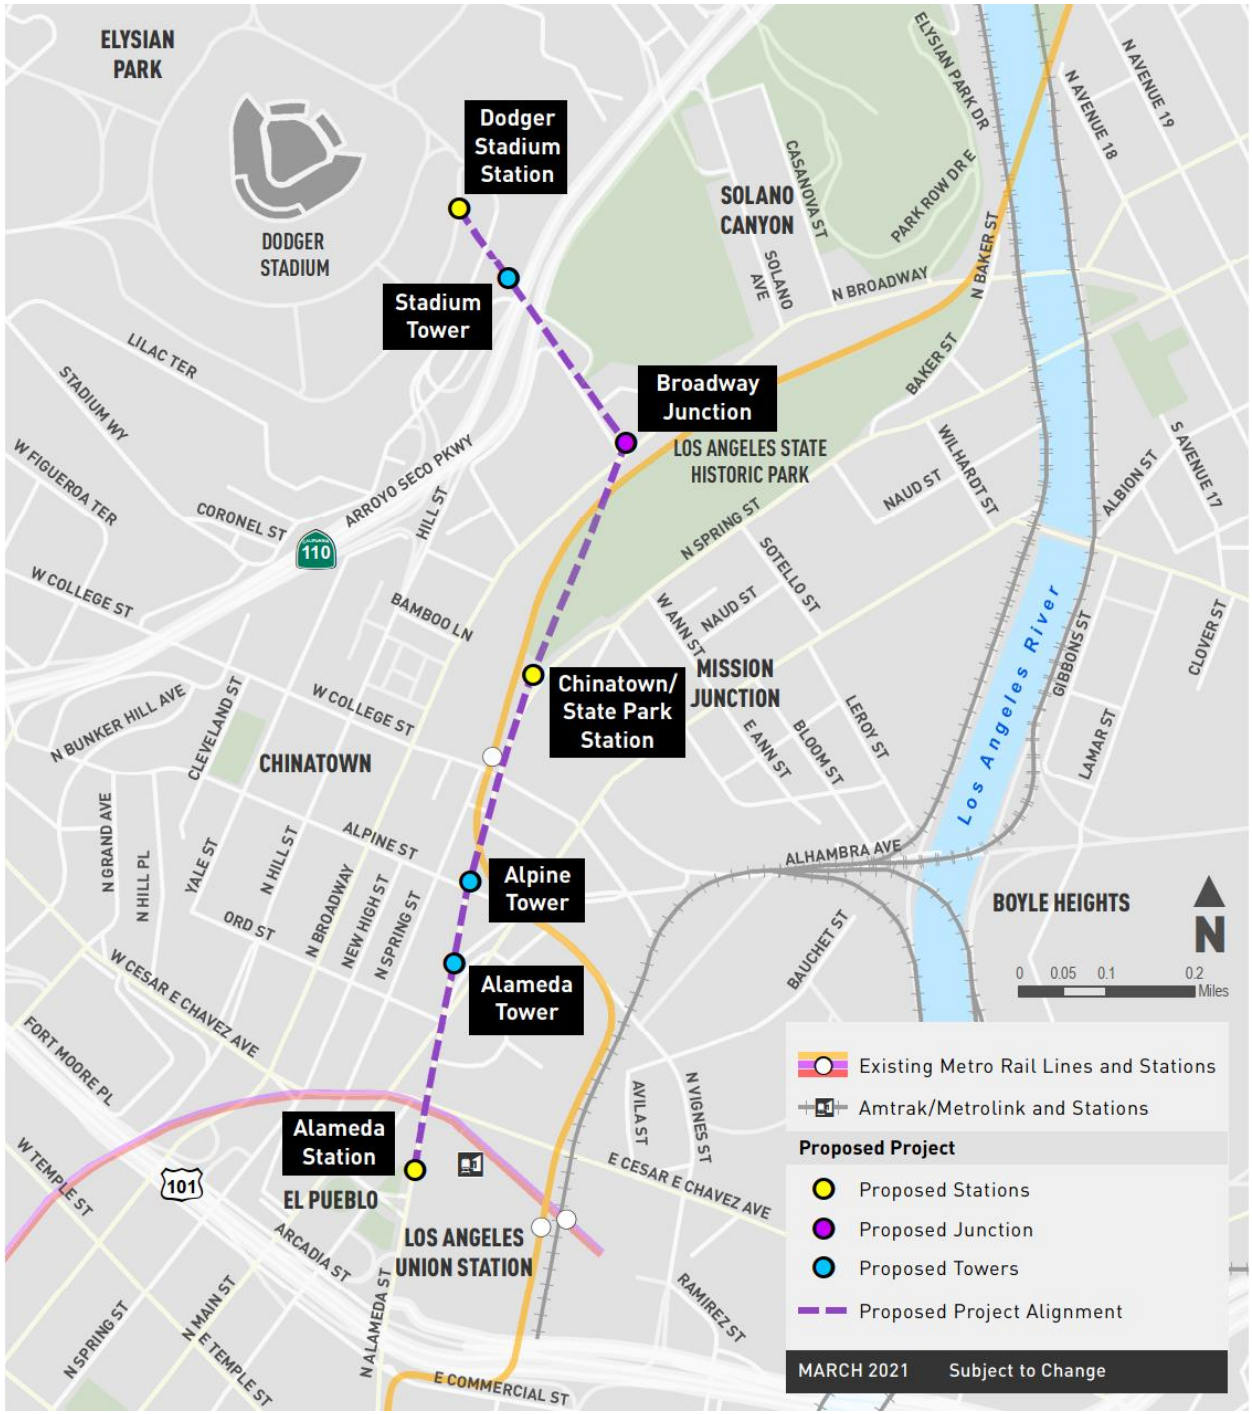
Project Description

Project Overview

- Provide a permanent transit connection from Los Angeles Union Station (LAUS) to the Dodger Stadium property via a 1.2-mile aerial gondola system
  - Travel time from LAUS to Dodger Stadium would be approximately 7 minutes
- Capacity of approximately 5,000 people per hour per direction
- Operate daily to serve existing residents, workers, park users, and visitors to Los Angeles
- Provide access to the Los Angeles State Historic Park and surrounding communities via the intermediate Chinatown/State Park Station
- Zero emission, environmentally friendly rapid transit that would reduce GHG emissions as a result of reduced vehicle trips in and around Dodger Stadium and on neighborhood streets, arterial roadways, and freeways

Project Location and Alignment

- The Project would commence adjacent to Union Station and El Pueblo and terminate at Dodger Stadium, with an intermediate station at the southernmost entrance to the Los Angeles State Historic Park
- Connect surrounding communities of Chinatown, Mission Junction, Elysian Park, Echo Park, and Solano Canyon to the regional transit system accessible at Union Station
- The proposed Project alignment maximizes alignment along the public ROW and publicly owned property and minimizes aerial rights over private properties, taking into account existing and future adjacent land uses



Precedent for Aerial Transit Systems

- Aerial transit technology has been used for over 100 years
- Modern systems are a feasible mode of urban transit and are currently operating in numerous cities around the world
- Established gondola transit systems worldwide – such as La Paz, Bolivia and Mexico City, Mexico – are being used as rapid transit for the urban populations that they service
- Similar to the systems used in Koblenz, Germany, Phu Quoc, Vietman, and Toulouse, France, the proposed Project is a "3S" gondola
  - Cabins will carry approximately 30 to 40 passengers
  - System will provide a smooth, stable ride

Portland, Oregon

Roosevelt Island, New York

La Paz, Bolivia

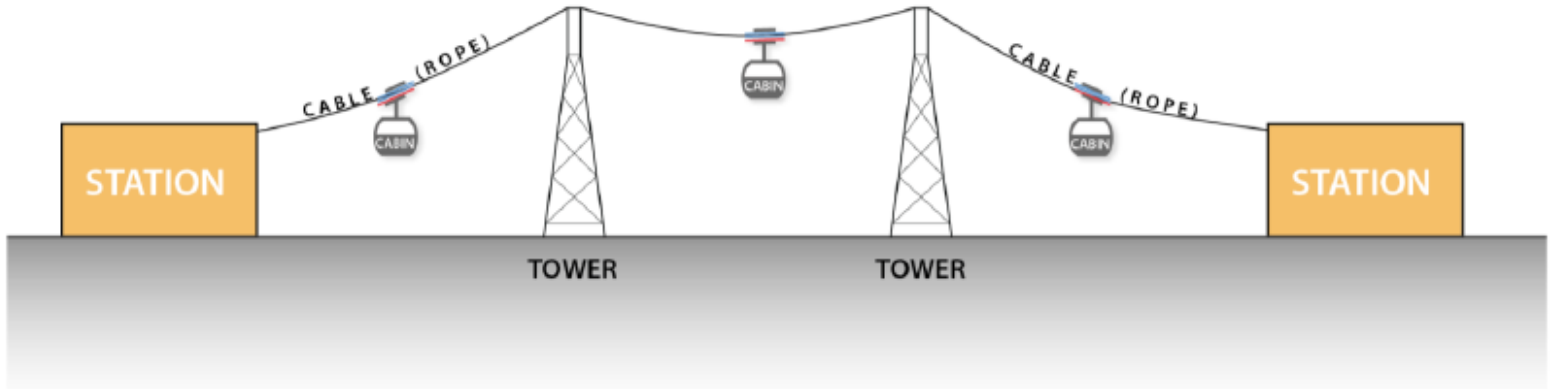
Mexico City, Mexico

Toulouse, France

Medellín, Colombia

Ropeway Technology

The ART system includes passenger stations, a non-passenger junction, and towers, which support the aerial cables that carry the gondola cabins



3 Passenger Stations

- Include mechanical, electrical, and plumbing systems, boarding platforms, and vertical circulation (e.g., stairs, escalators, and elevators)
- Include areas for ticketing, fare checking, and queueing; loading and unloading of passengers; operations; and system equipment

1 Non-Passenger Junction

- Required for the ART system to turn the cables and remain along the alignment

3 Towers to Support the Cables and Cabins

“3S” System and Gondola Cabins

“3S” System

- “3S” system includes three cables: two “track ropes” for stability and a third “haul rope” to circulate the cabins
- Cabins detach from continuously circulating haul rope and slow down upon entering a station for passenger exit and entry, then reattach to haul rope

Cabins

- 30 to 40 passengers each, depending on the exact configuration of seating and cabin amenities selected
- Fully ADA accessible and would accommodate wheelchairs
- Allow for sitting or standing
- Provide room for baby strollers and bicycles
- Would move at a maximum speed of 13.4 miles per hour during peak operations
- As they enter a station, the cabins would slow down to a speed of roughly one foot per second (less than one mile per hour) to allow passengers to enter and exit the moving cabin

Purpose and Need

- Provide a direct transit connection between Union Station and the Dodger Stadium property via an aerial gondola system
- Connect surrounding communities of Chinatown, Mission Junction, Los Angeles State Historic Park, Elysian Park, Echo Park, and Solano Canyon to the regional transit system accessible at Union Station
- Improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS
- Provide a mobility hub at the Chinatown/State Park Station
- Provide a sustainable form of transit by operating the ART system with the use of zero emission electricity with battery storage backup in order to reduce GHG emissions and improve air quality

Dodger Stadium: One of the Region's Most Visited Venues

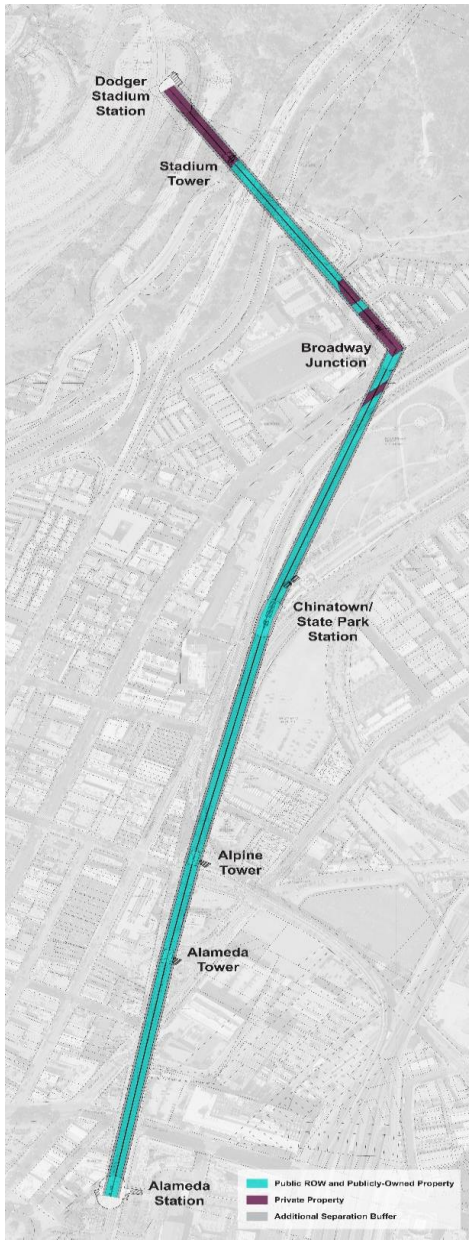
- Draws large regional crowds, with approximately 100 baseball games and other events each year
- Vast majority of visitors drive their personal vehicles
- Vehicles create congestion throughout the surrounding communities and nearby freeways
- Communities in the vicinity of the proposed Project alignment were identified as being in the 90 – 100 percentile of communities disproportionately burdened by multiple sources of pollution in the State (CalEnviroScreen 4.0 Map)

Project Objectives

- Expand mobility options for transit riders through a direct connection between LAUS and Dodger Stadium, a regional event center.
- Attract new transit riders to the Metro system through a unique experience of an aerial transit system and connecting to Dodger Stadium.
- Improve the Dodger Stadium visitor experience by providing efficient, high-capacity, and faster alternative access to Dodger Stadium.
- Enhance safety of neighborhoods adjacent to Dodger Stadium by reducing the number of vehicles in the area.
- Reduce transportation related pollution and greenhouse gas (GHG) emissions as a result of reduced vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days.
- Increase connectivity of people to the region's public transportation hub at LAUS and the Dodger Stadium property.
- Improve transit rider experience by providing unique scenic views of the Los Angeles area to ART passengers and Dodger fans.
- Bring a world class aerial transit system to the Los Angeles area.
- Enhance community connectivity by providing first/last mile transit and pedestrian access to areas that have historically been underserved, including the Los Angeles State Historic Park and Elysian Park.
- Identify comparable, affordable, and accessible fare opportunities for community and Los Angeles State Historic Park and Elysian Park access.
- Minimize the Project's environmental footprint through the integration of sustainability and environmentally-friendly design features into the materials, construction, operations, and maintenance of the proposed Project.
- Provide a sustainable form of transit by operating the ART system with the use of zero emission electricity with battery storage backup in order to reduce GHG emissions and improve air quality.
- Maximize the Project's alignment along the public ROW and publicly owned property and minimize aerial rights requirements over private properties, taking into account existing and future adjacent land uses.

Aerial Clearance | Alignment Over Public ROW/Publicly-Owned Property and Private Property

- Industry standards for the design and operation of ropeways and cabins are documented in the American National Standards Institute (ANSI) Standard B77.1, which is developed in coordination with manufacturers, consumers, and regulators
  - ANSI B77.1 regulates vertical and horizontal clearances between the ropeway and cabins to elements such as vehicles, pedestrians, vegetation, buildings, and other structures
- Alignment maximizes alignment along the public ROW and publicly owned property and minimizes aerial rights over private properties, taking into account existing and future adjacent land uses
- Additional considerations in selecting Project alignment:
  - Minimizing changes to travel lanes, parking lanes, and bicycle and pedestrian circulation
  - Minimizing utility relocations
  - Location of historic and archaeological resources
  - Minimize use of uneven or difficult topography
  - Technical considerations and feasibility

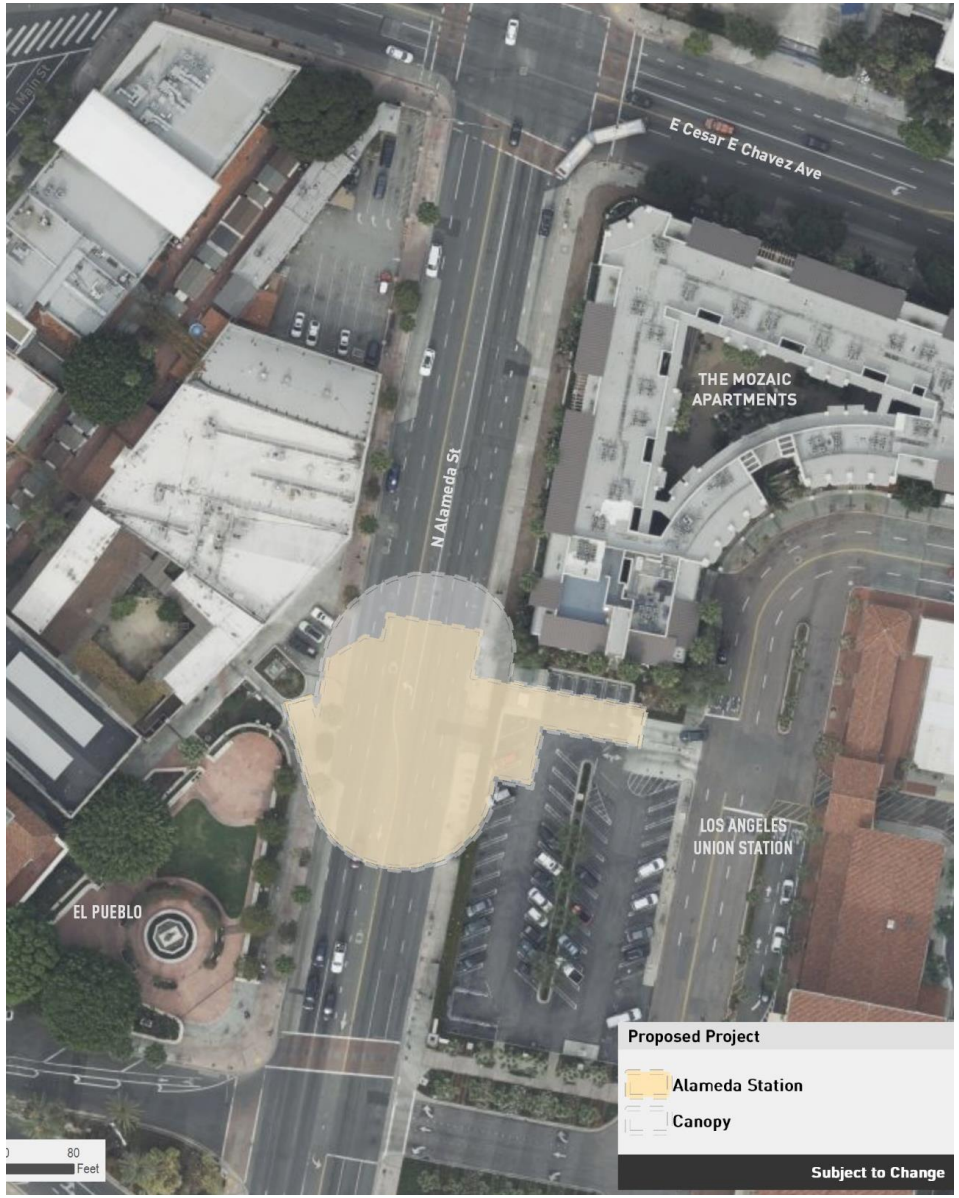


Design

- Design goal is to develop a common architectural design that unifies the overall aerial gondola system, while allowing for each major component to contribute to the respective localized urban condition
- Of equal importance is the desire to minimize the perceived scale and mass of the stations non-passenger junction, and towers
- The stations and junction take advantage of a simple barrel vault form to provide the minimum enclosure needed to protect the ropeway equipment and provide shade and weather protection to passengers on the boarding platform
- Each of the towers is designed so that their bases would not impede adjacent vehicular and pedestrian circulation, and the neutral light-tone gray is intended to conform with the surrounding urban environment

Alameda Station

- On Alameda Street adjacent to the planned LAUS Forecourt and Placita de Dolores between Los Angeles Street and Cesar Chavez Avenue
- Station would be approximately 173 feet long, 109 feet wide, and 78 feet high at its tallest point
- Passenger loading platform would be approximately 31 feet above Alameda Street
- Vertical circulation would be introduced on the north of the Placita de Dolores in a proposed new pedestrian plaza at El Pueblo and on the east from the planned LAUS Forecourt



Alameda Tower

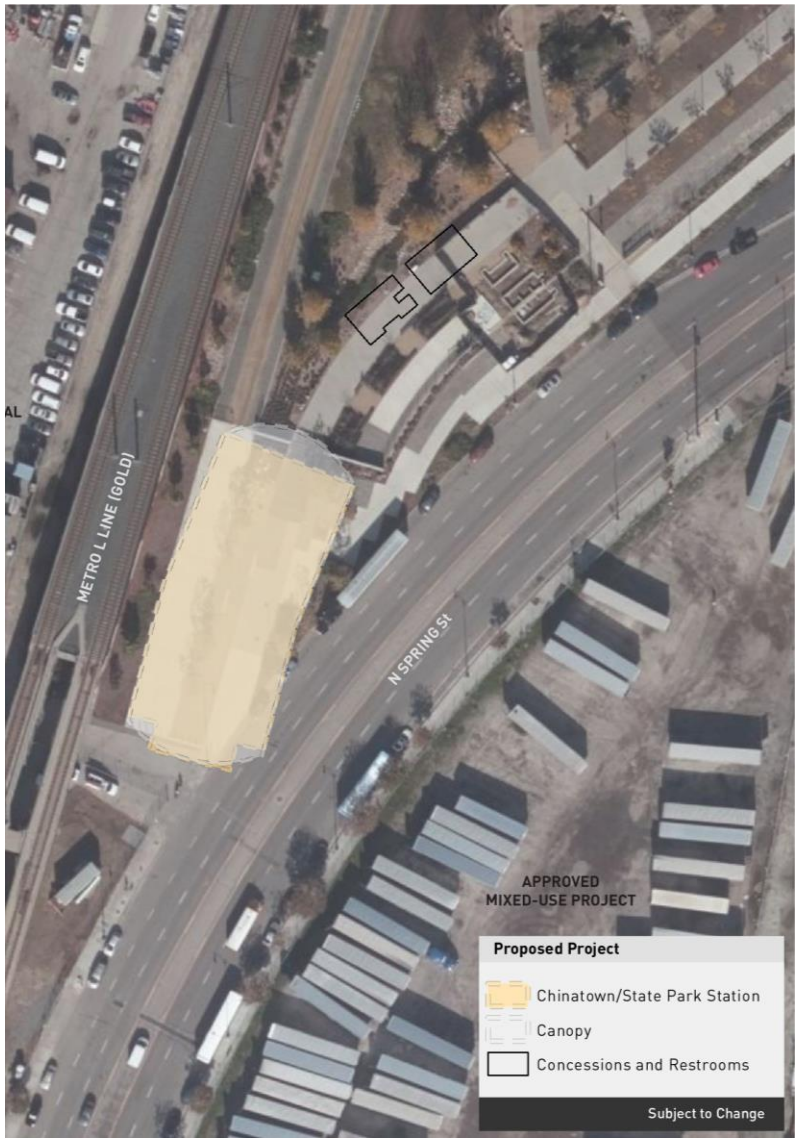
- Located on the Alameda Triangle, a City ROW between Alameda Street, North Main Street, and Alhambra Avenue
- 195 feet tall with the cable suspended 175 feet above ground
- Landscape and hardscape updates to the Alameda Triangle, including reuse and integration of existing pavers

Alpine Tower

- Located northeast corner of Alameda Street and Alpine Street, adjacent to the Metro L Line (Gold)
- Site is City-owned parcel, currently being used as non-public parking storage for City vehicles
- 195 feet tall at tallest point, with the cable suspended 175 feet above ground
- Landscaping and hardscaping near the base of the tower

Chinatown/State Park Station

- Adjacent to Spring Street in the southernmost portion of the Los Angeles State Historic Park
- Southern portion would be located on City ROW, with northern portion integrated into the southern boundary of the Los Angeles State Historic Park
- Station would be approximately 200 feet long, 80 feet wide, and 98 feet tall at its tallest point
- Passenger boarding platform approximately 50 feet above-grade
- Access to the boarding platform would be from the mezzanine via elevators and stairs
- Would include the installation of landscaping and hardscaping, including integration of the granite pavers



Chinatown/State Park Station

Station Amenities

- Mobility hub where passengers would be able to access a suite of first and last mile multi-modal options, such as a bike share program
- Pedestrian improvements, including hardscape and landscape improvements, shade structures, and potential seating

Park Amenities

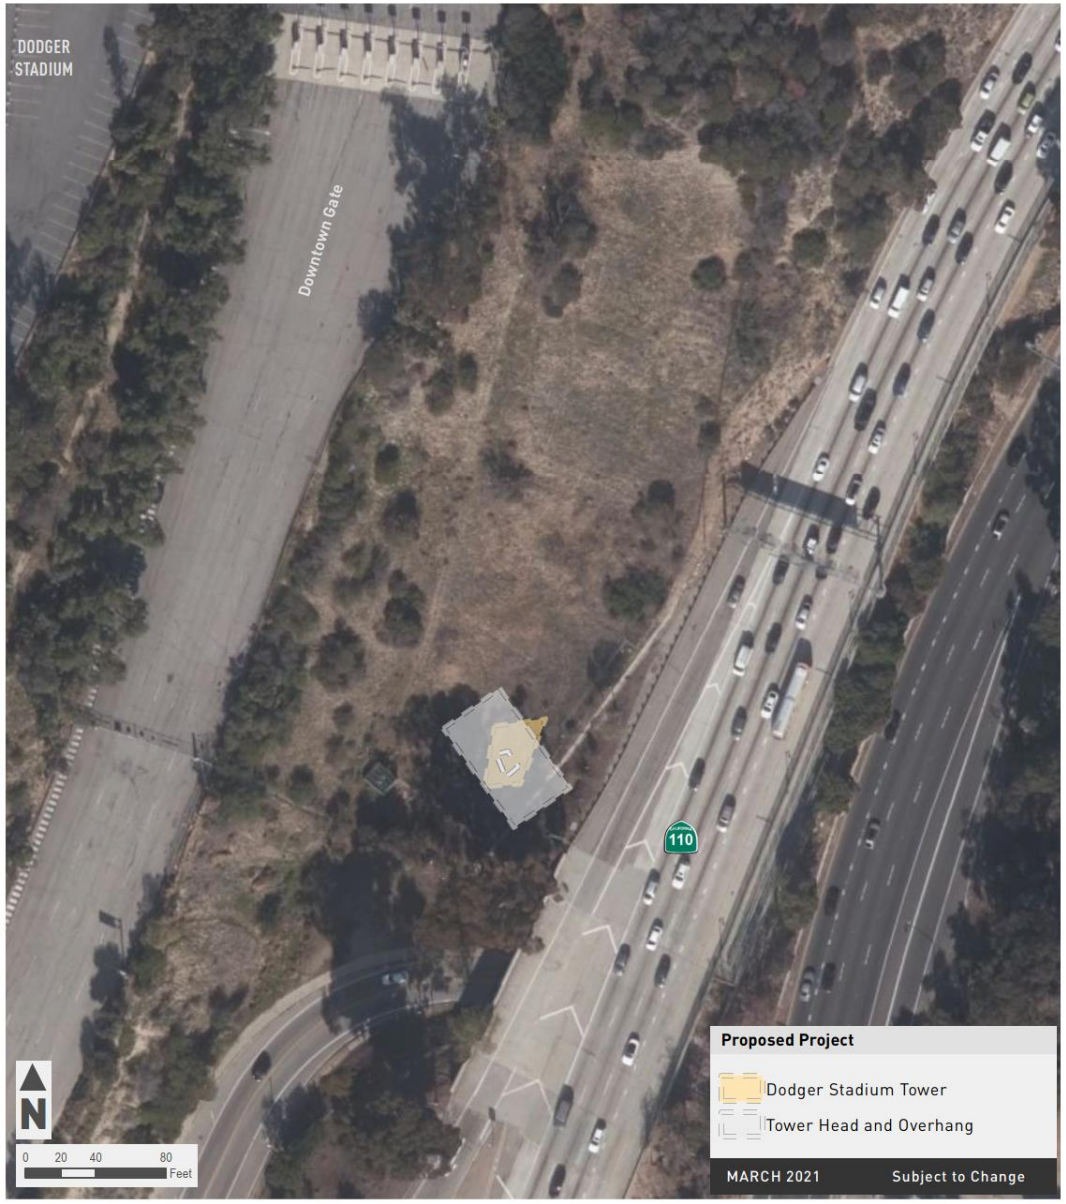
- 740 square feet of concessions
- 770 square feet of restrooms
- 220 square foot covered breezeway connecting concessions and restrooms

Broadway Junction

- Non-passenger junction that would be located at the intersection of North Broadway and Bishops Road
- Existing commercial building located at 1201 N. Broadway would be demolished
- Junction approximately 227 feet long, 60 feet wide, and 98 feet high at tallest point

Stadium Tower

- Located on hillside private property north of Stadium Way between the Dodger Stadium Downtown Gate and SR-110
- 179 feet tall with the cable suspended 159 feet above-ground with landscaping near the base of the tower



Dodger Stadium Station

- Southeast portion of the Dodger Stadium property near the Downtown Gate

Dodger Stadium Station

- Station would be approximately 194 feet long, 80 feet wide, and 74 feet high at its tallest point
- Cabins at this station would arrive and depart from an at-grade boarding platform, with the passenger queuing area also at-grade
- Would include a subterranean area below the platform for storage and maintenance of cabins, as well as staff break rooms, lockers, and parts storage areas
    - Cabins would be returned to and stored at Dodger Stadium Station when the system is not in use (after hours)
- Restrooms for passenger use would be located at the station

Dodger Stadium Station would also include a pedestrian connection to Dodger Stadium, including hardscape and landscape improvements and potential seating

Sustainability

- The proposed Project's sustainability features would include features included in:
  - 2019 California Green Building Standards Code
  - United States Green Building Council Leadership in Energy and Environmental Design (LEED) for New Construction
  - Institute for Sustainable Infrastructure's Envision Rating System
- 100% of the power for the proposed Project would be provided by the City of Los Angeles Department of Water and Power's Green Power Program
- Backup battery storage at each station, tower, and junction to provide backup power, rather than diesel generators

The proposed Project would provide a sustainable, high-capacity zero emission ART option for visitors to Dodger Stadium, while also providing access between Dodger Stadium, the surrounding communities, and the regional transit system accessible at LAUS. ART technology is quiet, and the proposed Project would reduce VMT and congestion, leading to reduced GHG emissions and improved air quality.

Construction

Timeline

- Construction of the proposed Project is anticipated to begin as early as 2024 and take approximately 25 months, including construction, cable installation, and system testing

Working Hours

- Construction hours are anticipated for 10 hours a day, which would vary to meet special circumstances and restrictions
- While not anticipated, approval would be required from the City of Los Angeles Board of Police Commissioners for extended construction hours and possible construction on Sundays

Lane Closures

- Anticipated closures would include lane closures in which lanes would be closed 24-hours a day during certain phases of construction, or alternating closures during certain phases of construction, in which closures would occur during construction hours for approximately 10 hours a day, and roads would reopen during non-construction hours for approximately 14 hours a day
- For alternating closures, during non-construction hours, steel plates would be placed over construction sites to the extent feasible in order to allow for vehicular and pedestrian circulation.
- The closures and hours would vary between location and phase of construction
- The proposed Project would implement a Construction Traffic Management Plan that would include detours and ensure that emergency access is maintained throughout all construction activities

Detailed Construction Assumptions

- Detailed construction assumptions are included in Draft EIR Appendix B

Draft EIR Key Analyses and Conclusions

Environmental Resource Topics

All Environmental Resource Topics per CEQA Guidelines Appendix G are addressed in the Draft EIR

- Aesthetics
- Agriculture/Forestry
- Air Quality
- Biological Resources
- Cultural/Historic Resources
- Energy
- Geology/Soils
- Greenhouse Gas Emissions
- Hazards/Hazardous Materials
- Hydrology/Water Quality
- Land Use/Planning
- Mineral Resources
- Noise
- Population/Housing
- Public Services
- Recreation
- Transportation
- Tribal Cultural Resources
- Utilities/Service Systems
- Wildfire

Aesthetics

WHAT WAS STUDIED?

- Visual impacts of Project components surrounding the Project alignment
- Key observation points representing visual character, including presence or absence of landscaping, predominant land uses, the scale of buildings, or the major scenic vistas, scenic resources, and substantive visual elements that are available, such as open space resources, street trees, and building frontages
- Viewers and viewer response, including pedestrians and recreationalists (e.g., park users)
- While there are no designated scenic vistas, views of the downtown Los Angeles skyline, Union Station, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium, and the San Gabriel and San Bernardino Mountains
- Light and glare

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project would not significantly block scenic or panoramic views, such as views of the downtown Los Angeles skyline, Union Station, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium, and the San Gabriel and San Bernardino Mountains
- With the proposed Project's entitlements and approvals – which would include design standards to enhance the visual identity and character of the proposed Project and its surrounding communities – there would not be a conflict with applicable zoning or other regulations governing scenic quality
- The proposed Project would not create a substantial source of light or glare and would comply with applicable City lighting regulations

Existing and Simulation from State Historic Park Towards downtown Los Angeles skyline

Aesthetics

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Scenic Vista	Less Than Significant	Less Than Significant
Scenic Resources	No Impact	No Impact
Visual Character	Less Than Significant	Less Than Significant
Light and Glare	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction: Barriers and sound walls would include a privacy screen, and the Project would implement best management practices to reduce visual impacts. No mitigation is required.

Operation: Project design features, including for building lighting and sign lighting. No mitigation is required.

Agriculture and Forestry

WHAT WAS STUDIED?

- Whether the Project would conflict with agricultural zoning at the Stadium Tower and Dodger Stadium Station sites

KEY ANALYSIS AND CONCLUSIONS

- The Dodger Stadium property does not contain agriculture uses and is subject to a Conditional Use Permit, which allows for the operation of a Major League Baseball stadium and various ancillary structures and uses, including "mass transportation service" to the site; therefore, construction and operation of the proposed Project would not conflict with existing agricultural zoning

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Conversion of Farmland	No Impact	No Impact
Conflict with Forest Land Zoning	No Impact	No Impact
Loss of Forest Land	No Impact	No Impact
Agricultural Use	No Impact	No Impact
Agricultural Zoning and Williamson Act	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

No mitigation is required.

Air Quality

WHAT WAS STUDIED?

- Potential impacts on air quality at the regional and local scales from construction and operation of the proposed Project
- The characteristics and effects of air pollutants
- Regulations that have been adopted to govern air quality management
- A Health Risk Assessment (HRA) evaluating the estimated cancer risk and non-cancer chronic hazard index associated with construction of the Project

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project would be consistent with applicable air quality plans
- The estimated emissions for construction the proposed Project would be less than significance thresholds for pollutants and emissions
- The proposed Project would not expose sensitive receptors to substantial concentrations of pollutants during operations because the proposed Project does not include any land uses or operational emissions that would materially impact ambient air quality during operation
- The proposed Project would result in a net reduction in criteria pollutant emissions by reducing VMT and thereby decreasing emissions compared to existing conditions
- Based on the HRA results, the proposed Project would result in a less than significant impact related to exposing sensitive receptors to substantial pollutant concentrations from TACs

Air Quality

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Air Quality Plans	Less Than Significant	Less Than Significant
Increase Air Pollutants	Less Than Significant	Less Than Significant
Sensitive Receptors	Less Than Significant	Less Than Significant
Other Emissions	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction: Project design feature requiring that all off-road diesel-powered construction equipment greater than 50 horsepower shall meet the Tier 4 emission standards for nonroad diesel engines promulgated by the USEPA. No mitigation is required.

Operation: No mitigation is required.

Biological Resources

WHAT WAS STUDIED?

- Whether the Project would affect special-status species and their habitat
- Whether the Project would affect riparian habitat or protected wetlands
- The potential for the Project to interfere with wildlife movement along the alignment
- Whether the Project would conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance
- Whether the Project would conflict with adopted habitat conservation plans

KEY ANALYSIS AND CONCLUSIONS

- The Project area generally does not provide habitat for special-status species; however, removal of mature palm and eucalyptus trees during construction of the proposed Project could result in the removal of bat roost sites
- The Project area does not contain riparian habitat, other sensitive natural communities, or protected wetlands; therefore, there would be no impact
- The Project area does not serve as a regional wildlife corridor; however, construction activities may result in bat and bird species avoiding areas where active construction is occurring
- The Project would replace removed trees pursuant to the City's Native Tree Protection Ordinance, California Department of Parks and Recreation requirements, and other applicable requirements

Biological Resources

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Riparian Habitat	No Impact	No Impact
Protected Wetlands	No Impact	No Impact
Biological Plans or Policies	Less Than Significant	No Impact
Interfere with Species Movement	Less Than Significant with Mitigation	Less Than Significant
Habitat Modifications	Less Than Significant with Mitigation	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction:

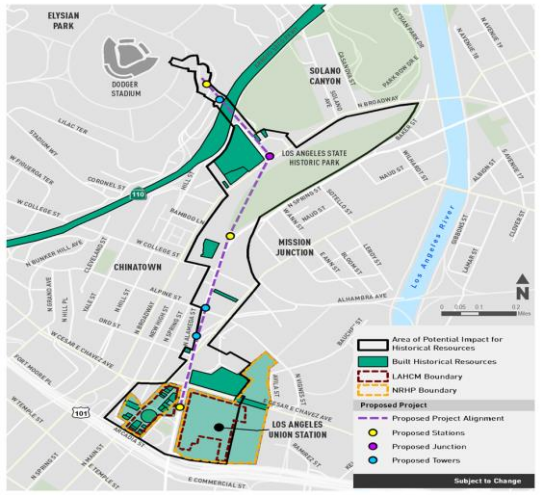
- Implement a project design feature to establish a Tree Protection zone to protect trees
- Pre-construction nesting surveys and measures to avoid and minimize impacts to nesting birds

Operation: No mitigation is required.

Cultural Resources

WHAT WAS STUDIED?

- Direct and indirect impacts to 29 built historic resources within the Area of Potential Impacts, including Los Angeles Union Station Passenger Terminal and Grounds, Los Angeles Plaza Historic District, Cathedral High School, and Arroyo Seco Parkway Historic District
- Impacts from ground disturbance to archaeological resources within the Area of Direct Impacts, including La Placita, the Zanja Madre, and Southern Pacific Railroad's River Station
- **KEY ANALYSIS AND CONCLUSIONS**
- Historic Resources
  - Construction of the proposed Alameda Station has the potential to result in both direct and indirect impacts to The Winery and the *El Grito* mural; however, impacts would be mitigated to less than significant
  - Construction-related and operational impacts to all other historical resources would be less than significant
- Archaeological Resources
  - Construction of the proposed Alameda Station, Alameda Triangle, Alpine Tower, and Chinatown/State Park Station have the potential to result in a substantial adverse change in the significance of an archaeologic resources; however, impacts would be mitigated to less than significant



Area of Potential Impacts for Built Historic Resources

Area of Direct Impacts for Archaeological Resources

Cultural Resources

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Historical Resource	Less Than Significant with Mitigation	Less Than Significant
Archaeological Resource	Less Than Significant with Mitigation	No Impact
Disturb Human Remains	Less Than Significant with Mitigation	No Impact

HOW WOULD IMPACTS BE MINIMIZED?

- Historic Resources
  - Project design features for pre- and post-construction documentation and protection of The Winery and *El Grito* mural, as well as protection of the *El Grito* mural during construction
  - Vibration monitoring and restrictions on force adjustable ground compaction devices during proposed Alameda Station construction
- Archaeological Resources
  - Preparation and implementation of a Cultural Resources Monitoring and Mitigation Plan and Archaeological Resources Worker Training Program
  - Pre-construction Archaeological Testing Plan for proposed Alameda Station and Chinatown/State Park Station
  - Potential redesign of Los Angeles State Historic Park amenities to avoid archaeological resources

Energy

WHAT WAS STUDIED?

- Overview of the federal, State, and local laws and regulations pertaining to energy
- Overview of California's energy production, supply, and consumption
- Evaluation of the energy resources related to construction and annual energy demands associated with Project operations

KEY ANALYSIS AND CONCLUSIONS

- The temporary energy consumption associated with the proposed Project's construction would allow for a long-term reduction in energy consumption associated with proposed Project operations
- The primary electricity usage associated would come from renewable resources through LADWP's Green Power Program
- The proposed Project would reduce VMT and increase the number of people using public transit, resulting in decreased use of fossil fuels for passenger vehicles

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Wasteful, Inefficient or Unnecessary Consumption	Less Than Significant	Less Than Significant
State or Local Energy Plans	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

No mitigation is required.

Geology and Soils

WHAT WAS STUDIED

- Whether the Project would be susceptible to seismic hazards, such as strong ground shaking, faulting, liquefaction, or landslides
- Whether the Project would be located on unstable geology, potentially resulting in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse.
- Whether the Project alignment would contain expansive soils that could create a substantial direct or indirect risks to life or property
- The potential for Project construction to directly or indirectly destroy a unique paleontological resource or site or unique geologic feature

KEY ANALYSIS AND CONCLUSIONS

- While the Project area is in a seismically active region of southern California, with compliance to existing standards and codes and implementation of mitigation, impacts related to the strong seismic ground shaking, seismic-related ground failure, and/or liquefaction during construction of the proposed Project would be reduced to less than significant
- The Project's Emergency Operations Plan would include emergency response protocols, and would state that in the event of a major earthquake, the system would be fully evacuated and shut down, and would not operate
- With compliance to existing standards and codes and implementation of mitigation, impacts related to lateral spreading, subsidence, liquefaction, or collapse during grading and construction of the Project components would be less than significant
- With compliance to existing standards and codes and implementation of mitigation, impacts related to soil corrosion during construction would be less than significant
- The northern portion of the proposed Project near the approach to Dodger Stadium Station has potential to encounter paleontological resources; however, impacts would be mitigated to less than significant

Geology and Soils

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	**Operations**
Adverse Effects: Earthquakes, Seismic-Related Ground Shaking, Liquefaction or Landslides	Less Than Significant with Mitigation	Less Than Significant
Support Wastewater Systems	No Impact	No Impact
Destroy Unique Paleontological or Geologic Features	Less Than Significant with Mitigation	No Impact
Soil Erosion/Loss of Topsoil	Less Than Significant	Less Than Significant
Unstable Geologic Unit or Soil	Less Than Significant with Mitigation	Less Than Significant
Expansive soil	Less Than Significant with Mitigation	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction:

- Preparation and implementation of a Site-Specific Final Geotechnical Report
- Preparation of and compliance with a Paleontological Resources Monitoring and Mitigation Plan

Operation: No mitigation is required

Greenhouse Gas Emissions (GHGs)

WHAT WAS STUDIED?

- Relevant federal, State, and local laws and regulations
- An overview of the science of GHGs
- Methodology used to evaluate GHG emissions related to the proposed Project

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project would not result in an incremental contribution of GHG emissions compared to existing conditions and would reduce GHG emissions compared to existing conditions

The lifetime emissions of the Project would be a reduction of 166,653 metric tons of GHGs.

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Generate GHGs	Less Than Significant	Less Than Significant
GHG Reduction Plans or Policies	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

No mitigation is required.

Hazards and Hazardous Materials

WHAT WAS STUDIED?

- Project activities were assessed to determine their potential impact on creating conditions hazardous to the public or the environment during construction and operation
- Potential impacts due to hazards and hazardous materials were then analyzed against applicable significance criteria

KEY ANALYSIS AND CONCLUSIONS

- While the proposed Project would use, transport, and dispose of limited amounts of hazardous substances during construction, the proposed Project would comply with federal, State, and local health and safety requirements; and would comply with all codes, standards, and regulations during operation
- The proposed Project would comply with OSHA, Cal/OSHA, and Division 71 of the Los Angeles Municipal Code, and would implement a Soil and Groundwater Management Plan, which would limit the potential for hazardous materials and waste spills to occur
- The proposed Project would conduct hazardous materials abatement by a licensed abatement contractor prior to demolition, which would ensure that that schools are not adversely impacted
- Construction and operation of the proposed Project would not interfere with LAPD access to the Hooper Heliport, and heliport operations would not be impacted by construction activities
- Five properties were identified as hazardous materials sites in the Project area; however, the Project would implement a Soil and Groundwater Management Plan to reduce impacts from these sites
- Construction of the proposed Project would not substantially impair the implementation of, or physically interfere with, an adopted emergency response plan or emergency evacuation plan; and daily operation of the project would not affect emergency response

Hazards and Hazardous Materials

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	**Operations**
Hazardous Sites	Less Than Significant with Mitigation	No Impact
Airport Land Use Plan	No Impact	No Impact
Hazard to Public or Environment	Less Than Significant with Mitigation	Less Than Significant
Emergency and Evacuation Plans	Less Than Significant	Less Than Significant
Hazards Near Schools	Less Than Significant with Mitigation	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction:

- Preparation and implementation of a Soil and Groundwater Management Plan to specify methods for handling and disposal in the event contaminated groundwater, contaminated soil, or structures, are encountered during Project construction
- Hazardous Materials Abatement for demolition of the existing building at 1201 North Broadway

Operation: No mitigation is required.

Hydrology and Water Quality

WHAT WAS STUDIED?

- The potential for the proposed Project to violate any water quality standards, decrease groundwater supplies, or result in substantial erosion or siltation on- or off-site
- The potential for the proposed Project to substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite
- The potential for the proposed Project to create or contribute to runoff water which would exceed the capacity of existing or planned stormwater drainage systems, or impede or redirect flood flows
- The potential for the proposed Project to risk release of pollutants during project inundation in flood hazard, tsunami, or seiche zones
- The potential for the proposed Project to conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project would comply with all applicable federal, State, regional, and local agency water quality protection laws and regulations, water quality control and/or sustainable groundwater management plans
- The proposed Project would incorporate best management practices and implement a low impact development plan to reduce hydrology and water quality impacts
- The proposed Project is not susceptible to release of pollutants due to project inundation in flood hazard, tsunami, or seiche zones

Hydrology and Water Quality

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Decrease Groundwater Supply	Less Than Significant	No Impact
Water Quality Standards or Plans	Less Than Significant	Less Than Significant
Alter Drainage	Less Than Significant	Less Than Significant
Flood, Tsunami or Seiche	Less Than Significant	Less Than Significant
Conflict with Plans	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction and Operation: The proposed Project would comply with applicable federal, State, regional, and local laws and regulations, including compliance with applicable stormwater permits, wastewater permits, and other water quality regulations. No mitigation is required.

Land Use and Planning

WHAT WAS STUDIED?

- The proposed Project's potential to physically divide an established community
- The proposed Project's potential to conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect

KEY ANALYSIS AND CONCLUSIONS

- Though temporary closures during construction would disrupt vehicular, pedestrian, and bicycle access within and between communities, there would be a variety of options available for connections and access within the Project area
  - Communities will remain accessible from other surrounding streets, and pedestrian detours would be provided, which would prevent closures from physically dividing established communities.
- The proposed Project would enhance community connectivity by providing first/last mile transit and pedestrian access and enhancements, including a mobility hub and support for the future Los Angeles State Historic Park bike and pedestrian bridge
- The proposed Project is consistent with policies, regulations, goals, and/or objectives of local Plans, codes, and ordinances
- State Parks considers there to be an inconsistency between the proposed Project and the Los Angeles State Historic Park General Plan and therefore a potentially significant impact because the Los Angeles State Historic Park General Plan does not identify transit as a use for the Park
  - With implementation of Mitigation Measure LUP-A, which would require the proposed Project to obtain a LASHP General Plan Amendment, impacts would be less than significant

Land Use and Planning

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Physically Divide Community	Less Than Significant	No Impact
Conflict with Land Use Plans or Policies	Less Than Significant with Mitigation	Less Than Significant with Mitigation

HOW WOULD IMPACTS BE MINIMIZED?

Construction (Physically Divide Community): While construction impacts are less than significant, implementation of the Construction Traffic Management Plan would include street closure information, detour plans, haul routes, and a staging plan

Construction and Operation: The proposed Project would obtain a Los Angeles State Historic Park General Plan Amendment to allow transit uses within the Los Angeles State Historic Park General Plan

Mineral Resources

WHAT WAS STUDIED?

- Whether construction of the Project would result in the loss of availability of a known mineral resources resource that would be of value to the region and the residents of the state.
- Whether the Project would result in the loss of availability of a locally- important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

KEY ANALYSIS AND CONCLUSIONS

- The Project is not located in an area of known mineral resources
- Much of the area within the City of Los Angeles was developed with structures prior to the MRZ classifications and is unavailable for extraction
- The Project alignment is located in an urbanized area of the City of Los Angeles, and the mining of such materials in an urbanized environment is not practical

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Loss of Available Mineral Resources	No Impact	No Impact

HOW WOULD IMPACTS BE MINIMIZED?

No mitigation is required.

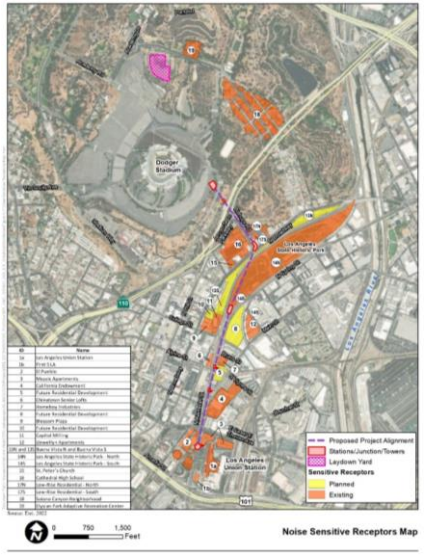
Noise

WHAT WAS STUDIED?

- Existing condition noise survey with measurements conducted at sites representative of noise-sensitive receptors along the proposed Project alignment, including locations of existing and future residential developments, schools, parks, and other areas with frequent outdoor human use
- Potential construction noise impacts were evaluated by calculating the Project related construction noise levels
- Operational noise impacts were evaluated by identifying the noise levels that would be generated by Project operation noise sources, including stations, junction, towers, cabins passing along the support sheaves at towers, cabins, and passengers at stations waiting to board the system
- Ground-borne vibration impact analysis for both building damage and human annoyance

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project's significant and unavoidable on-site construction noise impacts would be a function of the noise generated by construction equipment, the location of the equipment, the timing and duration of the noise-generating construction activities, and the relative distance to noise-sensitive receptors
- Noise generated from off-site construction-related traffic would be less than significant
- Noise generated from Project operations under the worst-case scenario would be less than significant
- Vibration generated from on-site construction activity would have significant and unavoidable human annoyance impacts; potential building damage impacts would be less than significant with mitigation
- Vibration generated from Project operations would be less than significant



Noise Sensitive Receptors Map

Vibration Sensitive Receptors Map

Noise

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Expose Public Near Airport	No Impact	No Impact
Generation or Increase in Ambient Noise Levels	Significant and Unavoidable	Less Than Significant
Generation of Excessive Vibration or Noise Levels	Significant and Unavoidable	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Operational Noise: Cabin project design features related to interior-to-exterior noise reduction and power sound levels of HVAC units. No mitigation is required.

Construction Noise: Implementation of a Construction Noise Management Plan, including

- Noise barriers
- Equipment maintenance
- Community outreach, including a Noise Disturbance Coordinator

Construction Vibration:

- Placement of vibration monitoring equipment for the Avila Adobe (1970s addition), *El Grito* mural, and The Winery
- Restrictions on the use of force-adjustable ground compaction devices

Population and Housing

WHAT WAS STUDIED?

- The potential for the proposed Project to cause substantial population growth, or accelerate growth that exceeds projected or planned levels
- Whether implementation of the proposed Project would displace substantial numbers of existing people or housing

KEY ANALYSIS AND CONCLUSIONS

- As a first/last mile transit connection to Dodger Stadium, the proposed Project would not induce substantial population growth either directly or indirectly
  - Designed to meet the area's transit needs and improve the efficiency of the existing transportation network
  - Support the City's goals from the Housing Element and Community Plans of providing transit near already planned residential development
- The proposed Project would not displace existing people or housing

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Induce Unplanned Population Growth	Less Than Significant	Less Than Significant
Displace People or Housing	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

No mitigation is required.

Public Services

WHAT WAS STUDIED?

- Whether the proposed Project would result in adverse physical impacts associated with the provision of new or physically altered public facilities, the construction of which could cause significant environmental impacts, including fire and police protection, schools, and other public facilities such as libraries, senior centers, homeless shelters, and daycare facilities
- Whether the Project would affect response times for emergency service

KEY ANALYSIS AND CONCLUSIONS

- While construction activities associated with the proposed Project would create a temporary increase in demand for emergency services, the implementation of mitigation measures and project design features, and compliance with applicable State and local regulations, including coordination with LAFD and LAPD prior to construction of the Project, would ensure that construction of the Project would not create additional demand for emergency services that would result in the need to add new—or physically alter existing—public facilities facilities
- LAFD and LAPD would have adequate access during construction
- While the proposed Project would create an increased demand for emergency services during Project operation, with adherence to the applicable regulations, coordination with LAFD and LAPD, and implementation of an Emergency Operations Plan, operation of the proposed Project would not create additional demand for emergency services that would result in the need to add new—or physically alter public facilities
- The proposed Project does not include housing, which could increase demand for school services or other public facilities

Public Services

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Need for new or altered Fire, Police, Schools or other Public Services	Less Than Significant with Mitigation	Less Than Significant
Service Ratios and Response Times	Less Than Significant with Mitigation	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction: The Construction Traffic Management Plan would reduce impacts related to emergency access

Operation: The proposed Project would comply with applicable regulations, would implement security features such as staff and cameras, and would implement an Emergency Operations Plan. No mitigation is required.

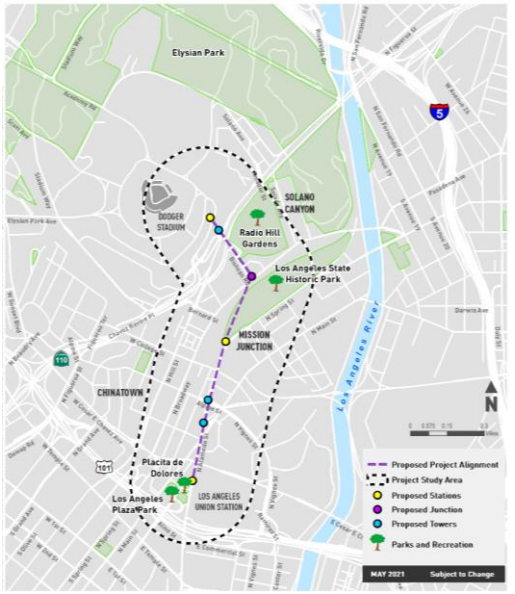
Parks and Recreation

WHAT WAS STUDIED?

- Potential to impact parks and recreational facilities during construction and operation, including Los Angeles Plaza Park and Placita de Dolores, Los Angeles State Historic Park, and Elysian Park

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project would not increase in the demand for parks, or generate new permanent residents that would result in an increase in the use of existing parks and recreational facilities, such that substantial deterioration of parks would occur or be accelerated or would result in the provision of new park facilities, or the need for new or physically altered park facilities
- The proposed Project would improve mobility and accessibility for the region by providing high capacity aerial rapid transit connecting the regional transit system at LAUS and the Los Angeles State Historic Park and Elysian Park



IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Deterioration of a Public Facility	Less Than Significant	Less Than Significant
Expansion of Recreational Facilities	Less Than Significant	Less Than Significant
Service Ratios and Performance Objectives	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

No mitigation is required.

Transportation

WHAT WAS STUDIED?

- Utilized both the CEQA Guidelines and LADOT's established screening criteria, analysis methodology, and threshold criteria through the City's TAG
- The analysis of VMT for the proposed Project employed a variety of data, methodologies, and models in order to estimate Project ridership, vehicle trips reduced, vehicle trip lengths, and ultimately the VMT benefit of the proposed Project
- Ridership estimates for Dodger Stadium game and event attendees, employees, tourists, neighborhood riders, and Los Angeles State Historic Park visitors and event attendees
- Location of the proposed Project stations, junction, and towers and whether these components substantially increase hazards due to a geometric design feature
- The proposed Project's construction conceptual traffic detour plans and haul route

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project would be consistent with PPOPs – programs, plans, ordinances, and policies – addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities
- The proposed Project would not introduce any unsafe physical conditions with the implementation of mitigation measures for the Alameda Tower and Chinatown/State Park Station
- With implementation of mitigation measures, emergency access would be maintained during proposed Project construction

The lifetime VMT reduction of the Project would be 129,629,500 VMT.

Transportation

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Vehicle Miles Traveled (VMT)	No Impact	No Impact
Conflict with Plan or Policies	Less Than Significant	Less Than Significant
Increase Hazards through Design	Less Than Significant with Mitigation	Less Than Significant with Mitigation

HOW WOULD IMPACTS BE MINIMIZED?

Construction:

- Implementation of a City approved and detailed Construction Traffic Management Plan, including street closure information, detour plans, haul routes, and a staging plan
- Implementation of a City approved Temporary Disaster Route Plan, which would include street closure information and detour plans in order to facilitate the movement of emergency vehicles through the study area and minimize effects on emergency response during a disaster

Construction and Operation:

- Visibility enhancements – such as high visibility crosswalk treatments, advanced crossing warning signs, flashing beacons, upgraded lighting, and new or upgraded traffic controls – at the proposed Alameda Tower and Chinatown/State Park Station

Tribal Cultural Resources

WHAT WAS STUDIED?

- Substantial adverse changes to significant tribal cultural resources
- Consulted with eight California Native American Tribes pursuant to Assembly Bill 52

KEY ANALYSIS AND CONCLUSIONS

- Resources exist in the area and require implementation of mitigation, including archaeological testing and data recovery
- Previously unidentified resources have potential to be encountered during construction; if the Native American Monitor identifies potential resources, the monitor may temporarily halt construction

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Change to Tribal Cultural Resource	Less Than Significant with Mitigation	No Impact

HOW WOULD IMPACTS BE MINIMIZED?

Construction:

- Implement the Cultural Resources Monitoring and Mitigation Program and Archaeological Testing Plan for LAUS Forecourt
- Retain a Native American monitor to monitor ground-disturbing construction activities at the location of the Alameda Station

Operation: No mitigation is required.

Utilities and Service Systems

WHAT WAS STUDIED?

- The relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities
- The effect of the Project on water supplies
- Whether the Project would require expansion of wastewater treatment capacity
- Whether area landfills would have sufficient capacity for solid waste generated by the Project

KEY ANALYSIS AND CONCLUSIONS

- Construction of the proposed Project would not require the construction of new or expanded utilities
- Construction of the proposed Project would require relocations of existing utilities, which would be coordinated with the utility providers and conducted in compliance with the applicable State and local codes and regulations
    - To minimize the potential interference with existing utilities associated with utility relocations during construction, the proposed Project would implement a Utility Relocation Plan
- Operation of the proposed Project would require connections to existing utilities systems
- Primary electricity usage would come from renewable resources and the existing power supply should be sufficient Project operations
- Construction and operation of the proposed Project would have sufficient water supply
- Construction and operation would generate potential wastewater, which would be treated per regulations
- Solid waste would not be generated in excess of State or local standards or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals

Utilities and Service Systems

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	**Operations**
Sufficient Water Supplies	Less Than Significant	Less Than Significant
Demand and Capacity on Wastewater Systems	Less Than Significant	Less Than Significant
Solid Waste Goals	Less Than Significant with Mitigation	Less Than Significant
Relocation or Construction of Utilities	Less Than Significant with Mitigation	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction:

- Develop and implement a Utility Relocation Plan in coordination with utility companies to minimize impacts to services throughout the Project construction
- Prepare a Soil and Groundwater Management Plan

Operation: No mitigation is required.

Wildfire

WHAT WAS STUDIED?

- Whether the proposed Project would result in potential significant impacts related to wildfire if located in or near State Responsibility Areas (SRAs) or lands classified as Very High Fire Hazard Severity Zones (VHFHSZ)
- Potential wildfire behavior within the Project area based on topography, weather, and fuels
- Substantially impair an adopted emergency response plan or emergency evacuation plan
- Whether the proposed Project would require installation or maintenance of associated infrastructure that may exacerbate fire risk or result in temporary or ongoing impacts to the environment
- Whether the proposed Project exposes people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post fire slope instability, or drainage changes
- Whether the proposed Project would expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires

KEY ANALYSIS AND CONCLUSIONS

- The portion of the proposed alignment containing the Broadway Junction, Stadium Tower, and Dodger Stadium Station are within the VHFHSZ
- Construction and operation of the proposed Project would not inhibit access to identified disaster routes and would not substantially impair implementation of an emergency response or evacuation plan
- The Project would adhere to applicable codes and regulations and best construction practices and would not exacerbate wildfire risks
- Implementation of project design features would further reduce these risks

Wildfire

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Impair Emergency or Evacuation Plans	Less Than Significant	Less Than Significant
Exacerbate Wildfire Risks	Less Than Significant	Less Than Significant
Install/Maintain Associated Infrastructure	Less Than Significant	Less Than Significant
Expose People or Structures to Wildfire Risks	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction: Implement project design features, including Fire Protection Plan and a fuel modification zone surrounding the Stadium Tower construction site. No mitigation is required.

Operation: Implement a project design features during operation of the Broadway Junction, Stadium Tower, and Dodger Stadium Station related to security monitoring by staff and cameras and the identification and reporting of fire safety hazards. No mitigation is required.

Alternatives

WHAT WAS STUDIED?

- A reasonable range of alternatives were selected to explore potential means to mitigate or avoid the significant environmental impacts associated with implementation of the proposed Project, while still achieving the Project's primary objectives
  - No Project Alternative – No New Development
  - Spring Street Alignment Alternative – Alignment Alternative to the proposed Project
  - Transportation Systems Management Alternative – Enhanced Union Station Dodger Stadium Express Service
- Several alternatives were considered but dismissed from detailed analysis for failure to meet most of the basic project objectives, infeasibility, or inability to avoid significant environmental impacts, including the Broadway Station Alignment Alternative, the Combined Metro L Line (Gold) Station and College Street Station Alignment Alternative, and Direct Alignment Alternatives.

KEY ANALYSIS AND CONCLUSIONS

- The No Project Alternative would not improve transit access or provide connections between communities. Additionally, VMT and vehicle congestion would not be reduced, and the associated reduction in GHG emissions and air quality improvements would not take place.
- The Spring Street Alignment Alternative would provide a direct transit connection and improve connectivity for surrounding communities. This Alternative would require a larger footprint and wouuld not reduce significant environmental impacts.
- The TSE Alternative would not provide a direct transit connection or improve connectivity for surrounding communities and would not provide the same reduction in VMT, GHG emissions, or improvements in air quality.

Alternatives

ALTERNATIVE CONCLUSIONS

Alternatives	Finding	
	Ability to Fulfill Project Objectives	**Ability to Reduce Significant Impacts**
No Project Alternative	Would Not Fulfill Project Objectives	Less Impacts than the Project
Spring Street Alignment Alternative	Would Fulfill All Project Objectives	Similar Impacts to the Project
Transportation Systems Management Alternative	Would Not Fulfill Most Project Objectives	Less Impacts than the Project

WHAT IS THE ENVIRONMENTALLY SUPERIOR ALTERNATIVE?

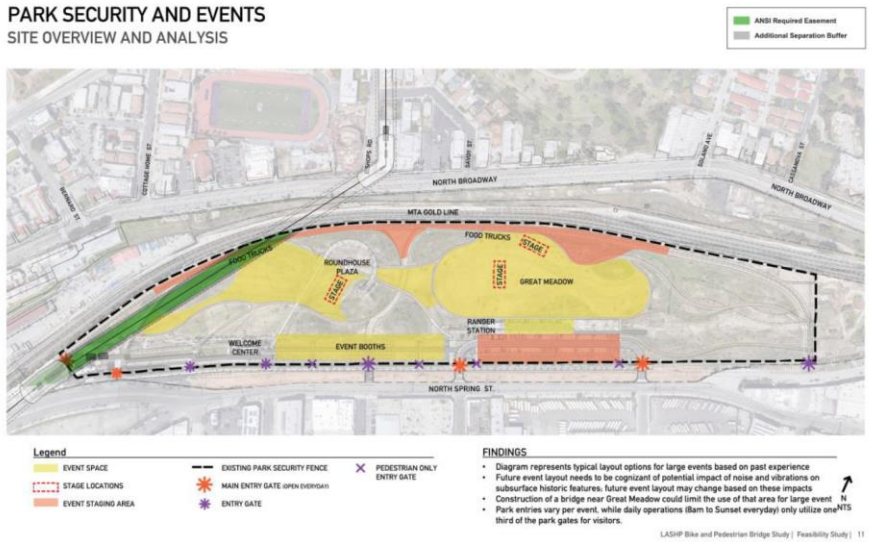
The TSM Alternative would be considered the environmentally superior alternative because it it would not result in a CEQA determination of a significant and unavoidable impact and would result in the fewest environmental impacts overall. However, the TSM Alternative's impact would be greater for air quality, energy, greenhouse gas emissions, hydrology and water quality, and transportation and traffic. In addition, the TSM Alternative would not meet the majority of the Project's Objectives in full or in part.

Other Additional Evaluations in the Draft EIR

LOS ANGELES STATE HISTORIC PARK

Kites: Due to the location of the proposed Project alignment – which traverses over along the western edge of the Park adjacent to the Metro L Line and pedestrian pathway – the proposed Project does not significantly reduce the safe kite flying area within the Park

Special Events: Due to the location of the proposed Project alignment, which crosses over a small portion of the park not typically used for screens and stages, and because events can still take place under the majority of the proposed Project alignment, the proposed Project does not significantly reduce the event space area within the Park



Typical Locations for Event Stages and Screens at the Los Angeles State Historic Park with Proposed Project Alignment

LOCATION OF THE ALAMEDA STATION AND CHINATOWN/STATE PARK STATION

HELIPORTS

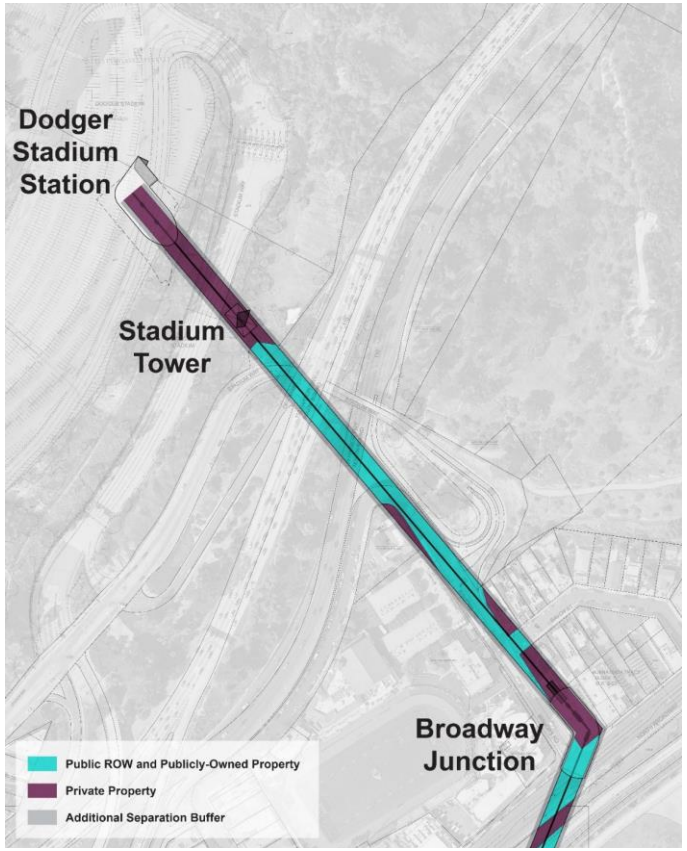
- The proposed Project alignment is not located within an area covered by an airport land use plan, nor within two miles of a public airport
- An airspace evaluation of the heliports in the proposed Project alignment's vicinity concluded that the construction and operation of the proposed Project will be clear of the airspace associated with the existing heliports in the proposed Project's vicinity, resulting in no potential for air navigation hazards and, therefore, no impacts to aeronautical activity, including to heliports in the proposed Project's vicinity

Design Option A

BROADWAY JUNCTION SHIFT TO AVOID 451 E. SAVOY

- Includes a shift in the overall Project alignment between the Broadway Junction and Dodger Stadium Station to avoid aerial rights requirements over 451 E. Savoy Street
- Shift would result in the alignment crossing over a small portion of Cathedral High School adjacent to Bishops Road
- Includes changes to the Project components of Broadway Junction, Stadium Tower, and Dodger Stadium Station
  - Would result in utility relocations and additional construction durations at both the Stadium Tower and Dodger Stadium Station
  - Would require a longer walk for proposed Project passengers to travel between the Dodger Stadium Station and Dodger Stadium

Proposed Project Alignment

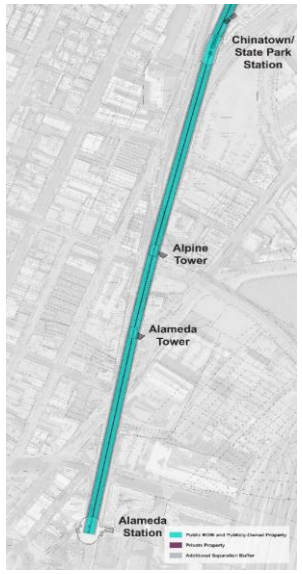


Design Option A

Design Option B

SINGLE TOWER ALONG ALAMEDA STREET

- In response to stakeholder feedback, who asked the Project Sponsor to assess the potential to reduce the number of towers along Alameda Street from two to one
- Consists of a 50-foot overall height increase at the Alameda Tower and the removal of Alpine Tower from the proposed Project between the Alameda Station and the Chinatown/State Park Station
- The increased tower height coincides with additional construction activities
- Would result in potential technical constraints
- Would result in the need for additional private aerial rights requirements



Proposed Project Alignment

Design Option B

Proposed Project Alignment

Design Option B

Design Option C

CHINATOWN/STATE PARK STATION WITH INCREASED HEIGHT

- In response to stakeholder feedback, who asked the Project Sponsor to consider a taller Chinatown/State Park Station
- Design Option C consists of a 35-foot overall height increase at the Chinatown/State Park Station
- The increased height coincides with additional construction activities
- Has the potential to reduce passenger experience due to the height, which also results in the boarding platform being raised, requiring additional vertical circulation to access and ascend the platform

Proposed Project Alignment

Design Option C

Use Option D

CHINATOWN/STATE PARK STATION AS A NON-PASSENGER JUNCTION

- In response to stakeholder feedback, who asked the Project Sponsor to consider no passenger access at the Chinatown/State Park Station, to increase the height of the cabins entering and exiting the station along Spring Street
- Use Option D includes substituting a non-passenger junction for the proposed Chinatown/State Park Station
- Would have the same location, height, width, length, and architectural finish as the proposed Project
- Would not enhance community connectivity to the Los Angeles State Historic Park, Chinatown, and the Mission Junction Neighborhood

Design and Use Option E

PEDESTRIAN BRIDGE AT THE LOS ANGELES STATE HISTORIC PARK

- The Los Angeles State Historic Park has proposed an ADA accessible pedestrian bridge that would gently slope from the central portion of the Park to North Broadway
- While the pedestrian bridge is not proposed as part of the proposed Project, the Draft EIR includes an analysis of the pedestrian bridge for the Park
- As noted in the Los Angeles State Historic Park General Plan and Final EIR and the Bike and Pedestrian Bridger Study, the bridge would provide safe pedestrian and bike access from the Chinatown and Solano Canyon communities into the Park

Source: Bridge Feasibility Study

Overview of the Parking Study

PROPOSED PROJECT PARKING STUDY

- Although CEQA does not require analysis of parking, a comprehensive Parking Study was conducted for the Project, which Metro had peer reviewed
- The Parking Study has been available on Metro's website since September 9, 2022

WHAT WAS STUDIED?

- Most proposed Project riders are expected to shift to transit to get to the Project
- There are approximately 10,290 spaces in publicly available lots and garages and in on-street spaces within ½ mile of the proposed Project's Alameda Station and Chinatown/State Park Station

Overview of the Parking Study

PARKING STUDY CONCLUSIONS

Parking Type	Game Day Parking			
	Parking Supply	Parked Vehicles	Occupancy	Available Supply
Off-Street Publicly Available Spaces	6,876	2,173	32%	4,703
On Street Spaces	3,417	2,017	59%	1,400
TOTAL				
Proposed Project Parking Demand (2042)	-	307 – 790		
Total Available Off-Street Spaces with Project	6,876	2,963	43%	3,913

*Counts were taken on September 10, 2021, on an evening when the Los Angeles Dodgers hosted the San Diego Padres; the paid attendance was 48,403, which was higher than the 2019 Los Angeles Dodgers season average for weekday evening games. In coordination with Metro and LADOT, the Parking Study applied a 46% increase to off-street publicly available spaces to account for the COVID-19 pandemic.

With the addition of the proposed Project's potential parking demand, there is plenty of available parking spaces within the proposed Project's walkshed. Even if some existing parking lots get redeveloped, there is plenty of off-street parking supply to accommodate all of the proposed Project's parking demand.

THE PROJECT IS COMMITTED TO ENCOURAGE TRANSIT RIDERSHIP

- Implement business to business partnerships with local businesses to pre-sell bundled packages that include patronage at local businesses and available off-street parking
- Support implementation/expansion of various management strategies including time limit parking restrictions and parking meters during game times to discourage riders from parking in the community and keeping spaces available for residents and local businesses

Public Comment Session

Public Comment Session

- Purpose: Allow the public an opportunity to comment on the Draft EIR

TODAY!

Learn about the Draft EIR's key analyses and conclusions and provide verbal public comment.

There will be no Q&A today.

Raise your hand and you will be called on to unmute yourself and provide public comment. Participants will be allocated up to two minutes per comment.

Communications typed into the Zoom chat will not be considered a formal public comment.

How to Comment on Draft EIR through January 17, 2023

How to Comment on Draft EIR

Public Hearings

Downtown Los Angeles/Chinatown
Saturday, December 10, 10:00 am – 12:00 pm
Los Angeles Union Station Ticket Concourse
800 N. Alameda Street, Los Angeles, CA 90012

Virtual Meeting via Zoom
Tuesday, December 13, 5:00 – 7:00 pm

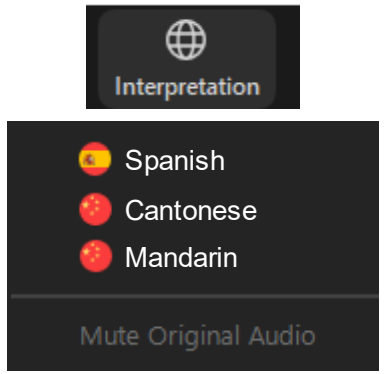
THANK YOU

Audiencia Pública sobre el Borrador del EIR del Proyecto de Transporte Rápido Aéreo de Los Ángeles

13 de diciembre de 2022

Language Accommodations* (Asistencia de Lenguaje / 語言選項 / 语言选项)



Click on the interpretation button.

Select Spanish, Cantonese, or Mandarin.

You are welcome to download a translated version of the Presentation at metro.net/aerialrapidtransit

*Note that if you are calling in via phone, the interpretation feature is not available in Zoom for phone-only participants. Please log in to Zoom to access interpretation if you can.

Español

Haga clic en el botón de interpretación.

Seleccione: Español, Cantonés o Mandarín.

Puede descargar una versión traducida de la presentación en metro.net/aerialrapidtransit

*Nota. Si llama vía telefónica, la opción de interpretación no estará disponible en Zoom. Si es posible, favor de ingresar a Zoom para tener acceso a la interpretación.

粵語

點擊傳譯按鈕。

選擇西班牙語、粵語或普通話。

歡迎您在 metro.net/aerialrapidtransit 下載簡報的翻譯版本

*注意: 如果您是打電話參加，口譯的選項無法使用。如有可能，請用電腦的Zoom 軟體連結口譯功能。

普通话

点击口译按钮。

选择西班牙语、粤语或普通话。

欢迎在 metro.net/aerialrapidtransit 下载演示文稿翻译版本。

*注意：如果您是打电话参加，口译的选项无法使用。如有可能，请用Zoom 软件连结口译功能。

Orden del Día

1. Propósito de la Reunión
2. Cómo Participar en Esta Reunión Virtual
3. Generalidades
4. Resumen del Proceso de la CEQA
5. Generalidades del Proyecto LA ART
6. Análisis y Conclusiones Clave del Borrador del EIR
7. Sesión de Comentarios Públicos

Para ayuda con el Zoom: por favor escríbanos a mary.nooristani@aecom.com o llame al (619) 251-9180

Propósito de la Reunión

ANÁLISIS Y CONCLUSIONES CLAVE DEL PRESENTE BORRADOR DEL EIR

SESIÓN DE COMENTARIOS PÚBLICOS

Proceso de la Ley de Calidad Ambiental de California (CEQA)

Periodo de Alcance de 45 Días 1 de Octubre – 16 de Noviembre de 2020

→

Revisión Pública del Borrador del EIR de 90 Días 17 de octubre – 17 de enero de 2023

→

Certificación del EIR Final por la Junta Directiva de Metro 2023

Alcance Comunitario Continuo

Tres Talleres Informativos

Dos Audiencias Públicas

ESTAMOS AQUÍ

¡HOY!

Conozca los análisis y conclusiones clave del Borrador del EIR y proporcione comentarios públicos verbales.

Hoy no habrá preguntas y respuestas.

La comunicación que se haga hoy a través del chat de Zoom no se considerarán un comentario público formal.

Cómo Hacer Comentarios Sobre el Borrador del EIR, a Más Tardar el 17 de Enero de 2023

Audiencia Pública Adicional

Centro de Los Ángeles/Chinatown
Jueves, 12 de enero de 2023, 5:00 – 7:00 p.m.
Secundaria Cathedral High School
1253 Bishops Road, Los Angeles, CA 90012

Email
LAART@metro.net

Correo postal
Mr. Cory Zelmer
Deputy Executive Officer Metro
One Gateway Plaza, Mail Stop 99-22-6
Los Angeles, CA 90012

Teléfono

¿Cómo Participar en esta Reunión?

¡HOY!

Conozca los análisis y conclusiones clave del Borrador del EIR y proporcione comentarios públicos verbales. Hoy no habrá preguntas y respuestas.

Durante la Sesión de Comentarios Públicos: Levante la mano y se le llamará para que quite el silencio a su dispositivo y así pueda proporcionar comentarios públicos.

Generalidades

Generalidades

- El Proyecto de Transporte Rápido Aéreo de Los Ángeles ha sido propuesto por LA Aerial Rapid Transit Technologies LLC
- Metro es la agencia principal en la preparación de un Informe de Impacto Ambiental (EIR) según la Ley de Calidad Ambiental de California (CEQA)
- El Borrador del EIR evalúa los posibles efectos ambientales asociados a la construcción y el funcionamiento del proyecto propuesto

Generalidades

- Como agencia principal, Metro tiene la responsabilidad de asegurarse de que:
  - El informe de impacto ambiental EIR evalúe adecuadamente los posibles impactos del proyecto
  - Las medidas de mitigación propuestas sean apropiadas
  - Se haya cumplido con el proceso de la CEQA en lo que respecta a las notificaciones públicas, la divulgación pública y la distribución de documentos

Generalidades

- Actualmente estamos aceptando comentarios del público sobre el borrador del EIR en virtud de la CEQA
  - Audiencias Públicas
  - Email
  - Correo postal
  - Teléfono
- Proyecto de Ley 44 del Senado
  - Adoptada para agilizar la revisión de los proyectos de transporte de liderazgo ambiental en el Condado de Los Ángeles en virtud de la CEQA
  - El proyecto propuesto será el primer proyecto de transporte de liderazgo ambiental en virtud del Proyecto de Ley 44 del Senado
  - Requisitos de la Audiencia Pública
    - **Taller Informativo: dentro de los primeros 10 días calendario del período de comentarios públicos, para informar al público sobre los análisis y conclusiones clave del Borrador del EIR**
    - Audiencia Pública: dentro de los últimos 10 días calendario del periodo de comentarios del público para obtener el testimonio del público

Generalidades del Proceso de la Ley de Calidad Ambiental de California (CEQA)

Proceso de la CEQA

Esto se requiere para todos los proyectos emprendidos, financiados o que requieran la aprobación de un organismo público

Informa al público y a los responsables de la toma de decisiones

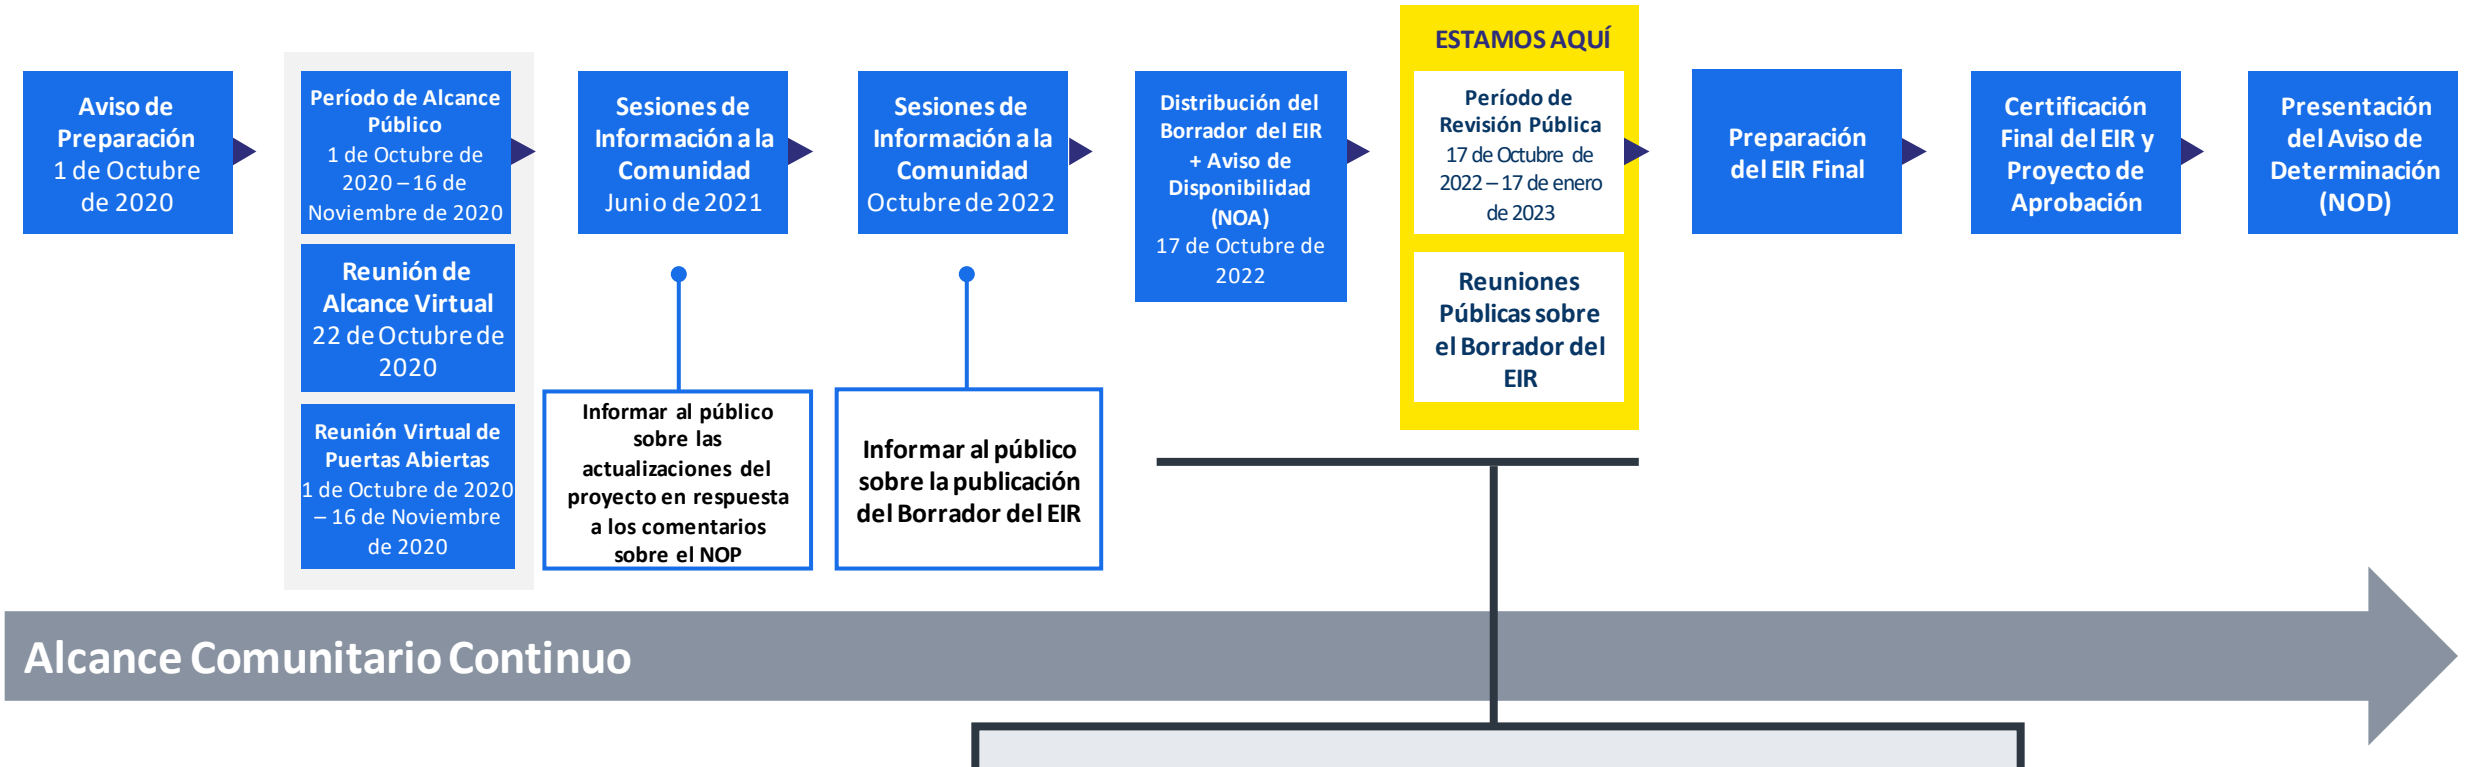
Revela los posibles impactos ambientales resultantes de un proyecto propuesto

Da la oportunidad de hacer comentarios sobre cuestiones ambientales

Dos periodos de comentarios del público: Periodo de Alcance Público y Revisión Pública del Borrador del EIR

SB 44 requiere dos reuniones públicas durante la Revisión Pública del Borrador del EIR: Taller Informativo y Audiencia Pública

Calendario



¿Cuál es el Objetivo del Borrador del EIR?

El propósito del Borrador del EIR es evaluar el potencial de los impactos ambientales asociados con la implementación del proyecto propuesto, y proporcionar medidas de mitigación cuando sea necesario

Reuniones públicas durante el Periodo de Revisión Pública del Borrador del EIR:

Talleres Informativos

Taller Informativo sobre el Borrador del EIR No. 1	Sábado 22 de octubre	Virtual
Taller Informativo sobre el Borrador del EIR No. 2	Martes 25 de octubre	En Persona

Metro organizó dos talleres informativos para dar a conocer al público los análisis y conclusiones clave del Borrador del EIR

Audiencias Públicas

Audiencia Pública sobre el Borrador del EIR No. 1	Sábado 10 de diciembre	En Persona
Audiencia Pública sobre el Borrador del EIR No. 2	Martes 13 de diciembre	Virtual
Audiencia Pública sobre el Borrador del EIR No. 3	Martes 12 de enero	En Persona

Metro organizará tres Audiencias Públicas para recibir comentarios del público sobre el Borrador del EIR

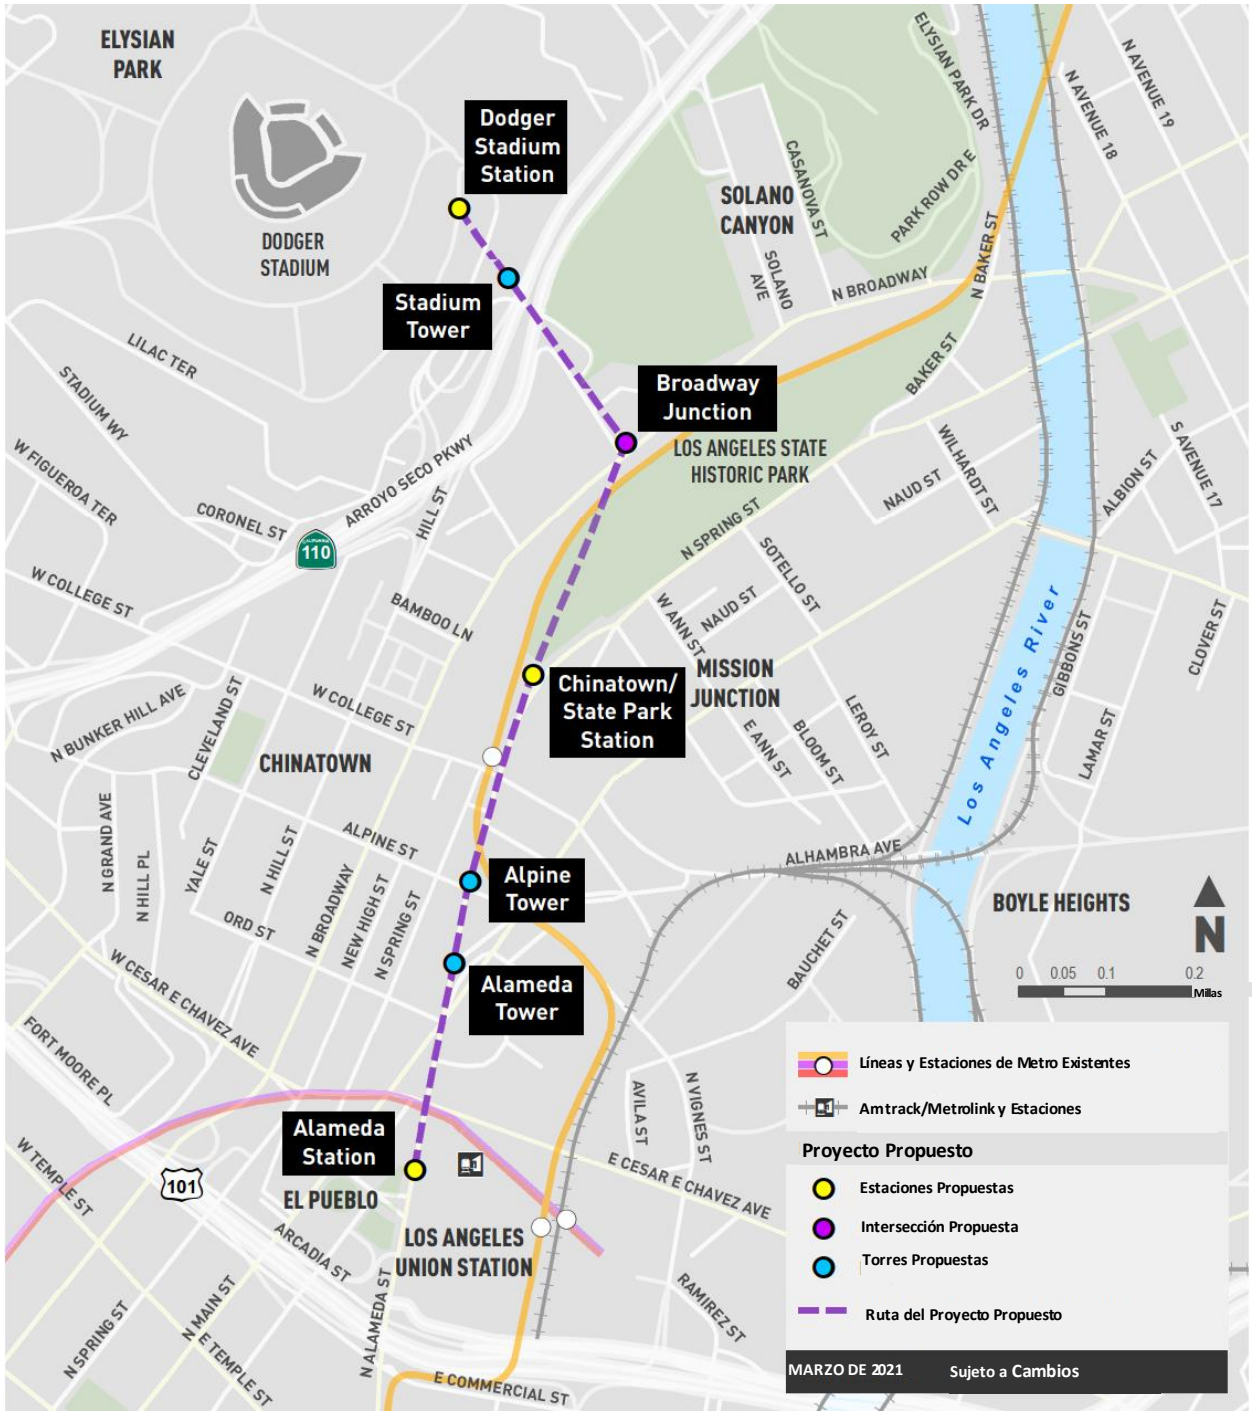
Descripción del Proyecto

Generalidades del Proyecto

- Proporciona una conexión de transporte permanente desde la estación Los Angeles Union Station (LAUS) hasta la propiedad del estadio Dodger Stadium a través de un sistema de góndolas aéreas de 1.2 millas (1.93 km).
  - El tiempo de traslado desde la estación LAUS hasta el Dodger Stadium sería de aproximadamente 7 minutos
- Capacidad de aproximadamente 5,000 personas por hora y por dirección
- Funcionamiento diario para dar servicio a los residentes, trabajadores, usuarios del parque y visitantes de Los Ángeles
- Da acceso al parque Los Angeles State Historic Park y a las comunidades circundantes a través de la estación intermedia de Chinatown/State Park
- Transporte rápido de cero emisiones, respetuoso del medio ambiente, que reduciría las emisiones de GEI gracias a la reducción de la congestión vehicular en el Dodger Stadium y sus alrededores y en las calles del vecindario, las carreteras arteriales y las autopistas.

Ruta y Ubicación del Proyecto

- El proyecto comenzaría junto a Union Station y El Pueblo, y terminaría en el Dodger Stadium, con una estación intermedia en la entrada que está más al sur del parque Los Angeles State Historic Park.
- Conecta las comunidades circundantes de Chinatown, Mission Junction, Elysian Park, Echo Park y Solano Canyon con el sistema de transporte regional accesible en Union Station
- La ruta propuesta del proyecto maximiza la ruta a lo largo del derecho de paso (ROW) público y la propiedad pública y minimiza los derechos aéreos sobre las propiedades privadas, teniendo en cuenta los usos de la tierra adyacentes existentes y futuros



Precedentes de Sistemas de Transporte Aéreo

- La tecnología de transporte aéreo se ha usado durante más de 100 años
- Los sistemas modernos son un medio factible de transporte urbano y actualmente funcionan en varias ciudades alrededor del mundo
- Sistemas de transportes de góndolas establecidos en el mundo, como los de La Paz, Bolivia y de la Ciudad de México, México, se usan como sistema de transporte rápido para las poblaciones urbanas a las que sirven
- Al igual que los sistemas utilizados en Koblenz (Alemania), Phu Quoc (Vietnam) y Toulouse (Francia), el proyecto propuesto es de góndolas "3S".
  - Las cabinas transportarán aproximadamente de 30 a 40 pasajeros
  - El sistema proporcionará un viaje fluido y estable

Portland, Oregon

Roosevelt Island, New York

La Paz, Bolivia

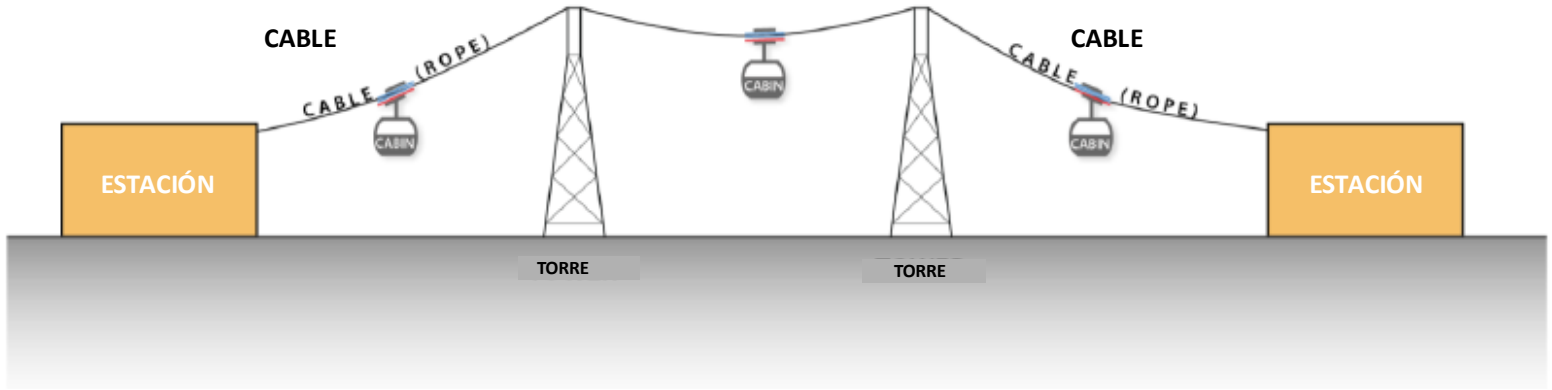
Ciudad de México, México

Toulouse, Francia

Medellín, Colombia

Tecnología de Transporte con Cables

El sistema ART incluye estaciones de pasajeros, una intersección que no es para pasajeros y torres para soportar los cables aéreos que transportan las cabinas



3 Estaciones de Pasajeros

- Incluyen sistemas mecánicos, eléctricos y de plomería, andenes de abordaje, y circulación vertical (por ejemplo, escaleras, escaleras mecánicas y ascensores)
- Incluyen áreas para la venta de boletos, la revisión de boletos y la formación de colas; el abordaje y desembarque de pasajeros; las operaciones; y los equipos del sistema

1 Intersección que no es para pasajeros

- Necesario para que el sistema ART gire los cables y permanezca a lo largo de la ruta del Proyecto

3 Torres para Soportar los Cables y las Cabinas

Sistema "3S" y Cabinas de Góndola

Sistema "3S"

- El sistema "3S" incluye tres cables: dos "cables guía" para la estabilidad y un tercer "cable de arrastre" para la circulación de las cabinas
- Las cabinas se desprenden del cable de arrastre que circula continuamente, se frenan al entrar en una estación para la salida y entrada de pasajeros, y luego se vuelven a unir al cable de arrastre

Cabinas

- De 30 a 40 pasajeros cada una, dependiendo de la configuración exacta de los asientos y las comodidades de las cabinas seleccionadas
- Totalmente accesibles para la ADA y con capacidad para sillas de ruedas
- En ellas se pueden sentar o estar de pie
- Ofrece espacio para carriola de bebé y bicicletas
- Se movería a una velocidad máxima de 13.4 millas por hora (21.6 km/h) durante las horas pico
- Al entrar en una estación, las cabinas reducirían su velocidad a aproximadamente 1 pie por segundo (0.3 m/seg) que equivale a menos de 1 milla por hora (1.6 km/h) para dejar que los pasajeros entren o salgan de la cabina en movimiento

Propósito y Necesidad

- Proporcionar una conexión de transporte directa entre Union Station y la propiedad del Dodger Stadium a través de un sistema de góndolas aéreas
- Conectar las comunidades circundantes de Chinatown, Mission Junction, Los Angeles State Historic Park, Elysian Park, Echo Park y Solano Canyon con el sistema de transporte regional accesible en Union Station
- Mejorar la movilidad y la accesibilidad en la región proporcionando una conexión diaria de transporte rápido aéreo de alta capacidad entre el sistema de transporte regional en LAUS
- Proporcionar un centro de movilidad en la Estación Chinatown/State Park
- Proporcionar un medio de transporte sostenible al operar el sistema ART usando electricidad de cero emisiones con almacenamiento de baterías de respaldo a fin de reducir las emisiones de GEI y mejorar la calidad del aire

Dodger Stadium: Uno de los Lugares Más Visitados de la Región

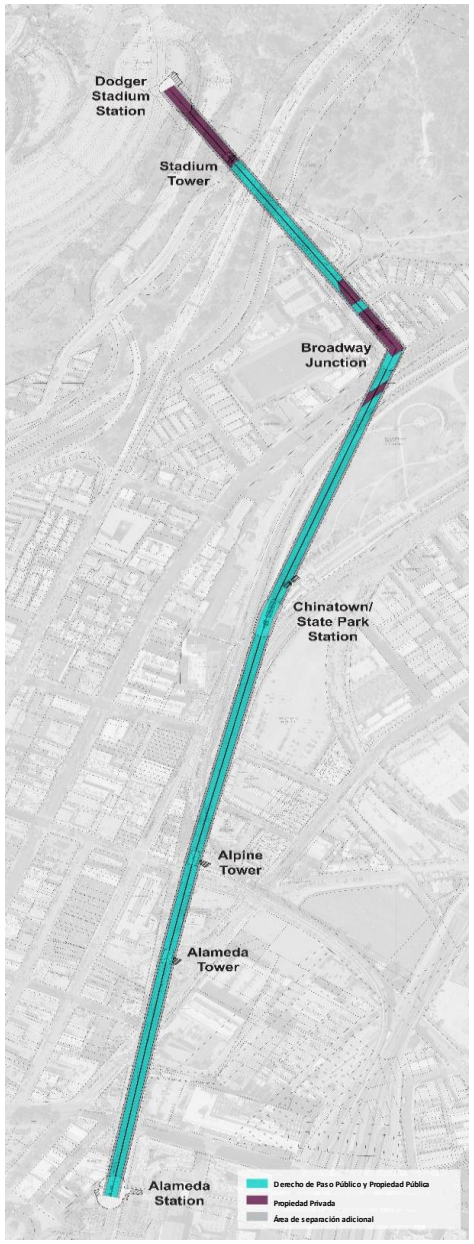
- Atrae a grandes multitudes de la región, con aproximadamente 100 partidos de béisbol y otros eventos cada año
- La gran mayoría de los visitantes se desplazan en sus vehículos personales
- Los vehículos ocasionan congestionamientos en las comunidades circundantes y en las autopistas cercanas
- Las comunidades cercanas a la ruta del proyecto propuesto fueron identificadas como en el percentil 90 – 100 de las comunidades desproporcionadamente cargadas por varias fuentes de contaminación en el Estado (Mapa CalEnviroScreen 4.0)

Objetivos del Proyecto

- Ampliar las opciones de movilidad para los usuarios del transporte público a través de una conexión directa entre la estación LAUS y Dodger Stadium, un centro de eventos regional.
- Atraer a nuevos usuarios de transporte público al sistema de Metro a través de una experiencia única de un sistema de transporte aéreo y brindar una conexión con el Dodger Stadium.
- Mejorar la experiencia de los visitantes del Dodger Stadium proporcionando un acceso alternativo eficiente, de gran capacidad y más rápido al Dodger Stadium.
- Mejorar la seguridad de los barrios adyacentes al Dodger Stadium reduciendo el número de vehículos en la zona.
- Reducir la contaminación relacionada con el transporte y las emisiones de gases de efecto invernadero (GEI) gracias a la reducción de la congestión vehicular en el Dodger Stadium y sus alrededores y en las calles del vecindario, las carreteras arteriales y las autopistas.
- Aumentar la conectividad de las personas con el centro de transporte público de la región de la estación LAUS y las instalaciones del Dodger Stadium.
- Mejorar la experiencia de los pasajeros del transporte público proporcionando vistas escénicas únicas del área de Los Ángeles a los pasajeros del ART y a los seguidores de los Dodgers.
- Llevar un sistema de transporte aéreo de clase mundial al área de Los Ángeles.
- Mejorar la conectividad de la comunidad proporcionando acceso peatonal y de transporte de primera/última milla a áreas que han estado históricamente desatendidas, incluyendo los parques Los Angeles State Historic Park y Elysian Park.
- Identificar oportunidades de tarifas comparables, asequibles y accesibles para la comunidad y el acceso a Los Angeles State Historic Park y Elysian Park.
- Minimizar la huella en el medio ambiente del proyecto mediante la integración de características de sostenibilidad y diseño respetuoso del medio ambiente en los materiales, la construcción, las operaciones y el mantenimiento del proyecto propuesto.
- Proporcionar un medio de transporte sostenible al operar el sistema ART usando electricidad de cero emisiones con almacenamiento de baterías de respaldo a fin de reducir las emisiones de GEI y mejorar la calidad del aire.
- Maximizar la ruta del proyecto a lo largo del derecho de paso (ROW) público y la propiedad pública y minimizar los requisitos de los derechos aéreos sobre las propiedades privadas, teniendo en cuenta los usos de la tierra adyacentes existentes y futuros

Espacio Aéreo | Ruta sobre Derecho de Paso Público/Propiedad Pública y Propiedad Privada

- Las normas de la industria para el diseño y el funcionamiento del transporte por cables y las cabinas están documentadas en la Norma B77.1 del American National Standards Institute (ANSI), el cual se desarrolla en coordinación con fabricantes, consumidores y reguladores
  - La Norma ANSI B77.1 regula las distancias verticales y horizontales entre el transporte por cables y las cabinas y elementos tales como vehículos, peatones, vegetación, edificios y otras estructuras
- La ruta maximiza la alineación a lo largo del derecho de paso (ROW) público y la propiedad pública y minimiza los derechos aéreos sobre las propiedades privadas, teniendo en cuenta los usos de la tierra adyacentes existentes y futuros
- Consideraciones adicionales en la selección de la ruta del proyecto:
  - Minimizar los cambios en los carriles de circulación, los carriles de estacionamiento y la circulación de bicicletas y peatones
  - Minimizar la reubicación de servicios públicos
  - La ubicación de recursos históricos y arqueológicos
  - Minimizar el uso de topografía irregular o difícil
  - Consideraciones técnicas y factibilidad



Diseño

- El objetivo del diseño es desarrollar un diseño arquitectónico común que unifique el sistema general de góndolas aéreas, permitiendo al mismo tiempo que cada componente principal contribuya a su respectiva condición urbana localizada
- De igual importancia es el deseo de minimizar la masa y la escala percibida de las estaciones, la intersección que no es para pasajeros y las torres.
- Las estaciones y la intersección aprovechan la forma de una bóveda de cañón simple para proporcionar el mínimo espacio cerrado necesario para proteger el equipo de transporte por cables y proporcionar sombra y protección contra la intemperie a los pasajeros en el andén de abordaje
- Cada una de las torres está diseñada para que sus bases no impidan la circulación adyacente de vehículos y peatones, y su color gris neutro de tono claro busca adaptarse al entorno urbano circundante

Estación Alameda

- En Alameda Street, junto a la explanada planeada de LAUS y la Placita de Dolores, entre Los Angeles Street y Cesar Chavez Avenue
- Esta estación tendría aproximadamente 173 pies (52 m) de largo, 109 pies (33 m) de ancho y 78 pies (24 m) de alto en su punto más alto.
- El andén de abordaje de pasajeros estaría aproximadamente a 31 pies (9.5 m) sobre la calle Alameda
- La circulación vertical se introduciría al norte de la Placita de Dolores, en una nueva plaza peatonal propuesta en El Pueblo y este de la zona prevista de la explanada de LAUS

Torre Alameda

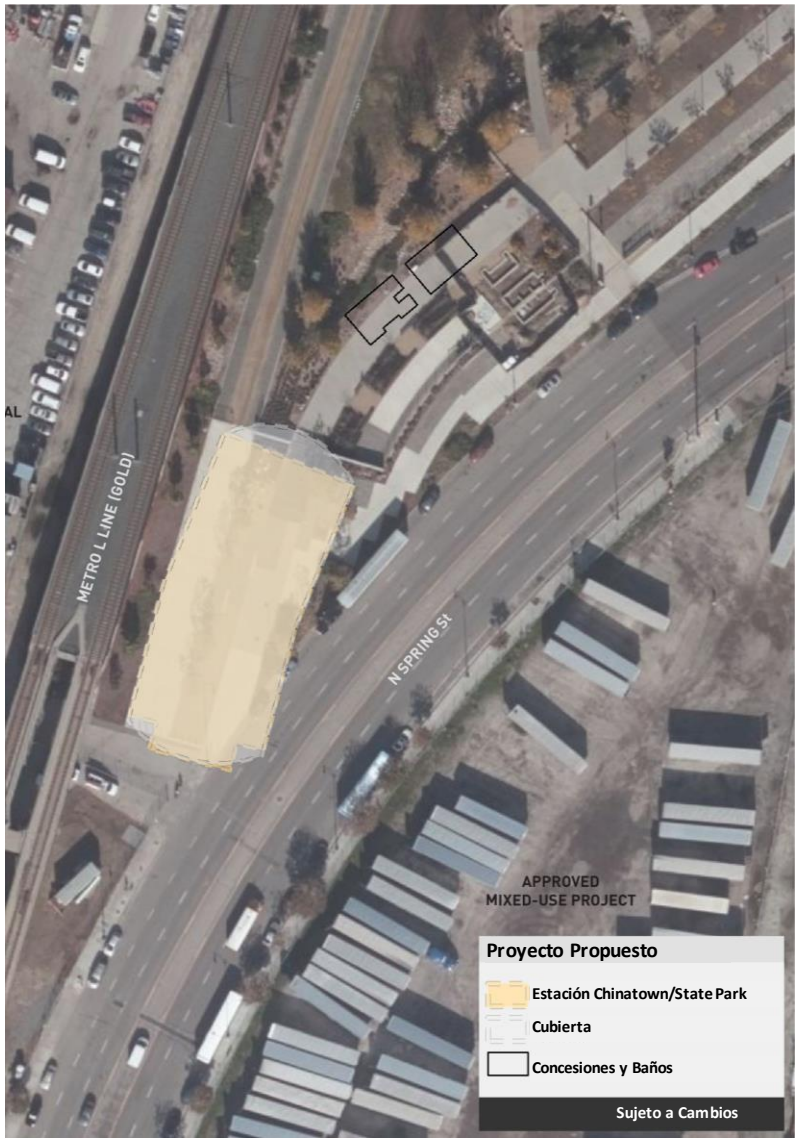
- Situada en el Triángulo de la Alameda, un derecho de paso de la Ciudad entre Alameda Street, North Main Street y Alhambra Avenue
- 195 pies (59 m) de altura y el cable estaría suspendido a 175 pies (53 m) sobre el suelo
- Actualizaciones del paisaje y las instalaciones del Triángulo de la Alameda, incluyendo la reutilización e integración de los adoquines existentes

Torre Alpine

- Situada en la esquina noreste de Alameda Street y Alpine Street, junto a la Línea L del Metro (Dorada)
- Es un terreno propiedad de la Ciudad, que actualmente se utiliza como estacionamiento no público para vehículos de la Ciudad
- 195 pies (59 m) de altura en el punto más alto y el cable estaría suspendido a 175 pies (53 m) sobre el suelo
- Paisajismo e instalaciones cerca de la base de la torre

Estación Chinatown/State Park

- Adyacente a Spring Street, en la parte que está más al sur del parque Los Angeles State Historic Park
- La parte sur de la estación se situaría en el derecho de paso de la Ciudad, con la parte norte integrada al límite sur del parque Los Angeles State Historic Park
- La estación tendría aproximadamente 200 pies (61 m) de largo, 80 pies (24 m) de ancho y 98 pies (30 m) de alto en su punto más alto.
- El andén de abordaje de pasajeros estaría aproximadamente a 50 pies (15 m) sobre el nivel del suelo
- El acceso al andén de abordaje se realizaría desde el mezzanine, mediante ascensores y escaleras
- Incluiría la creación de jardines e instalaciones, incluyendo la integración de los adoquines de granito



Estación Chinatown/State Park

Servicios de la Estación

- Centro de movilidad donde los pasajeros podrían tener acceso a un conjunto de opciones multimodales de primera y última milla, como un programa de bicicletas compartidas
- Mejoras peatonales, incluyendo mejoras paisajísticas y en las instalaciones, estructuras de sombra y posibles asientos

Servicios del Parque

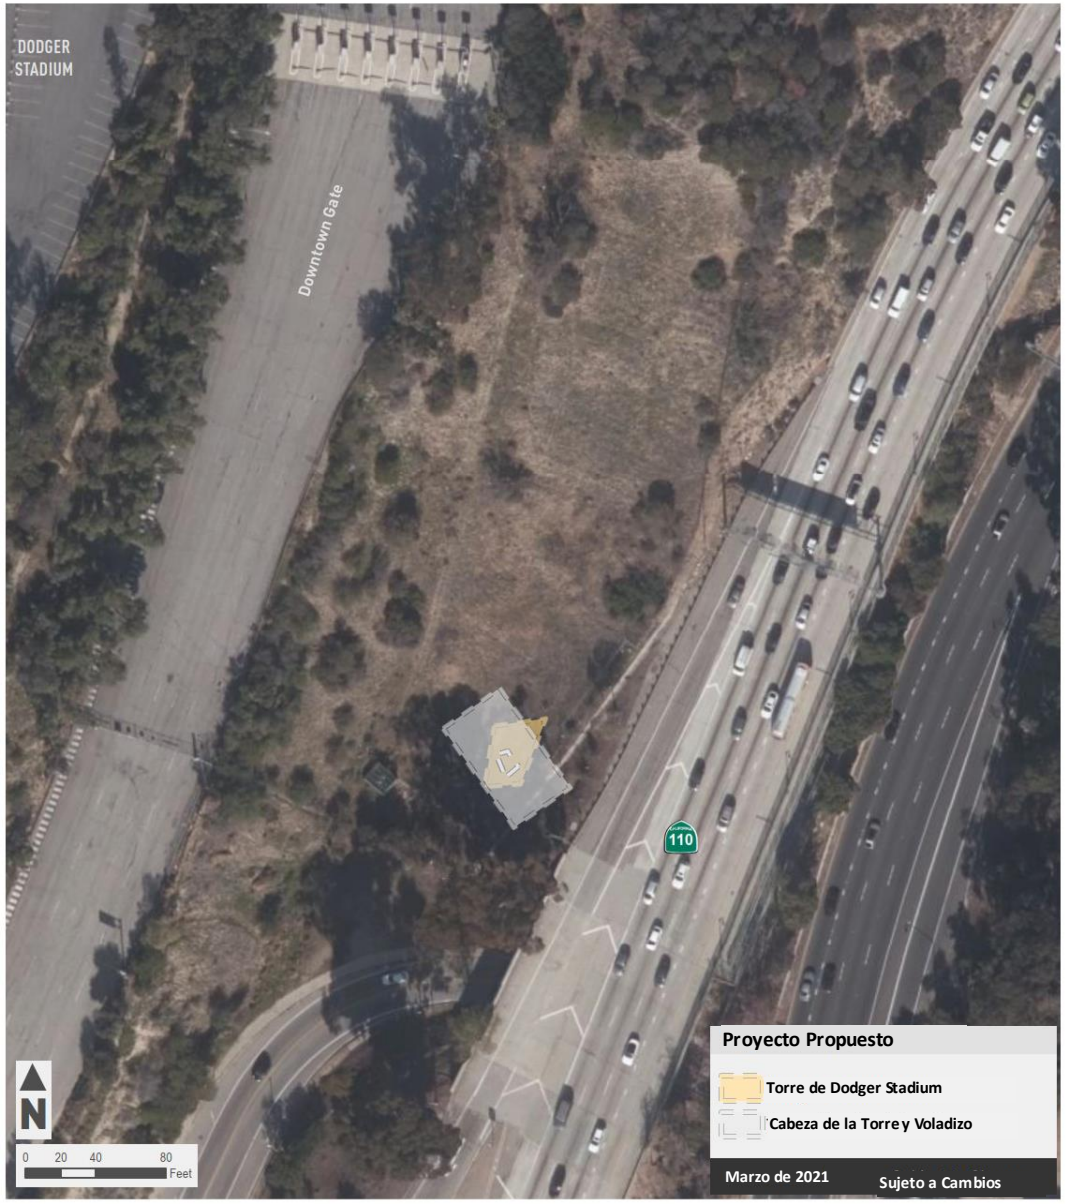
- 740 pies cuadrados (69 m2) de concesiones
- 770 pies cuadrados (72 m2) de baños
- Paso cubierto de 220 pies cuadrados (20 m2) que conecta las concesiones y los baños

Broadway Junction

- Intersección o entronque que no es para pasajeros y que se localizaría donde se cruzan North Broadway y Bishops Road
- El edificio comercial existente situado en el 1201 de N. Broadway sería demolido
- La intersección tendría aproximadamente 227 pies (69 m) de largo, 60 pies (18 m) de ancho y 98 pies (30 m) de alto en su punto más alto

Torre del Estadio

- Ubicada en una ladera de propiedad privada al norte de Stadium Way, entre la entrada de Dodger Stadium Downtown Gate y la SR-110
- 179 pies (55 m) de altura con el cable suspendido 159 pies (48 m) por encima del suelo y con jardines cerca de la base de la torre



Estación Dodger Stadium

- Parte sureste de la propiedad del Dodger Stadium, cerca de la entrada Downtown Gate

Estación Dodger Stadium

- La estación tendría aproximadamente 194 pies (59 m) de largo, 80 pies (24 m) de ancho y 74 pies (23 m) de alto en su punto más alto
- Las cabinas de esta estación llegarían y saldrían de un andén de abordaje a nivel, con la zona de filas de pasajeros también a nivel
- Incluiría una zona subterránea bajo el andén para el almacenamiento y el mantenimiento de las cabinas, así como salas de descanso para el personal, taquillas y zonas de almacenamiento de repuestos
    - Cuando el sistema no esté en uso, las cabinas se devolverían a la Estación Dodger Stadium y ahí se almacenarían (en las horas en las que no operarían)
- Los baños para uso de los pasajeros estarían en la estación

La Estación Dodger Stadium también incluiría una conexión peatonal con el Dodger Stadium, incluyendo mejoras paisajísticas y de las instalaciones, así como posibles asientos

Sustentabilidad

- Las características de sostenibilidad del proyecto propuesto incluirían características contenidas en:
  - El Código de Normas de Construcción Ecológica de California de 2019
  - Liderazgo en Energía y Diseño Ambiental (LEED) para nuevas construcciones del Consejo de Construcción Verde de los Estados Unidos
  - Sistema de Clasificación Envision del Instituto para la Infraestructura Sostenible
- El 100% de la energía para el proyecto propuesto sería suministrada por el Programa Green Power del Departamento de Agua y Energía de la Ciudad de Los Ángeles
- Almacenamiento de baterías de respaldo en cada estación, torre e intersección para proporcionar energía de reserva, en lugar de generadores diesel

Al igual que el proyecto, la alternativa de ruta de la calle Spring Street proporcionaría una opción de ART para los visitantes del Dodger Stadium, además del acceso entre el Dodger Stadium, las comunidades aledañas y el sistema de transporte regional disponible en Los Angeles Union Station. La tecnología del ART es silenciosa, y el proyecto propuesto reduciría las VMT y la congestión, lo que llevaría a reducir las emisiones de GEI y a mejorar la calidad del aire.

Construcción

Calendario

- Se prevé que la construcción del proyecto propuesto comience en 2024 y dure aproximadamente 25 meses, incluyendo la construcción, la instalación de los cables y las pruebas del sistema

Horario de los Trabajos

- Se prevé que el horario de construcción sea de 10 horas al día, que variará en función de las circunstancias y restricciones especiales
- Si bien no está anticipada, la aprobación de la Junta de Comisionados de Policía de la Ciudad de Los Ángeles se requeriría para ampliar las horas de construcción y los posibles trabajos de construcción en domingo.

Cierre de Carriles

- Los cierres anticipados incluirían cierres donde los carriles estarían cerrados las 24 horas del día durante ciertas fases de la construcción, o cierres alternos durante ciertas fases de la construcción, en los que los cierres se producirían durante las horas de construcción durante aproximadamente 10 horas al día, y las vialidades se reabrirían durante las horas en las que no hay trabajos de construcción, durante aproximadamente 14 horas al día
- En el caso de los cierres alternativos, durante las horas en las que no hay trabajos de construcción, se colocarían placas de acero en las obras en la medida de lo posible para permitir la circulación de vehículos y peatones.
- Los cierres y las horas variarán según el lugar y la fase de construcción
- El proyecto propuesto implementaría un Plan de Gestión del Tráfico de la Construcción que incluirá desvíos y asegurará que el acceso para emergencias se mantenga durante todas las actividades de construcción

Supuestos Detallados de la Construcción

- Los supuestos detallados de la construcción se incluyen en el Apéndice B del Borrador del EIR

Análisis y Conclusiones Clave del Borrador del EIR

Temas de Recursos Ambientales

Todos los Temas de Recursos Ambientales de conformidad con el Apéndice G de las Directrices de la CEQA se abordan en el Borrador del EIR:

- Estética
- Agricultura/Silvicultura
- Calidad del Aire
- Recursos Biológicos
- Recursos Históricos/Culturales
- Energía
- Geología/Suelos
- Emisiones de Gases de Efecto Invernadero
- Peligros/Materiales Peligrosos
- Hidrología/Calidad del Agua
- Planificación/Uso de la Tierra
- Recursos Minerales
- Ruido
- Población/Vivienda
- Servicios Públicos
- Recreación
- Transporte
- Recursos Culturales Tribales
- Sistemas de Servicios/Servicios Públicos
- Incendios Forestales

Estética

¿QUÉ SE ESTUDIÓ?

- Impactos visuales de los componentes del proyecto que rodean la ruta del proyecto
- Puntos de observación clave que representan el carácter visual, incluyendo la presencia o ausencia de jardines, los usos predominantes del suelo, la escala de los edificios o las principales vistas escénicas, los recursos escénicos y los elementos visuales sustanciales disponibles, como los recursos de espacios abiertos, los árboles de las calles y las fachadas de los edificios
- La respuestas de quienes perciben estas vistas, incluyendo los peatones y quienes realizan actividades recreativas (por ejemplo, los usuarios de los parques)
- Aunque no hay vistas escénicas designadas, las vistas del horizonte del centro de Los Ángeles, Union Station, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium y las montañas de San Gabriel y San Bernardino
- Luz y Deslumbramiento

ANÁLISIS Y CONCLUSIONES CLAVE

- El proyecto propuesto no bloquearía de manera significativa las vistas panorámicas o escénicas, como las vistas del horizonte del centro de Los Ángeles, Union Station, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium, y las montañas de San Gabriel y San Bernardino
- Con las autorizaciones y aprobaciones del proyecto propuesto – que incluirían normas de diseño para mejorar la identidad visual y el carácter del proyecto propuesto y sus comunidades circundantes – no habría conflicto con la zonificación aplicable u otras regulaciones que rigen la calidad escénica
- El proyecto propuesto no crearía una fuente sustancial de luz o deslumbramiento y cumpliría con la normativa de iluminación de la Ciudad

Vista Actual y Simulada desde el State Historic Park hacia el Centro - Horizonte de Los Ángeles

Estética

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Vista Escénica	Menos que significativo	Menos que significativo
Recursos Escénicos	Sin impacto	Sin impacto
Carácter Visual	Menos que significativo	Menos que significativo
Luz y Deslumbramiento	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción: Las barreras y los muros contra ruido incluirían una pantalla de privacidad, y el proyecto recurriría a las mejores prácticas de gestión para reducir los impactos visuales. No se requiere mitigación.

Operación: Características del diseño del proyecto, incluyendo la iluminación de edificios y la iluminación de los letreros. No se requiere mitigación.

Agricultura y Silvicultura

¿QUÉ SE ESTUDIÓ?

- Si el proyecto entraría en conflicto con la zonificación agrícola en los sitios de la Torre del Estadio y la Estación Dodger Stadium

ANÁLISIS Y CONCLUSIONES CLAVE

- La propiedad del Dodger Stadium no contiene usos agrícolas y está sujeta a un Permiso de Uso Condicional, que permite la operación de un estadio de Grandes Ligas de Béisbol y varias estructuras y usos auxiliares, incluyendo "servicio de transporte masivo" al sitio; por lo tanto, la construcción y operación del proyecto propuesto no entraría en conflicto con la zonificación agrícola existente

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Conversión de Tierras Agrícolas	Sin impacto	Sin impacto
Conflicto con la Zonificación de Tierras Forestales	Sin impacto	Sin impacto
Pérdida de Tierras Forestales	Sin impacto	Sin impacto
Uso Agrícola	Sin impacto	Sin impacto
Zonificación Agrícola y Ley Williamson	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

No se requiere mitigación.

Calidad del Aire

¿QUÉ SE ESTUDIÓ?

- Impactos potenciales en la calidad del aire a escala regional y local de la construcción y operación del proyecto propuesto
- Características y efectos de los contaminantes atmosféricos
- Normativas adoptadas para la gestión de la calidad del aire
- Una Evaluación de Riesgos para la Salud (HRA) que evalúe el riesgo estimado de cáncer y el índice de peligro crónico no cancerígeno asociado a la construcción del proyecto

ANÁLISIS Y CONCLUSIONES CLAVE

- El proyecto propuesto sería coherente con los planes de calidad del aire aplicables
- Las emisiones estimadas de la construcción del proyecto propuesto serían inferiores a los niveles significativos de contaminantes y emisiones
- El proyecto propuesto no expondría a los receptores sensibles a concentraciones sustanciales de contaminantes durante las operaciones, puesto que el proyecto propuesto no incluye ningún uso del suelo ni emisiones operativas que pudieran afectar materialmente a la calidad del aire del ambiente durante su funcionamiento
- El proyecto propuesto traería consigo a una reducción neta de las emisiones de contaminantes de los criterios al reducir las VMT, reduciendo así las emisiones en comparación con las condiciones existentes
- Basándose en los resultados de la HRA, el proyecto propuesto tendría un impacto menos que significativo relativo a la exposición de los receptores sensibles a concentraciones substanciales de contaminantes procedentes de los TAC.

Calidad del Aire

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Planes de Calidad del Aire	Menos que significativo	Menos que significativo
Aumento de los Contaminantes del Aire	Menos que significativo	Menos que significativo
Receptores Sensibles	Menos que significativo	Menos que significativo
Otras Emisiones	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción: Característica del proyecto que requiere que todos los equipos de construcción todo terreno que funcionen con diésel y tengan más de 50 caballos de fuerza deberán respetar las normas de emisiones de nivel 4 para motores diésel todo terreno establecidas por la Agencia de Protección Ambiental de los Estados Unidos (USEPA). No se requiere mitigación.

Operación: No se requiere mitigación.

Recursos Biológicos

¿QUÉ SE ESTUDIÓ?

- Si el proyecto afectaría a las especies con estatus especial y su hábitat
- Si el proyecto afectaría al hábitat ribereño o a los humedales protegidos
- El potencial de que el proyecto interfiera con el movimiento de la vida silvestre a lo largo de la ruta
- Si el proyecto entraría en conflicto con alguna política u ordenanza local que proteja los recursos biológicos, tal como una política u ordenanza de preservación de árboles
- Si el proyecto entraría en conflicto con los planes adoptados para la conservación del hábitat

ANÁLISIS Y CONCLUSIONES CLAVE

- El área del proyecto generalmente no alberga un hábitat para especies de estatus especial; sin embargo, el retiro de palmeras y eucaliptos maduros durante la construcción del proyecto propuesto podría traer consigo el retiro de sitios de descanso para murciélagos
- El área del proyecto no contiene hábitats ribereños, ni otras comunidades naturales sensibles o humedales protegidos; por lo tanto, no habría ningún impacto
- El área del proyecto no sirve como un corredor regional de vida silvestre; sin embargo, las actividades de construcción pueden provocar que especies de murciélagos y aves eviten las áreas de construcción activa
- El proyecto reemplazaría los árboles retirados de acuerdo con la Ordenanza de Protección de Árboles Nativos de la Ciudad, los requisitos del Departamento de Parques y Recreación de California y otros requisitos aplicables

Recursos Biológicos

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Hábitat Ribereño	Sin impacto	Sin impacto
Humedales Protegidos	Sin impacto	Sin impacto
Políticas o Planes Biológicos	Menos que significativo	Sin impacto
Interferencia en el Movimiento de las Especies	Menos que significativo con mitigación	Menos que significativo
Modificaciones del Hábitat	Menos que significativo con mitigación	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción:

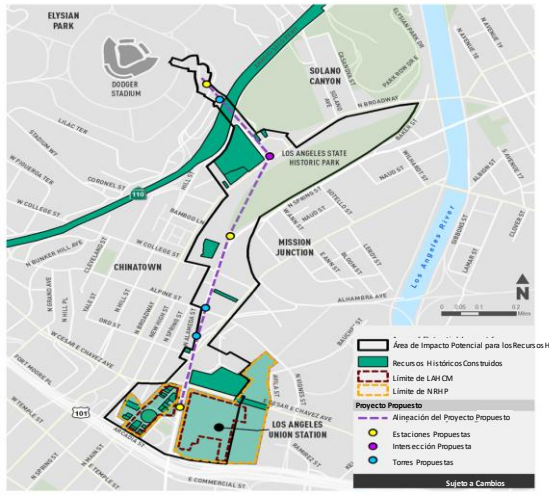
- Implementación de una característica de diseño del proyecto para establecer una Zona de Protección de Árboles para protegerlo s
- Estudios de anidación previos a la construcción y medidas para evitar y minimizar los impactos para las aves que aniden

Operación: No se requiere mitigación.

Recursos Culturales

¿QUÉ SE ESTUDIÓ?

- Impactos directos e indirectos a 29 recursos históricos construidos dentro de el Área de Impactos Potenciales, incluyendo la Terminal de Pasajeros de Los Angeles Union Station y sus terrenos, el Distrito Histórico de la Plaza de Los Ángeles, la escuela secundaria Cathedral High School y el Distrito Histórico de Arroyo Seco Parkway
- Impactos de la alteración del suelo para los recursos arqueológicos dentro del Área de Impactos Directos, incluyendo La Placita, la Zanja Madre y la estación ferroviaria Southern Pacific Railroad's River Station
- **ANÁLISIS Y CONCLUSIONES CLAVE**
- Recursos Históricos
  - La construcción de la Estación Alameda propuesta tiene el potencial de tener impactos directos e indirectos en la bodega de vinos The Winery y en el mural de *El Grito*; sin embargo, los impactos se mitigarían hasta hacerlos menos que significativos
  - Impactos relacionados con la construcción y las operaciones en todos los demás recursos históricos serían menos que significativos
- Recursos Arqueológicos
  - La construcción de la Estación Alameda, el Triángulo de Alameda, la Torre Alpine y la Estación Chinatown/State Park tienen el potencial de resultar en un cambio sustancial adverso en la importancia de un recurso arqueológico; sin embargo, los impactos serían mitigados para hacerlos menos que significativos



Área de Impactos Potenciales para los Recursos Históricos Construidos

Área de Impactos Directos en los Recursos Arqueológicos

Recursos Culturales

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Recurso Histórico	Menos que significativo con mitigación	Menos que significativo
Recurso Biológico	Menos que significativo con mitigación	Sin impacto
Alteración de Restos Humanos	Menos que significativo con mitigación	Sin impacto

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

- Recursos Históricos
  - Características del diseño del proyecto para la documentación de pre-construcción y de post-construcción y la protección de la bodega de vinos The Winery y el mural de *El Grito*, y la protección del mural de *El Grito* durante la construcción
  - Supervisión de vibraciones y restricciones de los dispositivos de compactación del suelo ajustables a la fuerza durante la construcción de la Estación Alameda propuesta
- Recursos Arqueológicos
  - Preparación e implementación de un Plan de Supervisión y Mitigación para Recursos Culturales y un Programa de Implementaciónde Trabajadores de Recursos Arqueológicos
  - Plan de Pruebas Arqueológicas Previas a la Construcción de la Estación Alameda y de la Estación Chinatown/State Park propuestas
  - Posible rediseño de los servicios del parque Los Angeles State Historic Park para evitar los recursos arqueológicos

Energía

¿QUÉ SE ESTUDIÓ?

- Generalidades de las leyes y los reglamentos federales, estatales y locales relativos a la energía
- Generalidades de la producción, el suministro y el consumo de energía en California
- Evaluación de los recursos energéticos relacionados con la construcción y la demanda anual de energía asociada a las operaciones del proyecto

ANÁLISIS Y CONCLUSIONES CLAVE

- El consumo temporal de energía asociado a la construcción del proyecto propuesto permitiría una reducción del consumo de energía a largo plazo asociado a las operaciones del proyecto propuesto
- El uso principal de electricidad asociado provendría de recursos renovables a través del Programa Green Power del LADWP
- El proyecto propuesto reduciría las VMT y aumentaría el número de personas que utilizan el transporte público, lo que resultaría en una disminución del uso de combustibles fósiles de los vehículos de pasajeros

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Consumo Innecesario, Ineficaz o Derrochador	Menos que significativo	Menos que significativo
Planes Energéticos Estatales o Locales	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

No se requiere mitigación.

Geología y Suelos

QUÉ SE ESTUDIÓ

- Si el proyecto sería susceptible a riesgos sísmicos, como fuertes sacudidas del suelo, fallas, licuefacción o deslizamientos de tierra
- Si el proyecto estaría ubicado en una unidad geológica o suelo inestable, lo que potencialmente daría lugar a un deslizamiento de tierra, expansión lateral, hundimiento, licuefacción o colapso dentro o fuera del sitio.
- Si la ruta del proyecto incluiría suelos expansivos que podrían crear un riesgo sustancial directo o indirecto para la vida o la propiedad
- El potencial de que el proyecto destruiría, directa o indirectamente, un recurso o recurso paleontológico único o una característica geológica única

ANÁLISIS Y CONCLUSIONES CLAVE

- Si bien el área del proyecto se encuentra en una región sísmica activa del sur de California, con el cumplimiento de las normas y los códigos existentes y la implementación de medidas de mitigación, los impactos relacionados con fuertes sacudidas sísmicas del suelo, fallas del suelo relacionadas con sismos y/o licuefacción durante la construcción del proyecto propuesto se reducirían a menos que significativos
- El Plan de Operaciones de Emergencia del proyecto incluiría protocolos de respuesta a emergencias y establecería que en caso de un terremoto de gran magnitud, el sistema sería evacuado y apagado por completo, y no se realizarían operaciones
- Con el cumplimiento de las normas y los códigos existentes y la aplicación de medidas de mitigación, los impactos relacionados con algún hundimiento, expansión lateral, licuefacción o colapso durante la nivelación y la construcción de los componentes del proyecto, serían menos que significativos
- Con el cumplimiento de los códigos y normas existentes y la aplicación de medidas de mitigación, los impactos relacionados con la corrosión del suelo durante la construcción serían menos que significativos
- En la parte norte del proyecto propuesto, cerca de la aproximación a la Estación Dodger Stadium, existe el potencial de encontrar recursos paleontológicos; sin embargo, los impactos serían mitigados para hacerlos menos que significativos

Geología y Suelos

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	**Operaciones**
Efectos Adversos: Terremotos, Sacudidas Sísmicas del Terreno, Licuefacción o Deslizamientos de Tierra	Menos que significativo con mitigación	Menos que significativo
Sistemas de Aguas Residuales de Apoyo	Sin impacto	Sin impacto
Destrucción de Características Paleontológicas o Geológicas Únicas	Menos que significativo con mitigación	Sin impacto
Erosión del Suelo/Pérdida de la Capa Superior	Menos que significativo	Menos que significativo
Unidad Geológica o Suelo Inestable	Menos que significativo con mitigación	Menos que significativo
Suelo Expansivo	Menos que significativo con mitigación	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción:

- Preparación e Implementación de un Informe Geotécnico Final Específico para el Emplazamiento
- Preparación de un Plan de Supervisión y Mitigación de los Recursos Paleontológicos y cumplimiento del mismo

Operación: No se requiere mitigación

Emisiones de Gases de Efecto Invernadero (GEI)

¿QUÉ SE ESTUDIÓ?

- Leyes y Reglamentos Federales, Estatales y Locales Pertinentes
- Generalidades de la Ciencia sobre los GEI
- Metodología utilizada para evaluar las emisiones de GEI relacionadas con el proyecto propuesto

ANÁLISIS Y CONCLUSIONES CLAVE

- El proyecto propuesto no traería consigo una contribución incremental de emisiones de GEI en comparación con las condiciones existentes, y reduciría las emisiones de GEI en comparación con las condiciones existentes

Las emisiones a lo largo de la vida del proyecto supondrían una reducción de 166,653 toneladas métricas de GEI.

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	**Operaciones**
Generación de GEI	Menos que significativo	Menos que significativo
Políticas o Planes de Reducción de GEI	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

No se requiere mitigación.

Peligros y Materiales Peligrosos

¿QUÉ SE ESTUDIÓ?

- Se evaluaron las actividades del proyecto para determinar su impacto potencial en la generación de condiciones peligrosas para el público o el medio ambiente durante la construcción y las operaciones
- A continuación se analizaron los posibles impactos ocasionados por los riesgos y materiales peligrosos en función de los criterios de importancia aplicables

ANÁLISIS Y CONCLUSIONES CLAVE

- Si bien el proyecto propuesto utilizaría, transportaría y eliminaría cantidades limitadas de sustancias peligrosas durante la construcción, el proyecto propuesto cumpliría con los requisitos federales, estatales y locales de salud y seguridad; y cumpliría con todos los códigos, normas y reglamentos durante la operación
- El proyecto propuesto cumpliría con lo dispuesto por la OSHA, Cal/OSHA, y la División 71 del Código Municipal de Los Ángeles, y aplicaría un Plan de Manejo de Suelos y Aguas Subterráneas, que limitaría el potencial de derrames de materiales y residuos peligrosos
- El proyecto propuesto llevaría a cabo la reducción de materiales peligrosos a través de un contratista de reducción con licencia antes de la demolición, lo que garantizaría que las escuelas no se vieran afectadas negativamente
- La construcción y operación del proyecto propuesto no interferiría con el acceso del LAPD al Helipuerto Hooper, y las operaciones del helipuerto no serían impactadas por las actividades de construcción
- Se identificaron cinco propiedades como sitios de materiales peligrosos en el área del proyecto; sin embargo, el proyecto implementaría un Plan de Manejo de Suelos y Aguas Subterráneas para reducir los impactos de estos sitios
- La construcción del proyecto propuesto no perjudicaría sustancialmente la implementación de un plan de respuesta a emergencias adoptado o un plan de evacuación de emergencias, ni interferiría físicamente con dichos planes; y la operación diaria del proyecto no afectaría las respuestas ante emergencias

Peligros y Materiales Peligrosos

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	**Operaciones**
Lugares Peligrosos	Menos que significativo con mitigación	Sin impacto
Plan de Uso del Suelo del Aeropuerto	Sin impacto	Sin impacto
Peligro para el Público o el Medio Ambiente	Menos que significativo con mitigación	Menos que significativo
Planes de Emergencia y Evacuación	Menos que significativo	Menos que significativo
Peligros cerca de Escuelas	Menos que significativo con mitigación	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción:

- Preparación e implementación de un Plan de Gestión de Suelos y Aguas Subterráneas para especificar métodos de manejo y eliminación en caso de presentarse una situación de aguas subterráneas contaminadas, suelos contaminados o estructuras contaminadas durante la construcción del proyecto
- Reducción de Materiales Peligrosos para la demolición del edificio existente en 1201 North Broadway

Operación: No se requiere mitigación.

Hidrología y Calidad del Agua

¿QUÉ SE ESTUDIÓ?

- El potencial de que el proyecto propuesto infrinja las normas de calidad del agua, disminuya los suministros de agua subterránea o provoque una erosión o sedimentación substancial dentro o fuera del sitio
- El potencial de que el proyecto propuesto aumente sustancialmente el índice o la cantidad de escorrentía superficial de manera que se produzcan inundaciones dentro o fuera del sitio
- El potencial de que el proyecto propuesto cree o contribuya a una escorrentía que supere la capacidad de los sistemas de drenaje de aguas pluviales existentes o previstos o que impida o redirija flujos
- El potencial de que el proyecto propuesto suponga un riesgo de liberación de contaminantes durante una inundación del proyecto en zonas con riesgo de inundación, tsunami u oscilación del agua
- El potencial de que el proyecto propuesto obstaculice o entre en conflicto con la aplicación de un plan de control de la calidad del agua o un plan de gestión sostenible de las aguas subterráneas

ANÁLISIS Y CONCLUSIONES CLAVE

- El proyecto propuesto cumpliría con todos los reglamentos y leyes de protección de la calidad del agua aplicables de los organismos federales, estatales, regionales y locales, el control de la calidad del agua y/o los planes de gestión sostenible de las aguas subterráneas
- El proyecto propuesto incorporaría las mejores prácticas de gestión y aplicaría un plan de desarrollo de bajo impacto para reducir los impactos sobre la hidrología y la calidad del agua
- El proyecto propuesto no es susceptible a la liberación de contaminantes debido a una inundación del proyecto en zonas con riesgo de inundación, tsunami u oscilación del agua

Hidrología y Calidad del Agua

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Reducción del Suministro de Agua del Suelo	Menos que significativo	Sin impacto
Planes o Normas de Calidad del Agua	Menos que significativo	Menos que significativo
Alteración del Drenaje	Menos que significativo	Menos que significativo
Inundación, Tsunami u Oscilación de Agua	Menos que significativo	Menos que significativo
Conflicto con los Planes	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción y Operaciones El proyecto propuesto cumpliría con los reglamentos y leyes federales, estatales, regionales y locales aplicables, incluyendo el cumplimiento de los permisos de aguas pluviales, permisos de aguas residuales y otros reglamentos sobre calidad del agua aplicables. No se requiere mitigación.

Planificación y Uso de la Tierra

¿QUÉ SE ESTUDIÓ?

- El potencial de que el proyecto dividiera físicamente a alguna comunidad establecida
- El potencial de que el proyecto entrara en conflicto con algún plan, política o reglamento de uso del suelo adoptado con el fin de evitar o mitigar algún efecto ambiental

ANÁLISIS Y CONCLUSIONES CLAVE

- Aunque los cierres temporales durante la construcción interrumpirían el acceso vehicular, peatonal y en bicicleta dentro y entre las comunidades, habría una variedad de opciones disponibles para las conexiones y el acceso dentro del área del proyecto
  - Las comunidades seguirán siendo accesibles desde otras calles circundantes, y se proporcionarán desvíos peatonales, lo que evitará que los cierres dividan físicamente a las comunidades establecidas.
- El proyecto propuesto mejoraría la conectividad de la comunidad al proporcionar acceso y mejoras al transporte público y a los peatones en los tramos de primera/última milla, incluyendo un centro de movilidad y apoyo al futuro puente para bicicletas y peatones de Los Angeles State Historic Park.
- El proyecto propuesto es coherente con los reglamentos, políticas, metas y/u objetivos de los planes, códigos y ordenanzas locales
- El organismo de parques estatales State Parks considera que hay una inconsistencia entre el proyecto propuesto y el Plan General de Los Angeles State Historic Park, y por ende considera un impacto potencialmente significativo porque el Plan General de Los Angeles State Historic Park no identifica al transporte como un uso del parque
  - Con la implementación de la Medida de Mitigación LUP-A, que requeriría que el proyecto propuesto obtuviera una Enmienda al Plan General de LASHP, los impactos serían menos que significativos

Planificación y Uso de la Tierra

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
División Física de la Comunidad	Menos que significativo	Sin impacto
Conflicto con Políticas o Planes de Uso de la Tierra	Menos que significativo con mitigación	Menos que significativo con mitigación

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción (División Física de la Comunidad): Si bien los impactos de la construcción son menos que significativos, la implementación del Plan de Gestión del Tráfico de la Construcción incluiría información sobre el cierre de calles, planes de desvío, rutas de transporte y un plan de preparación

Construcción y Operaciones El proyecto propuesto obtendría una Enmienda al Plan General de Los Angeles State Historic Park para permitir los usos de traslado dentro del Plan General de Los Angeles State Historic Park

Recursos Minerales

¿QUÉ SE ESTUDIÓ?

- Si la construcción del proyecto provocaría la pérdida de disponibilidad de recursos minerales conocidos que serían de valor para la región y los residentes del estado
- Si el proyecto provocaría la pérdida de disponibilidad de un sitio de recuperación de recursos minerales de importancia local delineado en un plan general local, plan específico u otro plan de uso del suelo

ANÁLISIS Y CONCLUSIONES CLAVE

- El proyecto no está ubicado en un área de recursos minerales conocidos
- Gran parte del área dentro de la Ciudad de Los Ángeles fue desarrollada con estructuras antes de las clasificaciones de MRZ y no está disponible para la extracción
- La ruta del proyecto está ubicada en un área urbanizada de la Ciudad de Los Ángeles, y la extracción de dichos materiales en un entorno urbanizado no es práctica

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Pérdida de Recursos Minerales Disponibles	Sin impacto	Sin impacto

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

No se requiere mitigación.

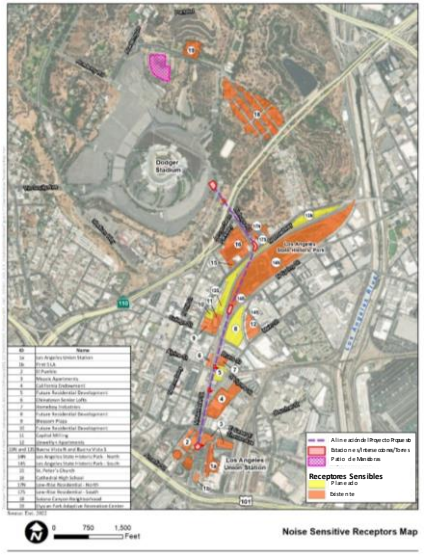
Ruido

¿QUÉ SE ESTUDIÓ?

- Sondeo del ruido en las condiciones existentes con mediciones realizadas en lugares representativos de los receptores sensibles al ruido a lo largo de la ruta del proyecto propuesto, incluyendo lugares de desarrollos residenciales existentes y futuros, escuelas, parques y otras áreas con uso frecuente de humanos al aire libre
- Los impactos potenciales del ruido de la construcción se evaluaron calculando los niveles de ruido de la construcción relacionados con el proyecto
- Los impactos del ruido de las operaciones se evaluaron identificando los niveles de ruido que serían generados por las fuentes de ruido de las operaciones del proyecto, incluyendo las estaciones, la intersección, las torres, las cabinas que pasan a lo largo de las poleas de soporte en las torres, las cabinas y los pasajeros en las estaciones que esperan para abordar el sistema
- Análisis del impacto de las vibraciones transmitidas por el suelo en lo que respecta a daños a los edificios y a molestias a las personas

ANÁLISIS Y CONCLUSIONES CLAVE

- Los impactos significativos e inevitables de la construcción del proyecto propuesto serían una función del ruido generado por el equipo de construcción, la ubicación del equipo, el momento y la duración de las actividades de construcción que generan el ruido, y la distancia en relación con los receptores sensibles al ruido
- El ruido generado por el tráfico relacionado con la construcción fuera del sitio de obras sería menos que significativo
- El ruido generado por las operaciones del proyecto, en el peor de los casos, sería menos que significativo
- La vibración generada por las actividades de construcción en el sitio tendría impactos significativos e inevitables en cuanto a molestias a las personas; los impactos potenciales de daños a edificios serían menos que significativos con mitigación
- La vibración generada por las operaciones del proyecto sería menos que significativa



Mapa de Receptores Sensibles al Ruido

Mapa de Receptores Sensibles a la Vibración

Ruido

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Exposición al Público cerca del Aeropuerto	Sin impacto	Sin impacto
Generación o aumento de los niveles de ruido ambiental	Significativo e Inevitable	Menos que significativo
Generación de Niveles Excesivos de Vibración o Ruido	Significativo e Inevitable	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Ruido de las Operaciones: Características del diseño de la cabina relacionadas con la reducción del ruido entre el interior y el exterior y los niveles sonoros de las unidades de calefacción, ventilación y aire acondicionado (HVAC). No se requiere mitigación.

Ruido de la Construcción: Implementación de un plan de gestión del ruido de la construcción, que incluya:

- Barreras contra el ruido
- Mantenimiento del equipo
- Alcance a la comunidad, incluyendo un Coordinador de Perturbaciones Acústicas

Vibración de la Construcción:

- Colocación de equipos de supervisión de vibraciones para Avila Adobe (adición de los años 1970), el mural de *El Grito* y la bodega de vinos The Winery
- Restricciones al uso de dispositivos de compactación del suelo ajustables a la fuerza

Población y Vivienda

¿QUÉ SE ESTUDIÓ?

- El potencial de que el proyecto propuesto provoque un crecimiento sustancial de la población, o acelere un crecimiento que supere los niveles proyectados o planificados
- Si la implementación del proyecto propuesto desplazaría un número substancial de personas o viviendas existentes

ANÁLISIS Y CONCLUSIONES CLAVE

- Como conexión de traslado de primera/última milla al Dodger Stadium, el proyecto propuesto no induciría un crecimiento substancial de la población, ni directa ni indirectamente
  - Está diseñado para satisfacer las necesidades de transporte de la zona y mejorar la eficiencia de la red de transporte existente
  - Apoya los objetivos de la Ciudad en cuanto al Elemento de Vivienda del Plan General y los Planes Comunitarios de proporcionar transporte público cerca del desarrollo residencial ya planificado
- El proyecto propuesto no desplazará a personas o viviendas existentes

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	**Operaciones**
Inducir un Crecimiento Demográfico No Planificado	Menos que significativo	Menos que significativo
Desplazamiento de personas o viviendas	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

No se requiere mitigación.

Servicios Públicos

¿QUÉ SE ESTUDIÓ?

- Si el proyecto propuesto traería consigo impactos físicos adversos asociados con la provisión de instalaciones públicas nuevas o alteradas físicamente, cuya construcción podría causar impactos ambientales significativos, incluyendo ~~en~~ la protección de los bomberos y la policía, las escuelas y otras instalaciones públicas como bibliotecas, centros de ancianos, refugios para personas sin hogar y guarderías
- Si el proyecto afectaría a los tiempos de respuesta de los servicios de emergencia

ANÁLISIS Y CONCLUSIONES CLAVE

- Si bien las actividades de construcción asociadas con el proyecto propuesto crearían un aumento temporal en la demanda de servicios de emergencia, la implementación de medidas de mitigación y características de diseño del proyecto, y el cumplimiento de las regulaciones estatales y locales aplicables, incluyendo la coordinación con el LAFD y el LAPD antes de la construcción del proyecto, asegurarían que la construcción del proyecto no crearía una demanda adicional de servicios de emergencia que resultaría en la necesidad de añadir nuevas instalaciones públicas o alterar físicamente las existentes
- LAFD y LAPD tendrían acceso adecuado durante la construcción
- Si bien el proyecto propuesto crearía una mayor demanda de servicios de emergencia durante las operaciones del proyecto, con el cumplimiento de los reglamentos aplicables, la coordinación con el LAFD y el LAPD y la implementación de un Plan de Operaciones de Emergencia, las operaciones del proyecto propuesto no crearían una demanda adicional de servicios de emergencia que resultara en la necesidad de agregar instalaciones públicas nuevas o alterarlas físicamente
- El proyecto propuesto no incluye viviendas, lo que podría aumentar la demanda de servicios escolares u otras instalaciones públicas

Servicios Públicos

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Necesidad de servicios de bomberos, policía, escuelas u otros servicios públicos que sean nuevos o modificados	Menos que significativo con mitigación	Menos que significativo
Tasas de Servicio y Tiempos de Respuesta	Menos que significativo con mitigación	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción: El Plan de Gestión del Tráfico de la Construcción reduciría los impactos relacionados con el acceso en caso de emergencias

Operación: El proyecto propuesto cumpliría con las regulaciones aplicables, implementaría elementos de seguridad como personal y cámaras, e implementaría un Plan de Operaciones de Emergencia. No se requiere mitigación.

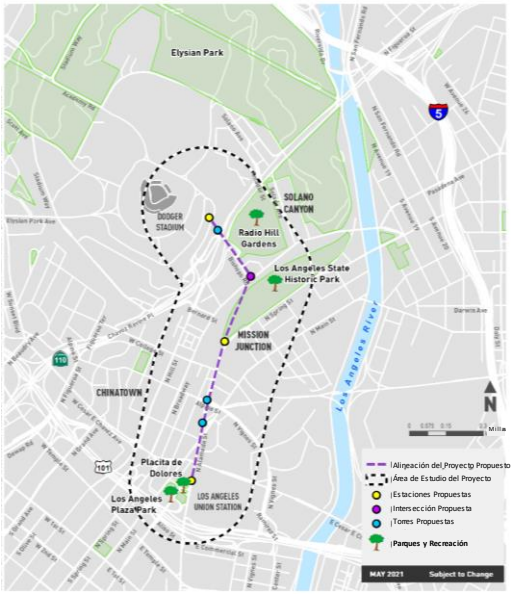
Parques y Recreación

¿QUÉ SE ESTUDIÓ?

- El potencial de afectar a los parques y las instalaciones recreativas durante la construcción y las operaciones, incluyendo los parques de Los Angeles State Historic Park, Elysian Park, Los Angeles Plaza Park y la Placita de Dolores

ANÁLISIS Y CONCLUSIONES CLAVE

- El proyecto propuesto no aumentaría la demanda de parques, ni generaría nuevos residentes permanentes que traerían consigo un aumento del uso de los parques e instalaciones recreativas existentes, de tal manera que se produjera o acelerara un deterioro sustancial de los parques o que resultara en la provisión de nuevas instalaciones de parques, o en la necesidad de instalaciones de parques nuevas o alteradas físicamente
- El proyecto propuesto mejoraría la movilidad y la accesibilidad de la región proporcionando un transporte rápido aéreo de gran capacidad que conectaría al sistema de transporte regional en la estación LAUS con Los Angeles State Historic Park y Elysian Park



CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Deterioro de una Instalación Pública	Menos que significativo	Menos que significativo
Ampliación de las Instalaciones Recreativas	Menos que significativo	Menos que significativo
Tasas de Servicio y Objetivos de Rendimiento	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?
No se requiere mitigación.

Transporte

¿QUÉ SE ESTUDIÓ?

- Se utilizaron las Directrices de la CEQA y los criterios de selección establecidos por el LADOT, la metodología de análisis y los criterios del umbral a través de las directrices TAG de la Ciudad
- El análisis de VMT para el proyecto propuesto empleó una variedad de datos, metodologías y modelos para estimar el número de pasajeros del proyecto, la reducción de viajes de vehículos, la distancia de los viajes de vehículos y, en última instancia, el beneficio de VMT del proyecto propuesto
- Estimaciones del número de pasajeros para los asistentes a los partidos y eventos del Dodger Stadium, empleados, turistas, transeúntes del vecindario y visitantes y asistentes a eventos de Los Angeles State Historic Park
- Ubicación de las estaciones, las torres y la intersección del proyecto propuesto y si estos componentes aumentan sustancialmente los peligros debido a una característica de diseño geométrico
- Los planes conceptuales de desvío de tráfico del proyecto propuesto y la ruta de transporte

ANÁLISIS Y CONCLUSIONES CLAVE

- El proyecto sería consistente con los PPOPs – programas, planes, ordenanzas o políticas – que aborden el sistema de circulación, incluyendo las instalaciones de transporte público, carreteras, bicicletas y peatones
- El proyecto propuesto no introduciría ninguna condición física insegura en la implementación de medidas de mitigación para la Torre Alameda y la Estación Chinatown/State Park
- Con la implementación de las medidas de mitigación, el acceso de emergencia se mantendría durante la construcción del proyecto propuesto

La reducción de VMT a lo largo de la vida del Proyecto sería de 129,629,500 VMT.

Transporte

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Millas Viajadas en Vehículos (VMT)	Sin impacto	Sin impacto
Conflicto con el Plan o las Políticas	Menos que significativo	Menos que significativo
Riesgos que Aumentan a Través del Diseño	Menos que significativo con mitigación	Menos que significativo con mitigación

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción:

- Implementación de un Plan de Gestión del Tráfico de la Construcción detallado y aprobado por la Ciudad, que incluya información sobre el cierre de calles, planes de desvío, rutas de transporte y un plan de preparación
- Implementación de un plan de ruta temporal en caso de desastre aprobado por la Ciudad, que incluiría información sobre el cierre de calles y planes de desvío a fin de facilitar el movimiento de vehículos de emergencia a través del área de estudio y minimizar los efectos en la respuesta de emergencia durante un desastre

Construcción y Operaciones

- Mejoras en la visibilidad – como tratamientos de alta visibilidad en los pasos de peatones, señales avanzadas de advertencia de cruces, luces intermitentes, iluminación mejorada y controles de tráfico nuevos o mejorados – en la Torre Alameda propuesta y en la Estación Chinatown/State Park

Recursos Culturales Tribales

¿QUÉ SE ESTUDIÓ?

- Cambios adversos sustanciales en recursos culturales tribales significativos
- Se ha consultado a ocho tribus de nativos americanos de California en virtud del Proyecto de Ley 52 de la Asamblea

ANÁLISIS Y CONCLUSIONES CLAVE

- Existen recursos en el área y requieren la implementación de mitigación, incluyendo pruebas arqueológicas y recuperación de datos
- Durante la construcción hay un potencial de que se encuentren recursos que no hayan sido identificados previamente; si el Supervisor Nativo Americano identifica recursos potenciales, dicho Supervisor puede detener temporalmente la construcción

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Cambio a los Recursos Culturales Tribales	Menos que significativo con mitigación	Sin impacto

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción:

- Implementar el Programa de Supervisión y Mitigación de Recursos Culturales y el Plan de Pruebas Arqueológicas de la Explanada de LAUS
- Mantener un Supervisor Nativo Americano para supervisar las actividades de construcción que perturban el suelo en el sitio de la Estación Alameda

Operación: No se requiere mitigación.

Sistemas de Servicios y Servicios Públicos

¿QUÉ SE ESTUDIÓ?

- La reubicación o construcción de instalaciones nuevas o ampliadas de agua, tratamiento de aguas residuales o drenaje de aguas pluviales, energía eléctrica, gas natural o telecomunicaciones
- El efecto del proyecto en el suministro de agua
- Si el proyecto requerirá la ampliación de la capacidad de tratamiento de aguas residuales
- Si los sitios para depósito de basura del área tendrían capacidad suficiente para los residuos sólidos generados por el proyecto

ANÁLISIS Y CONCLUSIONES CLAVE

- La construcción del proyecto propuesto no requeriría la construcción de servicios públicos nuevos o ampliados
- La construcción del proyecto propuesto requeriría la reubicación de servicios públicos existentes, que se coordinaría con los proveedores de los servicios públicos y se llevaría a cabo de conformidad con los códigos y reglamentos estatales y locales aplicables
    - Para minimizar la interferencia potencial con los servicios públicos existentes asociada con la reubicación de servicios públicos durante la construcción, el proyecto propuesto implementaría un Plan de Reubicación de Servicios Públicos
- El funcionamiento del proyecto propuesto requerirá conexiones a los sistemas de servicios públicos existentes
- El uso principal de electricidad provendría de recursos renovables, y el suministro de energía existente debería ser suficiente para las operaciones del proyecto
- La construcción y las operaciones del proyecto propuesto tendrían suficiente suministro de agua
- La construcción y las operaciones generarían posibles aguas residuales, las cuales se tratarían de conformidad con las normativas
- No se generarían residuos sólidos que superen los niveles de las normas estatales o locales, o que superen la capacidad de la infraestructura local, o que perjudicarían de alguna otra manera el cumplimiento de las metas de reducción de residuos sólidos

Sistemas de Servicios y Servicios Públicos

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Suministro de Agua Suficiente	Menos que significativo	Menos que significativo
Demanda y Capacidad de los Sistemas de Aguas Residuales	Menos que significativo	Menos que significativo
Objetivos en Materia de Residuos Sólidos	Menos que significativo con mitigación	Menos que significativo
Reubicación o Construcción de Servicios Públicos	Menos que significativo con mitigación	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción:

- Desarrollo e implementación de un Plan de Reubicación de Servicios Públicos en coordinación con las compañías de servicios públicos para minimizar los impactos a los servicios durante la construcción del proyecto
- Elaboración de un Plan de Gestión de Suelos y Aguas Subterráneas.

Operación: No se requiere mitigación.

Incendios Forestales

¿QUÉ SE ESTUDIÓ?

- Si el proyecto propuesto resultaría en impactos potenciales significativos relacionados con incendios forestales si se ubicara en Áreas de Responsabilidad Estatal (SRAs) o tierras clasificadas como Zonas de Muy Alto Riesgo de Incendio (VHFHSZ), o cerca de ellas
- Potencial de comportamiento de incendios forestales dentro del área del proyecto en función de la topografía, el clima y los combustibles
- Afectación substancial de la aplicación de un plan de respuesta a emergencias o un plan de evacuación de emergencias adoptado
- Si el proyecto propuesto requeriría la instalación o el mantenimiento de infraestructura asociada que podría exacerbar el riesgo de incendio o tener impactos temporales o continuos para el medio ambiente
- Si el proyecto expondría a las personas o estructuras a riesgos significativos, incluyendo inundaciones o deslizamientos de tierra, como resultado de una escorrentía, la inestabilidad de las laderas después de un incendio, o cambios en el drenado
- Si el proyecto expondría a las personas o estructuras, de manera directa o indirecta, a un riesgo significativo de pérdida, lesión o muerte que involucre incendios forestales

ANÁLISIS Y CONCLUSIONES CLAVE

- La porción de la ruta propuesta que contiene la intersección de Broadway Junction, la Torre del Estadio y la Estación Dodger Stadium están dentro de la VHFHSZ
- La construcción y operación del proyecto propuesto no inhibiría el acceso a las rutas de desastre identificadas y no perjudicaría sustancialmente la implementación de un plan de respuesta a emergencias o de evacuación
- El proyecto cumpliría con los códigos y las normativas aplicables y las mejores prácticas de la construcción, y no exacerbaría los riesgos de incendios forestales
- La aplicación de las características de diseño del proyecto reduciría aún más estos riesgos

Incendios Forestales

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Dificultar los Planes de Emergencia o Evacuación	Menos que significativo	Menos que significativo
Exacerbar los Riesgos de Incendios Forestales	Menos que significativo	Menos que significativo
Instalar/Mantener la Infraestructura Asociada	Menos que significativo	Menos que significativo
Exponer a Personas o Estructuras a Riesgos de Incendios Forestales	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción: Implementación de las características de diseño del proyecto, incluyendo el Plan de Protección contra Incendios y una zona de modificación de combustible que rodea el sitio de construcción de la Torre del Estadio. No se requiere mitigación.

Operación: Implementación de características del diseño del proyecto durante las operaciones de la intersección de Broadway Junction, la Torre del Estadio y la Estación Dodger Stadium relacionadas con la supervisión de la seguridad por parte del personal y las cámaras, y la identificación y notificación de riesgos de seguridad por incendios. No se requiere mitigación.

Alternativas

¿QUÉ SE ESTUDIÓ?

- Se seleccionó una gama razonable de alternativas para explorar los medios potenciales para mitigar o evitar los impactos ambientales significativos asociados con la implementación del proyecto propuesto, sin dejar de lograr los objetivos principales del proyecto
  - Alternativa Sin Proyecto – Sin Desarrollo Nuevo
  - Alternativa de la Ruta de Spring Street – Alternativa de Ruta al Proyecto Propuesto
  - Alternativa de Gestión de Sistemas de Transporte – Union Station Dodger Stadium Express Mejorado
- Se tuvieron en consideración varias alternativas pero se descartaron del análisis detallado por no cumplir con la mayoría de los objetivos básicos del proyecto, por ser inviables o por no poder evitar impactos ambientales significativos, incluyendo la Alternativa de Ruta de la Estación Broadway, la Alternativa de Ruta de la Estación de la Línea L (Dorada) del Metro y la Estación de College Street, y las Alternativas de Ruta Directa.

ANÁLISIS Y CONCLUSIONES CLAVE

- La Alternativa Sin Proyecto no mejoraría el acceso al transporte ni proporcionaría conexiones entre comunidades. Además no se reducirían las VMT ni la congestión vehicular, y no se reducirían las emisiones de GEI, ni mejoraría la calidad del aire.
- La Alternativa de Ruta de Spring Street proveería una conexión directa de transporte y mejoraría la conectividad de las comunidades circundantes. Esta alternativa requeriría una mayor huella y no reduciría los impactos ambientales significativos.
- La Alternativa TSE no proporcionaría una conexión de transporte directa, ni mejoraría la conectividad de las comunidades circundantes y no proporcionaría la misma reducción de VMT ni emisiones de GEI, y por ende, tampoco mejoras en la calidad del aire.

Alternativas

CONCLUSIONES DE LAS ALTERNATIVAS

Alternativas	Resultado	
	Capacidad para Cumplir con los Objetivos del Proyecto	**Capacidad de Reducir los Impactos Significativos**
Alternativa Sin Proyecto	No Cumpliría con los Objetivos del Proyecto	Menos Impactos que el Proyecto
Alternativa de Ruta de la calle Spring Street	Cumpliría con Todos Los Objetivos del Proyecto	Impactos Similares a los del Proyecto
Alternativa de Gestión de Sistemas de Transporte	No Cumpliría la Mayoría de los Objetivos del Proyecto	Menos Impactos que el Proyecto

¿CUÁL ES LA ALTERNATIVA AMBIENTALMENTE SUPERIOR?

La Alternativa TSM se consideraría la alternativa superior desde el punto de vista medioambiental porque no daría lugar a una determinación de la CEQA de un impacto significativo e inevitable y tendría el menor número de impactos medioambientales en general. Sin embargo, el impacto de la alternativa TSM sería mayor en cuanto a la calidad del aire, la energía, las emisiones de gases de efecto invernadero, la hidrología y la calidad del agua, y el transporte y el tráfico. Además, la Alternativa de TSM no permitiría que se alcancen total o parcialmente la mayoría de los Objetivos del Proyecto.

Otras Evaluaciones Adicionales en el EIR

LOS ANGELES STATE HISTORIC PARK

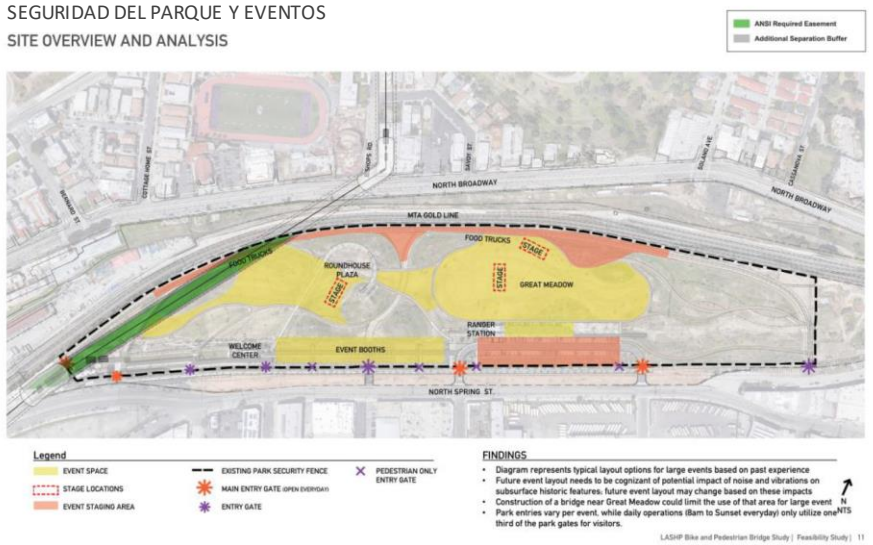
Cometas: Debido a la ubicación de la ruta del proyecto propuesto – que atraviesa el borde poniente del parque adyacente a la Línea L del Metro y al camino peatonal – el proyecto propuesto no reduce significativamente el área segura para volar cometas dentro del parque

Eventos Especiales: La ubicación de la ruta del proyecto propuesto cruza sobre una pequeña porción del parque que no se usa típicamente para pantallas ni escenarios, y los eventos aún pueden celebrarse bajo la mayor parte de la ruta del proyecto propuesto, por lo que el proyecto propuesto no reduce significativamente el área de espacio para eventos dentro del parque

UBICACIÓN DE LA ESTACIÓN ALAMEDA Y DE LA ESTACIÓN CHINATOWN/STATE PARK

HELIPUERTOS

- La ruta del proyecto propuesto no se encuentra dentro de un área cubierta por un plan de uso de suelo del aeropuerto, ni dentro de 2 millas (3.2 km) de distancia de un aeropuerto público
- Una evaluación del espacio aéreo de los helipuertos en las cercanías del proyecto propuesto concluyó que la construcción y la operación del proyecto propuesto estarán fuera del espacio aéreo asociado con los helipuertos existentes en las cercanías del proyecto propuesto, por lo que no hay ningún potencial de peligros para la navegación aérea y, por lo tanto, ningún impacto a la actividad aeronáutica, incluyendo a los helipuertos en las cercanías del proyecto propuesto



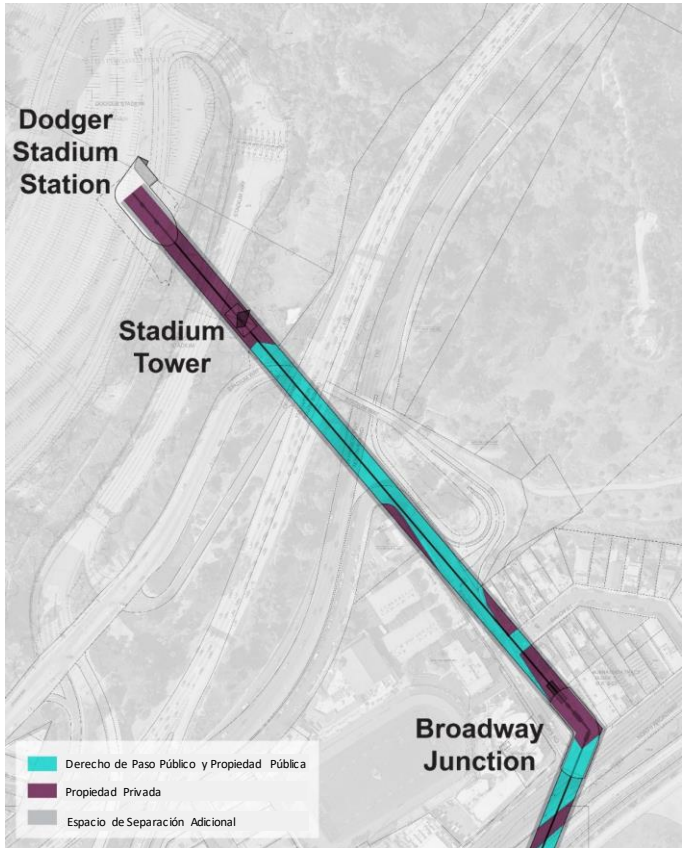
Ubicaciones Típicas para Pantallas y Escenarios de Eventos en Los Angeles State Historic Park con la Ruta del Proyecto Propuesto

Opción de Diseño A

CAMBIO EN LA INTERSECCIÓN DE BROADWAY JUNCTION PARA EVITAR LA UBICACIÓN DE 451 E. SAVOY

- Incluye un cambio en la ruta general del proyecto entre la intersección de Broadway Junction y la Estación Dodger Stadium para evitar los requisitos de derechos aéreos sobre 451 E. Savoy Street
- El cambio daría lugar a que la ruta cruzara sobre una pequeña porción de la secundaria Cathedral High School adyacente a Bishops Road
- Incluye cambios en los componentes del proyecto en Broadway Junction, la Torre del Estadio y la Estación Dodger Stadium
  - Resultaría en la reubicación de servicios públicos y tiempo adicional de construcción, tanto en la Torre del Estadio como en la Estación Dodger Stadium
  - Requeriría una caminata más larga de los pasajeros del proyecto propuesto para trasladarse entre la Estación Dodger Stadium y el estadio

Ruta del Proyecto ***Propuesto***

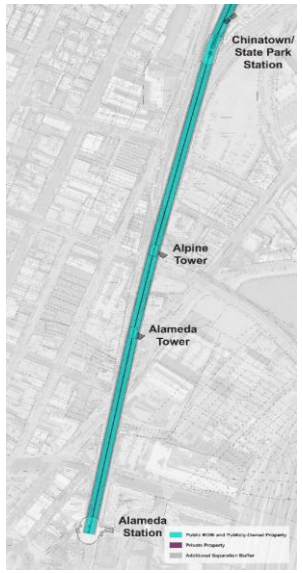


Opción de Diseño A

Opción de Diseño B

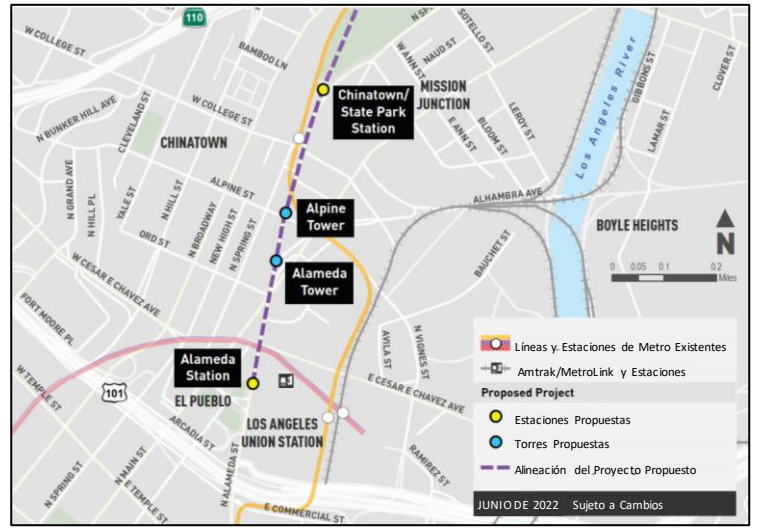
TORRE ÚNICA A LO LARGO DE ALAMEDA STREET

- En respuesta a los comentarios de las partes interesadas, que pidieron al Patrocinador del Proyecto que evalúe la posibilidad de reducir el número de torres a lo largo de Alameda Street de dos a una
- Consiste en un aumento de la altura total de 50 pies (15 m) en la Torre Alameda y la eliminación de la Torre Alpine del proyecto propuesto entre la Estación Alameda y la Estación Chinatown/State Park
- El aumento de la altura de la torre coincide con actividades de construcción adicionales
- Daría lugar a posibles limitaciones técnicas
- Daría lugar a la necesidad de requisitos adicionales de derechos aéreos privados



Ruta del Proyecto Propuesto

Opción de Diseño B



Ruta del Proyecto Propuesto

Opción de Diseño B

Opción de Diseño C

ESTACIÓN CHINATOWN/STATE PARK CON MAYOR ALTURA

- En respuesta a los comentarios de las partes interesadas, que pidieron al Patrocinador del Proyecto que considerara una estación de Chinatown/State Park más alta
- La Opción de Diseño C consiste en un aumento de la altura total de 35 pies (11 m) en la Estación Chinatown/State Park.
- El aumento de la altura coincide con actividades de construcción adicionales
- Tiene el potencial de aminorar la experiencia de los pasajeros debido a la altura, que también hace que el andén de abordaje esté elevado, lo que requiere una circulación vertical adicional para acceder y ascender al andén

Ruta del Proyecto Propuesto

Opción de Diseño C

Opción de Uso D

ESTACIÓN CHINATOWN/STATE PARK COMO INTERSECCIÓN SIN PASAJEROS

- En respuesta a los comentarios de las partes interesadas, que pidieron al Patrocinador del Proyecto que considerara la posibilidad de que no hubiera acceso a los pasajeros en la estación Chinatown/State Park, para aumentar la altura de las cabinas que entrarían y saldrían de la estación a lo largo de Spring Street
- La Opción de Uso D incluye substituir la intersección que no sería para pasajeros por la Estación Chinatown/State Park propuesta
- Tendría la misma ubicación, altura, anchura, longitud y acabado arquitectónico que el proyecto propuesto
- No mejoraría la conectividad de la comunidad con Los Angeles State Historic Park, Chinatown y el barrio de Mission Junction

Opción de Uso y Diseño E

PUENTE PEATONAL DEL LOS ANGELES STATE HISTORIC PARK

- Los Angeles State Historic Park ha propuesto un puente peatonal con acceso requerido por la ADA que se inclinaría suavemente, desde la parte central del parque hasta North Broadway
- Aunque el puente peatonal no se propone como parte del proyecto propuesto, el Borrador del EIR incluye un análisis del puente peatonal para el parque
- Como se señala en el EIR Final y Plan General del Los Angeles State Historic Park y en el Estudio del Puente para Bicicletas y Peatones; el puente proporcionaría un acceso seguro para peatones y bicicletas desde las comunidades de Chinatown y Solano Canyon al Parque

Fuente: Estudio de Factibilidad del Puente

Generalidades del Estudio de Estacionamiento

ESTUDIO DE ESTACIONAMIENTO DEL PROYECTO PROPUESTO

- Aunque la CEQA no exige un análisis del estacionamiento, se realizó un exhaustivo Estudio de Estacionamiento para el proyecto, el cual fue revisado por Metro.
- El Estudio de Estacionamiento ha estado disponible en la página web de Metro desde el 9 de septiembre de 2022

¿QUÉ SE ESTUDIÓ?

- Se espera que la mayoría de los usuarios del proyecto propuesto utilicen el transporte público para llegar al proyecto
- Hay aproximadamente 10,290 lugares en lotes y garajes públicos y en espacios en la calle a menos de ½ milla (800 m) de la Estación Alameda del proyecto propuesto y la Estación Chinatown/State Park

Generalidades del Estudio de Estacionamiento

CONCLUSIONES DEL ESTUDIO DE ESTACIONAMIENTO

Tipo de estacionamiento	Estacionamiento para un Día de Partido			
	Oferta de Estacionamiento	Vehículos Aparcados	Ocupación	Oferta Disponible
Lugares de Estacionamiento Público Disponibles Fuera de la Vía Pública	6,876	2,173	32%	4,703
Lugares en las Calles	3,417	2,017	59%	1,400
TOTAL				
Demanda de Estacionamiento con el Proyecto Propuesto (2042)	-	307 – 790		
Total de Lugares Disponibles Fuera de la Vía Pública con el Proyecto	6,876	2,963	43%	3,913

*Los conteos se realizaron el 10 de septiembre de 2021, en una noche en la que los Dodgers de Los Ángeles recibieron a los Padres de San Diego; la asistencia pagada fue de 48,403, que fue más alta que el promedio de la temporada 2019 de los Dodgers de Los Ángeles para los juegos nocturnos entre semana. En coordinación con Metro y LADOT, el Estudio de Estacionamiento aplicó un aumento del 46% a los espacios públicos disponibles fuera de la vía pública para tener en cuenta la pandemia de COVID-19.

Con la adición de la demanda potencial de estacionamiento del proyecto propuesto, hay muchos lugares de estacionamiento disponibles dentro de los alrededores del proyecto propuesto. Incluso si algunos de los estacionamientos existentes se reurbanizan, hay suficiente oferta de estacionamiento fuera de la vía pública para dar cabida a toda la demanda de estacionamiento del proyecto propuesto.

EL PROYECTO SE COMPROMETE A FOMENTAR EL USO DEL TRANSPORTE PÚBLICO

- Estableciendo asociaciones de empresa a empresa con los negocios locales para la preventa de paquetes que incluyan el consumo en los negocios locales y el estacionamiento disponible fuera de la vía pública
- Apoyar la implementación/expansión de varias estrategias de gestión, incluyendo restricciones de estacionamiento con límite de tiempo y parquímetros durante las horas de los partidos para disuadir a los pasajeros de aparcar en la comunidad y mantener espacios disponibles para los residentes y los negocios locales

Sesión de Comentarios Públicos

Sesión de Comentarios Públicos

- Propósito: Dar al público la oportunidad de hacer comentarios sobre el Borrador del EIR

¡HOY!

Conozca los análisis y conclusiones clave del Borrador del EIR y proporcione comentarios públicos verbales.

Hoy no habrá preguntas y respuestas.

Levante la mano y se le llamará para que quite el silencio a su dispositivo y así pueda proporcionar comentarios públicos. Los participantes dispondrán de hasta dos minutos por comentario.

La comunicación que se haga hoy a través del chat de Zoom no se considerarán un comentario público formal.

Cómo Hacer Comentarios sobre el Borrador del EIR a Más Tardar el 17 de Enero de 2023

Cómo Hacer Comentarios sobre el Borrador del EIR:

Audiencia Pública

Centro de Los Ángeles/Chinatown
Sábado 10 de Diciembre, 10:00 a.m. – 12:00 p.m.
Los Angeles Union Station
Explanada para Boletos
800 N. Alameda Street,
Los Angeles, CA 90012

Reunión Virtual vía Zoom
Martes 13 de Diciembre, 5:00 p.m. – 7:00 p.m.
Vaya a metro.net/aerialrapidtransit

議程

1. 會議目的
2. 如何參加此虛擬會議
3. 概述
4. 加州環境品質法案(CEQA)流程概述
5. 洛杉磯空中快速纜車計畫 概述
6. 《環境影響報告草案》主要分析及結論
7. 公眾意見徵詢會

如需有關Zoom的協助，請電郵至 mary.nooristani@aecom.com 或致電(619) 251-9180

會議目的

介紹《環境影響報告草案》
主要分析及結論

問答環節

加州環境質量法案(CEQA)流程

45天
範圍期限為2020年10月1日至11月16日

90天
《環境影響報告草案》公眾審查
2022年10月17日至2023年1月17日

運輸局董事會最終《環境影響報告草案》認證
2023

今天!
了解環境影響報告草案(DEIR)的主要分析和結論，並提供口頭公眾評論。
今天將不設問答環節

持續社區外展

兩次
信息
研討會
3 次 資訊說明會

我們在此

今天透過Zoom所發表的意見將不當作是是正式的公眾評論。

如何於2023年1月17日就環境影響報告草案(DEIR)作出評論?

新增資訊說明會

洛杉磯市中心/唐人街
2023年1月12日星期四，下午5時至7時
大教堂高中
1253 Bishops Road,
加利福尼亞州洛杉磯 90012

電郵

如何參加此虛擬會議

今天!

介紹環境影響報告草案(DEIR)主要分析和結論，並提供口頭公眾評論。今天將不設問答環節。

於資訊說明會上:如欲發表意見，請先舉手，被選中後，你將被要求寂靜並提出意見。

概述

概述

- 洛杉磯空中快速纜車計畫由洛杉磯空中快速纜車交通技術有限公司提出
- 洛杉磯縣都會運輸局是根據《加州環境品質法案》（CEQA）編寫環境影響報告的主導機構。
- 《環境影響報告草案》評估了與計畫建設和營運相關的潛在環境影響

概述

- 作為主導機構，洛杉磯縣都會運輸局有責任確保：
  - 《環境影響報告》充分評估計畫的潛在影響
  - 當中建議的緩解措施恰當
  - 已遵守《加州環境品質法案》（CEQA）流程，以進行公告、公關宣傳和文件分發

概述

- 我們目前正在收集公眾對《加州環境品質法案》（CEQA）轄下有關《環境影響報告草案》的意見
  - 公開聽證會
  - 電郵
  - 郵寄
  - 電話
- 參議院第44號法案
  - 透過《加州環境品質法案》（CEQA）優化洛杉磯縣環境主導交通計畫的審查
  - 擬建計畫將是參議院第44號法案下的第一個環境主導交通計畫
  - 公眾聽證會要求
    - **資訊研討會：於為期10天的公眾意見咨詢期間，向公眾匯報《環境影響報告草案》的主要分析和結論**
    - 公開聽證會：在公眾意見咨詢期的最後10天內取得公開聲明

《加州環境品質法案》（CEQA）概覽

《加州環境品質法案》（CEQA）程序

所有計畫均需由一家公共機構承擔、資助或審批

通知公眾和決策者

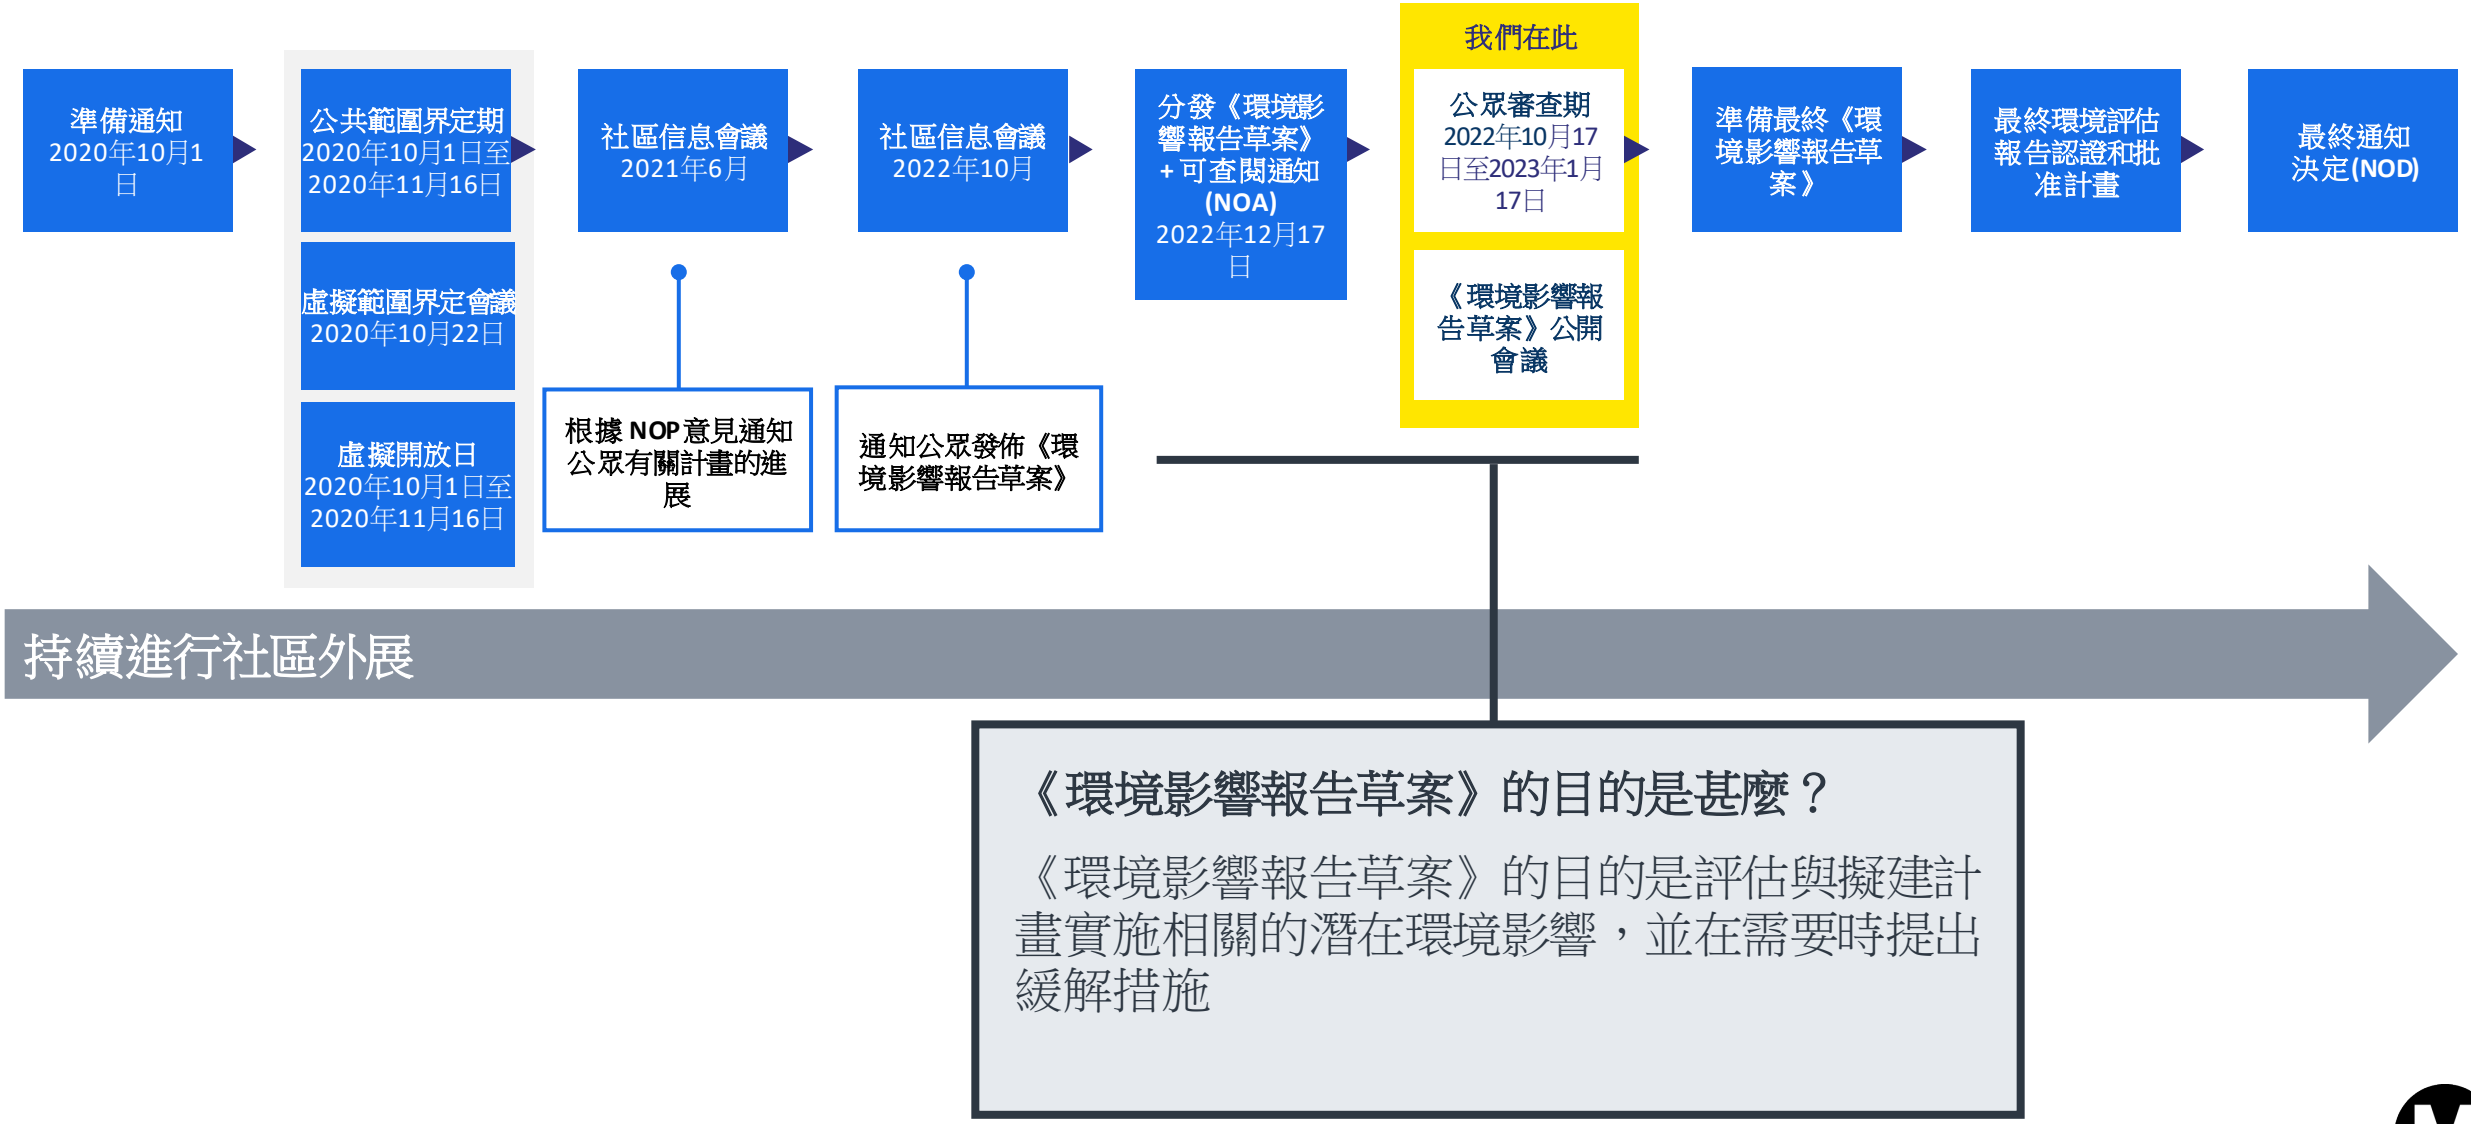
披露擬建計畫會產生的潛在環境影響

提供對環境問題發表評論的機會

兩個公眾意見咨詢期：(1) 公共範圍界定期和 (2) 《環境影響報告草案》公眾審查

SB 44 需要在 《環境影響報告草案》 公開評論期間召開兩次公開會議：
資訊說明會與公眾聽證會

時程線



《環境影響報告草案》的目的是甚麼？

《環境影響報告草案》的目的是評估與擬建計畫實施相關的潛在環境影響，並在需要時提出緩解措施

《環境影響報告草案》意見咨詢期間的公開會議

資訊性研討會

第一次《環境影響報告草案》資訊說明會	10月22日，星期六	虛擬
第二次《環境影響報告草案》資訊說明會	10月25日(星期二)，下午5時至7時	現場

運輸局將舉辦兩場資訊說明會，讓公眾了解《環境影響報告草案》中的關鍵分析和結論

公開聽證會

第一次《環境影響報告草案》公開聽證會	12月10日，星期六	現場
第二次《環境影響報告草案》公開聽證會	12月13日，星期二	虛擬
第三次《環境影響報告草案》公開聽證會	1月12日， 星期二	現場

運輸局將舉辦三次公開聽證會，就《環境影響報告草案》咨詢公眾意見

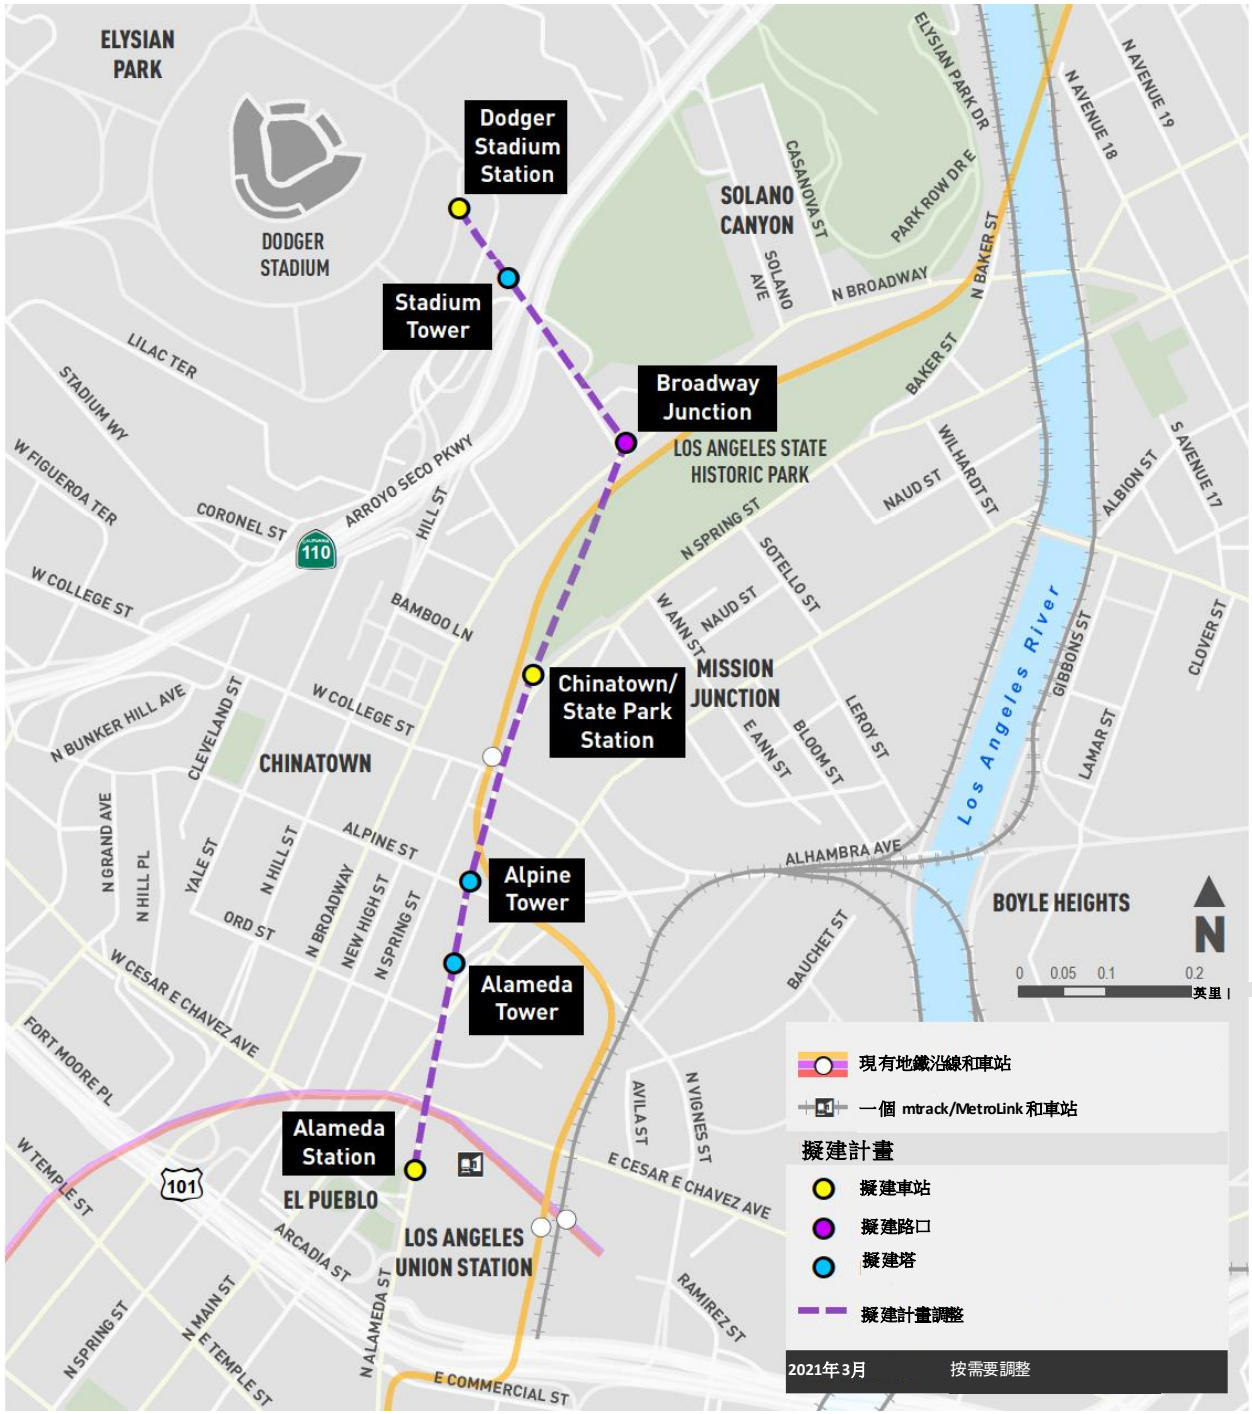
計畫介紹:

計畫概覽

- 透過 1.2 英里的空中快速纜車系統, 能提供從洛杉磯聯合車站 (LAUS) 到道奇體育場的永久交通連接
  - 從洛杉磯聯合車站到道奇體育場的行車時間約為7分鐘
- 每個方向每小時可容納約5,000人次
- 為洛杉磯的現有居民、工人、公園用戶和遊客每天提供服務
- 透過唐人街/州立公園中轉站，提供前往洛杉磯州立歷史公園和周邊社區的通道
- 由於減少了道奇體育場內和周圍以及附近街道、主要幹道和高速公路上的車輛行駛，溫室氣體排放將減少，達至零排放、環保的空中快速纜車

計畫位置和路線

- 計畫將在洛杉磯聯合車站和洛杉磯古城旁邊開始，並在道奇體育場結束，中途於洛杉磯州立歷史公園最南端的入口處設置一個中轉站
- 將唐人街、Mission Junction、伊利森公園(Elysian Park)、迴聲公園(Echo Park)和索拉諾郡峽谷(Solano Canyon)的周邊社區連接到聯合車站可到達的區域交通系統
- 擬建計畫路線最大限度地維護公共可行使通行權（ROW）和公有財產，以及減少使用在私人財產上空的空中權利，計畫同時亦顧及現有和未來的鄰近土地用途



空中快速纜車系統先例

- 空中快速纜車技術已經有100多年歷史
- 現代系統是一種可行的城市交通模式，目前在世界各地多個城市運行
- 全球已建立的空中快速纜車系統——如:玻利維亞的拉巴斯和墨西哥的墨西哥城——空中快速纜車系統正為該地的城市人口服務
- 擬建計畫是“3S”纜車，與德國科布倫茨、越南富國島和法國圖盧茲使用的系統類似
  - 車廂可乘載約30至40名乘客
  - 系統將提供平穩、穩定的行駛

俄勒岡州波特蘭

紐約羅斯福島

玻利維亞拉巴斯

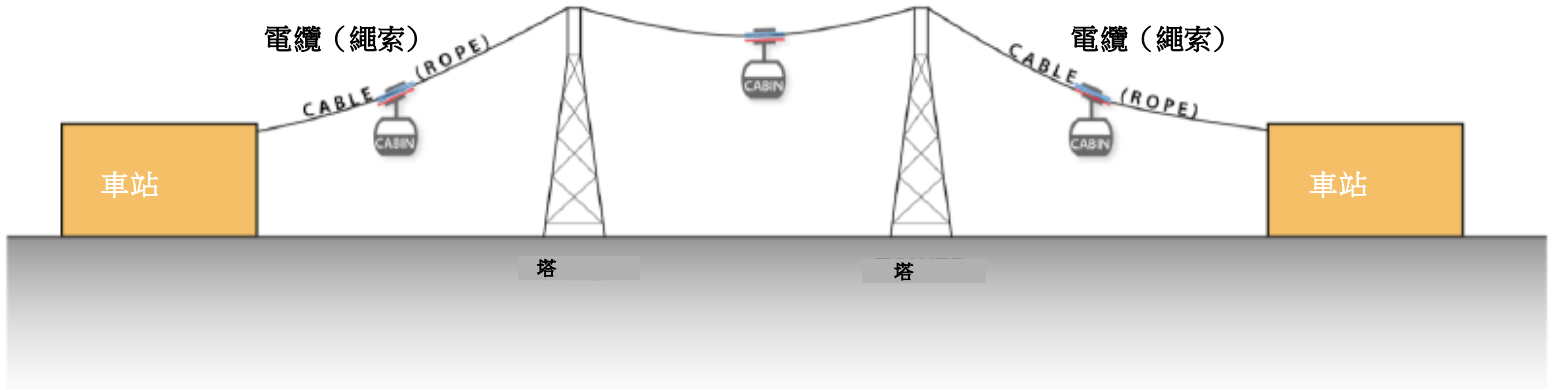
墨西哥墨西哥城

法國圖盧茲

哥倫比亞麥德林

索道技術

空中快速纜車系統包括客運站、非客運樞紐和塔，這些塔用作支撐車廂的架空電纜



三個客運站

- 包括機械、電力以及管道系統、登車平台和垂直流動設備（例如樓梯、自動扶梯和電梯）
- 包括售票處、檢票區和排隊區；乘客上落車廂；營運以及系統設備

一個非客運樞紐站

- 空中快速纜車系統的運作需電纜轉動並維持在路線上

三個用以支撐車廂的架空電纜的塔

“3S”系統和纜車車廂

“3S”系統

- “3S”系統包括三根電纜：兩根用於穩定的「軌道繩索」和第三根用於循環車廂的「牽引繩索」
- 車廂從連續循環的「牽引繩索」分離並在進入車站供乘客出入時減速，然後重新連接至「牽引繩索」

車廂

- 每個車廂可容納30至40名乘客，實際數量取決於所選座位的配置和所選用的車廂設備
- 完全無障礙及可容納輪椅上落
- 設有立位及坐位
- 為嬰兒車及單車提供停泊位置
- 於繁忙時間可以每小時 13.4 英里的最高速度移動
- 進入車站時，列車會減速至大約每秒一英尺（每小時不足一英里）的速度，允許乘客上落正在行駛的列車

目的及需要

- 透過空中快速纜車系統，提供從洛杉磯聯合車站 (LAUS) 到道奇體育場的交通連接
- 將唐人街、Mission Junction、伊利森公園(Elysian Park)、迴聲公園(Echo Park) 和索拉諾郡峽谷(Solano Canyon)的周邊社區連接到聯合車站可到達的區域交通系統
- 透過每日提供高容量的空中快速纜車(ART)服務，提高洛杉磯聯合車站(LAUS)的區域交通系統之間的流動性和可達性
- 在唐人街/州立公園站提供交通樞紐
- 透過使用零排放電力和備用電池運作，提供資源永續的交通方式，有效減少溫室氣體排放, 及改善空氣品質

道奇體育場：該區其中一個訪客量最大的場地

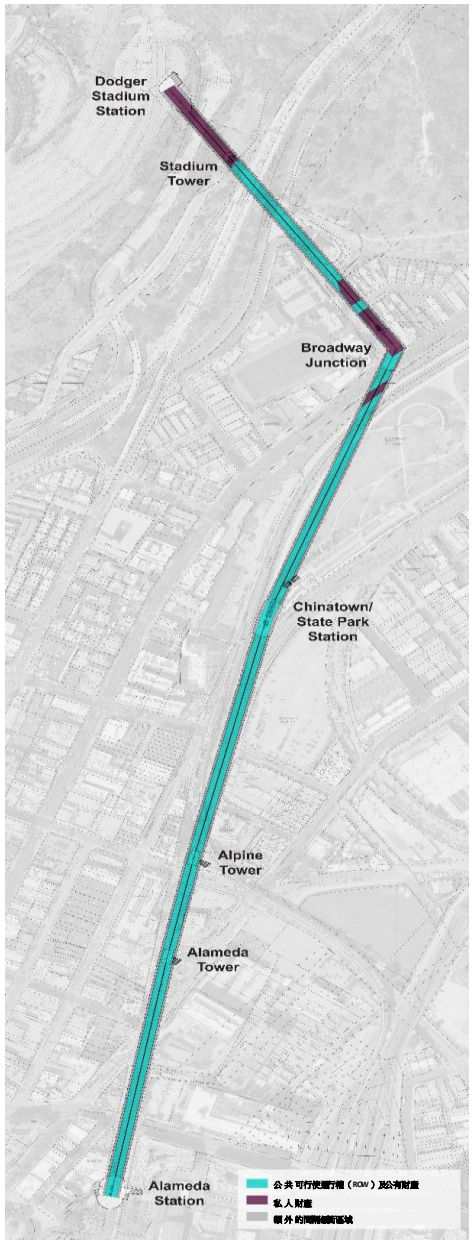
- 每年舉辦約100場棒球比賽和其他活動，吸引大量觀眾
- 大部份的觀眾使用私家車到達體育場
- 車輛令周邊社區及附近的高速公路造成交通擠塞
- 擬建計畫所經路線附近的社區，給認定會為該州帶來不同途徑的污染源頭，佔其不成比例的社區負擔的90-100%（CalEnviroScreen 4.0 地圖）

計畫目標

- 為洛杉磯聯合車站(LAUS)和區域活動中心道奇體育場提供直接連繫，為乘坐公共交通的乘客提供更多交通選擇。
- 空中快速纜車(ART)系統為新的乘客提供獨特的交通體驗，吸引他們乘坐鐵路系統，並連接他們到道奇體育場。
- 為到訪道奇體育場的遊客提供高效、高容量和更快捷的替代交通工具，改善遊客的體驗。
- 擬建計畫將減少該地區的車輛數目，從而提高毗鄰道奇體育場的社區的安全性
- 減少球賽日及特別活動的影響，使道奇體育場的周邊地方、鄰近社區、主要幹道和高速公路的車輛堵塞問題改善，這亦使因相關交通空氣污染和溫室氣體(GHG)排放相對減少
- 增加人們與洛杉磯聯合車站(LAUS)與道奇體育場建設的公共交通樞紐之間的連繫。
- 沿途為乘客和道奇隊球迷提供洛杉磯地區獨有的風景，改善乘客的乘車體驗。
- 將世界一流的空中交通系統帶到洛杉磯地區。
- 擬建計畫為以往交通服務不足的區域（包括洛杉磯州立歷史公園和伊利森公園）的一英里範圍內和行人通道提供交通系統，從而改善社區之間的連繫。
- 為社區和洛杉磯州立歷史公園和 Elysian 公園作出比較、為能負擔購買,及容易購得車票作比較。
- 將資源永續性和環保設計特徵整合到擬建計畫的選材、施工、營運和維修，能最大限度地減少計畫對環境的影響。
- 空中快速纜車(ART)系統以零排放電力和備用電池運作，提供可永續的交通方式，減少溫室氣體排放，並改善空氣品質。
- 擬建計畫路線最大限度地維護公共可行使通行權（ROW）道路及公有財產，以及減少使用在私人財產上空的通過權利，同時顧及現有和未來的鄰近土地用途

路線將建於公共通行權（ROW）範圍內或公共土地上

- 美國國家標準協會(ANSI)標準第B77.1項中記錄了纜車索道和車廂設計和運作及專業準則，該準則與製造商、消費者和監管機構共同協力研發
  - 美國國家標準協會(ANSI)標準第B77.1項對索道和車廂與車輛、行人、植物、建築物和其他結構等元素之間的垂直和水平間距作出了規範
- 擬建計畫路線最大限度地維護公共通行權（ROW）和公有土地，以及減少使用在私人財產上空的通過權利，同時,顧及現有和未來的鄰近土地用途方面
- 選擇計畫路線的其他注意事項：
  - 盡量減少擬建計畫對行車道、停車道以及單車和行人流通產生的變化
  - 盡可能減低搬遷公用事業管線設施的需要
  - 歷史和考古資源的位置
  - 盡量減少使用不平或崎嶇的地形
  - 技術考慮及其可行性



設計

- 設計目標是以一般的建築設計，統一整個空中纜車系統，同時,令每個主要元素按城市的狀況融入該市
- 非客運樞紐站,和支撐塔所承受的壓力與人流最小化亦同樣重要
- 車站和路口建有簡單的筒型拱頂，用以保護索道，並為登車平台上的乘客提供有蓋遮蔭處以以應對不同天氣狀況
- 支撐塔的設計採用簡約的淺灰色，與周邊城市環境融合，其設計令底部不會阻礙相鄰的車輛和行人流通

阿拉米達站

- 阿拉米達站將位於阿拉米達街，毗鄰正在計劃中的洛杉磯大學前院,和洛杉磯街,與塞薩爾查韋斯大道之間的加利福尼亞洛杉磯的公園(Placita de Dolores)。
- 該站大約長194英尺，寬80英尺，最高點高74英尺。
- 上落客平台高度約為阿拉米達街地面上方31英尺處

- 洛杉磯古城擬建的新步行廣場位於Placita de Dolores 以北，該處與洛杉磯聯合車站(LAUS)前院以東位置將計劃引入垂直流通設備

阿拉米達塔

- 位於阿拉米達三角區，該區由阿拉米達街、北大街和阿爾罕布拉大道之間的公共可行使通行權道路（ROW）組成
- 高195英尺，電纜懸掛在地面上方175英尺處
- 更新阿拉米達三角區的自然景觀和人工景觀，包括現有攤舖機的重用和整合

阿爾卑斯塔

- 位於阿拉米達街和阿爾卑斯街東北角，毗鄰地鐵L線(金)
- 地點屬城市擁有的地段，目前用作城市車輛的非公共停車庫
- 最高點為 195 英尺，電纜懸空 175 英尺
- 塔底附近的景觀美化與人造景觀美化

唐人街/州立公園站

- 毗鄰洛杉磯州立歷史公園最南端的春天街
- 南部將位於城市通行道路上， 北部與洛杉磯州立歷史公園的南部邊界結合
- 該站大約長194英尺，寬80英尺，最高點高74英尺。
- 乘客登車平台位於地面上方約50英尺處
- 以電梯和樓梯從夾層進入登車平台。
- 將包括安裝景觀美化和人工景觀美化，包括整合花崗岩攤鋪機

唐人街/州立公園站

車站設施

- 讓乘客可以在車站的中心樞紐一英里的範圍內選擇多種交通工具，例如:單車共享計劃
- 改善行人路措施，包括人工景觀和自然景觀改善、遮光設備和潛在興建的座位

公園設備

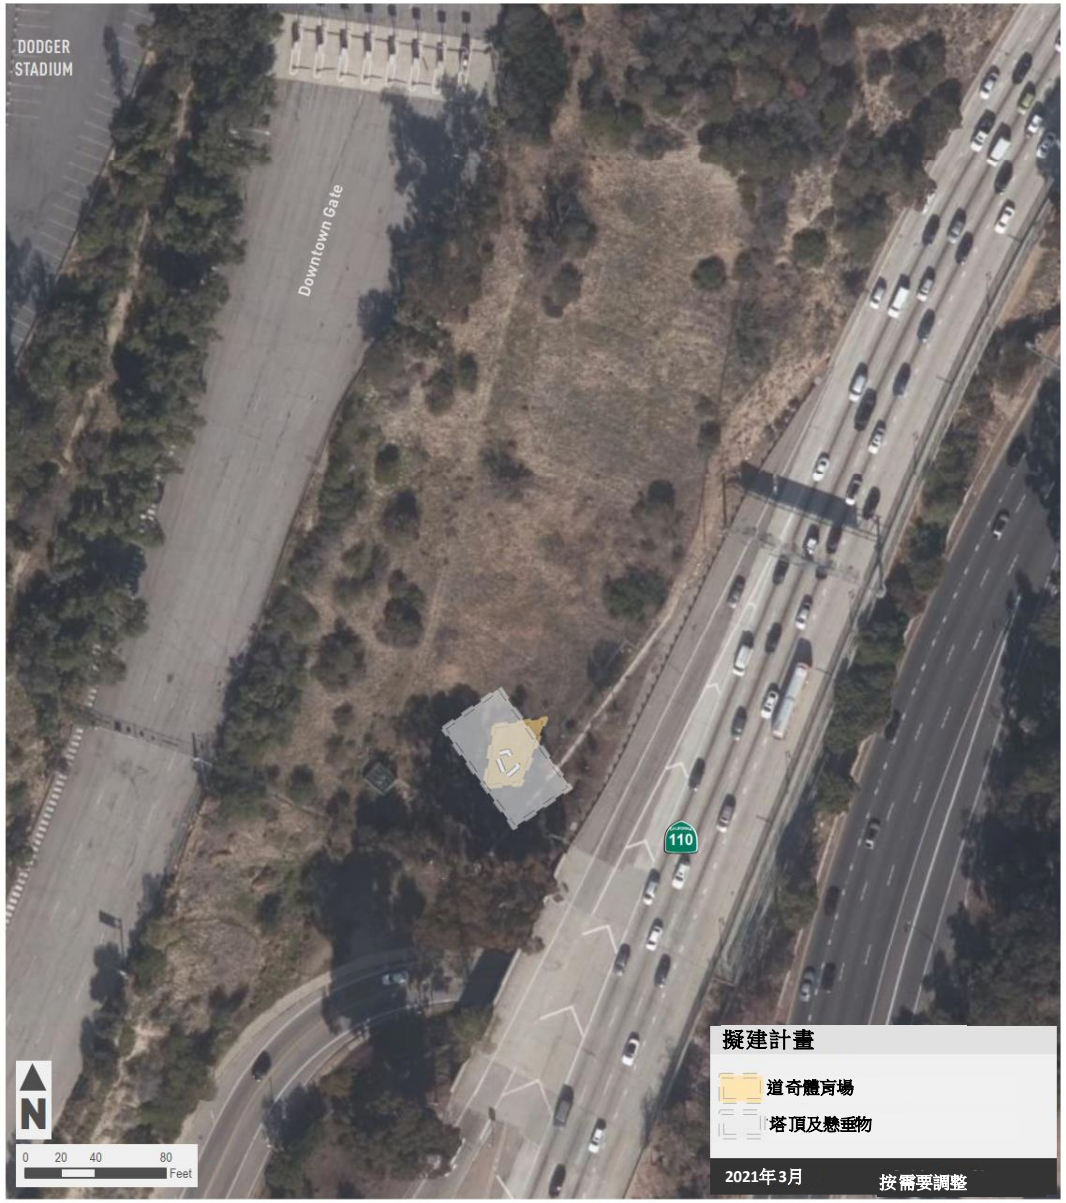
- 740平方英尺的特別用地
- 770平方英尺的洗手間
- 一條連接特別用地和洗手間長達220平方英尺的遮頂走廊

百老匯路口

- 百老匯路口是一個非客運路口，將位於北百老匯和主教路的交匯處
- 位於百老匯北部1201 N 的現有商業大廈將給拆除
- 路口約長 227 英尺，寬 60 英尺，最高點為 98 英尺

球場塔

- **位於道奇體育場市中心大門與** SR-110 之間的體育場路以北的私人物業的山坡上
- 高 179 英尺，電纜懸空 159 英尺，於塔底附近進行景觀美化



道奇體育場站

- 道奇體育場東南部,近市中心入口大門

道奇體育場站

- 該站大約長194英尺，寬80英尺，最高點高74英尺
- 車廂抵達該站時，乘客將在同一層上落車，乘客排隊等候區也在同一層。
- 將包括平台下方的地下區域，用於儲存和維護車廂，以及員工休息室、儲物櫃和零件儲存區。
    - 當系統數小時內不作使用，列車會給送回道奇體育場站
- 站內設有供乘客使用的洗手間

道奇體育場站還將包括與道奇體育場的行人連接道，包括人工景觀和自然景觀的改善,及將會興建的座位

可持續發展

- 擬建建計畫的永續性特徵將於以下包括在內：
  - 2019年加州綠色建築標準規範
  - 美國綠色建築委員會在新建築能源與環境設計(LEED)方面的領導計劃
  - 永續基礎設施研究所的設想評級系統
- 擬建計畫需要的電力將100%由洛杉磯市水電部的綠色電力計劃提供
- 每個站、塔和路口將使用存儲備用電池以提供備用電源，而不是使用柴油發電機

擬建計畫將為道奇體育場的訪客提供一個環境永續、高運力、零排放的空中快速纜車選擇，，同時也為道奇體育場、周邊社區和聯合車站的區域交通系統之間提供通道。空中快速纜車技術十分安靜，擬建計畫將減少車輛行駛里程（VMT）和堵塞問題，從而減少溫室氣體排放並改善空氣品質。

營建工程：

時間線

- 擬建計畫的營建工程預計最早於2024年開始，大約需要25個月，包括建設、電纜安裝和系統測試。

工時

- 預計施工時間為每天10小時，時間長短將因應特殊情況和限制而有變動
- 不在預定的延長施工時間和周日假期施工需由洛杉磯市警察委員會批准

車道封閉

- 擬建計畫預計將封閉某些車道，當中車道將在某些施工階段全天 24小時封閉，或在某些施工階段期間作時段封閉，約在施工期間每天封閉約10小時，而道路將在非施工時間每天開放約14小時
- 道路於時段封閉並在非施工時間，將盡可能於施工現場放置在鋼板，允許車輛和行人流通。
- 封閉時間將因應施工地點和階段而異
- 擬建計畫將實施施工交通管理計劃，當中包括設立繞道，以及確保其在所有施工活動中保持緊急通道

詳細工程假設

- 詳細工程假設包括在《環境影響報告草案》附錄B中

詳細工程假設

環境資源專題

每個 CEQA 指南附錄 G 的所有環境資源議題
在《環境影響報告草案》中得到處理：

- 美學
- 農業/林業
- 空氣品質
- 生物資源
- 文化/歷史資源
- 能源
- 地質/土壤
- 溫室氣體排放
- 危害/有害物質
- 水文/水質
- 土地使用/規劃
- 礦物資源
- 噪音
- 人口/住屋
- 公共服務
- 康樂日
- 交通運輸
- 部落文化資源
- 公用事業/服務系統
- 野火

美學

研究範圍是甚麼？

- 圍繞計畫路線的計畫組件對視覺上的影響
- 體現視覺個性的主要觀察點，包括景觀的存在與否、主要土地用途、建築規模或主要景觀、景觀資源和可用的重要視覺元素，例如:開放空間資源、街道上的樹木和建築物前的空地等
- 觀賞者及其反應，包括行人和康樂設施使用者（例如:公園使用者）
- 縱使沒有指定的風景區，人們仍可以欣賞到洛杉磯市中心的天際線、聯合車站、洛杉磯古城、洛杉磯州立歷史公園、阿羅約塞科公園大道、道奇體育場,及聖蓋博和聖貝納迪諾山脈的景觀
- 光線與強光

主要分析及結論

- 擬建計畫不會特別阻礙風景或全景，包括洛杉磯市中心天際線、聯合車站、洛杉磯古城、洛杉磯州立歷史公園、阿羅約塞科公園大道、道奇體育場,及聖加布里埃爾和聖貝納迪諾山脈的景觀
- 擬建計畫的權利和批准將不會與相關分區或其他管理風景質素的法規互相衝突, 當其中包括設計標準，以增強擬建計畫及其周邊社區的視覺識別和特色
- 擬建計畫將不會產生大量光線或強光，並符合相關城市照明法規

現時與模擬從州立歷史公園到洛杉磯市中心天際線的景觀

美學

影響總結

主題	發現	
	營建工程：	**操作**
優美景觀	影響不大。	影響不大。
風景資源	沒有影響。	沒有影響。
視覺特徵	影響不大。	影響不大。
光線與強光	影響不大。	影響不大。

如何可將影響降至最低?

營建工程：一個隱私屏幕將加設於屏障和隔音牆中，使計畫的視覺影響減低。無需採取緩解措施。

營運:計畫設計特徵，包括建築燈光和標示牌上的燈光。無需採取緩解措施。

農林資源

研究範圍是甚麼？

- 計畫會否與體育場塔和道奇體育場站的農業區劃互相衝突

主要分析及結論

- 道奇體育場不包括其農業用途，並受有條件使用許可證的約束，許可證只允許該處作為美國職業棒球大聯盟體育場,和各種附屬結構和用途，包括到達現場的「公共交通服務」；因此，擬建計畫的建設和營運不會與現有的農業區有互相衝突

影響總結

主題	發現	
	營建工程：	操作
耕地轉用	沒有影響。	沒有影響。
與林地區劃衝突	沒有影響。	沒有影響。
喪失林地	沒有影響。	沒有影響。
農業用途	沒有影響。	沒有影響。
農業區劃及威廉姆森法案	影響不大。	影響不大。

如何可將影響降至最低?

無需採取緩解措施。

空氣品質

研究範圍是甚麼？

- 擬建計畫的建設和營運對地區和空氣品質的潛在影響
- 空氣污染物的特徵和影響
- 已通過的管理空氣品質法規
- 評估與計畫建設相關的健康風險評估 (HRA)，包括預計的致癌風險和非致癌慢性危害指數

主要分析及結論

- 擬建計畫將符合適用的空氣品質計劃
- 擬建計畫的建設所引起的排放量預計將低於污染物和排放量的重要閾值
- 擬項建目在營運期間不會將敏感受體暴露於高濃度的污染物，因為計畫不包括任何對環境空氣品質產生重大影響的土地使用,或營運排放
- 與現有情況相比，擬建計畫將透過減少車輛行駛里程（VMT）而減少污染物排放量，從而減少淨標準污染物的排放
- 根據健康風險評估 (HRA) 結果，擬建計畫對敏感受體暴露於來自 TAC 的大量污染物濃度問題上帶來不太顯著的影響

空氣品質

影響總結

主題	發現	
	營建工程：	**操作**
空氣品質	影響不大。	影響不大。
增加空氣污染物	影響不大。	影響不大。
敏感受體	影響不大。	影響不大。
其他排放	影響不大。	影響不大。

如何可將影響降至最低?

營建工程：所有超過50馬力的非道路柴油動力建築設備,應至少滿足美國環保署頒布的非道路柴油發動機的第四級別排放標準。無需採取緩解措施。

營運:無需採取緩解措施。

生物資源

研究範圍是甚麼？

- 計畫是否會影響特殊物種及其棲息地
- 計畫是否會影響河岸棲息地或受保護的濕地
- 計畫干擾沿線野生動物活動的可能性
- 計畫是否會與保護生物資源的任何當地政策或法令（例如:樹木保護政策或法令）產生衝突？
- 計畫會否與已通過的棲息地保護計劃產生衝突

主要分析及結論

- 計畫區域中一般不包括特別物種棲息地；然而，在擬建計畫的建設過程中移除成熟的棕櫚樹和桉樹可能會移除蝙蝠棲息地
- 計畫區不包括河岸棲息地、其他敏感的自然群落或受保護的濕地； 因此計畫對生態不會有影響
- 計畫區域不會作為區域野生動物活動路線；但是，建築活動可能會導致蝙蝠和鳥類避開正在施工的地區。
- 計畫會根據城市原生樹木保護條例、加州公園和娛樂部的要求以及其他適用要求，去更換給砍伐的樹木

生物資源

影響總結

主題	發現	
	營建工程：	**操作**
河岸棲息地	沒有影響。	沒有影響。
受保育濕地	沒有影響。	沒有影響。
生物計劃或政策（營運）	影響不大。	沒有影響。
干擾物種活動	經緩解後影響不大。	影響不大。
改變棲息地（營運）	經緩解後影響不大。	影響不大。

如何可將影響降至最低?

營建工程：

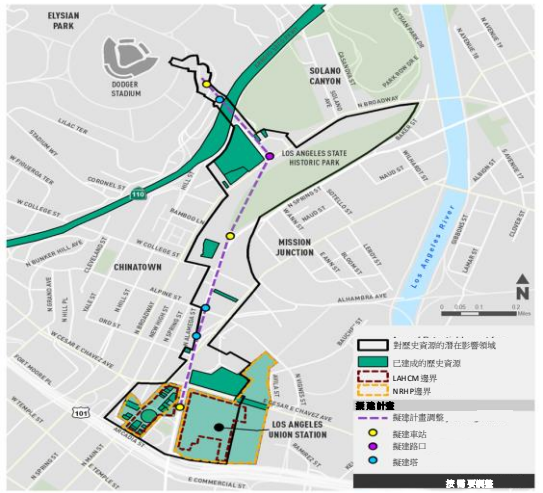
- 採用一個設有建立樹木保護區的設計方案以保護樹木
- 施工前進行築巢調查和採取措施，避免和盡量減少對築巢鳥類的影響

營運:無需採取緩解措施。

文化資源

研究範圍是甚麼？

- 在潛在影響的區域內,29個已建成的歷史資源受到直接和間接的影響,當中包括洛杉磯聯合車站客運站和場地、洛杉磯廣場歷史街區、大教堂高中和 Arroyo Seco Parkway 歷史街區
- 地面擾動對區域內考古資源有直接的影響，包括 La Placita、Zanja Madre,和南太平洋鐵路的河站
- **主要分析及結論**
- 歷史資源
  - 擬建的阿拉米達站的施工有可能對酒廠和El Grito壁畫造成直接和間接的影響，但影響將給減輕到不太顯著的水平
  - 施工計畫對所有其他歷史資源的相關建設,和營運的影響將不太顯著
- 考古資源
  - 擬建的阿拉米達站、阿拉米達三角區、阿爾卑斯塔和唐人街/州立公園站的施工有可能導致考古資源的重要性產生重大不良的影響；然而，影響將給減輕至不太顯著的水平



建築歷史資源的潛在影響區域

對考古資源的直接影響區域

文化資源

影響總結

主題	發現	
	營建工程：	**操作**
歷史資源	經緩解後影響不大。	影響不大。
考古資源	經緩解後影響不大。	沒有影響。
干擾人類遺骸	經緩解後影響不大。	沒有影響。

如何可將影響降至最低?

- 歷史資源
  - 用於施工前和施工後的文件，以及保護酒廠和《吶喊》(El Grito) 壁畫，以及在施工期間保護 El Grito 壁畫的計畫設計特點
  - 於擬建阿拉米達站施工期間，實施可調地面壓實裝置的震動監測與限制
- 考古資源
  - 制定和實施文化資源監測和緩解計劃，以及考古資源工作者推行計劃
  - 施工前考古測試計劃將在擬建的阿拉米達站和唐人街/州立公園站的實施
  - 為避開考古資源，洛杉磯州立歷史公園設施存在重新設計的潛在機會

能源

研究範圍是甚麼？

- 與能源有關的聯邦、州和地方法律法規概述
- 加州能源生產、供應和消耗概覽
- 評估與建設相關的能源資源，以及與計畫營運有關的年度能源需求

主要分析及結論

- 與擬建計畫的建設相關的臨時能源消耗將減少將來興建計畫營運的相關能源消耗
- LADWP的綠色電力計劃為擬建計畫的相關主要電力使用提供可再生資源
- 擬建計畫將減少車輛行駛里程（VMT),並增加使用公共交通的人數，從而減少車輛使用的化石燃料

影響總結

主題	發現	
	營建工程：	**操作**
浪費、低效或不必要的消耗	影響不大。	影響不大。
州或地方能源計劃	影響不大。	影響不大。

如何可將影響降至最低?

無需採取緩解措施。

地質和土壤

研究範圍是甚麼？

- 計畫是否容易受到地震災害的影響，例如:強烈的地震動、斷層、液化或土石流
- 計畫是否位於不穩定的土壤上，而有機會導致施工現場或非現場山泥傾瀉、橫向擴展、沉降、液化或坍塌。
- 計畫路線是否包括可能對生命或財產造成重大直接或間接風險的土壤膨脹
- 計畫會直接或間接破壞獨特的古生物資源或遺址，或獨特的地質特徵嗎？

主要分析及結論

- 雖然計畫區域位於加利福尼亞州南部的地震活躍區，但在遵守現有標準和規範並實施緩解措施的前提下，與擬建計畫施工期間的強烈地面震動、與地震相關的地面破壞和/或液化相關的影響將減少至不太顯著的水平
- 計畫的應急行動計劃將包括應急響應協議，並規定在發生大地震時，將纜車系統完全疏散並關閉，以及停止運作
- 在遵守現有標準和規範，並實施緩解措施的前提下，於計畫組成部分的分級和施工過程所帶來的橫向擴展、沉降、液化或崩塌相關的 影響將達至不太顯著的水平
- 在遵守現有標準和規範，並實施緩解措施的前提下,施工期間與土壤腐蝕相關的影響將達至不太顯著的水平
- 擬建計畫的北部靠近道奇體育場站的入口處可能存在古生物資源；然而，對資源的影響將給減輕到不太顯著的程度

地質和土壤

影響總結

主題	發現	
	營建工程：	操作
不良影響:地震、與地震相關的地面震動、液化或土石流（營運）	經緩解後影響不大。	影響不大。
支持污水系統	沒有影響。	沒有影響。
破壞獨特的古生物或地質特徵	經緩解後影響不大。	沒有影響。
土壤侵蝕/表土流失	影響不大。	影響不大。
不穩定的地質單元或土壤	經緩解後影響不大。	影響不大。
膨脹土壤	經緩解後影響不大。	影響不大。

如何可將影響降至最低?

營建工程：

- 準備和推行特定地點最終岩土工程報告
- 準備和遵守古生物資源監測和緩解計劃（PRMMP）

營運:無需採取緩解措施。

溫室氣體排放

研究範圍是甚麼？

- 相關的聯邦、州和地方法律法規
- 溫室氣體科學概述
- 用作評估與擬建計畫相關的溫室氣體排放的方法

主要分析及結論

- 與現時情況相比，擬建計畫不會增加溫室氣體排放量，反而將減少溫室氣體排放量

計畫的總溫室氣體排放量將減少 166,653 公噸

影響總結

主題	發現	
	營建工程：	操作
產生溫室氣體	影響不大。	影響不大。
溫室氣體減排計劃或政策	影響不大。	影響不大。

如何可將影響降至最低?

無需採取緩解措施。

危害和有害物質

研究範圍是甚麼？

- **對計畫活動進行評估，確定其在施工和營運期間危害公眾或環境的潛在影響**
- **分析特定地點所**產生的潛在危害和有害物質造成的潛在影響

主要分析及結論

- 擬建計畫將在施工期間使用、運輸和處置有限數量的有害物質，因此計畫將需符合**聯邦、州和地方的健康和安全**要求；並在施工過程中遵守所有規範、標準和法規
- 擬建計畫將遵守OSHA、Cal/OSHA，以及洛杉磯市政法規第71條，並實施土壤和地下水管理計劃，從而限制危險材料和廢物洩漏的可能性
- 擬建計畫將在拆卸前，將由持有執照的減排承建商進行有害物質減排，確保學校不會受到不良影響
- 擬建計畫的施工和營運不會干擾洛杉磯警察局進入胡珀直升機場，直升機場的營運將不會受到建築活動所影響
- 擬建計畫區內共有五處物業給認定為有害物質場地；然而計畫將實施土壤和地下水管理計劃，以減少這些地點所帶來的影響
- 擬建計畫的施工不會對已通過的應急響應計劃或應急疏散計劃的實施造成重大影響或實際干擾；計畫日常運作及施工將不影響應急響應活動

危害和有害物質

影響總結

主題	發現	
	營建工程：	**操作**
危險場地	經緩解後影響不大。	沒有影響。
機場土地使用計劃	沒有影響。	沒有影響。
危害公眾或環境	經緩解後影響不大。	影響不大。
應急和疏散計劃	影響不大。	影響不大。
學校附近的災害	經緩解後影響不大。	影響不大。

如何可將影響降至最低?

營建工程：

- 制定和實行土壤和地下水管理計劃，以 表明在計畫建設期間遇到受污染的地下水、土壤或建築物時，應採取的處理和處置方法。
- 拆除北百老匯1201號現有建築物期間的有害物質減排

營運:無需採取緩解措施。

水文和水質

研究範圍是甚麼？

- 擬建計畫有可能違反水質標準、減少地下水供應、或導致施工現場或場外發生嚴重侵蝕或淤積
- 擬建計畫有可能大幅增加地表徑流的速率或數量，從而導致施工現場或淹水的風險
- 擬建計畫有可能產生或增加徑流水，這將超過現有或規劃內的雨水排放系統的容量，以及阻礙或將洪水流改向
- 擬建計畫在洪水災害、海嘯或**震盪潮**期間釋放污染物的可能性
- 擬建計畫與水質控制計劃或可持續地下水管理計劃的實施發生衝突或阻礙該計劃的可能性

主要分析及結論

- 擬建計畫將遵守所有適用的聯邦、州、地區和地方機構的水質保護法律法規、水質控制和/或可持續地下水管理計劃
- 擬建計畫將採用最佳管理方式，並以低影響開發計劃進行，以減少水文和水質影響
- 擬建計畫不易因洪水災害、海嘯或**震盪潮**而排放污染物

水文和水質

影響總結

主題	發現	
	營建工程：	**操作**
減少地下水供應（營運）	影響不大。	沒有影響。
水質標准或計劃	影響不大。	影響不大。
改變排水	影響不大。	影響不大。
洪水、海嘯或震盪潮	影響不大。	影響不大。
與計劃衝突	影響不大。	影響不大。

如何可將影響降至最低?

工程與營運：擬建計畫將遵守**相關的聯邦、州、地區和地方法律法規，包括遵守有關雨水許可證、廢水許可證和其他水質法規。無需採取緩解措施。**

土地利用和規劃

研究範圍是甚麼？

- 計畫會劃分出一個已建立的社區嗎？
- 計畫是否會因為避免,或減輕對環境影響而採用的任何土地用途計劃、政策或法規相衝突而造成重大環境影響？

主要分析及結論

- 縱使計畫施工期間將臨時關閉通往各社區之間的車輛、行人和單車通道，但在計畫區域內將提供多種交通模式可供選擇
  - 其他周邊街道仍提供入口進入社區，並設有行人繞道，防止已建立的社區給分割。
- 擬建計畫t 將改善一英里範圍內的地區的交通和行人通道，以增強社區連通性，包括交通樞紐和對未來洛杉磯州立歷史公園單車和人行天橋的支援
- 擬建計畫符合政策、規定、目標和/或當地計劃、法規及條例的目的
- 州立公園認為擬建計畫與洛杉磯州立歷史公園總體規劃之間存在不一致，因此，計畫可能會對公園產生重大影響，因為洛杉磯州立歷史公園總體規劃並未將公共交通列入為公園用途
  - **擬建議計畫需獲取 LASSHP 總體規劃修正案，繼而推行 LUP-A 緩解措施，這將令計畫對公園的影響減低**

土地利用和規劃

影響總結

主題	發現	
	營建工程：	**操作**
物理上劃分社區	影響不大。	沒有影響。
與土地使用計劃或政策衝突	經緩解後影響不大。	經緩解後影響不大。

如何可將影響降至最低?

工程（物理劃分社區）：雖然施工影響不大，但施工交通管理計劃的實施將包括封閉街道、繞道計劃、運輸路線和分階段計劃

工程與營運：根據公共資源法典 5002.2，擬建計畫應獲得對洛杉磯州立歷史公園總體規劃的修訂，以允許將洛杉磯州立歷史公園總體規劃範圍內的土地作為交通用途。

礦物資源

研究範圍是甚麼？

- 計畫是否會導致對該地區和該州居民有價值的已知礦物資源喪失可用性？
- 計畫是否會導致當地總體規劃、具體規劃,或其他土地用途規劃中所包括的當地重要礦物資源回收場的可用性喪失？

主要分析及結論

- 計畫不位於已知礦產資源區內
- 洛杉磯市內的大部分地區都是在土地區分類之前開發的，因此無法開採該等地區
- 計畫路線位於洛杉磯市的城市地區，於城市開採此類材料並不可行

影響總結

主題	發現	
	營建工程：	操作
損失可用礦產資源	沒有影響。	沒有影響。

如何可將影響降至最低?

無需採取緩解措施。

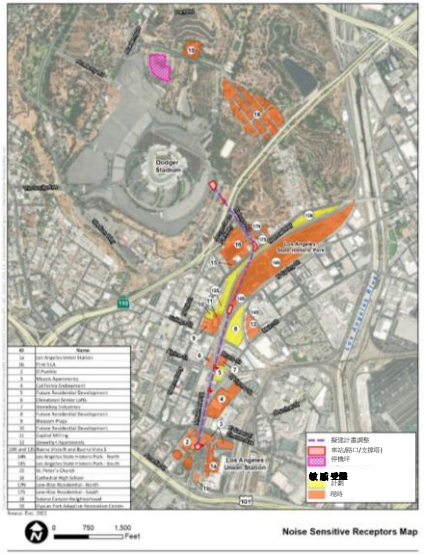
噪音

研究範圍是甚麼？

- 在擬建計畫路線沿線的噪音敏感受體代表地點進行測量，以計算現有噪音水平，包括現有和未來住宅開發、學校、公園和其他供人使用的戶外地方
- 透過計算與計畫相關的施工噪音水平，評估施工產生的潛在噪音影響
- 為評估計畫施工帶來的噪音影響，將計算計畫施工期間的噪音源頭，包括車站、路口、塔架、沿塔架支撐滑輪的車廂、車廂和車站上等待登車乘客
- 針對建築物損壞和人類干擾地面震動進行影響分析

主要分析及結論

- 擬建計畫對施工現場施工噪音的重大和不可避免的影響將取決於施工設備產生的噪音、設備的位置、施工活動的時間和工時長短，以及與噪音敏感受體區域的距離
- 施工場外的交通產生的噪音不太顯著
- 即使在最壞的情況下，計畫 施工所產生的噪音將不太顯著
- 現場施工活動產生的震動會產生重大且不可避免的人為滋擾；潛在的建築損壞在緩解後將變得不太顯著
- 計畫營運產生的震動將e 不太顯著



噪音敏感受體地圖

震動敏感受體地圖

噪音

影響總結

主題	發現	
	營建工程：	操作
暴露於機場附近	沒有影響。	沒有影響。
產生或增加噪音水平	嚴重且不能避免。	影響不大。
產生過度震動或噪音水平	嚴重且不能避免。	影響不大。

如何可將影響降至最低?

營運噪音：車廂設計的特色包括與 HVAC 單元內部到外部的降低噪音和電源聲級無需採取緩解措施。

施工噪音：實施施工噪音管理計劃，包括

- **噪音屏障**：
- **設備維修**：
- 社區外展，包括一名噪音干擾協調員

施工震動

- 於Avila Adobe（1970 年代添加）、El Grito 壁畫和 酒廠放置震動監測設備
- 使用可調整力度的地面壓實裝置的限制

人口和住屋

研究範圍是甚麼？

- 擬建計畫導致人口大幅增長或加速增長超過預期或計劃水平的可能性
- 推行擬建計畫是否會取代大量現有人口或住房

主要分析及結論

- 作為與道奇體育場的第一英里/最後一英里的連接交通，擬建計畫不會直接或間接引致大量人口增長
  - 計畫旨在滿足該地區的交通需求,並提高現有交通網絡的效率
  - 計畫在已規劃的住宅開發計畫附近提供交通工具，以達到住屋元素和社區計劃的城市目標，
- 擬建計畫不會取代現有的人口或住房

影響總結

主題	發現	
	營建工程：	操作
引致計劃以外的人口增長	影響不大。	影響不大。
流浪者或居民	影響不大。	影響不大。

如何可將影響降至最低?

無需採取緩解措施。

公共服務

研究範圍是甚麼？

- 擬建計畫是否會因提供新的或經過物理改造的公共設施而產生不良物理影響，建設這些設施可能會造成重大的環境影響，包括消防和警察保護、學校和其他公共設施，如:圖書館、老人院、流浪者收容所和托兒設施
- 計畫是否會影響緊急服務的回應時間

主要分析及結論

- 與擬建計畫相關的建設活動將暫時增加對緊急服務的需求，但在緩解措施和計畫設計特點的前提下，以及遵守適用的州份和地方法規，包括在計畫施工前與 LAFD 和 LAPD 進行協調時，將確保計畫的建設不會產生對緊急服務的額外需求，從而導致需要增加新的,或實際改變現有的公共設施
- LAFD 和 LAPD 在施工期間將有足夠的通道行駛
- 擬建計畫將在計畫營運期間增加對緊急服務的需求，在遵守適用法規與 LAFD和 LAPD 協調，並實施緊急行動計劃前提下，計畫的營運不會對緊急服務產生額外需求，從而導致需要增加新的或實際改變公共設施
- 擬建計畫內不包括興建住屋，這可能會增加對學校服務或其他公共設施的需求

公共服務

影響總結

主題	發現	
	營建工程：	**操作**
需要新的或改造的消防、警察、學校或其他公共服務	經緩解後影響不大。	影響不大。
服務比率和響應時間	經緩解後影響不大。	影響不大。

如何可將影響降至最低?

營建工程：施工交通管理計劃將減少緊急通道有關的影響

營運:擬建計畫將遵從相關法規，當中包括施工人員和攝像頭等保安措施，並會實行緊急營運計劃。無需採取緩解措施。

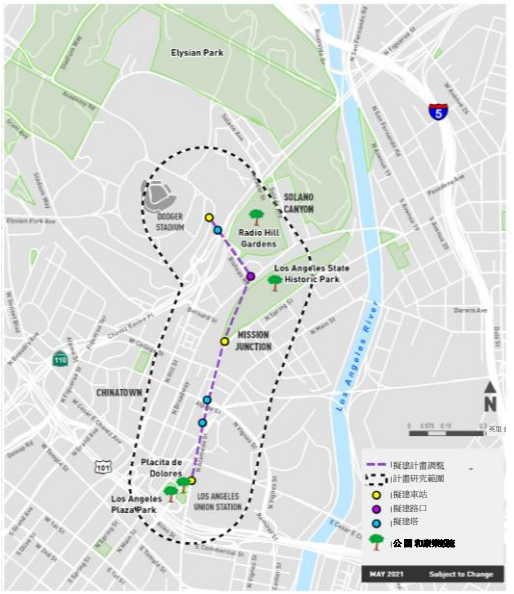
公園和康樂設施

研究範圍是甚麼？

- 擬建計畫在施工和營運期間對公園和康樂設施的潛在影響，包括洛杉磯廣場公園和多洛雷斯廣場、洛杉磯州立歷史公園和伊利森公園

主要分析及結論

- 擬建計畫不會增加對公園的需求，也不會產生新的永久居民，從而增加現有公園和康樂設施的使用。因此，計畫不會導致公園的嚴重老化問題發生或加速，或導致有需要建設新的公園設施，或需要新的或實質改變公園的設施
- 擬建的計畫提供連接洛杉磯聯合車站(LAUS)和洛杉磯州立歷史公園和伊利森公園，高容量的空中快速交通有助改善該地區的流動性和可達性



影響總結

主題	發現	
	營建工程：	操作
公共設施的老化	影響不大。	影響不大。
擴建康樂設施	影響不大。	影響不大。
服務比率和績效目標	影響不大。	影響不大。

如何可將影響降至最低?
無需採取緩解措施。

交通運輸

研究範圍是甚麼？

- 透過城市 TAG 使用《加州環境質量法案》(CEQA)和 LADOT 既定的篩選標準、分析方法和閾值標準
- 對擬建計畫的車輛行駛里程（VMT）以各種數據、方法和模型進行分析，以估計計畫載客量、減少的車輛行程、車輛行車時間，並最終估算擬建計畫的 VMT 收益
- 道奇體育場比賽和活動參加者、員工、遊客、乘客和洛杉磯州立歷史公園遊客和活動參加者的乘車人數估算
- 擬建計畫車站、路口和支撐塔的位置，以及這些組成部份是否因為幾何設計的特徵而令危險顯著增加
- 擬建計畫的建設概念交通繞道圖與運輸路線

主要分析及結論

- 擬建計畫將與 PPOPs（程序、計劃、條例和政策）一致，當中涉及流動系統，包括交通、道路、單車和行人設施
- 在阿拉米達塔和唐人街/州立公園站實施緩解措施時，擬建計畫不會引入任何不安全的物理條件
- 實施緩解措施，令擬建計畫施工期間保持緊急通道暢通

計畫的總車輛行駛里程（VMT）減少量為129,629,500。

交通運輸

影響總結

主題	發現	
	營建工程：	**操作**
減少車輛行駛里程	沒有影響。	沒有影響。
與計劃或政策衝突	影響不大。	影響不大。
計畫設計令危險增加	經緩解後影響不大。	經緩解後影響不大。

如何可將影響降至最低?

營建工程：

- 實施經市政府批准的詳細建設交通管理計劃,當中包括封閉街道、繞道計劃、運輸路線和分階段計劃
- 實施經市政府批准的臨時災害路線計劃，當中包括封閉街道資料和繞道計劃，讓應急車輛透過研究區域並最大限度地減少災害期間對應急回應的影響

工程與營運：

- 增強擬建阿拉米達塔和唐人街/州立公園站的能見度——例如:高能見度行人通道、優化交叉路口警告標示、閃光燈、升級照明以及新的或已升級的交通控制裝置

部落文化資源

研究範圍是甚麼？

- 對重要部落文化資源的重大不良影響
- 根據第52號議會法案諮詢了八個加州美洲原住民部落

主要分析及結論

- 該地區存在部落文化資源，並需實施緩解措施，包括考古測試和數據恢復
- 在建設過程中可能會遇到未給發現的資源；如果美洲原住民監視流程發現潛在資源，可能會暫停施工

影響總結

主題	發現	
	營建工程：	操作
改變部落文化資源	經緩解後影響不大。	沒有影響。

如何可將影響降至最低?

營建工程：

- 實施洛杉磯聯合車站(LAUS)前院文化資源監測和緩解計劃及考古測試計劃
- 保留一名美洲原住民監測員，以監測阿拉米達站所在地於施工期間的干擾地面的活動情況

營運:無需採取緩解措施。

公用事業和服務系統

研究範圍是甚麼？

- 搬遷、建造或擴建水、廢水處理或雨水排放、電力、天然氣或電訊設備
- 計畫對供水的影響
- 計畫是否需要增加污水處理能力
- 堆填區是否有足夠的容量處理計畫產生的固體廢物

主要分析及結論

- 擬建計畫的建設不需要建造新的或擴建的公用設施
- 擬建計畫需要搬遷現有公用事業，因此需與公用事業供應商協調並按照相關的州和地方法規和法規進行
  - 擬建計畫將實施公用事業搬遷計劃，從而盡量減少施工期間對現有公用事業的潛在干擾
- 擬建計畫的營運將需要連接到現有的公用事業系統
- 主要電力將來自可再生能源，現有電力供應量應足夠供給計畫營運
- 擬建計畫的建設和營運將有充足的供水
- 建設和營運期間所產生的污水將按規定進行處理
- 計畫是否會產生超過州或地方標準的固體廢物，或超過當地基礎設施的容量，或以其他方式影響減少固體廢物目標的實踐？

公用事業和服務系統

影響總結

主題	發現	
	營建工程：	操作
供水量充足	影響不大。	影響不大。
廢水系統的需求和容量	影響不大。	影響不大。
固體廢物目標	經緩解後影響不大。	影響不大。
公用事業搬遷或建設	經緩解後影響不大。	影響不大。

如何可將影響降至最低?

營建工程：

- 與公用事業公司合作制定並實施公用事業搬遷計劃，以盡量減少對整個計畫建設過程中對有關服務的影響
- *準備土壤和地下水管理計劃。*

營運:無需採取緩解措施。

野火

研究範圍是甚麼？

- 若擬建計畫位於州責任區 (SRA) 或屬於火災危險嚴重區 (VHFHSZ) 的土地或附近土地，是否會引致與發生火警相關的潛在重大影響
- 基於地形、天氣和燃料的計畫區域內潛在的野火特性
- 計畫是否會嚴重損害已通過的應急應變計劃或緊急疏散計劃？
- 擬建計畫是否需要安裝或維護可能加劇火災風險或對環境造成暫時或持續影響的相關基礎設施
- 擬建計畫是否會因為徑流、火災後邊坡不穩定或排水變化，使人或建築物面臨重大風險，包括下坡或下游洪水或土石流?
- 計畫是否會直接或間接地使人或建築物暴露於與火災有關的重大損失、傷害或死亡風險？

主要分析及結論

- 百老匯路口、體育場塔和道奇體育場站的擬定路線部分位於 VHFHSZ 內
- 擬建計畫的建設和營運不會阻礙進入已確定的災害路線，因此不會嚴重影響應急響應或疏散計劃
- 計畫將遵守相關規範和法規，不會令野火風險增加
- 計畫的設計將進一步降低這些風險

野火

影響總結

主題	發現	
	營建工程：	操作
對緊急情況或疏散計劃構成影響	影響不大。	影響不大。
增加野火風險	影響不大。	影響不大。
安裝/維護相關基建	影響不大。	影響不大。
令人或結構暴露於野火風險之中	影響不大。	影響不大。

如何可將影響降至最低?

營建工程：計畫設計包括消防計劃和體育場塔施工現場周圍的燃料改造區。無需採取緩解措施。

營運:在百老匯路口、體育場塔和道奇體育場站的營運期推行施計畫設計特色，該設計特色與工作人員和攝影系統的安全監控以及消防安全隱患的識別和報告有關。無需採取緩解措施。

替代方案

研究範圍是甚麼？

- 選擇了一系列替代方案，以找出減輕或避免與擬建計畫實施期間引起的重大環境影響的潛在方法，同時令計畫可以實現其主要目標
  - 沒有替代計畫——沒有新的發展
  - 春天街路線替代方案 – 擬建計畫的路線替代方案
  - 交通系統管理替代方案（提升道奇體育場快車）
- 基於幾個替代方案未能滿足大多數基本計畫目標、方案不可行、或無法避免重大的環境影響，該等替代方案已給排除在詳細分析之外，當中包括包括百老匯站路線替代方案、地鐵 L 線（金）聯合車站和學院街站路線替代方案以及直接路線替代方案。

主要分析及結論

- 無計畫替代方案不會改善公共交通通道或提供社區之間的聯繫。此外，車輛行駛里程和車輛擁擠問題不會減少，溫室氣體排放量亦將不會減少，空氣品質亦得不到改善。
- 將春天街替代方案提供直接的交通連接，並改善周邊社區的連通性。然而，替代方案需要更大的佔地面積，並且不會減少顯著的環境影響。
- TSE 替代方案不會提供直接的交通連接或改善周邊社區的連接，亦不會減少 車輛行駛里程（VMT）、溫室氣體排放或改善空氣品質。。

替代方案

替代方案總結

替代方案	發現	
	實現計畫目標的能力	減少重大影響的替代方案
沒有計畫替代方案	不能實現計畫目標	較計畫產生的影響少
春天街路線替代方案	能夠實現計畫目標	與計畫產生的影響相約
運輸系統管理替代方案	不能實現大部份計畫目標	較計畫產生的影響少

環境優越替代方案

TSM替代方案是較理想的環境替代方案，因為它不會產生加州環境品**質法案(CEQA)確認為重大和不可避免的影響，而且此方案整體**產生最小的環境影響。可是，**TSM替代方案對空氣品質、能源、溫室氣體排放、水文和水質以及運輸和交通的影響會較大。然而，道奇體育場快車替代方案不能完全或部分**滿足計畫的大部分目標。

《環境影響報告草案》中的非 CEQA 附加評估

洛杉磯州立歷史公園的使用情況

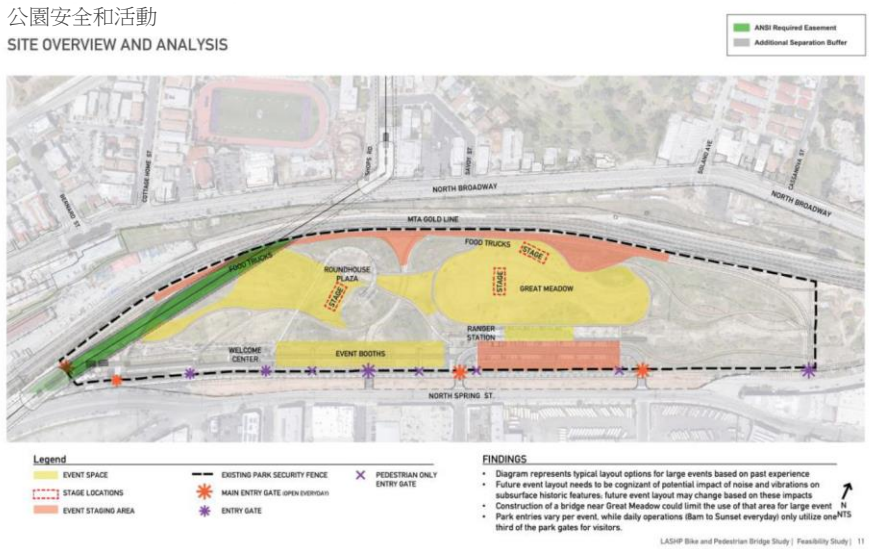
風箏由於擬建計畫路線的位置，即沿公園的西部邊緣，毗鄰地鐵 L 線和人行道，擬建計畫不會顯著減低公園內的安全放風箏範圍

特別活動擬建計畫不會顯著減少公園內的活動空間區域，因為擬建計畫路線的位置橫跨了公園不常用作屏幕和舞台的範圍，而且在擬建計畫路線的大部分情況下仍然可以舉辦活動

阿拉米達站和唐人街/州立公園站的位置

直升機場

- 擬建計畫路線不在機場土地使用計劃覆蓋的區域內，亦不屬於公共機場兩英里範圍內
- 從擬建計畫路線附近直升機場的空域評估所得出的結論如下:擬議計畫的建設和營運將避開與擬議計畫附近現有直升機場相關的空域，不會帶來潛在的空中航行危險，因此不會影響航空活動，包括擬建計畫附近的直升機場



洛杉磯州立歷史公園活動舞台和屏幕的位置及擬建的計畫路線

設計方案A

移動百老匯路口以避開451 E. SAVOY

- 設計方案 A 將包括改變百老匯路口和道奇體育場站之間的整體計畫路線，以避免在451 E.Savoy Street上的空中權限要求。
- 移動百老匯路口將導致路線穿過主教路附近的大教堂高中的一小部分
- 此設計選項包括對百老匯路口、體育場塔和道奇體育場的計畫元素更改。
  - 這將導致體育場塔和道奇體育場站的公用設施需要搬遷和額外的施工時間
  - 擬建計畫乘客來往道奇體育場站和道奇體育場之間需更長的步行時間

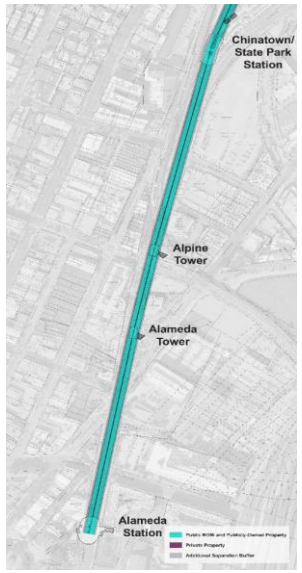
擬建計畫調整

設計方案A

設計方案B

沿阿拉米達街的單棟塔樓

- 回應持份者的意見，他們要求計畫發起人評估將阿拉米達街沿線的塔樓數量從兩座減少到一座的潛力
- 當中包括將阿拉米達塔的總高度增加50英尺，以及從阿拉米達站和唐人街/州立公園站之間的擬建計畫中將阿爾卑斯塔拆除
- 塔樓高度增加與額外的建築活動相符
- 這樣將導致潛在的技術限制
- 以及需要額外的私人空中權限要求



擬建計畫調整

設計方案B

擬建計畫調整

設計方案B

設計方案C

增加唐人街/州立公園站的高度

- 回應持份者的意見，他們要求計畫發起人考慮將唐人街/州立公園站加高
- 設計方案C將包括將唐人街/州立公園站的總高度增加35英尺
- 車站高度增加與額外的建築活動相符
- 由於高度可能會對乘客體驗有影響，也會導致登平台升高，因此需要額外的垂流動設備去進入和升高平台

擬建計畫調整

設計方案C

設計方案D

唐人街/州立公園站作為非客運樞紐站

- 回應持份者的意見，他們要求計畫發起人考慮在唐人街/州立公園站不設立乘客通道，從而增加沿春天街進出車站的車廂高度
- 使用方案D將涉及用擬建的唐人街/州立公園站代替非客運樞紐站。
- 此設計使用選項將具有與擬建計畫相同的位置、高度、寬度、長度和建築裝飾。
- 不會改善洛杉磯州立歷史公園、唐人街和 Mission Junction社區之間的連通性

設計使用方案E

洛杉磯州立歷史公園行人天橋

- 設計和使用方案E將包括一座ADA無障礙行人天橋，該天橋將從洛杉磯州立歷史公園的中心部分緩坡，越過地鐵 L 線（金線），直至北百老匯。
- 雖然行人天橋不屬擬建計畫的一部分，但《環境影響報告草案》中包括了對公園行人天橋的分析
- 洛杉磯州立歷史公園總體規劃和最終《環境影響報告》以及單車和行人天橋研究中提及，這座天橋將從唐人街和索拉諾群峽谷社區進入公園的行人和單車徑提供安全的通道

資料來源:天橋可行性研究

車輛停泊研究概述

擬建計畫車位需求 (2042)

- 加州環境品質法案(CEQA)並無要求對車輛停泊問題進行分析，但計畫進行了全面的泊車研究，並已獲得運輸局評審
- 車輛停泊研究自2022年9月9日起於運輸局網站上可供查閱

研究範圍是甚麼？

- 大多數乘客預計將轉乘公共交通工具到達計畫
- 在擬建的阿拉米達站和唐人街/州立公園站 ½ 英里範圍內，公共泊車位和車庫以及街道上約提供共 10,290 個車位

車輛停泊研究概述

車輛停泊研究結論

車位類型	比賽日泊車			
	車位供應	停泊車數	用量	車位供應量
室內車位	6,876	2,173	32%	4,703
街頭車位	3,417	2,017	59%	1,400
總數				
擬建計畫車位需求 (2042)	-	(213) 922-6913		
可供計畫使用的總室內車位數量	6,876	2,963	43%	3,913

*數據根據2021年9月10日洛杉磯道奇隊主場迎戰聖地牙哥教士隊的晚上進行；當天付費出席人數為48,403，超過2019年洛杉磯道奇隊平日晚間比賽的平均水平。與運輸局和 LADOT 合作，車輪停泊研究將室內公共泊車位置增加46%，以應對COVID-19疫情對車位需求。

對於擬建計畫的潛在停車需求，擬建計畫的行人路上有大量可用車位供應。即使某些現有的停車場需重新開發，附近也有大量的室內車位供應,以滿足擬建計畫對車位的需求。

計畫鼓勵乘客使用公共交通工具

- 與當地企業建立企業間的合作夥伴關係以預售捆綁套餐，當中包括企業顧客可使用路邊停車位
- 支持實施/擴展各種管理策略，包括限時停車限制和比賽期間的停車計時器，以阻止騎手在社區停車並為居民和當地企業保留可用空間

答詢時段

公眾意見徵詢會

- 會議目的:讓公眾有機會對環境影響報告草案(DEIR)發表評論

今天!

了解環境影響報告草案(DEIR)的主要分析和結論，並提供口頭公眾評論。

今天將不設問答環節

如欲發表意見，請先舉手，被選中後，你將被要求寂靜並提出意見。被選中的市民將享有兩分鐘的時間發表意見。

今天透過Zoom所發表的意見將不當作是是正式的公眾評論。

在2023年1月17日前如何評論《環境影響報告草案》

如何評論《環境影響報告草案》

议程

1. 会议目的
2. 如何参加本次虚拟会议
3. 概览
4. 加州环境质量法案（CEQA）流程概览
5. 洛杉矶空中快捷交通项目概览
6. 环境影响报告草案重点分析及总结
7. 公众评议期

如需Zoom方面的帮助：请发电子邮件到 mary.nooristani@aecom.com 或致电(619) 251-9180

会议目的

环境影响报告草案重点分析及总结

问答环节

《加州环境质量法案》（CEQA）流程

45天
范围界定期2020年10月1日–11月16日

90天环境影响报告草案公众审查
2022年10月17日 - 2023年1月17日

都会交通局董事会
对终版环境影响报告的认证
2023年

今天！
了解环境影响报告草案的重点分析及总结，并提供口头的公众意见。
今天将没有问答环节。

持续进行社区外展服务

两次
信息
说明会
三次公众听证会

我们在这里

今天通过Zoom聊天发送的沟通内容，将不会视为正式的公众意见。

如何在2023年1月17日前对环境影响报告草案提出意见。

额外的公众听证会

洛杉矶市区/唐人街
2023年1月12日（星期四），下午5-7点

如何参加本次会议

今天！

了解环境影响报告草案的重点分析及总结，并提供口头的公众意见。今天将没有问答环节。

在公众评议期期间：若您举手，将呼叫您发言，请**取消静音并提供公共意**见。

概览

概览

- 洛杉矶空中快捷交通技术有限公司提议洛杉矶空中快捷交通项目
- 洛杉矶都会交通局（交通局）是本案的主导机构，根据《加州环境质量法案》（CEQA）编制环境影响报告
- 环境影响报告草案评估了与项目施工和运营相关的潜在环境影响

概览

- 作为领导机构，都会交通局有责任确保：
  - 环境影响报告充分评估了项目的潜在影响
  - 提议的缓解措施是适当的
  - 在公告、公共宣传和文件分发方面均遵守了CEQA流程

概览

- 目前我们正在根据CEQA要求，征集公众对环境影响报告草案的意见
  - 公众听证会
  - 电子邮件
  - 邮件
  - 电话
- 参议院第44号方案
  - 旨在简化对洛杉矶县环保先锋交通项目的CEQA审查
  - 拟建项目将是参议院第44号法案下的第一个环保先锋交通项目
  - 公证听证会要求
    - **信息说明会：在公众评议期的头10个日历日内，向公众介绍环境影响报告草案的主要分析及结论**
    - 公众听证会：在公众评议期的最后10个日历日内，获得公众证词

《加州环境质量法案》（CEQA）流程概览

CEQA流程

所有由公共机构承办、资助或需要公共机构批准的项目概须

告知公众和决策者

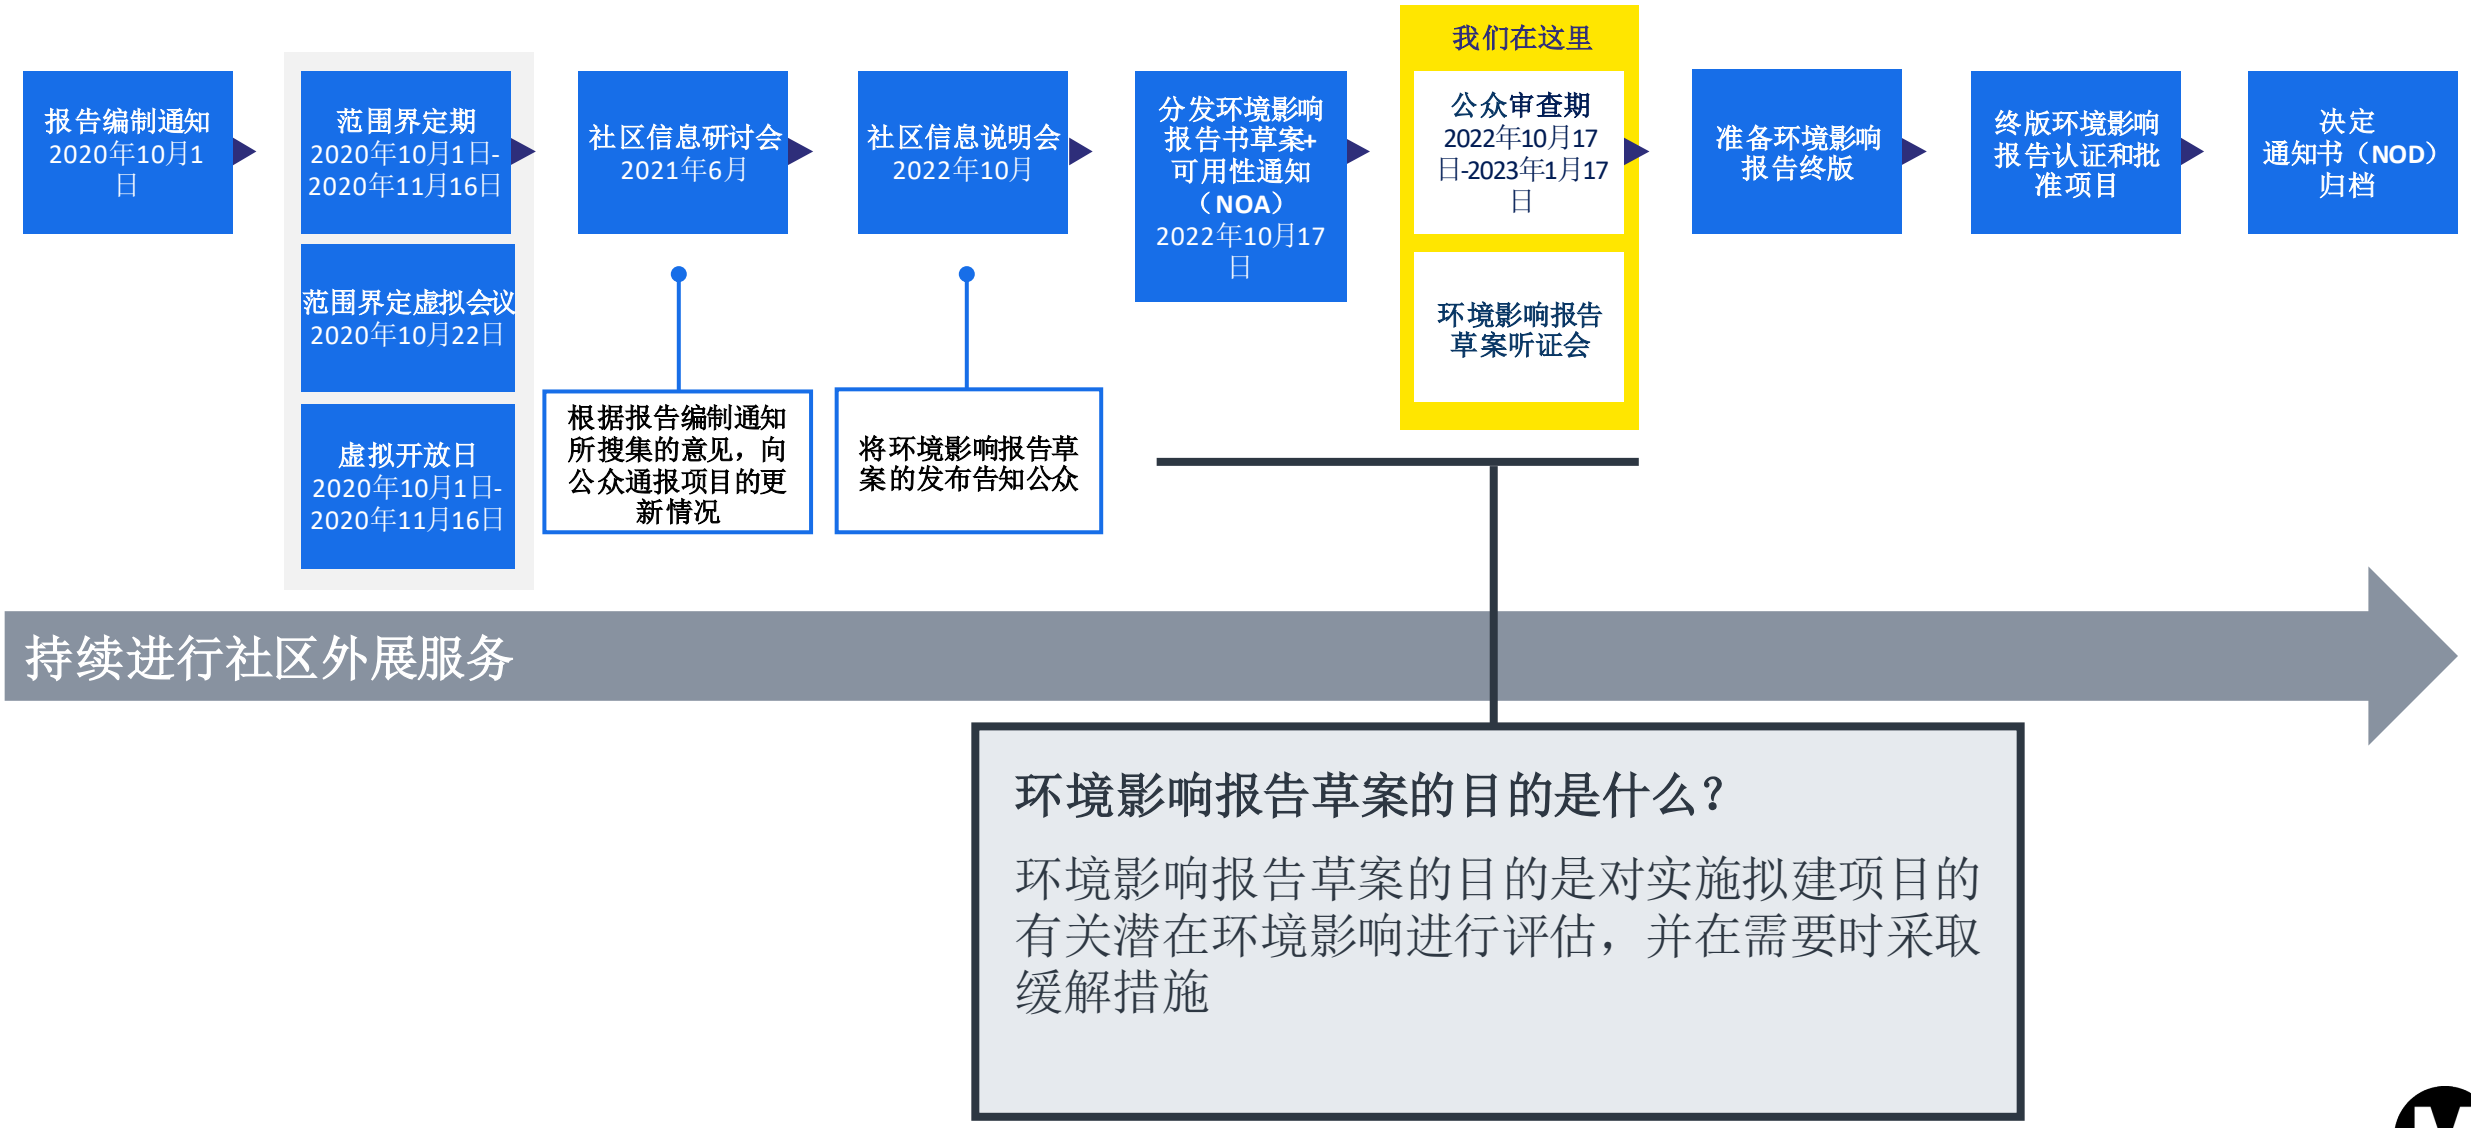
披露拟建项目可能造成的环境影响

提供对环境问题发表意见的机会

两个公众评议期：公众范围界定期以及报告草案公众审查期

参议院第44号法案要求在环境影响报告草案的公众审查期间举行两次公众会议：信息研讨会与公众听证会

时间线



环境影响报告草案的目的是什么？

环境影响报告草案的目的是对实施拟建项目的有关潜在环境影响进行评估，并在需要时采取缓解措施

在环境影响报告草案的公众审查期间举行多次公众会议

信息说明会

环境影响报告草案第一次信息说明会	10月22日（周六）	虚拟会议
环境影响报告草案第二次信息说明会	10月25日（周二）	现场会议

洛杉矶都会交通局已经举办了两次信息研讨会，向公众介绍环境影响报告草案的重点分析及总结

公众听证会

环境影响报告草案第一次公听会	12月10日（周六）	现场会议
环境影响报告草案第二次公听会	12月13日（周二）	虚拟会议
环境影响报告草案第三次公听会	1月12日（周二）	现场会议

洛杉矶都会交通局将举办三次公众听证会，听取公众对环境影响报告草案的意见

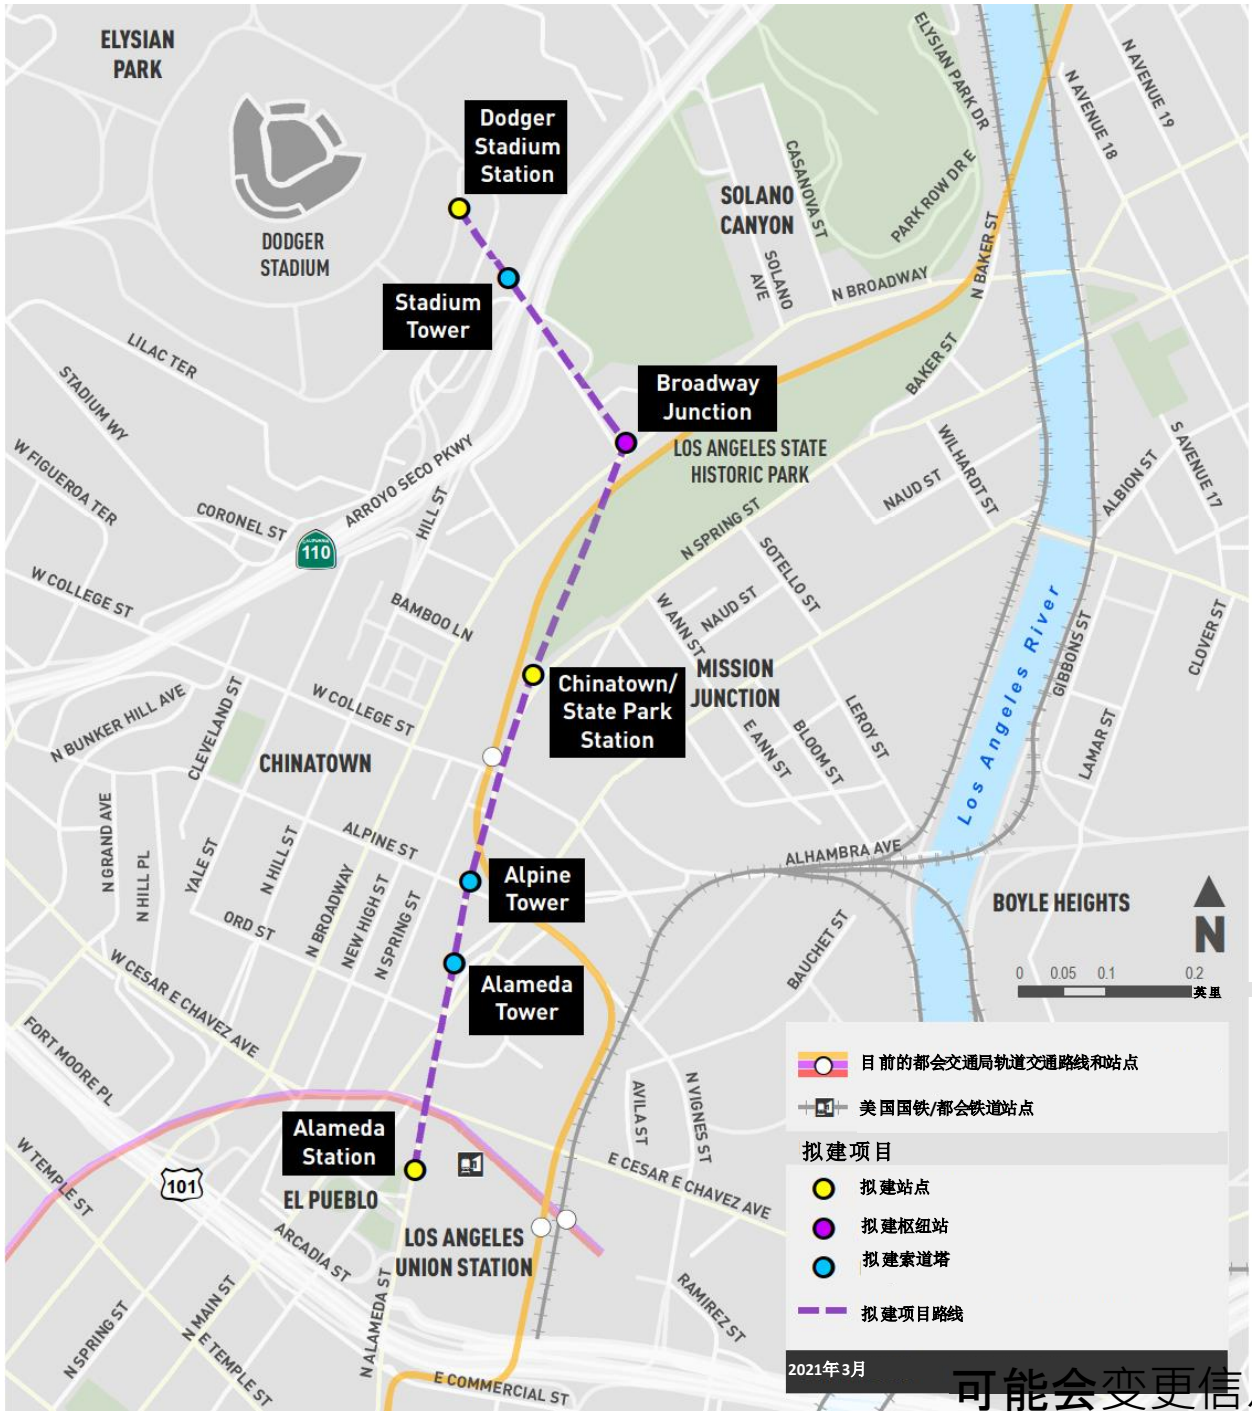
项目描述

项目概况

- 通过1.2英里长的空中缆车系统，提供从洛杉矶联合车站（LAUS）到道奇体育馆的永久性交通连接
  - 从洛杉矶联合车站到道奇体育馆的旅程约为7分钟
- 运力约为每个方向每小时5,000人次
- 拟建项目将每天运作，为现有居民、上班族、公园使用者和洛杉矶的访客提供服务
- 可通过中间的唐人街/州立公园站前往洛杉矶州立历史公园和周边社区
- 零排放且环保的快速交通系统，由于减少了道奇体育馆内和周围以及附近街道、主要干道和高速公路上的车辆出行，将减少温室气体排放

项目地点和路线

- 本项目将以洛杉矶联合车站和洛杉矶古城(El Pueblo)附近为起点，以道奇体育馆为终点，还有一个中间站位于洛杉矶州立历史公园最南门入口处
- 连接包括唐人街、Mission Junction社区、伊利森公园、回音（Echo）公园和索拉诺（Solano）峡谷的周边社区与联合车站的区域交通系统。
- 拟建的项目路线尽可能沿着沿公共通行权（ROW）和公有土地，并尽可能减少使用在私人地产上空的空中权利，同时考虑到现有和未来的邻近土地用途



可能会变更信

空中交通系统的先例

- 空中交通技术已经使用了100多年
- 现代系统是一种可行的城市交通方式，目前正在世界各地的许多城市运行
- 世界各地如玻利维亚的拉巴斯和墨西哥的墨西哥城已有的空中缆车交通系统，正为相应的城市人口提供快速交通服务
- 拟建项目与德国科布伦茨、越南富国岛和法国图卢兹所使用的系统类似，是一个“3S”空中缆车
  - 车厢可搭载约30至40名乘客
  - 系统将提供平稳流畅的乘车体验

俄勒冈州波特兰

纽约罗斯福岛

玻利维亚拉巴斯

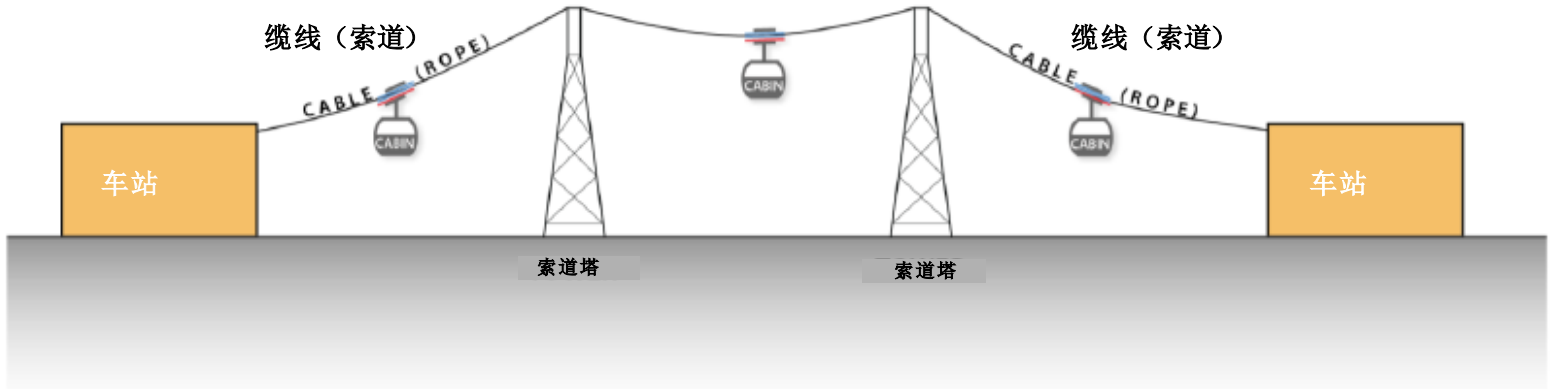
墨西哥的墨西哥城

法国图卢兹

哥伦比亚麦德林

索道技术

拟建项目将包括几个客站、一个非客枢纽站，以及为输送空中缆车的缆线提供支撑的三个索道塔



三个客站

- 包括机械、电气和管道系统、乘车站台和垂直流通（如楼梯、自动扶梯和电梯）
- 包括售票、检票和排队的区域；乘客的上下车；运营；和系统设备

一个非客枢纽站

- 要求空中快捷交通系统转过缆线并继续沿路线行驶

为缆线和缆车提供支撑的三个索道塔

“3S”系统与缆车车厢

“3S”系统

- “3S”系统包括三根缆索：两根“轨道索”用于稳定，第三根“牵引索”用于使车厢移动。
- 车厢与持续循环的牵引索分离并减速进入车站，以便乘客上下车，然后车厢再重新连接至牵引索上

缆车车厢

- 每个车厢可容纳30至40名乘客，具体取决于座位和车厢便利设施的具体配置
- 符合《美国残疾人法案》（ADA）的无障碍通道，可以放置轮椅
- 车厢里可以坐着或站着
- 为婴儿车和自行车的放置提供了空间
- 在运营高峰期，将以每小时13.4英里的最高速度行驶
- 车厢进站时，速度将降到大约每秒一英尺（低于每小时一英里），以便乘客能够登上和离开移动中的车厢

目的和需求

- 通过空中缆车系统提供从联合车站到道奇体育馆物业的直接交通连接
- 连接包括唐人街、Mission Junction社区、洛杉矶州立历史公园、伊利森公园、回音公园和索拉诺峡谷的周边社区与联合车站的区域交通系统
- 通过在洛杉矶联合车站的区域交通系统之间提供日常的高运力空中快捷交通连接，改善该地区的流动性和可及性
- 在唐人街/州立公园站提供一个交通转换点
- 使用零排放的电力和蓄电池，通过运营空中快捷交通系统提供具有环境永续性的交通方式，以减少温室气体排放及改善空气质量

道奇体育馆：该地区到访次数最多的场所之一

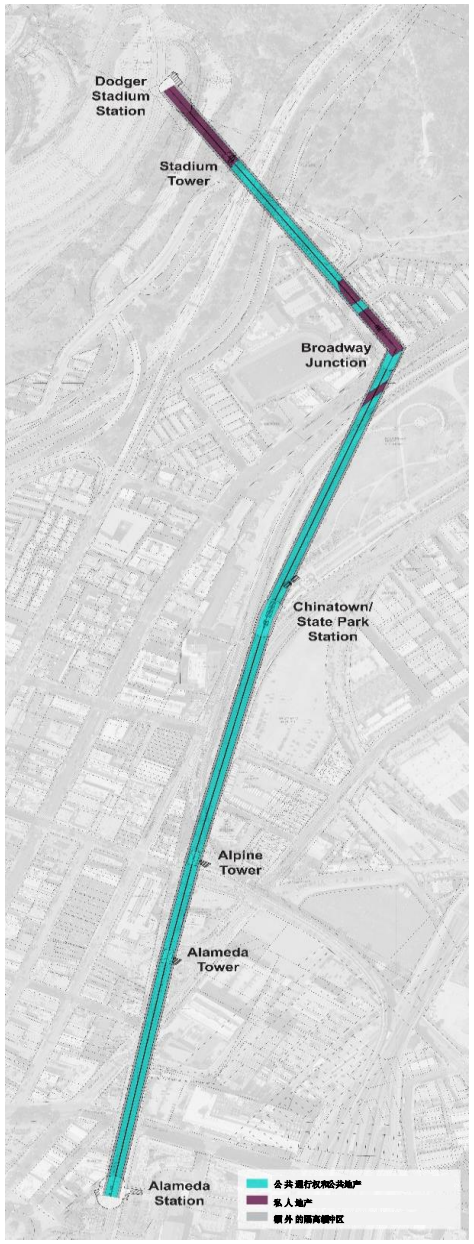
- 每年大约有100场棒球比赛和其它活动，吸引了大量的本地区人群
- 绝大多数访客都是自驾
- 车辆在周边社区和附近的高速公路上造成拥堵
- 拟建项目路线附近的社区被确定为受加州多种污染源不同程度影响的社区，并处于该类社区的第90-100百分位（CalEnviroScreen 4.0地图）。

项目目标

- 通过直接连接联合车站和作为区域活动中心的道奇体育馆，为需要转换交通方式的乘客提供更多出行选择。
- 通过空中交通系统的独特体验以及连通至道奇体育馆的交通服务，吸引新的交通乘客乘坐都会交通局交通系统。
- 为人们提供前往道奇体育馆的高效、高运力和更快捷的交通，从而改善交通体验。
- 减少该地区的车辆数量，以提高道奇体育馆附近社区的安全性
- 在球赛和特别活动期间，由于减少了道奇体育馆及其周围、社区街道、主干道和高速公路上的车辆拥堵，因而减少了与交通相关的污染和温室气体排放。
- 加强人们与联合车站和道奇体育馆的区域公共交通枢纽的连通性。
- 改善乘客交通体验,为使用空中快捷交通的乘客和道奇队球迷提供洛杉矶地区的独特风景。
- 为洛杉矶地区带来世界级的空中交通系统。
- 为过去曾经交通服务不足的区域（包括洛杉矶州立历史公园和伊利森公园），通过提供通往这些区域的第一英里/最后一英里的交通工具和和步行通道，加强社区连通性。
- 为社区以及洛杉矶州立历史公园和伊利森公园的交通确定可类比的、可负担的、易得到的票价机会。
- 通过在拟建项目的材料、施工、运营和维护中融入可持续和环境友好型设计特点，尽量减少项目的环境足迹。
- 使用零排放的电力和蓄电池，通过空中快捷交通系统提供具有可持续性的交通方式，以减少温室气体排放及改善空气质量。
- 拟建的项目路线尽可能沿着沿公共通行权（ROW）和公有地产，并尽量减少使用在私人地产上空的空中权利，同时考虑到现有和未来的邻近土地用途。

空中净空 | 路线跨越了公共通行权/公有地产和私有地产上空

- 美国国家标准协会（ANSI）标准第B77.1条中记载了索道和缆车车厢的设计和操作行业标准，该标准是与制造商、消费者和监管机构协调制定的
  - ANSI第B77.1条规定了索道和缆车车厢与车辆、行人、植被、建筑物和其它结构等元素之间的垂直和水平净空距离
- 拟建的项目路线尽可能沿着沿公共通行权和公有地产，并尽量减少使用在私人地产上空的空中权利，同时考虑到现有和未来的邻近土地用途
- 选择项目路线时所考虑的其它因素：
  - 尽量减少对行车道、停车道以及自行车和步行通道的改变
  - 尽量减少公用事业设施的搬迁
  - 历史与考古资源的位置
  - 尽量减少使用不平坦或困难的地形
  - 技术考虑和可行性



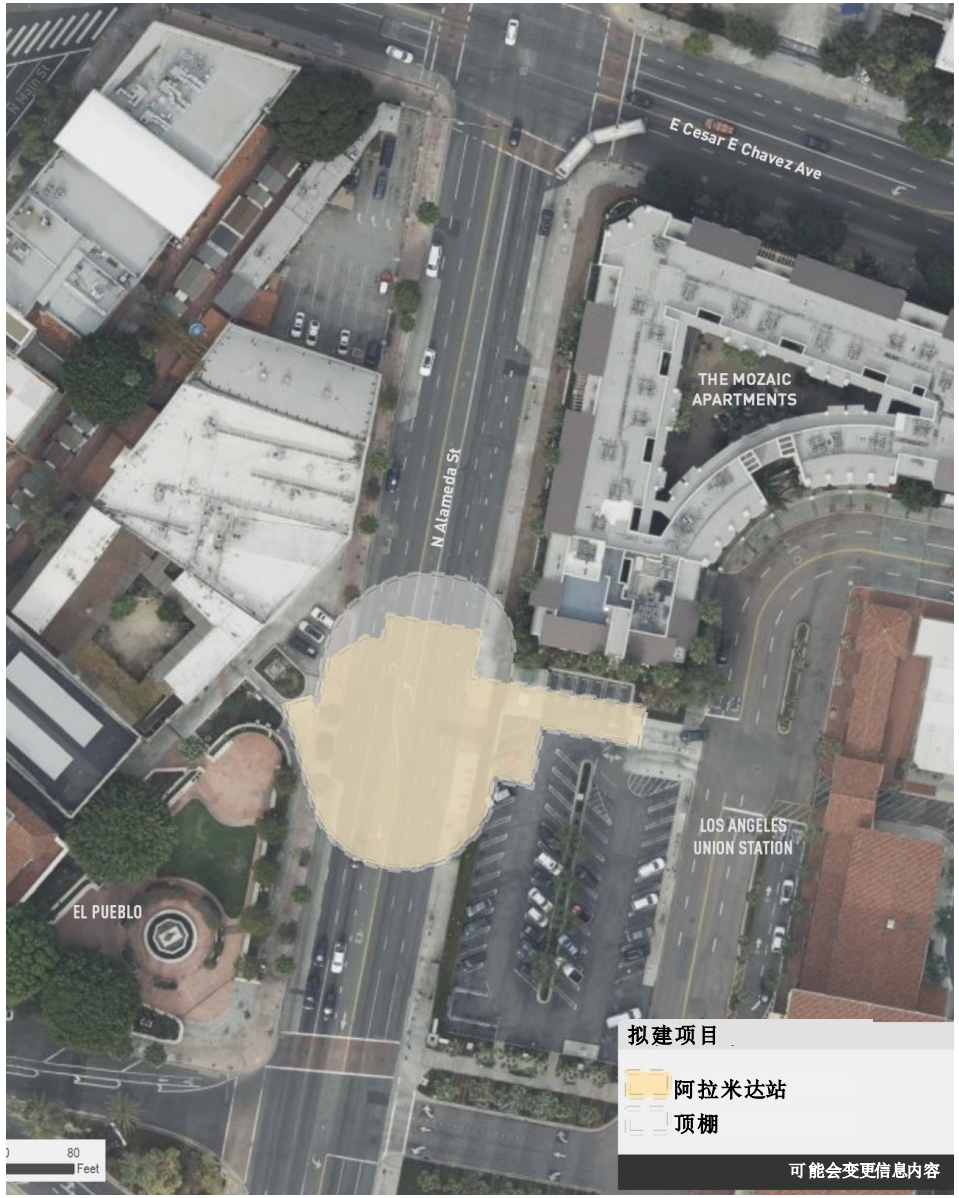
设计

- 设计目标是制定一个共用的建筑设计，使整个空中交通索道系统联合起来，同时让每个主要组成部分对各自所在位置的城市状况作出贡献
- 同样重要的是，要尽量减少车站、非客运枢纽站和索道塔的感知规模和感知质量
- 车站和枢纽站采用简单的桶形拱顶形式，提供保护索道设备所需的最小封闭空间，并为乘车站台上的乘客提供遮荫和风雨防护
- 每个索道塔均设计为不妨碍附近车辆与行人通行，并且塔身涂成中性的浅灰色，与周围的城市环境保持一致

阿拉米达站

- 位于阿拉米达街，毗邻规划中的联合车站前广场以及洛杉矶街与塞萨尔查韦斯（Cesar Chaves）大道之间的Placita de Dolores
- 这个车站大约有173英尺长，109英尺宽，最高点离地面78英尺
- 乘车站台将高出阿拉米达街约31英尺

- 将从Placita de Dolores北边、在洛杉矶古城的拟建的新行人广场上引入垂直流通设施， 东边是规划中的联合车站前广场



阿拉米达索道塔

- 位于阿拉米达三角区，阿拉米达街、北主街和阿罕布拉大道之间的公共通行权范围
- 高度将为195英尺，缆线悬挂在离地面175英尺处
- 对阿拉米达三角带的自然景观和硬景观进行美化升级，包括重新使用和整合现有的路面铺面

高山街索道塔

- 位于阿拉米达街和高山街的东北角，与轻轨L线（金线）相邻
- 该地块为市属地块，目前为城市车辆的私人停车场
- 最高点将为195英尺，缆线悬挂在离地面175英尺处
- 索道塔附近的自然景观和硬景观美化

唐人街/州立公园站

- 车站将位于洛杉矶州立历史公园最南端的春天街附近
- 车站的南半部分将位于公共通行权范围，而北半部分将与洛杉矶州立历史公园的南部边界融为一体
- 这个车站大约有200英尺长，80英尺宽，最高点离地面98英尺
- 乘车站台高出地面约50英尺
- 通过电梯和楼梯，可以从中层楼进入乘车站台
- 将包含自然景观以及硬景观的安装，包括使用花岗岩铺面

唐人街/州立公园站

车站休闲设施

- 交通转换点为乘客提供第一英里和最后一英里的多种形式选择，如自行车共享计划
- 步行通道升级，包括硬景观与自然景观的美化、安装遮阳结构和潜在的座位

公园休闲设施

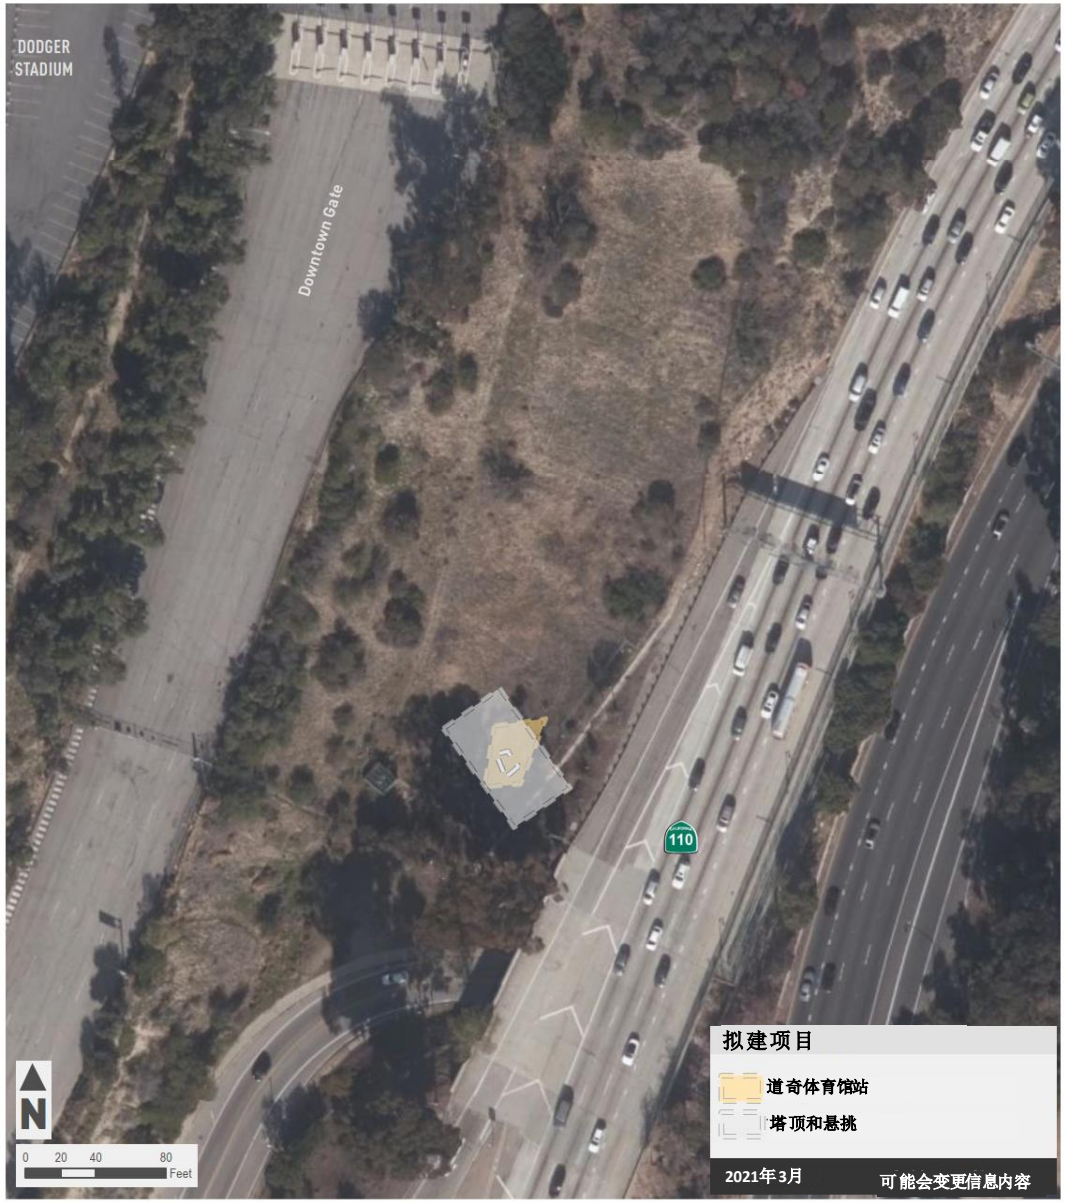
- 740平方英尺的特许经营商店
- 770平方英尺的洗手间
- 220平方英尺的有顶走廊，连接特许经营商店区和洗手间

百老汇枢纽站

- 百老汇枢纽站是一个非客运枢纽站，将位于北百老汇和主教路的交叉路口
- 位于1201 N.百老汇街的现有商业建筑将被拆除
- 车站大约将有227英尺长，60英尺宽，最高点离地98英尺

体育馆索道塔

- 位于体育馆路以北的山坡上的私人物业，夹在道奇体育馆市中心大门和SR-110州道之间
- 高179英尺，缆线悬挂在距离地面159英尺处，塔底附近有景观



道奇体育馆站

- 位于道奇体育馆物业西南部分，靠近市中心的大门处

道奇体育馆站

- 这个车站大约有194英尺长，80英尺宽，最高点离地面74英尺
- 在该站的缆车车厢将在同一水平面上让乘客抵达和离开，乘客排队等候区也将在同一水平面
- 道奇体育馆站将包括站台下方的地下区域，用于储存和维护车厢，以及用作工作人员的休息室、储物柜和零件储存区
    - 当系统不使用时（运营时间结束后），缆车车厢将返回道奇体育馆站并存放在该站
- 供乘客使用的洗手间将设在车站内

道奇体育馆站还将包括通往道奇体育馆的步行通道，包括硬景观和自然景观美化措施以及增加潜在的座位

永续性

- 拟建项目的永续性特点将包括以下法规中的特点：
  - 2019年加州绿色建筑标准规范
  - 美国绿色建筑委员会面向新建筑的能源与环境设计先锋（LEED）认证体系
  - 永续基础设施研究所的远景（Envision）评级体系
- 拟建项目的电力将100%由洛杉矶市水电部门的绿色电力计划供应
- 每个车站、索道塔和枢纽站均由备用电池储蓄电力，而非由柴油发电机提供备用电力

拟建项目将为道奇体育馆的访客提供一个可持续、高运力、零排放的空中快捷交通索道选择，同时也连通道奇体育馆、周边社区和可由洛杉矶联合车站进入的区域交通系统。空中快捷交通索道技术很安静，拟建项目将减少行车里程（VMT）和交通拥堵，从而减少温室气体排放并改善空气质量。

建筑施工

时间线

- 预计最早将于2024年开始拟建项目的施工，工期大约需要25个月，包括施工、缆线安装和系统测试。

施工时间

- 预计施工时间为每天10小时，并可能为了满足特殊情况和限制要求而有所改动
- 施工时间如发生变动，包括延长施工时间和可能在周日施工，都需要获得洛杉矶市警察专员委员会的批准

车道封闭

- 预期的封闭措施将包括车道封闭，车道将在某些施工阶段实施一天24小时封闭，或者在某些施工阶段实施时段封闭，即道路每天将于施工时段封闭约10小时，并在非施工时段每天重新开放约14小时
- 至于时段封闭，在非施工时段时，会在可行时在建筑工地上方放置钢板，以便车辆和行人通行。
- 封闭地点和时间将因各施工场地与施工阶段而异
- 拟建项目将实施施工交通管理计划，其中包括绕行路线，并确保在所有施工活动中保留应急通道

详细的施工假设

- 详细的施工假设载于环境影响报告草案附录B中

环境影响报告草案重点分析及结论

环境资源议题

根据CEQA指南附录G的所有环境资源议题
都已在环境影响报告中获得处理

- 美学
- 农业/林业
- 空气质量
- 生物资源
- 文化/历史资源
- 能源
- 地质/土壤
- 温室气体排放
- 危害/危险物品
- 水文/水质
- 土地使用/规划
- 矿产资源
- 噪音
- 人口/住房
- 公共服务
- 休闲娱乐
- 交通运输
- 部落文化资源
- 公用事业/服务系统
- 野生动植物

美学

研究内容

- 围绕项目路线的项目组成部分的视觉影响
- 代表视觉特征的主要观察点，包括是否有景观美化、主要土地用途、建筑物的规模，或主要的自然风景、风景资源和可用的实质性视觉元素，如开放空间资源、行道树和建筑物正面
- 观看者及观看者反应，包括行人和休闲者（如公园使用者）
- 虽然没有指明的自然风景，但可以看到洛杉矶市中心的天际线、联合车站、洛杉矶古城、洛杉矶州立历史公园、阿罗约·塞科（Arroyo Seco）林荫大道、道奇体育馆以及圣加布里埃尔（San Gabriel）山脉和圣贝纳迪诺（San Bernardino）山脉的风景
- 光线与眩光

重点分析及总结

- 拟建项目不会严重阻挡风景和全景景观，例如洛杉矶市中心的天际线、联合车站、洛杉矶古城、洛杉矶州立历史公园、阿罗约·塞科林荫大道、道奇体育馆以及圣加布里埃尔山脉和圣贝纳迪诺山脉的风景
- 拟建项目获得的资格与批准 - 其中包括提高拟建项目及其周边社区的视觉特性及特点的设计标准 - 不会与适用的分区或其它管理风景质量的法规发生冲突
- 拟建项目不会发出大量光线或眩光，并将遵守适用的城市照明法规

从州立历史公园向洛杉矶市区天际线看去的现有视图和模拟视图

美学

影响总结

主题	查找	
	建筑施工	运营
自然风景	影响不重大	影响不重大
景观资源	无影响	无影响
视觉特征	影响不重大	影响不重大
光线与眩光	影响不重大	影响不重大

如何尽量减少影响？

建筑施工：屏障和隔音墙将包括一个隐私屏。本项目将实行最佳管理做法，以减少视觉影响。无须采取缓解措施。

运营：项目设计特点，包括建筑照明和指示牌照明。无须采取缓解措施。

农林资源

研究内容

- 项目位于体育馆索道塔和道奇体育馆站的场地是否会与农业分区冲突

重点分析及总结

- 道奇体育馆的土地性质不包含农业用途，并受到有条件使用许可的限制，该许可允许运营美国职业棒球大联盟体育馆和各种附属建筑和各种用途，包括到该地点的“大众交通服务”；因此，拟建项目的建设和运营不会与现有的农业分区相冲突

影响总结

主题	查找	
	建筑施工	运营
农田转换	无影响	无影响
与林地分区冲突	无影响	无影响
林地损失	无影响	无影响
农业用途	无影响	无影响
农业分区与威廉姆森法案	影响不重大	影响不重大

如何尽量减少影响？

无须采取缓解措施。

空气质量

研究内容

- 拟建项目的施工和运营对区域和地方范围内的空气质量的潜在影响
- 空气污染物的特点和影响
- 已获通过的管理空气质量的法规
- 健康风险评估（HRA），评估与本项目建设相关的预计癌症风险和非癌症慢性危害指数

重点分析及总结

- 拟建项目将符合适用的空气质量计划要求
- 拟建项目因施工导致的预计排放量应低于污染物和排放物的显著性阈值
- 拟建项目在运营期间不会让敏感受体暴露于大量污染物，原因是拟建项目不包含任何会在运营期间导致对环境空气质量产生重大影响的土地用途或运营排放
- 与现状相比，拟建项目将通过减少行车里程（VMT）从而减少排放，使相关标准的空气污染物排放出现净减少
- 根据健康风险评估（HRA）的结果，拟建项目将导致敏感受体受到与暴露在毒性空气污染物（TACs）的大量污染物浓度中相关的影响，影响未及重大程度

空气质量

影响总结

主题	查找	
	建筑施工	运营
空气质量计划	影响不重大	影响不重大
空气污染物增多	影响不重大	影响不重大
敏感受体	影响不重大	影响不重大
其他排放	影响不重大	影响不重大

如何尽量减少影响?

建筑施工：项目设计特点要求所有大于50马力的非道路柴油动力施工设备应符合美国环保局（USEPA）颁布的非道路柴油发动机的第4级排放标准。无须采取缓解措施。

运营：无须采取缓解措施。

生物资源

研究内容

- 本项目是否会影响处于特殊状态的物种及其栖息地
- 本项目是否会影响河边栖息地或受保护的湿地
- 本项目干扰路线沿线的野生动物移动的可能性
- 本项目是否会与保护生物资源的本地政策或条例（例如树木保育政策或条例）相冲突
- 本项目是否会与已通过的栖息地保护计划相冲突

重点分析及总结

- 项目区域一般不为特殊物种提供栖息地；然而，在拟建项目施工期间移除成熟的棕榈树和桉树，可能会导致蝙蝠栖息地遭到移除
- 项目区域不包含河边栖息地、其他敏感的自然群落或受保护的湿地；因此，不会产生影响
- 项目区域不作区域野生动物走廊之用；然而，施工活动可能会导致蝙蝠和鸟类避开正在施工中的区域
- 本项目将根据市政府的《原生树木保护条例》、加州公园和休闲局的要求以及其它适用的要求，对移走的树木进行补种

生物资源

影响总结

主题	查找	
	建筑施工	运营
河边栖息地	无影响	无影响
受保护的湿地	无影响	无影响
生物计划或政策	影响不重大	无影响
干扰物种移动	采取缓解措施后无重大影响	影响不重大
栖息地改造	采取缓解措施后无重大影响	影响不重大

如何尽量减少影响？

建筑施工：

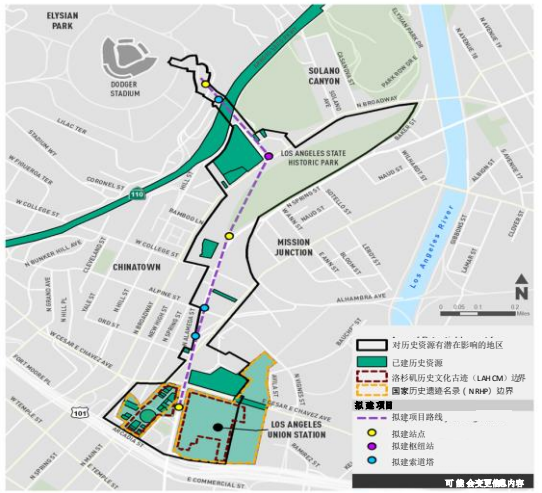
- 实施项目设计特点，建立树木保护区以保护树木
- 施工前进行筑巢调查及采取措施以避免并尽量减少对筑巢鸟类的影响

运营：无须采取缓解措施。

文化资源

研究内容

- 对“潜在影响区”内的29项已建历史资源产生直接或间接影响，包括洛杉矶联合车站总站及其场地、洛杉矶广场历史区、大教堂（Cathedral）高中、以及阿罗约·塞科（Arroyo Seco）林荫大道历史区
- 对“直接影响区”内的考古资源（包括La Placita、Zanja Madre和南太平洋铁路的河边车站）因地面干扰造成的影响
- **重点分析及总结**
- 历史资源
  - 计划中的阿拉米达站的建设有可能会对酿酒厂和El Grito壁画造成直接和间接影响；但是，影响将会被减轻到未及重大程度
  - 对所有其它历史资源，与施工和运营有关的影响将未及重大程度
- 考古资源
  - 计划中阿拉米达站、阿拉米达三角区、高山街索道塔和唐人街/州立公园站的建设有可能对考古资源的意义造成实质性的不利变化；但是，影响将被减轻到未及重大程度



对已建历史资源有潜在影响的地区

对考古资源有直接影响的地区

文化资源

影响总结

主题	查找	
	建筑施工	运营
历史资源	采取缓解措施后无重大影响	影响不重大
考古资源	采取缓解措施后无重大影响	无影响
扰乱人类遗迹	采取缓解措施后无重大影响	无影响

如何尽量减少影响？

- 历史资源
  - 项目设计特点是在施工前和施工后对酿酒厂和El Grito壁画进行记录和保护，以及在施工期间对El Grito壁画进行保护
  - 在拟建的阿拉米达站施工期间，对振动进行监测并限制使用可调节的地面压实装置
- 考古资源
  - 制定和实施文化资源监测与缓解计划以及考古资源工作者实施方案
  - 拟建的阿拉米达站和唐人街/州立公园站的施工前考古测试计划
  - 可能重新设计洛杉矶州立历史公园便利设施的位置，以避开该地的考古资源

能源

研究内容

- 与能源相关的联邦、州和地方法律和法规之概述
- 加州的能源生产、供应和消费之概况
- 与施工有关的能源资源以及与项目运营有关的年度能源需求的评估

重点分析及总结

- 与拟建项目施工相关的临时能源消耗，将导致与拟建项目运营相关的能源消耗长期减少
- 相关的主要用电将来自可再生资源，通过洛杉矶水电局的绿色电力计划供应
- 拟建项目将减少机动车流量，增加乘坐公共交通的人次，进而减少客运车辆对化石燃料的消耗

影响总结

主题	查找	
	建筑施工	运营
浪费、低效或不必要的消费	影响不重大	影响不重大
国家或地方能源计划	影响不重大	影响不重大

如何尽量减少影响？

无须采取缓解措施。

地质和土壤

研究内容

- 项目是否容易受到地震灾害影响，如强烈的地面震动、地质断层、土壤液化或山体滑坡等
- 项目是否位于不稳定的、可能导致场内或场外的滑坡、横向扩展、地陷、土壤液化或坍塌的地质上。
- 项目路线是否含有可能对生命或财产造成重大的直接或间接风险的膨胀土
- 项目施工直接或间接破坏独特的古生物资源或遗址或独特的地质特征的可能性

重点分析及总结

- 虽然项目区域位于南加州地震活跃区，但如果遵守现有标准和规范并采取缓解措施，在拟建项目的施工过程中，与强震地面震动、地震相关的地面破坏和/或土壤液化有关的影响将降低至不重大的程度
- 项目的应急行动计划将包括应急响应协议，并将规定在发生大地震时，系统将全部疏散和关闭，不会运行
- 在遵守现有标准和规范以及实施缓解措施的情况下，在项目组成部分的土地整平与施工过程中，与横向扩展、地陷、土壤液化或坍塌有关的影响将减轻至不重大的水平
- 在遵守现有标准和规范以及实施缓解措施的情况下，施工期间与土壤腐蚀有关的影响将减轻至不重大的水平
- 拟建项目的北部靠近道奇体育场站的地方有可能遇到古生物资源；但是，影响将减轻至不重大的程度

地质和土壤

影响总结

主题	查找	
	建筑施工	运营
不利影响：地震、与地震有关的地面震动、土壤液化或山体滑坡	采取缓解措施后无重大影响	影响不重大
支持污水处理系统	无影响	无影响
破坏独特的古生物特征或地质特征	采取缓解措施后无重大影响	无影响
土地侵蚀/表土流失	影响不重大	影响不重大
不稳定的地质单元和土壤	采取缓解措施后无重大影响	影响不重大
膨胀土	采取缓解措施后无重大影响	影响不重大

如何尽量减少影响？

建筑施工：

- 编制和执行针对各个工地的岩土工程最终报告
- 制定及遵守古生物资源监测和缓解计划

运营：无须采取缓解措施

温室气体排放

研究内容

- 相关的联邦、州和地方法律和法规
- 温室气体科学概述
- 用于评估与拟建项目相关的温室气体排放的方法

重点分析及总结

- 与现状相比，拟建项目不会导致对温室气体的增量作用，反而相对现状会减少温室气体排放

本项目整个使用期的排放量将减少166,653公吨温室气体。

影响总结

主题	查找	
	建筑施工	运营
产生温室气体	影响不重大	影响不重大
温室气体减排计划或政策	影响不重大	影响不重大

如何尽量减少影响？

无须采取缓解措施。

危害及危险物品

研究内容

- 对项目活动进行了评估，以确定施工和运营期间项目活动对公众或环境造成危险环境的潜在影响
- **然后根据适用的**显著性标准分析了危险和危险材料的潜在影响

重点分析及总结

- 虽然拟建项目将在施工期间使用、运输和处置有限数量的有害物质，但拟建项目将遵守联邦、州和地方的健康和安全要求；并在运营期间遵守所有的法规、标准和条例
- 拟建项目将遵守美国职业安全健康管理局（OSHA）、加州职业安全健康管理局（Cal/OSHA）和洛杉矶市政法典第71条要求，并实施土壤和地下水管理计划，该计划将限制发生危险材料和废物泄漏的可能性
- 拟建项目将在拆除现有建筑前，由持牌的危险物品消除承包商将危险物品消除，确保学校不会受到不利影响
- 拟建项目的施工和运营将不会干扰洛杉矶警察局进入胡珀（Hooper）直升机停机坪，而直升机停机坪的运营也不会受到施工活动的影响
- 在项目区域内，有五处物业被确定为危险物品场地；然而，项目将实施土壤和地下水管理计划，以减少来自这些场地的影响
- 拟建项目的施工不会严重损害已通过的应急计划或紧急疏散计划的实施，也不会对其造成实际干扰；项目的日常运作不会影响应急响应

危害及危险物品

影响总结

主题	查找	
	建筑施工	运营
危险场所	采取缓解措施后无重大影响	无影响
机场土地使用计划	无影响	无影响
对公众或环境的危害	采取缓解措施后无重大影响	影响不重大
应急和疏散计划	影响不重大	影响不重大
学校附近的危险	采取缓解措施后无重大影响	影响不重大

如何尽量减少影响?

建筑施工:

- 制定和实施《土壤和地下水管理计划》，以明确在项目建设过程中遇到受污染的地下水、受污染的土壤或建筑物时的处理和处置方法
- 北百老汇1201号现楼拆除中的危险物质消除

运营: 无须采取缓解措施。

水文水质

研究内容

- 拟建项目违反任何水质标准、减少地下水供应，或在工地内外造成严重侵蚀或淤积的可能性
- 拟建项目大幅增加地表径流的速率或流量，从而在工地内外造成淹水的可能性
- 制造或导致超出现有或规划的雨水排放系统容量的径流，或阻碍或改变洪水流向的可能性
- 拟建项目被洪水或海啸淹没时或位于地震区时，释放污染物的潜在风险
- 拟建项目与水质控制计划或可持续地下水管理计划相冲突或妨碍其实施的可能性

重点分析及总结

- 拟建项目将遵守所有适用的联邦、州、区域和地方机构的水质保护法律和法规、水质控制和/或可持续地下水管理计划
- 拟建项目将结合最佳管理实践，并执行低影响开发计划，以减少对水文和水质的影响
- 拟建项目不易遭受被洪水或海啸淹没或位于地震区释放污染物的潜在风险

水文水质

影响总结

主题	查找	
	建筑施工	运营
减少地下水供应	影响不重大	无影响
水质标准或计划	影响不重大	影响不重大
改变排水系统	影响不重大	影响不重大
洪水、海啸或震荡潮	影响不重大	影响不重大
与计划冲突	影响不重大	影响不重大

如何尽量减少影响？

施工与运营拟建项目将符合**适用的**联邦、州、地区和地方法律法规，包括符合适用的雨水许可证、废水许可证**和其它水**质法规。无须采取缓解措施。

土地使用与规划

研究内容

- 拟建项目在物理上分隔出一个已建立的社区的潜在可能
- 拟建项目与任何为避免或减轻环境影响而采取的土地用途计划、政策或规例相冲突的潜在可能

重点分析及总结

- 尽管施工期间的临时封闭会影响社区内部和社区之间的车辆、行人和自行车通行，但项目区域内的连接和通行仍有多种选择
  - 社区将保持与周围其它街道的连通，并将提供步行绕行路线，以防止道路的封闭令现有社区遭到物理分割
- 拟建项目将通过提供第一/最后一英里的交通和步行通道和一些改造升级措施，包括交通转换点以及为未来的洛杉矶州立历史公园自行车和人行天桥提供支持，加强社区的连通性
- 拟建项目与当地规划、法典和条例的政策、法规、目的和/或目标一致
- 州立公园认为，拟建项目与洛杉矶州立历史公园总体规划之间存在不一致之处，因此可能会产生重大影响，原因是洛杉矶州立历史公园的总体规划并未将交通确定为公园用途之一
  - **随着**缓解措施LUP-A（**即要求**拟建项目获得对洛杉矶州立历史公园总体规划的修正）的实施，影响将未及重大的程度

土地使用与规划

影响总结

主题	查找	
	建筑施工	运营
物理分隔社区	影响不重大	无影响
与土地用途规划或政策相冲突	采取缓解措施后无重大影响	采取缓解措施后无重大影响

如何尽量减少影响？

施工（物理分隔社区）：当施工影响不重大时，施工交通管理计划的实施将包括道路封闭信息、绕行计划、工地运输路线和分段运输计划

施工与运营拟建项目应获得对洛杉矶州立历史公园总体规划的修正，以允许将洛杉矶州立历史公园总体规划范围内的土地作为交通用途

矿产资源

研究内容

- 项目的施工是否会导致无法获得对该地区和该州居民有价值的已知矿产资源？
- 本项目是否会导致当地总体规划、具体规划或其它土地使用规划中标明的当地重要的矿产资源回收场地失去可用性？

重点分析及总结

- 项目并未位于已知的矿产资源地区
- 洛杉矶市内的大部分地区在矿产资源分区分类之前便已开发盖楼，无法进行开采
- 项目路线位于洛杉矶市的城市化地区，在城市化环境中开采此类矿产是不切实际的

影响总结

主题	查找	
	建筑施工	运营
损失可利用的矿产资源	无影响	无影响

如何尽量减少影响？

无须采取缓解措施。

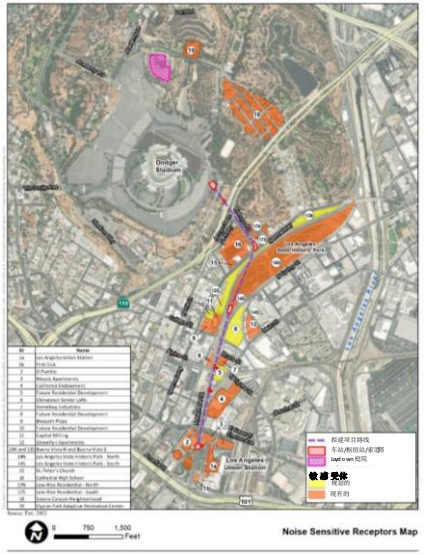
噪音

研究内容

- 对拟建项目路线沿线有代表性的噪音受体，包括现有及未来的住宅开发、学校、公园及其它经常有人在户外活动的地方，进行现状噪音调查及测量
- 对潜在的施工噪音影响的评估是通过对项目相关的施工噪音水平进行计算而得出
- 对运营噪音影响的评估是确定项目运营的噪音源（包括车站、枢纽站、索道塔、索道塔塔支撑轮上通过的车厢、车厢和车站候车乘客）可能产生的噪音水平而得出
- 地面振动对建筑物的破坏和对人的干扰的影响之分析

重点分析及总结

- 拟建项目的重大和不可避免的现场施工噪音影响是由施工设备产生的噪音、设备的位置、产生噪音的施工活动的时间和持续时间以及与噪声敏感受体的相对距离决定的
- 场外施工产生的相关交通噪音无重大影响
- 最坏的情况下，项目运营产生的噪音将低于显著水平
- 现场施工活动产生的振动将对人类产生重大且不可避免的影响；潜在的建筑破坏影响在采取缓解措施后应为不重大
- 项目运营产生的振动将低于显著水平



噪音敏感受体地图

振动敏感受体地图

噪音

影响总结

主题	查找	
	建筑施工	运营
机场附近的公开暴露	无影响	无影响
产生或增加环境噪音水平	影响重大且不可避免	影响不重大
产生超标的振动或噪音水平	影响重大且不可避免	影响不重大

如何尽量减少影响？

营运噪音：车厢项目设计特点与暖通空调机组从内到外的降噪和功率声级相关无须采取缓解措施。

施工噪音：实施施工噪音管理计划，包括

- 噪音屏障
- 设备维修保养
- 社区外展服务，含一位噪音干扰协调员

施工振动：

- 为Avila土砖房（1970年代扩建）、El Grito壁画和酿酒厂放置振动监测设备
- 限制使用压力可调的地面压实装置

人口与住房

研究内容

- 拟建项目有可能导致人口大幅增长，或增长速度超过预期或规划水平
- 实施拟建项目是否会导致大量人口迁移和住房搬迁

重点分析及总结

- 作为通往道奇体育馆的第一/最后一英里的交通连接，拟建项目不会直接或间接导致大量人口增长
  - 旨在满足该地区的交通需求，以及提高现有交通网络的效率
  - 支持市政府关于住房要素和社区计划的目标，即在已规划的住宅开发附近提供交通服务
- 拟建项目不应导致现有的人口迁移或住房搬迁

影响总结

主题	查找	
	建筑施工	运营
导致计划外的人口增长	影响不重大	影响不重大
人口迁移或居民搬迁	影响不重大	影响不重大

如何尽量减少影响？

无须采取缓解措施。

公共服务

研究内容

- 拟建项目是否会导致与提供新的或改造的公共设施有关的不利有形影响，这些设施的建设可能会造成重大的环境影响，包括消防和警察保护、学校和其它公共设施，例如图书馆、老年中心、无家可归者收容所和日托设施等
- 本项目是否会影响应急服务的响应时间

重点分析及总结

- 虽然与拟建项目有关的施工活动会造成暂时增加对应急服务的需求，但缓解措施和项目设计特点的实施，以及适用的国家和地方法规的遵守，包括在项目施工前与洛杉矶消防局和洛杉矶警察局协调，将确保项目施工不会造成额外的应急服务需求以致于需要增加新的或实际改变现有的公共设施
- 洛杉矶消防局和洛杉矶警察局将在施工中有充分的通道
- 虽然拟建项目在项目运营期间会增加对应急服务的需求，但在遵守适用的法规，与洛杉矶消防局和洛杉矶警察局协调，以及实施应急行动计划的情况下，拟建项目的运营不会造成额外的应急服务需求以致于需要增加新的或实际改变公共设施
- 拟建项目不包括住房，住房可能会增加对学校服务或其它公共设施的需求

公共服务

影响总结

主题	查找	
	建筑施工	运营
需要新建或改建消防站、警察局、学校或其它公共服务设施	采取缓解措施后无重大影响	影响不重大
服务比率和响应时间	采取缓解措施后无重大影响	影响不重大

如何尽量减少影响？

建筑施工：施工交通管理计划将减少与应急通道相关的影响

运营：拟建项目将遵守适用的法规，将贯彻安全特点（如工作人员和摄像机），并将实施应急行动计划。无须采取缓解措施。

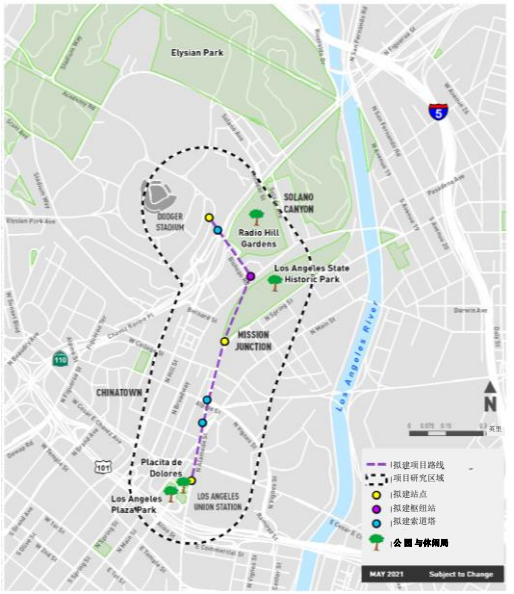
公园与休闲设施

研究内容

- 在施工和运营期间可能对公园和休闲设施产生影响的可能性，包括对洛杉矶广场公园和 Placita de Dolores、洛杉矶州立历史公园和伊利森公园的影响

重点分析及总结

- 拟建项目不会导致对公园的需求增加，或产生新的长期居民，从而导致现有公园和休闲设施的使用量增加，继而使公园设施出现实质性损坏，或导致需要提供新的公园设施，或导致需要新的或实质改变的公园设施
- 拟建项目将提供高运力的空中快捷交通服务，将洛杉矶联合车站的区域交通系统与洛杉矶州立历史公园及伊利森公园的相连，以改善本区域的流动性和可及性



影响总结

主题	查找	
	建筑施工	运营
公共设施的损坏	影响不重大	影响不重大
扩建休闲设施	影响不重大	影响不重大
服务比率和业绩目标	影响不重大	影响不重大

如何尽量减少影响？
无须采取缓解措施。

交通运输

研究内容

- 利用了CEQA指南和洛杉矶交通局通过城市标签建立的筛选标准、分析方法和阈值标准
- 对拟建项目的行车里程（VMT）采用了各种数据、方法和模型，以便能估计项目的乘客量、减少车辆行程数量、车辆行程长度进行分析，并最终估计出拟建项目的行车里程效益
- 道奇体育馆比赛和活动的参与者、员工、游客、附近的乘客，以及洛杉矶州立历史公园的游客和活动参与者，两者的乘客量预估
- 拟建的项目车站、枢纽站和索道塔的位置，以及这些组成部分是否会因其几何设计特征而大大增加了危险
- 拟建项目施工概念交通绕行方案及运输路线

重点分析及总结

- 拟建项目将符合PPOPs - 方案、计划、条例和政策 - 处理包括交通、道路、自行车和步行设施的流通系统
- 由于阿拉米达索道塔和唐人街/国家公园站采取了缓解措施，拟建项目不会带来任何不安全的实际状况
- 随着缓解措施的实施，在拟建项目施工期间将保留紧急通道

项目整个使用周期减少的行车里程将为129,629,500英里。

交通运输

影响总结

主题	查找	
	建筑施工	运营
行车里程（VMT）	无影响	无影响
与计划或政策相冲突	影响不重大	影响不重大
设计增加了危险性	采取缓解措施后无重大影响	采取缓解措施后无重大影响

如何尽量减少影响？

建筑施工：

- 执行经市政府批准的详细的施工交通管理计划，包括道路封闭信息、绕行计划、工地运输路线和分段运输计划
- 执行经市政府批准的临时救灾路线计划，其中将包括道路封闭的信息和绕行计划，以方便应急车辆通过研究区域，并尽量减少灾害期间对应急响应的影响

施工与运营

- 为拟建的阿拉米达索道塔和唐人街/州立公园车站加强能见度 - 例如高能见度的人行横道处理、先进十字路口警告标志、闪烁的信号灯、升级的照明以及新的或升级的交通管制

部落文化资源

研究内容

- 对重要的部落文化资源的实质性不利变化
- 按照大会第52号法案的要求，向八大加州原住民部落咨询

重点分析及总结

- 存在于该地区的资源以及需要采取缓解措施，包括考古测试和数据恢复
- 有可能在施工中遇到以前未发现的资源；如果美国原住民监测员发现了潜在的资源，监测员可以暂时停止施工

影响总结

主题	查找	
	建筑施工	运营
对部落文化资源的改变	采取缓解措施后无重大影响	无影响

如何尽量减少影响？

建筑施工：

- 实施文化资源监测和缓解计划以及洛杉矶联合车站前广场的考古测试计划
- 保留一名美国原住民监测员，监测阿拉米达站所在地的地面扰动施工活动

运营：无须采取缓解措施。

公用事业和服务系统

研究内容

- 搬迁或建造新的或扩建的水、废水处理或雨水排放、电力、天然气或电信设施
- 本项目对供水的影响
- 本项目是否需要扩大废水处理能力
- 该地的垃圾填埋场是否有足够的能力处理本项目所产生的固体废物

重点分析及总结

- 拟建项目的施工将不需要兴建新的或扩建的公用事业设施
- 拟建项目的施工将需要迁移现有的公共设施，这将与公共设施供应商协调，并遵守适用的国家和地方法规和条例
  - 为了尽量减少施工期间对现有公共设施的潜在干扰，拟建项目将实施一个公共设施搬迁计划
- 拟建项目的运营将需要连接到现有的公用事业系统
- 主要的电力使用将来自于可再生资源，现有的电力供应应能满足项目运营的需要
- 拟建项目的施工和运营将有足够的水供应
- 施工和运营将产生潜在的废水，这些废水将按照规定进行处理
- 本项目产生的固体废弃物不应超过国家或地方标准，或超出当地基础设施的能力，或以其它方式妨碍固体废物减少目标的实现

公用事业和服务系统

影响总结

主题	查找	
	建筑施工	运营
充足的供水	影响不重大	影响不重大
对污水系统的需求量及其污水处理能力	影响不重大	影响不重大
固体废弃物	采取缓解措施后无重大影响	影响不重大
搬迁或建造公用事业设施	采取缓解措施后无重大影响	影响不重大

如何尽量减少影响？

建筑施工：

- 与公用事业公司协调，制定并实施一项公用事业搬迁计划，以尽量减少在整个项目施工过程中对公用事业服务的影响
- 制定一份土壤和地下水管理计划

运营：无须采取缓解措施。

野生动植物

研究内容

- 如果位于州责任区(SRAs)或被划分为火灾非常高危险严重区(VHFHSZ)的土地内或附近，拟建项目是否会导致与野火相关的潜在重大影响
- 根据地形、天气和燃料，项目区域内潜在的野火风险
- 对已通过的应急计划或紧急疏散计划造成严重损害
- 拟建项目是否需要安装或维护相关的基础设施，从而可能加剧火灾风险或导致对环境的临时或持续影响
- 拟建项目是否会使人或建筑物面临重大风险，包括由于径流、火灾后的斜坡失稳或排水变化而导致的下坡或下游洪水或山崩？
- 拟建项目是否会使人们或建筑物直接或间接地暴露于涉及野地火灾的重大损失、伤害或死亡风险中

重点分析及总结

- 拟建路线的一部分，包括百老汇枢纽站、体育馆索道塔和道奇体育馆站位于火灾非常高危险严重区(VHFHSZ)内
- 拟建项目的施工和运营不会妨碍进入已确定的避灾路线，也不会严重影响应急反应或疏散计划的实施
- 本项目将遵守适用的法规和条例以及最佳施工实践，不会加剧野火风险
- 贯彻项目设计特点将进一步减少这些风险

野生动植物

影响总结

主题	查找	
	建筑施工	运营
破坏应急或疏散计划	影响不重大	影响不重大
加剧野火风险	影响不重大	影响不重大
安装/维护相关基础设施	影响不重大	影响不重大
使人们或建筑物面临野火风险	影响不重大	影响不重大

如何尽量减少影响？

建筑施工：贯彻项目设计特点，包括消防计划和体育馆塔建筑工地周围的燃料改造分区。无须采取缓解措施。

运营：在百老汇枢纽站、体育场索道塔以及道奇体育馆站运营期间，贯彻有关的项目设计特点，通过工作人员和摄像头进行安全监控，识别和报告消防安全隐患。无须采取缓解措施。

备选方案

研究内容

- 我们选择了一系列合理的替代方案，以探讨可能的方法，以减轻或避免因实施拟建项目而造成的重大环境影响，同时仍能实现本项目的主要目标
  - 无项目备选方案 - 无新的开发项目
  - 春天街备选方案 - 拟建项目的备选路线
  - 交通系统管理备选方案 - 增加道奇体育馆巴士快线服务
- 有几个备选方案经过考虑，由于未能满足大部分基本项目目标，或不可行，或无法避免重大环境影响，被排除在详细分析之外。这几个备选方案包括百老汇站路线备选方案、轻轨L线(金线)站与学院街站合并路线备选方案，以及直接路线备选方案。

重点分析及总结

- 无项目备选方案不会改善交通或为社区之间提供连接。此外，行车里程和车辆拥堵不会减少，相应地也不会发生温室气体排放减少和空气质量改善。
- 春天街路线备选方案将提供直接的交通连接，并改善周围社区的连通性。这一备选方案需要更大的占地面积，并且不会减少对环境的重大影响。
- TSE备选方案不会为周围社区提供直接的过境连接或改善连接，也不会同等程度地减少行车里程（VMT）、温室气体排放或改善空气质量。

备选方案

备选方案总结

备选方案	查找	
	实现项目目标的能力	减少重大影响的能力
无项目工程备选方案	不会实现项目目标	比项目的影响少
春天街路线备选方案	将会实现项目目标	与项目的影响相似
交通系统管理备选方案	无法实现大部分项目目标	比项目的影响少

什么是更环保的备选方案？

TSM备选方案被认为是对环境更友好的备选方案，原因是它不会导致CEQA**确定的重大和不可避免的影响，并且**总体上将产生最少的环境影响。然而，TSM备选方案对空气质量、能源、温室气体排放、水文和水质、以及运输**和交通的影响会更大。此外，**TSM备选方案不能完全或部分地实现项目的大部分目标。

环境影响报告草案中其它的附加评估

洛杉矶州立历史公园

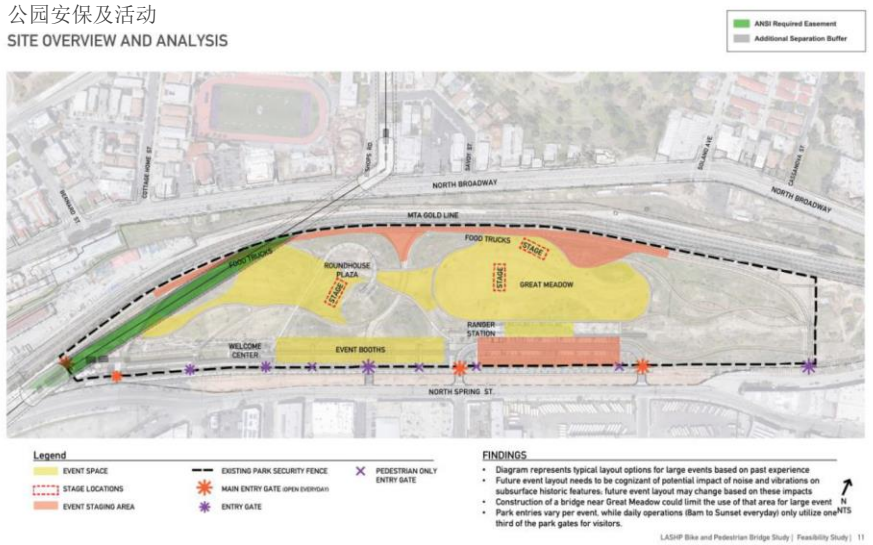
风筝：由于拟建项目路线位于公园的西部边缘，毗邻轻轨L线和行人通道，因此不会明显减少在公园内放飞风筝的安全面积

特别活动：由于拟建项目路线的位置，跨越了公园中通常不用于屏幕和舞台的一小部分，并且由于仍然可以在拟建项目路线的大部分下空进行活动，因此拟建项目并没有明显减少公园内的活动空间面积

阿拉米达站和唐人街/州立公园站的所在地

直升机停机坪

- 拟建的项目路线并未在机场土地使用计划所覆盖的区域内，也不在公共机场的两英里范围内
- 对拟建项目路线附近的直升机停机坪进行的空域评估认为，拟建项目的施工和运营将避开与项目附近现有直升机停机坪有关的空域，不会造成空中导航危险，因此不会对航空活动（包括对拟建项目附近的直升机停机坪）造成影响



洛杉矶州立历史公园的活动舞台和屏幕的典型位置，以及拟建项目路线

设计方案A

改变百老汇枢纽站的位置以避开451 E. SAVOY街

- 将包括对百老汇枢纽站和道奇体育馆站之间的整体项目路线的改变，以避免在451 E. Savoy街上空的空中权利要求
- 位置改变将导致路线穿过毗邻主教（Bishops）路旁边的大教堂高中的一小部分
- 包括对百老汇枢纽站、体育馆索道塔和道奇体育馆站等项目组成部分的改变
  - 可能会导致体育馆索道塔和道奇体育馆站两处场地的公用事业设施搬迁以及增加额外的施工期
  - 将需要拟建项目的乘客在道奇体育馆站和道奇体育馆直接走更长的路

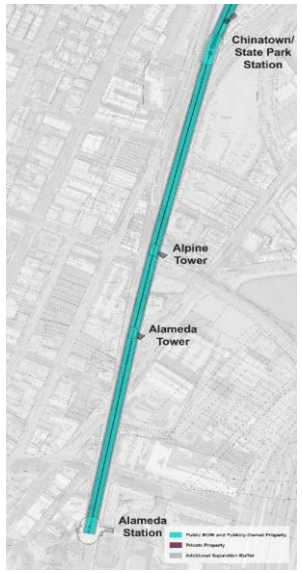
拟建项目路线

设计方案A

设计方案B

沿着阿拉米达街的单个索道塔

- 利益相关者的反馈意见要求项目主办方评估将阿拉米达街沿路的索道塔数量从两个减少到一个的可能性，作为回应
- 包括将阿拉米达索道塔的整体高度增加50英尺，并将阿拉米达站和唐人街/州立公园站之间高山街索道塔从拟建项目中移除
- 增加的索道塔高度将需要增加相应的施工
- 将导致潜在的技术限制
- 将导致需要额外的私人地产上空的空中权利



拟建项目路线

设计方案B

拟建项目路线

设计方案B

设计方案C

将唐人街/州立公园站的高度增加

- 利益相关者的反馈意见要求项目主办方考虑建造更高的唐人街/国家公园站，作为回应
- 设计方案C包括将唐人街/州立公园站的总高度增加35英尺。
- 增加的车站高度将需要增加相应的施工
- 由于高度的原因，可能会降低乘客体验，这也将导致乘车站台被抬高，需要额外的垂直流通设施才能进入和登上站台

拟建项目路线

设计方案C

使用设计方案D

唐人街/州立公园站作为非客枢纽站

- 利益相关者的反馈意见要求项目主办方考虑在唐人街/州立公园站不设乘客通道，以增加沿着春天街进出车站的缆车高度
- 使用方案D将涉及用一个非客枢纽站取代计划中的唐人街/州立公园站。
- 将具有与拟建项目相同的地点、高度、宽度、长度和建筑外观。
- 将不会加强洛杉矶州立历史公园、唐人街和Mission Junction社区之间的社区连接

设计和使用方案E

洛杉矶州立历史公园人行天桥

- 洛杉矶州立历史公园提出建设一座符合《美国残疾人法案》（ADA）的无障碍人行天桥，桥将从公园的中部平缓上升，一直连接到北百老汇
- 虽然并未提出将该人行天桥作为拟建项目的一部分，但本环境影响报告草案包含对公园人行天桥的分析
- 正如洛杉矶州立历史公园总体规划和最终环境影响报告，以及在自行车和人行天桥研究中所指出的，该桥将提供从唐人街和索拉诺峡谷社区进入公园的安全的行人和自行车通道

来源：人行天桥可行性研究

停车研究概览

拟建项目停车位研究

- 即使CEQA不要求对停车进行分析，也对本项目进行了全面的停车研究，对此都会交通局已对停车研究进行了同行评议
- 停车研究报告已于2022年9月9日在都会交通局的网站上公布

研究内容

- 预计大多数拟搭乘项目的乘客将转乘交通工具前往本项目
- 在拟建项目的阿拉米达站和唐人街/州立公园站的半英里范围内，公共可用停车位和车库以及街道上的停车位约有10,290个

停车研究概览

停车研究结论

停车类型	比赛日停车			
	停车位供应	停泊的车辆	停车位占用率	可用的停车位数
非街道可停车的公共空间	6,876	2,173	32%	4,703
路边停车位	3,417	2,017	59%	1,400
总计				
拟建项目停车需求（2042年）	-	307 – 790		
项目可用的街外停车位总数	6,876	2,963	43%	3,913

*统计时间是2021年9月10日，当天晚上洛杉矶道奇队主场迎战圣地亚哥教士队；付费入场人数为48,403人，高于2019年洛杉矶道奇队工作日晚间比赛的赛季平均水平。在与都会交通局和洛杉矶交通局的协调下，本停车研究将非街道公共可用停车位增加了46%，以应对新冠肺炎疫情。

考虑到拟建项目的潜在停车需求，故在拟建项目的步行可及范围内提供了大量可用的停车位。即使一些现有的停车场被重新改建，也有大量的非街道停车位供应，以满足拟建项目的所有停车需求。

本项目致力于鼓励人们乘坐公共交通

- 与本地商业建立商业合作关系，预售捆绑套餐，包括惠顾本地商业的客户和可用的非街道停车位
- 支持实施/扩大各种管理策略，包括比赛期间的限时停车限制和咪表收费，以劝阻乘客将车停在社区内，并为居民和本地商业提供停车位

公众评议期

公众评议期

- 目的：让公众可以有机会对环境影响报告草案发表意见

今天！

了解环境影响报告草案的重点分析及总结，并提供口头的公众意见。

今天将没有问答环节。

若您举手，将呼叫您发言，请取消**静音并提供公共意**见。参加者的每个**意**见将有最多两分钟时间。

今天通过Zoom聊天发送的沟通内容，将不会视为正式的公众意见。

在2023年1月17日前如何对环境影响报告草案发表意见

如何对环境影响报告草案发表意见

Agenda

1. Purpose of Meeting
2. How to Participate in this Virtual Meeting
3. Overview
4. CEQA Process Overview
5. LA ART Project Overview
6. Draft EIR Key Analyses and Conclusions
7. Public Comment Session

For assistance with Zoom: please email mary.nooristani@aecom.com or call (619) 251-9180

Purpose of the Meeting

PRESENT DRAFT EIR KEY ANALYSES AND CONCLUSIONS

PUBLIC COMMENT SESSION

California Environmental Quality Act (CEQA) Process

45-Day Scoping Period
October 1–November 16, 2020

90-Day Draft EIR Public Review
October 17–January 17, 2023

Metro Board of Directors Certification of Final EIR
2023

TODAY!

Learn about the Draft EIR's key analyses and conclusions and provide verbal public comment.

There will be no Q&A today.

Ongoing Community Outreach

Two Informational Workshops

Three Public Hearings

WE ARE HERE

Communications typed into the Zoom chat will not be considered a formal public comment.

How to Comment on Draft EIR through January 17, 2023

Additional Public Hearing

Downtown LA/Chinatown
Thursday, January 12, 2023, 5:00 – 7:00 pm
Cathedral High School
1253 Bishops Road, Los Angeles, CA 90012

Email
LAART@metro.net

Mail
Mr. Cory Zelmer

How to Participate in this Meeting

TODAY!

Learn about the Draft EIR's key analyses and conclusions and provide verbal public comment.

There will be no Q&A today.

During Public Comment Session: Raise your hand and you will be called on to unmute yourself and provide public comment.

Overview

Overview

- The Los Angeles Aerial Rapid Transit Project is proposed by LA Aerial Rapid Transit Technologies LLC
- Metro is the lead agency in the preparation of an Environmental Impact Report (EIR) under the California Environmental Quality Act (CEQA)
- The Draft EIR evaluates the potential environmental effects associated with construction and operation of the proposed Project

Overview

- As the lead agency, Metro has the responsibility to ensure that:
  - The EIR adequately assesses the potential project impacts
  - The proposed mitigation measures are appropriate
  - The CEQA process has been complied with for public notices, public outreach, and distribution of documents

Overview

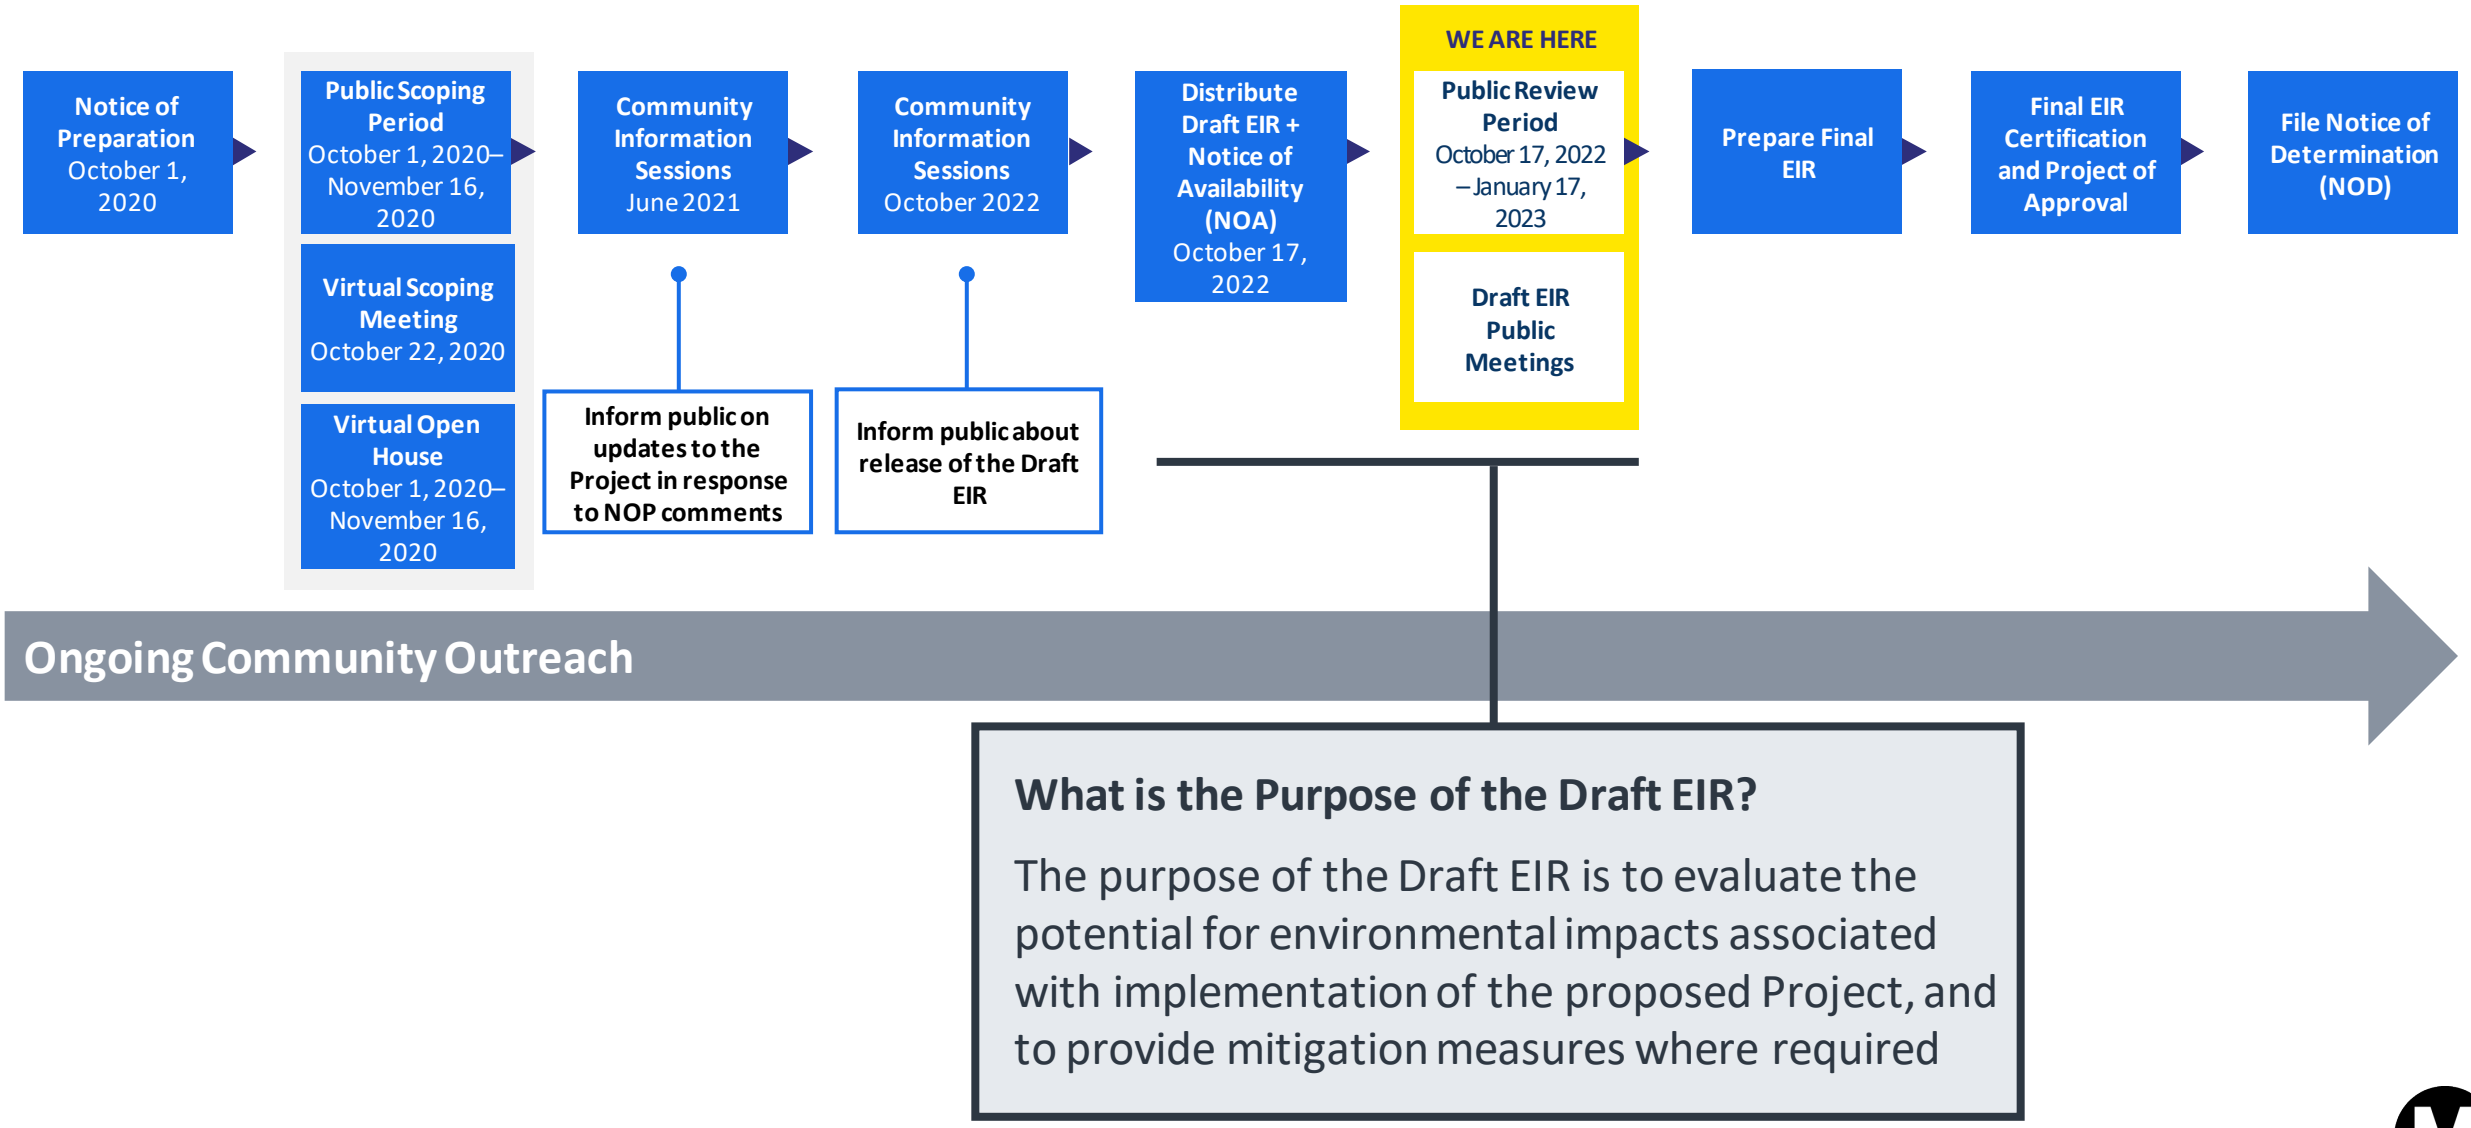
- We are currently accepting public comments on the Draft EIR under CEQA
  - Public Hearings
  - Email
  - Mail
  - Phone
- Senate Bill 44
  - Provides CEQA litigation streamlining for “environmental leadership transit projects”Los Angeles County
  - The proposed Project will be the first environmental leadership transit project under Senate Bill 44
  - Public Hearing Requirements
    - **Informational Workshop: within the first 10 calendar days of the public comment period to inform the public about the Draft EIR’s key analyses and conclusions**
    - Public Hearing: within the last 10 calendar days of the public comment period to obtain public testimony

Overview of the California Environmental Quality Act (CEQA) Process

CEQA Process

- Required for all projects undertaken, funded, or requiring approval by a public agency
- Informs the public and decision makers
- Discloses potential environmental impacts resulting from a proposed project
- Provides the opportunity to comment on environmental issues
- Two public comment periods: Scoping Period and Draft EIR Public Review
- SB 44 requires two public meetings during Draft EIR Public Review: Informational Workshop and Public Hearing

Timeline



What is the Purpose of the Draft EIR?

The purpose of the Draft EIR is to evaluate the potential for environmental impacts associated with implementation of the proposed Project, and to provide mitigation measures where required

Public Meetings During Draft EIR Public Review Period

Informational Workshops

Draft EIR Informational Workshop No. 1	Saturday, October 22	Virtual
Draft EIR Informational Workshop No. 2	Tuesday, October 25	In-Person

Metro hosted two Informational Workshops to inform the public of the key analyses and conclusions in the Draft EIR

Public Hearings

Draft EIR Public Hearing No. 1	Saturday, December 10	In-Person
Draft EIR Public Hearing No. 2	Tuesday, December 13	Virtual
Draft EIR Public Hearing No. 3	Tuesday, January 12	In-Person

Metro will host three Public Hearings to take public comment on the Draft EIR

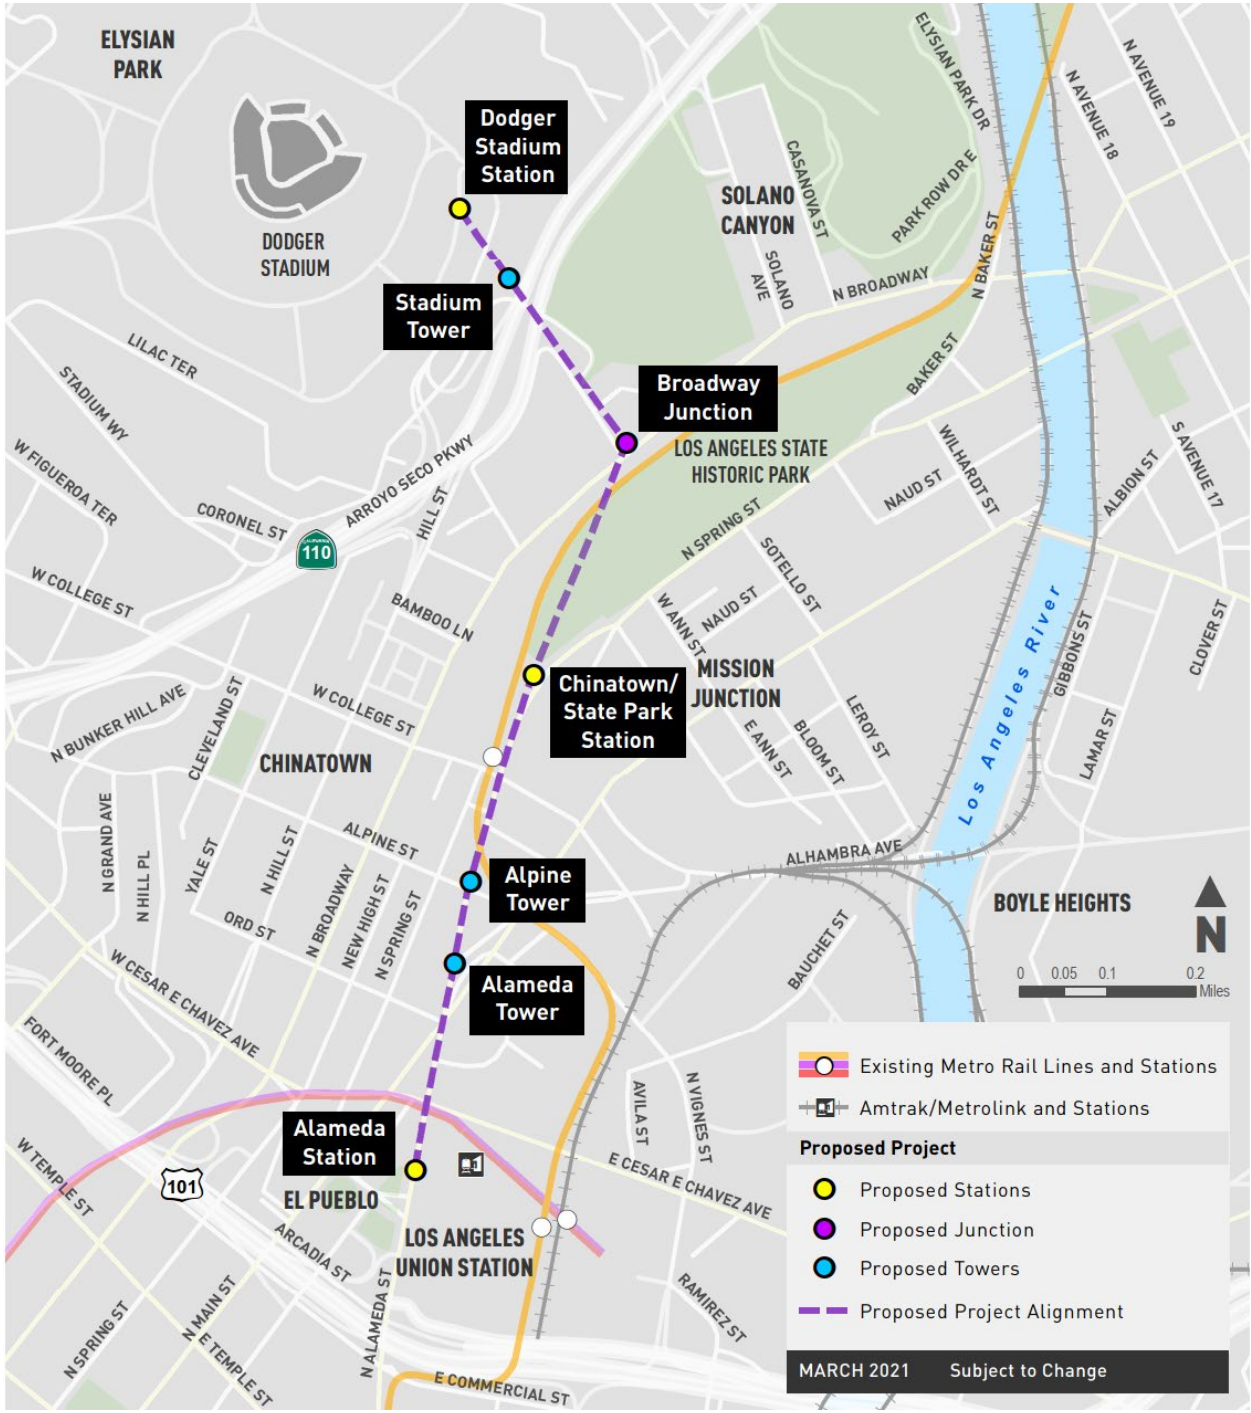
Project Description

Project Overview

- Provide a permanent transit connection from Los Angeles Union Station (LAUS) to the Dodger Stadium property via a 1.2-mile aerial gondola system
  - Travel time from LAUS to Dodger Stadium would be approximately 7 minutes
- Capacity of approximately 5,000 people per hour per direction
- Operate daily to serve existing residents, workers, park users, and visitors to Los Angeles
- Provide access to the Los Angeles State Historic Park and surrounding communities via the intermediate Chinatown/State Park Station
- Zero emission, environmentally friendly rapid transit that would reduce GHG emissions as a result of reduced vehicle trips in and around Dodger Stadium and on neighborhood streets, arterial roadways, and freeways

Project Location and Alignment

- The Project would commence adjacent to Union Station and El Pueblo and terminate at Dodger Stadium, with an intermediate station at the southernmost entrance to the Los Angeles State Historic Park
- Connect surrounding communities of Chinatown, Mission Junction, Elysian Park, Echo Park, and Solano Canyon to the regional transit system accessible at Union Station
- The proposed Project alignment maximizes alignment along the public ROW and publicly owned property and minimizes aerial rights over private properties, taking into account existing and future adjacent land uses



Precedent for Aerial Transit Systems

- Aerial transit technology has been used for over 100 years
- Modern systems are a feasible mode of urban transit and are currently operating in numerous cities around the world
- Established gondola transit systems worldwide – such as La Paz, Bolivia and Mexico City, Mexico – are being used as rapid transit for the urban populations that they service
- Similar to the systems used in Koblenz, Germany, Phu Quoc, Vietman, and Toulouse, France, the proposed Project is a "3S" gondola
  - Cabins will carry approximately 30 to 40 passengers
  - System will provide a smooth, stable ride

Portland, Oregon

Roosevelt Island, New York

La Paz, Bolivia

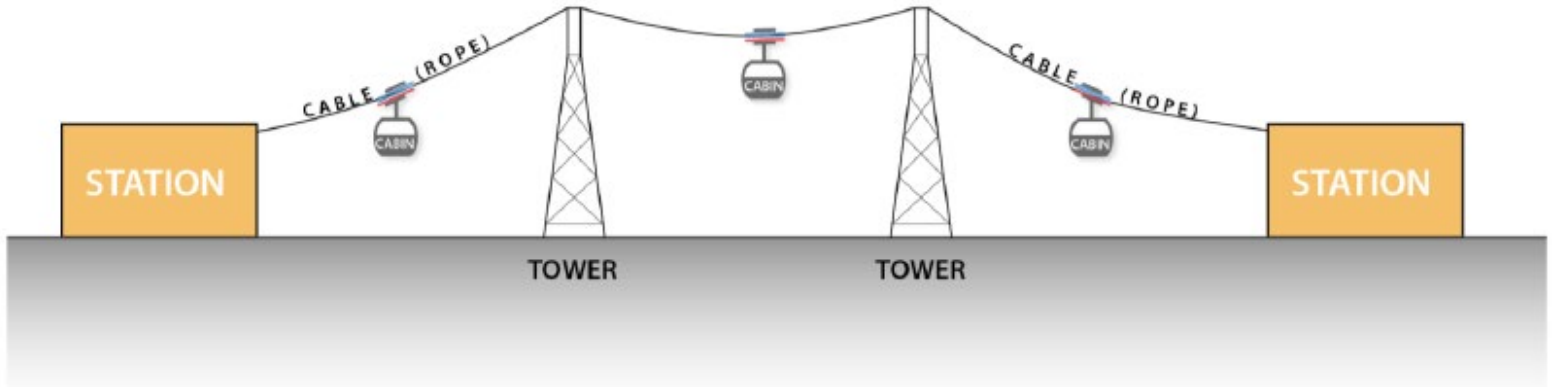
Mexico City, Mexico

Toulouse, France

Medellín, Colombia

Ropeway Technology

The ART system includes passenger stations, a non-passenger junction, and towers, which support the aerial cables that carry the gondola cabins



3 Passenger Stations

- Include mechanical, electrical, and plumbing systems, boarding platforms, and vertical circulation (e.g., stairs, escalators, and elevators)
- Include areas for ticketing, fare checking, and queueing; loading and unloading of passengers; operations; and system equipment

1 Non-Passenger Junction

- Required for the ART system to turn the cables and remain along the alignment

3 Towers to Support the Cables and Cabins

“3S” System and Gondola Cabins

“3S” System

- “3S” system includes three cables: two “track ropes” for stability and a third “haul rope” to circulate the cabins
- Cabins detach from continuously circulating haul rope and slow down upon entering a station for passenger exit and entry, then reattach to haul rope

Cabins

- 30 to 40 passengers each, depending on the exact configuration of seating and cabin amenities selected
- Fully ADA accessible and would accommodate wheelchairs
- Allow for sitting or standing
- Provide room for baby strollers and bicycles
- Would move at a maximum speed of 13.4 miles per hour during peak operations
- As they enter a station, the cabins would slow down to a speed of roughly one foot per second (less than one mile per hour) to allow passengers to enter and exit the moving cabin

Purpose and Need

- Provide a direct transit connection between Union Station and the Dodger Stadium property via an aerial gondola system
- Connect surrounding communities of Chinatown, Mission Junction, Los Angeles State Historic Park, Elysian Park, Echo Park, and Solano Canyon to the regional transit system accessible at Union Station
- Improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS
- Provide a mobility hub at the Chinatown/State Park Station
- Provide a sustainable form of transit by operating the ART system with the use of zero emission electricity with battery storage backup in order to reduce GHG emissions and improve air quality

Dodger Stadium: One of the Region's Most Visited Venues

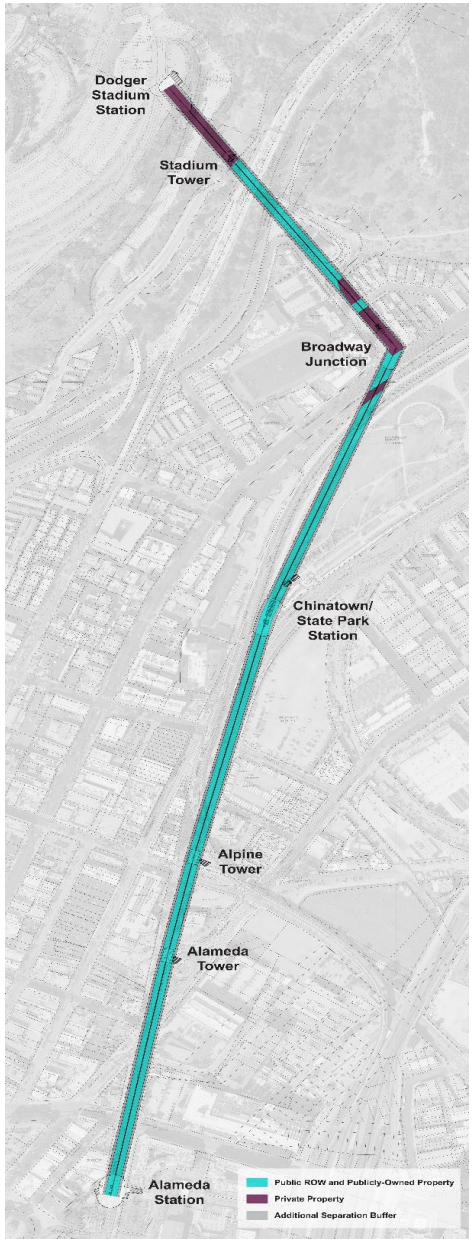
- Draws large regional crowds, with approximately 100 baseball games and other events each year
- Vast majority of visitors drive their personal vehicles
- Vehicles create congestion throughout the surrounding communities and nearby freeways
- Communities in the vicinity of the proposed Project alignment were identified as being in the 90 – 100 percentile of communities disproportionately burdened by multiple sources of pollution in the State (CalEnviroScreen 4.0 Map)

Project Objectives

- Expand mobility options for transit riders through a direct connection between LAUS and Dodger Stadium, a regional event center.
- Attract new transit riders to the Metro system through a unique experience of an aerial transit system and connecting to Dodger Stadium.
- Improve the Dodger Stadium visitor experience by providing efficient, high-capacity, and faster alternative access to Dodger Stadium.
- Enhance safety of neighborhoods adjacent to Dodger Stadium by reducing the number of vehicles in the area.
- Reduce transportation related pollution and greenhouse gas (GHG) emissions as a result of reduced vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days.
- Increase connectivity of people to the region's public transportation hub at LAUS and the Dodger Stadium property.
- Improve transit rider experience by providing unique scenic views of the Los Angeles area to ART passengers and Dodger fans.
- Bring a world class aerial transit system to the Los Angeles area.
- Enhance community connectivity by providing first/last mile transit and pedestrian access to areas that have historically been underserved, including the Los Angeles State Historic Park and Elysian Park.
- Identify comparable, affordable, and accessible fare opportunities for community and Los Angeles State Historic Park and Elysian Park access.
- Minimize the Project's environmental footprint through the integration of sustainability and environmentally-friendly design features into the materials, construction, operations, and maintenance of the proposed Project.
- Provide a sustainable form of transit by operating the ART system with the use of zero emission electricity with battery storage backup in order to reduce GHG emissions and improve air quality.
- Maximize the Project's alignment along the public ROW and publicly owned property and minimize aerial rights requirements over private properties, taking into account existing and future adjacent land uses.

Aerial Clearance | Alignment Over Public ROW/Publicly-Owned Property and Private Property

- Industry standards for the design and operation of ropeways and cabins are documented in the American National Standards Institute (ANSI) Standard B77.1, which is developed in coordination with manufacturers, consumers, and regulators
  - ANSI B77.1 regulates vertical and horizontal clearances between the ropeway and cabins to elements such as vehicles, pedestrians, vegetation, buildings, and other structures
- Alignment maximizes alignment along the public ROW and publicly owned property and minimizes aerial rights over private properties, taking into account existing and future adjacent land uses
- Additional considerations in selecting Project alignment:
  - Minimizing changes to travel lanes, parking lanes, and bicycle and pedestrian circulation
  - Minimizing utility relocations
  - Location of historic and archaeological resources
  - Minimize use of uneven or difficult topography
  - Technical considerations and feasibility



Design

- Design goal is to develop a common architectural design that unifies the overall aerial gondola system, while allowing for each major component to contribute to the respective localized urban condition
- Of equal importance is the desire to minimize the perceived scale and mass of the stations non-passenger junction, and towers
- The stations and junction take advantage of a simple barrel vault form to provide the minimum enclosure needed to protect the ropeway equipment and provide shade and weather protection to passengers on the boarding platform
- Each of the towers is designed so that their bases would not impede adjacent vehicular and pedestrian circulation, and the neutral light-tone gray is intended to conform with the surrounding urban environment

Alameda Station

- On Alameda Street adjacent to the planned LAUS Forecourt and Placita de Dolores between Los Angeles Street and Cesar Chavez Avenue
- Station would be approximately 173 feet long, 109 feet wide, and 78 feet high at its tallest point
- Passenger loading platform would be approximately 31 feet above Alameda Street
- Vertical circulation would be introduced on the north of the Placita de Dolores in a proposed new pedestrian plaza at El Pueblo and on the east from the planned LAUS Forecourt

Alameda Tower

- Located on the Alameda Triangle, a City ROW between Alameda Street, North Main Street, and Alhambra Avenue
- 195 feet tall with the cable suspended 175 feet above ground
- Landscape and hardscape updates to the Alameda Triangle, including reuse and integration of existing pavers

Alpine Tower

- Located northeast corner of Alameda Street and Alpine Street, adjacent to the Metro L Line (Gold)
- Site is City-owned parcel, currently being used as non-public parking storage for City vehicles
- 195 feet tall at tallest point, with the cable suspended 175 feet above ground
- Landscaping and hardscaping near the base of the tower

Chinatown/State Park Station

- Adjacent to Spring Street in the southernmost portion of the Los Angeles State Historic Park
- Southern portion would be located on City ROW, with northern portion integrated into the southern boundary of the Los Angeles State Historic Park
- Station would be approximately 200 feet long, 80 feet wide, and 98 feet tall at its tallest point
- Passenger boarding platform approximately 50 feet above-grade
- Access to the boarding platform would be from the mezzanine via elevators and stairs
- Would include the installation of landscaping and hardscaping, including integration of the granite pavers

Chinatown/State Park Station

Station Amenities

- Mobility hub where passengers would be able to access a suite of first and last mile multi-modal options, such as a bike share program
- Pedestrian improvements, including hardscape and landscape improvements, shade structures, and potential seating

Park Amenities

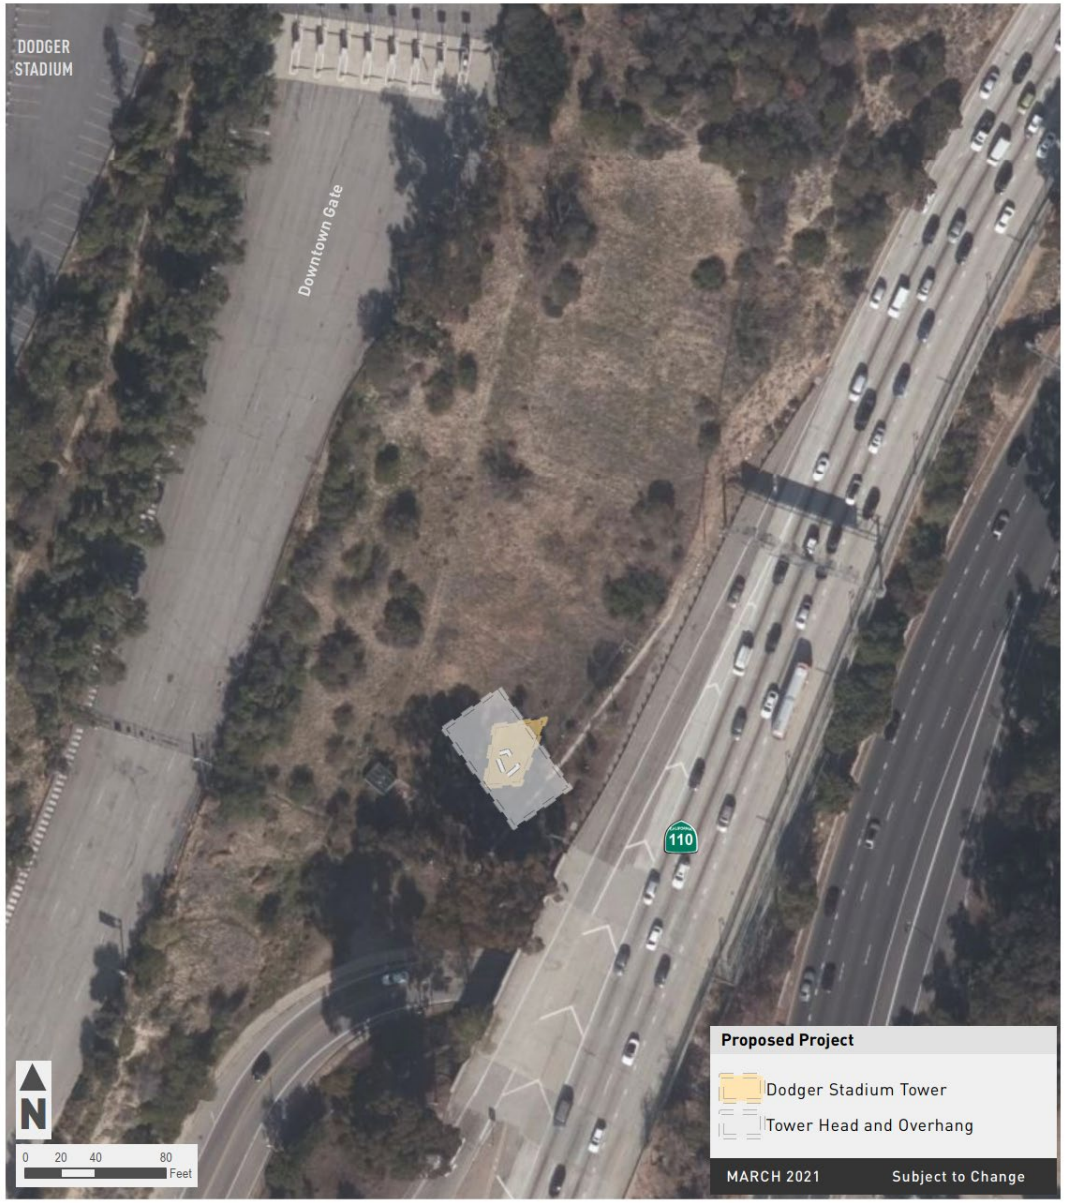
- 740 square feet of concessions
- 770 square feet of restrooms
- 220 square foot covered breezeway connecting concessions and restrooms

Broadway Junction

- Non-passenger junction that would be located at the intersection of North Broadway and Bishops Road
- Existing commercial building located at 1201 N. Broadway would be demolished
- Junction approximately 227 feet long, 60 feet wide, and 98 feet high at tallest point

Stadium Tower

- Located on hillside private property north of Stadium Way between the Dodger Stadium Downtown Gate and SR-110
- 179 feet tall with the cable suspended 159 feet above-ground with landscaping near the base of the tower



Dodger Stadium Station

- Southeast portion of the Dodger Stadium property near the Downtown Gate

Dodger Stadium Station

- Station would be approximately 194 feet long, 80 feet wide, and 74 feet high at its tallest point
- Cabins at this station would arrive and depart from an at-grade boarding platform, with the passenger queuing area also at-grade
- Would include a subterranean area below the platform for storage and maintenance of cabins, as well as staff break rooms, lockers, and parts storage areas
    - Cabins would be returned to and stored at Dodger Stadium Station when the system is not in use (after hours)
- Restrooms for passenger use would be located at the station

Dodger Stadium Station would also include a pedestrian connection to Dodger Stadium, including hardscape and landscape improvements and potential seating

Sustainability

- The proposed Project's sustainability features would include features included in:
  - 2019 California Green Building Standards Code
  - United States Green Building Council Leadership in Energy and Environmental Design (LEED) for New Construction
  - Institute for Sustainable Infrastructure's Envision Rating System
- 100% of the power for the proposed Project would be provided by the City of Los Angeles Department of Water and Power's Green Power Program
- Backup battery storage at each station, tower, and junction to provide backup power, rather than diesel generators

The proposed Project would provide a sustainable, high-capacity zero emission ART option for visitors to Dodger Stadium, while also providing access between Dodger Stadium, the surrounding communities, and the regional transit system accessible at LAUS. ART technology is quiet, and the proposed Project would reduce VMT and congestion, leading to reduced GHG emissions and improved air quality.

Construction

Timeline

- Construction of the proposed Project is anticipated to begin as early as 2024 and take approximately 25 months, including construction, cable installation, and system testing

Working Hours

- Construction hours are anticipated for 10 hours a day, which would vary to meet special circumstances and restrictions
- While not anticipated, approval would be required from the City of Los Angeles Board of Police Commissioners for extended construction hours and possible construction on Sundays

Lane Closures

- Anticipated closures would include lane closures in which lanes would be closed 24-hours a day during certain phases of construction, or alternating closures during certain phases of construction, in which closures would occur during construction hours for approximately 10 hours a day, and roads would reopen during non-construction hours for approximately 14 hours a day
- For alternating closures, during non-construction hours, steel plates would be placed over construction sites to the extent feasible in order to allow for vehicular and pedestrian circulation.
- The closures and hours would vary between location and phase of construction
- The proposed Project would implement a Construction Traffic Management Plan that would include detours and ensure that emergency access is maintained throughout all construction activities

Detailed Construction Assumptions

- Detailed construction assumptions are included in Draft EIR Appendix B

Draft EIR Key Analyses and Conclusions

Environmental Resource Topics

All Environmental Resource Topics per CEQA Guidelines Appendix G are addressed in the Draft EIR

- Aesthetics
- Agriculture/Forestry
- Air Quality
- Biological Resources
- Cultural/Historic Resources
- Energy
- Geology/Soils
- Greenhouse Gas Emissions
- Hazards/Hazardous Materials
- Hydrology/Water Quality
- Land Use/Planning
- Mineral Resources
- Noise
- Population/Housing
- Public Services
- Recreation
- Transportation
- Tribal Cultural Resources
- Utilities/Service Systems
- Wildfire

Aesthetics

WHAT WAS STUDIED?

- Visual impacts of Project components surrounding the Project alignment
- Key observation points representing visual character, including presence or absence of landscaping, predominant land uses, the scale of buildings, or the major scenic vistas, scenic resources, and substantive visual elements that are available, such as open space resources, street trees, and building frontages
- Viewers and viewer response, including pedestrians and recreationalists (e.g., park users)
- While there are no designated scenic vistas, views of the downtown Los Angeles skyline, Union Station, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium, and the San Gabriel and San Bernardino Mountains
- Light and glare

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project would not significantly block scenic or panoramic views, such as views of the downtown Los Angeles skyline, Union Station, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium, and the San Gabriel and San Bernardino Mountains
- With the proposed Project's entitlements and approvals – which would include design standards to enhance the visual identity and character of the proposed Project and its surrounding communities – there would not be a conflict with applicable zoning or other regulations governing scenic quality
- The proposed Project would not create a substantial source of light or glare and would comply with applicable City lighting regulations

Existing and Simulation from State Historic Park Towards downtown Los Angeles skyline

Aesthetics

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Scenic Vista	Less Than Significant	Less Than Significant
Scenic Resources	No Impact	No Impact
Visual Character	Less Than Significant	Less Than Significant
Light and Glare	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction: Barriers and sound walls would include a privacy screen, and the Project would implement best management practices to reduce visual impacts. No mitigation is required.

Operation: Project design features, including for building lighting and sign lighting. No mitigation is required.

Agriculture and Forestry

WHAT WAS STUDIED?

- Whether the Project would conflict with agricultural zoning at the Stadium Tower and Dodger Stadium Station sites

KEY ANALYSIS AND CONCLUSIONS

- The Dodger Stadium property does not contain agriculture uses and is subject to a Conditional Use Permit, which allows for the operation of a Major League Baseball stadium and various ancillary structures and uses, including "mass transportation service" to the site; therefore, construction and operation of the proposed Project would not conflict with existing agricultural zoning

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Conversion of Farmland	No Impact	No Impact
Conflict with Forest Land Zoning	No Impact	No Impact
Loss of Forest Land	No Impact	No Impact
Agricultural Use	No Impact	No Impact
Agricultural Zoning and Williamson Act	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

No mitigation is required.

Air Quality

WHAT WAS STUDIED?

- Potential impacts on air quality at the regional and local scales from construction and operation of the proposed Project
- The characteristics and effects of air pollutants
- Regulations that have been adopted to govern air quality management
- A Health Risk Assessment (HRA) evaluating the estimated cancer risk and non-cancer chronic hazard index associated with construction of the Project

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project would be consistent with applicable air quality plans
- The estimated emissions for construction the proposed Project would be less than significance thresholds for pollutants and emissions
- The proposed Project would not expose sensitive receptors to substantial concentrations of pollutants during operations because the proposed Project does not include any land uses or operational emissions that would materially impact ambient air quality during operation
- The proposed Project would result in a net reduction in criteria pollutant emissions by reducing VMT and thereby decreasing emissions compared to existing conditions
- Based on the HRA results, the proposed Project would result in a less than significant impact related to exposing sensitive receptors to substantial pollutant concentrations from TACs

Air Quality

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Air Quality Plans	Less Than Significant	Less Than Significant
Increase Air Pollutants	Less Than Significant	Less Than Significant
Sensitive Receptors	Less Than Significant	Less Than Significant
Other Emissions	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction: Project design feature requiring that all off-road diesel-powered construction equipment greater than 50 horsepower shall meet the Tier 4 emission standards for nonroad diesel engines promulgated by the USEPA. No mitigation is required.

Operation: No mitigation is required.

Biological Resources

WHAT WAS STUDIED?

- Whether the Project would affect special-status species and their habitat
- Whether the Project would affect riparian habitat or protected wetlands
- The potential for the Project to interfere with wildlife movement along the alignment
- Whether the Project would conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance
- Whether the Project would conflict with adopted habitat conservation plans

KEY ANALYSIS AND CONCLUSIONS

- The Project area generally does not provide habitat for special-status species; however, removal of mature palm and eucalyptus trees during construction of the proposed Project could result in the removal of bat roost sites
- The Project area does not contain riparian habitat, other sensitive natural communities, or protected wetlands; therefore, there would be no impact
- The Project area does not serve as a regional wildlife corridor; however, construction activities may result in bat and bird species avoiding areas where active construction is occurring
- The Project would replace removed trees pursuant to the City's Native Tree Protection Ordinance, California Department of Parks and Recreation requirements, and other applicable requirements

Biological Resources

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Riparian Habitat	No Impact	No Impact
Protected Wetlands	No Impact	No Impact
Biological Plans or Policies	Less Than Significant	No Impact
Interfere with Species Movement	Less Than Significant with Mitigation	Less Than Significant
Habitat Modifications	Less Than Significant with Mitigation	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction:

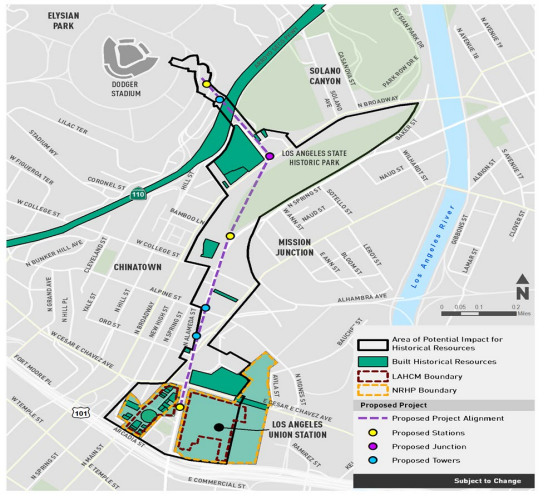
- Implement a project design feature to establish a Tree Protection zone to protect trees
- Pre-construction nesting surveys and measures to avoid and minimize impacts to nesting birds

Operation: No mitigation is required.

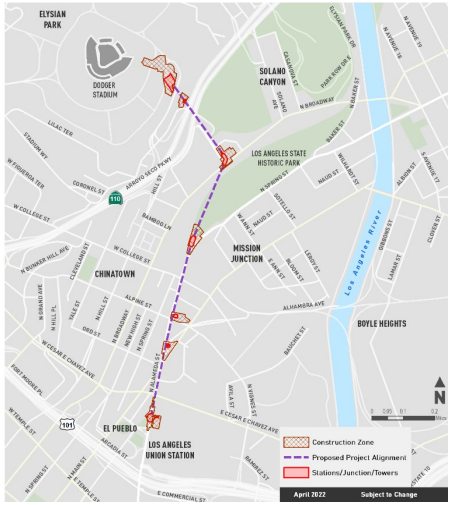
Cultural Resources

WHAT WAS STUDIED?

- Direct and indirect impacts to 29 built historic resources within the Area of Potential Impacts, including Los Angeles Union Station Passenger Terminal and Grounds, Los Angeles Plaza Historic District, Cathedral High School, and Arroyo Seco Parkway Historic District
- Impacts from ground disturbance to archaeological resources within the Area of Direct Impacts, including La Placita, the Zanja Madre, and Southern Pacific Railroad's River Station
- **KEY ANALYSIS AND CONCLUSIONS**
- Historic Resources
  - Construction of the proposed Alameda Station has the potential to result in both direct and indirect impacts to The Winery and the *El Grito* mural; however, impacts would be mitigated to less than significant
  - Construction-related and operational impacts to all other historical resources would be less than significant
- Archaeological Resources
  - Construction of the proposed Alameda Station, Alameda Triangle, Alpine Tower, and Chinatown/State Park Station have the potential to result in a substantial adverse change in the significance of an archaeologic resources; however, impacts would be mitigated to less than significant



Area of Potential Impacts for Built Historic Resources



Area of Direct Impacts for Archaeological Resources

Cultural Resources

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Historical Resource	Less Than Significant with Mitigation	Less Than Significant
Archaeological Resource	Less Than Significant with Mitigation	No Impact
Disturb Human Remains	Less Than Significant with Mitigation	No Impact

HOW WOULD IMPACTS BE MINIMIZED?

- Historic Resources
  - Project design features for pre- and post-construction documentation and protection of The Winery and *El Grito* mural, as well as protection of the *El Grito* mural during construction
  - Vibration monitoring and restrictions on force adjustable ground compaction devices during proposed Alameda Station construction
- Archaeological Resources
  - Preparation and implementation of a Cultural Resources Monitoring and Mitigation Plan and Archaeological Resources Worker Training Program
  - Pre-construction Archaeological Testing Plan for proposed Alameda Station and Chinatown/State Park Station
  - Potential redesign of Los Angeles State Historic Park amenities to avoid archaeological resources

Energy

WHAT WAS STUDIED?

- Overview of the federal, State, and local laws and regulations pertaining to energy
- Overview of California's energy production, supply, and consumption
- Evaluation of the energy resources related to construction and annual energy demands associated with Project operations

KEY ANALYSIS AND CONCLUSIONS

- The temporary energy consumption associated with the proposed Project's construction would allow for a long-term reduction in energy consumption associated with proposed Project operations
- The primary electricity usage associated would come from renewable resources through LADWP's Green Power Program
- The proposed Project would reduce VMT and increase the number of people using public transit, resulting in decreased use of fossil fuels for passenger vehicles

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Wasteful, Inefficient or Unnecessary Consumption	Less Than Significant	Less Than Significant
State or Local Energy Plans	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

No mitigation is required.

Geology and Soils

WHAT WAS STUDIED

- Whether the Project would be susceptible to seismic hazards, such as strong ground shaking, faulting, liquefaction, or landslides
- Whether the Project would be located on unstable geology, potentially resulting in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse.
- Whether the Project alignment would contain expansive soils that could create a substantial direct or indirect risks to life or property
- The potential for Project construction to directly or indirectly destroy a unique paleontological resource or site or unique geologic feature

KEY ANALYSIS AND CONCLUSIONS

- While the Project area is in a seismically active region of southern California, with compliance to existing standards and codes and implementation of mitigation, impacts related to the strong seismic ground shaking, seismic-related ground failure, and/or liquefaction during construction of the proposed Project would be reduced to less than significant
- The Project's Emergency Operations Plan would include emergency response protocols, and would state that in the event of a major earthquake, the system would be fully evacuated and shut down, and would not operate
- With compliance to existing standards and codes and implementation of mitigation, impacts related to lateral spreading, subsidence, liquefaction, or collapse during grading and construction of the Project components would be less than significant
- With compliance to existing standards and codes and implementation of mitigation, impacts related to soil corrosion during construction would be less than significant
- The northern portion of the proposed Project near the approach to Dodger Stadium Station has potential to encounter paleontological resources; however, impacts would be mitigated to less than significant

Geology and Soils

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	**Operations**
Adverse Effects: Earthquakes, Seismic-Related Ground Shaking, Liquefaction or Landslides	Less Than Significant with Mitigation	Less Than Significant
Support Wastewater Systems	No Impact	No Impact
Destroy Unique Paleontological or Geologic Features	Less Than Significant with Mitigation	No Impact
Soil Erosion/Loss of Topsoil	Less Than Significant	Less Than Significant
Unstable Geologic Unit or Soil	Less Than Significant with Mitigation	Less Than Significant
Expansive soil	Less Than Significant with Mitigation	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction:

- Preparation and implementation of a Site-Specific Final Geotechnical Report
- Preparation of and compliance with a Paleontological Resources Monitoring and Mitigation Plan

Operation: No mitigation is required

Greenhouse Gas Emissions (GHGs)

WHAT WAS STUDIED?

- Relevant federal, State, and local laws and regulations
- An overview of the science of GHGs
- Methodology used to evaluate GHG emissions related to the proposed Project

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project would not result in an incremental contribution of GHG emissions compared to existing conditions and would reduce GHG emissions compared to existing conditions

The lifetime emissions of the Project would be a reduction of 166,653 metric tons of GHGs.

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Generate GHGs	Less Than Significant	Less Than Significant
GHG Reduction Plans or Policies	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

No mitigation is required.

Hazards and Hazardous Materials

WHAT WAS STUDIED?

- Project activities were assessed to determine their potential impact on creating conditions hazardous to the public or the environment during construction and operation
- Potential impacts due to hazards and hazardous materials were then analyzed against applicable significance criteria

KEY ANALYSIS AND CONCLUSIONS

- While the proposed Project would use, transport, and dispose of limited amounts of hazardous substances during construction, the proposed Project would comply with federal, State, and local health and safety requirements; and would comply with all codes, standards, and regulations during operation
- The proposed Project would comply with OSHA, Cal/OSHA, and Division 71 of the Los Angeles Municipal Code, and would implement a Soil and Groundwater Management Plan, which would limit the potential for hazardous materials and waste spills to occur
- The proposed Project would conduct hazardous materials abatement by a licensed abatement contractor prior to demolition, which would ensure that that schools are not adversely impacted
- Construction and operation of the proposed Project would not interfere with LAPD access to the Hooper Heliport, and heliport operations would not be impacted by construction activities
- Five properties were identified as hazardous materials sites in the Project area; however, the Project would implement a Soil and Groundwater Management Plan to reduce impacts from these sites
- Construction of the proposed Project would not substantially impair the implementation of, or physically interfere with, an adopted emergency response plan or emergency evacuation plan; and daily operation of the project would not affect emergency response

Hazards and Hazardous Materials

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	**Operations**
Hazardous Sites	Less Than Significant with Mitigation	No Impact
Airport Land Use Plan	No Impact	No Impact
Hazard to Public or Environment	Less Than Significant with Mitigation	Less Than Significant
Emergency and Evacuation Plans	Less Than Significant	Less Than Significant
Hazards Near Schools	Less Than Significant with Mitigation	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction:

- Preparation and implementation of a Soil and Groundwater Management Plan to specify methods for handling and disposal in the event contaminated groundwater, contaminated soil, or structures, are encountered during Project construction
- Hazardous Materials Abatement for demolition of the existing building at 1201 North Broadway

Operation: No mitigation is required.

Hydrology and Water Quality

WHAT WAS STUDIED?

- The potential for the proposed Project to violate any water quality standards, decrease groundwater supplies, or result in substantial erosion or siltation on- or off-site
- The potential for the proposed Project to substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite
- The potential for the proposed Project to create or contribute to runoff water which would exceed the capacity of existing or planned stormwater drainage systems, or impede or redirect flood flows
- The potential for the proposed Project to risk release of pollutants during project inundation in flood hazard, tsunami, or seiche zones
- The potential for the proposed Project to conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project would comply with all applicable federal, State, regional, and local agency water quality protection laws and regulations, water quality control and/or sustainable groundwater management plans
- The proposed Project would incorporate best management practices and implement a low impact development plan to reduce hydrology and water quality impacts
- The proposed Project is not susceptible to release of pollutants due to project inundation in flood hazard, tsunami, or seiche zones

Hydrology and Water Quality

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Decrease Groundwater Supply	Less Than Significant	No Impact
Water Quality Standards or Plans	Less Than Significant	Less Than Significant
Alter Drainage	Less Than Significant	Less Than Significant
Flood, Tsunami or Seiche	Less Than Significant	Less Than Significant
Conflict with Plans	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction and Operation: The proposed Project would comply with applicable federal, State, regional, and local laws and regulations, including compliance with applicable stormwater permits, wastewater permits, and other water quality regulations. No mitigation is required.

Land Use and Planning

WHAT WAS STUDIED?

- The proposed Project's potential to physically divide an established community
- The proposed Project's potential to conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect

KEY ANALYSIS AND CONCLUSIONS

- Though temporary closures during construction would disrupt vehicular, pedestrian, and bicycle access within and between communities, there would be a variety of options available for connections and access within the Project area
  - Communities will remain accessible from other surrounding streets, and pedestrian detours would be provided, which would prevent closures from physically dividing established communities.
- The proposed Project would enhance community connectivity by providing first/last mile transit and pedestrian access and enhancements, including a mobility hub and support for the future Los Angeles State Historic Park bike and pedestrian bridge
- The proposed Project is consistent with policies, regulations, goals, and/or objectives of local Plans, codes, and ordinances
- State Parks considers there to be an inconsistency between the proposed Project and the Los Angeles State Historic Park General Plan and therefore a potentially significant impact because the Los Angeles State Historic Park General Plan does not identify transit as a use for the Park
  - With implementation of Mitigation Measure LUP-A, which would require the proposed Project to obtain a LASHP General Plan Amendment, impacts would be less than significant

Land Use and Planning

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Physically Divide Community	Less Than Significant	No Impact
Conflict with Land Use Plans or Policies	Less Than Significant with Mitigation	Less Than Significant with Mitigation

HOW WOULD IMPACTS BE MINIMIZED?

Construction (Physically Divide Community): While construction impacts are less than significant, implementation of the Construction Traffic Management Plan would include street closure information, detour plans, haul routes, and a staging plan

Construction and Operation: The proposed Project would obtain a Los Angeles State Historic Park General Plan Amendment to allow transit uses within the Los Angeles State Historic Park General Plan

Mineral Resources

WHAT WAS STUDIED?

- Whether construction of the Project would result in the loss of availability of a known mineral resources resource that would be of value to the region and the residents of the state.
- Whether the Project would result in the loss of availability of a locally- important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

KEY ANALYSIS AND CONCLUSIONS

- The Project is not located in an area of known mineral resources
- Much of the area within the City of Los Angeles was developed with structures prior to the MRZ classifications and is unavailable for extraction
- The Project alignment is located in an urbanized area of the City of Los Angeles, and the mining of such materials in an urbanized environment is not practical

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Loss of Available Mineral Resources	No Impact	No Impact

HOW WOULD IMPACTS BE MINIMIZED?

No mitigation is required.

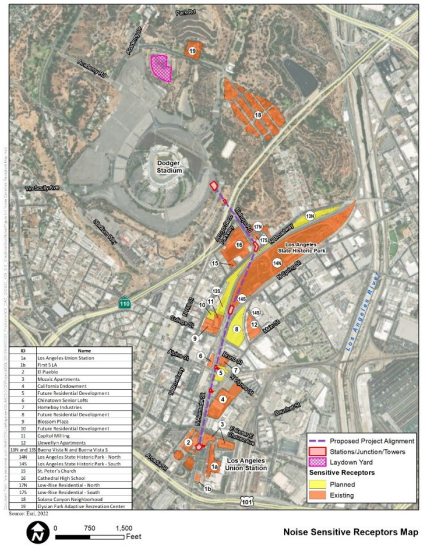
Noise

WHAT WAS STUDIED?

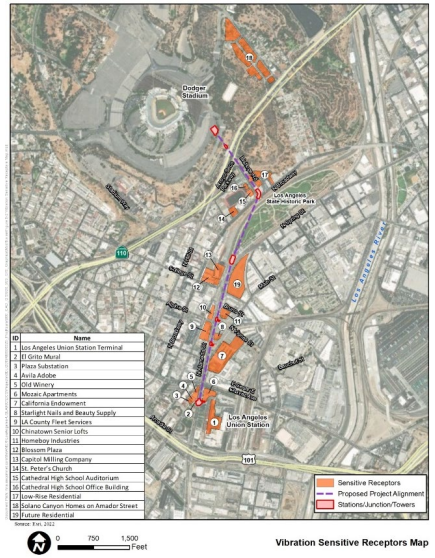
- Existing condition noise survey with measurements conducted at sites representative of noise-sensitive receptors along the proposed Project alignment, including locations of existing and future residential developments, schools, parks, and other areas with frequent outdoor human use
- Potential construction noise impacts were evaluated by calculating the Project related construction noise levels
- Operational noise impacts were evaluated by identifying the noise levels that would be generated by Project operation noise sources, including stations, junction, towers, cabins passing along the support sheaves at towers, cabins, and passengers at stations waiting to board the system
- Ground-borne vibration impact analysis for both building damage and human annoyance

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project's significant and unavoidable on-site construction noise impacts would be a function of the noise generated by construction equipment, the location of the equipment, the timing and duration of the noise-generating construction activities, and the relative distance to noise-sensitive receptors
- Noise generated from off-site construction-related traffic would be less than significant
- Noise generated from Project operations under the worst-case scenario would be less than significant
- Vibration generated from on-site construction activity would have significant and unavoidable human annoyance impacts; potential building damage impacts would be less than significant with mitigation
- Vibration generated from Project operations would be less than significant



Noise Sensitive Receptors Map



Vibration Sensitive Receptors Map

Noise

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Expose Public Near Airport	No Impact	No Impact
Generation or Increase in Ambient Noise Levels	Significant and Unavoidable	Less Than Significant
Generation of Excessive Vibration or Noise Levels	Significant and Unavoidable	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Operational Noise: Cabin project design features related to interior-to-exterior noise reduction and power sound levels of HVAC units. No mitigation is required.

Construction Noise: Implementation of a Construction Noise Management Plan, including

- Noise barriers
- Equipment maintenance
- Community outreach, including a Noise Disturbance Coordinator

Construction Vibration:

- Placement of vibration monitoring equipment for the Avila Adobe (1970s addition), *El Grito* mural, and The Winery
- Restrictions on the use of force-adjustable ground compaction devices

Population and Housing

WHAT WAS STUDIED?

- The potential for the proposed Project to cause substantial population growth, or accelerate growth that exceeds projected or planned levels
- Whether implementation of the proposed Project would displace substantial numbers of existing people or housing

KEY ANALYSIS AND CONCLUSIONS

- As a first/last mile transit connection to Dodger Stadium, the proposed Project would not induce substantial population growth either directly or indirectly
  - Designed to meet the area's transit needs and improve the efficiency of the existing transportation network
  - Support the City's goals from the Housing Element and Community Plans of providing transit near already planned residential development
- The proposed Project would not displace existing people or housing

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Induce Unplanned Population Growth	Less Than Significant	Less Than Significant
Displace People or Housing	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

No mitigation is required.

Public Services

WHAT WAS STUDIED?

- Whether the proposed Project would result in adverse physical impacts associated with the provision of new or physically altered public facilities, the construction of which could cause significant environmental impacts, including fire and police protection, schools, and other public facilities such as libraries, senior centers, homeless shelters, and daycare facilities
- Whether the Project would affect response times for emergency service

KEY ANALYSIS AND CONCLUSIONS

- While construction activities associated with the proposed Project would create a temporary increase in demand for emergency services, the implementation of mitigation measures and project design features, and compliance with applicable State and local regulations, including coordination with LAFD and LAPD prior to construction of the Project, would ensure that construction of the Project would not create additional demand for emergency services that would result in the need to add new—or physically alter existing—public facilities facilities
- LAFD and LAPD would have adequate access during construction
- While the proposed Project would create an increased demand for emergency services during Project operation, with adherence to the applicable regulations, coordination with LAFD and LAPD, and implementation of an Emergency Operations Plan, operation of the proposed Project would not create additional demand for emergency services that would result in the need to add new—or physically alter public facilities
- The proposed Project does not include housing, which could increase demand for school services or other public facilities

Public Services

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Need for new or altered Fire, Police, Schools or other Public Services	Less Than Significant with Mitigation	Less Than Significant
Service Ratios and Response Times	Less Than Significant with Mitigation	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction: The Construction Traffic Management Plan would reduce impacts related to emergency access

Operation: The proposed Project would comply with applicable regulations, would implement security features such as staff and cameras, and would implement an Emergency Operations Plan. No mitigation is required.

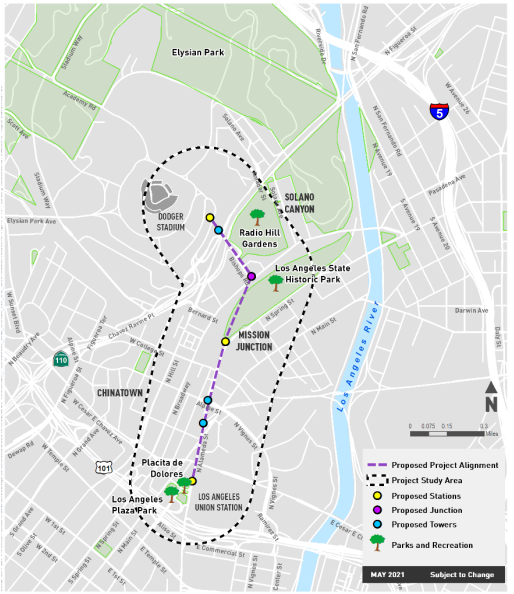
Parks and Recreation

WHAT WAS STUDIED?

- Potential to impact parks and recreational facilities during construction and operation, including Los Angeles Plaza Park and Placita de Dolores, Los Angeles State Historic Park, and Elysian Park

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project would not increase in the demand for parks, or generate new permanent residents that would result in an increase in the use of existing parks and recreational facilities, such that substantial deterioration of parks would occur or be accelerated or would result in the provision of new park facilities, or the need for new or physically altered park facilities
- The proposed Project would improve mobility and accessibility for the region by providing high capacity aerial rapid transit connecting the regional transit system at LAUS and the Los Angeles State Historic Park and Elysian Park



IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Deterioration of a Public Facility	Less Than Significant	Less Than Significant
Expansion of Recreational Facilities	Less Than Significant	Less Than Significant
Service Ratios and Performance Objectives	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

No mitigation is required.

Transportation

WHAT WAS STUDIED?

- Utilized both the CEQA Guidelines and LADOT's established screening criteria, analysis methodology, and threshold criteria through the City's TAG
- The analysis of VMT for the proposed Project employed a variety of data, methodologies, and models in order to estimate Project ridership, vehicle trips reduced, vehicle trip lengths, and ultimately the VMT benefit of the proposed Project
- Ridership estimates for Dodger Stadium game and event attendees, employees, tourists, neighborhood riders, and Los Angeles State Historic Park visitors and event attendees
- Location of the proposed Project stations, junction, and towers and whether these components substantially increase hazards due to a geometric design feature
- The proposed Project's construction conceptual traffic detour plans and haul route

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project would be consistent with PPOPs – programs, plans, ordinances, and policies – addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities
- The proposed Project would not introduce any unsafe physical conditions with the implementation of mitigation measures for the Alameda Tower and Chinatown/State Park Station
- With implementation of mitigation measures, emergency access would be maintained during proposed Project construction

The lifetime VMT reduction of the Project would be 129,629,500 VMT.

Transportation

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Vehicle Miles Traveled (VMT)	No Impact	No Impact
Conflict with Plan or Policies	Less Than Significant	Less Than Significant
Increase Hazards through Design	Less Than Significant with Mitigation	Less Than Significant with Mitigation

HOW WOULD IMPACTS BE MINIMIZED?

Construction:

- Implementation of a City approved and detailed Construction Traffic Management Plan, including street closure information, detour plans, haul routes, and a staging plan
- Implementation of a City approved Temporary Disaster Route Plan, which would include street closure information and detour plans in order to facilitate the movement of emergency vehicles through the study area and minimize effects on emergency response during a disaster

Construction and Operation:

- Visibility enhancements – such as high visibility crosswalk treatments, advanced crossing warning signs, flashing beacons, upgraded lighting, and new or upgraded traffic controls – at the proposed Alameda Tower and Chinatown/State Park Station

Tribal Cultural Resources

WHAT WAS STUDIED?

- Substantial adverse changes to significant tribal cultural resources
- Consulted with eight California Native American Tribes pursuant to Assembly Bill 52

KEY ANALYSIS AND CONCLUSIONS

- Resources exist in the area and require implementation of mitigation, including archaeological testing and data recovery
- Previously unidentified resources have potential to be encountered during construction; if the Native American Monitor identifies potential resources, the monitor may temporarily halt construction

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Change to Tribal Cultural Resource	Less Than Significant with Mitigation	No Impact

HOW WOULD IMPACTS BE MINIMIZED?

Construction:

- Implement the Cultural Resources Monitoring and Mitigation Program and Archaeological Testing Plan for LAUS Forecourt
- Retain a Native American monitor to monitor ground-disturbing construction activities at the location of the Alameda Station

Operation: No mitigation is required.

Utilities and Service Systems

WHAT WAS STUDIED?

- The relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities
- The effect of the Project on water supplies
- Whether the Project would require expansion of wastewater treatment capacity
- Whether area landfills would have sufficient capacity for solid waste generated by the Project

KEY ANALYSIS AND CONCLUSIONS

- Construction of the proposed Project would not require the construction of new or expanded utilities
- Construction of the proposed Project would require relocations of existing utilities, which would be coordinated with the utility providers and conducted in compliance with the applicable State and local codes and regulations
    - To minimize the potential interference with existing utilities associated with utility relocations during construction, the proposed Project would implement a Utility Relocation Plan
- Operation of the proposed Project would require connections to existing utilities systems
- Primary electricity usage would come from renewable resources and the existing power supply should be sufficient Project operations
- Construction and operation of the proposed Project would have sufficient water supply
- Construction and operation would generate potential wastewater, which would be treated per regulations
- Solid waste would not be generated in excess of State or local standards or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals

Utilities and Service Systems

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Sufficient Water Supplies	Less Than Significant	Less Than Significant
Demand and Capacity on Wastewater Systems	Less Than Significant	Less Than Significant
Solid Waste Goals	Less Than Significant with Mitigation	Less Than Significant
Relocation or Construction of Utilities	Less Than Significant with Mitigation	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction:

- Develop and implement a Utility Relocation Plan in coordination with utility companies to minimize impacts to services throughout the Project construction
- Prepare a Soil and Groundwater Management Plan

Operation: No mitigation is required.

Wildfire

WHAT WAS STUDIED?

- Whether the proposed Project would result in potential significant impacts related to wildfire if located in or near State Responsibility Areas (SRAs) or lands classified as Very High Fire Hazard Severity Zones (VHFHSZ)
- Potential wildfire behavior within the Project area based on topography, weather, and fuels
- Substantially impair an adopted emergency response plan or emergency evacuation plan
- Whether the proposed Project would require installation or maintenance of associated infrastructure that may exacerbate fire risk or result in temporary or ongoing impacts to the environment
- Whether the proposed Project exposes people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post fire slope instability, or drainage changes
- Whether the proposed Project would expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires

KEY ANALYSIS AND CONCLUSIONS

- The portion of the proposed alignment containing the Broadway Junction, Stadium Tower, and Dodger Stadium Station are within the VHFHSZ
- Construction and operation of the proposed Project would not inhibit access to identified disaster routes and would not substantially impair implementation of an emergency response or evacuation plan
- The Project would adhere to applicable codes and regulations and best construction practices and would not exacerbate wildfire risks
- Implementation of project design features would further reduce these risks

Wildfire

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Impair Emergency or Evacuation Plans	Less Than Significant	Less Than Significant
Exacerbate Wildfire Risks	Less Than Significant	Less Than Significant
Install/Maintain Associated Infrastructure	Less Than Significant	Less Than Significant
Expose People or Structures to Wildfire Risks	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

Construction: Implement project design features, including Fire Protection Plan and a fuel modification zone surrounding the Stadium Tower construction site. No mitigation is required.

Operation: Implement a project design features during operation of the Broadway Junction, Stadium Tower, and Dodger Stadium Station related to security monitoring by staff and cameras and the identification and reporting of fire safety hazards. No mitigation is required.

Alternatives

WHAT WAS STUDIED?

- A reasonable range of alternatives were selected to explore potential means to mitigate or avoid the significant environmental impacts associated with implementation of the proposed Project, while still achieving the Project's primary objectives
  - No Project Alternative – No New Development
  - Spring Street Alignment Alternative – Alignment Alternative to the proposed Project
  - Transportation Systems Management Alternative – Enhanced Union Station Dodger Stadium Express Service
- Several alternatives were considered but dismissed from detailed analysis for failure to meet most of the basic project objectives, infeasibility, or inability to avoid significant environmental impacts, including the Broadway Station Alignment Alternative, the Combined Metro L Line (Gold) Station and College Street Station Alignment Alternative, and Direct Alignment Alternatives.

KEY ANALYSIS AND CONCLUSIONS

- The No Project Alternative would not improve transit access or provide connections between communities. Additionally, VMT and vehicle congestion would not be reduced, and the associated reduction in GHG emissions and air quality improvements would not take place.
- The Spring Street Alignment Alternative would provide a direct transit connection and improve connectivity for surrounding communities. This Alternative would require a larger footprint and wouuld not reduce significant environmental impacts.
- The TSE Alternative would not provide a direct transit connection or improve connectivity for surrounding communities and would not provide the same reduction in VMT, GHG emissions, or improvements in air quality.

Alternatives

ALTERNATIVE CONCLUSIONS

Alternatives	Finding	
	Ability to Fulfill Project Objectives	**Ability to Reduce Significant Impacts**
No Project Alternative	Would Not Fulfill Project Objectives	Less Impacts than the Project
Spring Street Alignment Alternative	Would Fulfill All Project Objectives	Similar Impacts to the Project
Transportation Systems Management Alternative	Would Not Fulfill Most Project Objectives	Less Impacts than the Project

WHAT IS THE ENVIRONMENTALLY SUPERIOR ALTERNATIVE?

The TSM Alternative would be considered the environmentally superior alternative because it it would not result in a CEQA determination of a significant and unavoidable impact and would result in the fewest environmental impacts overall. However, the TSM Alternative's impact would be greater for air quality, energy, greenhouse gas emissions, hydrology and water quality, and transportation and traffic. In addition, the TSM Alternative would not meet the majority of the Project's Objectives in full or in part.

Other Additional Evaluations in the Draft EIR

LOS ANGELES STATE HISTORIC PARK

Kites: Due to the location of the proposed Project alignment – which traverses over along the western edge of the Park adjacent to the Metro L Line and pedestrian pathway – the proposed Project does not significantly reduce the safe kite flying area within the Park

Special Events: Due to the location of the proposed Project alignment, which crosses over a small portion of the park not typically used for screens and stages, and because events can still take place under the majority of the proposed Project alignment, the proposed Project does not significantly reduce the event space area within the Park

Typical Locations for Event Stages and Screens at the Los Angeles State Historic Park with Proposed Project Alignment

LOCATION OF THE ALAMEDA STATION AND CHINATOWN/STATE PARK STATION

HELIPORTS

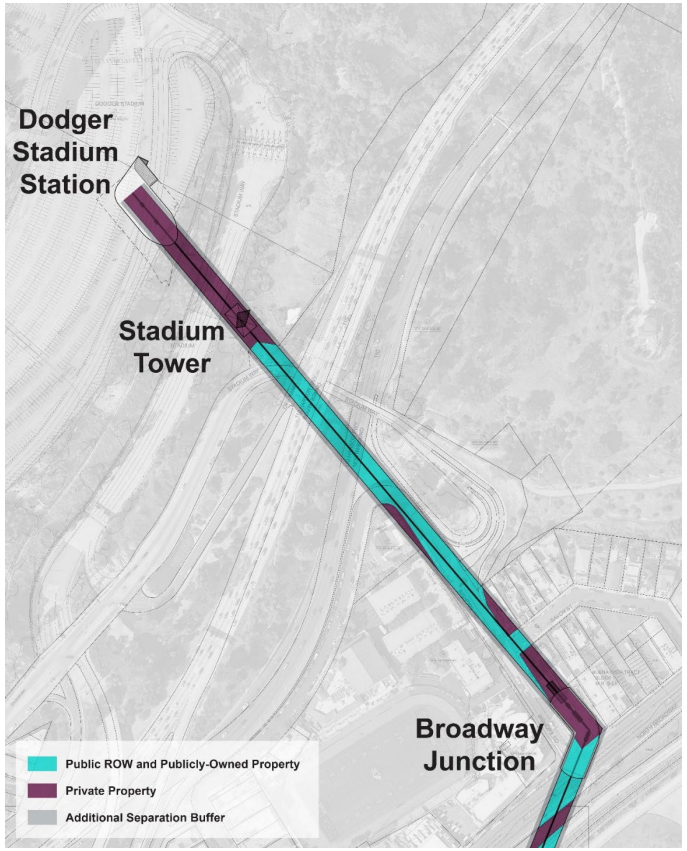
- The proposed Project alignment is not located within an area covered by an airport land use plan, nor within two miles of a public airport
- An airspace evaluation of the heliports in the proposed Project alignment's vicinity concluded that the construction and operation of the proposed Project will be clear of the airspace associated with the existing heliports in the proposed Project's vicinity, resulting in no potential for air navigation hazards and, therefore, no impacts to aeronautical activity, including to heliports in the proposed Project's vicinity

Design Option A

BROADWAY JUNCTION SHIFT TO AVOID 451 E. SAVOY

- Includes a shift in the overall Project alignment between the Broadway Junction and Dodger Stadium Station to avoid aerial rights requirements over 451 E. Savoy Street
- Shift would result in the alignment crossing over a small portion of Cathedral High School adjacent to Bishops Road
- Includes changes to the Project components of Broadway Junction, Stadium Tower, and Dodger Stadium Station
  - Would result in utility relocations and additional construction durations at both the Stadium Tower and Dodger Stadium Station
  - Would require a longer walk for proposed Project passengers to travel between the Dodger Stadium Station and Dodger Stadium

Proposed Project Alignment

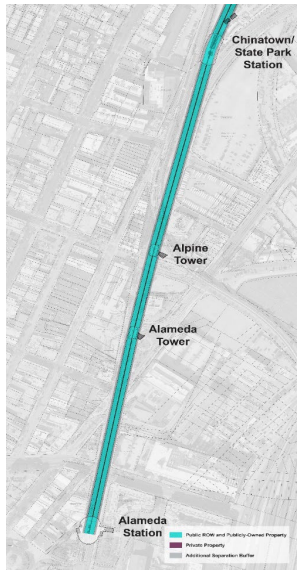


Design Option A

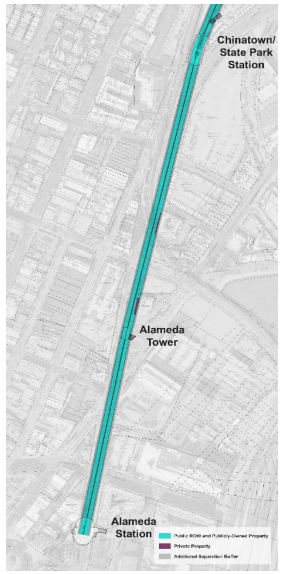
Design Option B

SINGLE TOWER ALONG ALAMEDA STREET

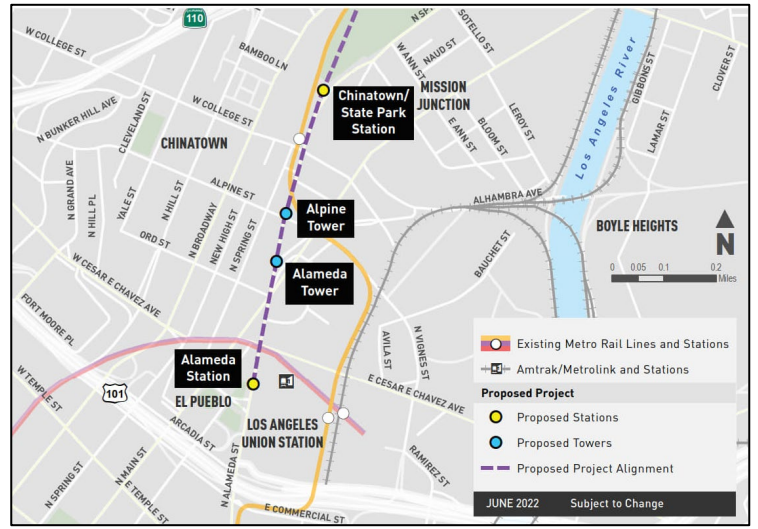
- In response to stakeholder feedback, who asked the Project Sponsor to assess the potential to reduce the number of towers along Alameda Street from two to one
- Consists of a 50-foot overall height increase at the Alameda Tower and the removal of Alpine Tower from the proposed Project between the Alameda Station and the Chinatown/State Park Station
- The increased tower height coincides with additional construction activities
- Would result in potential technical constraints
- Would result in the need for additional private aerial rights requirements



Proposed Project Alignment



Design Option B



Proposed Project Alignment

Design Option B

Design Option C

CHINATOWN/STATE PARK STATION WITH INCREASED HEIGHT

- In response to stakeholder feedback, who asked the Project Sponsor to consider a taller Chinatown/State Park Station
- Design Option C consists of a 35-foot overall height increase at the Chinatown/State Park Station
- The increased height coincides with additional construction activities
- Has the potential to reduce passenger experience due to the height, which also results in the boarding platform being raised, requiring additional vertical circulation to access and ascend the platform

Proposed Project Alignment

Design Option C

Use Option D

CHINATOWN/STATE PARK STATION AS A NON-PASSENGER JUNCTION

- In response to stakeholder feedback, who asked the Project Sponsor to consider no passenger access at the Chinatown/State Park Station, to increase the height of the cabins entering and exiting the station along Spring Street
- Use Option D includes substituting a non-passenger junction for the proposed Chinatown/State Park Station
- Would have the same location, height, width, length, and architectural finish as the proposed Project
- Would not enhance community connectivity to the Los Angeles State Historic Park, Chinatown, and the Mission Junction Neighborhood

Design and Use Option E

PEDESTRIAN BRIDGE AT THE LOS ANGELES STATE HISTORIC PARK

- The Los Angeles State Historic Park has proposed an ADA accessible pedestrian bridge that would gently slope from the central portion of the Park to North Broadway
- While the pedestrian bridge is not proposed as part of the proposed Project, the Draft EIR includes an analysis of the pedestrian bridge for the Park
- As noted in the Los Angeles State Historic Park General Plan and Final EIR and the Bike and Pedestrian Bridger Study, the bridge would provide safe pedestrian and bike access from the Chinatown and Solano Canyon communities into the Park

Source: Bridge Feasibility Study

Overview of the Parking Study

PROPOSED PROJECT PARKING STUDY

- Although CEQA does not require analysis of parking, a comprehensive Parking Study was conducted for the Project, which Metro had peer reviewed
- The Parking Study has been available on Metro's website since September 9, 2022

WHAT WAS STUDIED?

- Most proposed Project riders are expected to shift to transit to get to the Project
- There are approximately 10,290 spaces in publicly available lots and garages and in on-street spaces within ½ mile of the proposed Project's Alameda Station and Chinatown/State Park Station

Overview of the Parking Study

PARKING STUDY CONCLUSIONS

Parking Type	Game Day Parking			
	Parking Supply	Parked Vehicles	Occupancy	Available Supply
Off-Street Publicly Available Spaces	6,876	2,173	32%	4,703
On Street Spaces	3,417	2,017	59%	1,400
TOTAL				
Proposed Project Parking Demand (2042)	-	307 – 790		
Total Available Off-Street Spaces with Project	6,876	2,963	43%	3,913

*Counts were taken on September 10, 2021, on an evening when the Los Angeles Dodgers hosted the San Diego Padres; the paid attendance was 48,403, which was higher than the 2019 Los Angeles Dodgers season average for weekday evening games. In coordination with Metro and LADOT, the Parking Study applied a 46% increase to off-street publicly available spaces to account for the COVID-19 pandemic.

With the addition of the proposed Project's potential parking demand, there is plenty of available parking spaces within the proposed Project's walkshed. Even if some existing parking lots get redeveloped, there is plenty of off-street parking supply to accommodate all of the proposed Project's parking demand.

THE PROJECT IS COMMITTED TO ENCOURAGE TRANSIT RIDERSHIP

- Implement business to business partnerships with local businesses to pre-sell bundled packages that include patronage at local businesses and available off-street parking
- Support implementation/expansion of various management strategies including time limit parking restrictions and parking meters during game times to discourage riders from parking in the community and keeping spaces available for residents and local businesses

Public Comment Session

Public Comment Session

- Purpose: Allow the public an opportunity to comment on the Draft EIR

TODAY!

Learn about the Draft EIR's key analyses and conclusions and provide verbal public comment.

There will be no Q&A today.

Raise your hand and you will be called on to unmute yourself and provide public comment. Participants will be allocated up to two minutes per comment.

Communications typed into the Zoom chat will not be considered a formal public comment.

How to Comment on Draft EIR through January 17, 2023

How to Comment on Draft EIR

Public Hearings

Downtown Los Angeles/Chinatown
Saturday, December 10, 10:00 am – 12:00 pm
Los Angeles Union Station Ticket Concourse
800 N. Alameda Street, Los Angeles, CA 90012

Virtual Meeting via Zoom
Tuesday, December 13, 5:00 – 7:00 pm
Go to metro.net/aerialrapidtransit
for details

Downtown Los Angeles/Chinatown
Thursday, January 12, 2023, 5:00 – 7:00 pm
Cathedral High School
1253 Bishops Road, Los Angeles, CA 90012

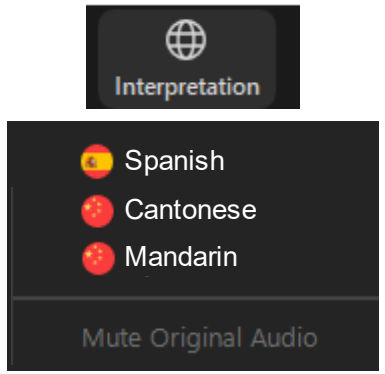
THANK YOU

Audiencia Pública sobre el Borrador del EIR del Proyecto de Transporte Rápido Aéreo de Los Ángeles

13 de diciembre de 2022

Language Accommodations* (Asistencia de Lenguaje / 語言選項 / 语言选项)



Click on the interpretation button.

Select Spanish, Cantonese, or Mandarin.

You are welcome to download a translated version of the Presentation at metro.net/aerialrapidtransit

*Note that if you are calling in via phone, the interpretation feature is not available in Zoom for phone-only participants. Please log in to Zoom to access interpretation if you can.

Español

Haga clic en el botón de interpretación.

Seleccione: Español, Cantonés o Mandarín.

Puede descargar una versión traducida de la presentación en metro.net/aerialrapidtransit

*Nota. Si llama vía telefónica, la opción de interpretación no estará disponible en Zoom. Si es posible, favor de ingresar a Zoom para tener acceso a la interpretación.

粵語

點擊傳譯按鈕。

選擇西班牙語、粵語或普通話。

歡迎您在 metro.net/aerialrapidtransit 下載簡報的翻譯版本

*注意: 如果您是打電話參加，口譯的選項無法使用。如有可能，請用電腦的Zoom 軟體連結口譯功能。

普通话

点击口译按钮。

选择西班牙语、粤语或普通话。

欢迎在 metro.net/aerialrapidtransit 下载演示文稿翻译版本。

*注意：如果您是打电话参加，口译的选项无法使用。如有可能，请用Zoom 软件连结口译功能。

Orden del Día

1. Propósito de la Reunión
2. Cómo Participar en Esta Reunión Virtual
3. Generalidades
4. Resumen del Proceso de la CEQA
5. Generalidades del Proyecto LA ART
6. Análisis y Conclusiones Clave del Borrador del EIR
7. Sesión de Comentarios Públicos

Para ayuda con el Zoom: por favor escríbanos a mary.nooristani@aecom.com o llame al (619) 251-9180

Propósito de la Reunión

ANÁLISIS Y CONCLUSIONES CLAVE DEL PRESENTE BORRADOR DEL EIR

SESIÓN DE COMENTARIOS PÚBLICOS

Proceso de la Ley de Calidad Ambiental de California (CEQA)

Periodo de Alcance de 45 Días 1 de Octubre – 16 de Noviembre de 2020

→

Revisión Pública del Borrador del EIR de 90 Días 17 de octubre – 17 de enero de 2023

→

Certificación del EIR Final por la Junta Directiva de Metro 2023

Alcance Comunitario Continuo

Tres Talleres Informativos

Dos Audiencias Públicas

ESTAMOS AQUÍ

¡HOY!

Conozca los análisis y conclusiones clave del Borrador del EIR y proporcione comentarios públicos verbales.

Hoy no habrá preguntas y respuestas.

La comunicación que se haga hoy a través del chat de Zoom no se considerarán un comentario público formal.

Cómo Hacer Comentarios Sobre el Borrador del EIR, a Más Tardar el 17 de Enero de 2023

Audiencia Pública Adicional

Centro de Los Ángeles/Chinatown
Jueves, 12 de enero de 2023, 5:00 – 7:00 p.m.
Secundaria Cathedral High School
1253 Bishops Road, Los Angeles, CA 90012

Email
LAART@metro.net

Correo postal
Mr. Cory Zelmer
Deputy Executive Officer Metro
One Gateway Plaza, Mail Stop 99-22-6
Los Angeles, CA 90012

Teléfono
213-922-6913

¿Cómo Participar en esta Reunión?

¡HOY!

Infórmese sobre los Análisis y Conclusiones Clave del Borrador del EIR, y haga preguntas.

No se aceptarán comentarios del público hoy.

Preguntas y Respuestas (Q&A): Utilice la función de Preguntas y Respuestas (Q&A) para escribir una pregunta durante la sesión de Preguntas y Respuestas.

Generalidades

Generalidades

- El Proyecto de Transporte Rápido Aéreo de Los Ángeles ha sido propuesto por LA Aerial Rapid Transit Technologies LLC
- Metro es la agencia principal en la preparación de un Informe de Impacto Ambiental (EIR) según la Ley de Calidad Ambiental de California (CEQA)
- El Borrador del EIR evalúa los posibles efectos ambientales asociados a la construcción y el funcionamiento del proyecto propuesto

Generalidades

- Como agencia principal, Metro tiene la responsabilidad de asegurarse de que:
  - El informe de impacto ambiental EIR evalúe adecuadamente los posibles impactos del proyecto
  - Las medidas de mitigación propuestas sean apropiadas
  - Se haya cumplido con el proceso de la CEQA en lo que respecta a las notificaciones públicas, la divulgación pública y la distribución de documentos

Generalidades

- Actualmente estamos aceptando comentarios del público sobre el borrador del EIR en virtud de la CEQA
  - Audiencias Públicas
  - Email
  - Correo postal
  - Teléfono
- Proyecto de Ley 44 del Senado
  - Adoptada para agilizar la revisión de los proyectos de transporte de liderazgo ambiental en el Condado de Los Ángeles en virtud de la CEQA
  - El proyecto propuesto será el primer proyecto de transporte de liderazgo ambiental en virtud del Proyecto de Ley 44 del Senado
  - Requisitos de la Audiencia Pública
    - **Taller Informativo: dentro de los primeros 10 días calendario del período de comentarios del público para informar al público sobre los análisis y conclusiones clave del Borrador del EIR**
    - Audiencia Pública: dentro de los últimos 10 días calendario del periodo de comentarios del público para obtener el testimonio del público

Generalidades del Proceso de la Ley de Calidad Ambiental de California (CEQA)

Proceso de la CEQA

Esto se requiere para todos los proyectos emprendidos, financiados o que requieran la aprobación de un organismo público

Informa al público y a los responsables de la toma de decisiones

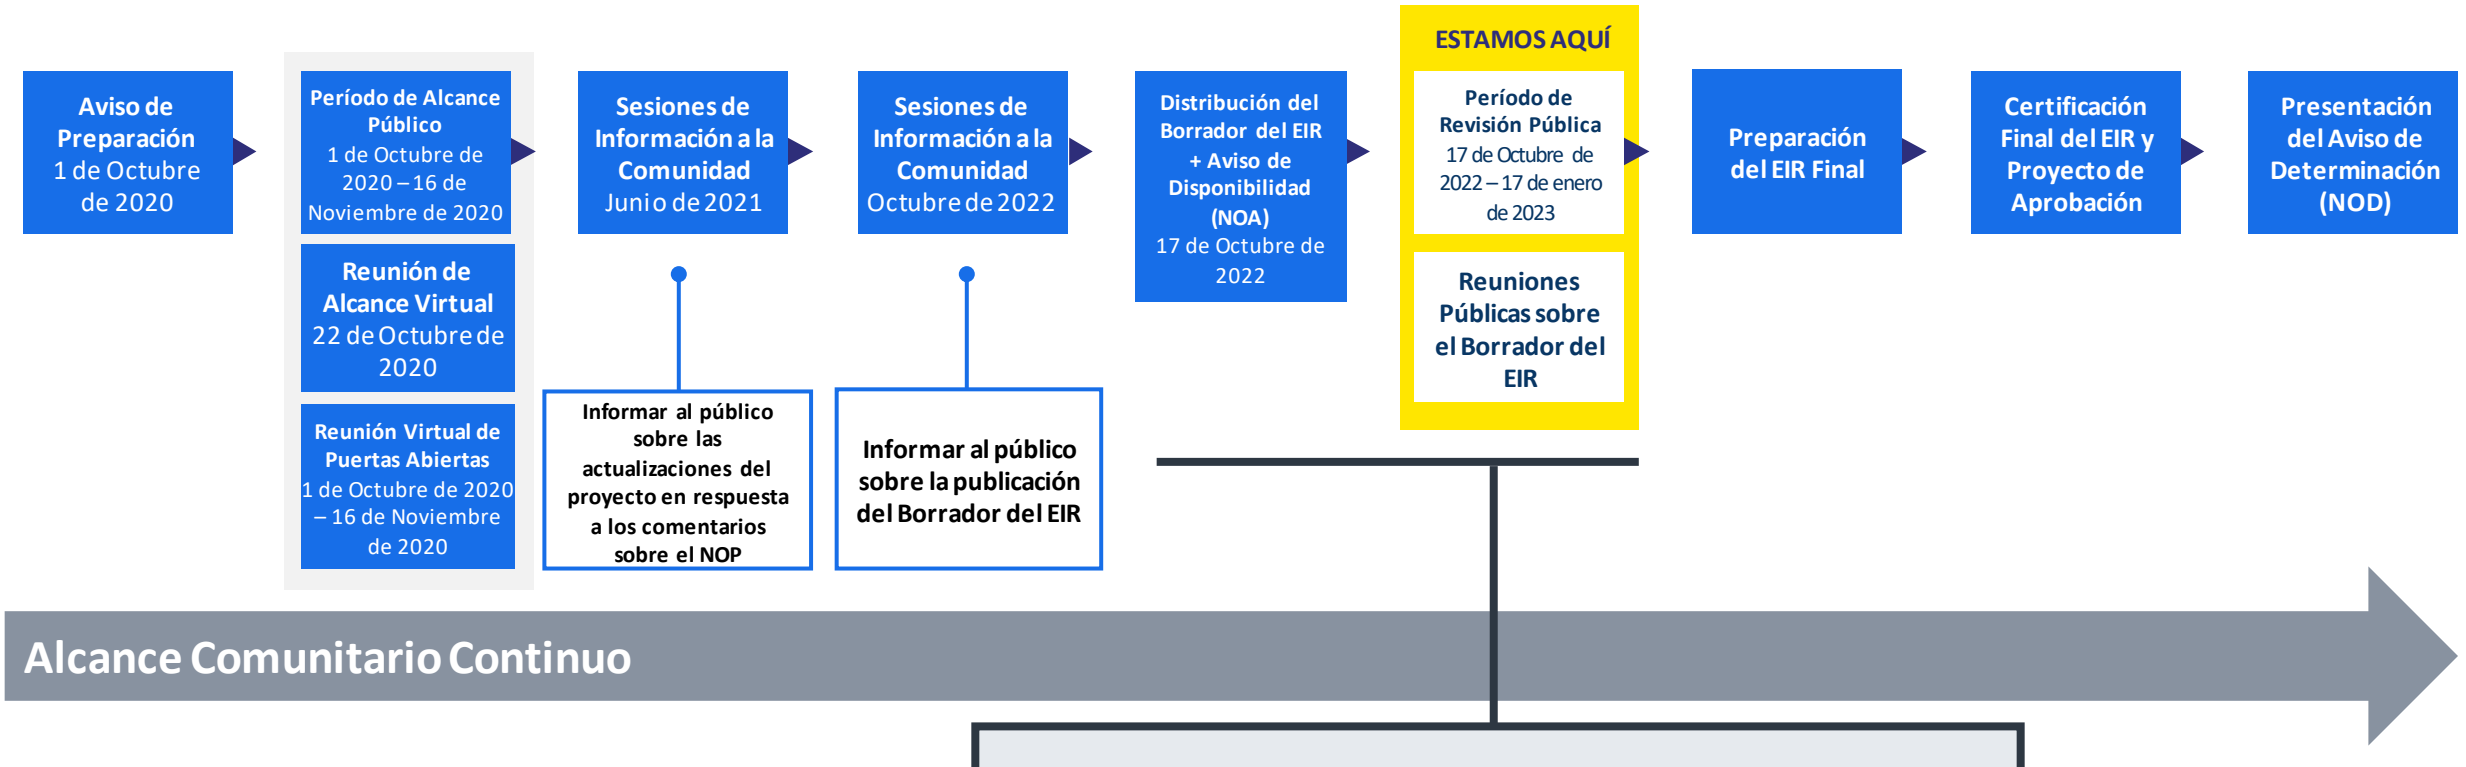
Revela los posibles impactos ambientales resultantes de un proyecto propuesto

Da la oportunidad de hacer comentarios sobre cuestiones ambientales

Dos periodos de comentarios del público: Periodo de Alcance Público y Revisión Pública del Borrador del EIR

SB 44 requiere dos reuniones públicas durante la Revisión Pública del Borrador del EIR: Taller Informativo y Audiencia Pública

Calendario



¿Cuál es el Objetivo del Borrador del EIR?

El propósito del Borrador del EIR es evaluar el potencial de los impactos ambientales asociados con la implementación del proyecto propuesto, y proporcionar medidas de mitigación cuando sea necesario

Reuniones públicas durante el Periodo de Revisión Pública del Borrador del EIR:

Talleres Informativos

Taller Informativo sobre el Borrador del EIR No. 1	Sábado 22 de octubre	Virtual
Taller Informativo sobre el Borrador del EIR No. 2	Martes 25 de octubre	En Persona

Metro organizó dos talleres informativos para dar a conocer al público los análisis y conclusiones clave del Borrador del EIR

Audiencias Públicas

Audiencia Pública sobre el Borrador del EIR No. 1	Sábado 10 de diciembre	En Persona
Audiencia Pública sobre el Borrador del EIR No. 2	Martes 13 de diciembre	Virtual
Audiencia Pública sobre el Borrador del EIR No. 3	Martes 12 de enero	En Persona

Metro organizará tres Audiencias Públicas para recibir comentarios del público sobre el Borrador del EIR

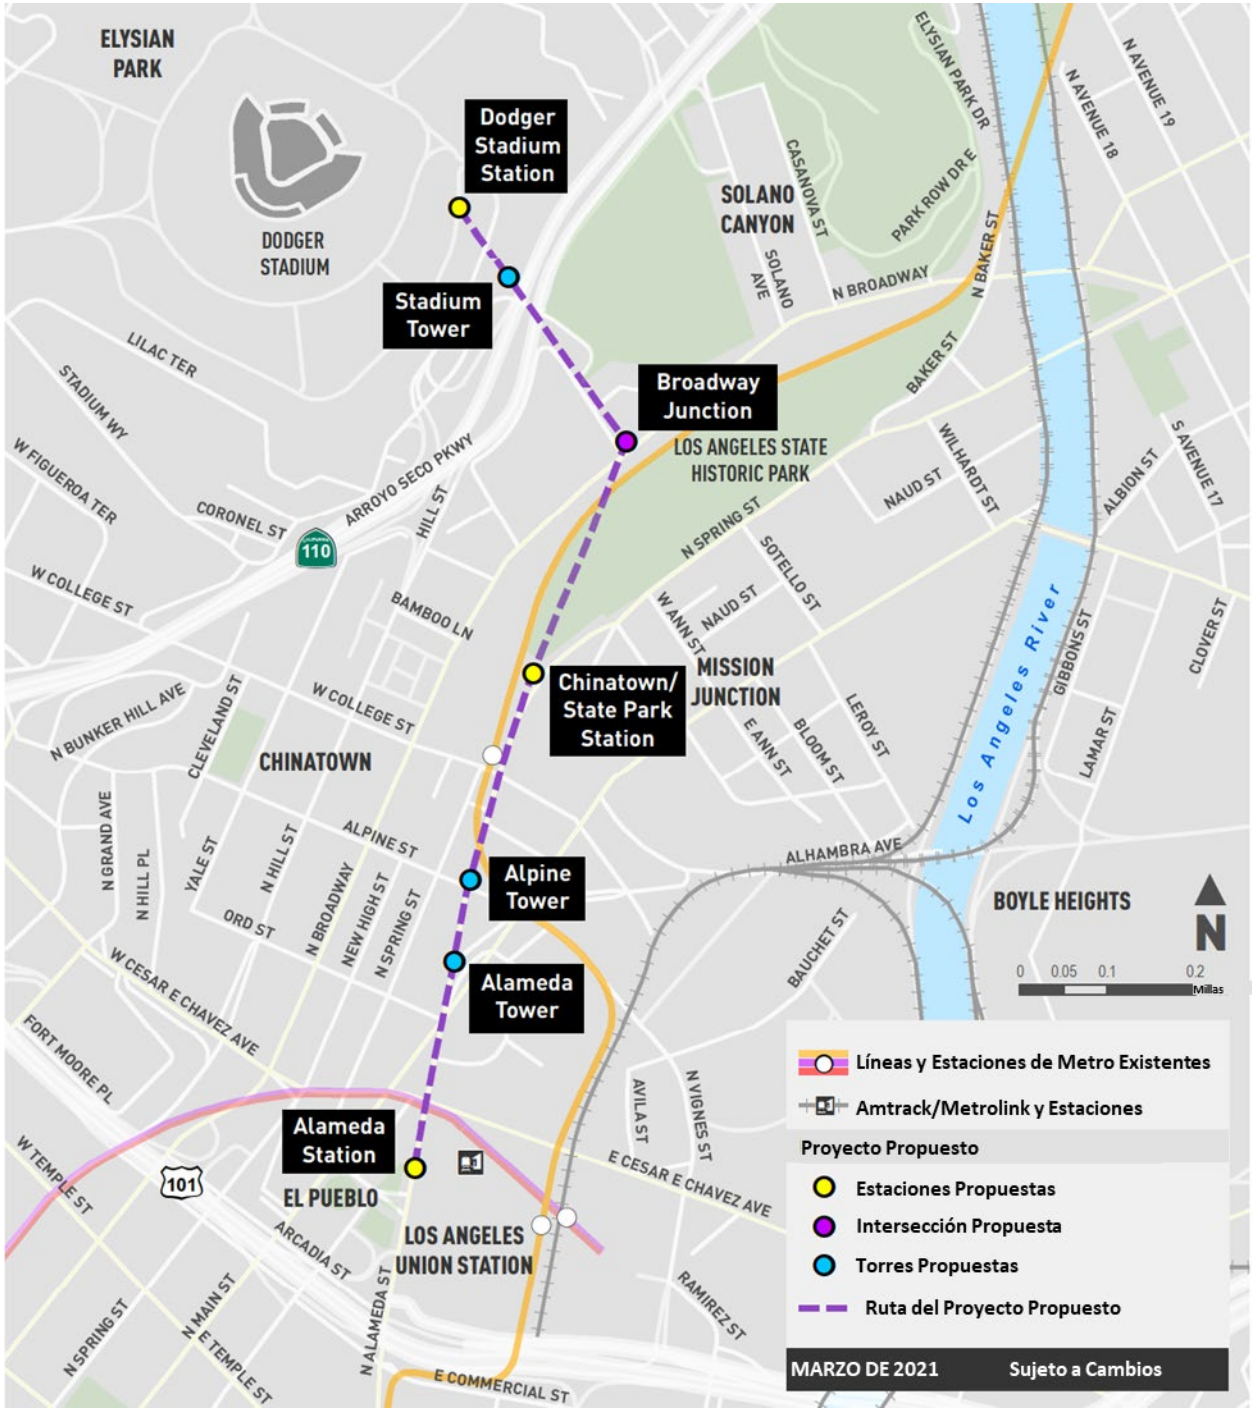
Descripción del Proyecto

Generalidades del Proyecto

- Proporciona una conexión de transporte permanente desde la estación Los Angeles Union Station (LAUS) hasta la propiedad del estadio Dodger Stadium a través de un sistema de góndolas aéreas de 1.2 millas (1.93 km).
  - El tiempo de traslado desde la estación LAUS hasta el Dodger Stadium sería de aproximadamente 7 minutos
- Capacidad de aproximadamente 5,000 personas por hora y por dirección
- Funcionamiento diario para dar servicio a los residentes, trabajadores, usuarios del parque y visitantes de Los Ángeles
- Da acceso al parque Los Angeles State Historic Park y a las comunidades circundantes a través de la estación intermedia de Chinatown/State Park
- Transporte rápido de cero emisiones, respetuoso del medio ambiente, que reduciría las emisiones de GEI gracias a la reducción de la congestión vehicular en el Dodger Stadium y sus alrededores y en las calles del vecindario, las carreteras arteriales y las autopistas.

Ruta y Ubicación del Proyecto

- El proyecto comenzaría junto a Union Station y El Pueblo, y terminaría en el Dodger Stadium, con una estación intermedia en la entrada que está más al sur del parque Los Angeles State Historic Park.
- Conecta las comunidades circundantes de Chinatown, Mission Junction, Elysian Park, Echo Park y Solano Canyon con el sistema de transporte regional accesible en Union Station
- La ruta propuesta del proyecto maximiza la ruta a lo largo del derecho de paso (ROW) público y la propiedad pública y minimiza los derechos aéreos sobre las propiedades privadas, teniendo en cuenta los usos de la tierra adyacentes existentes y futuros



Precedentes de Sistemas de Transporte Aéreo

- La tecnología de transporte aéreo se ha usado durante más de 100 años
- Los sistemas modernos son un medio factible de transporte urbano y actualmente funcionan en varias ciudades alrededor del mundo
- Sistemas de transportes de góndolas establecidos en el mundo, como los de La Paz, Bolivia y de la Ciudad de México, México, se usan como sistema de transporte rápido para las poblaciones urbanas a las que sirven
- Al igual que los sistemas utilizados en Koblenz (Alemania), Phu Quoc (Vietnam) y Toulouse (Francia), el proyecto propuesto es de góndolas "3S".
  - Las cabinas transportarán aproximadamente de 30 a 40 pasajeros
  - El sistema proporcionará un viaje fluido y estable

Portland, Oregon

Roosevelt Island, New York

La Paz, Bolivia

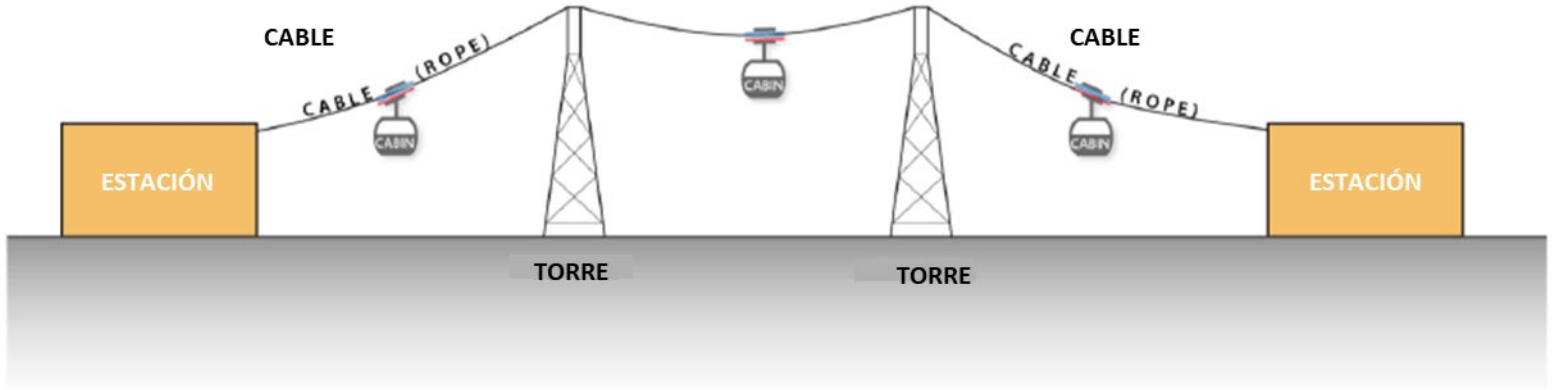
Ciudad de México, México

Toulouse, Francia

Medellín, Colombia

Tecnología de Transporte con Cables

El sistema ART incluye estaciones de pasajeros, una intersección que no es para pasajeros y torres para soportar los cables aéreos que transportan las cabinas



3 Estaciones de Pasajeros

- Incluyen sistemas mecánicos, eléctricos y de plomería, andenes de abordaje, y circulación vertical (por ejemplo, escaleras, escaleras mecánicas y ascensores)
- Incluyen áreas para la venta de boletos, la revisión de boletos y la formación de colas; el abordaje y desembarque de pasajeros; las operaciones; y los equipos del sistema

1 Intersección que no es para pasajeros

- Necesario para que el sistema ART gire los cables y permanezca a lo largo de la ruta del Proyecto

3 Torres para Soportar los Cables y las Cabinas

Sistema "3S" y Cabinas de Góndola

Sistema "3S"

- El sistema "3S" incluye tres cables: dos "cables guía" para la estabilidad y un tercer "cable de arrastre" para la circulación de las cabinas
- Las cabinas se desprenden del cable de arrastre que circula continuamente, se frenan al entrar en una estación para la salida y entrada de pasajeros, y luego se vuelven a unir al cable de arrastre

Cabinas

- De 30 a 40 pasajeros cada una, dependiendo de la configuración exacta de los asientos y las comodidades de las cabinas seleccionadas
- Totalmente accesibles para la ADA y con capacidad para sillas de ruedas
- En ellas se pueden sentar o estar de pie
- Ofrece espacio para carriola de bebé y bicicletas
- Se movería a una velocidad máxima de 13.4 millas por hora (21.6 km/h) durante las horas pico
- Al entrar en una estación, las cabinas reducirían su velocidad a aproximadamente 1 pie por segundo (0.3 m/seg) que equivale a menos de 1 milla por hora (1.6 km/h) para dejar que los pasajeros entren o salgan de la cabina en movimiento

Propósito y Necesidad

- Proporcionar una conexión de transporte directa entre Union Station y la propiedad del Dodger Stadium a través de un sistema de góndolas aéreas
- Conectar las comunidades circundantes de Chinatown, Mission Junction, Los Angeles State Historic Park, Elysian Park, Echo Park y Solano Canyon con el sistema de transporte regional accesible en Union Station
- Mejorar la movilidad y la accesibilidad en la región proporcionando una conexión diaria de transporte rápido aéreo de alta capacidad entre el sistema de transporte regional en LAUS
- Proporcionar un centro de movilidad en la Estación Chinatown/State Park
- Proporcionar un medio de transporte sostenible al operar el sistema ART usando electricidad de cero emisiones con almacenamiento de baterías de respaldo a fin de reducir las emisiones de GEI y mejorar la calidad del aire

Dodger Stadium: Uno de los Lugares Más Visitados de la Región

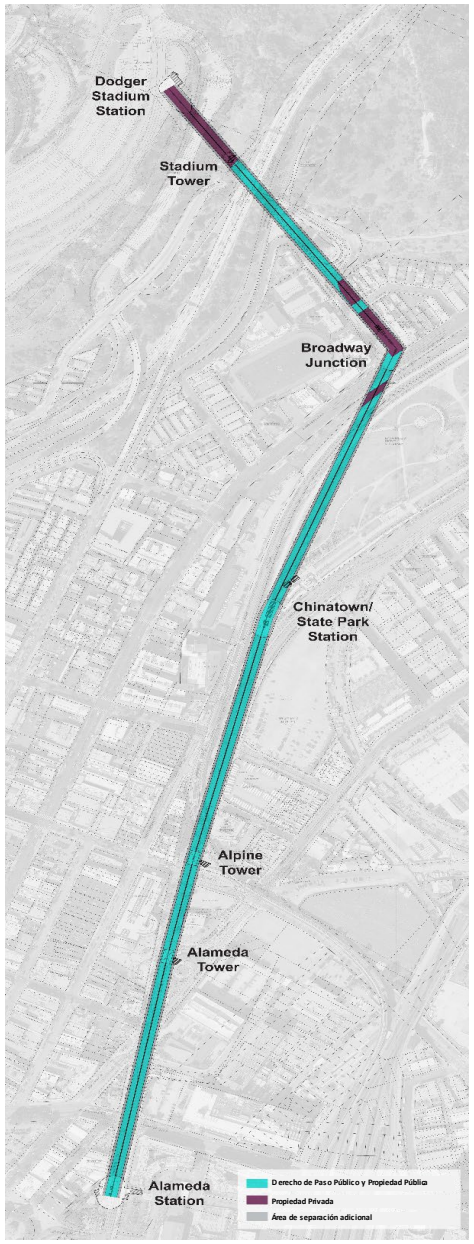
- Atrae a grandes multitudes de la región, con aproximadamente 100 partidos de béisbol y otros eventos cada año
- La gran mayoría de los visitantes se desplazan en sus vehículos personales
- Los vehículos ocasionan congestionamientos en las comunidades circundantes y en las autopistas cercanas
- Las comunidades cercanas a la ruta del proyecto propuesto fueron identificadas como en el percentil 90 – 100 de las comunidades desproporcionadamente cargadas por varias fuentes de contaminación en el Estado (Mapa CalEnviroScreen 4.0)

Objetivos del Proyecto

- Ampliar las opciones de movilidad para los usuarios del transporte público a través de una conexión directa entre la estación LAUS y Dodger Stadium, un centro de eventos regional.
- Atraer a nuevos usuarios de transporte público al sistema de Metro a través de una experiencia única de un sistema de transporte aéreo y brindar una conexión con el Dodger Stadium.
- Mejorar la experiencia de los visitantes del Dodger Stadium proporcionando un acceso alternativo eficiente, de gran capacidad y más rápido al Dodger Stadium.
- Mejorar la seguridad de los barrios adyacentes al Dodger Stadium reduciendo el número de vehículos en la zona.
- Reducir la contaminación relacionada con el transporte y las emisiones de gases de efecto invernadero (GEI) gracias a la reducción de la congestión vehicular en el Dodger Stadium y sus alrededores y en las calles del vecindario, las carreteras arteriales y las autopistas.
- Aumentar la conectividad de las personas con el centro de transporte público de la región de la estación LAUS y las instalaciones del Dodger Stadium.
- Mejorar la experiencia de los pasajeros del transporte público proporcionando vistas escénicas únicas del área de Los Ángeles a los pasajeros del ART y a los seguidores de los Dodgers.
- Llevar un sistema de transporte aéreo de clase mundial al área de Los Ángeles.
- Mejorar la conectividad de la comunidad proporcionando acceso peatonal y de transporte de primera/última milla a áreas que han estado históricamente desatendidas, incluyendo los parques Los Angeles State Historic Park y Elysian Park.
- Identificar oportunidades de tarifas comparables, asequibles y accesibles para la comunidad y el acceso a Los Angeles State Historic Park y Elysian Park.
- Minimizar la huella en el medio ambiente del proyecto mediante la integración de características de sostenibilidad y diseño respetuoso del medio ambiente en los materiales, la construcción, las operaciones y el mantenimiento del proyecto propuesto.
- Proporcionar un medio de transporte sostenible al operar el sistema ART usando electricidad de cero emisiones con almacenamiento de baterías de respaldo a fin de reducir las emisiones de GEI y mejorar la calidad del aire.
- Maximizar la ruta del proyecto a lo largo del derecho de paso (ROW) público y la propiedad pública y minimizar los requisitos de los derechos aéreos sobre las propiedades privadas, teniendo en cuenta los usos de la tierra adyacentes existentes y futuros

Espacio Aéreo | Ruta sobre Derecho de Paso Público/Propiedad Pública y Propiedad Privada

- Las normas de la industria para el diseño y el funcionamiento del transporte por cables y las cabinas están documentadas en la Norma B77.1 del American National Standards Institute (ANSI), el cual se desarrolla en coordinación con fabricantes, consumidores y reguladores
  - La Norma ANSI B77.1 regula las distancias verticales y horizontales entre el transporte por cables y las cabinas y elementos tales como vehículos, peatones, vegetación, edificios y otras estructuras
- La ruta maximiza la alineación a lo largo del derecho de paso (ROW) público y la propiedad pública y minimiza los derechos aéreos sobre las propiedades privadas, teniendo en cuenta los usos de la tierra adyacentes existentes y futuros
- Consideraciones adicionales en la selección de la ruta del proyecto:
  - Minimizar los cambios en los carriles de circulación, los carriles de estacionamiento y la circulación de bicicletas y peatones
  - Minimizar la reubicación de servicios públicos
  - La ubicación de recursos históricos y arqueológicos
  - Minimizar el uso de topografía irregular o difícil
  - Consideraciones técnicas y factibilidad



Diseño

- El objetivo del diseño es desarrollar un diseño arquitectónico común que unifique el sistema general de góndolas aéreas, permitiendo al mismo tiempo que cada componente principal contribuya a su respectiva condición urbana localizada
- De igual importancia es el deseo de minimizar la masa y la escala percibida de las estaciones, la intersección que no es para pasajeros y las torres.
- Las estaciones y la intersección aprovechan la forma de una bóveda de cañón simple para proporcionar el mínimo espacio cerrado necesario para proteger el equipo de transporte por cables y proporcionar sombra y protección contra la intemperie a los pasajeros en el andén de abordaje
- Cada una de las torres está diseñada para que sus bases no impidan la circulación adyacente de vehículos y peatones, y su color gris neutro de tono claro busca adaptarse al entorno urbano circundante

Estación Alameda

- En Alameda Street, junto a la explanada planeada de LAUS y la Placita de Dolores, entre Los Angeles Street y Cesar Chavez Avenue
- Esta estación tendría aproximadamente 173 pies (52 m) de largo, 109 pies (33 m) de ancho y 78 pies (24 m) de alto en su punto más alto.
- El andén de abordaje de pasajeros estaría aproximadamente a 31 pies (9.5 m) sobre la calle Alameda
- La circulación vertical se introduciría al norte de la Placita de Dolores, en una nueva plaza peatonal propuesta en El Pueblo y este de la zona prevista de la explanada de LAUS

Torre Alameda

- Situada en el Triángulo de la Alameda, un derecho de paso de la Ciudad entre Alameda Street, North Main Street y Alhambra Avenue
- 195 pies (59 m) de altura y el cable estaría suspendido a 175 pies (53 m) sobre el suelo
- Actualizaciones del paisaje y las instalaciones del Triángulo de la Alameda, incluyendo la reutilización e integración de los adoquines existentes

Torre Alpine

- Situada en la esquina noreste de Alameda Street y Alpine Street, junto a la Línea L del Metro (Dorada)
- Es un terreno propiedad de la Ciudad, que actualmente se utiliza como estacionamiento no público para vehículos de la Ciudad
- 195 pies (59 m) de altura en el punto más alto y el cable estaría suspendido a 175 pies (53 m) sobre el suelo
- Paisajismo e instalaciones cerca de la base de la torre

Estación Chinatown/State Park

- Adyacente a Spring Street, en la parte que está más al sur del parque Los Angeles State Historic Park
- La parte sur de la estación se situaría en el derecho de paso de la Ciudad, con la parte norte integrada al límite sur del parque Los Angeles State Historic Park
- La estación tendría aproximadamente 200 pies (61 m) de largo, 80 pies (24 m) de ancho y 98 pies (30 m) de alto en su punto más alto.
- El andén de abordaje de pasajeros estaría aproximadamente a 50 pies (15 m) sobre el nivel del suelo
- El acceso al andén de abordaje se realizaría desde el mezzanine, mediante ascensores y escaleras
- Incluiría la creación de jardines e instalaciones, incluyendo la integración de los adoquines de granito

Estación Chinatown/State Park

Servicios de la Estación

- Centro de movilidad donde los pasajeros podrían tener acceso a un conjunto de opciones multimodales de primera y última milla, como un programa de bicicletas compartidas
- Mejoras peatonales, incluyendo mejoras paisajísticas y en las instalaciones, estructuras de sombra y posibles asientos

Servicios del Parque

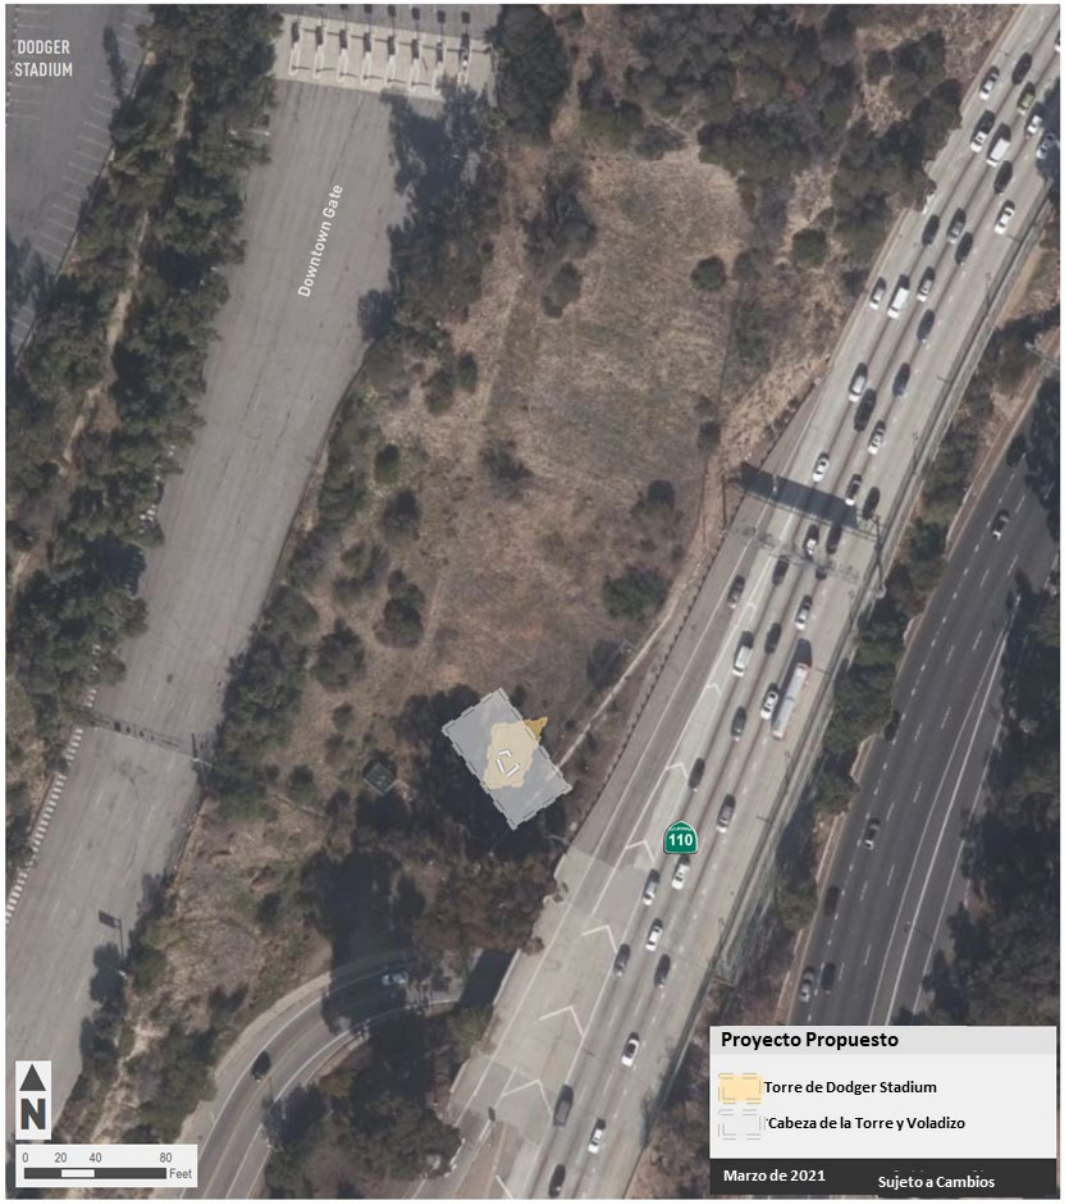
- 740 pies cuadrados (69 m2) de concesiones
- 770 pies cuadrados (72 m2) de baños
- Paso cubierto de 220 pies cuadrados (20 m2) que conecta las concesiones y los baños

Broadway Junction

- Intersección o entronque que no es para pasajeros y que se localizaría donde se cruzan North Broadway y Bishops Road
- El edificio comercial existente situado en el 1201 de N. Broadway sería demolido
- La intersección tendría aproximadamente 227 pies (69 m) de largo, 60 pies (18 m) de ancho y 98 pies (30 m) de alto en su punto más alto

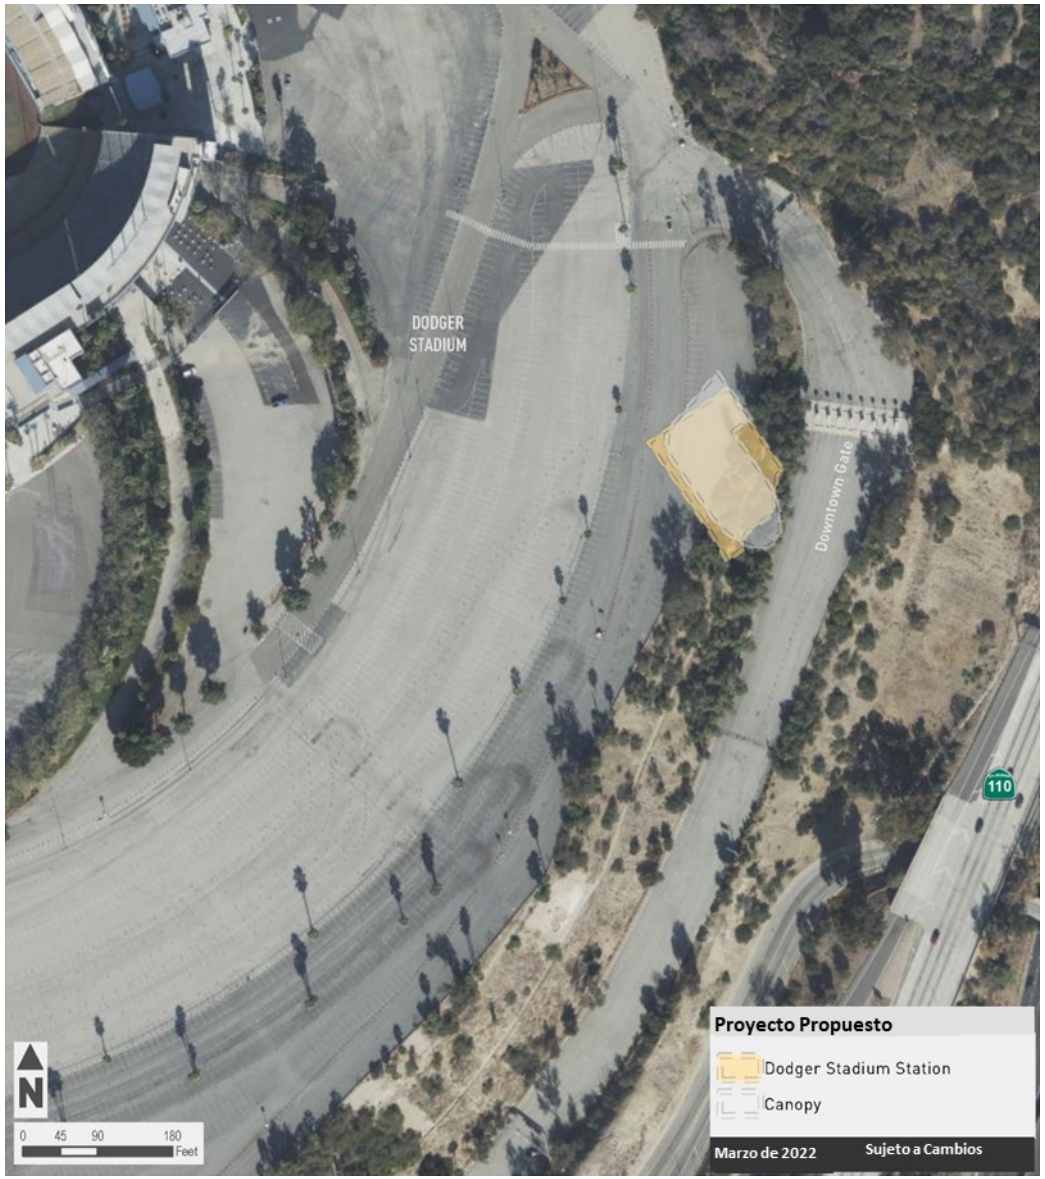
Torre del Estadio

- Ubicada en una ladera de propiedad privada al norte de Stadium Way, entre la entrada de Dodger Stadium Downtown Gate y la SR-110
- 179 pies (55 m) de altura con el cable suspendido 159 pies (48 m) por encima del suelo y con jardines cerca de la base de la torre



Estación Dodger Stadium

- Parte sureste de la propiedad del Dodger Stadium, cerca de la entrada Downtown Gate



Estación Dodger Stadium

- La estación tendría aproximadamente 194 pies (59 m) de largo, 80 pies (24 m) de ancho y 74 pies (23 m) de alto en su punto más alto
- Las cabinas de esta estación llegarían y saldrían de un andén de abordaje a nivel, con la zona de filas de pasajeros también a nivel
- Incluiría una zona subterránea bajo el andén para el almacenamiento y el mantenimiento de las cabinas, así como salas de descanso para el personal, taquillas y zonas de almacenamiento de repuestos
    - Cuando el sistema no esté en uso, las cabinas se devolverían a la Estación Dodger Stadium y ahí se almacenarían (en las horas en las que no operarían)
- Los baños para uso de los pasajeros estarían en la estación

La Estación Dodger Stadium también incluiría una conexión peatonal con el Dodger Stadium, incluyendo mejoras paisajísticas y de las instalaciones, así como posibles asientos

Sustentabilidad

- Las características de sostenibilidad del proyecto propuesto incluirían características contenidas en:
  - El Código de Normas de Construcción Ecológica de California de 2019
  - Liderazgo en Energía y Diseño Ambiental (LEED) para nuevas construcciones del Consejo de Construcción Verde de los Estados Unidos
  - Sistema de Clasificación Envision del Instituto para la Infraestructura Sostenible
- El 100% de la energía para el proyecto propuesto sería suministrada por el Programa Green Power del Departamento de Agua y Energía de la Ciudad de Los Ángeles
- Almacenamiento de baterías de respaldo en cada estación, torre e intersección para proporcionar energía de reserva, en lugar de generadores diesel

Al igual que el proyecto, la alternativa de ruta de la calle Spring Street proporcionaría una opción de ART para los visitantes del Dodger Stadium, además del acceso entre el Dodger Stadium, las comunidades aledañas y el sistema de transporte regional disponible en Los Angeles Union Station. La tecnología del ART es silenciosa, y el proyecto propuesto reduciría las VMT y la congestión, lo que llevaría a reducir las emisiones de GEI y a mejorar la calidad del aire.

Construcción

Calendario

- Se prevé que la construcción del proyecto propuesto comience en 2024 y dure aproximadamente 25 meses, incluyendo la construcción, la instalación de los cables y las pruebas del sistema

Horario de los Trabajos

- Se prevé que el horario de construcción sea de 10 horas al día, que variará en función de las circunstancias y restricciones especiales
- Si bien no está anticipada, la aprobación de la Junta de Comisionados de Policía de la Ciudad de Los Ángeles se requeriría para ampliar las horas de construcción y los posibles trabajos de construcción en domingo.

Cierre de Carriles

- Los cierres anticipados incluirían cierres donde los carriles estarían cerrados las 24 horas del día durante ciertas fases de la construcción, o cierres alternos durante ciertas fases de la construcción, en los que los cierres se producirían durante las horas de construcción durante aproximadamente 10 horas al día, y las vialidades se reabrirían durante las horas en las que no hay trabajos de construcción, durante aproximadamente 14 horas al día
- En el caso de los cierres alternativos, durante las horas en las que no hay trabajos de construcción, se colocarían placas de acero en las obras en la medida de lo posible para permitir la circulación de vehículos y peatones.
- Los cierres y las horas variarán según el lugar y la fase de construcción
- El proyecto propuesto implementaría un Plan de Gestión del Tráfico de la Construcción que incluirá desvíos y asegurará que el acceso para emergencias se mantenga durante todas las actividades de construcción

Supuestos Detallados de la Construcción

- Los supuestos detallados de la construcción se incluyen en el Apéndice B del Borrador del EIR

Análisis y Conclusiones Clave del Borrador del EIR

Temas de Recursos Ambientales

Todos los Temas de Recursos Ambientales de conformidad con el Apéndice G de las Directrices de la CEQA se abordan en el Borrador del EIR:

- Estética
- Agricultura/Silvicultura
- Calidad del Aire
- Recursos Biológicos
- Recursos Históricos/Culturales
- Energía
- Geología/Suelos
- Emisiones de Gases de Efecto Invernadero
- Peligros/Materiales Peligrosos
- Hidrología/Calidad del Agua
- Planificación/Uso de la Tierra
- Recursos Minerales
- Ruido
- Población/Vivienda
- Servicios Públicos
- Recreación
- Transporte
- Recursos Culturales Tribales
- Sistemas de Servicios/Servicios Públicos
- Incendios Forestales

Estética

¿QUÉ SE ESTUDIÓ?

- Impactos visuales de los componentes del proyecto que rodean la ruta del proyecto
- Puntos de observación clave que representan el carácter visual, incluyendo la presencia o ausencia de jardines, los usos predominantes del suelo, la escala de los edificios o las principales vistas escénicas, los recursos escénicos y los elementos visuales sustanciales disponibles, como los recursos de espacios abiertos, los árboles de las calles y las fachadas de los edificios
- La respuestas de quienes perciben estas vistas, incluyendo los peatones y quienes realizan actividades recreativas (por ejemplo, los usuarios de los parques)
- Aunque no hay vistas escénicas designadas, las vistas del horizonte del centro de Los Ángeles, Union Station, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium y las montañas de San Gabriel y San Bernardino
- Luz y Deslumbramiento

ANÁLISIS Y CONCLUSIONES CLAVE

- El proyecto propuesto no bloquearía de manera significativa las vistas panorámicas o escénicas, como las vistas del horizonte del centro de Los Ángeles, Union Station, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium, y las montañas de San Gabriel y San Bernardino
- Con las autorizaciones y aprobaciones del proyecto propuesto – que incluirían normas de diseño para mejorar la identidad visual y el carácter del proyecto propuesto y sus comunidades circundantes – no habría conflicto con la zonificación aplicable u otras regulaciones que rigen la calidad escénica
- El proyecto propuesto no crearía una fuente sustancial de luz o deslumbramiento y cumpliría con la normativa de iluminación de la Ciudad

Vista Actual y Simulada desde el State Historic Park hacia el Centro - Horizonte de Los Ángeles

Estética

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Vista Escénica	Menos que significativo	Menos que significativo
Recursos Escénicos	Sin impacto	Sin impacto
Carácter Visual	Menos que significativo	Menos que significativo
Luz y Deslumbramiento	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción: Las barreras y los muros contra ruido incluirían una pantalla de privacidad, y el proyecto recurriría a las mejores prácticas de gestión para reducir los impactos visuales. No se requiere mitigación.

Operación: Características del diseño del proyecto, incluyendo la iluminación de edificios y la iluminación de los letreros. No se requiere mitigación.

Agricultura y Silvicultura

¿QUÉ SE ESTUDIÓ?

- Si el proyecto entraría en conflicto con la zonificación agrícola en los sitios de la Torre del Estadio y la Estación Dodger Stadium

ANÁLISIS Y CONCLUSIONES CLAVE

- La propiedad del Dodger Stadium no contiene usos agrícolas y está sujeta a un Permiso de Uso Condicional, que permite la operación de un estadio de Grandes Ligas de Béisbol y varias estructuras y usos auxiliares, incluyendo "servicio de transporte masivo" al sitio; por lo tanto, la construcción y operación del proyecto propuesto no entraría en conflicto con la zonificación agrícola existente

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Conversión de Tierras Agrícolas	Sin impacto	Sin impacto
Conflicto con la Zonificación de Tierras Forestales	Sin impacto	Sin impacto
Pérdida de Tierras Forestales	Sin impacto	Sin impacto
Uso Agrícola	Sin impacto	Sin impacto
Zonificación Agrícola y Ley Williamson	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

No se requiere mitigación.

Calidad del Aire

¿QUÉ SE ESTUDIÓ?

- Impactos potenciales en la calidad del aire a escala regional y local de la construcción y operación del proyecto propuesto
- Características y efectos de los contaminantes atmosféricos
- Normativas adoptadas para la gestión de la calidad del aire
- Una Evaluación de Riesgos para la Salud (HRA) que evalúe el riesgo estimado de cáncer y el índice de peligro crónico no cancerígeno asociado a la construcción del proyecto

ANÁLISIS Y CONCLUSIONES CLAVE

- El proyecto propuesto sería coherente con los planes de calidad del aire aplicables
- Las emisiones estimadas de la construcción del proyecto propuesto serían inferiores a los niveles significativos de contaminantes y emisiones
- El proyecto propuesto no expondría a los receptores sensibles a concentraciones sustanciales de contaminantes durante las operaciones, puesto que el proyecto propuesto no incluye ningún uso del suelo ni emisiones operativas que pudieran afectar materialmente a la calidad del aire del ambiente durante su funcionamiento
- El proyecto propuesto traería consigo a una reducción neta de las emisiones de contaminantes de los criterios al reducir las VMT, reduciendo así las emisiones en comparación con las condiciones existentes
- Basándose en los resultados de la HRA, el proyecto propuesto tendría un impacto menos que significativo relativo a la exposición de los receptores sensibles a concentraciones substanciales de contaminantes procedentes de los TAC.

Calidad del Aire

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Planes de Calidad del Aire	Menos que significativo	Menos que significativo
Aumento de los Contaminantes del Aire	Menos que significativo	Menos que significativo
Receptores Sensibles	Menos que significativo	Menos que significativo
Otras Emisiones	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción: Característica del proyecto que requiere que todos los equipos de construcción todo terreno que funcionen con diésel y tengan más de 50 caballos de fuerza deberán respetar las normas de emisiones de nivel 4 para motores diésel todo terreno establecidas por la Agencia de Protección Ambiental de los Estados Unidos (USEPA). No se requiere mitigación.

Operación: No se requiere mitigación.

Recursos Biológicos

¿QUÉ SE ESTUDIÓ?

- Si el proyecto afectaría a las especies con estatus especial y su hábitat
- Si el proyecto afectaría al hábitat ribereño o a los humedales protegidos
- El potencial de que el proyecto interfiera con el movimiento de la vida silvestre a lo largo de la ruta
- Si el proyecto entraría en conflicto con alguna política u ordenanza local que proteja los recursos biológicos, tal como una política u ordenanza de preservación de árboles
- Si el proyecto entraría en conflicto con los planes adoptados para la conservación del hábitat

ANÁLISIS Y CONCLUSIONES CLAVE

- El área del proyecto generalmente no alberga un hábitat para especies de estatus especial; sin embargo, el retiro de palmeras y eucaliptos maduros durante la construcción del proyecto propuesto podría traer consigo el retiro de sitios de descanso para murciélagos
- El área del proyecto no contiene hábitats ribereños, ni otras comunidades naturales sensibles o humedales protegidos; por lo tanto, no habría ningún impacto
- El área del proyecto no sirve como un corredor regional de vida silvestre; sin embargo, las actividades de construcción pueden provocar que especies de murciélagos y aves eviten las áreas de construcción activa
- El proyecto reemplazaría los árboles retirados de acuerdo con la Ordenanza de Protección de Árboles Nativos de la Ciudad, los requisitos del Departamento de Parques y Recreación de California y otros requisitos aplicables

Recursos Biológicos

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Hábitat Ribereño	Sin impacto	Sin impacto
Humedales Protegidos	Sin impacto	Sin impacto
Políticas o Planes Biológicos	Menos que significativo	Sin impacto
Interferencia en el Movimiento de las Especies	Menos que significativo con mitigación	Menos que significativo
Modificaciones del Hábitat	Menos que significativo con mitigación	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción:

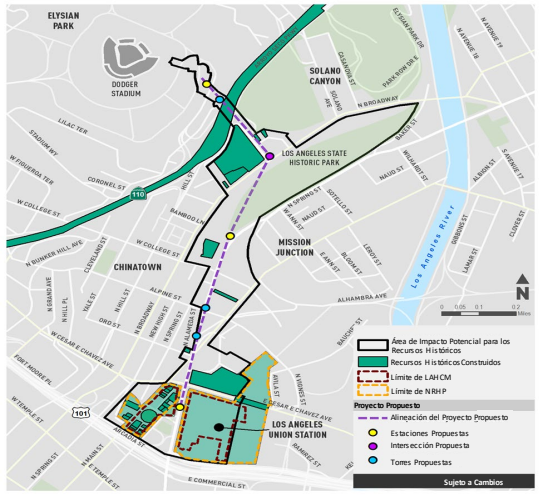
- Implementación de una característica de diseño del proyecto para establecer una Zona de Protección de Árboles para protegerlos
- Estudios de anidación previos a la construcción y medidas para evitar y minimizar los impactos para las aves que aniden

Operación: No se requiere mitigación.

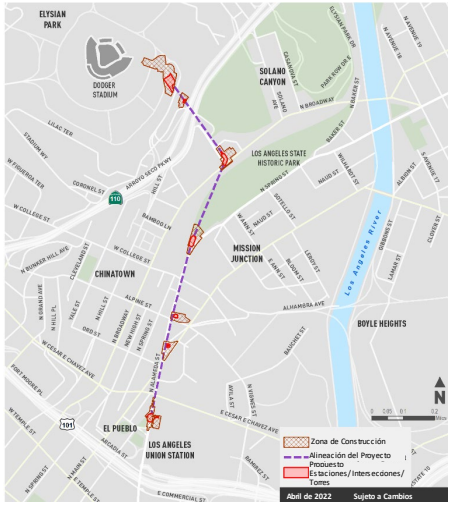
Recursos Culturales

¿QUÉ SE ESTUDIÓ?

- Impactos directos e indirectos a 29 recursos históricos construidos dentro de el Área de Impactos Potenciales, incluyendo la Terminal de Pasajeros de Los Angeles Union Station y sus terrenos, el Distrito Histórico de la Plaza de Los Ángeles, la escuela secundaria Cathedral High School y el Distrito Histórico de Arroyo Seco Parkway
- Impactos de la alteración del suelo para los recursos arqueológicos dentro del Área de Impactos Directos, incluyendo La Placita, la Zanja Madre y la estación ferroviaria Southern Pacific Railroad's River Station
- **ANÁLISIS Y CONCLUSIONES CLAVE**
- Recursos Históricos
  - La construcción de la Estación Alameda propuesta tiene el potencial de tener impactos directos e indirectos en la bodega de vinos The Winery y en el mural de *El Grito*; sin embargo, los impactos se mitigarían hasta hacerlos menos que significativos
  - Impactos relacionados con la construcción y las operaciones en todos los demás recursos históricos serían menos que significativos
- Recursos Arqueológicos
  - La construcción de la Estación Alameda, el Triángulo de Alameda, la Torre Alpine y la Estación Chinatown/State Park tienen el potencial de resultar en un cambio sustancial adverso en la importancia de un recurso arqueológico; sin embargo, los impactos serían mitigados para hacerlos menos que significativos



Área de Impactos Potenciales para los Recursos Históricos Construidos



Área de Impactos Directos en los Recursos Arqueológicos

Recursos Culturales

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Recurso Histórico	Menos que significativo con mitigación	Menos que significativo
Recurso Biológico	Menos que significativo con mitigación	Sin impacto
Alteración de Restos Humanos	Menos que significativo con mitigación	Sin impacto

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

- Recursos Históricos
  - Características del diseño del proyecto para la documentación de pre-construcción y de post-construcción y la protección de la bodega de vinos The Winery y el mural de *El Grito*, y la protección del mural de *El Grito* durante la construcción
  - Supervisión de vibraciones y restricciones de los dispositivos de compactación del suelo ajustables a la fuerza durante la construcción de la Estación Alameda propuesta
- Recursos Arqueológicos
  - Preparación e implementación de un Plan de Supervisión y Mitigación para Recursos Culturales y un Programa de Implementación de Trabajadores de Recursos Arqueológicos
  - Plan de Pruebas Arqueológicas Previas a la Construcción de la Estación Alameda y de la Estación Chinatown/State Park propuestas
  - Posible rediseño de los servicios del parque Los Angeles State Historic Park para evitar los recursos arqueológicos

Energía

¿QUÉ SE ESTUDIÓ?

- Generalidades de las leyes y los reglamentos federales, estatales y locales relativos a la energía
- Generalidades de la producción, el suministro y el consumo de energía en California
- Evaluación de los recursos energéticos relacionados con la construcción y la demanda anual de energía asociada a las operaciones del proyecto

ANÁLISIS Y CONCLUSIONES CLAVE

- El consumo temporal de energía asociado a la construcción del proyecto propuesto permitiría una reducción del consumo de energía a largo plazo asociado a las operaciones del proyecto propuesto
- El uso principal de electricidad asociado provendría de recursos renovables a través del Programa Green Power del LADWP
- El proyecto propuesto reduciría las VMT y aumentaría el número de personas que utilizan el transporte público, lo que resultaría en una disminución del uso de combustibles fósiles de los vehículos de pasajeros

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Consumo Innecesario, Ineficaz o Derrochador	Menos que significativo	Menos que significativo
Planes Energéticos Estatales o Locales	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

No se requiere mitigación.

Geología y Suelos

QUÉ SE ESTUDIÓ

- Si el proyecto sería susceptible a riesgos sísmicos, como fuertes sacudidas del suelo, fallas, licuefacción o deslizamientos de tierra
- Si el proyecto estaría ubicado en una unidad geológica o suelo inestable, lo que potencialmente daría lugar a un deslizamiento de tierra, expansión lateral, hundimiento, licuefacción o colapso dentro o fuera del sitio.
- Si la ruta del proyecto incluiría suelos expansivos que podrían crear un riesgo sustancial directo o indirecto para la vida o la propiedad
- El potencial de que el proyecto destruiría, directa o indirectamente, un recurso o recurso paleontológico único o una característica geológica única

ANÁLISIS Y CONCLUSIONES CLAVE

- Si bien el área del proyecto se encuentra en una región sísmica activa del sur de California, con el cumplimiento de las normas y los códigos existentes y la implementación de medidas de mitigación, los impactos relacionados con fuertes sacudidas sísmicas del suelo, fallas del suelo relacionadas con sismos y/o licuefacción durante la construcción del proyecto propuesto se reducirían a menos que significativos
- El Plan de Operaciones de Emergencia del proyecto incluiría protocolos de respuesta a emergencias y establecería que en caso de un terremoto de gran magnitud, el sistema sería evacuado y apagado por completo, y no se realizarían operaciones
- Con el cumplimiento de las normas y los códigos existentes y la aplicación de medidas de mitigación, los impactos relacionados con algún hundimiento, expansión lateral, licuefacción o colapso durante la nivelación y la construcción de los componentes del proyecto, serían menos que significativos
- Con el cumplimiento de los códigos y normas existentes y la aplicación de medidas de mitigación, los impactos relacionados con la corrosión del suelo durante la construcción serían menos que significativos
- En la parte norte del proyecto propuesto, cerca de la aproximación a la Estación Dodger Stadium, existe el potencial de encontrar recursos paleontológicos; sin embargo, los impactos serían mitigados para hacerlos menos que significativos

Geología y Suelos

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	**Operaciones**
Efectos Adversos: Terremotos, Sacudidas Sísmicas del Terreno, Licuefacción o Deslizamientos de Tierra	Menos que significativo con mitigación	Menos que significativo
Sistemas de Aguas Residuales de Apoyo	Sin impacto	Sin impacto
Destrucción de Características Paleontológicas o Geológicas Únicas	Menos que significativo con mitigación	Sin impacto
Erosión del Suelo/Pérdida de la Capa Superior	Menos que significativo	Menos que significativo
Unidad Geológica o Suelo Inestable	Menos que significativo con mitigación	Menos que significativo
Suelo Expansivo	Menos que significativo con mitigación	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción:

- Preparación e Implementación de un Informe Geotécnico Final Específico para el Emplazamiento
- Preparación de un Plan de Supervisión y Mitigación de los Recursos Paleontológicos y cumplimiento del mismo

Operación: No se requiere mitigación

Emisiones de Gases de Efecto Invernadero (GEI)

¿QUÉ SE ESTUDIÓ?

- Leyes y Reglamentos Federales, Estatales y Locales Pertinentes
- Generalidades de la Ciencia sobre los GEI
- Metodología utilizada para evaluar las emisiones de GEI relacionadas con el proyecto propuesto

ANÁLISIS Y CONCLUSIONES CLAVE

- El proyecto propuesto no traería consigo una contribución incremental de emisiones de GEI en comparación con las condiciones existentes, y reduciría las emisiones de GEI en comparación con las condiciones existentes

Las emisiones a lo largo de la vida del proyecto supondrían una reducción de 166,653 toneladas métricas de GEI.

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Generación de GEI	Menos que significativo	Menos que significativo
Políticas o Planes de Reducción de GEI	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

No se requiere mitigación.

Peligros y Materiales Peligrosos

¿QUÉ SE ESTUDIÓ?

- Se evaluaron las actividades del proyecto para determinar su impacto potencial en la generación de condiciones peligrosas para el público o el medio ambiente durante la construcción y las operaciones
- A continuación se analizaron los posibles impactos ocasionados por los riesgos y materiales peligrosos en función de los criterios de importancia aplicables

ANÁLISIS Y CONCLUSIONES CLAVE

- Si bien el proyecto propuesto utilizaría, transportaría y eliminaría cantidades limitadas de sustancias peligrosas durante la construcción, el proyecto propuesto cumpliría con los requisitos federales, estatales y locales de salud y seguridad; y cumpliría con todos los códigos, normas y reglamentos durante la operación
- El proyecto propuesto cumpliría con lo dispuesto por la OSHA, Cal/OSHA, y la División 71 del Código Municipal de Los Ángeles, y aplicaría un Plan de Manejo de Suelos y Aguas Subterráneas, que limitaría el potencial de derrames de materiales y residuos peligrosos
- El proyecto propuesto llevaría a cabo la reducción de materiales peligrosos a través de un contratista de reducción con licencia antes de la demolición, lo que garantizaría que las escuelas no se vieran afectadas negativamente
- La construcción y operación del proyecto propuesto no interferiría con el acceso del LAPD al Helipuerto Hooper, y las operaciones del helipuerto no serían impactadas por las actividades de construcción
- Se identificaron cinco propiedades como sitios de materiales peligrosos en el área del proyecto; sin embargo, el proyecto implementaría un Plan de Manejo de Suelos y Aguas Subterráneas para reducir los impactos de estos sitios
- La construcción del proyecto propuesto no perjudicaría sustancialmente la implementación de un plan de respuesta a emergencias adoptado o un plan de evacuación de emergencias, ni interferiría físicamente con dichos planes; y la operación diaria del proyecto no afectaría las respuestas ante emergencias

Peligros y Materiales Peligrosos

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	**Operaciones**
Lugares Peligrosos	Menos que significativo con mitigación	Sin impacto
Plan de Uso del Suelo del Aeropuerto	Sin impacto	Sin impacto
Peligro para el Público o el Medio Ambiente	Menos que significativo con mitigación	Menos que significativo
Planes de Emergencia y Evacuación	Menos que significativo	Menos que significativo
Peligros cerca de Escuelas	Menos que significativo con mitigación	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción:

- Preparación e implementación de un Plan de Gestión de Suelos y Aguas Subterráneas para especificar métodos de manejo y eliminación en caso de presentarse una situación de aguas subterráneas contaminadas, suelos contaminados o estructuras contaminadas durante la construcción del proyecto
- Reducción de Materiales Peligrosos para la demolición del edificio existente en 1201 North Broadway

Operación: No se requiere mitigación.

Hidrología y Calidad del Agua

¿QUÉ SE ESTUDIÓ?

- El potencial de que el proyecto propuesto infrinja las normas de calidad del agua, disminuya los suministros de agua subterránea o provoque una erosión o sedimentación substancial dentro o fuera del sitio
- El potencial de que el proyecto propuesto aumente sustancialmente el índice o la cantidad de escorrentía superficial de manera que se produzcan inundaciones dentro o fuera del sitio
- El potencial de que el proyecto propuesto cree o contribuya a una escorrentía que supere la capacidad de los sistemas de drenaje de aguas pluviales existentes o previstos o que impida o redirija flujos
- El potencial de que el proyecto propuesto suponga un riesgo de liberación de contaminantes durante una inundación del proyecto en zonas con riesgo de inundación, tsunami u oscilación del agua
- El potencial de que el proyecto propuesto obstaculice o entre en conflicto con la aplicación de un plan de control de la calidad del agua o un plan de gestión sostenible de las aguas subterráneas

ANÁLISIS Y CONCLUSIONES CLAVE

- El proyecto propuesto cumpliría con todos los reglamentos y leyes de protección de la calidad del agua aplicables de los organismos federales, estatales, regionales y locales, el control de la calidad del agua y/o los planes de gestión sostenible de las aguas subterráneas
- El proyecto propuesto incorporaría las mejores prácticas de gestión y aplicaría un plan de desarrollo de bajo impacto para reducir los impactos sobre la hidrología y la calidad del agua
- El proyecto propuesto no es susceptible a la liberación de contaminantes debido a una inundación del proyecto en zonas con riesgo de inundación, tsunami u oscilación del agua

Hidrología y Calidad del Agua

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Reducción del Suministro de Agua del Suelo	Menos que significativo	Sin impacto
Planes o Normas de Calidad del Agua	Menos que significativo	Menos que significativo
Alteración del Drenaje	Menos que significativo	Menos que significativo
Inundación, Tsunami u Oscilación de Agua	Menos que significativo	Menos que significativo
Conflicto con los Planes	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción y Operaciones El proyecto propuesto cumpliría con los reglamentos y leyes federales, estatales, regionales y locales aplicables, incluyendo el cumplimiento de los permisos de aguas pluviales, permisos de aguas residuales y otros reglamentos sobre calidad del agua aplicables. No se requiere mitigación.

Planificación y Uso de la Tierra

¿QUÉ SE ESTUDIÓ?

- El potencial de que el proyecto dividiera físicamente a alguna comunidad establecida
- El potencial de que el proyecto entrara en conflicto con algún plan, política o reglamento de uso del suelo adoptado con el fin de evitar o mitigar algún efecto ambiental

ANÁLISIS Y CONCLUSIONES CLAVE

- Aunque los cierres temporales durante la construcción interrumpirían el acceso vehicular, peatonal y en bicicleta dentro y entre las comunidades, habría una variedad de opciones disponibles para las conexiones y el acceso dentro del área del proyecto
    - Las comunidades seguirán siendo accesibles desde otras calles circundantes, y se proporcionarán desvíos peatonales, lo que evitará que los cierres dividan físicamente a las comunidades establecidas.
- El proyecto propuesto mejoraría la conectividad de la comunidad al proporcionar acceso y mejoras al transporte público y a los peatones en los tramos de primera/última milla, incluyendo un centro de movilidad y apoyo al futuro puente para bicicletas y peatones de Los Angeles State Historic Park.
- El proyecto propuesto es coherente con los reglamentos, políticas, metas y/u objetivos de los planes, códigos y ordenanzas locales
- El organismo de parques estatales State Parks considera que hay una inconsistencia entre el proyecto propuesto y el Plan General de Los Angeles State Historic Park, y por ende considera un impacto potencialmente significativo porque el Plan General de Los Angeles State Historic Park no identifica al transporte como un uso del parque
    - Con la implementación de la Medida de Mitigación LUP-A, que requeriría que el proyecto propuesto obtuviera una Enmienda al Plan General de LASHP, los impactos serían menos que significativos

Planificación y Uso de la Tierra

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
División Física de la Comunidad	Menos que significativo	Sin impacto
Conflicto con Políticas o Planes de Uso de la Tierra	Menos que significativo con mitigación	Menos que significativo con mitigación

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción (División Física de la Comunidad): Si bien los impactos de la construcción son menos que significativos, la implementación del Plan de Gestión del Tráfico de la Construcción incluiría información sobre el cierre de calles, planes de desvío, rutas de transporte y un plan de preparación

Construcción y Operaciones El proyecto propuesto obtendría una Enmienda al Plan General de Los Angeles State Historic Park para permitir los usos de traslado dentro del Plan General de Los Angeles State Historic Park

Recursos Minerales

¿QUÉ SE ESTUDIÓ?

- Si la construcción del proyecto provocaría la pérdida de disponibilidad de recursos minerales conocidos que serían de valor para la región y los residentes del estado
- Si el proyecto provocaría la pérdida de disponibilidad de un sitio de recuperación de recursos minerales de importancia local delineado en un plan general local, plan específico u otro plan de uso del suelo

ANÁLISIS Y CONCLUSIONES CLAVE

- El proyecto no está ubicado en un área de recursos minerales conocidos
- Gran parte del área dentro de la Ciudad de Los Ángeles fue desarrollada con estructuras antes de las clasificaciones de MRZ y no está disponible para la extracción
- La ruta del proyecto está ubicada en un área urbanizada de la Ciudad de Los Ángeles, y la extracción de dichos materiales en un entorno urbanizado no es práctica

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Pérdida de Recursos Minerales Disponibles	Sin impacto	Sin impacto

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

No se requiere mitigación.

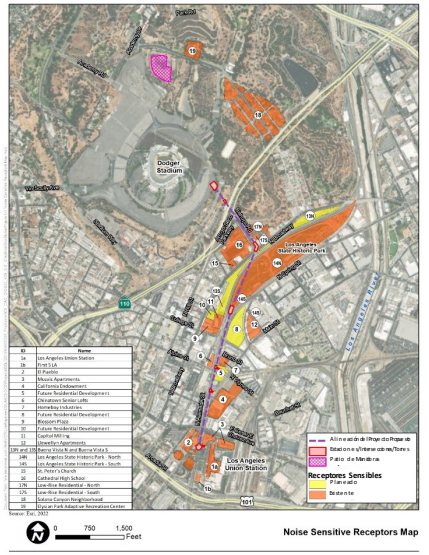
Ruido

¿QUÉ SE ESTUDIÓ?

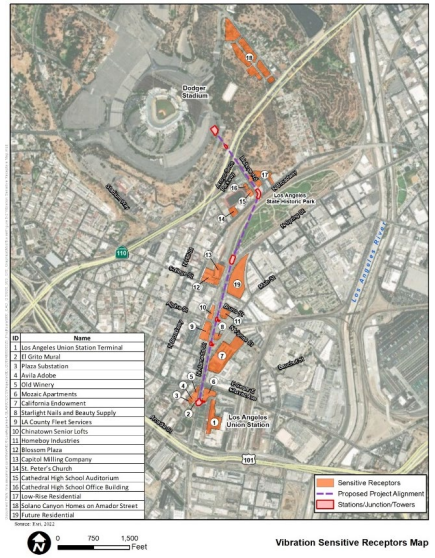
- Sondeo del ruido en las condiciones existentes con mediciones realizadas en lugares representativos de los receptores sensibles al ruido a lo largo de la ruta del proyecto propuesto, incluyendo lugares de desarrollos residenciales existentes y futuros, escuelas, parques y otras áreas con uso frecuente de humanos al aire libre
- Los impactos potenciales del ruido de la construcción se evaluaron calculando los niveles de ruido de la construcción relacionados con el proyecto
- Los impactos del ruido de las operaciones se evaluaron identificando los niveles de ruido que serían generados por las fuentes de ruido de las operaciones del proyecto, incluyendo las estaciones, la intersección, las torres, las cabinas que pasan a lo largo de las poleas de soporte en las torres, las cabinas y los pasajeros en las estaciones que esperan para abordar el sistema
- Análisis del impacto de las vibraciones transmitidas por el suelo en lo que respecta a daños a los edificios y a molestias a las personas

ANÁLISIS Y CONCLUSIONES CLAVE

- Los impactos significativos e inevitables de la construcción del proyecto propuesto serían una función del ruido generado por el equipo de construcción, la ubicación del equipo, el momento y la duración de las actividades de construcción que generan el ruido, y la distancia en relación con los receptores sensibles al ruido
- El ruido generado por el tráfico relacionado con la construcción fuera del sitio de obras sería menos que significativo
- El ruido generado por las operaciones del proyecto, en el peor de los casos, sería menos que significativo
- La vibración generada por las actividades de construcción en el sitio tendría impactos significativos e inevitables en cuanto a molestias a las personas; los impactos potenciales de daños a edificios serían menos que significativos con mitigación
- La vibración generada por las operaciones del proyecto sería menos que significativa



Mapa de Receptores Sensibles al Ruido



Mapa de Receptores Sensibles a la Vibración

Ruido

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Exposición al Público cerca del Aeropuerto	Sin impacto	Sin impacto
Generación o aumento de los niveles de ruido ambiental	Significativo e Inevitable	Menos que significativo
Generación de Niveles Excesivos de Vibración o Ruido	Significativo e Inevitable	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Ruido de las Operaciones: Características del diseño de la cabina relacionadas con la reducción del ruido entre el interior y el exterior y los niveles sonoros de las unidades de calefacción, ventilación y aire acondicionado (HVAC). No se requiere mitigación.

Ruido de la Construcción: Implementación de un plan de gestión del ruido de la construcción, que incluya:

- Barreras contra el ruido
- Mantenimiento del equipo
- Alcance a la comunidad, incluyendo un Coordinador de Perturbaciones Acústicas

Vibración de la Construcción:

- Colocación de equipos de supervisión de vibraciones para Avila Adobe (adición de los años 1970), el mural de *El Grito* y la bodega de vinos The Winery
- Restricciones al uso de dispositivos de compactación del suelo ajustables a la fuerza

Población y Vivienda

¿QUÉ SE ESTUDIÓ?

- El potencial de que el proyecto propuesto provoque un crecimiento sustancial de la población, o acelere un crecimiento que supere los niveles proyectados o planificados
- Si la implementación del proyecto propuesto desplazaría un número substancial de personas o viviendas existentes

ANÁLISIS Y CONCLUSIONES CLAVE

- Como conexión de traslado de primera/última milla al Dodger Stadium, el proyecto propuesto no induciría un crecimiento substancial de la población, ni directa ni indirectamente
  - Está diseñado para satisfacer las necesidades de transporte de la zona y mejorar la eficiencia de la red de transporte existente
  - Apoya los objetivos de la Ciudad en cuanto al Elemento de Vivienda del Plan General y los Planes Comunitarios de proporcionar transporte público cerca del desarrollo residencial ya planificado
- El proyecto propuesto no desplazará a personas o viviendas existentes

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Inducir un Crecimiento Demográfico No Planificado	Menos que significativo	Menos que significativo
Desplazamiento de personas o viviendas	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

No se requiere mitigación.

Servicios Públicos

¿QUÉ SE ESTUDIÓ?

- Si el proyecto propuesto traería consigo impactos físicos adversos asociados con la provisión de instalaciones públicas nuevas o alteradas físicamente, cuya construcción podría causar impactos ambientales significativos, incluyendo ~~en~~ la protección de los bomberos y la policía, las escuelas y otras instalaciones públicas como bibliotecas, centros de ancianos, refugios para personas sin hogar y guarderías
- Si el proyecto afectaría a los tiempos de respuesta de los servicios de emergencia

ANÁLISIS Y CONCLUSIONES CLAVE

- Si bien las actividades de construcción asociadas con el proyecto propuesto crearían un aumento temporal en la demanda de servicios de emergencia, la implementación de medidas de mitigación y características de diseño del proyecto, y el cumplimiento de las regulaciones estatales y locales aplicables, incluyendo la coordinación con el LAFD y el LAPD antes de la construcción del proyecto, asegurarían que la construcción del proyecto no crearía una demanda adicional de servicios de emergencia que resultaría en la necesidad de añadir nuevas instalaciones públicas o alterar físicamente las existentes
- LAFD y LAPD tendrían acceso adecuado durante la construcción
- Si bien el proyecto propuesto crearía una mayor demanda de servicios de emergencia durante las operaciones del proyecto, con el cumplimiento de los reglamentos aplicables, la coordinación con el LAFD y el LAPD y la implementación de un Plan de Operaciones de Emergencia, las operaciones del proyecto propuesto no crearían una demanda adicional de servicios de emergencia que resultara en la necesidad de agregar instalaciones públicas nuevas o alterarlas físicamente
- El proyecto propuesto no incluye viviendas, lo que podría aumentar la demanda de servicios escolares u otras instalaciones públicas

Servicios Públicos

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Necesidad de servicios de bomberos, policía, escuelas u otros servicios públicos que sean nuevos o modificados	Menos que significativo con mitigación	Menos que significativo
Tasas de Servicio y Tiempos de Respuesta	Menos que significativo con mitigación	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción: El Plan de Gestión del Tráfico de la Construcción reduciría los impactos relacionados con el acceso en caso de emergencias

Operación: El proyecto propuesto cumpliría con las regulaciones aplicables, implementaría elementos de seguridad como personal y cámaras, e implementaría un Plan de Operaciones de Emergencia. No se requiere mitigación.

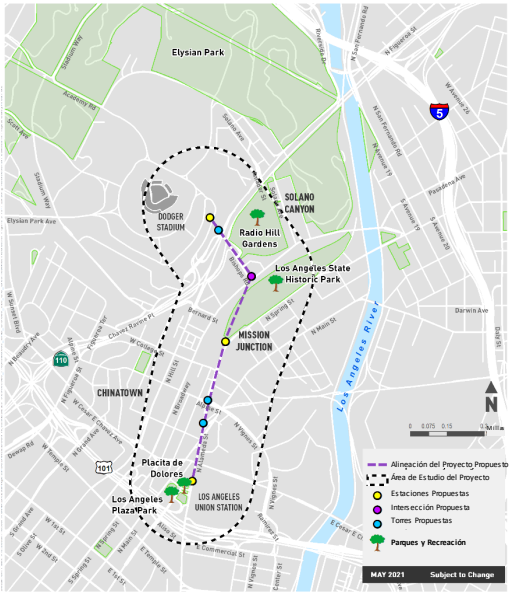
Parques y Recreación

¿QUÉ SE ESTUDIÓ?

- El potencial de afectar a los parques y las instalaciones recreativas durante la construcción y las operaciones, incluyendo los parques de Los Angeles State Historic Park, Elysian Park, Los Angeles Plaza Park y la Placita de Dolores

ANÁLISIS Y CONCLUSIONES CLAVE

- El proyecto propuesto no aumentaría la demanda de parques, ni generaría nuevos residentes permanentes que traerían consigo un aumento del uso de los parques e instalaciones recreativas existentes, de tal manera que se produjera o acelerara un deterioro sustancial de los parques o que resultara en la provisión de nuevas instalaciones de parques, o en la necesidad de instalaciones de parques nuevas o alteradas físicamente
- El proyecto propuesto mejoraría la movilidad y la accesibilidad de la región proporcionando un transporte rápido aéreo de gran capacidad que conectaría al sistema de transporte regional en la estación LAUS con Los Angeles State Historic Park y Elysian Park



CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Deterioro de una Instalación Pública	Menos que significativo	Menos que significativo
Ampliación de las Instalaciones Recreativas	Menos que significativo	Menos que significativo
Tasas de Servicio y Objetivos de Rendimiento	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?
No se requiere mitigación.

Transporte

¿QUÉ SE ESTUDIÓ?

- Se utilizaron las Directrices de la CEQA y los criterios de selección establecidos por el LADOT, la metodología de análisis y los criterios del umbral a través de las directrices TAG de la Ciudad
- El análisis de VMT para el proyecto propuesto empleó una variedad de datos, metodologías y modelos para estimar el número de pasajeros del proyecto, la reducción de viajes de vehículos, la distancia de los viajes de vehículos y, en última instancia, el beneficio de VMT del proyecto propuesto
- Estimaciones del número de pasajeros para los asistentes a los partidos y eventos del Dodger Stadium, empleados, turistas, transeúntes del vecindario y visitantes y asistentes a eventos de Los Angeles State Historic Park
- Ubicación de las estaciones, las torres y la intersección del proyecto propuesto y si estos componentes aumentan sustancialmente los peligros debido a una característica de diseño geométrico
- Los planes conceptuales de desvío de tráfico del proyecto propuesto y la ruta de transporte

ANÁLISIS Y CONCLUSIONES CLAVE

- El proyecto sería consistente con los PPOPs – programas, planes, ordenanzas o políticas – que aborden el sistema de circulación, incluyendo las instalaciones de transporte público, carreteras, bicicletas y peatones
- El proyecto propuesto no introduciría ninguna condición física insegura en la implementación de medidas de mitigación para la Torre Alameda y la Estación Chinatown/State Park
- Con la implementación de las medidas de mitigación, el acceso de emergencia se mantendría durante la construcción del proyecto propuesto

La reducción de VMT a lo largo de la vida del Proyecto sería de 129,629,500 VMT.

Transporte

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Millas Viajadas en Vehículos (VMT)	Sin impacto	Sin impacto
Conflicto con el Plan o las Políticas	Menos que significativo	Menos que significativo
Riesgos que Aumentan a Través del Diseño	Menos que significativo con mitigación	Menos que significativo con mitigación

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción:

- Implementación de un Plan de Gestión del Tráfico de la Construcción detallado y aprobado por la Ciudad, que incluya información sobre el cierre de calles, planes de desvío, rutas de transporte y un plan de preparación
- Implementación de un plan de ruta temporal en caso de desastre aprobado por la Ciudad, que incluiría información sobre el cierre de calles y planes de desvío a fin de facilitar el movimiento de vehículos de emergencia a través del área de estudio y minimizar los efectos en la respuesta de emergencia durante un desastre

Construcción y Operaciones

- Mejoras en la visibilidad – como tratamientos de alta visibilidad en los pasos de peatones, señales avanzadas de advertencia de cruces, luces intermitentes, iluminación mejorada y controles de tráfico nuevos o mejorados – en la Torre Alameda propuesta y en la Estación Chinatown/State Park

Recursos Culturales Tribales

¿QUÉ SE ESTUDIÓ?

- Cambios adversos sustanciales en recursos culturales tribales significativos
- Se ha consultado a ocho tribus de nativos americanos de California en virtud del Proyecto de Ley 52 de la Asamblea

ANÁLISIS Y CONCLUSIONES CLAVE

- Existen recursos en el área y requieren la implementación de mitigación, incluyendo pruebas arqueológicas y recuperación de datos
- Durante la construcción hay un potencial de que se encuentren recursos que no hayan sido identificados previamente; si el Supervisor Nativo Americano identifica recursos potenciales, dicho Supervisor puede detener temporalmente la construcción

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Cambio a los Recursos Culturales Tribales	Menos que significativo con mitigación	Sin impacto

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción:

- Implementar el Programa de Supervisión y Mitigación de Recursos Culturales y el Plan de Pruebas Arqueológicas de la Explanada de LAUS
- Mantener un Supervisor Nativo Americano para supervisar las actividades de construcción que perturban el suelo en el sitio de la Estación Alameda

Operación: No se requiere mitigación.

Sistemas de Servicios y Servicios Públicos

¿QUÉ SE ESTUDIÓ?

- La reubicación o construcción de instalaciones nuevas o ampliadas de agua, tratamiento de aguas residuales o drenaje de aguas pluviales, energía eléctrica, gas natural o telecomunicaciones
- El efecto del proyecto en el suministro de agua
- Si el proyecto requerirá la ampliación de la capacidad de tratamiento de aguas residuales
- Si los sitios para depósito de basura del área tendrían capacidad suficiente para los residuos sólidos generados por el proyecto

ANÁLISIS Y CONCLUSIONES CLAVE

- La construcción del proyecto propuesto no requeriría la construcción de servicios públicos nuevos o ampliados
- La construcción del proyecto propuesto requeriría la reubicación de servicios públicos existentes, que se coordinaría con los proveedores de los servicios públicos y se llevaría a cabo de conformidad con los códigos y reglamentos estatales y locales aplicables
    - Para minimizar la interferencia potencial con los servicios públicos existentes asociada con la reubicación de servicios públicos durante la construcción, el proyecto propuesto implementaría un Plan de Reubicación de Servicios Públicos
- El funcionamiento del proyecto propuesto requerirá conexiones a los sistemas de servicios públicos existentes
- El uso principal de electricidad provendría de recursos renovables, y el suministro de energía existente debería ser suficiente para las operaciones del proyecto
- La construcción y las operaciones del proyecto propuesto tendrían suficiente suministro de agua
- La construcción y las operaciones generarían posibles aguas residuales, las cuales se tratarían de conformidad con las normativas
- No se generarían residuos sólidos que superen los niveles de las normas estatales o locales, o que superen la capacidad de la infraestructura local, o que perjudicarían de alguna otra manera el cumplimiento de las metas de reducción de residuos sólidos

Sistemas de Servicios y Servicios Públicos

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Suministro de Agua Suficiente	Menos que significativo	Menos que significativo
Demanda y Capacidad de los Sistemas de Aguas Residuales	Menos que significativo	Menos que significativo
Objetivos en Materia de Residuos Sólidos	Menos que significativo con mitigación	Menos que significativo
Reubicación o Construcción de Servicios Públicos	Menos que significativo con mitigación	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción:

- Desarrollo e implementación de un Plan de Reubicación de Servicios Públicos en coordinación con las compañías de servicios públicos para minimizar los impactos a los servicios durante la construcción del proyecto
- Elaboración de un Plan de Gestión de Suelos y Aguas Subterráneas.

Operación: No se requiere mitigación.

Incendios Forestales

¿QUÉ SE ESTUDIÓ?

- Si el proyecto propuesto resultaría en impactos potenciales significativos relacionados con incendios forestales si se ubicara en Áreas de Responsabilidad Estatal (SRAs) o tierras clasificadas como Zonas de Muy Alto Riesgo de Incendio (VHFHSZ), o cerca de ellas
- Potencial de comportamiento de incendios forestales dentro del área del proyecto en función de la topografía, el clima y los combustibles
- Afectación substancial de la aplicación de un plan de respuesta a emergencias o un plan de evacuación de emergencias adoptado
- Si el proyecto propuesto requeriría la instalación o el mantenimiento de infraestructura asociada que podría exacerbar el riesgo de incendio o tener impactos temporales o continuos para el medio ambiente
- Si el proyecto expondría a las personas o estructuras a riesgos significativos, incluyendo inundaciones o deslizamientos de tierra, como resultado de una escorrentía, la inestabilidad de las laderas después de un incendio, o cambios en el drenado
- Si el proyecto expondría a las personas o estructuras, de manera directa o indirecta, a un riesgo significativo de pérdida, lesión o muerte que involucre incendios forestales

ANÁLISIS Y CONCLUSIONES CLAVE

- La porción de la ruta propuesta que contiene la intersección de Broadway Junction, la Torre del Estadio y la Estación Dodger Stadium están dentro de la VHFHSZ
- La construcción y operación del proyecto propuesto no inhibiría el acceso a las rutas de desastre identificadas y no perjudicaría sustancialmente la implementación de un plan de respuesta a emergencias o de evacuación
- El proyecto cumpliría con los códigos y las normativas aplicables y las mejores prácticas de la construcción, y no exacerbaría los riesgos de incendios forestales
- La aplicación de las características de diseño del proyecto reduciría aún más estos riesgos

Incendios Forestales

CONCLUSIONES SOBRE EL IMPACTO

Tema	Resultado	
	Construcción	Operaciones
Dificultar los Planes de Emergencia o Evacuación	Menos que significativo	Menos que significativo
Exacerbar los Riesgos de Incendios Forestales	Menos que significativo	Menos que significativo
Instalar/Mantener la Infraestructura Asociada	Menos que significativo	Menos que significativo
Exponer a Personas o Estructuras a Riesgos de Incendios Forestales	Menos que significativo	Menos que significativo

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

Construcción: Implementación de las características de diseño del proyecto, incluyendo el Plan de Protección contra Incendios y una zona de modificación de combustible que rodea el sitio de construcción de la Torre del Estadio. No se requiere mitigación.

Operación: Implementación de características del diseño del proyecto durante las operaciones de la intersección de Broadway Junction, la Torre del Estadio y la Estación Dodger Stadium relacionadas con la supervisión de la seguridad por parte del personal y las cámaras, y la identificación y notificación de riesgos de seguridad por incendios. No se requiere mitigación.

Alternativas

¿QUÉ SE ESTUDIÓ?

- Se seleccionó una gama razonable de alternativas para explorar los medios potenciales para mitigar o evitar los impactos ambientales significativos asociados con la implementación del proyecto propuesto, sin dejar de lograr los objetivos principales del proyecto
  - Alternativa Sin Proyecto – Sin Desarrollo Nuevo
  - Alternativa de la Ruta de Spring Street – Alternativa de Ruta al Proyecto Propuesto
  - Alternativa de Gestión de Sistemas de Transporte – Union Station Dodger Stadium Express Mejorado
- Se tuvieron en consideración varias alternativas pero se descartaron del análisis detallado por no cumplir con la mayoría de los objetivos básicos del proyecto, por ser inviables o por no poder evitar impactos ambientales significativos, incluyendo la Alternativa de Ruta de la Estación Broadway, la Alternativa de Ruta de la Estación de la Línea L (Dorada) del Metro y la Estación de College Street, y las Alternativas de Ruta Directa.

ANÁLISIS Y CONCLUSIONES CLAVE

- La Alternativa Sin Proyecto no mejoraría el acceso al transporte ni proporcionaría conexiones entre comunidades. Además no se reducirían las VMT ni la congestión vehicular, y no se reducirían las emisiones de GEI, ni mejoraría la calidad del aire.
- La Alternativa de Ruta de Spring Street proveería una conexión directa de transporte y mejoraría la conectividad de las comunidades circundantes. Esta alternativa requeriría una mayor huella y no reduciría los impactos ambientales significativos.
- La Alternativa TSE no proporcionaría una conexión de transporte directa, ni mejoraría la conectividad de las comunidades circundantes y no proporcionaría la misma reducción de VMT ni emisiones de GEI, y por ende, tampoco mejoras en la calidad del aire.

Alternativas

CONCLUSIONES DE LAS ALTERNATIVAS

Alternativas	Resultado	
	Capacidad para Cumplir con los Objetivos del Proyecto	**Capacidad de Reducir los Impactos Significativos**
Alternativa Sin Proyecto	No Cumpliría con los Objetivos del Proyecto	Menos Impactos que el Proyecto
Alternativa de Ruta de la calle Spring Street	Cumpliría con Todos Los Objetivos del Proyecto	Impactos Similares a los del Proyecto
Alternativa de Gestión de Sistemas de Transporte	No Cumpliría la Mayoría de los Objetivos del Proyecto	Menos Impactos que el Proyecto

¿CUÁL ES LA ALTERNATIVA AMBIENTALMENTE SUPERIOR?

La Alternativa TSM se consideraría la alternativa superior desde el punto de vista medioambiental porque no daría lugar a una determinación de la CEQA de un impacto significativo e inevitable y tendría el menor número de impactos medioambientales en general. Sin embargo, el impacto de la alternativa TSM sería mayor en cuanto a la calidad del aire, la energía, las emisiones de gases de efecto invernadero, la hidrología y la calidad del agua, y el transporte y el tráfico. Además, la Alternativa de TSM no permitiría que se alcancen total o parcialmente la mayoría de los Objetivos del Proyecto.

Otras Evaluaciones Adicionales en el EIR

LOS ANGELES STATE HISTORIC PARK

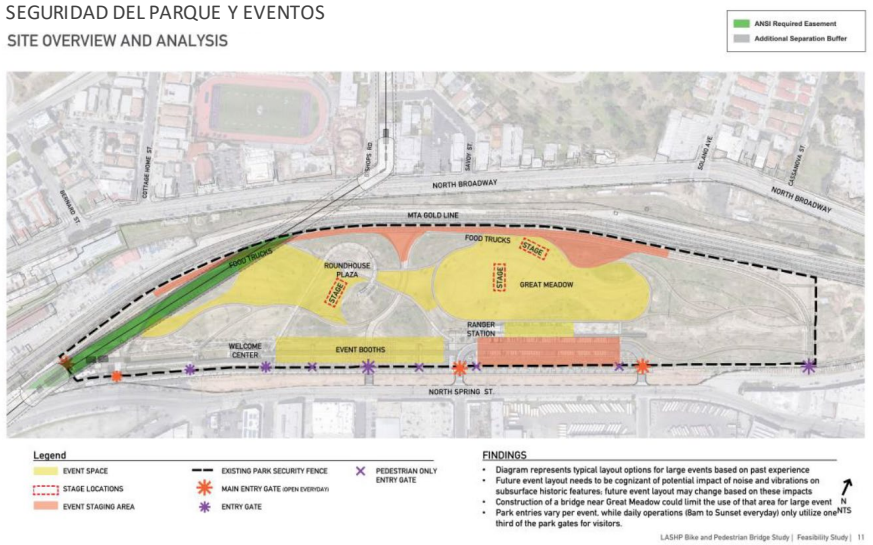
Cometas: Debido a la ubicación de la ruta del proyecto propuesto – que atraviesa el borde poniente del parque adyacente a la Línea L del Metro y al camino peatonal – el proyecto propuesto no reduce significativamente el área segura para volar cometas dentro del parque

Eventos Especiales: La ubicación de la ruta del proyecto propuesto cruza sobre una pequeña porción del parque que no se usa típicamente para pantallas ni escenarios, y los eventos aún pueden celebrarse bajo la mayor parte de la ruta del proyecto propuesto, por lo que el proyecto propuesto no reduce significativamente el área de espacio para eventos dentro del parque

UBICACIÓN DE LA ESTACIÓN ALAMEDA Y DE LA ESTACIÓN CHINATOWN/STATE PARK

HELIPUERTOS

- La ruta del proyecto propuesto no se encuentra dentro de un área cubierta por un plan de uso de suelo del aeropuerto, ni dentro de 2 millas (3.2 km) de distancia de un aeropuerto público
- Una evaluación del espacio aéreo de los helipuertos en las cercanías del proyecto propuesto concluyó que la construcción y la operación del proyecto propuesto estarán fuera del espacio aéreo asociado con los helipuertos existentes en las cercanías del proyecto propuesto, por lo que no hay ningún potencial de peligros para la navegación aérea y, por lo tanto, ningún impacto a la actividad aeronáutica, incluyendo a los helipuertos en las cercanías del proyecto propuesto



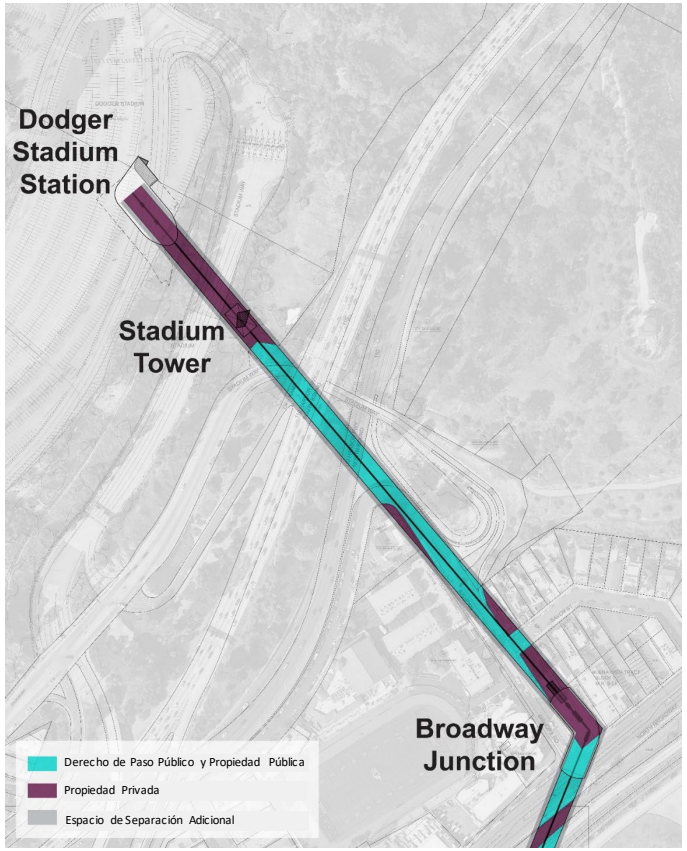
Ubicaciones Típicas para Pantallas y Escenarios de Eventos en Los Angeles State Historic Park con la Ruta del Proyecto Propuesto

Opción de Diseño A

CAMBIO EN LA INTERSECCIÓN DE BROADWAY JUNCTION PARA EVITAR LA UBICACIÓN DE 451 E. SAVOY

- Incluye un cambio en la ruta general del proyecto entre la intersección de Broadway Junction y la Estación Dodger Stadium para evitar los requisitos de derechos aéreos sobre 451 E. Savoy Street
- El cambio daría lugar a que la ruta cruzara sobre una pequeña porción de la secundaria Cathedral High School adyacente a Bishops Road
- Incluye cambios en los componentes del proyecto en Broadway Junction, la Torre del Estadio y la Estación Dodger Stadium
  - Resultaría en la reubicación de servicios públicos y tiempo adicional de construcción, tanto en la Torre del Estadio como en la Estación Dodger Stadium
  - Requeriría una caminata más larga de los pasajeros del proyecto propuesto para trasladarse entre la Estación Dodger Stadium y el estadio

Ruta del Proyecto Propuesto

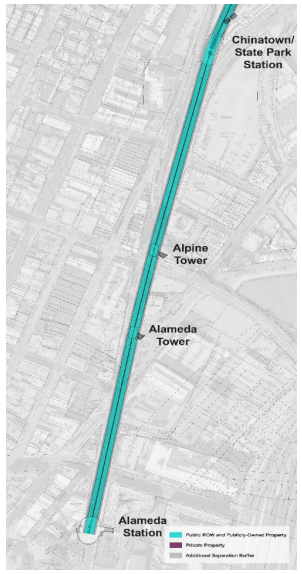


Opción de Diseño A

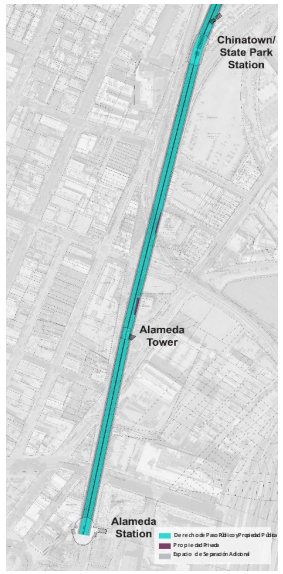
Opción de Diseño B

TORRE ÚNICA A LO LARGO DE ALAMEDA STREET

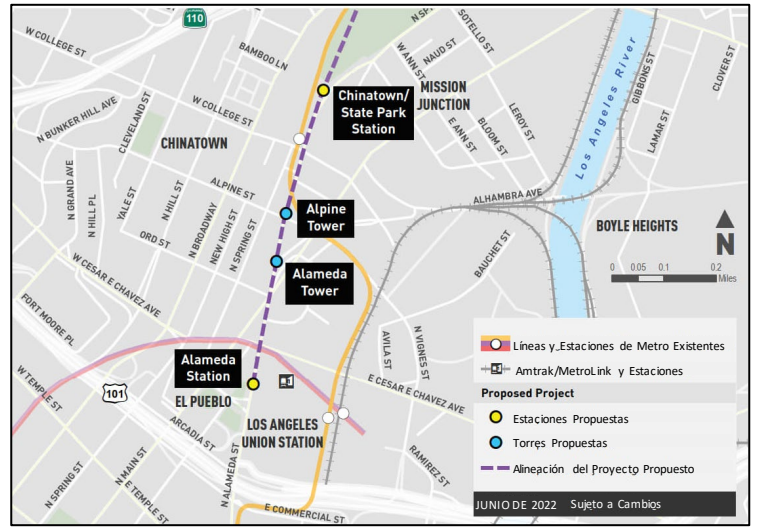
- En respuesta a los comentarios de las partes interesadas, que pidieron al Patrocinador del Proyecto que evalúe la posibilidad de reducir el número de torres a lo largo de Alameda Street de dos a una
- Consiste en un aumento de la altura total de 50 pies (15 m) en la Torre Alameda y la eliminación de la Torre Alpine del proyecto propuesto entre la Estación Alameda y la Estación Chinatown/State Park
- El aumento de la altura de la torre coincide con actividades de construcción adicionales
- Daría lugar a posibles limitaciones técnicas
- Daría lugar a la necesidad de requisitos adicionales de derechos aéreos privados



Ruta del Proyecto Propuesto



Opción de Diseño B



Ruta del Proyecto Propuesto

Opción de Diseño B

Opción de Diseño C

ESTACIÓN CHINATOWN/STATE PARK CON MAYOR ALTURA

- En respuesta a los comentarios de las partes interesadas, que pidieron al Patrocinador del Proyecto que considerara una estación de Chinatown/State Park más alta
- La Opción de Diseño C consiste en un aumento de la altura total de 35 pies (11 m) en la Estación Chinatown/State Park.
- El aumento de la altura coincide con actividades de construcción adicionales
- Tiene el potencial de aminorar la experiencia de los pasajeros debido a la altura, que también hace que el andén de abordaje esté elevado, lo que requiere una circulación vertical adicional para acceder y ascender al andén

Ruta del Proyecto Propuesto

Opción de Diseño C

Opción de Uso D

ESTACIÓN CHINATOWN/STATE PARK COMO INTERSECCIÓN SIN PASAJEROS

- En respuesta a los comentarios de las partes interesadas, que pidieron al Patrocinador del Proyecto que considerara la posibilidad de que no hubiera acceso a los pasajeros en la estación Chinatown/State Park, para aumentar la altura de las cabinas que entrarían y saldrían de la estación a lo largo de Spring Street
- La Opción de Uso D incluye substituir la intersección que no sería para pasajeros por la Estación Chinatown/State Park propuesta
- Tendría la misma ubicación, altura, anchura, longitud y acabado arquitectónico que el proyecto propuesto
- No mejoraría la conectividad de la comunidad con Los Angeles State Historic Park, Chinatown y el barrio de Mission Junction

Opción de Uso y Diseño E

PUENTE PEATONAL DEL LOS ANGELES STATE HISTORIC PARK

- Los Angeles State Historic Park ha propuesto un puente peatonal con acceso requerido por la ADA que se inclinaría suavemente, desde la parte central del parque hasta North Broadway
- Aunque el puente peatonal no se propone como parte del proyecto propuesto, el Borrador del EIR incluye un análisis del puente peatonal para el parque
- Como se señala en el EIR Final y Plan General del Los Angeles State Historic Park y en el Estudio del Puente para Bicicletas y Peatones; el puente proporcionaría un acceso seguro para peatones y bicicletas desde las comunidades de Chinatown y Solano Canyon al Parque

Fuente: Estudio de Factibilidad del Puente

Generalidades del Estudio de Estacionamiento

ESTUDIO DE ESTACIONAMIENTO DEL PROYECTO PROPUESTO

- Aunque la CEQA no exige un análisis del estacionamiento, se realizó un exhaustivo Estudio de Estacionamiento para el proyecto, el cual fue revisado por Metro.
- El Estudio de Estacionamiento ha estado disponible en la página web de Metro desde el 9 de septiembre de 2022

¿QUÉ SE ESTUDIÓ?

- Se espera que la mayoría de los usuarios del proyecto propuesto utilicen el transporte público para llegar al proyecto
- Hay aproximadamente 10,290 lugares en lotes y garajes públicos y en espacios en la calle a menos de ½ milla (800 m) de la Estación Alameda del proyecto propuesto y la Estación Chinatown/State Park

Generalidades del Estudio de Estacionamiento

CONCLUSIONES DEL ESTUDIO DE ESTACIONAMIENTO

Tipo de estacionamiento	Estacionamiento para un Día de Partido			
	Oferta de Estacionamiento	Vehículos Aparcados	Ocupación	Oferta Disponible
Lugares de Estacionamiento Público Disponibles Fuera de la Vía Pública	6,876	2,173	32%	4,703
Lugares en las Calles	3,417	2,017	59%	1,400
TOTAL				
Demanda de Estacionamiento con el Proyecto Propuesto (2042)	-	307 – 790		
Total de Lugares Disponibles Fuera de la Vía Pública con el Proyecto	6,876	2,963	43%	3,913

*Los conteos se realizaron el 10 de septiembre de 2021, en una noche en la que los Dodgers de Los Ángeles recibieron a los Padres de San Diego; la asistencia pagada fue de 48,403, que fue más alta que el promedio de la temporada 2019 de los Dodgers de Los Ángeles para los juegos nocturnos entre semana. En coordinación con Metro y LADOT, el Estudio de Estacionamiento aplicó un aumento del 46% a los espacios públicos disponibles fuera de la vía pública para tener en cuenta la pandemia de COVID-19.

Con la adición de la demanda potencial de estacionamiento del proyecto propuesto, hay muchos lugares de estacionamiento disponibles dentro de los alrededores del proyecto propuesto. Incluso si algunos de los estacionamientos existentes se reurbanizan, hay suficiente oferta de estacionamiento fuera de la vía pública para dar cabida a toda la demanda de estacionamiento del proyecto propuesto.

EL PROYECTO SE COMPROMETE A FOMENTAR EL USO DEL TRANSPORTE PÚBLICO

- Estableciendo asociaciones de empresa a empresa con los negocios locales para la preventa de paquetes que incluyan el consumo en los negocios locales y el estacionamiento disponible fuera de la vía pública
- Apoyar la implementación/expansión de varias estrategias de gestión, incluyendo restricciones de estacionamiento con límite de tiempo y parquímetros durante las horas de los partidos para disuadir a los pasajeros de aparcar en la comunidad y mantener espacios disponibles para los residentes y los negocios locales

Sesión de Comentarios Públicos

Sesión de Comentarios Públicos

- Propósito: Dar al público la oportunidad de hacer comentarios sobre el Borrador del EIR

¡HOY!

Conozca los análisis y conclusiones clave del Borrador del EIR y proporcione comentarios públicos verbales.

Hoy no habrá preguntas y respuestas.

Levante la mano y se le llamará para que quite el silencio a su dispositivo y así pueda proporcionar comentarios públicos. Los participantes dispondrán de hasta dos minutos por comentario.

La comunicación que se haga hoy a través del chat de Zoom no se considerarán un comentario público formal.

Cómo Hacer Comentarios sobre el Borrador del EIR a Más Tardar el 17 de Enero de 2023

Cómo Hacer Comentarios sobre el Borrador del EIR:

Audiencia Pública

Centro de Los Ángeles/Chinatown
Sábado 10 de Diciembre, 10:00 a.m. – 12:00 p.m.
Los Angeles Union Station
Explanada para Boletos
800 N. Alameda Street,
Los Angeles, CA 90012

Reunión Virtual vía Zoom
Martes 13 de Diciembre, 5:00 p.m. – 7:00 p.m.
Vaya a metro.net/aerialrapidtransit

如何參加此虛擬會議

今天!

介紹環境影響報告草案(DEIR)主要分析和結論，並提供口頭公眾評論。今天將不設問答環節。

於資訊說明會上:如欲發表意見，請先舉手，被選中後，你將被要求寂靜並提出意見。

概述

概述

- 洛杉磯空中快速纜車計畫由洛杉磯空中快速纜車交通技術有限公司提出
- 洛杉磯縣都會運輸局是根據《加州環境品質法案》（CEQA）編寫環境影響報告的主導機構。
- 《環境影響報告草案》評估了與計畫建設和營運相關的潛在環境影響

概述

- 作為主導機構，洛杉磯縣都會運輸局有責任確保：
  - 《環境影響報告》充分評估計畫的潛在影響
  - 當中建議的緩解措施恰當
  - 已遵守《加州環境品質法案》（CEQA）流程，以進行公告、公關宣傳和文件分發

概述

- 我們目前正在收集公眾對《加州環境品質法案》（CEQA）轄下有關《環境影響報告草案》的意見
  - 公開聽證會
  - 電郵
  - 郵寄
  - 電話
- 參議院第44號法案
  - 透過《加州環境品質法案》（CEQA）優化洛杉磯縣環境主導交通計畫的審查
  - 擬建計畫將是參議院第44號法案下的第一個環境主導交通計畫
  - 公眾聽證會要求
    - **資訊研討會：於為期10天的公眾意見咨詢期間，向公眾匯報《環境影響報告草案》的主要分析和結論**
    - 公開聽證會：在公眾意見咨詢期的最後10天內取得公開聲明

《加州環境品質法案》（CEQA）概覽

《加州環境品質法案》（CEQA）程序

所有計畫均需由一家公共機構承擔、資助或審批

通知公眾和決策者

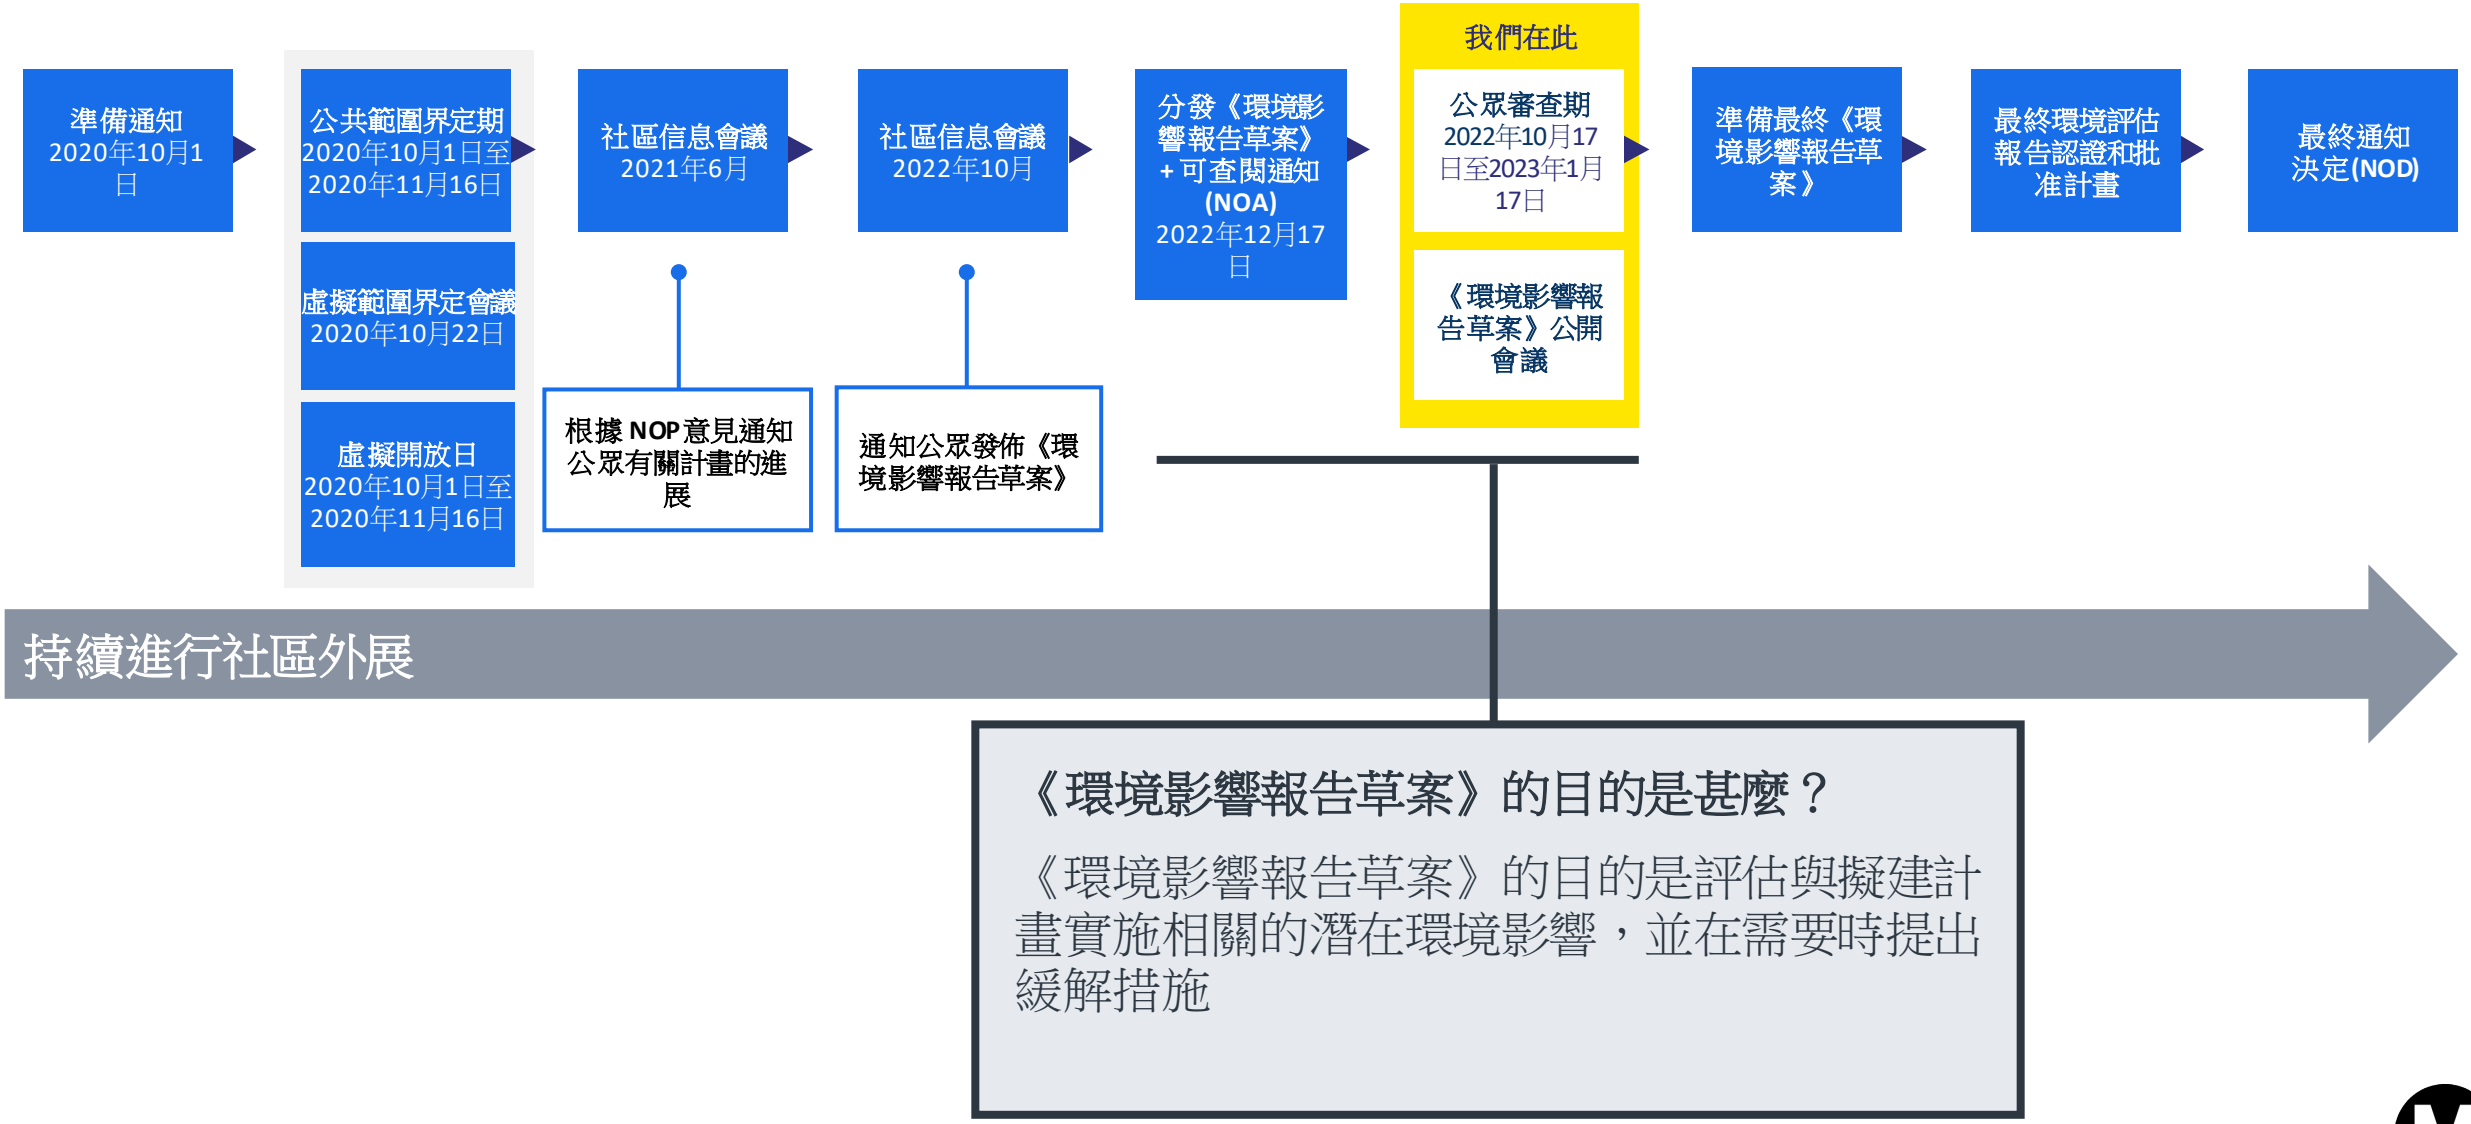
披露擬建計畫會產生的潛在環境影響

提供對環境問題發表評論的機會

兩個公眾意見咨詢期：(1) 公共範圍界定期和 (2) 《環境影響報告草案》公眾審查

SB 44 需要在 《環境影響報告草案》 公開評論期間召開兩次公開會議：
資訊說明會與公眾聽證會

時程線



《環境影響報告草案》的目的是甚麼？

《環境影響報告草案》的目的是評估與擬建計畫實施相關的潛在環境影響，並在需要時提出緩解措施

《環境影響報告草案》意見咨詢期間的公開會議

資訊性研討會

第一次《環境影響報告草案》資訊說明會	10月22日，星期六	虛擬
第二次《環境影響報告草案》資訊說明會	10月25日(星期二)，下午5時至7時	現場

運輸局將舉辦兩場資訊說明會，讓公眾了解《環境影響報告草案》中的關鍵分析和結論

公開聽證會

第一次《環境影響報告草案》公開聽證會	12月10日，星期六	現場
第二次《環境影響報告草案》公開聽證會	12月13日，星期二	虛擬
第三次《環境影響報告草案》公開聽證會	1月12日， 星期二	現場

運輸局將舉辦三次公開聽證會，就《環境影響報告草案》咨詢公眾意見

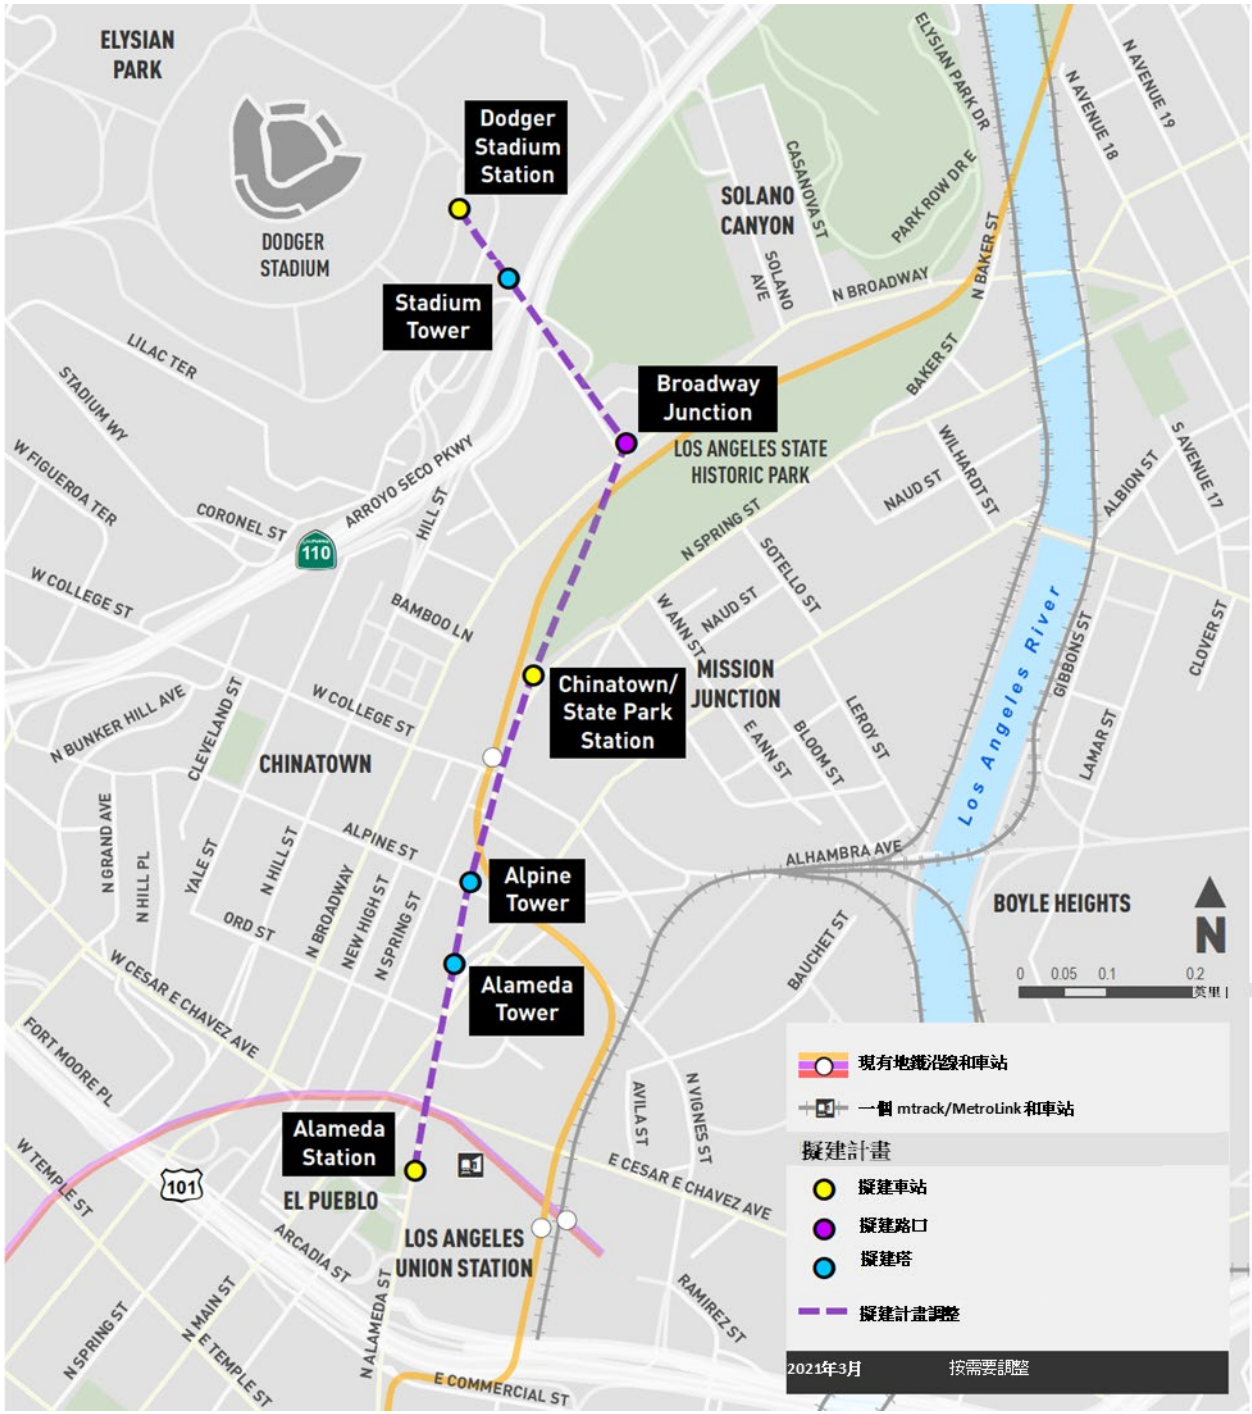
計畫介紹:

計畫概覽

- 透過 1.2 英里的空中快速纜車系統，能提供從洛杉磯聯合車站 (LAUS) 到道奇體育場的永久交通連接
  - 從洛杉磯聯合車站到道奇體育場的行車時間約為7分鐘
- 每個方向每小時可容納約5,000人次
- 為洛杉磯的現有居民、工人、公園用戶和遊客每天提供服務
- 透過唐人街/州立公園中轉站，提供前往洛杉磯州立歷史公園和周邊社區的通道
- 由於減少了道奇體育場內和周圍以及附近街道、主要幹道和高速公路上的車輛行駛，溫室氣體排放將減少，達至零排放、環保的空中快速纜車

計畫位置和路線

- 計畫將在洛杉磯聯合車站和洛杉磯古城旁邊開始，並在道奇體育場結束，中途於洛杉磯州立歷史公園最南端的入口處設置一個中轉站
- 將唐人街、Mission Junction、伊利森公園(Elysian Park)、迴聲公園(Echo Park)和索拉諾郡峽谷(Solano Canyon)的周邊社區連接到聯合車站可到達的區域交通系統
- 擬建計畫路線最大限度地維護公共可行使通行權（ROW）和公有財產，以及減少使用在私人財產上空的空中權利，計畫同時亦顧及現有和未來的鄰近土地用途



空中快速纜車系統先例

- 空中快速纜車技術已經有100多年歷史
- 現代系統是一種可行的城市交通模式，目前在世界各地多個城市運行
- 全球已建立的空中快速纜車系統——如:玻利維亞的拉巴斯和墨西哥的墨西哥城——空中快速纜車系統正為該地的城市人口服務
- 擬建計畫是“3S”纜車，與德國科布倫茨、越南富國島和法國圖盧茲使用的系統類似
  - 車廂可乘載約30至40名乘客
  - 系統將提供平穩、穩定的行駛

俄勒岡州波特蘭

紐約羅斯福島

玻利維亞拉巴斯

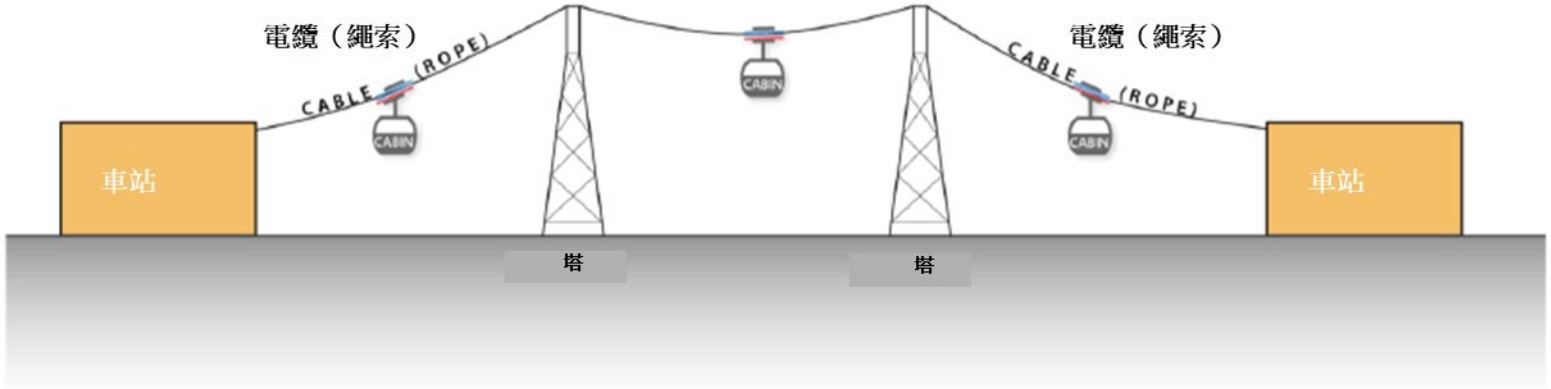
墨西哥墨西哥城

法國圖盧茲

哥倫比亞麥德林

索道技術

空中快速纜車系統包括客運站、非客運樞紐和塔，這些塔用作支撐車廂的架空電纜



三個客運站

- 包括機械、電力以及管道系統、登車平台和垂直流動設備（例如樓梯、自動扶梯和電梯）
- 包括售票處、檢票區和排隊區；乘客上落車廂；營運以及系統設備

一個非客運樞紐站

- 空中快速纜車系統的運作需電纜轉動並維持在路線上

三個用以支撐車廂的架空電纜的塔

“3S”系統和纜車車廂

“3S”系統

- “3S”系統包括三根電纜：兩根用於穩定的「軌道繩索」和第三根用於循環車廂的「牽引繩索」
- 車廂從連續循環的「牽引繩索」分離並在進入車站供乘客出入時減速，然後重新連接至「牽引繩索」

車廂

- 每個車廂可容納30至40名乘客，實際數量取決於所選座位的配置和所選用的車廂設備
- 完全無障礙及可容納輪椅上落
- 設有立位及坐位
- 為嬰兒車及單車提供停泊位置
- 於繁忙時間可以每小時13.4英里的最高速度移動
- 進入車站時，列車會減速至大約每秒一英尺（每小時不足一英里）的速度，允許乘客上落正在行駛的列車

目的及需要

- 透過空中快速纜車系統，提供從洛杉磯聯合車站 (LAUS) 到道奇體育場的交通連接
- 將唐人街、Mission Junction、伊利森公園(Elysian Park)、迴聲公園(Echo Park) 和索拉諾郡峽谷(Solano Canyon)的周邊社區連接到聯合車站可到達的區域交通系統
- 透過每日提供高容量的空中快速纜車(ART)服務，提高洛杉磯聯合車站(LAUS)的區域交通系統之間的流動性和可達性
- 在唐人街/州立公園站提供交通樞紐
- 透過使用零排放電力和備用電池運作，提供資源永續的交通方式，有效減少溫室氣體排放, 及改善空氣品質

道奇體育場：該區其中一個訪客量最大的場地

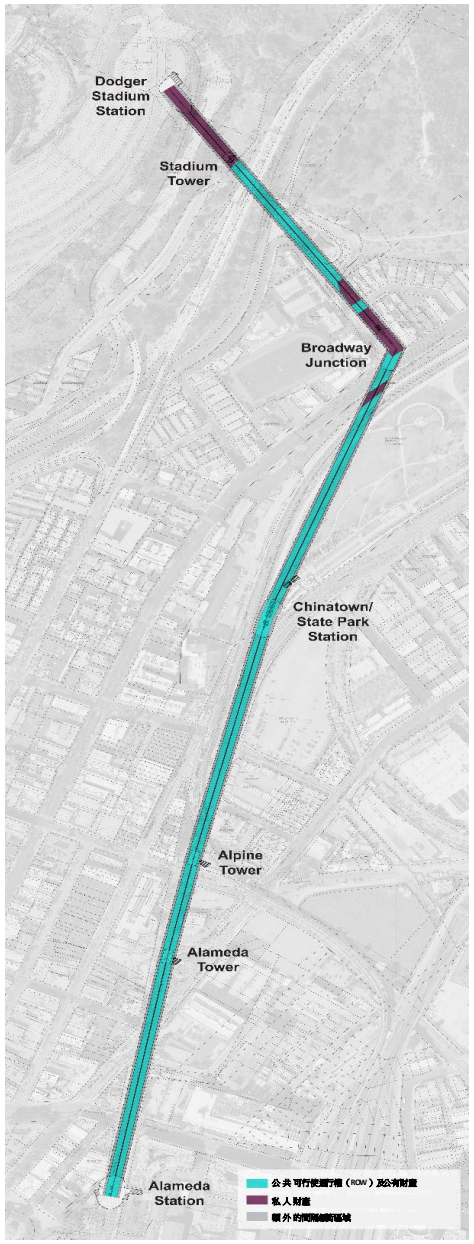
- 每年舉辦約100場棒球比賽和其他活動，吸引大量觀眾
- 大部份的觀眾使用私家車到達體育場
- 車輛令周邊社區及附近的高速公路造成交通擠塞
- 擬建計畫所經路線附近的社區，給認定會為該州帶來不同途徑的污染源頭，佔其不成比例的社區負擔的90-100%（CalEnviroScreen 4.0 地圖）

計畫目標

- 為洛杉磯聯合車站(LAUS)和區域活動中心道奇體育場提供直接連繫，為乘坐公共交通的乘客提供更多交通選擇。
- 空中快速纜車(ART)系統為新的乘客提供獨特的交通體驗，吸引他們乘坐鐵路系統，並連接他們到道奇體育場。
- 為到訪道奇體育場的遊客提供高效、高容量和更快捷的替代交通工具，改善遊客的體驗。
- 擬建計畫將減少該地區的車輛數目，從而提高毗鄰道奇體育場的社區的安全性
- 減少球賽日及特別活動的影響，使道奇體育場的周邊地方、鄰近社區、主要幹道和高速公路的車輛堵塞問題改善，這亦使因相關交通空氣污染和溫室氣體(GHG)排放相對減少
- 增加人們與洛杉磯聯合車站(LAUS)與道奇體育場建設的公共交通樞紐之間的連繫。
- 沿途為乘客和道奇隊球迷提供洛杉磯地區獨有的風景，改善乘客的乘車體驗。
- 將世界一流的空中交通系統帶到洛杉磯地區。
- 擬建計畫為以往交通服務不足的區域（包括洛杉磯州立歷史公園和伊利森公園）的一英里範圍內和行人通道提供交通系統，從而改善社區之間的連繫。
- 為社區和洛杉磯州立歷史公園和 Elysian 公園作出比較、為能負擔購買,及容易購得車票作比較。
- 將資源永續性和環保設計特徵整合到擬建計畫的選材、施工、營運和維修，能最大限度地減少計畫對環境的影響。
- 空中快速纜車(ART)系統以零排放電力和備用電池運作，提供可永續的交通方式，減少溫室氣體排放，並改善空氣品質。
- 擬建計畫路線最大限度地維護公共可行使通行權（ROW）道路及公有財產，以及減少使用在私人財產上空的通過權利，同時顧及現有和未來的鄰近土地用途

路線將建於公共通行權（ROW）範圍內或公共土地上

- 美國國家標準協會(ANSI)標準第B77.1項中記錄了纜車索道和車廂設計和運作及專業準則，該準則與製造商、消費者和監管機構共同協力研發
  - 美國國家標準協會(ANSI)標準第B77.1項對索道和車廂與車輛、行人、植物、建築物和其他結構等元素之間的垂直和水平間距作出了規範
- 擬建計畫路線最大限度地維護公共通行權（ROW）和公有土地，以及減少使用在私人財產上空的通過權利，同時,顧及現有和未來的鄰近土地用途方面
- 選擇計畫路線的其他注意事項：
  - 盡量減少擬建計畫對行車道、停車道以及單車和行人流通產生的變化
  - 盡可能減低搬遷公用事業管線設施的需要
  - 歷史和考古資源的位置
  - 盡量減少使用不平或崎嶇的地形
  - 技術考慮及其可行性



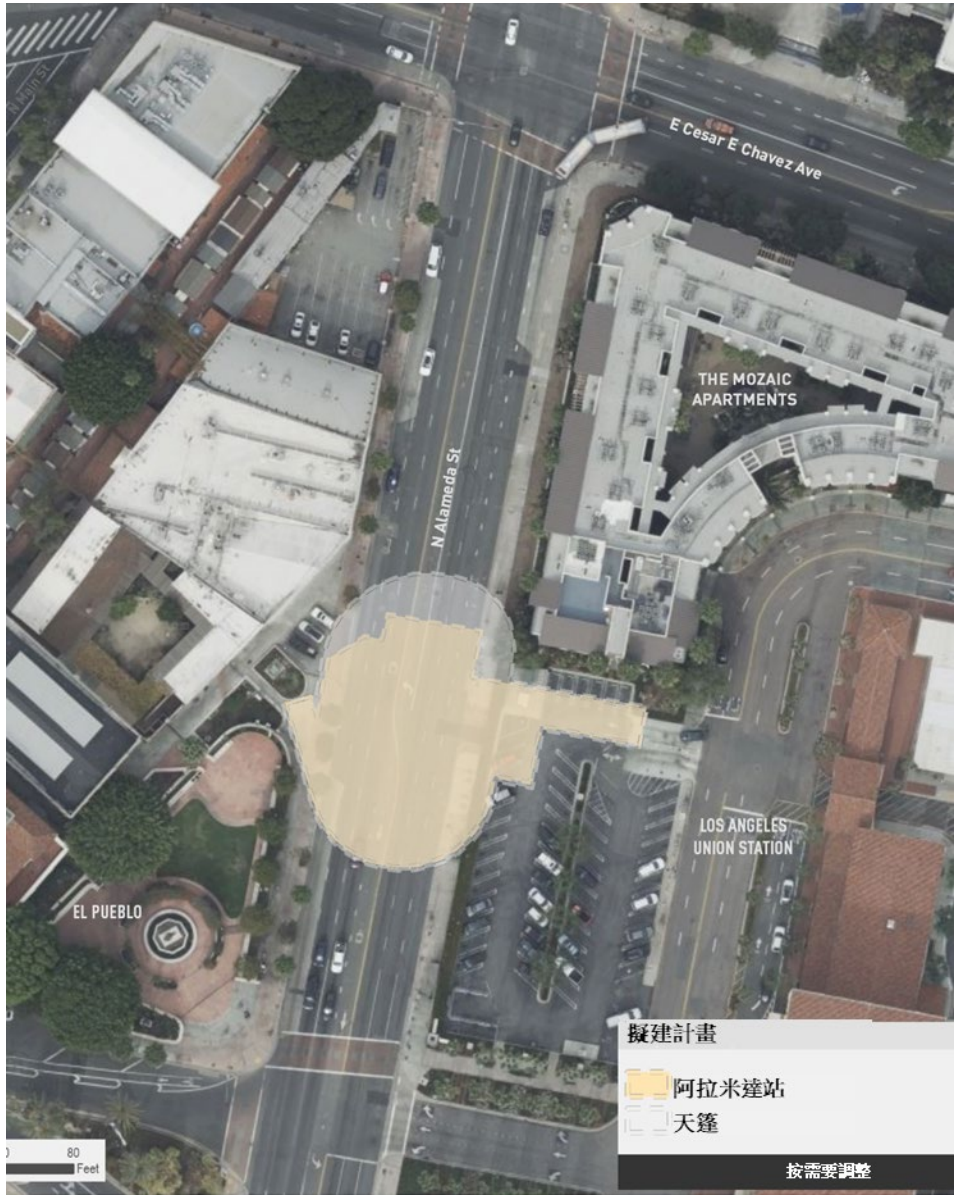
設計

- 設計目標是以一般的建築設計，統一整個空中纜車系統，同時,令每個主要元素按城市的狀況融入該市
- 非客運樞紐站,和支撐塔所承受的壓力與人流最小化亦同樣重要
- 車站和路口建有簡單的筒型拱頂，用以保護索道，並為登車平台上的乘客提供有蓋遮蔭處以以應對不同天氣狀況
- 支撐塔的設計採用簡約的淺灰色，與周邊城市環境融合，其設計令底部不會阻礙相鄰的車輛和行人流通

阿拉米達站

- 阿拉米達站將位於阿拉米達街，毗鄰正在計劃中的洛杉磯大學前院,和洛杉磯街,與塞薩爾查韋斯大道之間的加利福尼亞洛杉磯的公園(Placita de Dolores)。
- 該站大約長194英尺，寬80英尺，最高點高74英尺。
- 上落客平台高度約為阿拉米達街地面上方31英尺處

- 洛杉磯古城擬建的新步行廣場位於Placita de Dolores 以北，該處與洛杉磯聯合車站(LAUS)前院以東位置將計劃引入垂直流通設備



阿拉米達塔

- 位於阿拉米達三角區，該區由阿拉米達街、北大街和阿爾罕布拉大道之間的公共可行使通行權道路（ROW）組成
- 高195英尺，電纜懸掛在地面上方175英尺處
- 更新阿拉米達三角區的自然景觀和人工景觀，包括現有攤舖機的重用和整合

阿爾卑斯塔

- 位於阿拉米達街和阿爾卑斯街東北角，毗鄰地鐵L線(金)
- 地點屬城市擁有的地段，目前用作城市車輛的非公共停車庫
- 最高點為 195 英尺，電纜懸空 175 英尺
- 塔底附近的景觀美化與人造景觀美化

唐人街/州立公園站

- 毗鄰洛杉磯州立歷史公園最南端的春天街
- 南部將位於城市通行道路上， 北部與洛杉磯州立歷史公園的南部邊界結合
- 該站大約長194英尺，寬80英尺，最高點高74英尺。
- 乘客登車平台位於地面上方約50英尺處
- 以電梯和樓梯從夾層進入登車平台。
- 將包括安裝景觀美化和人工景觀美化，包括整合花崗岩攤鋪機

唐人街/州立公園站

車站設施

- 讓乘客可以在車站的中心樞紐一英里的範圍內選擇多種交通工具，例如:單車共享計劃
- 改善行人路措施，包括人工景觀和自然景觀改善、遮光設備和潛在興建的座位

公園設備

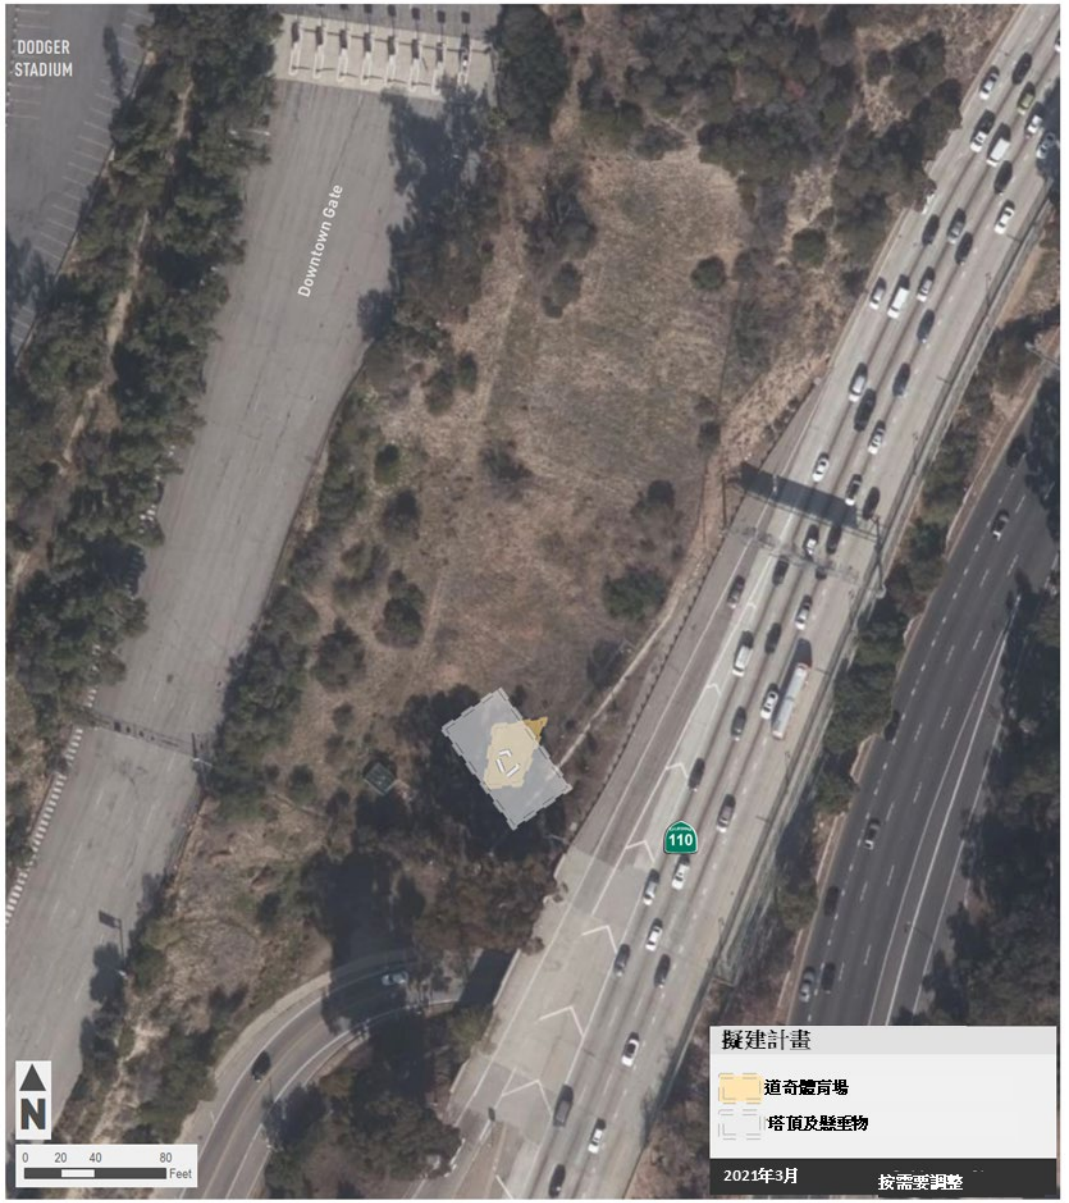
- 740平方英尺的特別用地
- 770平方英尺的洗手間
- 一條連接特別用地和洗手間長達220平方英尺的遮頂走廊

百老匯路口

- 百老匯路口是一個非客運路口，將位於北百老匯和主教路的交匯處
- 位於百老匯北部1201 N 的現有商業大廈將給拆除
- 路口約長 227 英尺，寬 60 英尺，最高點為 98 英尺

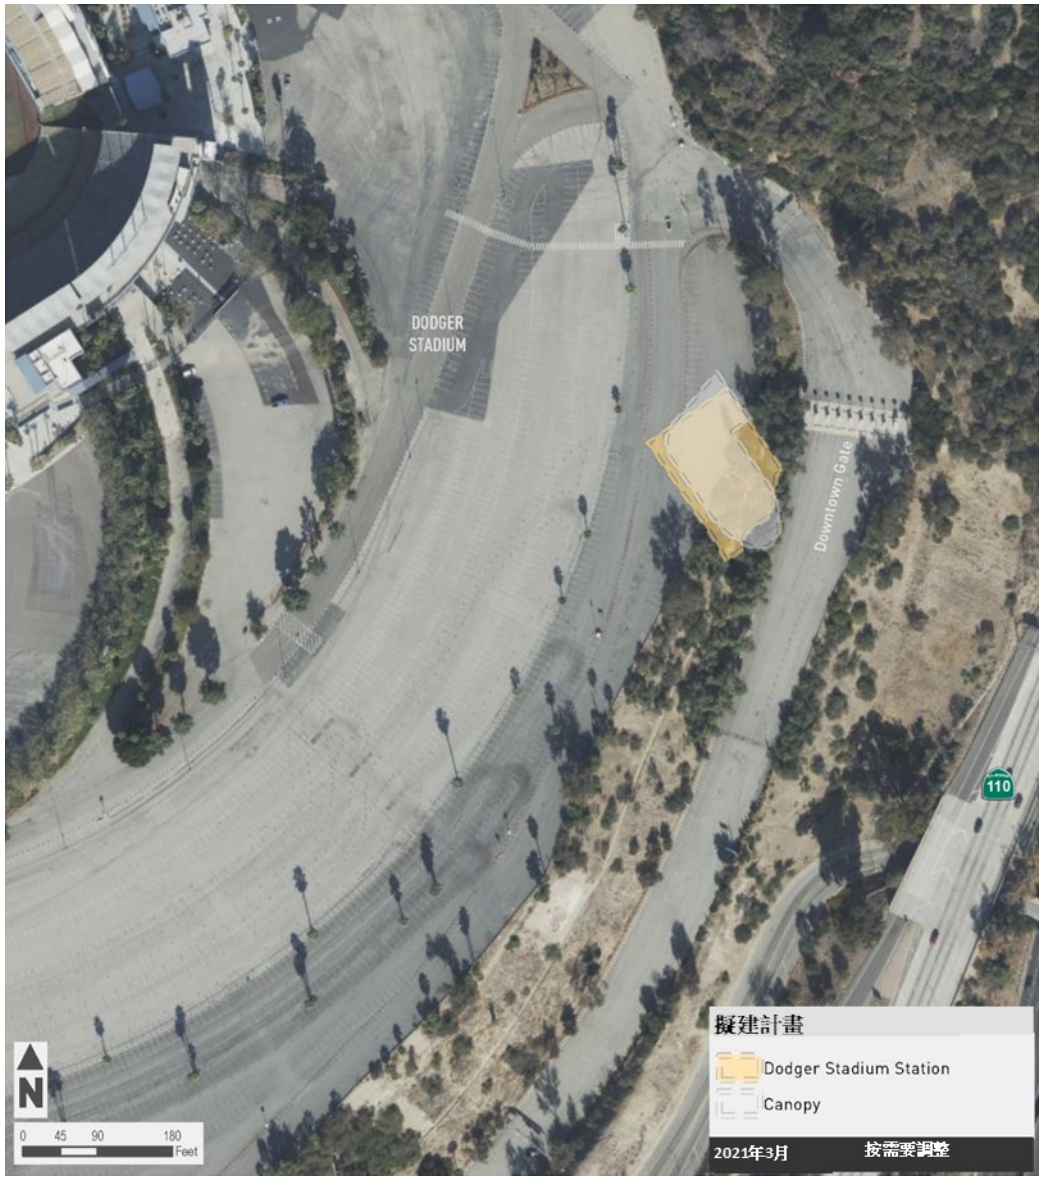
球場塔

- **位於道奇體育場市中心大門與** SR-110 之間的體育場路以北的私人物業的山坡上
- 高 179 英尺，電纜懸空 159 英尺，於塔底附近進行景觀美化



道奇體育場站

- 道奇體育場東南部,近市中心入口大門



道奇體育場站

- 該站大約長194英尺，寬80英尺，最高點高74英尺
- 車廂抵達該站時，乘客將在同一層上落車，乘客排隊等候區也在同一層。
- 將包括平台下方的地下區域，用於儲存和維護車廂，以及員工休息室、儲物櫃和零件儲存區。
    - 當系統數小時內不作使用，列車會給送回道奇體育場站
- 站內設有供乘客使用的洗手間

道奇體育場站還將包括與道奇體育場的行人連接道，包括人工景觀和自然景觀的改善,及將會興建的座位

可持續發展

- 擬建建計畫的永續性特徵將於以下包括在內：
  - 2019年加州綠色建築標準規範
  - 美國綠色建築委員會在新建築能源與環境設計(LEED)方面的領導計劃
  - 永續基礎設施研究所的設想評級系統
- 擬建計畫需要的電力將100%由洛杉磯市水電部的綠色電力計劃提供
- 每個站、塔和路口將使用存儲備用電池以提供備用電源，而不是使用柴油發電機

擬建計畫將為道奇體育場的訪客提供一個環境永續、高運力、零排放的空中快速纜車選擇，，同時也為道奇體育場、周邊社區和聯合車站的區域交通系統之間提供通道。空中快速纜車技術十分安靜，擬建計畫將減少車輛行駛里程（VMT）和堵塞問題，從而減少溫室氣體排放並改善空氣品質。

營建工程：

時間線

- 擬建計畫的營建工程預計最早於2024年開始，大約需要25個月，包括建設、電纜安裝和系統測試。

工時

- 預計施工時間為每天10小時，時間長短將因應特殊情況和限制而有變動
- 不在預定的延長施工時間和周日假期施工需由洛杉磯市警察委員會批准

車道封閉

- 擬建計畫預計將封閉某些車道，當中車道將在某些施工階段全天 24小時封閉，或在某些施工階段期間作時段封閉，約在施工期間每天封閉約10小時，而道路將在非施工時間每天開放約14小時
- 道路於時段封閉並在非施工時間，將盡可能於施工現場放置在鋼板，允許車輛和行人流通。
- 封閉時間將因應施工地點和階段而異
- 擬建計畫將實施施工交通管理計劃，當中包括設立繞道，以及確保其在所有施工活動中保持緊急通道

詳細工程假設

- 詳細工程假設包括在《環境影響報告草案》附錄B中

詳細工程假設

環境資源專題

每個 CEQA 指南附錄 G 的所有環境資源議題
在《環境影響報告草案》中得到處理：

- 美學
- 農業/林業
- 空氣品質
- 生物資源
- 文化/歷史資源
- 能源
- 地質/土壤
- 溫室氣體排放
- 危害/有害物質
- 水文/水質
- 土地使用/規劃
- 礦物資源
- 噪音
- 人口/住屋
- 公共服務
- 康樂日
- 交通運輸
- 部落文化資源
- 公用事業/服務系統
- 野火

美學

研究範圍是甚麼？

- 圍繞計畫路線的計畫組件對視覺上的影響
- 體現視覺個性的主要觀察點，包括景觀的存在與否、主要土地用途、建築規模或主要景觀、景觀資源和可用的重要視覺元素，例如:開放空間資源、街道上的樹木和建築物前的空地等
- 觀賞者及其反應，包括行人和康樂設施使用者（例如:公園使用者）
- 縱使沒有指定的風景區，人們仍可以欣賞到洛杉磯市中心的天際線、聯合車站、洛杉磯古城、洛杉磯州立歷史公園、阿羅約塞科公園大道、道奇體育場,及聖蓋博和聖貝納迪諾山脈的景觀
- 光線與強光

主要分析及結論

- 擬建計畫不會特別阻礙風景或全景，包括洛杉磯市中心天際線、聯合車站、洛杉磯古城、洛杉磯州立歷史公園、阿羅約塞科公園大道、道奇體育場,及聖加布里埃爾和聖貝納迪諾山脈的景觀
- 擬建計畫的權利和批准將不會與相關分區或其他管理風景質素的法規互相衝突, 當其中包括設計標準，以增強擬建計畫及其周邊社區的視覺識別和特色
- 擬建計畫將不會產生大量光線或強光，並符合相關城市照明法規

現時與模擬從州立歷史公園到洛杉磯市中心天際線的景觀

美學

影響總結

主題	發現	
	營建工程：	**操作**
優美景觀	影響不大。	影響不大。
風景資源	沒有影響。	沒有影響。
視覺特徵	影響不大。	影響不大。
光線與強光	影響不大。	影響不大。

如何可將影響降至最低?

營建工程：一個隱私屏幕將加設於屏障和隔音牆中，使計畫的視覺影響減低。無需採取緩解措施。

營運:計畫設計特徵，包括建築燈光和標示牌上的燈光。無需採取緩解措施。

農林資源

研究範圍是甚麼？

- 計畫會否與體育場塔和道奇體育場站的農業區劃互相衝突

主要分析及結論

- 道奇體育場不包括其農業用途，並受有條件使用許可證的約束，許可證只允許該處作為美國職業棒球大聯盟體育場,和各種附屬結構和用途，包括到達現場的「公共交通服務」；因此，擬建計畫的建設和營運不會與現有的農業區有互相衝突

影響總結

主題	發現	
	營建工程：	操作
耕地轉用	沒有影響。	沒有影響。
與林地區劃衝突	沒有影響。	沒有影響。
喪失林地	沒有影響。	沒有影響。
農業用途	沒有影響。	沒有影響。
農業區劃及威廉姆森法案	影響不大。	影響不大。

如何可將影響降至最低?

無需採取緩解措施。

空氣品質

研究範圍是甚麼？

- 擬建計畫的建設和營運對地區和空氣品質的潛在影響
- 空氣污染物的特徵和影響
- 已通過的管理空氣品質法規
- 評估與計畫建設相關的健康風險評估 (HRA)，包括預計的致癌風險和非致癌慢性危害指數

主要分析及結論

- 擬建計畫將符合適用的空氣品質計劃
- 擬建計畫的建設所引起的排放量預計將低於污染物和排放量的重要閾值
- 擬項建目在營運期間不會將敏感受體暴露於高濃度的污染物，因為計畫不包括任何對環境空氣品質產生重大影響的土地使用，或營運排放
- 與現有情況相比，擬建計畫將透過減少車輛行駛里程（VMT）而減少污染物排放量，從而減少淨標準污染物的排放
- 根據健康風險評估 (HRA) 結果，擬建計畫對敏感受體暴露於來自 TAC 的大量污染物濃度問題上帶來不太顯著的影響

空氣品質

影響總結

主題	發現	
	營建工程：	**操作**
空氣品質	影響不大。	影響不大。
增加空氣污染物	影響不大。	影響不大。
敏感受體	影響不大。	影響不大。
其他排放	影響不大。	影響不大。

如何可將影響降至最低?

營建工程：所有超過50馬力的非道路柴油動力建築設備,應至少滿足美國環保署頒布的非道路柴油發動機的第四級別排放標準。無需採取緩解措施。

營運:無需採取緩解措施。

生物資源

研究範圍是甚麼？

- 計畫是否會影響特殊物種及其棲息地
- 計畫是否會影響河岸棲息地或受保護的濕地
- 計畫干擾沿線野生動物活動的可能性
- 計畫是否會與保護生物資源的任何當地政策或法令（例如:樹木保護政策或法令）產生衝突？
- 計畫會否與已通過的棲息地保護計劃產生衝突

主要分析及結論

- 計畫區域中一般不包括特別物種棲息地；然而，在擬建計畫的建設過程中移除成熟的棕櫚樹和桉樹可能會移除蝙蝠棲息地
- 計畫區不包括河岸棲息地、其他敏感的自然群落或受保護的濕地； 因此計畫對生態不會有影響
- 計畫區域不會作為區域野生動物活動路線；但是，建築活動可能會導致蝙蝠和鳥類避開正在施工的地區。
- 計畫會根據城市原生樹木保護條例、加州公園和娛樂部的要求以及其他適用要求，去更換給砍伐的樹木

生物資源

影響總結

主題	發現	
	營建工程：	**操作**
河岸棲息地	沒有影響。	沒有影響。
受保育濕地	沒有影響。	沒有影響。
生物計劃或政策（營運）	影響不大。	沒有影響。
干擾物種活動	經緩解後影響不大。	影響不大。
改變棲息地（營運）	經緩解後影響不大。	影響不大。

如何可將影響降至最低?

營建工程：

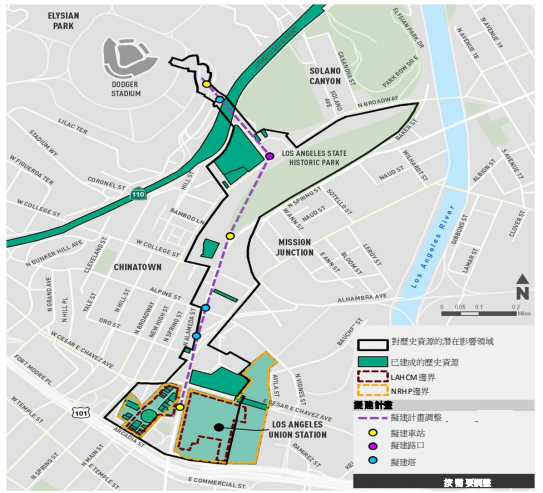
- 採用一個設有建立樹木保護區的設計方案以保護樹木
- 施工前進行築巢調查和採取措施，避免和盡量減少對築巢鳥類的影響

營運:無需採取緩解措施。

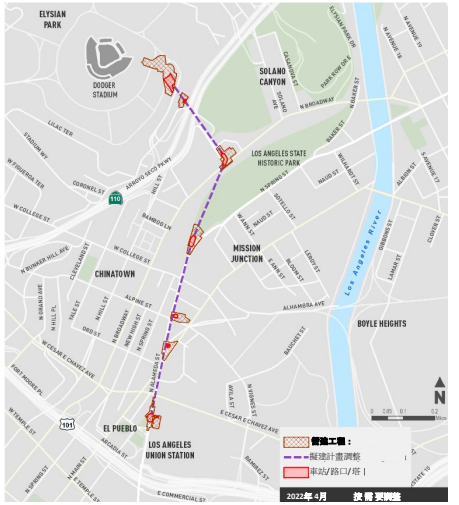
文化資源

研究範圍是甚麼？

- 在潛在影響的區域內,29個已建成的歷史資源受到直接和間接的影響,當中包括洛杉磯聯合車站客運站和場地、洛杉磯廣場歷史街區、大教堂高中和 Arroyo Seco Parkway 歷史街區
- 地面擾動對區域內考古資源有直接的影響，包括 La Placita、Zanja Madre,和南太平洋鐵路的河站
- **主要分析及結論**
- 歷史資源
  - 擬建的阿拉米達站的施工有可能對酒廠和El Grito壁畫造成直接和間接的影響，但影響將給減輕到不太顯著的水平
  - 施工計畫對所有其他歷史資源的相關建設,和營運的影響將不太顯著
- 考古資源
  - 擬建的阿拉米達站、阿拉米達三角區、阿爾卑斯塔和唐人街/州立公園站的施工有可能導致考古資源的重要性產生重大不良的影響；然而，影響將給減輕至不太顯著的水平



建築歷史資源的潛在影響區域



對考古資源的直接影響區域

文化資源

影響總結

主題	發現	
	營建工程：	**操作**
歷史資源	經緩解後影響不大。	影響不大。
考古資源	經緩解後影響不大。	沒有影響。
干擾人類遺骸	經緩解後影響不大。	沒有影響。

如何可將影響降至最低?

- 歷史資源
  - 用於施工前和施工後的文件，以及保護酒廠和《吶喊》(El Grito) 壁畫，以及在施工期間保護 El Grito 壁畫的計畫設計特點
  - 於擬建阿拉米達站施工期間，實施可調地面壓實裝置的震動監測與限制
- 考古資源
  - 制定和實施文化資源監測和緩解計劃，以及考古資源工作者推行計劃
  - 施工前考古測試計劃將在擬建的阿拉米達站和唐人街/州立公園站的實施
  - 為避開考古資源，洛杉磯州立歷史公園設施存在重新設計的潛在機會

能源

研究範圍是甚麼？

- 與能源有關的聯邦、州和地方法律法規概述
- 加州能源生產、供應和消耗概覽
- 評估與建設相關的能源資源，以及與計畫營運有關的年度能源需求

主要分析及結論

- 與擬建計畫的建設相關的臨時能源消耗將減少將來興建計畫營運的相關能源消耗
- LADWP的綠色電力計劃為擬建計畫的相關主要電力使用提供可再生資源
- 擬建計畫將減少車輛行駛里程（VMT),並增加使用公共交通的人數，從而減少車輛使用的化石燃料

影響總結

主題	發現	
	營建工程：	**操作**
浪費、低效或不必要的消耗	影響不大。	影響不大。
州或地方能源計劃	影響不大。	影響不大。

如何可將影響降至最低?

無需採取緩解措施。

地質和土壤

研究範圍是甚麼？

- 計畫是否容易受到地震災害的影響，例如:強烈的地震動、斷層、液化或土石流
- 計畫是否位於不穩定的土壤上，而有機會導致施工現場或非現場山泥傾瀉、橫向擴展、沉降、液化或坍塌。
- 計畫路線是否包括可能對生命或財產造成重大直接或間接風險的土壤膨脹
- 計畫會直接或間接破壞獨特的古生物資源或遺址，或獨特的地質特徵嗎？

主要分析及結論

- 雖然計畫區域位於加利福尼亞州南部的地震活躍區，但在遵守現有標準和規範並實施緩解措施的前提下，與擬建計畫施工期間的強烈地面震動、與地震相關的地面破壞和/或液化相關的影響將減少至不太顯著的水平
- 計畫的應急行動計劃將包括應急響應協議，並規定在發生大地震時，將纜車系統完全疏散並關閉，以及停止運作
- 在遵守現有標準和規範，並實施緩解措施的前提下，於計畫組成部分的分級和施工過程所帶來的橫向擴展、沉降、液化或崩塌相關的 影響將達至不太顯著的水平
- 在遵守現有標準和規範，並實施緩解措施的前提下,施工期間與土壤腐蝕相關的影響將達至不太顯著的水平
- 擬建計畫的北部靠近道奇體育場站的入口處可能存在古生物資源；然而，對資源的影響將給減輕到不太顯著的程度

地質和土壤

影響總結

主題	發現	
	營建工程：	**操作**
不良影響:地震、與地震相關的地面震動、液化或土石流（營運）	經緩解後影響不大。	影響不大。
支持污水系統	沒有影響。	沒有影響。
破壞獨特的古生物或地質特徵	經緩解後影響不大。	沒有影響。
土壤侵蝕/表土流失	影響不大。	影響不大。
不穩定的地質單元或土壤	經緩解後影響不大。	影響不大。
膨脹土壤	經緩解後影響不大。	影響不大。

如何可將影響降至最低?

營建工程：

- 準備和推行特定地點最終岩土工程報告
- 準備和遵守古生物資源監測和緩解計劃（PRMMP）

營運:無需採取緩解措施。

溫室氣體排放

研究範圍是甚麼？

- 相關的聯邦、州和地方法律法規
- 溫室氣體科學概述
- 用作評估與擬建計畫相關的溫室氣體排放的方法

主要分析及結論

- 與現時情況相比，擬建計畫不會增加溫室氣體排放量，反而將減少溫室氣體排放量

計畫的總溫室氣體排放量將減少 166,653 公噸

影響總結

主題	發現	
	營建工程：	**操作**
產生溫室氣體	影響不大。	影響不大。
溫室氣體減排計劃或政策	影響不大。	影響不大。

如何可將影響降至最低?

無需採取緩解措施。

危害和有害物質

研究範圍是甚麼？

- **對計畫活動進行評估，確定其在施工和營運期間危害公眾或環境的潛在影響**
- **分析特定地點所**產生的潛在危害和有害物質造成的潛在影響

主要分析及結論

- 擬建計畫將在施工期間使用、運輸和處置有限數量的有害物質，因此計畫將需符合**聯邦、州和地方的健康和安全**要求；並在施工過程中遵守所有規範、標準和法規
- 擬建計畫將遵守OSHA、Cal/OSHA，以及洛杉磯市政法規第71條，並實施土壤和地下水管理計劃，從而限制危險材料和廢物洩漏的可能性
- 擬建計畫將在拆卸前，將由持有執照的減排承建商進行有害物質減排，確保學校不會受到不良影響
- 擬建計畫的施工和營運不會干擾洛杉磯警察局進入胡珀直升機場，直升機場的營運將不會受到建築活動所影響
- 擬建計畫區內共有五處物業給認定為有害物質場地；然而計畫將實施土壤和地下水管理計劃，以減少這些地點所帶來的影響
- 擬建計畫的施工不會對已通過的應急響應計劃或應急疏散計劃的實施造成重大影響或實際干擾；計畫日常運作及施工將不影響應急響應活動

危害和有害物質

影響總結

主題	發現	
	營建工程：	**操作**
危險場地	經緩解後影響不大。	沒有影響。
機場土地使用計劃	沒有影響。	沒有影響。
危害公眾或環境	經緩解後影響不大。	影響不大。
應急和疏散計劃	影響不大。	影響不大。
學校附近的災害	經緩解後影響不大。	影響不大。

如何可將影響降至最低?

營建工程：

- 制定和實行土壤和地下水管理計劃，以 表明在計畫建設期間遇到受污染的地下水、土壤或建築物時，應採取的處理和處置方法。
- 拆除北百老匯1201號現有建築物期間的有害物質減排

營運:無需採取緩解措施。

水文和水質

研究範圍是甚麼？

- 擬建計畫有可能違反水質標準、減少地下水供應、或導致施工現場或場外發生嚴重侵蝕或淤積
- 擬建計畫有可能大幅增加地表徑流的速率或數量，從而導致施工現場或淹水的風險
- 擬建計畫有可能產生或增加徑流水，這將超過現有或規劃內的雨水排放系統的容量，以及阻礙或將洪水流改向
- 擬建計畫在洪水災害、海嘯或**震盪潮**期間釋放污染物的可能性
- 擬建計畫與水質控制計劃或可持續地下水管理計劃的實施發生衝突或阻礙該計劃的可能性

主要分析及結論

- 擬建計畫將遵守所有適用的聯邦、州、地區和地方機構的水質保護法律法規、水質控制和/或可持續地下水管理計劃
- 擬建計畫將採用最佳管理方式，並以低影響開發計劃進行，以減少水文和水質影響
- 擬建計畫不易因洪水災害、海嘯或**震盪潮**而排放污染物

水文和水質

影響總結

主題	發現	
	營建工程：	**操作**
減少地下水供應（營運）	影響不大。	沒有影響。
水質標准或計劃	影響不大。	影響不大。
改變排水	影響不大。	影響不大。
洪水、海嘯或震盪潮	影響不大。	影響不大。
與計劃衝突	影響不大。	影響不大。

如何可將影響降至最低?

工程與營運：擬建計畫將遵守**相關的聯邦、州、地區和地方法律法規，包括遵守有關雨水許可證、廢水許可證和其他水質法規。無需採取緩解措施。**

土地利用和規劃

研究範圍是甚麼？

- 計畫會劃分出一個已建立的社區嗎？
- 計畫是否會因為避免,或減輕對環境影響而採用的任何土地用途計劃、政策或法規相衝突而造成重大環境影響？

主要分析及結論

- 縱使計畫施工期間將臨時關閉通往各社區之間的車輛、行人和單車通道，但在計畫區域內將提供多種交通模式可供選擇
  - 其他周邊街道仍提供入口進入社區，並設有行人繞道，防止已建立的社區給分割。
- 擬建計畫t 將改善一英里範圍內的地區的交通和行人通道，以增強社區連通性，包括交通樞紐和對未來洛杉磯州立歷史公園單車和人行天橋的支援
- 擬建計畫符合政策、規定、目標和/或當地計劃、法規及條例的目的
- 州立公園認為擬建計畫與洛杉磯州立歷史公園總體規劃之間存在不一致，因此，計畫可能會對公園產生重大影響，因為洛杉磯州立歷史公園總體規劃並未將公共交通列入為公園用途
  - **擬建議計畫需獲取 LASSHP 總體規劃修正案，繼而推行 LUP-A 緩解措施，這將令計畫對公園的影響減低**

土地利用和規劃

影響總結

主題	發現	
	營建工程：	**操作**
物理上劃分社區	影響不大。	沒有影響。
與土地使用計劃或政策衝突	經緩解後影響不大。	經緩解後影響不大。

如何可將影響降至最低?

工程（物理劃分社區）：雖然施工影響不大，但施工交通管理計劃的實施將包括封閉街道、繞道計劃、運輸路線和分階段計劃

工程與營運：根據公共資源法典 5002.2，擬建計畫應獲得對洛杉磯州立歷史公園總體規劃的修訂，以允許將洛杉磯州立歷史公園總體規劃範圍內的土地作為交通用途。

礦物資源

研究範圍是甚麼？

- 計畫是否會導致對該地區和該州居民有價值的已知礦物資源喪失可用性？
- 計畫是否會導致當地總體規劃、具體規劃,或其他土地用途規劃中所包括的當地重要礦物資源回收場的可用性喪失？

主要分析及結論

- 計畫不位於已知礦產資源區內
- 洛杉磯市內的大部分地區都是在土地區分類之前開發的，因此無法開採該等地區
- 計畫路線位於洛杉磯市的城市地區，於城市開採此類材料並不可行

影響總結

主題	發現	
	營建工程：	**操作**
損失可用礦產資源	沒有影響。	沒有影響。

如何可將影響降至最低?

無需採取緩解措施。

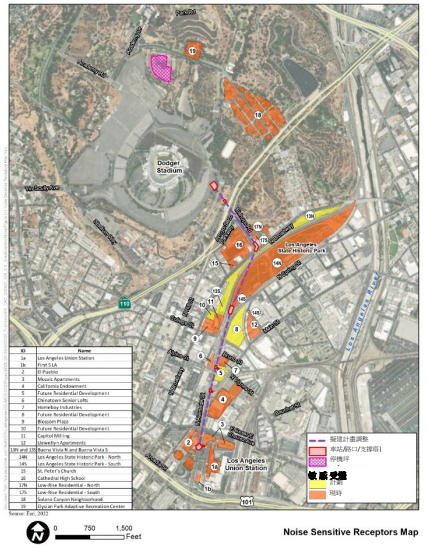
噪音

研究範圍是甚麼？

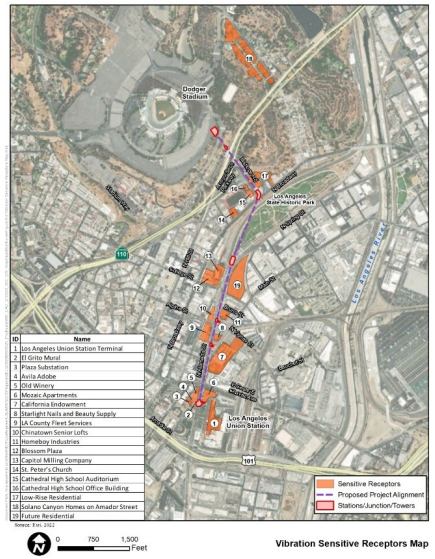
- 在擬建計畫路線沿線的噪音敏感受體代表地點進行測量，以計算現有噪音水平，包括現有和未來住宅開發、學校、公園和其他供人使用的戶外地方
- 透過計算與計畫相關的施工噪音水平，評估施工產生的潛在噪音影響
- 為評估計畫施工帶來的噪音影響，將計算計畫施工期間的噪音源頭，包括車站、路口、塔架、沿塔架支撐滑輪的車廂、車廂和車站上等待登車乘客
- 針對建築物損壞和人類干擾地面震動進行影響分析

主要分析及結論

- 擬建計畫對施工現場施工噪音的重大和不可避免的影響將取決於施工設備產生的噪音、設備的位置、施工活動的時間和工時長短，以及與噪音敏感受體區域的距離
- 施工場外的交通產生的噪音不太顯著
- 即使在最壞的情況下，計畫 施工所產生的噪音將不太顯著
- 現場施工活動產生的震動會產生重大且不可避免的人為滋擾；潛在的建築損壞在緩解後將變得不太顯著
- 計畫營運產生的震動將e 不太顯著



噪音敏感受體地圖



震動敏感受體地圖

噪音

影響總結

主題	發現	
	營建工程：	**操作**
暴露於機場附近	沒有影響。	沒有影響。
產生或增加噪音水平	嚴重且不能避免。	影響不大。
產生過度震動或噪音水平	嚴重且不能避免。	影響不大。

如何可將影響降至最低?

營運噪音：車廂設計的特色包括與 HVAC 單元內部到外部的降低噪音和電源聲級無需採取緩解措施。

施工噪音：實施施工噪音管理計劃，包括

- **噪音屏障**：
- **設備維修**：
- 社區外展，包括一名噪音干擾協調員

施工震動

- 於Avila Adobe（1970 年代添加）、El Grito 壁畫和 酒廠放置震動監測設備
- 使用可調整力度的地面壓實裝置的限制

人口和住屋

研究範圍是甚麼？

- 擬建計畫導致人口大幅增長或加速增長超過預期或計劃水平的可能性
- 推行擬建計畫是否會取代大量現有人口或住房

主要分析及結論

- 作為與道奇體育場的第一英里/最後一英里的連接交通，擬建計畫不會直接或間接引致大量人口增長
  - 計畫旨在滿足該地區的交通需求,並提高現有交通網絡的效率
  - 計畫在已規劃的住宅開發計畫附近提供交通工具，以達到住屋元素和社區計劃的城市目標，
- 擬建計畫不會取代現有的人口或住房

影響總結

主題	發現	
	營建工程：	**操作**
引致計劃以外的人口增長	影響不大。	影響不大。
流浪者或居民	影響不大。	影響不大。

如何可將影響降至最低?

無需採取緩解措施。

公共服務

研究範圍是甚麼？

- 擬建計畫是否會因提供新的或經過物理改造的公共設施而產生不良物理影響，建設這些設施可能會造成重大的環境影響，包括消防和警察保護、學校和其他公共設施，如:圖書館、老人院、流浪者收容所和托兒設施
- 計畫是否會影響緊急服務的回應時間

主要分析及結論

- 與擬建計畫相關的建設活動將暫時增加對緊急服務的需求，但在緩解措施和計畫設計特點的前提下，以及遵守適用的州份和地方法規，包括在計畫施工前與 LAFD 和 LAPD 進行協調時，將確保計畫的建設不會產生對緊急服務的額外需求，從而導致需要增加新的,或實際改變現有的公共設施
- LAFD 和 LAPD 在施工期間將有足夠的通道行駛
- 擬建計畫將在計畫營運期間增加對緊急服務的需求，在遵守適用法規與 LAFD和 LAPD 協調，並實施緊急行動計劃前提下，計畫的營運不會對緊急服務產生額外需求，從而導致需要增加新的或實際改變公共設施
- 擬建計畫內不包括興建住屋，這可能會增加對學校服務或其他公共設施的需求

公共服務

影響總結

主題	發現	
	營建工程：	**操作**
需要新的或改造的消防、警察、學校或其他公共服務	經緩解後影響不大。	影響不大。
服務比率和響應時間	經緩解後影響不大。	影響不大。

如何可將影響降至最低?

營建工程：施工交通管理計劃將減少緊急通道有關的影響

營運:擬建計畫將遵從相關法規，當中包括施工人員和攝像頭等保安措施，並會實行緊急營運計劃。無需採取緩解措施。

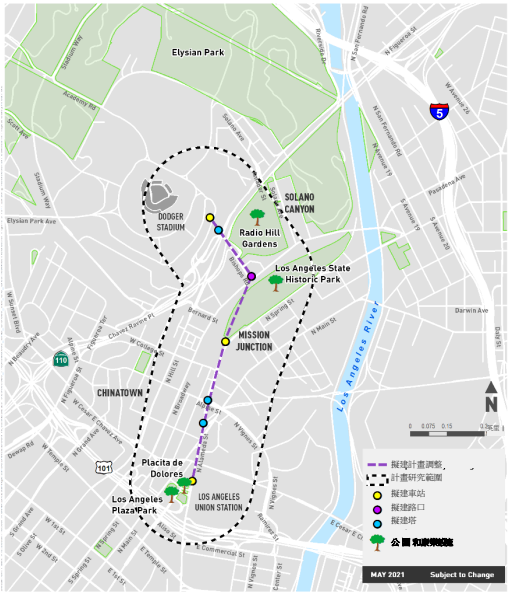
公園和康樂設施

研究範圍是甚麼？

- 擬建計畫在施工和營運期間對公園和康樂設施的潛在影響，包括洛杉磯廣場公園和多洛雷斯廣場、洛杉磯州立歷史公園和伊利森公園

主要分析及結論

- 擬建計畫不會增加對公園的需求，也不會產生新的永久居民，從而增加現有公園和康樂設施的使用。因此，計畫不會導致公園的嚴重老化問題發生或加速，或導致有需要建設新的公園設施，或需要新的或實質改變公園的設施
- 擬建的計畫提供連接洛杉磯聯合車站(LAUS)和洛杉磯州立歷史公園和伊利森公園，高容量的空中快速交通有助改善該地區的流動性和可達性



影響總結

主題	發現	
	營建工程：	**操作**
公共設施的老化	影響不大。	影響不大。
擴建康樂設施	影響不大。	影響不大。
服務比率和績效目標	影響不大。	影響不大。

如何可將影響降至最低?
無需採取緩解措施。

交通運輸

研究範圍是甚麼？

- 透過城市 TAG 使用《加州環境質量法案》(CEQA)和 LADOT 既定的篩選標準、分析方法和閾值標準
- 對擬建計畫的車輛行駛里程（VMT）以各種數據、方法和模型進行分析，以估計計畫載客量、減少的車輛行程、車輛行車時間，並最終估算擬建計畫的 VMT 收益
- 道奇體育場比賽和活動參加者、員工、遊客、乘客和洛杉磯州立歷史公園遊客和活動參加者的乘車人數估算
- 擬建計畫車站、路口和支撐塔的位置，以及這些組成部份是否因為幾何設計的特徵而令危險顯著增加
- 擬建計畫的建設概念交通繞道圖與運輸路線

主要分析及結論

- 擬建計畫將與 PPOPs（程序、計劃、條例和政策）一致，當中涉及流動系統，包括交通、道路、單車和行人設施
- 在阿拉米達塔和唐人街/州立公園站實施緩解措施時，擬建計畫不會引入任何不安全的物理條件
- 實施緩解措施，令擬建計畫施工期間保持緊急通道暢通

計畫的總車輛行駛里程（VMT）減少量為129,629,500。

交通運輸

影響總結

主題	發現	
	營建工程：	**操作**
減少車輛行駛里程	沒有影響。	沒有影響。
與計劃或政策衝突	影響不大。	影響不大。
計畫設計令危險增加	經緩解後影響不大。	經緩解後影響不大。

如何可將影響降至最低?

營建工程：

- 實施經市政府批准的詳細建設交通管理計劃,當中包括封閉街道、繞道計劃、運輸路線和分階段計劃
- 實施經市政府批准的臨時災害路線計劃，當中包括封閉街道資料和繞道計劃，讓應急車輛透過研究區域並最大限度地減少災害期間對應急回應的影響

工程與營運：

- 增強擬建阿拉米達塔和唐人街/州立公園站的能見度——例如:高能見度行人通道、優化交叉路口警告標示、閃光燈、升級照明以及新的或已升級的交通控制裝置

部落文化資源

研究範圍是甚麼？

- 對重要部落文化資源的重大不良影響
- 根據第52號議會法案諮詢了八個加州美洲原住民部落

主要分析及結論

- 該地區存在部落文化資源，並需實施緩解措施，包括考古測試和數據恢復
- 在建設過程中可能會遇到未給發現的資源；如果美洲原住民監視流程發現潛在資源，可能會暫停施工

影響總結

主題	發現	
	營建工程：	操作
改變部落文化資源	經緩解後影響不大。	沒有影響。

如何可將影響降至最低?

營建工程：

- 實施洛杉磯聯合車站(LAUS)前院文化資源監測和緩解計劃及考古測試計劃
- 保留一名美洲原住民監測員，以監測阿拉米達站所在地於施工期間的干擾地面的活動情況

營運:無需採取緩解措施。

公用事業和服務系統

研究範圍是甚麼？

- 搬遷、建造或擴建水、廢水處理或雨水排放、電力、天然氣或電訊設備
- 計畫對供水的影響
- 計畫是否需要增加污水處理能力
- 堆填區是否有足夠的容量處理計畫產生的固體廢物

主要分析及結論

- 擬建計畫的建設不需要建造新的或擴建的公用設施
- 擬建計畫需要搬遷現有公用事業，因此需與公用事業供應商協調並按照相關的州和地方法規和法規進行
  - 擬建計畫將實施公用事業搬遷計劃，從而盡量減少施工期間對現有公用事業的潛在干擾
- 擬建計畫的營運將需要連接到現有的公用事業系統
- 主要電力將來自可再生能源，現有電力供應量應足夠供給計畫營運
- 擬建計畫的建設和營運將有充足的供水
- 建設和營運期間所產生的污水將按規定進行處理
- 計畫是否會產生超過州或地方標準的固體廢物，或超過當地基礎設施的容量，或以其他方式影響減少固體廢物目標的實踐？

公用事業和服務系統

影響總結

主題	發現	
	營建工程：	**操作**
供水量充足	影響不大。	影響不大。
廢水系統的需求和容量	影響不大。	影響不大。
固體廢物目標	經緩解後影響不大。	影響不大。
公用事業搬遷或建設	經緩解後影響不大。	影響不大。

如何可將影響降至最低?

營建工程：

- 與公用事業公司合作制定並實施公用事業搬遷計劃，以盡量減少對整個計畫建設過程中對有關服務的影響
- *準備土壤和地下水管理計劃。*

營運:無需採取緩解措施。

野火

研究範圍是甚麼？

- 若擬建計畫位於州責任區 (SRA) 或屬於火災危險嚴重區 (VHFHSZ) 的土地或附近土地，是否會引致與發生火警相關的潛在重大影響
- 基於地形、天氣和燃料的計畫區域內潛在的野火特性
- 計畫是否會嚴重損害已通過的應急應變計劃或緊急疏散計劃？
- 擬建計畫是否需要安裝或維護可能加劇火災風險或對環境造成暫時或持續影響的相關基礎設施
- 擬建計畫是否會因為徑流、火災後邊坡不穩定或排水變化，使人或建築物面臨重大風險，包括下坡或下游洪水或土石流?
- 計畫是否會直接或間接地使人或建築物暴露於與火災有關的重大損失、傷害或死亡風險？

主要分析及結論

- 百老匯路口、體育場塔和道奇體育場站的擬定路線部分位於 VHFHSZ 內
- 擬建計畫的建設和營運不會阻礙進入已確定的災害路線，因此不會嚴重影響應急響應或疏散計劃
- 計畫將遵守相關規範和法規，不會令野火風險增加
- 計畫的設計將進一步降低這些風險

野火

影響總結

主題	發現	
	營建工程：	操作
對緊急情況或疏散計劃構成影響	影響不大。	影響不大。
增加野火風險	影響不大。	影響不大。
安裝/維護相關基建	影響不大。	影響不大。
令人或結構暴露於野火風險之中	影響不大。	影響不大。

如何可將影響降至最低?

營建工程：計畫設計包括消防計劃和體育場塔施工現場周圍的燃料改造區。無需採取緩解措施。

營運:在百老匯路口、體育場塔和道奇體育場站的營運期推行施計畫設計特色，該設計特色與工作人員和攝影系統的安全監控以及消防安全隱患的識別和報告有關。無需採取緩解措施。

替代方案

研究範圍是甚麼？

- 選擇了一系列替代方案，以找出減輕或避免與擬建計畫實施期間引起的重大環境影響的潛在方法，同時令計畫可以實現其主要目標
  - 沒有替代計畫——沒有新的發展
  - 春天街路線替代方案 – 擬建計畫的路線替代方案
  - 交通系統管理替代方案（提升道奇體育場快車）
- 基於幾個替代方案未能滿足大多數基本計畫目標、方案不可行、或無法避免重大的環境影響，該等替代方案已給排除在詳細分析之外，當中包括包括百老匯站路線替代方案、地鐵 L 線（金）聯合車站和學院街站路線替代方案以及直接路線替代方案。

主要分析及結論

- 無計畫替代方案不會改善公共交通通道或提供社區之間的聯繫。此外，車輛行駛里程和車輛擁擠問題不會減少，溫室氣體排放量亦將不會減少，空氣品質亦得不到改善。
- 將春天街替代方案提供直接的交通連接，並改善周邊社區的連通性。然而，替代方案需要更大的佔地面積，並且不會減少顯著的環境影響。
- TSE 替代方案不會提供直接的交通連接或改善周邊社區的連接，亦不會減少 車輛行駛里程（VMT）、溫室氣體排放或改善空氣品質。。

替代方案

替代方案總結

替代方案	發現	
	實現計畫目標的能力	減少重大影響的替代方案
沒有計畫替代方案	不能實現計畫目標	較計畫產生的影響少
春天街路線替代方案	能夠實現計畫目標	與計畫產生的影響相約
運輸系統管理替代方案	不能實現大部份計畫目標	較計畫產生的影響少

環境優越替代方案

TSM替代方案是較理想的環境替代方案，因為它不會產生加州環境品**質法案(CEQA)確認為重大和不可避免的影響，而且此方案整體**產生最小的環境影響。可是，**TSM替代方案對空氣品質、能源、溫室氣體排放、水文和水質以及運輸和交通的影響會較大。然而，道奇體育場快車替代方案不能完全或部分**滿足計畫的大部分目標。

《環境影響報告草案》中的非 CEQA 附加評估

洛杉磯州立歷史公園的使用情況

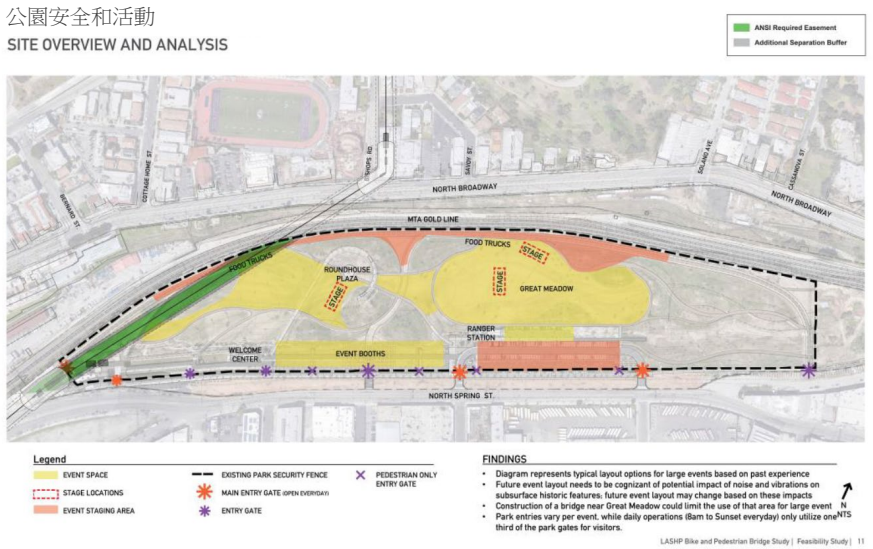
風箏由於擬建計畫路線的位置，即沿公園的西部邊緣，毗鄰地鐵 L 線和人行道，擬建計畫不會顯著減低公園內的安全放風箏範圍

特別活動擬建計畫不會顯著減少公園內的活動空間區域，因為擬建計畫路線的位置橫跨了公園不常用作屏幕和舞台的範圍，而且在擬建計畫路線的大部分情況下仍然可以舉辦活動

阿拉米達站和唐人街/州立公園站的位置

直升機場

- 擬建計畫路線不在機場土地使用計劃覆蓋的區域內，亦不屬於公共機場兩英里範圍內
- 從擬建計畫路線附近直升機場的空域評估所得出的結論如下:擬議計畫的建設和營運將避開與擬議計畫附近現有直升機場相關的空域，不會帶來潛在的空中航行危險，因此不會影響航空活動，包括擬建計畫附近的直升機場



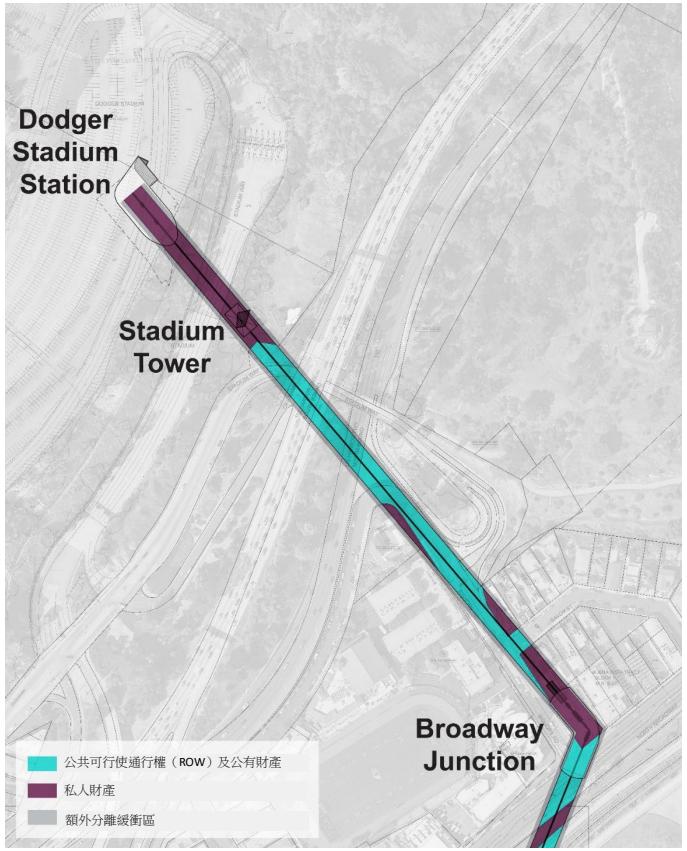
洛杉磯州立歷史公園活動舞台和屏幕的位置及擬建的計畫路線

設計方案A

移動百老匯路口以避開451 E. SAVOY

- 設計方案 A 將包括改變百老匯路口和道奇體育場站之間的整體計畫路線，以避免在451 E.Savoy Street上的空中權限要求。
- 移動百老匯路口將導致路線穿過主教路附近的大教堂高中的一小部分
- 此設計選項包括對百老匯路口、體育場塔和道奇體育場的計畫元素更改。
  - 這將導致體育場塔和道奇體育場站的公用設施需要搬遷和額外的施工時間
  - 擬建計畫乘客來往道奇體育場站和道奇體育場之間需更長的步行時間

擬建計畫調整

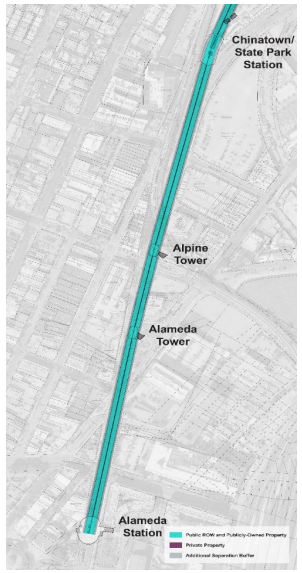


設計方案A

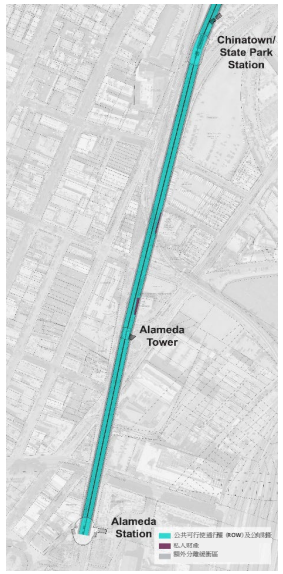
設計方案B

沿阿拉米達街的單棟塔樓

- 回應持份者的意見，他們要求計畫發起人評估將阿拉米達街沿線的塔樓數量從兩座減少到一座的潛力
- 當中包括將阿拉米達塔的總高度增加50英尺，以及從阿拉米達站和唐人街/州立公園站之間的擬建計畫中將阿爾卑斯塔拆除
- 塔樓高度增加與額外的建築活動相符
- 這樣將導致潛在的技術限制
- 以及需要額外的私人空中權限要求



擬建計畫調整



設計方案B

擬建計畫調整

設計方案B

設計方案C

增加唐人街/州立公園站的高度

- 回應持份者的意見，他們要求計畫發起人考慮將唐人街/州立公園站加高
- 設計方案C將包括將唐人街/州立公園站的總高度增加35英尺
- 車站高度增加與額外的建築活動相符
- 由於高度可能會對乘客體驗有影響，也會導致登平台升高，因此需要額外的垂流動設備去進入和升高平台

擬建計畫調整

設計方案C

設計方案D

唐人街/州立公園站作為非客運樞紐站

- 回應持份者的意見，他們要求計畫發起人考慮在唐人街/州立公園站不設立乘客通道，從而增加沿春天街進出車站的車廂高度
- 使用方案D將涉及用擬建的唐人街/州立公園站代替非客運樞紐站。
- 此設計使用選項將具有與擬建計畫相同的位置、高度、寬度、長度和建築裝飾。
- 不會改善洛杉磯州立歷史公園、唐人街和 Mission Junction社區之間的連通性

設計使用方案E

洛杉磯州立歷史公園行人天橋

- 設計和使用方案E將包括一座ADA無障礙行人天橋，該天橋將從洛杉磯州立歷史公園的中心部分緩坡，越過地鐵 L 線（金線），直至北百老匯。
- 雖然行人天橋不屬擬建計畫的一部分，但《環境影響報告草案》中包括了對公園行人天橋的分析
- 洛杉磯州立歷史公園總體規劃和最終《環境影響報告》以及單車和行人天橋研究中提及，這座天橋將從唐人街和索拉諾群峽谷社區進入公園的行人和單車徑提供安全的通道

資料來源:天橋可行性研究

車輛停泊研究概述

擬建計畫車位需求 (2042)

- 加州環境品質法案(CEQA)並無要求對車輛停泊問題進行分析，但計畫進行了全面的泊車研究，並已獲得運輸局評審
- 車輛停泊研究自2022年9月9日起於運輸局網站上可供查閱

研究範圍是甚麼？

- 大多數乘客預計將轉乘公共交通工具到達計畫
- 在擬建的阿拉米達站和唐人街/州立公園站 ½ 英里範圍內，公共泊車位和車庫以及街道上約提供共 10,290 個車位

車輛停泊研究概述

車輛停泊研究結論

車位類型	比賽日泊車			
	車位供應	停泊車數	用量	車位供應量
室內車位	6,876	2,173	32%	4,703
街頭車位	3,417	2,017	59%	1,400
總數				
擬建計畫車位需求 (2042)	-	(213) 922-6913		
可供計畫使用的總室內車位數量	6,876	2,963	43%	3,913

*數據根據2021年9月10日洛杉磯道奇隊主場迎戰聖地牙哥教士隊的晚上進行；當天付費出席人數為48,403，超過2019年洛杉磯道奇隊平日晚間比賽的平均水平。與運輸局和 LADOT 合作，車輪停泊研究將室內公共泊車位置增加46%，以應對COVID-19疫情對車位需求。

對於擬建計畫的潛在停車需求，擬建計畫的行人路上有大量可用車位供應。即使某些現有的停車場需重新開發，附近也有大量的室內車位供應,以滿足擬建計畫對車位的需求。

計畫鼓勵乘客使用公共交通工具

- 與當地企業建立企業間的合作夥伴關係以預售捆綁套餐，當中包括企業顧客可使用路邊停車位
- 支持實施/擴展各種管理策略，包括限時停車限制和比賽期間的停車計時器，以阻止騎手在社區停車並為居民和當地企業保留可用空間

答詢時段

公眾意見徵詢會

- 會議目的:讓公眾有機會對環境影響報告草案(DEIR)發表評論

今天!

了解環境影響報告草案(DEIR)的主要分析和結論，並提供口頭公眾評論。

今天將不設問答環節

如欲發表意見，請先舉手，被選中後，你將被要求寂靜並提出意見。被選中的市民將享有兩分鐘的時間發表意見。

今天透過Zoom所發表的意見將不當作是是正式的公眾評論。

在2023年1月17日前如何評論《環境影響報告草案》

如何評論《環境影響報告草案》

公開聽證會

洛杉磯市中心/唐人街
12月10日，星期六上午10時至中午12時
洛杉磯聯合車站售票大堂
800 N.阿拉米達街
加利福尼亞州洛杉磯 90012

透過ZOOM進行的線上會議
12月13日，星期二下午5時至7時
metro.net/aerialrapidtransit
詳情

洛杉磯市中心/唐人街
2023年1月12日星期四，下午5時至7時

议程

1. 会议目的
2. 如何参加本次虚拟会议
3. 概览
4. 加州环境质量法案（CEQA）流程概览
5. 洛杉矶空中快捷交通项目概览
6. 环境影响报告草案重点分析及总结
7. 公众评议期

如需Zoom方面的帮助：请发电子邮件到 mary.nooristani@aecom.com 或致电(619) 251-9180

会议目的

环境影响报告草案重点分析及总结

问答环节

《加州环境质量法案》（CEQA）流程

45天
范围界定期2020年10月1日–11月16日

90天环境影响报告草案公众审查
2022年10月17日 - 2023年1月17日

都会交通局董事会
对终版环境影响报告的认证
2023年

今天！
了解环境影响报告草案的重点分析及总结，并提供口头的公众意见。
今天将没有问答环节。

持续进行社区外展服务

两次
信息
说明会
三次公众听证会

我们在这里

今天通过Zoom聊天发送的沟通内容，将不会视为正式的公众意见。

如何在2023年1月17日前对环境影响报告草案提出意见。

额外的公众听证会

洛杉矶市区/唐人街
2023年1月12日（星期四），下午5-7点
大教堂高中
1253 Bishops Road, 洛杉矶市，加州 90012

如何参加本次会议

今天！

了解环境影响报告草案的重点分析及总结，并提供口头的公众意见。今天将没有问答环节。

在公众评议期期间：若您举手，将呼叫您发言，请**取消静音并提供公共意**见。

概览

概览

- 洛杉矶空中快捷交通技术有限公司提议洛杉矶空中快捷交通项目
- 洛杉矶都会交通局（交通局）是本案的主导机构，根据《加州环境质量法案》（CEQA）编制环境影响报告
- 环境影响报告草案评估了与项目施工和运营相关的潜在环境影响

概览

- 作为领导机构，都会交通局有责任确保：
  - 环境影响报告充分评估了项目的潜在影响
  - 提议的缓解措施是适当的
  - 在公告、公共宣传和文件分发方面均遵守了CEQA流程

概览

- 目前我们正在根据CEQA要求，征集公众对环境影响报告草案的意见
  - 公众听证会
  - 电子邮件
  - 邮件
  - 电话
- 参议院第44号方案
  - 旨在简化对洛杉矶县环保先锋交通项目的CEQA审查
  - 拟建项目将是参议院第44号法案下的第一个环保先锋交通项目
  - 公证听证会要求
    - **信息说明会：在公众评议期的头10个日历日内，向公众介绍环境影响报告草案的主要分析及结论**
    - 公众听证会：在公众评议期的最后10个日历日内，获得公众证词

《加州环境质量法案》（CEQA）流程概览

CEQA流程

所有由公共机构承办、资助或需要公共机构批准的项目概须

告知公众和决策者

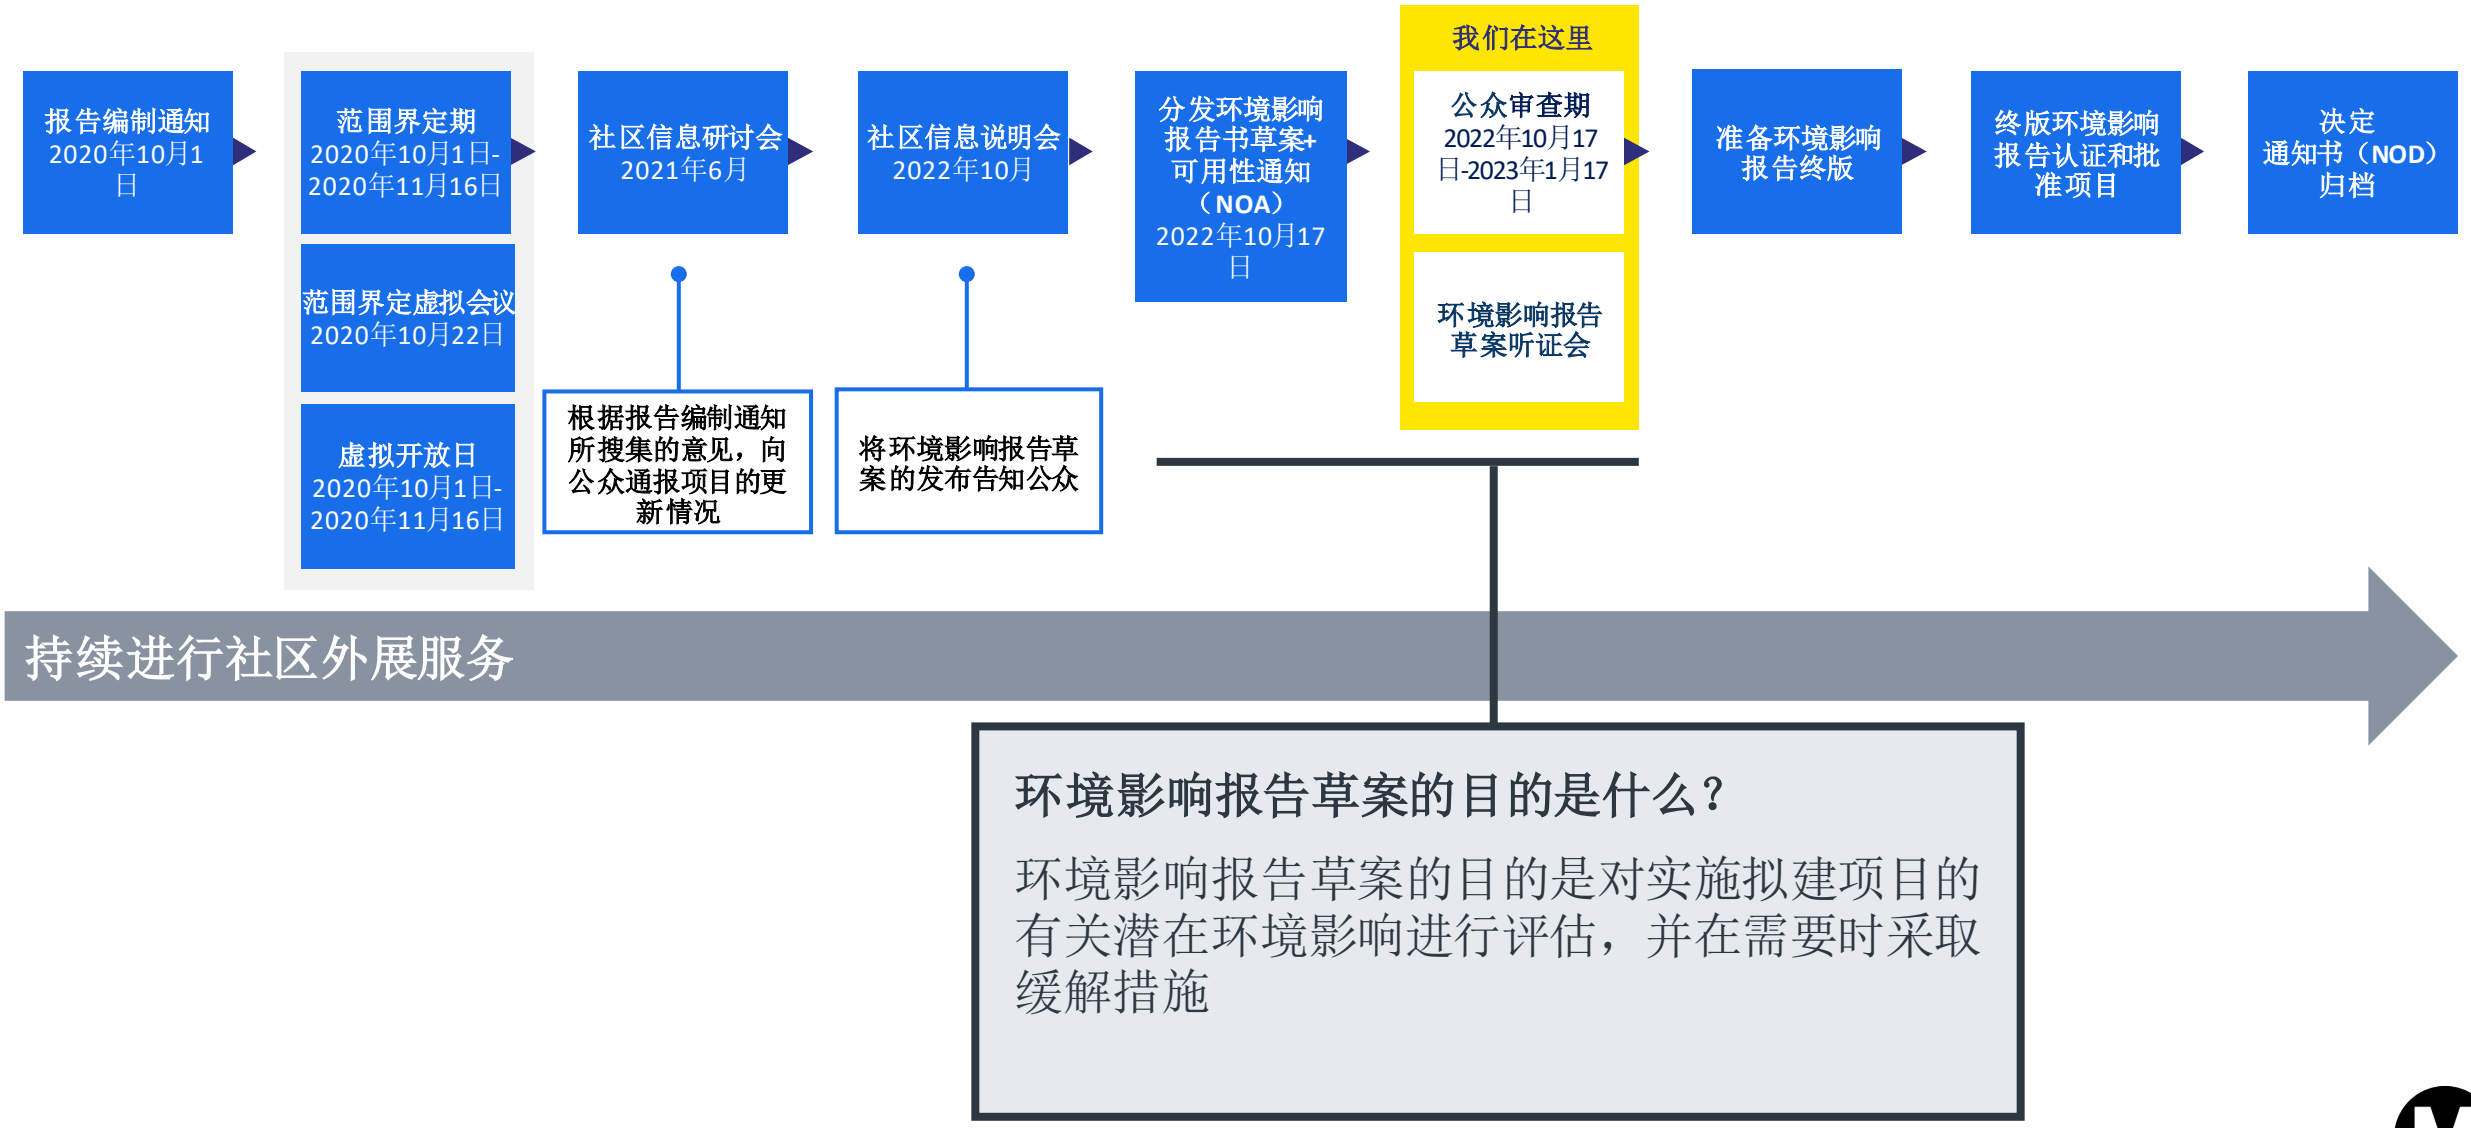
披露拟建项目可能造成的环境影响

提供对环境问题发表意见的机会

两个公众评议期：公众范围界定期以及报告草案公众审查期

参议院第44号法案要求在环境影响报告草案的公众审查期间举行两次公众会议：信息研讨会与公众听证会

时间线



环境影响报告草案的目的是什么？

环境影响报告草案的目的是对实施拟建项目的有关潜在环境影响进行评估，并在需要时采取缓解措施

在环境影响报告草案的公众审查期间举行多次公众会议

信息说明会

环境影响报告草案第一次信息说明会	10月22日（周六）	虚拟会议
环境影响报告草案第二次信息说明会	10月25日（周二）	现场会议

洛杉矶都会交通局已经举办了两次信息研讨会，向公众介绍环境影响报告草案的重点分析及总结

公众听证会

环境影响报告草案第一次公听会	12月10日（周六）	现场会议
环境影响报告草案第二次公听会	12月13日（周二）	虚拟会议
环境影响报告草案第三次公听会	1月12日（周二）	现场会议

洛杉矶都会交通局将举办三次公众听证会，听取公众对环境影响报告草案的意见

项目描述

项目概况

- 通过1.2英里长的空中缆车系统，提供从洛杉矶联合车站（LAUS）到道奇体育馆的永久性交通连接
  - 从洛杉矶联合车站到道奇体育馆的旅程约为7分钟
- 运力约为每个方向每小时5,000人次
- 拟建项目将每天运作，为现有居民、上班族、公园使用者和洛杉矶的访客提供服务
- 可通过中间的唐人街/州立公园站前往洛杉矶州立历史公园和周边社区
- 零排放且环保的快速交通系统，由于减少了道奇体育馆内和周围以及附近街道、主要干道和高速公路上的车辆出行，将减少温室气体排放

项目地点和路线

- 本项目将以洛杉矶联合车站和洛杉矶古城(El Pueblo)附近为起点，以道奇体育馆为终点，还有一个中间站位于洛杉矶州立历史公园最南门入口处
- 连接包括唐人街、Mission Junction社区、伊利森公园、回音（Echo）公园和索拉诺（Solano）峡谷的周边社区与联合车站的区域交通系统。
- 拟建的项目路线尽可能沿着沿公共通行权（ROW）和公有土地，并尽可能减少使用在私人地产上空的空中权利，同时考虑到现有和未来的邻近土地用途

空中交通系统的先例

- 空中交通技术已经使用了100多年
- 现代系统是一种可行的城市交通方式，目前正在世界各地的许多城市运行
- 世界各地如玻利维亚的拉巴斯和墨西哥的墨西哥城已有的空中缆车交通系统，正为相应的城市人口提供快速交通服务
- 拟建项目与德国科布伦茨、越南富国岛和法国图卢兹所使用的系统类似，是一个“3S”空中缆车
  - 车厢可搭载约30至40名乘客
  - 系统将提供平稳流畅的乘车体验

俄勒冈州波特兰

纽约罗斯福岛

玻利维亚拉巴斯

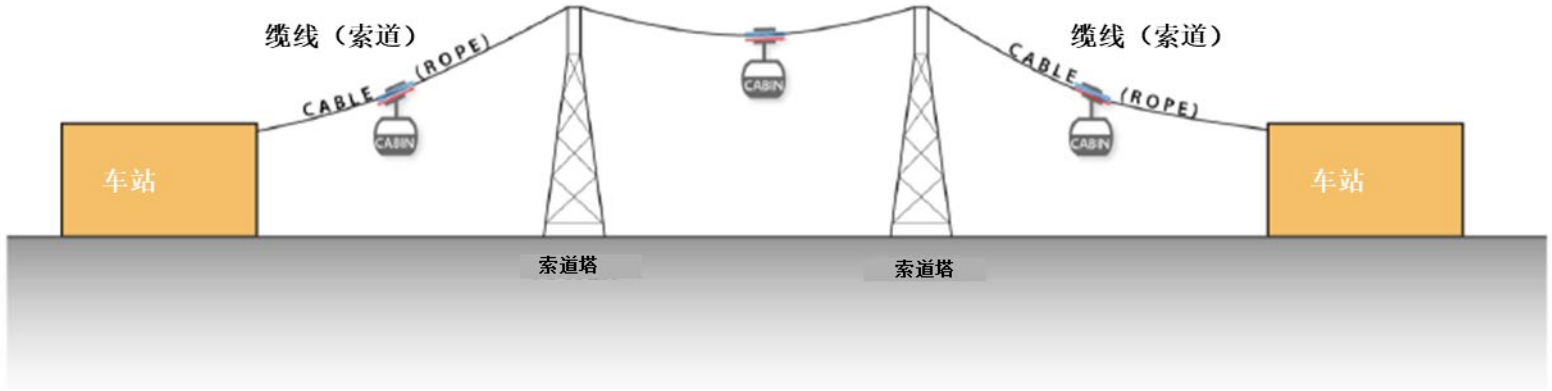
墨西哥的墨西哥城

法国图卢兹

哥伦比亚麦德林

索道技术

拟建项目将包括几个客站、一个非客枢纽站，以及为输送空中缆车的缆线提供支撑的三个索道塔



三个客站

- 包括机械、电气和管道系统、乘车站台和垂直流通（如楼梯、自动扶梯和电梯）
- 包括售票、检票和排队的区域；乘客的上下车；运营；和系统设备

一个非客枢纽站

- 要求空中快捷交通系统转过缆线并继续沿路线行驶

为缆线和缆车提供支撑的三个索道塔

“3S”系统与缆车车厢

“3S”系统

- “3S”系统包括三根缆索：两根“轨道索”用于稳定，第三根“牵引索”用于使车厢移动。
- 车厢与持续循环的牵引索分离并减速进入车站，以便乘客上下车，然后车厢再重新连接至牵引索上

缆车车厢

- 每个车厢可容纳30至40名乘客，具体取决于座位和车厢便利设施的具体配置
- 符合《美国残疾人法案》（ADA）的无障碍通道，可以放置轮椅
- 车厢里可以坐着或站着
- 为婴儿车和自行车的放置提供了空间
- 在运营高峰期，将以每小时13.4英里的最高速度行驶
- 车厢进站时，速度将降到大约每秒一英尺（低于每小时一英里），以便乘客能够登上和离开移动中的车厢

目的和需求

- 通过空中缆车系统提供从联合车站到道奇体育馆物业的直接交通连接
- 连接包括唐人街、Mission Junction社区、洛杉矶州立历史公园、伊利森公园、回音公园和索拉诺峡谷的周边社区与联合车站的区域交通系统
- 通过在洛杉矶联合车站的区域交通系统之间提供日常的高运力空中快捷交通连接，改善该地区的流动性和可及性
- 在唐人街/州立公园站提供一个交通转换点
- 使用零排放的电力和蓄电池，通过运营空中快捷交通系统提供具有环境永续性的交通方式，以减少温室气体排放及改善空气质量

道奇体育馆：该地区到访次数最多的场所之一

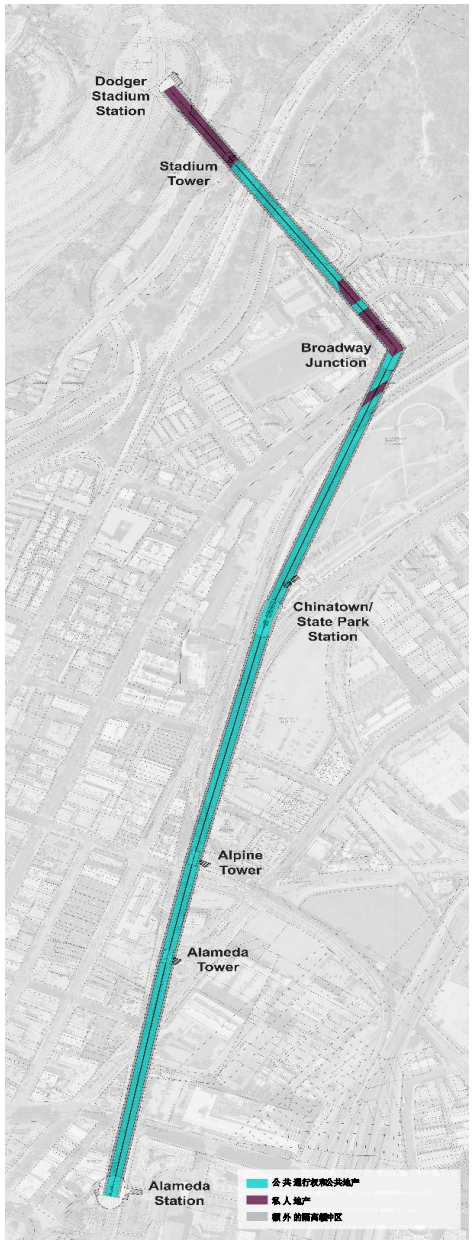
- 每年大约有100场棒球比赛和其它活动，吸引了大量的本地区人群
- 绝大多数访客都是自驾
- 车辆在周边社区和附近的高速公路上造成拥堵
- 拟建项目路线附近的社区被确定为受加州多种污染源不同程度影响的社区，并处于该类社区的第90-100百分位（CalEnviroScreen 4.0地图）。

项目目标

- 通过直接连接联合车站和作为区域活动中心的道奇体育馆，为需要转换交通方式的乘客提供更多出行选择。
- 通过空中交通系统的独特体验以及连通至道奇体育馆的交通服务，吸引新的交通乘客乘坐都会交通局交通系统。
- 为人们提供前往道奇体育馆的高效、高运力和更快捷的交通，从而改善交通体验。
- 减少该地区的车辆数量，以提高道奇体育馆附近社区的安全性
- 在球赛和特别活动期间，由于减少了道奇体育馆及其周围、社区街道、主干道和高速公路上的车辆拥堵，因而减少了与交通相关的污染和温室气体排放。
- 加强人们与联合车站和道奇体育馆的区域公共交通枢纽的连通性。
- 改善乘客交通体验,为使用空中快捷交通的乘客和道奇队球迷提供洛杉矶地区的独特风景。
- 为洛杉矶地区带来世界级的空中交通系统。
- 为过去曾经交通服务不足的区域（包括洛杉矶州立历史公园和伊利森公园），通过提供通往这些区域的第一英里/最后一英里的交通工具和和步行通道，加强社区连通性。
- 为社区以及洛杉矶州立历史公园和伊利森公园的交通确定可类比的、可负担的、易得到的票价机会。
- 通过在拟建项目的材料、施工、运营和维护中融入可持续和环境友好型设计特点，尽量减少项目的环境足迹。
- 使用零排放的电力和蓄电池，通过空中快捷交通系统提供具有可持续性的交通方式，以减少温室气体排放及改善空气质量。
- 拟建的项目路线尽可能沿着沿公共通行权（ROW）和公有地产，并尽量减少使用在私人地产上空的空中权利，同时考虑到现有和未来的邻近土地用途。

空中净空 | 路线跨越了公共通行权/公有地产和私有地产上空

- 美国国家标准协会（ANSI）标准第B77.1条中记载了索道和缆车车厢的设计和操作行业标准，该标准是与制造商、消费者和监管机构协调制定的
  - ANSI第B77.1条规定了索道和缆车车厢与车辆、行人、植被、建筑物和其它结构等元素之间的垂直和水平净空距离
- 拟建的项目路线尽可能沿着沿公共通行权和公有地产，并尽量减少使用在私人地产上空的空中权利，同时考虑到现有和未来的邻近土地用途
- 选择项目路线时所考虑的其它因素：
  - 尽量减少对行车道、停车道以及自行车和步行通道的改变
  - 尽量减少公用事业设施的搬迁
  - 历史与考古资源的位置
  - 尽量减少使用不平坦或困难的地形
  - 技术考虑和可行性



设计

- 设计目标是制定一个共用的建筑设计，使整个空中交通索道系统联合起来，同时让每个主要组成部分对各自所在位置的城市状况作出贡献
- 同样重要的是，要尽量减少车站、非客运枢纽站和索道塔的感知规模和感知质量
- 车站和枢纽站采用简单的桶形拱顶形式，提供保护索道设备所需的最小封闭空间，并为乘车站台上的乘客提供遮荫和风雨防护
- 每个索道塔均设计为不妨碍附近车辆与行人通行，并且塔身涂成中性的浅灰色，与周围的城市环境保持一致

阿拉米达站

- 位于阿拉米达街，毗邻规划中的联合车站前广场以及洛杉矶街与塞萨尔查韦斯（Cesar Chaves）大道之间的Placita de Dolores
- 这个车站大约有173英尺长，109英尺宽，最高点离地面78英尺
- 乘车站台将高出阿拉米达街约31英尺

- 将从Placita de Dolores北边、在洛杉矶古城的拟建的新行人广场上引入垂直流通设施， 东边是规划中的联合车站前广场

阿拉米达索道塔

- 位于阿拉米达三角区，阿拉米达街、北主街和阿罕布拉大道之间的公共通行权范围
- 高度将为195英尺，缆线悬挂在离地面175英尺处
- 对阿拉米达三角带的自然景观和硬景观进行美化升级，包括重新使用和整合现有的路面铺面

高山街索道塔

- 位于阿拉米达街和高山街的东北角，与轻轨L线（金线）相邻
- 该地块为市属地块，目前为城市车辆的私人停车场
- 最高点将为195英尺，缆线悬挂在离地面175英尺处
- 索道塔附近的自然景观和硬景观美化

唐人街/州立公园站

- 车站将位于洛杉矶州立历史公园最南端的春天街附近
- 车站的南半部分将位于公共通行权范围，而北半部分将与洛杉矶州立历史公园的南部边界融为一体
- 这个车站大约有200英尺长，80英尺宽，最高点离地面98英尺
- 乘车站台高出地面约50英尺
- 通过电梯和楼梯，可以从中层楼进入乘车站台
- 将包含自然景观以及硬景观的安装，包括使用花岗岩铺面

唐人街/州立公园站

车站休闲设施

- 交通转换点为乘客提供第一英里和最后一英里的多种形式选择，如自行车共享计划
- 步行通道升级，包括硬景观与自然景观的美化、安装遮阳结构和潜在的座位

公园休闲设施

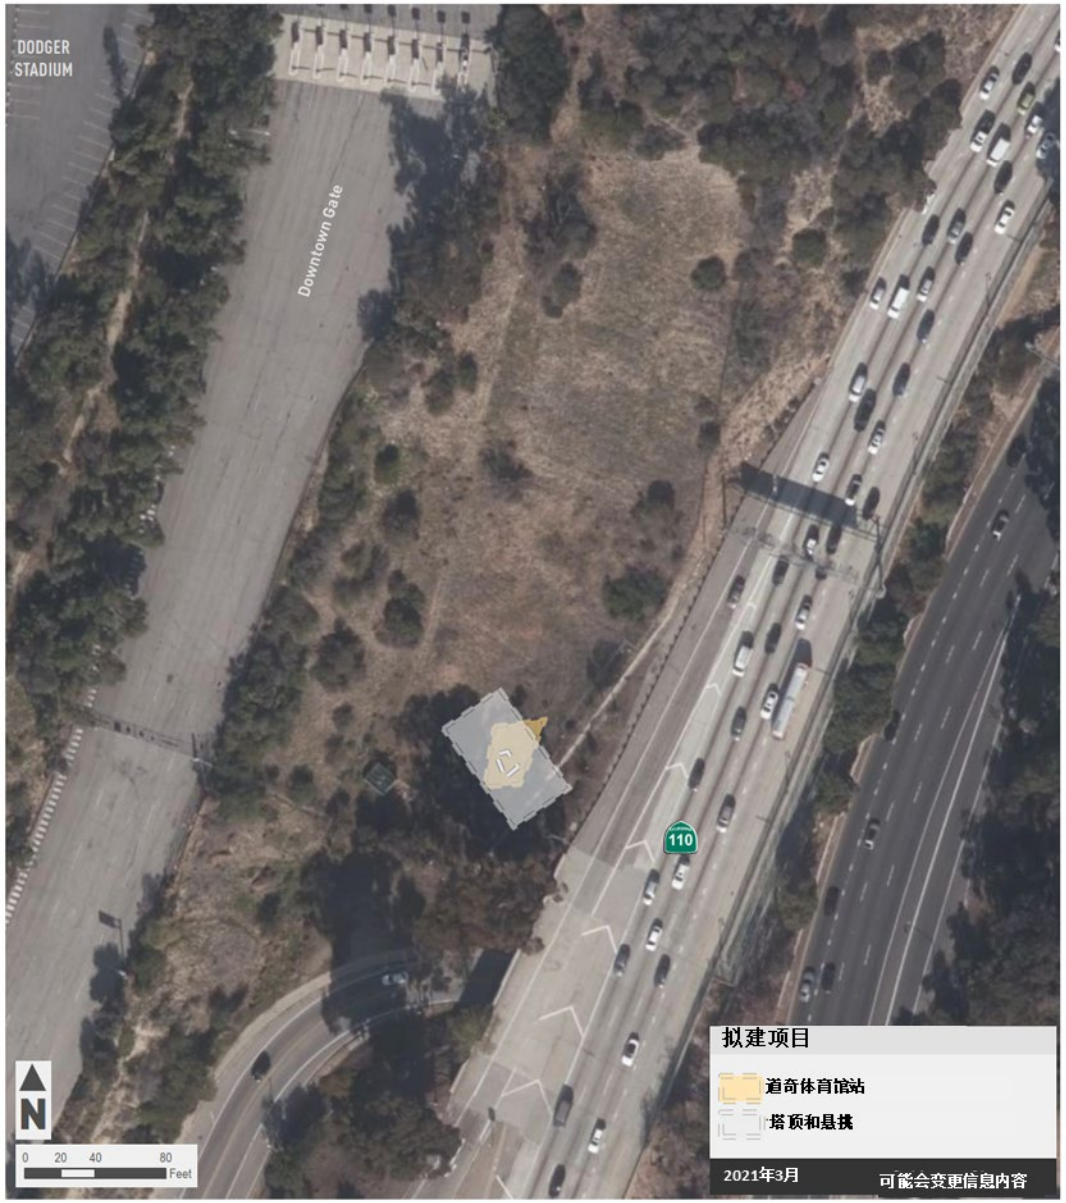
- 740平方英尺的特许经营商店
- 770平方英尺的洗手间
- 220平方英尺的有顶走廊，连接特许经营商店区和洗手间

百老汇枢纽站

- 百老汇枢纽站是一个非客运枢纽站，将位于北百老汇和主教路的交叉路口
- 位于1201 N.百老汇街的现有商业建筑将被拆除
- 车站大约将有227英尺长，60英尺宽，最高点离地98英尺

体育馆索道塔

- 位于体育馆路以北的山坡上的私人物业，夹在道奇体育馆市中心大门和SR-110州道之间
- 高179英尺，缆线悬挂在距离地面159英尺处，塔底附近有景观



道奇体育馆站

- 位于道奇体育馆物业西南部分，靠近市中心的大门处

道奇体育馆站

- 这个车站大约有194英尺长，80英尺宽，最高点离地面74英尺
- 在该站的缆车车厢将在同一水平面上让乘客抵达和离开，乘客排队等候区也将在同一水平面
- 道奇体育馆站将包括站台下方的地下区域，用于储存和维护车厢，以及用作工作人员的休息室、储物柜和零件储存区
    - 当系统不使用时（运营时间结束后），缆车车厢将返回道奇体育馆站并存放在该站
- 供乘客使用的洗手间将设在车站内

道奇体育馆站还将包括通往道奇体育馆的步行通道，包括硬景观和自然景观美化措施以及增加潜在的座位

永续性

- 拟建项目的永续性特点将包括以下法规中的特点：
  - 2019年加州绿色建筑标准规范
  - 美国绿色建筑委员会面向新建筑的能源与环境设计先锋（LEED）认证体系
  - 永续基础设施研究所的远景（Envision）评级体系
- 拟建项目的电力将100%由洛杉矶市水电部门的绿色电力计划供应
- 每个车站、索道塔和枢纽站均由备用电池储蓄电力，而非由柴油发电机提供备用电力

拟建项目将为道奇体育馆的访客提供一个可持续、高运力、零排放的空中快捷交通索道选择，同时也连通道奇体育馆、周边社区和可由洛杉矶联合车站进入的区域交通系统。空中快捷交通索道技术很安静，拟建项目将减少行车里程（VMT）和交通拥堵，从而减少温室气体排放并改善空气质量。

建筑施工

时间线

- 预计最早将于2024年开始拟建项目的施工，工期大约需要25个月，包括施工、缆线安装和系统测试。

施工时间

- 预计施工时间为每天10小时，并可能为了满足特殊情况和限制要求而有所改动
- 施工时间如发生变动，包括延长施工时间和可能在周日施工，都需要获得洛杉矶市警察专员委员会的批准

车道封闭

- 预期的封闭措施将包括车道封闭，车道将在某些施工阶段实施一天24小时封闭，或者在某些施工阶段实施时段封闭，即道路每天将于施工时段封闭约10小时，并在非施工时段每天重新开放约14小时
- 至于时段封闭，在非施工时段时，会在可行时在建筑工地上方放置钢板，以便车辆和行人通行。
- 封闭地点和时间将因各施工场地与施工阶段而异
- 拟建项目将实施施工交通管理计划，其中包括绕行路线，并确保在所有施工活动中保留应急通道

详细的施工假设

- 详细的施工假设载于环境影响报告草案附录B中

环境影响报告草案重点分析及结论

环境资源议题

根据CEQA指南附录G的所有环境资源议题
都已在环境影响报告中获得处理

- 美学
- 农业/林业
- 空气质量
- 生物资源
- 文化/历史资源
- 能源
- 地质/土壤
- 温室气体排放
- 危害/危险物品
- 水文/水质
- 土地使用/规划
- 矿产资源
- 噪音
- 人口/住房
- 公共服务
- 休闲娱乐
- 交通运输
- 部落文化资源
- 公用事业/服务系统
- 野生动植物

美学

研究内容

- 围绕项目路线的项目组成部分的视觉影响
- 代表视觉特征的主要观察点，包括是否有景观美化、主要土地用途、建筑物的规模，或主要的自然风景、风景资源和可用的实质性视觉元素，如开放空间资源、行道树和建筑物正面
- 观看者及观看者反应，包括行人和休闲者（如公园使用者）
- 虽然没有指明的自然风景，但可以看到洛杉矶市中心的天际线、联合车站、洛杉矶古城、洛杉矶州立历史公园、阿罗约·塞科（Arroyo Seco）林荫大道、道奇体育馆以及圣加布里埃尔（San Gabriel）山脉和圣贝纳迪诺（San Bernardino）山脉的风景
- 光线与眩光

重点分析及总结

- 拟建项目不会严重阻挡风景和全景景观，例如洛杉矶市中心的天际线、联合车站、洛杉矶古城、洛杉矶州立历史公园、阿罗约·塞科林荫大道、道奇体育馆以及圣加布里埃尔山脉和圣贝纳迪诺山脉的风景
- 拟建项目获得的资格与批准 - 其中包括提高拟建项目及其周边社区的视觉特性及特点的设计标准 - 不会与适用的分区或其它管理风景质量的法规发生冲突
- 拟建项目不会发出大量光线或眩光，并将遵守适用的城市照明法规

从州立历史公园向洛杉矶市区天际线看去的现有视图和模拟视图

美学

影响总结

主题	查找	
	建筑施工	运营
自然风景	影响不重大	影响不重大
景观资源	无影响	无影响
视觉特征	影响不重大	影响不重大
光线与眩光	影响不重大	影响不重大

如何尽量减少影响？

建筑施工：屏障和隔音墙将包括一个隐私屏。本项目将实行最佳管理做法，以减少视觉影响。无须采取缓解措施。

运营：项目设计特点，包括建筑照明和指示牌照明。无须采取缓解措施。

农林资源

研究内容

- 项目位于体育馆索道塔和道奇体育馆站的场地是否会与农业分区冲突

重点分析及总结

- 道奇体育馆的土地性质不包含农业用途，并受到有条件使用许可的限制，该许可允许运营美国职业棒球大联盟体育馆和各种附属建筑和各种用途，包括到该地点的“大众交通服务”；因此，拟建项目的建设和运营不会与现有的农业分区相冲突

影响总结

主题	查找	
	建筑施工	运营
农田转换	无影响	无影响
与林地分区冲突	无影响	无影响
林地损失	无影响	无影响
农业用途	无影响	无影响
农业分区与威廉姆森法案	影响不重大	影响不重大

如何尽量减少影响？

无须采取缓解措施。

空气质量

研究内容

- 拟建项目的施工和运营对区域和地方范围内的空气质量的潜在影响
- 空气污染物的特点和影响
- 已获通过的管理空气质量的法规
- 健康风险评估（HRA），评估与本项目建设相关的预计癌症风险和非癌症慢性危害指数

重点分析及总结

- 拟建项目将符合适用的空气质量计划要求
- 拟建项目因施工导致的预计排放量应低于污染物和排放物的显著性阈值
- 拟建项目在运营期间不会让敏感受体暴露于大量污染物，原因是拟建项目不包含任何会在运营期间导致对环境空气质量产生重大影响的土地用途或运营排放
- 与现状相比，拟建项目将通过减少行车里程（VMT）从而减少排放，使相关标准的空气污染物排放出现净减少
- 根据健康风险评估（HRA）的结果，拟建项目将导致敏感受体受到与暴露在毒性空气污染物（TACs）的大量污染物浓度中相关的影响，影响未及重大程度

空气质量

影响总结

主题	查找	
	建筑施工	运营
空气质量计划	影响不重大	影响不重大
空气污染物增多	影响不重大	影响不重大
敏感受体	影响不重大	影响不重大
其他排放	影响不重大	影响不重大

如何尽量减少影响？

建筑施工：项目设计特点要求所有大于50马力的非道路柴油动力施工设备应符合美国环保局（USEPA）颁布的非道路柴油发动机的第4级排放标准。无须采取缓解措施。

运营：无须采取缓解措施。

生物资源

研究内容

- 本项目是否会影响处于特殊状态的物种及其栖息地
- 本项目是否会影响河边栖息地或受保护的湿地
- 本项目干扰路线沿线的野生动物移动的可能性
- 本项目是否会与保护生物资源的本地政策或条例（例如树木保育政策或条例）相冲突
- 本项目是否会与已通过的栖息地保护计划相冲突

重点分析及总结

- 项目区域一般不为特殊物种提供栖息地；然而，在拟建项目施工期间移除成熟的棕榈树和桉树，可能会导致蝙蝠栖息地遭到移除
- 项目区域不包含河边栖息地、其他敏感的自然群落或受保护的湿地；因此，不会产生影响
- 项目区域不作区域野生动物走廊之用；然而，施工活动可能会导致蝙蝠和鸟类避开正在施工中的区域
- 本项目将根据市政府的《原生树木保护条例》、加州公园和休闲局的要求以及其它适用的要求，对移走的树木进行补种

生物资源

影响总结

主题	查找	
	建筑施工	运营
河边栖息地	无影响	无影响
受保护的湿地	无影响	无影响
生物计划或政策	影响不重大	无影响
干扰物种移动	采取缓解措施后无重大影响	影响不重大
栖息地改造	采取缓解措施后无重大影响	影响不重大

如何尽量减少影响？

建筑施工：

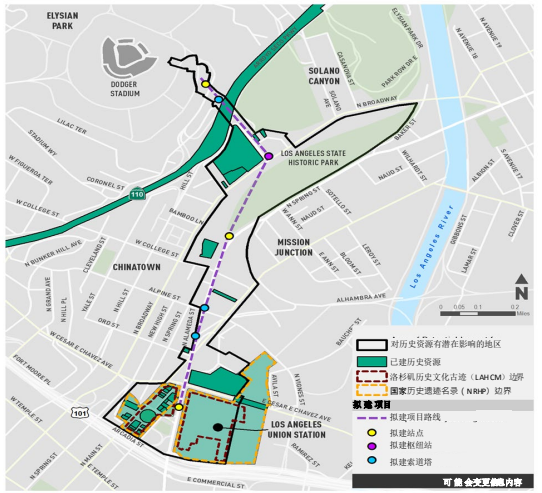
- 实施项目设计特点，建立树木保护区以保护树木
- 施工前进行筑巢调查及采取措施以避免并尽量减少对筑巢鸟类的影响

运营：无须采取缓解措施。

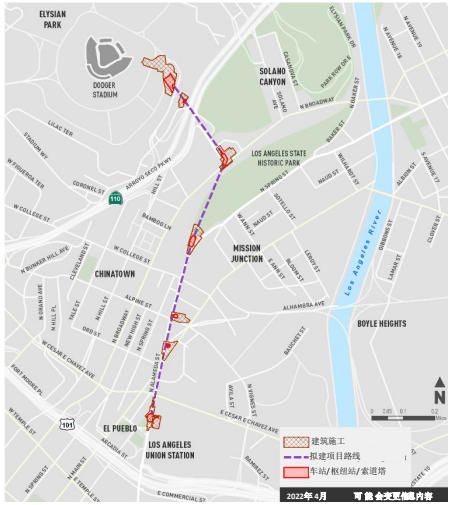
文化资源

研究内容

- 对“潜在影响区”内的29项已建历史资源产生直接或间接影响，包括洛杉矶联合车站总站及其场地、洛杉矶广场历史区、大教堂（Cathedral）高中、以及阿罗约·塞科（Arroyo Seco）林荫大道历史区
- 对“直接影响区”内的考古资源（包括La Placita、Zanja Madre和南太平洋铁路的河边车站）因地面干扰造成的影响
- **重点分析及总结**
- 历史资源
  - 计划中的阿拉米达站的建设有可能会对酿酒厂和El Grito壁画造成直接和间接影响；但是，影响将会被减轻到未及重大程度
  - 对所有其它历史资源，与施工和运营有关的影响将未及重大程度
- 考古资源
  - 计划中阿拉米达站、阿拉米达三角区、高山街索道塔和唐人街/州立公园站的建设有可能对考古资源的意义造成实质性的不利变化；但是，影响将被减轻到未及重大程度



对已建历史资源有潜在影响的地区



对考古资源有直接影响的地区

文化资源

影响总结

主题	查找	
	建筑施工	运营
历史资源	采取缓解措施后无重大影响	影响不重大
考古资源	采取缓解措施后无重大影响	无影响
扰乱人类遗迹	采取缓解措施后无重大影响	无影响

如何尽量减少影响？

- 历史资源
  - 项目设计特点是在施工前和施工后对酿酒厂和El Grito壁画进行记录和保护，以及在施工期间对El Grito壁画进行保护
  - 在拟建的阿拉米达站施工期间，对振动进行监测并限制使用可调节的地面压实装置
- 考古资源
  - 制定和实施文化资源监测与缓解计划以及考古资源工作者实施方案
  - 拟建的阿拉米达站和唐人街/州立公园站的施工前考古测试计划
  - 可能重新设计洛杉矶州立历史公园便利设施的位置，以避开该地的考古资源

能源

研究内容

- 与能源相关的联邦、州和地方法律和法规之概述
- 加州的能源生产、供应和消费之概况
- 与施工有关的能源资源以及与项目运营有关的年度能源需求的评估

重点分析及总结

- 与拟建项目施工相关的临时能源消耗，将导致与拟建项目运营相关的能源消耗长期减少
- 相关的主要用电将来自可再生资源，通过洛杉矶水电局的绿色电力计划供应
- 拟建项目将减少机动车流量，增加乘坐公共交通的人次，进而减少客运车辆对化石燃料的消耗

影响总结

主题	查找	
	建筑施工	运营
浪费、低效或不必要的消费	影响不重大	影响不重大
国家或地方能源计划	影响不重大	影响不重大

如何尽量减少影响？

无须采取缓解措施。

地质和土壤

研究内容

- 项目是否容易受到地震灾害影响，如强烈的地面震动、地质断层、土壤液化或山体滑坡等
- 项目是否位于不稳定的、可能导致场内或场外的滑坡、横向扩展、地陷、土壤液化或坍塌的地质上。
- 项目路线是否含有可能对生命或财产造成重大的直接或间接风险的膨胀土
- 项目施工直接或间接破坏独特的古生物资源或遗址或独特的地质特征的可能性

重点分析及总结

- 虽然项目区域位于南加州地震活跃区，但如果遵守现有标准和规范并采取缓解措施，在拟建项目的施工过程中，与强震地面震动、地震相关的地面破坏和/或土壤液化有关的影响将降低至不重大的程度
- 项目的应急行动计划将包括应急响应协议，并将规定在发生大地震时，系统将全部疏散和关闭，不会运行
- 在遵守现有标准和规范以及实施缓解措施的情况下，在项目组成部分的土地整平与施工过程中，与横向扩展、地陷、土壤液化或坍塌有关的影响将减轻至不重大的水平
- 在遵守现有标准和规范以及实施缓解措施的情况下，施工期间与土壤腐蚀有关的影响将减轻至不重大的水平
- 拟建项目的北部靠近道奇体育场站的地方有可能遇到古生物资源；但是，影响将减轻至不重大的程度

地质和土壤

影响总结

主题	查找	
	建筑施工	运营
不利影响：地震、与地震有关的地面震动、土壤液化或山体滑坡	采取缓解措施后无重大影响	影响不重大
支持污水处理系统	无影响	无影响
破坏独特的古生物特征或地质特征	采取缓解措施后无重大影响	无影响
土地侵蚀/表土流失	影响不重大	影响不重大
不稳定的地质单元和土壤	采取缓解措施后无重大影响	影响不重大
膨胀土	采取缓解措施后无重大影响	影响不重大

如何尽量减少影响？

建筑施工：

- 编制和执行针对各个工地的岩土工程最终报告
- 制定及遵守古生物资源监测和缓解计划

运营：无须采取缓解措施

温室气体排放

研究内容

- 相关的联邦、州和地方法律和法规
- 温室气体科学概述
- 用于评估与拟建项目相关的温室气体排放的方法

重点分析及总结

- 与现状相比，拟建项目不会导致对温室气体的增量作用，反而相对现状会减少温室气体排放

本项目整个使用期的排放量将减少166,653公吨温室气体。

影响总结

主题	查找	
	建筑施工	运营
产生温室气体	影响不重大	影响不重大
温室气体减排计划或政策	影响不重大	影响不重大

如何尽量减少影响？

无须采取缓解措施。

危害及危险物品

研究内容

- 对项目活动进行了评估，以确定施工和运营期间项目活动对公众或环境造成危险环境的潜在影响
- **然后根据适用的**显著性标准分析了危险和危险材料的潜在影响

重点分析及总结

- 虽然拟建项目将在施工期间使用、运输和处置有限数量的有害物质，但拟建项目将遵守联邦、州和地方的健康和安全要求；并在运营期间遵守所有的法规、标准和条例
- 拟建项目将遵守美国职业安全健康管理局（OSHA）、加州职业安全健康管理局（Cal/OSHA）和洛杉矶市政法典第71条要求，并实施土壤和地下水管理计划，该计划将限制发生危险材料和废物泄漏的可能性
- 拟建项目将在拆除现有建筑前，由持牌的危险物品消除承包商将危险物品消除，确保学校不会受到不利影响
- 拟建项目的施工和运营将不会干扰洛杉矶警察局进入胡珀（Hooper）直升机停机坪，而直升机停机坪的运营也不会受到施工活动的影响
- 在项目区域内，有五处物业被确定为危险物品场地；然而，项目将实施土壤和地下水管理计划，以减少来自这些场地的影响
- 拟建项目的施工不会严重损害已通过的应急计划或紧急疏散计划的实施，也不会对其造成实际干扰；项目的日常运作不会影响应急响应

危害及危险物品

影响总结

主题	查找	
	建筑施工	运营
危险场所	采取缓解措施后无重大影响	无影响
机场土地使用计划	无影响	无影响
对公众或环境的危害	采取缓解措施后无重大影响	影响不重大
应急和疏散计划	影响不重大	影响不重大
学校附近的危险	采取缓解措施后无重大影响	影响不重大

如何尽量减少影响?

建筑施工:

- 制定和实施《土壤和地下水管理计划》，以明确在项目建设过程中遇到受污染的地下水、受污染的土壤或建筑物时的处理和处置方法
- 北百老汇1201号现楼拆除中的危险物质消除

运营: 无须采取缓解措施。

水文水质

研究内容

- 拟建项目违反任何水质标准、减少地下水供应，或在工地内外造成严重侵蚀或淤积的可能性
- 拟建项目大幅增加地表径流的速率或流量，从而在工地内外造成淹水的可能性
- 制造或导致超出现有或规划的雨水排放系统容量的径流，或阻碍或改变洪水流向的可能性
- 拟建项目被洪水或海啸淹没时或位于地震区时，释放污染物的潜在风险
- 拟建项目与水质控制计划或可持续地下水管理计划相冲突或妨碍其实施的可能性

重点分析及总结

- 拟建项目将遵守所有适用的联邦、州、区域和地方机构的水质保护法律和法规、水质控制和/或可持续地下水管理计划
- 拟建项目将结合最佳管理实践，并执行低影响开发计划，以减少对水文和水质的影响
- 拟建项目不易遭受被洪水或海啸淹没或位于地震区释放污染物的潜在风险

水文水质

影响总结

主题	查找	
	建筑施工	运营
减少地下水供应	影响不重大	无影响
水质标准或计划	影响不重大	影响不重大
改变排水系统	影响不重大	影响不重大
洪水、海啸或震荡潮	影响不重大	影响不重大
与计划冲突	影响不重大	影响不重大

如何尽量减少影响？

施工与运营拟建项目将符合**适用的**联邦、州、地区和地方法律法规，包括符合适用的雨水许可证、废水许可证**和其它水**质法规。无须采取缓解措施。

土地使用与规划

研究内容

- 拟建项目在物理上分隔出一个已建立的社区的潜在可能
- 拟建项目与任何为避免或减轻环境影响而采取的土地用途计划、政策或规例相冲突的潜在可能

重点分析及总结

- 尽管施工期间的临时封闭会影响社区内部和社区之间的车辆、行人和自行车通行，但项目区域内的连接和通行仍有多种选择
  - 社区将保持与周围其它街道的连通，并将提供步行绕行路线，以防止道路的封闭令现有社区遭到物理分割
- 拟建项目将通过提供第一/最后一英里的交通和步行通道和一些改造升级措施，包括交通转换点以及为未来的洛杉矶州立历史公园自行车和人行天桥提供支持，加强社区的连通性
- 拟建项目与当地规划、法典和条例的政策、法规、目的和/或目标一致
- 州立公园认为，拟建项目与洛杉矶州立历史公园总体规划之间存在不一致之处，因此可能会产生重大影响，原因是洛杉矶州立历史公园的总体规划并未将交通确定为公园用途之一
  - **随着**缓解措施LUP-A（**即要求**拟建项目获得对洛杉矶州立历史公园总体规划的修正）的实施，影响将未及重大的程度

土地使用与规划

影响总结

主题	查找	
	建筑施工	运营
物理分隔社区	影响不重大	无影响
与土地用途规划或政策相冲突	采取缓解措施后无重大影响	采取缓解措施后无重大影响

如何尽量减少影响？

施工（物理分隔社区）：当施工影响不重大时，施工交通管理计划的实施将包括道路封闭信息、绕行计划、工地运输路线和分段运输计划

施工与运营拟建项目应获得对洛杉矶州立历史公园总体规划的修正，以允许将洛杉矶州立历史公园总体规划范围内的土地作为交通用途

矿产资源

研究内容

- 项目的施工是否会导致无法获得对该地区和该州居民有价值的已知矿产资源？
- 本项目是否会导致当地总体规划、具体规划或其它土地使用规划中标明的当地重要的矿产资源回收场地失去可用性？

重点分析及总结

- 项目并未位于已知的矿产资源地区
- 洛杉矶市内的大部分地区在矿产资源分区分类之前便已开发盖楼，无法进行开采
- 项目路线位于洛杉矶市的城市化地区，在城市化环境中开采此类矿产是不切实际的

影响总结

主题	查找	
	建筑施工	运营
损失可利用的矿产资源	无影响	无影响

如何尽量减少影响？

无须采取缓解措施。

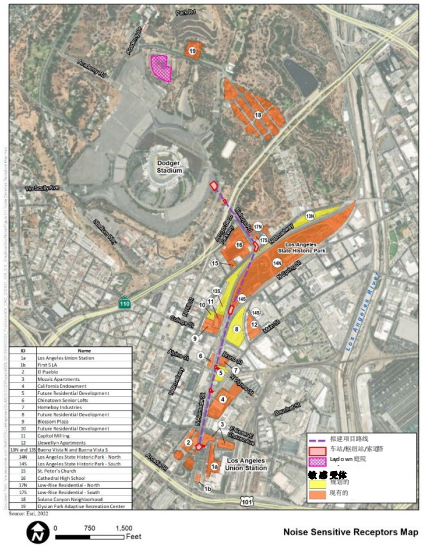
噪音

研究内容

- 对拟建项目路线沿线有代表性的噪音受体，包括现有及未来的住宅开发、学校、公园及其它经常有人在户外活动的地方，进行现状噪音调查及测量
- 对潜在的施工噪音影响的评估是通过对项目相关的施工噪音水平进行计算而得出
- 对运营噪音影响的评估是确定项目运营的噪音源（包括车站、枢纽站、索道塔、索道塔塔支撑轮上通过的车厢、车厢和车站候车乘客）可能产生的噪音水平而得出
- 地面振动对建筑物的破坏和对人的干扰的影响之分析

重点分析及总结

- 拟建项目的重大和不可避免的现场施工噪音影响是由施工设备产生的噪音、设备的位置、产生噪音的施工活动的时间和持续时间以及与噪声敏感受体的相对距离决定的
- 场外施工产生的相关交通噪音无重大影响
- 最坏的情况下，项目运营产生的噪音将低于显著水平
- 现场施工活动产生的振动将对人类产生重大且不可避免的影响；潜在的建筑破坏影响在采取缓解措施后应为不重大
- 项目运营产生的振动将低于显著水平



噪音敏感受体地图

振动敏感受体地图

噪音

影响总结

主题	查找	
	建筑施工	运营
机场附近的公开暴露	无影响	无影响
产生或增加环境噪音水平	影响重大且不可避免	影响不重大
产生超标的振动或噪音水平	影响重大且不可避免	影响不重大

如何尽量减少影响?

营运噪音：车厢项目设计特点与暖通空调机组从内到外的降噪和功率声级相关无须采取缓解措施。

施工噪音：实施施工噪音管理计划，包括

- 噪音屏障
- 设备维修保养
- 社区外展服务，含一位噪音干扰协调员

施工振动：

- 为Avila土砖房（1970年代扩建）、El Grito壁画和酿酒厂放置振动监测设备
- 限制使用压力可调的地面压实装置

人口与住房

研究内容

- 拟建项目有可能导致人口大幅增长，或增长速度超过预期或规划水平
- 实施拟建项目是否会导致大量人口迁移和住房搬迁

重点分析及总结

- 作为通往道奇体育馆的第一/最后一英里的交通连接，拟建项目不会直接或间接导致大量人口增长
  - 旨在满足该地区的交通需求，以及提高现有交通网络的效率
  - 支持市政府关于住房要素和社区计划的目标，即在已规划的住宅开发附近提供交通服务
- 拟建项目不应导致现有的人口迁移或住房搬迁

影响总结

主题	查找	
	建筑施工	运营
导致计划外的人口增长	影响不重大	影响不重大
人口迁移或居民搬迁	影响不重大	影响不重大

如何尽量减少影响？

无须采取缓解措施。

公共服务

研究内容

- 拟建项目是否会导致与提供新的或改造的公共设施有关的不利有形影响，这些设施的建设可能会造成重大的环境影响，包括消防和警察保护、学校和其它公共设施，例如图书馆、老年中心、无家可归者收容所和日托设施等
- 本项目是否会影响应急服务的响应时间

重点分析及总结

- 虽然与拟建项目有关的施工活动会造成暂时增加对应急服务的需求，但缓解措施和项目设计特点的实施，以及适用的国家和地方法规的遵守，包括在项目施工前与洛杉矶消防局和洛杉矶警察局协调，将确保项目施工不会造成额外的应急服务需求以致于需要增加新的或实际改变现有的公共设施
- 洛杉矶消防局和洛杉矶警察局将在施工中有充分的通道
- 虽然拟建项目在项目运营期间会增加对应急服务的需求，但在遵守适用的法规，与洛杉矶消防局和洛杉矶警察局协调，以及实施应急行动计划的情况下，拟建项目的运营不会造成额外的应急服务需求以致于需要增加新的或实际改变公共设施
- 拟建项目不包括住房，住房可能会增加对学校服务或其它公共设施的需求

公共服务

影响总结

主题	查找	
	建筑施工	运营
需要新建或改建消防站、警察局、学校或其它公共服务设施	采取缓解措施后无重大影响	影响不重大
服务比率和响应时间	采取缓解措施后无重大影响	影响不重大

如何尽量减少影响？

建筑施工：施工交通管理计划将减少与应急通道相关的影响

运营：拟建项目将遵守适用的法规，将贯彻安全特点（如工作人员和摄像机），并将实施应急行动计划。 无须采取缓解措施。

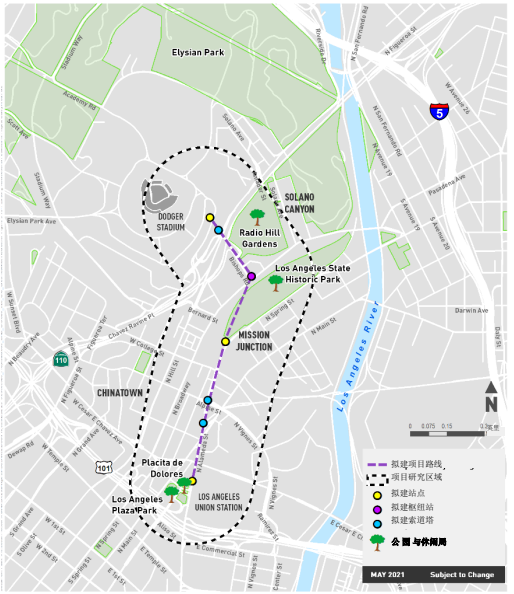
公园与休闲设施

研究内容

- 在施工和运营期间可能对公园和休闲设施产生影响的可能性，包括对洛杉矶广场公园和 Placita de Dolores、洛杉矶州立历史公园和伊利森公园的影响

重点分析及总结

- 拟建项目不会导致对公园的需求增加，或产生新的长期居民，从而导致现有公园和休闲设施的使用量增加，继而使公园设施出现实质性损坏，或导致需要提供新的公园设施，或导致需要新的或实质改变的公园设施
- 拟建项目将提供高运力的空中快捷交通服务，将洛杉矶联合车站的区域交通系统与洛杉矶州立历史公园及伊利森公园的相连，以改善本区域的流动性和可及性



影响总结

主题	查找	
	建筑施工	运营
公共设施的损坏	影响不重大	影响不重大
扩建休闲设施	影响不重大	影响不重大
服务比率和业绩目标	影响不重大	影响不重大

如何尽量减少影响？
无须采取缓解措施。

交通运输

研究内容

- 利用了CEQA指南和洛杉矶交通局通过城市标签建立的筛选标准、分析方法和阈值标准
- 对拟建项目的行车里程（VMT）采用了各种数据、方法和模型，以便能估计项目的乘客量、减少车辆行程数量、车辆行程长度进行分析，并最终估计出拟建项目的行车里程效益
- 道奇体育馆比赛和活动的参与者、员工、游客、附近的乘客，以及洛杉矶州立历史公园的游客和活动参与者，两者的乘客量预估
- 拟建的项目车站、枢纽站和索道塔的位置，以及这些组成部分是否会因其几何设计特征而大大增加了危险
- 拟建项目施工概念交通绕行方案及运输路线

重点分析及总结

- 拟建项目将符合PPOPs - 方案、计划、条例和政策 - 处理包括交通、道路、自行车和步行设施的流通系统
- 由于阿拉米达索道塔和唐人街/国家公园站采取了缓解措施，拟建项目不会带来任何不安全的实际状况
- 随着缓解措施的实施，在拟建项目施工期间将保留紧急通道

项目整个使用周期减少的行车里程将为129,629,500英里。

交通运输

影响总结

主题	查找	
	建筑施工	运营
行车里程（VMT）	无影响	无影响
与计划或政策相冲突	影响不重大	影响不重大
设计增加了危险性	采取缓解措施后无重大影响	采取缓解措施后无重大影响

如何尽量减少影响？

建筑施工：

- 执行经市政府批准的详细的施工交通管理计划，包括道路封闭信息、绕行计划、工地运输路线和分段运输计划
- 执行经市政府批准的临时救灾路线计划，其中将包括道路封闭的信息和绕行计划，以方便应急车辆通过研究区域，并尽量减少灾害期间对应急响应的影响

施工与运营

- 为拟建的阿拉米达索道塔和唐人街/州立公园车站加强能见度 - 例如高能见度的人行横道处理、先进十字路口警告标志、闪烁的信号灯、升级的照明以及新的或升级的交通管制

部落文化资源

研究内容

- 对重要的部落文化资源的实质性不利变化
- 按照大会第52号法案的要求，向八大加州原住民部落咨询

重点分析及总结

- 存在于该地区的资源以及需要采取缓解措施，包括考古测试和数据恢复
- 有可能在施工中遇到以前未发现的资源；如果美国原住民监测员发现了潜在的资源，监测员可以暂时停止施工

影响总结

主题	查找	
	建筑施工	运营
对部落文化资源的改变	采取缓解措施后无重大影响	无影响

如何尽量减少影响？

建筑施工：

- 实施文化资源监测和缓解计划以及洛杉矶联合车站前广场的考古测试计划
- 保留一名美国原住民监测员，监测阿拉米达站所在地的地面扰动施工活动

运营：无须采取缓解措施。

公用事业和服务系统

研究内容

- 搬迁或建造新的或扩建的水、废水处理或雨水排放、电力、天然气或电信设施
- 本项目对供水的影响
- 本项目是否需要扩大废水处理能力
- 该地的垃圾填埋场是否有足够的能力处理本项目所产生的固体废物

重点分析及总结

- 拟建项目的施工将不需要兴建新的或扩建的公用事业设施
- 拟建项目的施工将需要迁移现有的公共设施，这将与公共设施供应商协调，并遵守适用的国家和地方法规和条例
  - 为了尽量减少施工期间对现有公共设施的潜在干扰，拟建项目将实施一个公共设施搬迁计划
- 拟建项目的运营将需要连接到现有的公用事业系统
- 主要的电力使用将来自于可再生资源，现有的电力供应应能满足项目运营的需要
- 拟建项目的施工和运营将有足够的水供应
- 施工和运营将产生潜在的废水，这些废水将按照规定进行处理
- 本项目产生的固体废弃物不应超过国家或地方标准，或超出当地基础设施的能力，或以其它方式妨碍固体废物减少目标的实现

公用事业和服务系统

影响总结

主题	查找	
	建筑施工	运营
充足的供水	影响不重大	影响不重大
对污水系统的需求量及其污水处理能力	影响不重大	影响不重大
固体废弃物	采取缓解措施后无重大影响	影响不重大
搬迁或建造公用事业设施	采取缓解措施后无重大影响	影响不重大

如何尽量减少影响？

建筑施工：

- 与公用事业公司协调，制定并实施一项公用事业搬迁计划，以尽量减少在整个项目施工过程中对公用事业服务的影响
- 制定一份土壤和地下水管理计划

运营：无须采取缓解措施。

野生动植物

研究内容

- 如果位于州责任区(SRAs)或被划分为火灾非常高危险严重区(VHFHSZ)的土地内或附近，拟建项目是否会导致与野火相关的潜在重大影响
- 根据地形、天气和燃料，项目区域内潜在的野火风险
- 对已通过的应急计划或紧急疏散计划造成严重损害
- 拟建项目是否需要安装或维护相关的基础设施，从而可能加剧火灾风险或导致对环境的临时或持续影响
- 拟建项目是否会使人或建筑物面临重大风险，包括由于径流、火灾后的斜坡失稳或排水变化而导致的下坡或下游洪水或山崩？
- 拟建项目是否会使人们或建筑物直接或间接地暴露于涉及野地火灾的重大损失、伤害或死亡风险中

重点分析及总结

- 拟建路线的一部分，包括百老汇枢纽站、体育馆索道塔和道奇体育馆站位于火灾非常高危险严重区(VHFHSZ)内
- 拟建项目的施工和运营不会妨碍进入已确定的避灾路线，也不会严重影响应急反应或疏散计划的实施
- 本项目将遵守适用的法规和条例以及最佳施工实践，不会加剧野火风险
- 贯彻项目设计特点将进一步减少这些风险

野生动植物

影响总结

主题	查找	
	建筑施工	运营
破坏应急或疏散计划	影响不重大	影响不重大
加剧野火风险	影响不重大	影响不重大
安装/维护相关基础设施	影响不重大	影响不重大
使人们或建筑物面临野火风险	影响不重大	影响不重大

如何尽量减少影响？

建筑施工：贯彻项目设计特点，包括消防计划和体育馆塔建筑工地周围的燃料改造分区。无须采取缓解措施。

运营：在百老汇枢纽站、体育场索道塔以及道奇体育馆站运营期间，贯彻有关的项目设计特点，通过工作人员和摄像头进行安全监控，识别和报告消防安全隐患。无须采取缓解措施。

备选方案

研究内容

- 我们选择了一系列合理的替代方案，以探讨可能的方法，以减轻或避免因实施拟建项目而造成的重大环境影响，同时仍能实现本项目的主要目标
  - 无项目备选方案 - 无新的开发项目
  - 春天街备选方案 - 拟建项目的备选路线
  - 交通系统管理备选方案 - 增加道奇体育馆巴士快线服务
- 有几个备选方案经过考虑，由于未能满足大部分基本项目目标，或不可行，或无法避免重大环境影响，被排除在详细分析之外。这几个备选方案包括百老汇站路线备选方案、轻轨L线(金线)站与学院街站合并路线备选方案，以及直接路线备选方案。

重点分析及总结

- 无项目备选方案不会改善交通或为社区之间提供连接。此外，行车里程和车辆拥堵不会减少，相应地也不会发生温室气体排放减少和空气质量改善。
- 春天街路线备选方案将提供直接的交通连接，并改善周围社区的连通性。这一备选方案需要更大的占地面积，并且不会减少对环境的重大影响。
- TSE备选方案不会为周围社区提供直接的过境连接或改善连接，也不会同等程度地减少行车里程（VMT）、温室气体排放或改善空气质量。

备选方案

备选方案总结

备选方案	查找	
	实现项目目标的能力	减少重大影响的能力
无项目工程备选方案	不会实现项目目标	比项目的影响少
春天街路线备选方案	将会实现项目目标	与项目的影响相似
交通系统管理备选方案	无法实现大部分项目目标	比项目的影响少

什么是更环保的备选方案？

TSM备选方案被认为是对环境更友好的备选方案，原因是它不会导致CEQA**确定的重大和不可避免的影响，并且**总体上将产生最少的环境影响。然而，TSM备选方案对空气质量、能源、温室气体排放、水文和水质、以及运输**和交通的影响会更大。此外，**TSM备选方案不能完全或部分地实现项目的大部分目标。

环境影响报告草案中其它的附加评估

洛杉矶州立历史公园

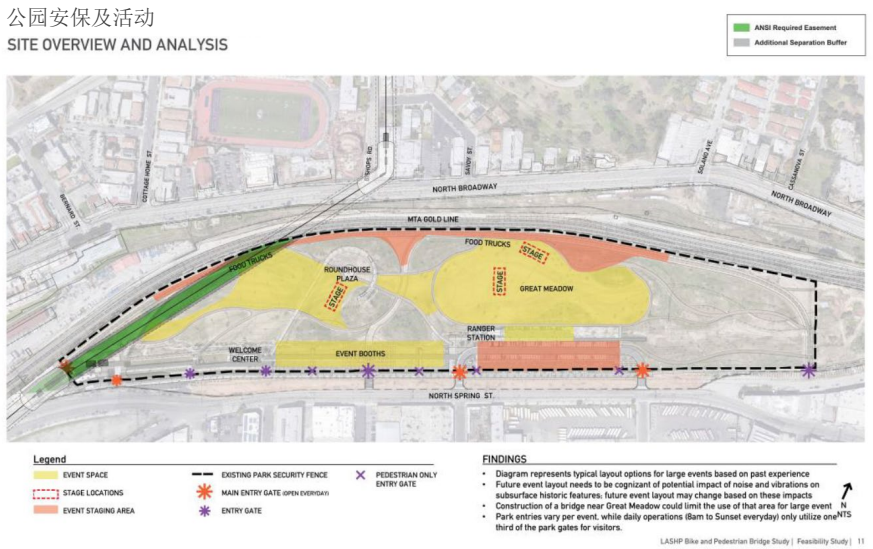
风筝：由于拟建项目路线位于公园的西部边缘，毗邻轻轨L线和行人通道，因此不会明显减少在公园内放飞风筝的安全面积

特别活动：由于拟建项目路线的位置，跨越了公园中通常不用于屏幕和舞台的一小部分，并且由于仍然可以在拟建项目路线的大部分下空进行活动，因此拟建项目并没有明显减少公园内的活动空间面积

阿拉米达站和唐人街/州立公园站的所在地

直升机停机坪

- 拟建的项目路线并未在机场土地使用计划所覆盖的区域内，也不在公共机场的两英里范围内
- 对拟建项目路线附近的直升机停机坪进行的空域评估认为，拟建项目的施工和运营将避开与项目附近现有直升机停机坪有关的空域，不会造成空中导航危险，因此不会对航空活动（包括对拟建项目附近的直升机停机坪）造成影响



洛杉矶州立历史公园的活动舞台和屏幕的典型位置，以及拟建项目路线

设计方案A

改变百老汇枢纽站的位置以避开451 E. SAVOY街

- 将包括对百老汇枢纽站和道奇体育馆站之间的整体项目路线的改变，以避免在451 E. Savoy街上空的空中权利要求
- 位置改变将导致路线穿过毗邻主教（Bishops）路旁边的大教堂高中的一小部分
- 包括对百老汇枢纽站、体育馆索道塔和道奇体育馆站等项目组成部分的改变
  - 可能会导致体育馆索道塔和道奇体育馆站两处场地的公用事业设施搬迁以及增加额外的施工期
  - 将需要拟建项目的乘客在道奇体育馆站和道奇体育馆直接走更长的路

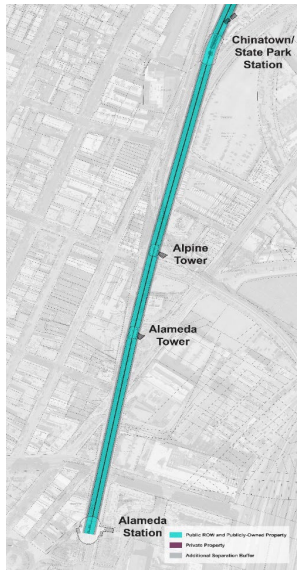
拟建项目路线

设计方案A

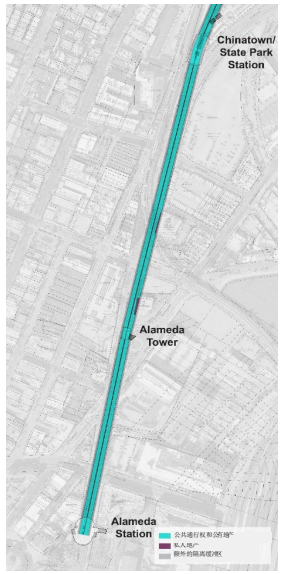
设计方案B

沿着阿拉米达街的单个索道塔

- 利益相关者的反馈意见要求项目主办方评估将阿拉米达街沿路的索道塔数量从两个减少到一个的可能性，作为回应
- 包括将阿拉米达索道塔的整体高度增加50英尺，并将阿拉米达站和唐人街/州立公园站之间高山街索道塔从拟建项目中移除
- 增加的索道塔高度将需要增加相应的施工
- 将导致潜在的技术限制
- 将导致需要额外的私人地产上空的空中权利



拟建项目路线



设计方案B

拟建项目路线

设计方案B

设计方案C

将唐人街/州立公园站的高度增加

- 利益相关者的反馈意见要求项目主办方考虑建造更高的唐人街/国家公园站，作为回应
- 设计方案C包括将唐人街/州立公园站的总高度增加35英尺。
- 增加的车站高度将需要增加相应的施工
- 由于高度的原因，可能会降低乘客体验，这也将导致乘车站台被抬高，需要额外的垂直流通设施才能进入和登上站台

拟建项目路线

设计方案C

使用设计方案D

唐人街/州立公园站作为非客枢纽站

- 利益相关者的反馈意见要求项目主办方考虑在唐人街/州立公园站不设乘客通道，以增加沿着春天街进出车站的缆车高度
- 使用方案D将涉及用一个非客枢纽站取代计划中的唐人街/州立公园站。
- 将具有与拟建项目相同的地点、高度、宽度、长度和建筑外观。
- 将不会加强洛杉矶州立历史公园、唐人街和Mission Junction社区之间的社区连接

设计和使用方案E

洛杉矶州立历史公园人行天桥

- 洛杉矶州立历史公园提出建设一座符合《美国残疾人法案》（ADA）的无障碍人行天桥，桥将从公园的中部平缓上升，一直连接到北百老汇
- 虽然并未提出将该人行天桥作为拟建项目的一部分，但本环境影响报告草案包含对公园人行天桥的分析
- 正如洛杉矶州立历史公园总体规划和最终环境影响报告，以及在自行车和人行天桥研究中所指出的，该桥将提供从唐人街和索拉诺峡谷社区进入公园的安全的行人和自行车通道

来源：人行天桥可行性研究

停车研究概览

拟建项目停车位研究

- 即使CEQA不要求对停车进行分析，也对本项目进行了全面的停车研究，对此都会交通局已对停车研究进行了同行评议
- 停车研究报告已于2022年9月9日在都会交通局的网站上公布

研究内容

- 预计大多数拟搭乘项目的乘客将转乘交通工具前往本项目
- 在拟建项目的阿拉米达站和唐人街/州立公园站的半英里范围内，公共可用停车位和车库以及街道上的停车位约有10,290个

停车研究概览

停车研究结论

停车类型	比赛日停车			
	停车位供应	停泊的车辆	停车位占用率	可用的停车位数
非街道可停车的公共空间	6,876	2,173	32%	4,703
路边停车位	3,417	2,017	59%	1,400
总计				
拟建项目停车需求（2042年）	-	307 – 790		
项目可用的街外停车位总数	6,876	2,963	43%	3,913

*统计时间是2021年9月10日，当天晚上洛杉矶道奇队主场迎战圣地亚哥教士队；付费入场人数为48,403人，高于2019年洛杉矶道奇队工作日晚间比赛的赛季平均水平。在与都会交通局和洛杉矶交通局的协调下，本停车研究将非街道公共可用停车位增加了46%，以应对新冠肺炎疫情。

考虑到拟建项目的潜在停车需求，故在拟建项目的步行可及范围内提供了大量可用的停车位。即使一些现有的停车场被重新改建，也有大量的非街道停车位供应，以满足拟建项目的所有停车需求。

本项目致力于鼓励人们乘坐公共交通

- 与本地商业建立商业合作关系，预售捆绑套餐，包括惠顾本地商业的客户和可用的非街道停车位
- 支持实施/扩大各种管理策略，包括比赛期间的限时停车限制和咪表收费，以劝阻乘客将车停在社区内，并为居民和本地商业提供停车位

公众评议期

公众评议期

- 目的：让公众可以有机会对环境影响报告草案发表意见

今天！

了解环境影响报告草案的重点分析及总结，并提供口头的公众意见。

今天将没有问答环节。

若您举手，将呼叫您发言，请取消**静音并提供公共意**见。参加者的每个**意**见将有最多两分钟时间。

今天通过Zoom聊天发送的沟通内容，将不会视为正式的公众意见。

Metro

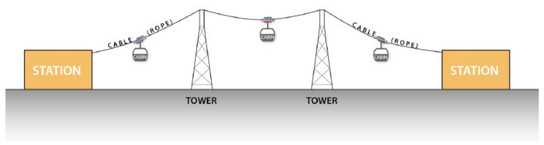
What is Aerial Rapid Transit

¿Qué es el Transporte Rápido Aéreo?

PRECEDENT FOR AERIAL TRANSIT SYSTEMS

- Aerial transit technology has been used for over 100 years
- Aerial rapid transit (ART) is a proven, zero emission, safe, sustainable, high-capacity, and highly efficient form of transportation
- Modern systems are a feasible mode of urban transit and are currently operating in numerous cities around the world



OVERVIEW

- In an aerial transit system, cabins are suspended above grade by cables strung between stations and towers
- The proposed Project would include three passenger stations, a non-passenger junction, and three towers, which support the aerial cables that carry the gondola cabins
- The cabins would allow for sitting or standing; would accommodate wheelchairs, baby strollers, and bicycles; and would be fully ADA accessible
- Each cabin would have a security camera on board with a feed to the control room as well as a “push to talk” button

Metro

Portland, Oregon - Reversible Tramway

Portland, Oregon - Tranvía Reversible

Roosevelt Island, New York - Reversible Tramway

Roosevelt Island, New York - Tranvía Reversible

Mexico City, Mexico - Monocable Detachable Gondola

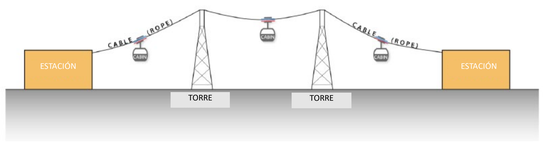
Ciudad de México, México - Góndola Monocable Desprendible

Toulouse, France – 3S

Toulouse, Francia – 3S

PRECEDENTES DE SISTEMAS DE TRANSPORTE AÉREO

- *La tecnología de transporte aéreo se ha usado durante más de 100 años*
- *El Transporte Rápido Aéreo (ART) es una forma de transporte probada, con cero emisiones, segura, sostenible, de gran capacidad y altamente eficiente.*
- *Los sistemas modernos son un medio factible de transporte urbano y actualmente funcionan en varias ciudades alrededor del mundo*



GENERALIDADES

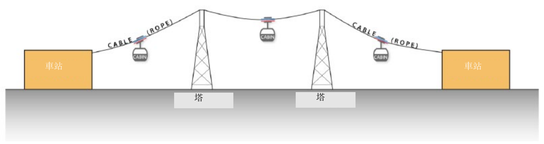
- *En un sistema de transporte aéreo como éste, las cabinas se suspenden por encima del nivel del suelo mediante cables extendidos entre las estaciones y las torres*
- *El proyecto propuesto incluye tres estaciones de pasajeros, una intersección que no es para pasajeros y tres torres para soportar los cables aéreos que transportan las cabinas de las góndolas*
- *En las cabinas, los pasajeros pueden sentarse o estar de pie; podrían acomodar sillas de ruedas, carreolas para bebé y bicicletas, y serían totalmente accesibles de conformidad con la ADA.*
- *Cada cabina tendría una cámara de seguridad a bordo con una transmisión a la sala de control, así como un botón para "pulsar para hablar".*

甚麼是空中快速纜車系統

什么是空中快捷交通

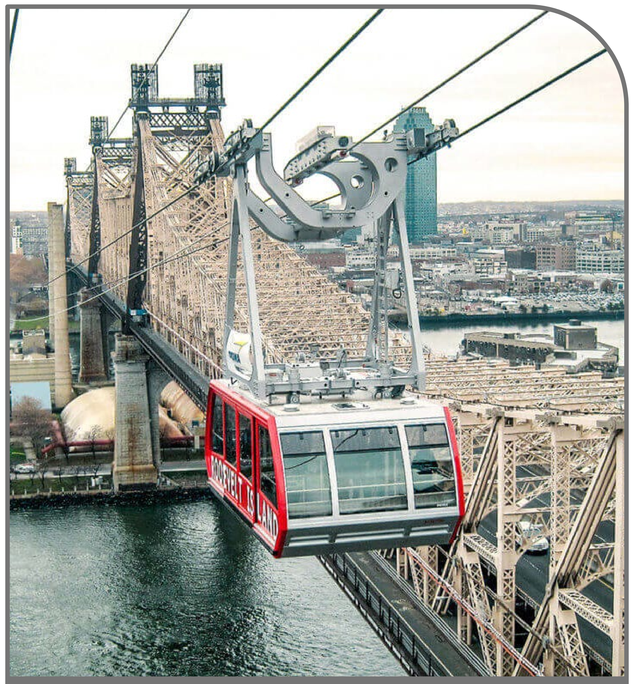
空中快速纜車系統先例

- 空中快速纜車技術已經有100多年歷史
- 空中快速纜車系統是經過實證為零排放、安全、環境永續、高容量和高效能的交通運輸模式
- 現代系統是一種可行的城市交通模式，目前在世界各地多個城市運作



俄勒岡州波特蘭 - 可逆駛電車

俄勒冈州波特兰 - 往复式索道



羅斯福島，紐約 - 可逆駛電車

纽约市罗斯福岛 - 往复式索道

墨西哥墨西哥城 - 可卸除單軌電纜纜車

墨西哥墨西哥城 - 单索可分离式缆车

法國圖盧茲

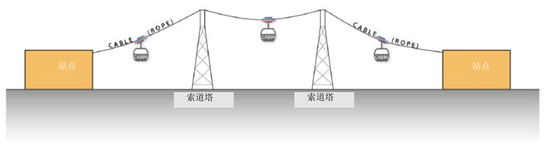
法国图卢兹 - 3S缆车

概述

- 空中纜車系統中，車廂以車站與塔之間的電纜懸掛在地面上
- 擬建計畫將包括三個客運站、一個非客運樞紐站和三個支撐塔，這些塔用作支撐空中纜車的電纜
- 乘客可在車廂內站立或坐著；車廂支援輪椅、嬰兒車及單車上落；車廂可讓《美國殘疾人法案》中的殘疾人士使用
- 每卡車廂中設有保安監控鏡頭及「通話」按鈕，二者均連接到控制室

空中交通系统的先例

- *空中交通技术已经使用了100多年*
- *空中快捷交通（ART）是一种经验证的零排放、安全、具有环境永续性且高运力的的高效交通形式*
- *现代的空中交通系统是一种可行的城市交通方式，目前正在世界各地的许多城市运行*



概览

- *在空中交通系统中，车站和索道塔之间的缆线将缆车悬挂在地面上方*
- *拟建项目将包括三个客站、一个非客枢纽站，以及为输送空中缆车的缆线提供支撑的三个索道塔*
- *车厢里可以坐或站，也可以放置轮椅、婴儿车和自行车；并提供了符合《美国残疾人法案》（ADA）的无障碍通道*
- *每个车厢里均安装了将信号传输至控制室的安全摄像头，并配有“一键通”按钮*

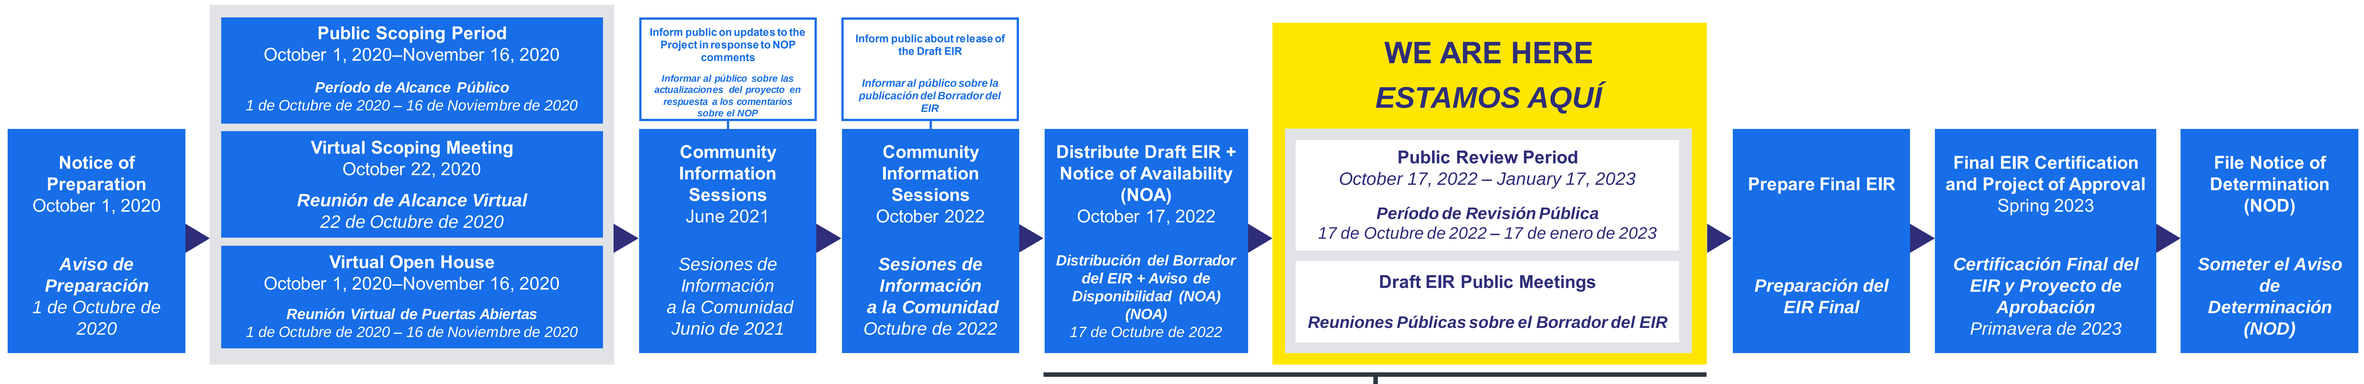
CEQA Process and Timeline

Calendario y Proceso de la CEQA

CEQA OVERVIEW AND TIMELINE | *CALENDARIO Y GENERALIDADES DE LA CEQA*



What is the Purpose of the EIR?

The purpose of the Draft EIR is to evaluate the potential for environmental impacts associated with implementation of the proposed Project, and to provide mitigation measures where required

¿Cuál es el Propósito del Borrador del EIR?

El propósito del Borrador del EIR es el de evaluar los potenciales impactos ambientales asociados con la implementación del proyecto propuesto, y proporcionar medidas de mitigación cuando sea necesario

CEQA PROCESS

- Required for all projects undertaken, funded, or requiring approval by a public agency
- Informs the public and decision makers
- Discloses potential environmental impacts resulting from a proposed project
- Provides the opportunity to comment on environmental issues
- Two public comment periods: Scoping Period and Draft EIR Public Review
- SB 44 requires 2 Public Meetings during Draft EIR Public Review: Informational Workshop and Public Hearing

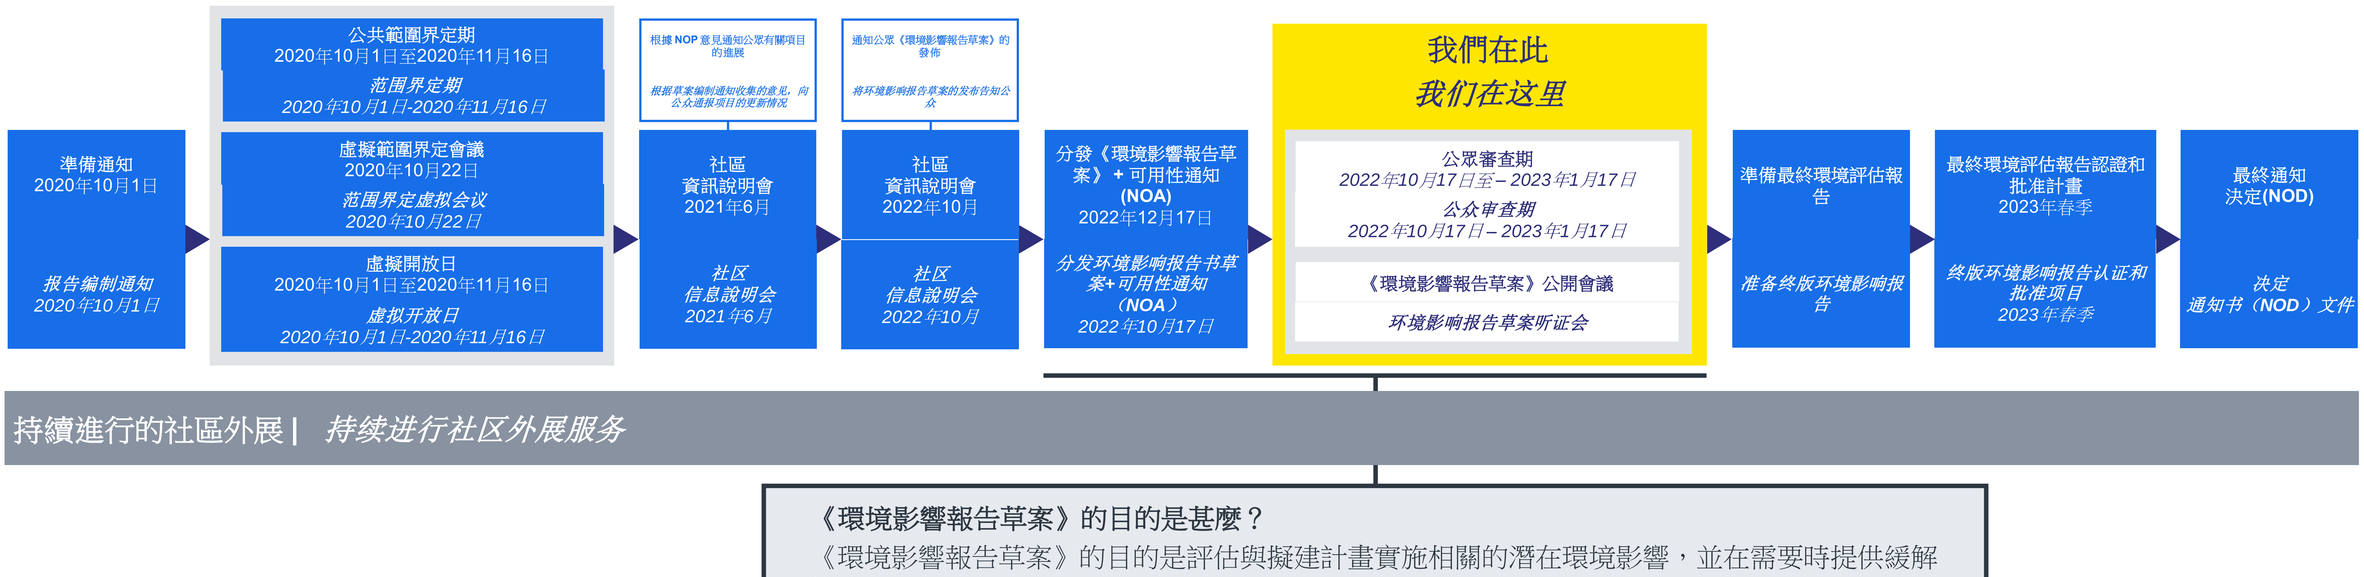
PROCESO DE LA CEQA

- *Esto se requiere para todos los proyectos emprendidos, financiados o que requieran la aprobación de un organismo público*
- *Informa al público y a los responsables de la toma de decisiones*
- *Revela los posibles impactos ambientales resultantes de un proyecto propuesto*
- *Da la oportunidad de hacer comentarios sobre cuestiones ambientales*
- *Dos periodos de comentarios del público: Periodo de Alcance Público y Revisión Pública del Borrador del EIR*
- *SB 44 requiere 2 reuniones públicas durante la Revisión Pública del Borrador del EIR: Taller Informativo y Audiencia Pública*

Metro

加州環境品質法案(CEQA)程序及時間線
《加州环境质量法案》（CEQA）流程及时间线

加州環境品質法案(CEQA)概覽及時間線 | 《加州环境质量法案》（CEQA）概览及时间线



《環境影響報告草案》的目的是甚麼？

《環境影響報告草案》的目的是評估與擬建計畫實施相關的潛在環境影響，並在需要時提供緩解措施

环境影响报告的目的是什么？

环境影响报告草案的目的是对实施拟建项目的有关潜在环境影响进行评估，并在必要时采取缓解措施。

加州環境品質法案(CEQA)程序

- 要求公共機構承擔、資助或需要批准的所有計畫
- 通知公眾和決策者
- 披露擬建計畫會產生的潛在環境影響
- 提供對環境問題發表評論的機會
- 兩個公眾意見咨詢期：(1) 公共範圍界定期和 (2)《環境影響報告草案》公眾審查
- SB 44 需要在《環境影響報告草案》公開評論期間召開兩次公開會議：資訊說明會與公眾聽證會

《加州环境质量法案》（CEQA）流程

- *所有由公共机构承办、资助或须由公共机构批准的项目概须*
- *告知公众和决策者*
- *披露拟建项目可能造成的环境影响*
- *提供对环境问题发表意见的机会*
- *两个公众评议期：公众范围界定期以及报告草案公众审查期*
- *SB 44 号法案要求在环境影响报告草案的公众审查期间举行两次公众会议：信息说明会与公众听证会*

Metro

Summary of Impacts

Topic	No Impact	Less Than Significant	Less Than Significant with Mitigation	Significant and Unavoidable
Aesthetics	• Scenic Resources (Construction and Operations)	• Scenic Vista (Construction and Operations) • Visual Character (Construction and Operations) • Light and Glare (Construction and Operations)		
Agriculture and Forestry	• Conversion of Farmland • Conflict with Forest Land Zoning • Loss of Forest Land • Agricultural Use	• Agricultural Zoning and Williamson Act		
Air Quality		• Air Quality Plans (s/b Standards) • Increase Air Pollutants • Sensitive Receptors • Other Emissions		
Biological Resources	• Riparian Habitat • Protected Wetlands • Biological Plans or Policies (Operations)	• Habitat Modifications (Operations) • Biological Plans or Policies (Construction) • Interfere with Species Movement (Operations)	• Habitat Modifications (Construction) • Interfere with Species Movement (Construction)	
Cultural Resources	• Archaeological Resource (Operations) • Disturb Human Remains (Operations)	• Historical Resource (Operations)	• Historical Resource (Construction) • Archaeological Resource (Construction) • Disturb Human Remains (Construction)	
Energy		• Wasteful, Inefficient or Unnecessary Consumption (Construction and Operations) • State or Local Energy Plans (Construction and Operations)		
Geology and Soils	• Support Wastewater Systems (Construction and Operations) • Destroy Unique Paleontological or Geologic Features (Operations)	• Adverse Effects: Earthquakes, Seismic-Related Ground Shaking, Liquefaction or Landslides (Operations) • Soil Erosion/Loss of Topsoil (Construction and Operations) • Unstable Geologic Unit or Soil (Operations) • Expansive soil (Operations)	• Adverse Effects: Earthquakes, Seismic-Related Ground Shaking, Liquefaction or Landslides (Construction) • Destroy Unique Paleontological or Geologic Features (Construction) • Unstable Geologic Unit or Soil (Construction) • Expansive soil (Construction)	
Greenhouse Gas Emissions (GHGs)		• Generate GHGs (Construction and Operations) • GHG Reduction Plans or Policies (Construction and Operations)		
Hazards and Hazardous Materials	• Hazardous Sites (Operations) • Airport Land Use Plan (Construction and Operations)	• Hazard to Public or Environment (Operations) • Emergency and Evacuation Plans (Construction and Operations) • Hazards Near Schools (Operations)	• Hazardous Sites (Construction) • Hazard to Public or Environment (Construction) • Hazards Near Schools (Construction)	
Hydrology and Water Quality	• Decrease Groundwater Supply (Operations)	• Decrease Groundwater Supply (Construction) • Water Quality Standards or Plans (Construction and Operations) • Alter Drainage (Construction and Operations) • Flood, Tsunami or Seiche (Construction and Operations) • Conflict with Plans (Construction and Operations)		

Topic	No Impact	Less Than Significant	Less Than Significant with Mitigation	Significant and Unavoidable
Land Use and Planning	• Physically Divide Community (Operations)	• Physically Divide Community (Construction)	- Conflict with Land Use Plans or Policies (Construction and Operations)	
Mineral Resources	• Loss of Available Mineral Resources (Construction and Operations)			
Noise	• Expose Public Near Airport (Construction and Operations)	• Generation or Increase in Ambient Noise Levels (Operations) • Generation of Excessive Vibration or Noise Levels (Operations)		• Generation or Increase in Ambient Noise Levels (Construction) • Generation of Excessive Vibration or Noise Levels (Construction)
Population and Housing		• Induce Unplanned Population Growth (Construction and Operations) • Displace People or Housing (Construction and Operations)		
Public Services		• Need for New or Altered Fire, Police, Schools, or other Public Services (Operations) • Service Ratios and Response Times (Operations)	• Need for New or Altered Fire, Police, Schools, or other Public Services (Construction) • Service Ratios and Response Times (Construction)	
Parks and Recreation		• Deterioration of a Public Facility (Construction and Operations) • Expansion of Recreational Facilities (Construction and Operations) • Service Ratios and Performance Objectives (Construction and Operations)		
Transportation	• Vehicle Miles Traveled (VMT) (Construction and Operations)	• Conflict with Plan or Policies (Construction and Operations)	• Increase Hazards through Design (Construction and Operations)	
Tribal Cultural Resources	Change to Tribal Cultural Resource (Operations)		• Change to Tribal Cultural Resource (Construction)	
Utilities and Service Systems		• Sufficient Water Supplies (Construction and Operations) • Demand and Capacity on Wastewater Systems (Construction and Operations) • Solid Waste Goals (Operations) • Relocation or Construction of Utilities (Operations)	• Solid Waste Goals (Construction) • Relocation or Construction of Utilities (Construction)	
Wildfire		• Impair Emergency or Evacuation Plans (Construction and Operations) • Exacerbate Wildfire Risks (Construction and Operations) • Installation/Maintenance of Infrastructure (Construction and Operations) • Expose People or Structures to Wildfire Risks (Construction and Operations)		

Resumen de los Impactos

Tema	Sin impacto	Menos que significativo	Menos que significativo con mitigación	Significativo e Inevitable
Estética	• Recursos Escénicos (Construcción y Operaciones)	• Vista Escénica (Construcción y Operaciones) • Carácter Visual (Construcción y Operaciones) • Luz y Deslumbramiento (Construcción y Operaciones)		
Agricultura y Silvicultura	• Conversión de Tierras Agrícolas • Conflicto con la Zonificación de Tierras Forestales • Pérdida de Tierras Forestales • Uso Agrícola	• Zonificación Agrícola y Ley Williamson		
Calidad del Aire		• Calidad del Aire Planes (s/b Normas) • Aumento de los Contaminantes del Aire • Receptores Sensibles • Otras Emisiones		
Recursos Biológicos	• Hábitat Ribereño • Humedales Protegidos • Políticas o Planes Biológicos (Operaciones)	• Modificaciones del Hábitat (Operaciones) • Políticas o Planes Biológicos (Construcción) • Interferencia en el Movimiento de las Especies (Operaciones)	• Modificaciones del Hábitat (Construcción) • Interferencia en el Movimiento de las Especies (Construcción)	
Recursos Culturales	• Recursos Arqueológicos (Operaciones) • Alteración de Restos Humanos (Operaciones)	• Recurso Histórico (Operaciones)	• Recurso Histórico (Construcción) • Recurso Arqueológico (Construcción) • Alteración de Restos Humanos (Construcción)	
Energía		• Consumo Innecesario, Ineficaz o Derrochador (Construcción y Operaciones) • Planes Energéticos Estatales o Locales (Construcción y Operaciones)		
Geología y Suelos	• Apoyo a los Sistemas de Aguas Residuales (Construcción y Operaciones) • Destrucción de Características Paleontológicas o Geológicas Únicas (Operaciones)	• Efectos Adversos: Terremotos, Sacudidas Sísmicas del Terreno, Licuefacción o Deslizamientos de Tierra (Operaciones) • Erosión del Suelo/Pérdida De La Capa Superior (Construcción y Operaciones) • Unidad Geológica o Suelo Inestable (Operaciones) • Suelo Expansivo (Operaciones)	• Efectos Adversos: Terremotos, sacudidas sísmicas del suelo, licuefacción o deslizamientos de tierra (Construcción) • Destrucción de Características Geológicas o Paleontológicas Únicas (Construcción) • Suelo o Unidad Geológica Inestable (Construcción) • Suelo Expansivo (Construcción)	
Emisiones de Gases de Efecto Invernadero (GEI)		• Generación de GEI (Construcción y Operaciones) • Políticas o Planes de Reducción de GEI (Construcción y Operaciones)		
Peligros y Materiales Peligrosos	• Sitios Peligrosos (Operaciones) • Plan de Uso de Suelo del Aeropuerto (Construcción y Operaciones)	• Peligro para el Público o el Medio Ambiente (Operaciones) • Planes de Emergencia y Evacuación (Construcción y Operaciones) • Peligros cerca de Escuelas (Operaciones)	• Sitios Peligrosos (Construcción) • Peligros para el Público o el Medio Ambiente (Construcción) • Peligros cerca de Escuelas (Construcción)	
Hidrología y Calidad del Agua	• Reducción del Suministro de Agua Subterránea (Operaciones)	• Reducción del Suministro de Agua Subterránea (Construcción) • Planes o Normas de Calidad del Agua (Construcción y Operaciones) • Alteración del Drenaje (Construcción y Operaciones) • Inundación, Tsunami u Oscilaciones de Agua (Construcción y Operaciones) • Conflicto con Planes (Construcción y Operaciones)		

Tema	Sin impacto	Menos que significativo	Menos que significativo con mitigación	Significativo e Inevitable
Planificación y Uso de la Tierra	• División Física de la Comunidad (Operaciones)	• División Física de la Comunidad (Construcción)	- Conflicto con Políticas o Planes de Uso de la Tierra (Construcción y Operaciones)	
Recursos Minerales	• Pérdida de Recursos Minerales Disponibles (Construcción y Operaciones)			
Ruido	• Exposición al Público cerca del Aeropuerto (Construcción y Operaciones)	• Generación o Aumento de los Niveles de Ruido Ambiental (Operaciones) • Generación de Niveles Excesivos de Vibración o Ruido (Operaciones)		• Generación o Aumento de los Niveles de Ruido Ambiental (Construcción) • Generación de Niveles Excesivos de Vibración o Ruido (Construcción)
Población y Vivienda		• Inducir un Crecimiento Demográfico No Planificado (Construcción y Operaciones) • Desplazamiento de Personas Viviendas (Construcción y Operaciones)		
Servicios Públicos		• Necesidad de Servicios de Bomberos, Policía, Escuelas u Otros Servicios Públicos que Sean Nuevos o Modificados (Operaciones) • Tasas de Servicio y Tiempos de Respuesta (Operaciones)	• Necesidad de Servicios de Bomberos, Policía, Escuelas u Otros Servicios Públicos que Sean Nuevos o Modificados (Construcción) • Tasas de Servicio y Tiempos de Respuesta (Construcción)	
Parques y Recreación		• Deterioro de una Instalación Pública (Construcción y Operaciones) • Ampliación de las Instalaciones Recreativas (Construcción y Operaciones) • Tasas de Servicio y Objetivos de Rendimiento (Construcción y Operaciones)		
Transporte	• Millas Viajadas en Vehículos (VMT) (Construcción y Operaciones)	• Conflicto con Planes o Políticas (Construcción y Operaciones)	• Riesgos que Aumentan a Través del Diseño (Construcción y Operaciones)	
Recursos Culturales Tribales	Cambio a los Recursos Culturales Tribales (Operaciones)		• Cambio a los Recursos Culturales Tribales (Construcción)	
Sistemas de Servicios y Servicios Públicos		• Suministro de Agua Suficiente (Construcción y Operaciones) • Demanda y Capacidad de los Sistemas de Aguas Residuales (Construcción y Operaciones) • Objetivos en Materia de Residuos Sólidos (Operaciones) • Reubicación o Construcción de Servicios Públicos (Operaciones)	• Objetivos en Materia de Residuos Sólidos (Construcción) • Reubicación o Construcción de Servicios Públicos (Construcción)	
Incendios Forestales		• Dificultar los Planes de Emergencia o Evacuación (Construcción y Operaciones) • Exacerbar los Riesgos de Incendios Forestales (Construcción y Operaciones) • Instalción/Mantenimiento de Infraestructura (Construcción y Operaciones) • Exponer a Personas o Estructuras a Riesgos de Incendios Forestales (Construcción y Operaciones)		

Metro

影響總結

主題	沒有影響。	影響不大。	經緩解後影響不大。	嚴重且不能避免。
美學	• 景觀資源 (工程與營運)	• 優美景觀 (工程與營運) • 視覺特徵 (工程與營運) • 光線與強光 (工程與營運)		
農林資源	• 耕地轉用 • 與林地區劃衝突 • 喪失林地 • 農業用途	• 農業區劃及威廉姆森法案		
空氣質量		• 空氣質量計劃 (s/b 級別) • 增加空氣污染物 • 敏感受體 • 其他排放物		
生物資源	• 河岸棲息地 • 受保育濕地 • 生物計劃或政策（營運）	• 改變棲息地（營運） • 生物計劃或政策（工程） • 干擾物種移動（營運）	• 改變棲息地（工程） • 干擾物種移動（營運）	
文化資源	• 考古資源（營運） • 干擾人類遺骸（營運）	• 歷史資源（營運）	• 歷史資源（工程） • 考古資源（工程） • 干擾人類遺骸（工程）	
能源		• 浪費、低效或不必要的用途（工程與營運） • 州或地方能源計劃（工程與營運）		
地質和土壤	• 污水支援系統（工程與營運） • 破壞獨特的古生物或地質特徵（營運）	• 不良影響:地震、與地震相關的地面震動、液化或山泥傾瀉（營運） • 土壤侵蝕/表土流失（工程與營運） • 不穩定的地質單元或土壤（營運） • 膨脹土壤（營運）	• 不良影響:地震、與地震相關的地面震動、液化或山泥傾瀉（營運） • 破壞獨特的古生物或地質特徵（營運） • 不穩定的地質單元或土壤（營運） • 膨脹土壤（營運）	
溫室氣體排放		• 產生溫室氣體（工程與營運） • 溫室氣體減排計劃或政策（工程與營運）		
危害和有害物質	• 有害工地（營運） • 機場土地運用（工程與營運）	• 對公眾及環境有害（營運） • 應急及疏散計劃（工程與營運） • 學校附近的災害（營運）	• 有害工地（工程） • 對公眾及環境有害（工程） • 學校附近的災害（工程）	
水文和水質	• 減少地下水供應（營運）	• 減少地下水供應（工程） • 水質標准或計劃（工程與營運） • 改變排水（工程與營運） • 水浸、海嘯或塞切（工程與營運） • 與計劃衝突（工程與營運）		

主題	沒有影響。	影響不大。	經緩解後影響不大。	嚴重且不能避免。
土地利用和規劃	• 物理上劃分社區	• 工程（物理劃分社區）：	- 與土地使用計劃或政策衝突（工程和營運）	
礦物資源	• 損失可用礦物資源（工程和營運）			
噪音	• 公眾暴露於機場附近（工程和營運）	• 產生或增加噪音水平（營運） • 產生過度震動或噪音水平（營運）		• 產生或增加噪音水平（工程） • 產生過度震動或噪音水平（工程）
人口和住屋		• 導致計劃以外的人口增長（建設和營運） • 流浪者或住屋（建設和營運）		
公共服務		• 需要新的或改造的消防、警察、學校或其他公共服務 • 服務比率和響應時間	• 需要新的或改造的消防、警察、學校或其他公共服務 • 服務比率和響應時間(工程)	
公園和康樂設施		• 公共設施老化（工程和營運） • 擴建康樂設施（工程和營運） • 服務比率和績效目標（工程和營運）		
交通運輸	• 車輛行駛里程（VMT）（工程和營運）	• 與計劃或政策衝突（工程與營運）	• 設計令危險增加（工程與營運）	
部落文化資源	改變部落文化資源(營運)		• 改變部落文化資源(工程)	
公用事業和服務系統		• 充足供水（工程與營運） • 污水系統的需求與容量（工程與營運） • 固體廢物目標(營運) • **公用事業搬遷或建設(營運)**	• 固體廢物目標(工程) • 公用事業搬遷或建設(工程)	
野火		• 應急及疏散計劃（工程與營運） • 加劇野火風險（工程與營運） • 安裝/維護基建設施（工程與營運） • 公眾或結構暴露於野火風險之中（工程與營運）

影响总结

主题	无影响	影响不重大	采取缓解措施后无重大影响	有重大影响且不可避免
美学	• 风景资源（施工与运营）	• 自然风光（施工与运营） • 视觉特点（施工与运营） • 光线与眩光（施工与运营）		
农林资源	• 农田转换 • 与林地分区冲突 • 林地损失 • 农业用途	• 农业分区与威廉姆森法案		
空气质量		• 空气质量规划（s/b标准） • 空气污染物增多 • 敏感受体 • 其它排放		
生物资源	• 河边栖息地 • 受保护的湿地 • 生物计划或政策（运营）	• 栖息地改造（运营） • 生物计划或政策（施工） • 干扰物种移动（运营）	• 栖息地改造（施工） • 干扰物种移动（施工）	
文化资源	• 考古资源（运营） • 扰乱人类遗迹（运营）	• 历史资源（运营）	• 历史资源（施工） • 考古资源（施工） • 扰乱人类遗迹（施工）	
能源		• 浪费、低效或不必要的消费（施工与运营） • 国家和地方能源计划（施工与运营）		
地质和土壤	• 支持污水处理系统（施工与运营） • 破坏独特的古生物特征或地质特征（施工）	• 不利影响：地震、与地震有关的地面震动、土壤液化或山体滑坡(运营) • 土壤侵蚀/表土流失（施工和与运营） • 不稳定的地质单元和土壤（运营） • 膨胀性土壤（运营）	• 不利影响：地震、与地震有关的地面震动、土壤液化或山体滑坡(施工) • 破坏独特的古生物特征或地质特征（施工） • 不稳定的地质单元和土壤（运营） • 膨胀性土壤（施工）	
温室气体排放		• 产生温室气体（施工与运营） • 温室气体减排计划或政策（施工与运营）		
危害及危险物品	• 危险场所（运营） • 机场土地使用计划（施工与运营）	• 对公众或环境的危害（运营） • 应急和疏散计划（施工与运营） • 学校附近的危险（运营）	• 危险场所（施工） • 对公众或环境的危害（施工） • 学校附近的危险（施工）	
水文水质	• 减少地下水供应（运营）	• 减少地下水供应（施工） • 水质标准或计划（施工与运营） • 改变排水方式（施工与运营） • 洪水、海啸或假潮（施工与运营） • 与计划冲突（施工与运营）		

主题	无影响	影响不重大	采取缓解措施后无重大影响	有重大影响且不可避免
土地使用与规划	• 物理分隔社区（运营）	• 物理分隔社区（施工）	- 与土地使用规划或政策相冲突（施工与运营）	
矿产资源	• 可利用矿产资源的损失（施工与运营）			
噪音	• 机场附近的公开暴露（施工与运营）	• 产生或增加环境噪音水平（运营） • 产生超标的振动或噪音水平（运营）		• 产生或增加环境噪音水平（施工） • 产生超标的振动或噪音水平（施工）
人口与住房		• 导致计划外的人口增长（施工与运营） • 迁移人口或住房（施工与运营）		
公共服务		• 需要新建或改建消防站、警察局、学校或其它公共服务设施（运营） • 服务比率和响应时间（运营）	• 需要新建或改建消防站、警察局、学校或其它公共服务设施（施工） • 服务比率和响应时间（施工）	
公园与休闲局		• 一项公共设施的损坏（施工与运营） • 扩建休闲设施（施工与运营） • 服务比率和绩效目标（施工与运营）		
交通运输	• 行车里程（VMT）（施工与运营）	• 与规划或政策相冲突（施工与运营）	• 设计导致危险性增加（施工与运营）	
部落文化资源	对部落文化资源的改变（运营）		• 对部落文化资源的改变（施工）	
公用事业和服务系统		• 充足供水（施工与运营） • 污水处理系统的需求及容量（施工与运营） • 固体废弃物目标（运营） • 搬迁或建造公用事业设施（运营）	• 固体废弃物目标（施工） • 搬迁或建造公用事业设施（施工）	
野火		• 损害应急或疏散计划（施工与运营） • 加剧野火风险（施工与运营） • 基础设施的安装/维护（施工与运营） • 使人们或建筑物面临野火风险（施工与运营）		

Metro

Project Description

Descripción del Proyecto

PROJECT LOCATION AND ALIGNMENT

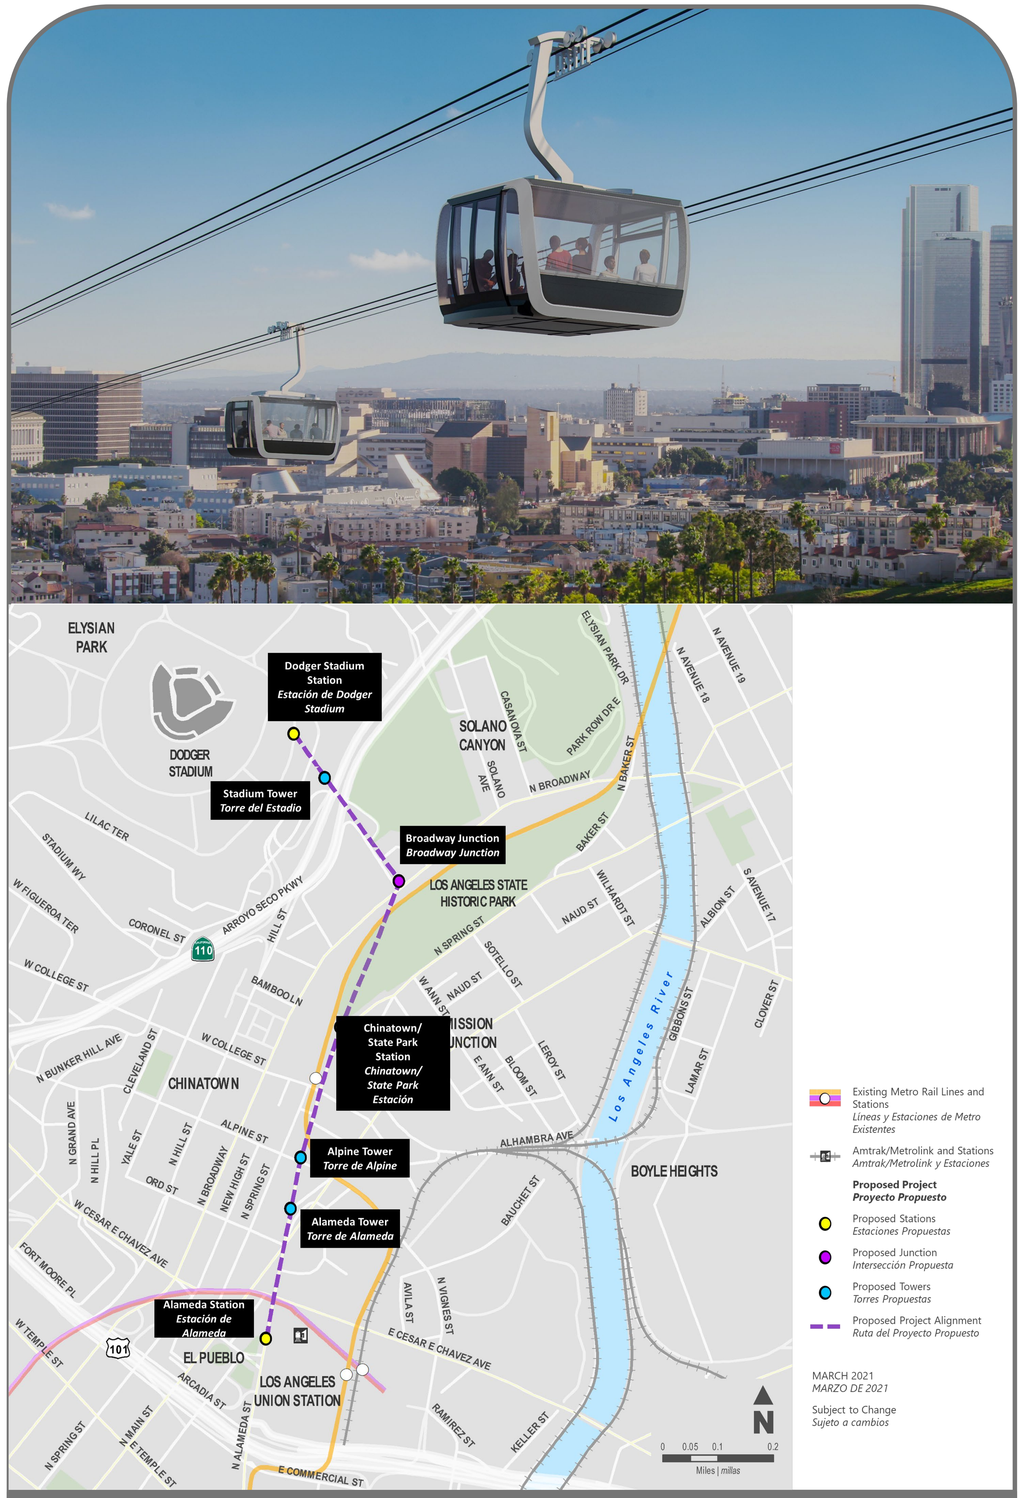
- The Project would commence adjacent to Union Station and El Pueblo and terminate at Dodger Stadium, with an intermediate station at the southernmost entrance to the Los Angeles State Historic Park
- The proposed Project alignment maximizes alignment along the public ROW and publicly owned property and minimizes aerial rights over private properties, taking into account existing and future adjacent land uses

PURPOSE AND NEED

- Provide a direct transit connection from Los Angeles Union Station (LAUS) to the Dodger Stadium property via an aerial gondola system
- Connect surrounding communities of Chinatown, Mission Junction, Los Angeles State Historic Park, Elysian Park, Echo Park, and Solano Canyon to the regional transit system accessible at Union Station
- Improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the regional transit system at LAUS
- Provide a mobility hub at the Chinatown/State Park Station
- Provide a sustainable form of transit by operating the ART system with the use of zero emission electricity with battery storage backup in order to reduce GHG emissions and improve air quality

PROJECT OVERVIEW

- Provide a permanent transit connection from Los Angeles Union Station (LAUS) to the Dodger Stadium property via a 1.2-mile aerial gondola system
- Travel time from LAUS to Dodger Stadium would be approximately 7 minutes
- Capacity of approximately 5,000 people per hour per direction
- Operate daily to serve existing residents, workers, park users, and visitors to Los Angeles
- Provide access to the Los Angeles State Historic Park and surrounding communities via the intermediate Chinatown/State Park Station
- Zero emission, environmentally friendly rapid transit that would reduce GHG emissions as a result of reduced vehicle trips in and around Dodger Stadium and on neighborhood streets, arterial roadways, and freeways



Project location and alignment

Ruta y ubicación del proyecto

RUTA Y UBICACIÓN DEL PROYECTO

- *El proyecto comenzaría junto a Union Station y El Pueblo, y terminaría en el Dodger Stadium, con una estación intermedia en la entrada que está más al sur del Los Angeles State Historic Park.*
- *La ruta propuesta del proyecto maximiza la ruta a lo largo del derecho de paso (ROW) público y la propiedad pública y minimiza los derechos aéreos sobre las propiedades privadas, teniendo en cuenta los usos de la tierra adyacentes existentes y futuros*

PROPÓSITO Y NECESIDAD

- *Proporcionar una conexión de transporte directa desde la estación Los Angeles Union Station (LAUS) hasta la propiedad del Dodger Stadium a través de un sistema de góndolas aéreas*
- *Conectar las comunidades circundantes de Chinatown, Mission Junction, Los Angeles State Historic Park, Elysian Park, Echo Park y Solano Canyon con el sistema de transporte regional accesible en Union Station*
- *Mejorar la movilidad y la accesibilidad en la región proporcionando una conexión diaria de transporte rápido aéreo de alta capacidad entre el sistema de tránsito regional en LAUS*
- *Proporcionar un centro de movilidad en la Estación de Chinatown/State Park*
- *Proporcionar un medio de transporte sostenible al operar el sistema ART usando electricidad de cero emisiones con almacenamiento de baterías de respaldo a fin de reducir las emisiones de GEI y mejorar la calidad del aire*

GENERALIDADES DEL PROYECTO

- *Proporciona una conexión de transporte permanente desde la estación Los Angeles Union Station (LAUS) hasta la propiedad del Dodger Stadium a través de un sistema de góndolas aéreas de 1.2 millas (1.9 km)*
- *El tiempo de traslado desde la estación LAUS hasta el Dodger Stadium sería de aproximadamente 7 minutos*
- *Capacidad de aproximadamente 5,000 personas por hora y por dirección*
- *Funcionamiento diario para dar servicio a los residentes, trabajadores, usuarios del parque y visitantes de Los Ángeles*
- *Da acceso al Los Angeles State Historic Park y a las comunidades circundantes a través de la estación intermedia de Chinatown/State Park*
- *Transporte rápido de cero emisiones, respetuoso del medio ambiente, el cual reduciría las emisiones de GEI al reducir los desplazamientos de vehículos en el Dodger Stadium y sus alrededores, así como en las calles de los barrios, las vías arteriales y las autopistas cercanas*

Metro

計畫介紹:

项目描述

計畫位置和路線

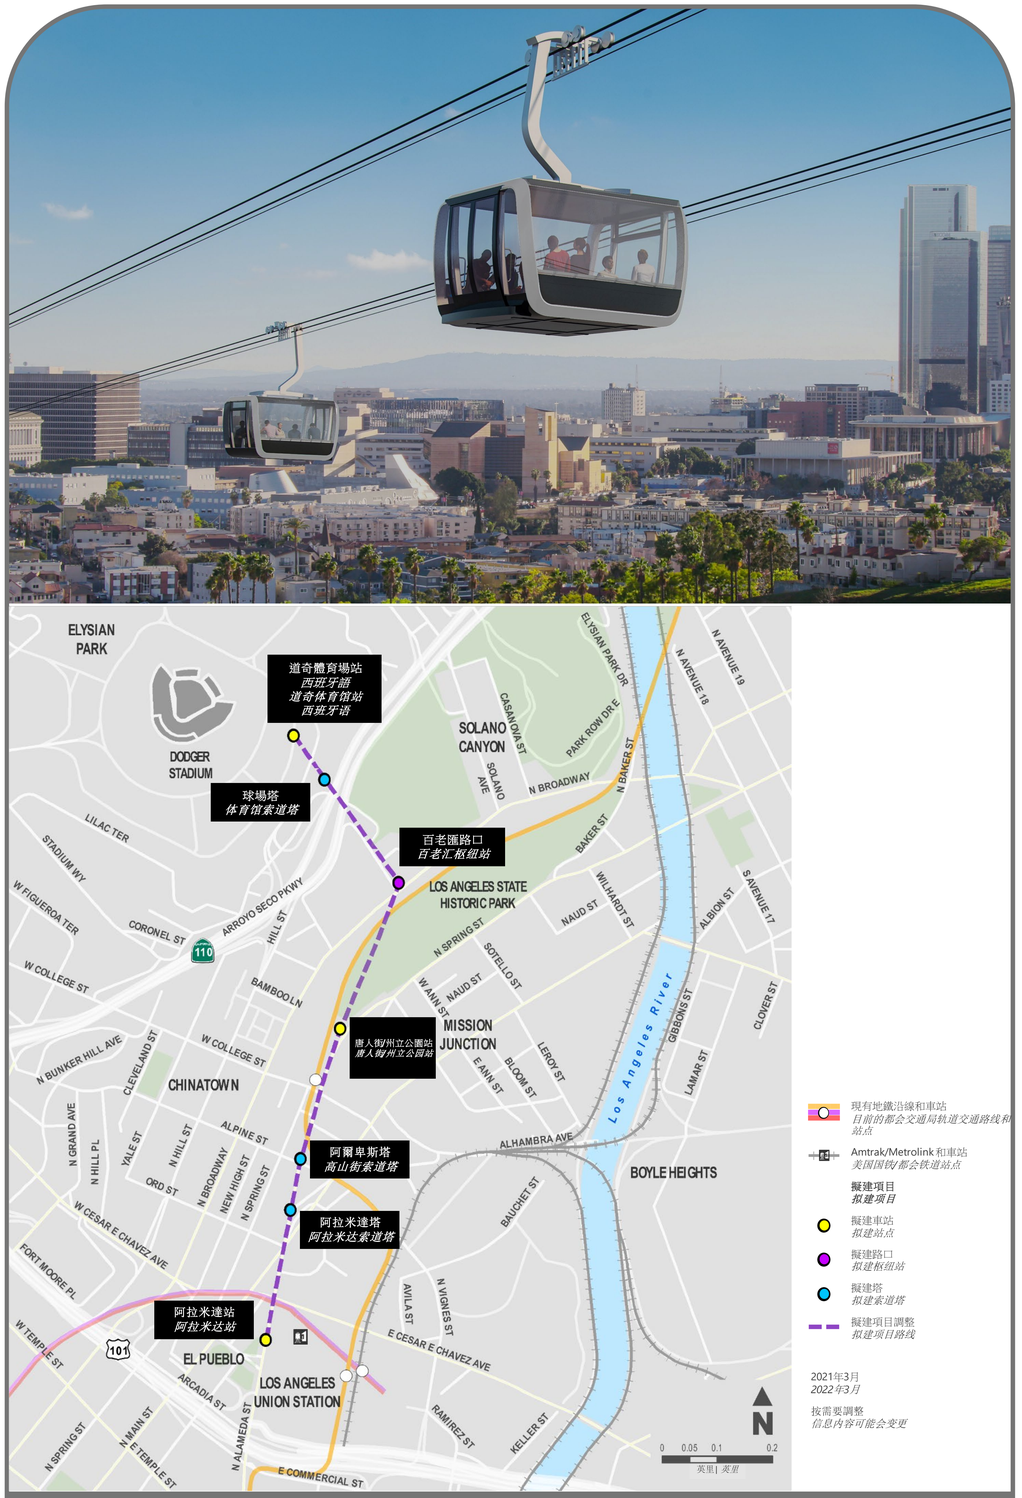
- 該計畫將在洛杉磯聯合車站和洛杉磯古城附近開始，並在道奇體育場結束，在洛杉磯州立歷史公園最南端的入口處設有一個中轉站
- 擬建計畫目路線最大限度地維護公共可行使通行權（ROW）和公有財產，以及減少使用在私人財產上空的空中權利，同時也考慮現有和未來的鄰近土地用途

目的及需要

- 透過空中快速纜車系統能提供從洛杉磯聯合車站 (LAUS) 到道奇體育場的永久交通連接
- 將唐人街、Mission Junction、伊利森公園(Elysian Park)、迴聲公園(Echo Park)和索拉諾郡峽谷(Solano Canyon)的周邊社區連接到聯合車站可到達的區域交通系統
- 透過在洛杉磯聯合車站 (LAUS) 的區域交通系統，每日提供高容量的空中快速交通，從而提高該地區的流動性和可達性
- 為唐人街/州立公園站提供交通樞紐
- 空中快速纜車系統提供一個可持續的交通方式，系統採用零排放電力和備用電池，以減少溫室氣體排放並改善空氣質量

計畫目概述

- 透過 1.2 公里的空中快速纜車系統能提供從洛杉磯聯合車站 (LAUS) 到道奇體育場的永久交通連接
- 從洛杉磯聯合車站到道奇體育場的行車時間約為7分鐘
- 每個方向每小時可容納約5,000人次
- 每天運作，為洛杉磯的現有居民、工人、公園用戶和遊客提供服務
- 透過中間的唐人街/州立公園站提供前往洛杉磯州立歷史公園和周邊社區的通道
- 零排放、環保的空中快速纜車，由於減少了道奇體育場內和周圍以及附近街道、主幹道和高速公路上的車輛出行，將減少溫室氣體排放



計畫位置和路線 *项目位置和路线*

项目位置和路线

- *本项目将以洛杉矶联合车站和洛杉矶古城(El Pueblo)附近为起点，以道奇体育馆为终点，还有一个中间站位于洛杉矶州立历史公园最南门入口处*
- *拟建的项目路线尽可能沿着公共通行权（ROW）和公有财产，并尽可能减少使用在私人财产上空的空中权利，同时考虑到现有和未来的邻近土地用途*

目的和需求

- *通过空中缆车系统提供从洛杉矶联合车站（LAUS）到道奇体育馆的直接交通连接*
- *连接包括唐人街、Mission Junction社区、洛杉矶州立历史公园、伊利森公园、回音（Echo）公园和索拉诺（Solano）峡谷的周边社区与联合车站的区域交通系统*
- *通过在洛杉矶联合车站的区域交通系统之间提供日常的高运力空中快捷交通连接，改善该地区的流动性和可及性*
- *在唐人街/州立公园站提供交通转换点*
- *通过空中快捷交通系统，使用零排放的电力和蓄电池，提供具有可持续性的交通方式，以减少温室气体排放及改善空气质量*

项目概况

- *通过延续1.2英里的空中缆车系统，提供从洛杉矶联合车站到道奇体育馆物业的永久性交通连接*
- *从洛杉矶联合车站到道奇体育馆的旅程约为7分钟*
- *运力为每个方向每小时约5,000人次*
- *拟建项目将每天运作，为现有居民、上班族、公园使用者和洛杉矶的访客提供服务*
- *可通过中间的唐人街/州立公园站，前往洛杉矶州立历史公园和周边社区*
- *零排放、环保的快捷交通系统，由于减少了道奇体育馆内和周围以及附近街道、主要干道和高速公路上的车辆出行，所以将减少温室气体排放*

Metro

Project Description – Stations

Descripción del Proyecto – Estaciones

ALAMEDA STATION

- On Alameda Street adjacent to the planned LAUS Forecourt and Placita de Dolores between Los Angeles Street and Cesar Chavez Avenue
- Station would be approximately 173 feet long, 109 feet wide, and 78 feet high at its tallest point
- Passenger loading platform would be approximately 31 feet above Alameda Street
- Vertical circulation would be introduced on the north of the Placita de Dolores in a proposed new pedestrian plaza at El Pueblo and on the east from the planned LAUS Forecourt

ESTACIÓN ALAMEDA

- *En Alameda Street, junto a la explanada planeada de LAUS y la Placita de Dolores, entre Los Angeles Street y Cesar Chavez Avenue*
- *Esta estación tendría aproximadamente 173 pies (52 m) de largo, 109 pies (33 m) de ancho y 78 pies (24 m) de alto en su punto más alto.*
- *El andén de abordaje de pasajeros estaría aproximadamente a 31 pies (9.5 m) sobre la calle Alameda Street*
- *La circulación vertical se introduciría al norte de la Placita de Dolores, en una nueva plaza peatonal propuesta en El Pueblo y en el este desde la zona prevista de la explanada de LAUS*

CHINATOWN/STATE PARK STATION

- Adjacent to Spring Street in the southernmost portion of the Los Angeles State Historic Park
- Southern portion would be located on City ROW, with northern portion integrated into the southern boundary of the Los Angeles State Historic Park
- Station would be approximately 200 feet long, 80 feet wide, and 98 feet tall at its tallest point
- Passenger boarding platform approximately 50 feet above-grade
- Access to the boarding platform would be from the mezzanine via elevators and stairs
- Would include the installation of landscaping and hardscaping, including integration of the granite pavers

ESTACIÓN CHINATOWN/STATE PARK

- *Adyacente a Spring Street, en la parte que está más al sur del parque Los Angeles State Historic Park.*
- *La parte sur de la estación se situaría en el derecho de paso de la Ciudad, con la parte norte integrada al límite sur del Los Angeles State Historic Park.*
- *La estación tendría aproximadamente 200 pies (61 m) de largo, 80 pies (24 m) de ancho y 98 pies (30 m) de alto en su punto más alto.*
- *El andén de abordaje de pasajeros estaría aproximadamente a 50 pies (15 m) sobre el nivel del suelo*
- *El acceso al andén de abordaje se realizaría desde el entrepiso, mediante ascensores y escaleras*
- *Incluiría la creación de jardines e instalaciones, incluyendo la integración de los adoquines de granito*

DODGER STADIUM STATION

- Southeast portion of the Dodger Stadium property near the Downtown Gate
- Station would be approximately 194 feet long, 80 feet wide, and 74 feet high at its tallest point
- Cabins at this station would arrive and depart from an at-grade boarding platform, with the passenger queuing area also at-grade
- Would include a subterranean area below the platform for storage and maintenance of cabins, as well as staff break rooms, lockers, and parts storage areas
  - Cabins would be returned to and stored at Dodger Stadium Station when the system is not in use (after hours)
- Restrooms for passenger use would be located at the station
- Dodger Stadium Station would also include a pedestrian connection to Dodger Stadium, including hardscape and landscape improvements and potential seating

ESTACIÓN DODGER STADIUM

- *Parte sureste de la propiedad del Dodger Stadium, cerca de la entrada Downtown Gate*
- *La estación tendría aproximadamente 194 pies (59 m) de largo, 80 pies (24 m) de ancho y 74 pies (23 m) de alto en su punto más alto*
- *Las cabinas de esta estación llegarían y saldrían de un andén de abordaje a nivel, con la zona de cola de pasajeros también a nivel*
- *Incluiría una zona subterránea bajo el andén para el almacenamiento y el mantenimiento de las cabinas, así como salas de descanso para el personal, taquillas y zonas de almacenamiento de repuestos*
  - *Cuando el sistema no esté en uso, las cabinas se devolverían a la Estación Dodger Stadium y ahí se almacenarían (en las horas en las que no operarían)*
- *Los baños para uso de los pasajeros estarían en la estación*
- *La Estación Dodger Stadium también incluiría una conexión peatonal con el Dodger Stadium, incluyendo mejoras paisajísticas y de las instalaciones, así como posibles asientos*

Metro

計畫描述 - 車站

项目描述 - 车站

阿拉米達站

- 阿拉米達站將位於阿拉米達街，毗鄰計劃中的洛杉磯大學前院和洛杉磯街與塞薩爾查韋斯大道之間的加利福尼亞洛杉磯的公園(Placita de Dolores)。
- 該站大約長194英尺，寬80英尺，最高點高74英尺。
- 上下客平台高度約為阿拉米達街上方 31 英尺處
- El Pueblo 擬建的新步行廣場位於Placita de Dolores 以北，該處與洛杉磯聯合車站(LAUS)前院以東位置將計劃引入垂直流通設備

阿拉米达站

- *阿拉米达站将位于阿拉米达街，与计划中的联合车站前广场和洛杉矶街与塞萨尔查韦斯大道之间的Placita de Dolores相邻*
- *车站大约将有173英尺长，109英尺宽，最高点离地面78英尺*
- *乘车平台将高出阿拉米达街约31英尺*
- *将从Placita de Dolores的北部、在洛杉矶古城的拟建的新行人广场上引入垂直流通设施，东边是规划中的联合车站前广场*

唐人街/州立公園站

- 毗鄰洛杉磯州立歷史公園最南端的春天街南部將位於城市通行道路上，北部與洛杉磯州立歷史公園的南部邊界結合
- 該站大約長194英尺，寬80英尺，最高點高74英尺
- 乘客月台比地面高約 50 英尺
- 透過電梯和樓梯從夾層進入月台
- 將包括安裝景觀美化和人工景觀美化，包括整合花崗岩攤舖機

唐人街/州立公园站

- *车站将位于洛杉矶州立历史公园最南端的春天街附近*
- *车站的南半部分将位于公共通行权范围，而北半部分将与洛杉矶州立历史公园的南部边界融为一体*
- *车站将有大约200英尺长，80英尺宽，最高点离地面98英尺*
- *乘车平台高出地面约50英尺*
- *通过电梯和楼梯，可以从中层楼进入乘客站台*
- *将包括安装自然景观以及硬景观，包括使用花岗岩铺面*

道奇體育場站

- 道奇體育場東南部,近市中心入口大門
- 該站大約長194英尺，寬80英尺，最高點高74英尺。
- 該站的列車將在同一鐵道上的月月台到達和離開，乘客排隊等候區也在同一鐵道上。
- 道奇體育場站將包括平台下方的地下區域，用於儲存和維護車廂，以及成為員工休息室、儲物櫃和零件儲存區。
  - 當系統不在使用時，車廂將被送回並存放在道奇體育場站。
- 站內設有供乘客使用的洗手間。
- 道奇體育場站還將包括與道奇體育場的行人連接道，包括人工景觀和自然景觀改善以及潛在的座位。

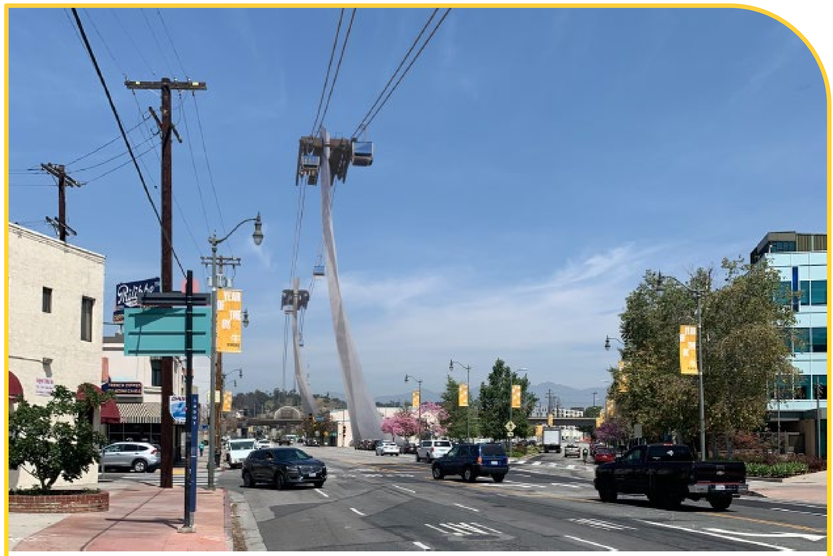
道奇体育馆站

- *位于道奇体育馆物业西南部分，靠近市中心的大门处*
- *车站大约将有194英尺长，80英尺宽，最高点离地面74英尺*
- *在该站的缆车车厢将在同一水平面上让乘客抵达和离开，乘客排队等候区也在同一水平面*
- *车站将包括站台下方的地下区域，用于储存和维护缆车车厢，以及用作工作人员的休息室、储物柜和零件储存区*
  - *当系统不使用时（运营时间结束后），缆车车厢将返回道奇体育馆站并存放在该站*
- *供乘客使用的洗手间将设在车站内*
- *道奇体育馆站还将包括通往道奇体育馆的步行通道，包括硬景观和自然景观美化措施以及增加潜在的座位*

Metro

Project Description – Towers and Junction

Descripción del Proyecto – Torres e Intersección



ALAMEDA TOWER

- Located on the Alameda Triangle, a City ROW between Alameda Street, North Main Street, and Alhambra Avenue
- 195 feet tall with the cable suspended 175 feet above ground
- Landscape and hardscape updates to the Alameda Triangle, including reuse and integration of existing pavers

TORRE ALAMEDA

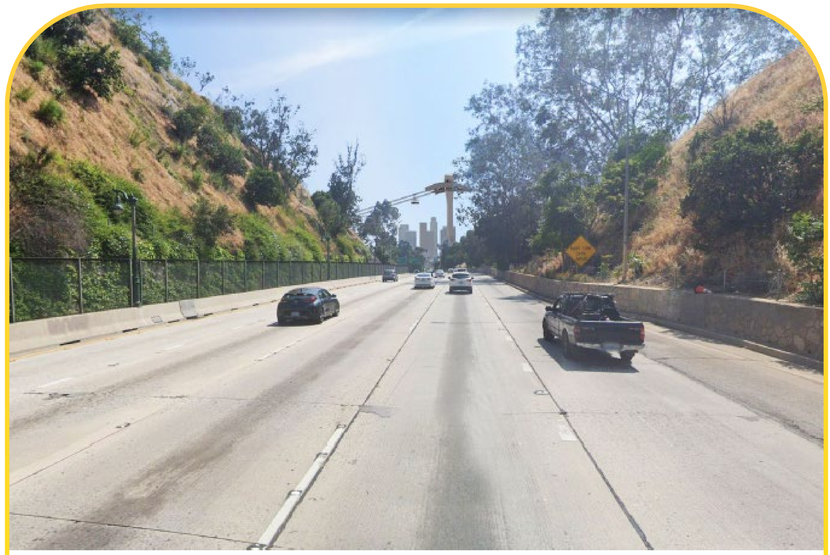
- *Situada en el Triángulo de la Alameda, un derecho de paso de la Ciudad entre Alameda Street, North Main Street y Alhambra Avenue*
- *195 pies (59 m) de altura y el cable estaría suspendido a 175 pies (53 m) sobre el suelo*
- *Actualizaciones del paisaje y las instalaciones del Triángulo de la Alameda, incluyendo la reutilización e integración de los adoquines existentes*

ALPINE TOWER

- Located northeast corner of Alameda Street and Alpine Street, adjacent to the Metro L Line (Gold)
- Site is City-owned parcel, currently being used as non-public parking storage for City vehicles
- 195 feet tall at tallest point, with the cable suspended 175 feet above ground
- Landscaping and hardscaping near the base of the tower

TORRE ALPINE

- *Situada en la esquina noreste de Alameda Street y Alpine Street, junto a la Línea L del Metro (Dorada)*
- *Es un terreno propiedad de la Ciudad, que actualmente se utiliza como estacionamiento no público para vehículos de la Ciudad.*
- *195 pies (59 m) de altura en el punto más alto y el cable estaría suspendido a 175 pies (53 m) sobre el suelo*
- *Paisajismo e instalaciones cerca de la base de la torre*

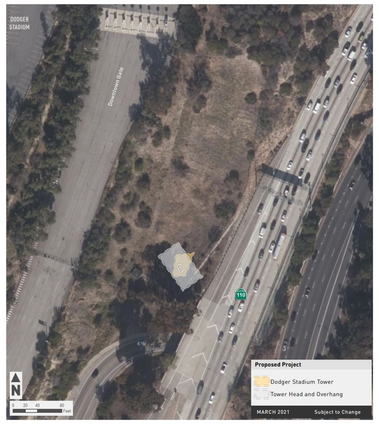


STADIUM TOWER

- Located on hillside private property north of Stadium Way between the Dodger Stadium Downtown Gate and SR-110
- 179 feet tall with the cable suspended 159 feet above-ground with landscaping near the base of the tower

TORRE DEL ESTADIO

- *Ubicada en una propiedad privada al norte de Stadium Way, entre la entrada del Dodger Stadium Downtown Gate y la SR-110.*
- *179 pies (55 m) de altura con el cable suspendido 159 pies (48 m) por encima del suelo y con jardines cerca de la base de la torre*



BROADWAY JUNCTION

- Non-passenger junction that would be located at the intersection of North Broadway and Bishops Road
- Existing commercial building located at 1201 N. Broadway would be demolished
- Junction approximately 227 feet long, 60 feet wide, and 98 feet high at tallest point

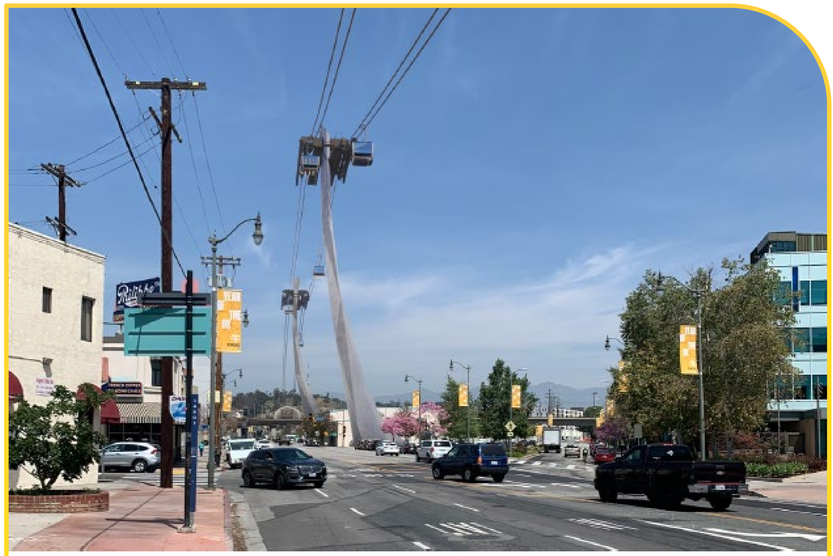
INTERSECCIÓN BROADWAY

- *Intersección o entronque que no es para pasajeros y que estaría localizada donde se cruzan North Broadway y Bishops Road*
- *El edificio comercial existente situado en el 1201 de N. Broadway sería demolido*
- *La intersección tendría aproximadamente 227 pies (69 m) de largo, 60 pies (18 m) de ancho y 98 pies (30 m) de alto en su punto más alto.*

Metro

計畫描述 - 支撐塔和路口

项目描述 - 索道塔和枢纽站



阿拉米達塔

- 位於阿拉米達三角區，阿拉米達街、北大街和阿爾罕布拉大道之間的城市通行道路上
- 高 195 英尺，電纜懸掛於地面以上 175 英尺處
- 阿拉米達三角區的景觀和人工景觀更新，包括重用和整合現有攤舖機

阿拉米达索道塔

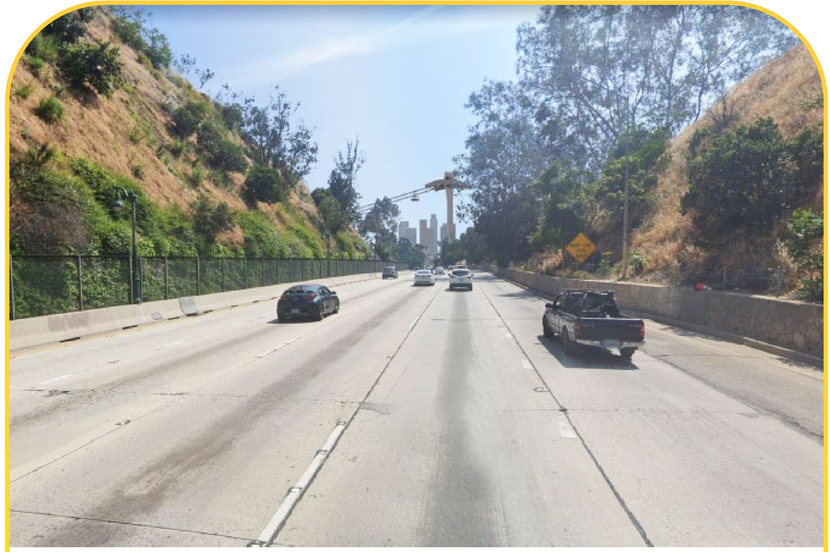
- *位于阿拉米达三角区，是阿拉米达街、北主街和阿罕布拉大道之间的公共通行权范围*
- *索道塔将有195英尺高，缆线悬挂在离地面175英尺处*
- *对阿拉米达三角带的自然景观和硬景观进行美化升级，包括重新使用和整合现有的路面铺面*

阿爾卑斯塔

- 位於阿拉米達街和阿爾卑斯街東北角，毗鄰地鐵L線（金）
- 地點屬城市擁有的地段，目前用作城市車輛的非公共停車場
- 最高點為 195 英尺，電纜懸空 175 英尺
- 塔底附近的景觀美化與人造景觀美化

高山街索道塔

- *位于阿拉米达街和高山街的东北角，与轻轨L线（金线）相邻*
- *该地块为市属地块，目前为城市车辆的非公共停车场*
- *索道塔最高点将为195英尺，缆线悬挂在离地面175英尺处*
- *索道塔附近的自然景观和硬景观美化*

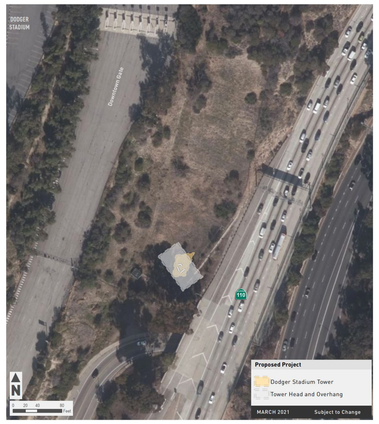


球場塔

- 位於道奇體育場市中心大門與 SR-110 之間的體育場路以北的私人物業的山坡上
- 高 179 英尺，電纜懸空 159 英尺，於塔底附近進行景觀美化

体育馆索道塔

- *位于体育馆路以北的山坡上的私人物业，夹在道奇体育馆市中心大门和SR-110州道之间*
- *高179英尺，缆线悬挂在距离地面159英尺处，塔底附近有景观*



百老匯路口

- 百老匯路口是一個非客運路口，將位於北百老匯和主教路的交匯處。
- 位於百老匯北部1201的現有商業大廈將被拆除。
- 路口約長 227 英尺，寬 60 英尺，最高點為 98 英尺

百老汇枢纽站

- *是一个非客运枢纽站，将位于北百老汇和主教路的交叉路口*
- *位于1201 N. 百老汇街的现有商业建筑将被拆除*
- *车站大约将有227英尺长，60英尺宽，最高点离地98英尺*

Metro

Aesthetics

Estética

WHAT WAS STUDIED?

- Visual impacts of Project components surrounding the Project alignment
- Key observation points representing visual character, including presence or absence of landscaping, predominant land uses, the scale of buildings, or the major scenic vistas, scenic resources, and substantive visual elements that are available, such as open space resources, street trees, and building frontages
- Viewers and viewer response, including pedestrians and recreationalists (e.g., park users)
- While there are no designated scenic vistas, views of the downtown Los Angeles skyline, Union Station, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium, and the San Gabriel and San Bernardino Mountains
- Light and glare

KEY ANALYSIS AND IMPACT CONCLUSIONS

- The proposed Project would not significantly block scenic or panoramic views, such as views of the downtown Los Angeles skyline, Union Station, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium, and the San Gabriel and San Bernardino Mountains
- With the proposed Project's entitlements and approvals – which would include design standards to enhance the visual identity and character of the proposed Project and its surrounding communities – there would not be a conflict with applicable zoning or other regulations governing scenic quality
- The proposed Project would not create a substantial source of light or glare and would comply with applicable City lighting regulations

Topic	Finding	
	Construction	Operations
Scenic Vista	Less Than Significant	Less Than Significant
Scenic Resources	No Impact	No Impact
Visual Character	Less Than Significant	Less Than Significant
Light and Glare	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

- Construction: Barriers and sound walls would include a privacy screen, and the Project would implement best management practices to reduce visual impacts. No mitigation is required.
- Operation: Project design features, including for building lighting and sign lighting. No mitigation is required.

Vista existente y simulación de vista hacia el norte en Alameda Street desde Main Street

¿QUÉ SE ESTUDIÓ?

- *Impactos visuales de los componentes del proyecto que rodean la ruta del proyecto*
- *Puntos de observación clave que representan el carácter visual, incluyendo la presencia o ausencia de jardines, los usos predominantes del suelo, la escala de los edificios o las principales vistas escénicas, los recursos escénicos y los elementos visuales sustanciales disponibles, como los recursos de espacios abiertos, los árboles de las calles y las fachadas de los edificios*
- *La respuestas de quienes perciben estas vistas, incluyendo los peatones y quienes realizan actividades recreativas (por ejemplo, los usuarios de los parques)*
- *Aunque no hay vistas escénicas designadas, las vistas del horizonte del centro de Los Ángeles, Union Station, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium y las montañas de San Gabriel y San Bernardino*
- *Luz y Deslumbramiento*

ANÁLISIS Y CONCLUSIONES CLAVE DEL IMPACTO

- *El proyecto propuesto no bloquearía de manera significativa las vistas panorámicas o escénicas, como las vistas del horizonte del centro de Los Ángeles, Union Station, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium, y las montañas de San Gabriel y San Bernardino*
- *Con las autorizaciones y aprobaciones del proyecto propuesto – que incluirían normas de diseño para mejorar la identidad visual y el carácter del proyecto propuesto y sus comunidades circundantes – no habría conflicto con la zonificación aplicable u otras regulaciones que rigen la calidad escénica*
- *El proyecto propuesto no crearía una fuente sustancial de luz o deslumbramiento y cumpliría con la normativa de iluminación de la Ciudad*

Tema	*Resultado*	
	Construcción	*Operaciones*
Vista Escénica	*Menos que significativo*	*Menos que significativo*
Recursos Escénicos	*Sin impacto*	*Sin impacto*
Carácter Visual	*Menos que significativo*	*Menos que significativo*
Luz y Deslumbramiento	*Menos que significativo*	*Menos que significativo*

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

- *Construcción: Las barreras y los muros contra ruido incluirían una pantalla de privacidad, y el proyecto recurriría a las mejores prácticas de gestión para reducir los impactos visuales. No se requiere mitigación.*
- *Operación: Características del diseño del proyecto, incluyendo la iluminación de edificios y la iluminación de los letreros. No se requiere mitigación.*

Metro

美學

美学

研究範圍是甚麼？

- 圍繞計畫路線的計畫組件對視覺上的影響
- 體現視覺個性的主要觀察點，包括景觀的存在與否、主要土地用途、建築規模或主要景觀、景觀資源和可用的重要視覺元素，例如:開放空間資源、街道上的樹木和建築物前的空地等
- 觀賞者與其反應，包括行人和康樂設施使用者（例如:公園使用者）
- 縱使沒有指定的風景區，人們仍可以欣賞到洛杉磯市中心的天際線、聯合車站、洛杉磯古城、洛杉磯州立歷史公園、阿羅約塞科公園大道、道奇體育場以及聖蓋博和聖貝納迪諾山脈的景觀
- 光線與強光

關鍵分析和影響總結

- 擬建計畫不會顯著阻礙風景或全景，包括洛杉磯市中心天際線、聯合車站、洛杉磯古城、洛杉磯州立歷史公園、阿羅約塞科公園大道、道奇體育場以及聖加布里埃爾和聖貝納迪諾山脈的景觀
- 擬議計畫目的權利和批准將不會與相關分區或其他管理風景質量的法規互相衝突---當其中包括設計標準，以增強擬建計畫及其周邊社區的視覺識別和特徵
- 擬建計畫將不會產生大量光線或強光，並符合相關城市照明法規

主題	發現	
	建築工程：	操作
優美景觀	影響不大。	影響不大。
風景資源	沒有影響。	沒有影響。
視覺特徵	影響不大。	影響不大。
光線與強光	影響不大。	影響不大。

如何可將影響降至最低?

- 建築工程：一個隱私屏幕將加設於屏障和隔音牆中，使計畫的視覺影響減低。無需採取緩解措施。
- **營運:計畫設計特徵，包括建築燈光和標示牌上的燈光。無需採取緩解措施。**

研究内容

- *围绕项目路线的项目组成部分的视觉影响*
- *代表视觉特征的主要观察点，包括是否有景观美化、主要土地用途、建筑物的规模，或主要的自然景观、风景资源和可用的实质性视觉元素，如开放空间资源、行道树和建筑物正面*
- *观看者及观看者反应，包括行人和休闲者（如公园使用者）*
- *虽然没有指明的自然风景，但可以看到洛杉矶市中心的天际线、联合车站、洛杉矶古城、洛杉矶州立历史公园、阿罗约·塞科（Arroyo Seco）林荫大道、道奇体育馆以及圣加布里埃尔（San Gabriel）山脉和圣贝纳迪诺（San Bernardino）山脉的风景*
- *光线与眩光*

重点分析与影响总结

- *拟建项目不会严重阻挡风景和全景景观，例如洛杉矶市中心的天际线、联合车站、洛杉矶古城、洛杉矶州立历史公园、阿罗约·塞科林荫大道、道奇体育馆以及圣加布里埃尔山脉和圣贝纳迪诺山脉的风景*
- *拟建项目获得的资格与批准 - 其中包括提高拟建项目就以周边社区的视觉特性及特点的设计标准 - 不会与适用的分区或其他管理风景质量的法规发生冲突*
- *拟建项目不会发出大量光线或眩光，并将遵守适用的城市照明法规*

主题	查找	
	建筑施工	运营
自然风景	影响不重大	影响不重大
景观资源	无影响	无影响
视觉特征	影响不重大	影响不重大
光线与眩光	影响不重大	影响不重大

如何最大限度地减少影响？

- *建筑施工：屏障和隔音墙将包括一个隐私屏。本项目将实行最佳管理做法，以减少视觉影响。无须采取缓解措施。*
- ***运营：**项目设计特点，包括建筑照明和指示牌照明。无须采取缓解措施。*

Metro

Aesthetics

Estética

OVERALL DESIGN GOAL

- Design goal is to develop a common architectural design that unifies the overall aerial gondola system, while allowing for each major component to contribute to the respective localized urban condition
- Of equal importance is the desire to minimize the perceived scale and mass of the stations non-passenger junction, and towers

STATION & JUNCTION DESIGN SYSTEM

- Colors for the material finishes at each station and junction will be selected to be complementary to each of the respective sites and surrounding urban fabric
- Each station could also provide an opportunity for site specific pertaining to community involvement artist collaboration, and certain components of rail including station design, trees and other landscaping, signage, street and pedestrian lighting, and public art
- Pedestrian access enhancements, including hardscape and landscape improvements, are proposed at each of the station locations

TOWER DESIGN STRATEGY

- The towers would be designed as monopoles and would support the steel cables required for the 3S system
- Mechanical equipment would provide rope control and maintenance functions. The track ropes are supported by the profile beams. Between the profile beams, the haul rope rides on a series of wheels, or sheaves, which maintain the rope position
- Each of the towers is designed so that their bases would not impede adjacent vehicular and pedestrian circulation
- Towers painted a neutral light-tone gray color for consistency with the surrounding urban environment

Alameda Station, viewed from Los Angeles Union Station

Estación Alameda vista desde Los Angeles Union Station

Broadway Junction

Intersección Broadway

Alameda and Alpine Tower

Torre Alameda y Alpine

Dodger Stadium Station

Estación Dodger Stadium

OBJETIVO GENERAL DEL DISEÑO

- El objetivo del diseño es desarrollar un diseño arquitectónico común que unifique el sistema general de góndolas aéreas, permitiendo al mismo tiempo que cada componente principal contribuya a su respectiva condición urbana localizada
- De igual importancia es el deseo de minimizar la masa y la escala percibida de las estaciones, la intersección que no es para pasajeros y las torres.

SISTEMA DE DISEÑO DE ESTACIONES E INTERSECCIÓN

- *Los colores de los acabados de los materiales de cada estación y la intersección se seleccionarán de manera que se complementen con cada uno de los emplazamientos respectivos y el tejido urbano circundante*
- *Cada estación también podría ofrecer una oportunidad para la colaboración artística con la comunidad y ciertos componentes de las vías de movimiento, como el diseño de la estación, los árboles y otros elementos paisajísticos, la señalización, la iluminación peatonal y de las calles, y el arte público.*
- *En cada una de las estaciones se proponen mejoras en los accesos peatonales, incluyendo las mejoras paisajísticas y de las instalaciones.*

ESTRATEGIA DEL DISEÑO DE LAS TORRES

- *Las torres se diseñarán como monopostes y soportarán los cables de acero necesarios para el sistema 3S*
- *Los equipos mecánicos se encargarían de las funciones de control y mantenimiento de los cables. Los cables de las vías de movimiento se apoyan en las vigas de perfil. Entre las vigas de perfil, el cable de tracción se desplaza sobre una serie de ruedas, o poleas, que mantienen la posición del cable*
- *Cada una de las torres está diseñada para que sus bases no impidan la circulación adyacente de vehículos y peatones*
- *Las torres se pintan de un color gris claro neutro para que armonicen con el entorno urbano.*

Metro

美學

美学

整體設計目標

- 設計目標是以通用的建築設計，統一整個空中纜車系統，同時令每個主要部份按城市的狀況融入該市
- 非客運樞紐站和支撐塔所承受的壓力與人流最小化的問題同樣重要

車站和路口設計系統

- 將細心挑選每個站點和路口的飾面材料與顏色，讓車站點與其周圍的城市面貌互相融合
- 車站可為社區參與藝術家提供相關場地的合作機會，以及鐵路的某些組成部分，包括車站設計、樹木和其他景觀、標示、街道和行人照明以及公共藝術
- 建議在每個車站位置加強行人通道，包括人工景觀和自然景觀改善

塔樓設計策略

- 這些塔將採取單桿設計，並將支撐 3S 系統所需的鋼纜
- 機械設備將提供繩索控制和維護功能。承載鋼索由吊樑支撐。吊樑之間，牽引繩索繫於一系列輪子或滑輪上，這些輪子或滑輪穩定繩索位置
- 每座塔的設計都確保其基座不會阻礙相鄰的車輛及行人通道
- 房屋塗上了淡淺灰色，使其與周邊城市環境保持一致，

总体设计目标

- 设计目标是开发一个共用的建筑设计，使整个空中交通索道系统联合起来，同时让每个组成部分对各自所在地的城市状况作出贡献
- 同样重要的是，要尽量减少车站、非客运枢纽站和和索道塔的感知规模和感知质量

车站及枢纽站设计系统

- 每个车站和枢纽站口的材料饰面将选择与每个相应的地点和周围的城市结构互补的颜色
- 每个车站还可以为各个地方特定的社区参与艺术家合作提供机会。索道的若干组成部分包括车站设计、树木和其它景观美化、指示牌、街道和行人照明以及公共艺术
- 拟议在各个车站地点对人行道进行升级，包括硬景观和自然景观美化

索道塔设计策略

- 索道塔将设计成单极，并将支持3S系统所须的钢索
- 机械设备将提供缆线控制和维护功能。轨道索由型材横梁支撑。型材横梁之间，牵引索由一系列轮子或滑轮驱动并且使其维持位置。
- 每个索道塔均设计为不妨碍邻近的车辆与行人通行
- 塔楼涂成中性的浅灰色，与周围的城市环境保持一致

Air Quality, Greenhouse Gas, and Energy - Operation

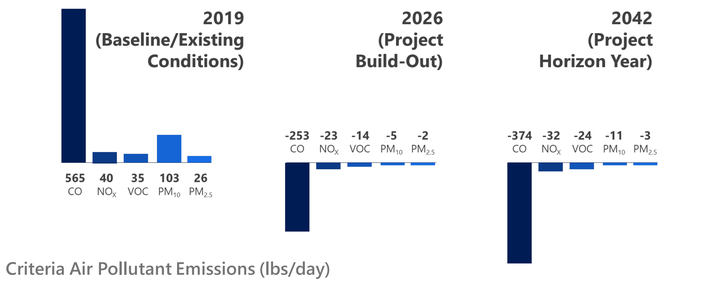
Calidad del Aire, Gases de Efecto Invernadero y Energía - Operación

WHAT WAS STUDIED?

- Project Operation
  - Maximum daily operational emissions (pounds per day [lb/day])
  - Greenhouse gas emissions from operation (metric tons/year [MT/yr])
  - Operational energy usage

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project is expected to result in a net reduction in vehicle miles traveled thereby decreasing the associated criteria air pollutant emissions compared to existing conditions



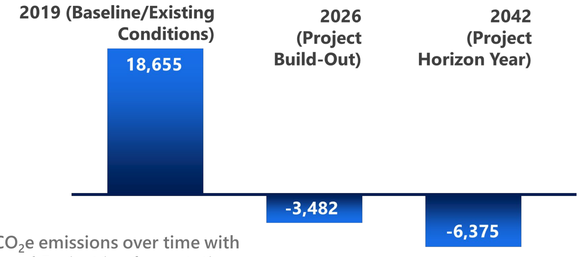
Criteria Air Pollutant Emissions (lbs/day)

IMPACT CONCLUSIONS

Topic	Finding
	Operation
Mass Daily Operational Emissions	Less Than Significant
Operational Greenhouse Gas Impacts	Less Than Significant
Operational Energy Usage	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

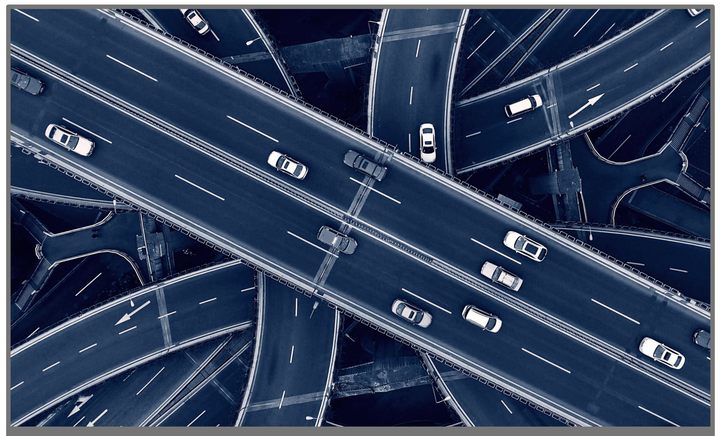
- Operation:
  - Open-air station design to allow for passive ventilation strategies
  - Rely on City of Los Angeles Department of Water and Power's Green Power Program
  - Back-up power supplied by batteries rather than diesel generators
  - Innovative transportation alternative reduces vehicle miles traveled and achieves a net reduction in emissions



Net CO_2e emissions over time with proposed Project implementation

Los Angeles Department of Water and Power's Green Power Program uses a combination of wind and solar energy.

El Programa Green Power del Departamento de Agua y Energía de Los Ángeles utiliza una combinación de energía eólica y solar.



Reduced vehicle miles traveled

Menos Millas Viajadas en Vehículos

The lifetime emissions of the Project would be a reduction of 166,653 metric tons of GHGs.

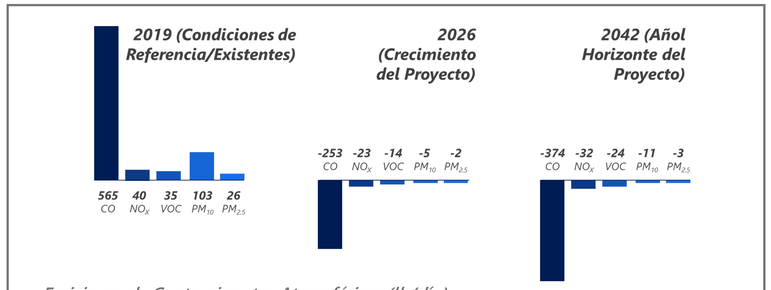
Las emisiones a lo largo de la vida del proyecto supondrían una reducción de 166,653 toneladas métricas de GEI.

¿QUÉ SE ESTUDIÓ?

- Operación del Proyecto
  - Emisiones diarias máximas de las operaciones (libras por día [lb/día])
  - Emisiones de gases de efecto invernadero de las operaciones (toneladas métricas/año [TM/año])
  - Uso de energía de las operaciones

ANÁLISIS Y CONCLUSIONES CLAVE

- Se espera que el proyecto propuesto traiga consigo a una reducción neta de las millas viajadas en vehículos (VMT), reduciendo así las emisiones de contaminantes atmosféricos correspondientes en comparación con las condiciones existentes



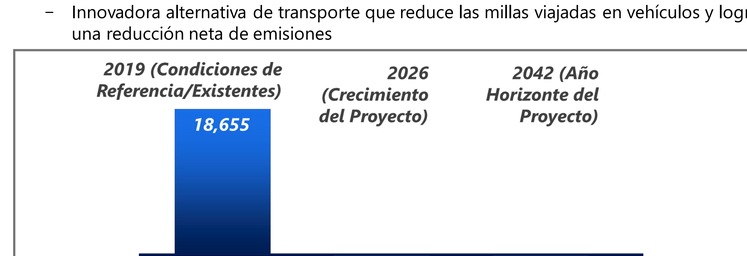
Emisiones de Contaminantes Atmosféricos (lb/día)

CONCLUSIONES SOBRE EL IMPACTO

Tema	*Resultado*
	Operación
Emisiones Masivas Diarias de las Operaciones	*Menos que significativo*
Impacto de los Gases de Efecto Invernadero de las Operaciones	*Menos que significativo*
Uso de Energía de las Operaciones	*Menos que significativo*

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

- Operación:
  - Diseño de la estación al aire libre para permitir estrategias de ventilación pasiva
  - Utilizando el programa de energía verde Green Power del Departamento de Agua y Energía de la Ciudad de Los Ángeles
  - Energía de reserva suministrada por baterías en lugar de generadores de diesel
  - Innovadora alternativa de transporte que reduce las millas viajadas en vehículos y logra una reducción neta de emisiones



Emisiones netas de CO_2e a lo largo del tiempo con la ejecución del proyecto propuesto

Metro

空氣品質、溫室氣體和能源 - 營運

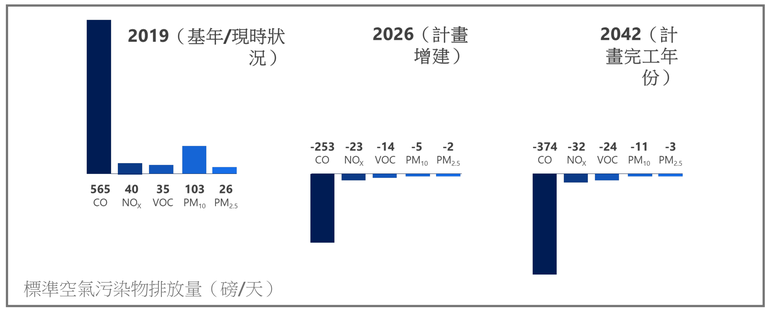
空气质量、温室气体和能源 - 运营

研究範圍是甚麼？

- 計畫目營運
  - 每日最高營運排放量（磅/天）
  - 營運產生的溫室氣體排放量（公噸/年）
  - 營運能源使用

主要分析及結論

- 與現時情況相比，擬議項目預計將令車輛行駛淨里程減少，從而減少相關標準空氣污染物排放



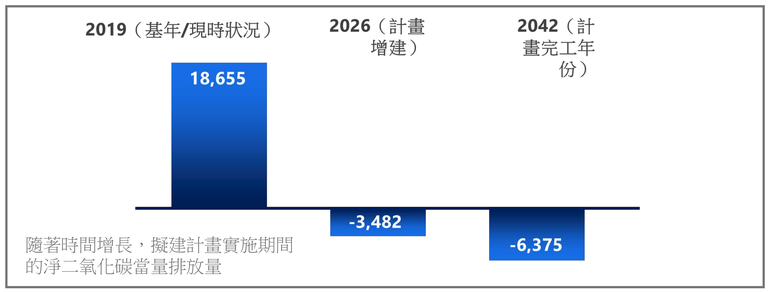
標準空氣污染物排放量（磅/天）

影響總結

主題	發現
	營運:
營運帶來的大量日常排放	影響不大。
營運帶來的溫室氣體影響	影響不大。
營運能源使用	影響不大。

如何可將影響降至最低?

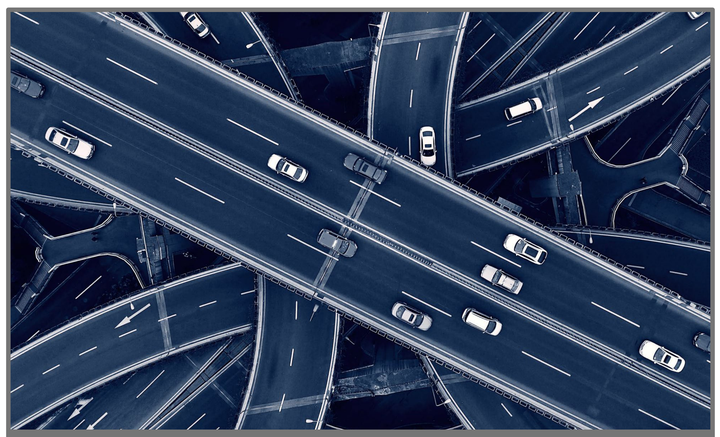
- **營運:**
  - 以露天車站設計採用被動式通風策略
  - 跟隨洛杉磯市水電局的綠色電力計劃
  - 使用電池而非柴油發電機提供的備用電源
  - 創新的交通方式減少車輛行駛里程，並減少淨排放量



隨著時間增長，擬建計畫實施期間的淨二氧化碳當量排放量

洛杉磯水電部的綠色電力計劃使用風能和太陽能。

洛杉矶市水电局的绿色电力计划使用风力发电与太阳能发电相结合的方式。



減少車輛行駛里程

减少的行车里程

項目的總溫室氣體排放量將減少 166,653 公噸。

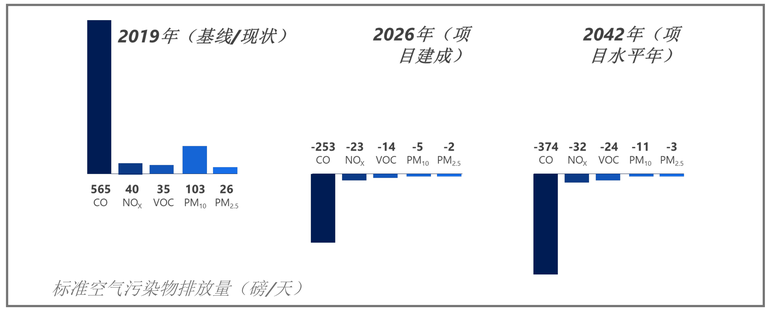
*该项目整个使用期的排放量将减少**166,653** **公吨温室气体。***

研究内容

- 项目运营
  - 运营的每日排放量上限（磅/天）
  - 运营中的温室气体排放（公吨/年）
  - 运营的能源使用

重点分析及总结

- 与现状相比，预计拟建项目将使得行车里程（VMT）出现净减少，从而减少相关标准的空气污染物排放



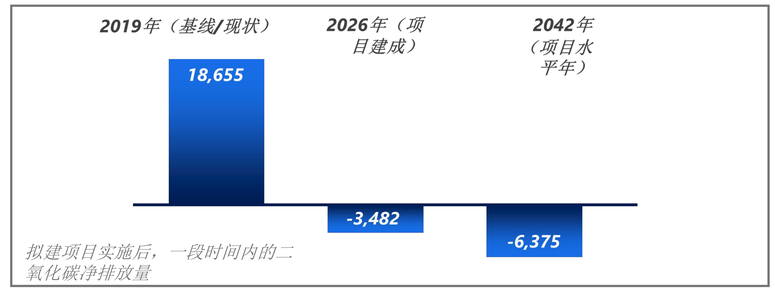
标准空气污染物排放量（磅/天）

影响总结

主题	*查找*
	运营
大规模日常运营排放	*影响不重大*
运营导致的温室气体影响	*影响不重大*
运营能源使用	*影响不重大*

如何最大限度地减少影响？

- 运营：
  - 露天的车站设计，实现被动通风策略
  - 依托洛杉矶市水电局的绿色电力计划
  - 由电池而非柴油发电机提供备用电力
  - 创新的交通方式减少了行车里程，实现了净减排



拟建项目实施后，一段时间内的二氧化碳净排放量

Metro

Archaeology

Arqueología

WHAT WAS STUDIED?

- The Area of Direct Impacts (a three-dimensional area of potential ground disturbance in the maximum Project footprint) for archaeological resources
- Studied both maps of known resources discovered by other projects and potential resources based on historic maps, soil maps and Native American Consultation. Also conducted surveys

KEY ANALYSIS AND CONCLUSIONS

- Nine archaeological resources had been previously recorded within the Area of Direct Impacts, including one multi-component (prehistoric and historic) and eight historic-age archaeological sites that are currently paved over
- No new surface-visible archaeological resources were revealed in the Area of Direct impacts from the pedestrian survey
- Avoidance/preservation of significant resources is always the first choice, but where avoidance is not possible, other measures are necessary to minimize impacts to a level that is less than significant. These include:
  - CUL-A: Cultural Resources Monitoring and Mitigation Plan
  - CUL-B: Archaeological Resources Worker Training Program
  - CUL-C: Archaeological Testing Plan for 19-000887 and 19-004320 (Alameda Station)
  - CUL-D: Archaeological Testing Plan for LAUS Forecourt
  - CUL-E: Archaeological Testing Plan for Los Angeles State Historic Park
  - CUL-F: Redesign of Placement of Park Amenity Structures to Avoid Archaeological Features at Los Angeles State Historic Park Station

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Archaeological Resource	Less Than Significant with Mitigation	No Impact
Disturb Human Remains	Less Than Significant with Mitigation	No Impact

HOW WOULD IMPACTS BE MINIMIZED?

- A Cultural Resources Monitoring and Mitigation Plan and a Paleontological Monitoring and Mitigation Plan prepared by qualified archaeologist prior to construction to lay out protocols for monitoring during construction
- Archaeological Resources Worker Training Program to mitigate unknown historical resources within Area of Direct Impacts conducted with input from El Pueblo and Los Angeles State Historic Park staff prior to start of ground-disturbing activities
- Archaeological Testing Plan for certain resources at Alameda Station and Chinatown/State Park Station prepared prior to ground-disturbing activities
- Potential Redesign of Placement of Park Amenity Structures to Avoid Archaeological Features at Los Angeles State Historic Park

Area of Direct Impacts for Broadway Alignment Alternative

Área de Impactos Directos para la Ruta Alternativa de Broadway

¿QUÉ SE ESTUDIÓ?

- *El Área de Impactos Directos (un área tridimensional de alteración potencial del suelo en la huella máxima del proyecto) para los recursos arqueológicos*
- *Se estudiaron tanto los mapas de recursos conocidos descubiertos por otros proyectos como los recursos potenciales basados en mapas históricos, mapas de suelos y consultas con nativos americanos. También se realizaron sondeos*

ANÁLISIS Y CONCLUSIONES CLAVE

- *Se habían registrado previamente nueve recursos arqueológicos dentro del Área de Impactos Directos, incluyendo un sitio multicomponente (prehistórico e histórico) y ocho sitios arqueológicos de edad histórica que actualmente están pavimentados*
- *No se han detectado nuevos recursos arqueológicos visibles en superficie en el Área de Impactos Directos a partir del sondeo peatonal.*
- *Evitar/preservar los recursos significativos es siempre la primera opción, pero cuando no es posible evitarlos, son necesarias otras medidas para minimizar los impactos a un nivel menos que significativo. Entre estas se encuentran:*
  - *CUL-A: Plan de Supervisión de los Recursos Culturales y Mitigación*
  - *CUL-B: Programa de Capacitación de Trabajadores sobre Recursos Arqueológicos.*
  - *CUL-C: Plan de Pruebas Arqueológicas para 19-000887 y 19-004320 (Estación de Alameda).*
  - *CUL-D: Plan de Pruebas Arqueológicas para la Explanada de LAUS.*
  - *CUL-E: Plan de Pruebas Arqueológicas para el Los Angeles State Historic Park.*
  - *CUL-F: Rediseño de la Ubicación de las Estructuras de Servicios del Parque para Evitar los Elementos Arqueológicos en la Estación de Los Angeles State Historic Park.*

CONCLUSIONES SOBRE EL IMPACTO

Tema	*Resultado*	
	Construcción	*Operaciones*
Recurso Biológico	*Menos que significativo con mitigación*	*Sin impacto*
Alteración de Restos Humanos	*Menos que significativo con mitigación*	*Sin impacto*

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

- *Un Plan de Supervisión y Mitigación de los Recursos Culturales y un Plan de Supervisión y Mitigación de los Recursos Paleontológicos preparados por un arqueólogo calificado antes de la construcción para establecer los protocolos de supervisión durante la misma.*
- *Programa de Capacitación de trabajadores de recursos arqueológicos para mitigar los recursos históricos desconocidos dentro del Área de Impactos Directos, realizado con la aportación del personal de El Pueblo y de Los Angeles State Historic Park antes de iniciar las actividades de alteración del suelo*
- *Plan de Pruebas Arqueológicas para determinados recursos en la Estación de Alameda y en la Estación de Chinatown/Parque Estatal preparado antes de las actividades de alteración del suelo*
- *Rediseño Posible de la Ubicación de las Estructuras de Servicios del Parque para Evitar los Elementos Arqueológicos en Los Angeles State Historic Park.*

Metro

考古

考古学

研究範圍是甚麼？

- 對考古資源有直接影響的區域（最大項目中對地面產生潛在干擾的三維立體區域範圍）
- 根據歷史地圖、土壤地圖及對美洲原住民的諮詢，研究出其他項目中所發現的已知資源地圖和潛在資源。此外，還進行了調查

主要分析及結論

- 早前記錄了直接影響區域內的 9 個考古資源，當中包括一個多元組成部分（史前和歷史）及 8 個目前已鋪設的歷史時期考古遺址
- 行人調查結果顯示直接影響區域中沒有發現新的地表可見考古資源
- 避免/保護重要資源始終是優先選擇，但在無法避免的情況下，需要採取其他措施將影響降至一個較低的水平。當中包括:
  - CUL-A:**文化資源監測和緩解計劃。**
  - CUL-B:**考古資源工作者培訓計劃。**
  - CUL-C:19-000887 和 19-004320（**阿拉米達站**）**考古測試計劃。**
  - CUL-D:**洛杉磯聯合車站前院考古測試計劃。**
  - CUL-E:**洛杉磯州立歷史公園的考古測試計劃。**
  - CUL-F:**重新設計公園便利設施的佈局，以避免洛杉磯州立歷史公園站的考古特徵。**

影響總結

主題	發現	
	建築工程：	**操作**
考古資源	經緩解後影響不大。	沒有影響。
擾亂人類遺骸	經緩解後影響不大。	沒有影響。

如何可將影響降至最低?

- 由合資格的考古學家需在施工前準備文化資源監測和緩解計劃，以及古生物監測和緩解計劃，以制定施工期間的監測協定
- 在開始地面干擾活動之前，考古資源工作者的培訓計劃將按照洛杉磯古城和洛杉磯州立歷史公園工作人員的意見進行，從而減輕直接影響區域內未知的歷史資源
- 在地面干擾活動進行前，於阿拉米達站和唐人街/州立公園站某些資源的考古實施測試計劃
- **重新設計公園便利設施的佈局，以避免洛杉磯州立歷史公園站的考古特徵。**

百老匯路口替代路線的直接影響區域

百老汇路线备选方案的直接影响区

研究内容

- *考古资源的直接影响区（项目最大覆盖区内的潜在地面干扰的三维区域）*
- *研究了其它项目发现的已知资源地图和以历史地图、土壤地图和美国原住民协商为根据的潜在资源。也进行了调查*

重点分析及总结

- *在直接影响区内，以前记录了9项考古资源，包括1项多成分（史前和历史）和8个历史时代的考古遗址，目前已铺设路面*
- *通过行人调查，在直接影响区内未发现新的地表可见考古资源*
- *避开/保护重要资源始终是首选，但在无法避开的情况下，有必要采取其它措施，将影响降至不重大的水平。这些措施包括：*
  - *文化-A：文化资源监测与缓解措施计划*
  - *文化-B:施工人员考古资源培训计划*
  - *文化-C：第19-000887号和19-004320号资源（阿拉米达站）的考古测试计划*
  - *文化-D：联合车站前广场的考古测试计划*
  - *文化-E：洛杉矶州立历史公园考古测试计划*
  - *文化-F：重新设计公园便利设施的位置，以避开洛杉矶州立历史公园站的考古特征*

影响总结

主题	*查找*	
	建筑施工	*运营*
考古资源	*采取缓解措施后无重大影响*	*无影响*
扰乱人类遗迹	*采取缓解措施后无重大影响*	*无影响*

如何尽量减少影响？

- *由合资格考古学家在施工前制定文化资源监测与缓解措施计划，以及古生物监测与缓解措施计划，以制定施工期间的监测方案*
- *在进行地面干扰活动之前，实施施工人员考古资源培训计划，并采纳由洛杉矶古城和洛杉矶州立历史公园工作人员提供的建议，以减轻对直接影响区内的未知历史资源的影响*
- *在进行地面干扰活动之前，先为阿拉米达站和唐人街/州立公园站的若干资源制定考古测试计划*
- *可能重新设计公园便利设施的位置，以避开洛杉矶州立历史公园站的考古特征*

Metro

Historical Resources

Recursos Históricos

WHAT WAS STUDIED?

- Direct, indirect, and cumulative impacts on historical resources from Project components
- Historical resources may include building, structures objects, sites, and districts
- Historical resources are properties listed or formally determined eligible for listing in National and California Registers and designated as Los Angeles Historic-Cultural Monuments
- Properties identified in a historical resource survey such as SurveyLA were treated as historical resources for the purposes of the study
- 29 historical resources were identified along the proposed Project alignment including 2 districts with numerous contributing elements

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project would not result in the demolition, destruction, or relocation of any historical resources
- The proposed Project would introduce modern features in the form of cables, cabins, towers, junctions, and stations in the vicinity of historical resources; however, the change would not constitute a significant impact due to the mixed character of the alignment
- Alameda Station would be located within the boundary of the Los Angeles Union Station Passenger Terminal and Grounds. However, the proposed location of the new vertical circulation elements is Parking Lot B, which is not a character-defining feature of the historical resource
- Alameda Station would also be located within the boundary of the Los Angeles Plaza Historic-Cultural Monument. However, the proposed location of the new vertical circulation elements and pedestrian plaza is Placita de Dolores, which is not a character-defining feature of the historical resource
- Due to the proximity of construction to the Winery building and El Grito Mural mitigation measures are recommended in the Noise and Vibration section of the Draft EIR

IMPACT CONCLUSIONS

- 15 historical resources less than significant indirect impacts
- 4 historical resources less than significant direct impacts

Topic	Finding	
	Construction	Operations
Historical Resource	Less Than Significant with Mitigation	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

- Project design features for pre- and post-construction documentation and protection of The Winery and El Grito mural, as well as protection of the El Grito mural during construction
- Vibration monitoring and restrictions on force adjustable ground compaction devices during proposed Alameda Station construction

Built Historical Resources

Recursos Históricos Construidos

¿QUÉ SE ESTUDIÓ?

- *Impactos directos, indirectos y acumulativos de los componentes del proyecto sobre los recursos históricos*
- *Los recursos históricos pueden incluir edificios, estructuras, objetos, sitios y distritos*
- *Los recursos históricos son propiedades inscritas en los Registros Nacionales y de California o que han sido designadas como Monumentos Histórico-Culturales de Los Ángeles.*
- *Las propiedades identificadas en un sondeo de recursos históricos como SurveyLA fueron tratadas como recursos históricos para efectos del estudio*
- *Se identificaron 29 recursos históricos a lo largo de la ruta del proyecto propuesto, incluyendo 2 distritos con numerosos elementos contribuyentes*

ANÁLISIS Y CONCLUSIONES CLAVE

- *El proyecto propuesto no daría ligar a la demolición, destrucción o reubicación de ningún recurso histórico*
- *El proyecto propuesto introduciría elementos modernos en forma de cables, cabinas, torres, intersecciones y estaciones en las proximidades de recursos históricos; sin embargo, el cambio no constituiría un impacto significativo debido al carácter mixto de la ruta*
- *La Estación Alameda estaría situada dentro de los límites de la terminal de pasajeros de la estación Los Angeles Union Station y sus terrenos. Sin embargo, la ubicación propuesta de los nuevos elementos de circulación vertical es el estacionamiento B, que no es una característica definitoria del recurso histórico*
- *La Estación Alameda también estaría situada dentro de los límites del Monumento Histórico-Cultural de Los Angeles Plaza. Sin embargo, la ubicación propuesta de los nuevos elementos de circulación vertical y la plaza peatonal es la Placita de Dolores, que no es un elemento que defina el carácter del recurso histórico*
- *Debido a la proximidad de la construcción al edificio de la bodega de vinos The Winery y al mural de El Grito, se recomiendan medidas de mitigación en la sección de Ruido y Vibración del Borrador del EIR*

CONCLUSIONES SOBRE EL IMPACTO

- *15 recursos históricos con impactos indirectos menos que significativos*
- *4 recursos históricos con impactos directos menos que significativos*

Tema	*Resultado*	
	Construcción	*Operaciones*
Recurso Histórico	*Menos que significativo con mitigación*	*Menos que significativo*

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

- *Características del diseño del proyecto para la documentación de pre-construcción y de post-construcción y la protección de la bodega de vinos The Winery y el mural de El Grito, y la protección del mural de El Grito durante la construcción*
- *Supervisión de vibraciones y restricciones de los dispositivos de compactación del suelo ajustables a la fuerza durante la construcción de la Estación Alameda propuesta*

Metro

歷史資源

历史资源

研究範圍是甚麼？

- 計畫組成部份對於歷史資源的直接、間接和累積的影響
- 歷史資源可能包括建築物、結構物、地點和地區
- 歷史資源是是指國家和加利福尼亞登記冊中列入，或正式確定為有資格列入並指定為洛杉磯歷史文化古蹟的財產
- 為達到研究目的，在歷史資源調查（如： SurveyLA）中獲確定的資源被視為歷史資源
- 擬建項目的路線沿途共確定了 29 個歷史資源，包括兩個具有眾多貢獻元素的地區

主要分析及結論

- 擬建計畫不會導致任何歷史資源的拆卸、破壞或搬遷
- 擬建計畫將在歷史資源附近以電纜、車廂、塔、路口和車站等形式加入現代特色元素；但由於路線的混合特性，這種變化將不會構成重大影響
- 阿拉米達站將建於洛杉磯聯合車站客運站和地面的邊界內然而，新的垂直流通設備的建議位置在停車場 B 位，這裡並不符合歷史資源的定義特徵
- 阿拉米達站將建於洛杉磯廣場歷史文化紀念碑的邊界內。然而，新的垂直流通設備與步行廣場的擬建位置為多洛雷斯廣場，該處並不符合歷史資源的定義特徵
- 由於建築靠近酒廠大樓與El Grito 壁畫，因此在《環境影響報告草案》中建議採取噪音和震動舒緩措施

影響總結

- 15 個歷史資源的間接影響不顯著
- 4個歷史資源的直接影響不顯著

主題	發現	
	建築工程：	**操作**
歷史資源	經緩解後影響不大。	影響不大。

如何可將影響降至最低?

- 計畫設計特點是於酒廠與 El Grito 壁畫於施工前及施工後的文件記錄和保護，以及於施工期間保護 El Grito 壁畫的
- 在擬建阿拉米達站的施工其間，監測震動與限制可調整力度的地面壓實裝置

已建成的歷史資源 *已建的历史资源*

研究内容

- 项目组成部分对历史资源的直接、间接和累积影响
- 历史资源可能包括建筑物、结构物、遗址和地区
- 历史资源是指被列入或正式确定有资格列入国家和加州登记册以及被指定为洛杉矶历史文化遗址的财产
- 就研究目的而言，在历史资源调查如SurveyLA调查中确定的财产，视为历史资源
- 沿着拟建项目路线，已经确定了29项历史资源，其中包括2项具有众多贡献元素的地区

重点分析及总结

- 拟建项目不会导致任何历史资源遭拆除、破坏或搬迁
- 拟议项目将在历史资源附近引入缆线、缆车、索道楼、枢纽站和车站等现代特征；但由于路线的混合特征，这一变化不会构成重大影响
- 阿拉米达站将位于洛杉矶联合车站总站及其场地的边界内。然而，新的垂直流通设施的计划位置是停车场地块B，此地块不是历史资源的定义特征
- 阿拉米达站也将位于洛杉矶广场历史文化遗址的边界内。然而，新的垂直流通设施和行人广场的计划位置是Placita de Dolores，此地块不是历史资源的定义特征
- 由于施工接近酿酒厂建筑和El Grito壁画，在环境影响报告草案中的对噪音和振动部分的缓解措施作出了建议

影响总结

- 15项历史资源受到不重大的间接影响
- 4项历史资源受到不重大的直接影响

主题	查找	
	建筑施工	**运营**
历史资源	采取缓解措施后无重大影响	影响不重大

如何尽量减少影响？

- 项目设计特点是在施工前和施工后记录和保护酿酒厂和El Grito壁画，以及在施工期间保护El Grito壁画
- 在拟建的阿拉米达站施工期间，对振动进行监测并限制使用可调节的地面压实装置

Metro

Parks and Recreation

Parques y Recreación

WHAT WAS STUDIED?

- The proposed Project's potential to impact parks and recreational facilities during construction and operation, including Los Angeles Plaza Park and Placita de Dolores, Los Angeles State Historic Park, and Elysian Park
- A study area of a ¼ -mile buffer around the proposed Project alignment was established as an operational baseline to evaluate potential impacts
- Potential of the proposed Project to impact recreational facilities by:
  - Increasing the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated
  - Including recreational facilities or requiring the construction or expansion of recreational facilities which might have an adverse physical effect on the environment
- Potential of proposed Project to impact parks by resulting in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, or a need for new or physically altered government facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any parks

KEY ANALYSIS AND CONCLUSIONS

- The proposed Project would not result in an increase in the use of parks such that substantial physical deterioration would occur or be accelerated
  - The Los Angeles State Historic Park, which accommodates events with attendance ranging from 6,000 to 22,500 attendees, would be able to accommodate additional visitation
- The proposed Project would not include the construction or expansion of recreational facilities and increased access to parks are not expected to increase the use of existing parks or other recreational facilities such that new or expanded facilities would be required
- Construction and operations of the proposed Project would not result in the provision of new park facilities, or the need for new or physically altered park facilities during construction
  - During construction of the Chinatown/State Park Station, options for pedestrian access, including the provision of pedestrian detours during construction, would allow for continued pedestrian access within the Project area such that park patrons would have access to approximately 30 acres of the 32-acre Los Angeles State Historic Park, including all the recreational areas, during construction activities within the park.

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	Operations
Increase use of parks or recreational facilities accelerating substantial facility deterioration	Less Than Significant	Less Than Significant
Include or require construction or expansion of recreational facilities with potential for adverse effect on environment	Less Than Significant	Less Than Significant
Provide or require new or physically altered governmental facilities the construction of which could cause significant environmental impacts to maintain acceptable performance objectives for parks	Less Than Significant	Less Than Significant

HOW WOULD IMPACTS BE MINIMIZED?

- No mitigation is required
- During construction of the Chinatown/State Park Station, options for pedestrian access, including the provision of pedestrian detours during construction, would allow for continued pedestrian access within the Project area such that park patrons would have access to approximately 30 acres of the 32-acre Los Angeles State Historic Park, including all the recreational areas, during construction activities within the park

Existing Parks and Recreational Facilities in Project Study Area

Parques e Instalaciones Recreativas Existentes en el Área de Estudio del Proyecto

¿QUÉ SE ESTUDIÓ?

- *El potencial del proyecto propuesto de afectar a los parques y las instalaciones recreativas durante la construcción y las operaciones, incluyendo los parques de Los Angeles State Historic Park, Elysian Park, Los Angeles Plaza Park y la Placita de Dolores*
- *Se estableció una zona de estudio de ¼ de milla (400 m) alrededor de la ruta del proyecto propuesto como línea de base de las operaciones para evaluar los impactos potenciales*
- *Potencial del proyecto propuesto para impactar las instalaciones recreativas al:*
  - *Provocar un aumento en el uso de los parques vecinales y regionales existentes o de otras instalaciones recreativas de manera que se produjera o acelerara un deterioro físico sustancial de las instalaciones*
  - *Incluir instalaciones recreativas o requerir la construcción o ampliación de instalaciones recreativas que pudieran tener un efecto físico adverso sobre el medio ambiente*
- *Impacto potencial del proyecto propuesto que podría tener impactos físicos adversos sustanciales asociados con la provisión de instalaciones gubernamentales nuevas o alteradas físicamente, o la necesidad de instalaciones gubernamentales nuevas o alteradas físicamente, cuya construcción podría causar impactos ambientales significativos, para mantener aceptables las tasas de servicio, los tiempos de respuesta u otros propósitos de rendimiento para cualquiera de los parques*

ANÁLISIS Y CONCLUSIONES CLAVE

- *El proyecto propuesto no provocaría un aumento en el uso de los parques de manera que se produjera o acelerara un deterioro físico sustancial*
  - *Los Angeles State Historic Park, donde se celebran eventos con una asistencia que de entre 6,000 y los 22,500 asistentes, podría recibir visitas adicionales*
- *El proyecto propuesto no incluiría la construcción o ampliación de instalaciones recreativas y no se espera que el mayor acceso a los parques aumente el uso de los parques existentes u otras instalaciones recreativas de manera que se requieran instalaciones nuevas o ampliadas*
- *La construcción y las operaciones del proyecto propuesto no darían lugar a la provisión de nuevas instalaciones de parques, ni a la necesidad de instalaciones de parques nuevas o alteradas físicamente durante la construcción*
  - *Durante la construcción de la Estación Chinatown/State Park, las opciones para el acceso peatonal, incluyendo la provisión de desvíos peatonales durante la construcción, permitirían el acceso peatonal continuo dentro del área del proyecto de manera que los usuarios del parque tendrían acceso a aproximadamente 30 acres (12.15 hectáreas) del Los Angeles State Historic Park de 32 acres (12.95 hectáreas), incluyendo todas las áreas recreativas, durante las actividades de construcción dentro del parque.*

CONCLUSIONES SOBRE LOS IMPACTOS

Tema	*Resultado*	
	Construcción	*Operaciones*
Aumenta del uso de parques o instalaciones recreativas, acelerando el deterioro sustancial de las instalaciones	*Menos que significativo*	*Menos que significativo*
Inclusión o necesidad de construir o ampliar instalaciones recreativas con efecto adverso potencial en el medio ambiente	*Menos que significativo*	*Menos que significativo*
Se proporcionan o requieren instalaciones gubernamentales nuevas o alteradas físicamente cuya construcción podría causar impactos ambientales significativos para mantener objetivos de rendimiento aceptables para los parques	*Menos que significativo*	*Menos que significativo*

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

- *No se requiere mitigación*
- *Durante la construcción de la Estación de Chinatown/State Park, las opciones para el acceso peatonal, incluyendo la provisión de desvíos peatonales durante la construcción, permitirían el acceso peatonal continuo dentro del área del proyecto de manera que los usuarios del parque tendrían acceso a aproximadamente 30 acres (12.15 hectáreas) del Los Angeles State Historic Park de 32 acres (12.95 hectáreas), incluyendo todas las áreas recreativas, durante las actividades de construcción dentro del parque*

Metro

公園及康樂設施

公园及休闲设施

研究範圍是甚麼？

- 擬建計畫在施工和營運期間對公園和康樂設施的潛在影響，包括洛杉磯廣場公園和多洛雷斯廣場、洛杉磯州立歷史公園和伊利森公園
- 於擬建計畫路線周邊 ¼ 英里位置建立一個研究區域，作為操作基線以評估項目的潛在影響
- 擬建計畫有機會透過以下形式影響康樂設施：
  - 計畫是否會導致現有社區和區域公園,或其他休閒設施的使用增加，從而導致設施退化或加速其退化？
  - 計畫會否包括康樂設施或需要興建或擴建可能對環境造成不良影響的康樂設施？
- 若需保持現有公共服務的可接受的服務比率、響應時間或其它表現目標，計畫是否會因為提供新的或實質改動的政府設施，或因需要興建新的或實質改動的政府設施，而對環境造成重大的不良影響:

主要分析及結論

- 擬建計畫不會令公園使用量增加，從而引致嚴重的物理老化，或加速其老化
  - 洛杉磯州立歷史公園所舉辦的活動將能夠容納更多的參加者，現時可容納的人數約為 6,000 至 22,500 人
- 擬建計畫不會因為增加現有公園或其他康樂設施的使用而興建或擴建康樂設施，亦不會增加進入公園的人口，因此，需要興建新的，或擴建現有設施
- 擬建計畫的工程營運不會帶來提供新的公園設施，或在建設期間需要新的或改建現有的公園設施
  - 在唐人街/州立公園站施工期間，行人通道的選擇，包括在施工期間提供行人繞道，將在項目區域中繼續提供行人通道。這樣，洛杉磯州立歷史公園的遊客就可以在公園內的施工活動進行其間使用大約32英畝中的30的英畝，包括所有的休閒區。

影響總結

主題	發現	
	建築工程：	**操作**
增加公園或娛樂設施的使用，加速設施老化	影響不大。	影響不大。
包括或要求興建或擴建可能對環境產生不良影響的康樂設施	影響不大。	影響不大。
為保持公園可接受的績效目標，需提供或需要新的或經改造的政府設施，而興建該等設施可能會對環境造成重大影響	影響不大。	影響不大。

如何將影響減到最低?

- 無需採取緩解措施。
- 在唐人街/州立公園站施工期間，行人通道的選擇，包括在施工期間提供行人繞道，將在項目區域中繼續提供行人通道。這樣，洛杉磯州立歷史公園的遊客就可以在公園內的施工活動進行其間使用大約32英畝中的30的英畝，包括所有的休閒區。

研究内容

- 拟建项目在施工和运营期间可能对公园和休闲设施产生影响，包括对洛杉矶广场公园和Placita de Dolores、洛杉矶州立历史公园和伊利森公园的影响
- 在拟建项目路线周围建立了一个1/4英里的缓冲区作为运营基准，以评估潜在的影响
- 拟建项目对休闲设施的影响如下：
  - 导致现有的社区及区域公园或其它休闲设施的使用增加，以致设施出现实质性损坏或加速损坏
  - 包含休闲设施，或要求兴建或扩建休闲设施，从而可能导致对环境造成不良影响
- 为维持公园的可接受的服务比率、响应时间或其它表现目标，拟建项目可能会对公园造成影响，导致产生与新的或实际变动的政府设施的供应有关的实质性不利影响，或导致需要兴建新的或实际改造的政府设施，其建设可能会造成重大环境影响

主要分析及结论

- 拟建项目不会使公园使用量增加，因而不会导致实质物理损坏或使其加速发生
  - 洛杉矶州立历史公园能够接纳更多的到访，活动可容纳的参观者人数从6000人到22,500人不等。
- 拟建项目不包括兴建或扩建娱乐设施，而预计的增加进入公园的通道也不会增加现有公园或其它休闲设施的使用量，以致须新建或扩建设施
- 拟建项目的施工与运营不会导致须兴建新的公园设施，亦不会引致在建造期间需要新的或实质改动的公园设施
  - 在唐人街/州立公园站施工期间，包括在施工期间提供绕行路线的步行通道方案将在项目区域内为行人持续提供通道，这样在公园内施工期间，公园使用者将能进入32英亩的洛杉矶州立历史公园中约30英亩的土地，包括所有的休闲区域。

影响总结

主题	查找	
	建筑施工	**运营**
公园或休闲设施的使用量增加，加速了设施的实质损坏	影响不重大	影响不重大
包括或要求兴建或扩建有可能对环境产生不利影响的休闲设施	影响不重大	影响不重大
提供或需要新的或物理改造过的政府设施(这些设施的施工可能造成重大的环境影响）以维持可接受的公园绩效目标	影响不重大	影响不重大

如何尽量减少影响？

- 无须采取缓解措施
- 在唐人街/州立公园站施工期间，包括在施工期间提供绕行路线的步行通道方案将在项目区域内为行人持续提供通道，这样在公园内施工期间，公园使用者将能进入32英亩的洛杉矶州立历史公园中约30英亩的土地，包括所有的休闲区域。

Metro

Aerial Rights Over Park

Derechos Aéreos Sobre el Parque

LOCATION

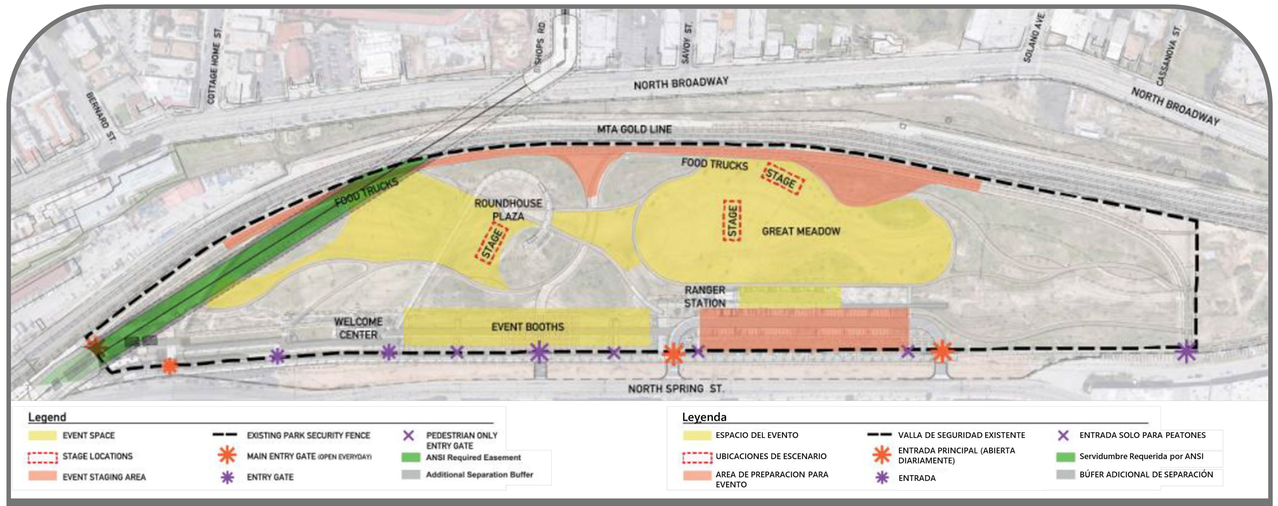
- The proposed Project alignment crosses over the westernmost edge of the Los Angeles State Historic Park, adjacent to the existing Metro L Line (Gold) and the associated overhead catenary system
- The proposed Project's location in the park and required aerial clearance would not increase the usage of the park such that substantial physical deterioration of the facility would occur or be accelerated

KITES

- Due to the location of the proposed Project alignment – which traverses over along the western edge of the Park adjacent to the Metro L Line and pedestrian pathway – the proposed Project does not significantly reduce the safe kite flying area within the Park

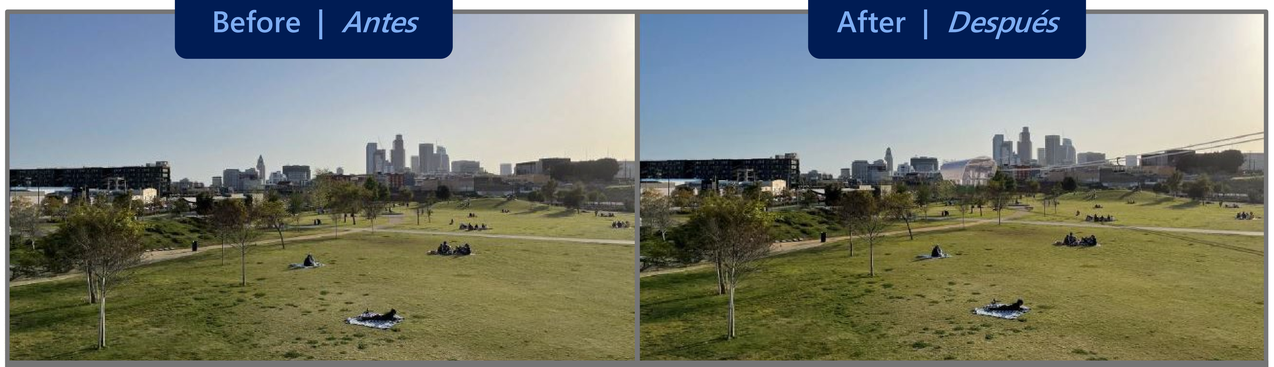
SPECIAL EVENTS

- The proposed Project's vertical clearance to the bottom of the cabins would range from 26 to 53 feet with an average of approximately 40 feet from ground level over the park
- Given these clearances, it will continue to be possible for events to take place both under the majority of the alignment within the park and adjacent to the alignment



Typical Locations for Event Stages and Screens at the Los Angeles State Historic Park with Proposed Project Alignment

Ubicaciones Típicas para Pantallas y Escenarios de Eventos en Los Angeles State Historic Park con la Ruta del Proyecto Propuesto



Existing and simulation view looking Southwest from Roundhouse within Los Angeles State Historic Park

Vista existente y simulación de vista al suroeste desde Roundhouse, dentro de Los Angeles State Historic Park

Existing and simulation view looking Southwest from within Los Angeles State Historic Park

Vista existente y simulación de vista al suroeste desde dentro de Los Angeles State Historic Park

UBICACIÓN

- *La ruta del proyecto propuesto cruza el borde del extremo poniente del Los Angeles State Historic Park, junto a la Línea L (Dorada) del Metro y el sistema catenario elevado asociado*
- *La ubicación del proyecto propuesto en el parque y el espacio aéreo requerido no aumentarán el uso del parque de manera que se produzca o acelere un deterioro físico sustancial de las instalaciones*

COMETAS

- *Debido a la ubicación de la ruta del proyecto propuesto – que atraviesa el borde poniente del parque adyacente a la Línea L del Metro y al camino peatonal – el proyecto propuesto no reduce significativamente el área segura para volar cometas dentro del parque*

EVENTOS ESPECIALES

- *La distancia vertical del proyecto propuesto hasta la parte inferior de las cabinas sería de entre 26 y 53 pies (8 y 16 m), con un promedio de aproximadamente 40 pies (12 m) desde el nivel del suelo del parque*
- *Dadas estas distancias, seguirá siendo posible celebrar eventos bajo la mayor parte de la ruta dentro del parque y junto a dicha ruta*

Metro

公園空中權利

公园上方的空中权利

地點

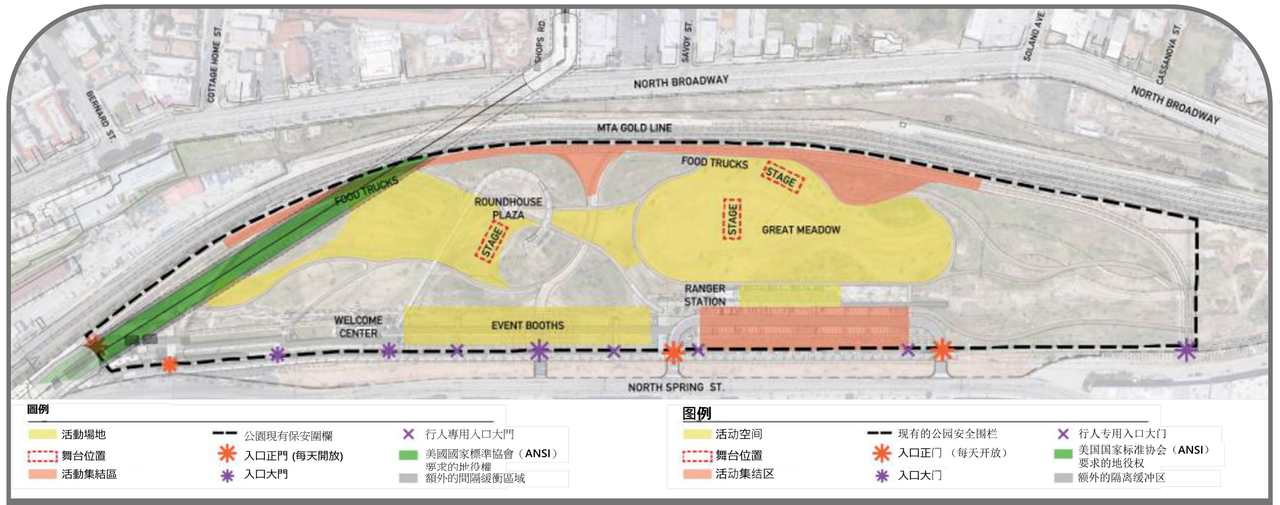
- 擬建計畫路線橫跨洛杉磯州立歷史公園的最西端，毗鄰現有的地鐵 L 線（金線）及相關的架空懸鏈線系統
- 擬建計畫在公園內的位置，和所需進行的淨空活動將不會增加公園的使用量，從而引致設施老化，或加速其老化

風箏

- 由於擬建計畫路線的位置——沿著公園的西部邊緣，毗鄰地鐵 L 線和行人路——擬建計畫將不會顯著減少公園內可供安全放風箏的區域

特別活動

- 從擬建計畫至車廂底部的垂直淨空範圍為 26 至 53 英尺，平均距離公園地面約 40 英尺
- 在這情況下，活動將可以繼續在公園內的大部分路線下和與路線相鄰的地方舉行



洛杉磯州立歷史公園活動舞台和屏幕的獨有位置與擬建項目路線

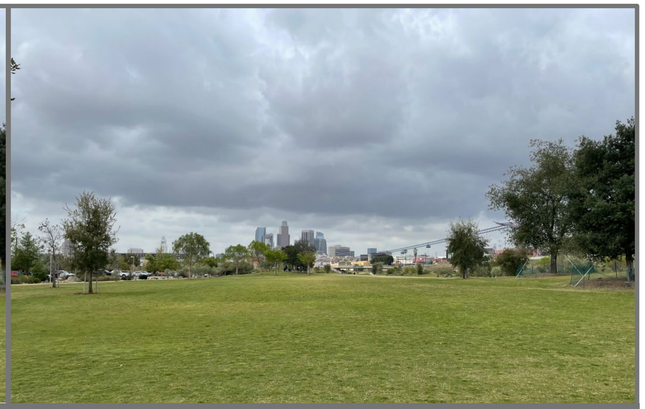
後 | 之后

現時與模擬從洛杉磯州立歷史公園內的 Roundhouse 向西南看的景觀

从洛杉矶州立历史公园内的圆屋朝西南方向看的现有视图和模拟视图



現時與模擬從洛杉磯州立歷史公園內向西南看的景觀

从洛杉矶州立历史公园内朝西南方向看的现有视图和模拟视图

位置

- *拟建项目路线穿过洛杉矶州立历史公园的最西边缘，毗邻现有的轻轨L线(金线)及其相关的高架悬链系统*
- *拟建项目在公园内的位置和所须的空中净空不会增加公园的使用量，因而不会导致或加速设施的实质性损坏*

风筝

- *由于拟建项目路线位于公园的西部边缘，毗邻轻轨L线和行人通道，因此不会明显减少在公园内放飞风筝的安全面积*

特别活动

- *拟建项目到缆车底部的垂直净空范围为26至53英尺，公园上空平均距地面约40英尺*
- *鉴于这些净空，将继续有可能在公园内的大部分索道线路下方和附近举行活动。*

Metro

Benefits of Chinatown/ State Park Station

Beneficios de la Estación Chinatown/ State Park

DISTANCE FROM METRO L LINE (GOLD) STATION

- The LA ART Chinatown / State Park Station and Metro's L Line Chinatown Station are approximately 500 feet apart
- With that distance, ground level walk would take ~3 minutes and does not require crossing any streets
- Pedestrian access enhancements could include pedestrian improvements between Metro's L Line (Gold) Station and the Chinatown/State Park Station consistent with the Connect US Action Plan, including hardscape and landscape improvements, shade structures, and potential seating, as well as support for the future Los Angeles State Historic Park bike and pedestrian bridge

PARK AMENITIES

- 740 square feet of concessions
- 770 square feet of restrooms
- 220 square foot covered breezeway connecting concessions and restrooms
- Mobility hub to access a suite of first and last mile multi-modal options, such as a bike share program

THE LOS ANGELES STATE HISTORIC PARK PEDESTRIAN BRIDGE

- Currently the northern edge of the Los Angeles State Historic Park adjacent is bordered by the Metro L Line (Gold) tracks, forming a barrier and restricting direct visitor access to the park from North Broadway
- In 2019, the Los Angeles State Historic Park conducted a Bike and Pedestrian Bridge Study to explore the feasibility of providing pedestrian and bicycle access from the park to neighborhoods and land uses north of Broadway, including Chinatown, Cathedral High School, the Savoy neighborhood, Elysian Park, and the Solano Canyon neighborhood
- The Draft EIR evaluates the Park's pedestrian bridge as Design and Use Option E

Park Amenities

Servicios del Parque

Potential Broadway-State Historic Park Pedestrian Bridge

Puente Peatonal Potencial Broadway-State Historic Park

DISTANCIA DE LA ESTACIÓN DE LA LÍNEA L DEL METRO (DORADA)

- *La Estación Chinatown/State Park del ART y la Estación Chinatown de la Línea L de Metro están a unos 500 pies (152 m) de distancia*
- *Con esa distancia, el recorrido a pie a nivel del suelo tomaría ~3 minutos y no se requiere cruzar ninguna calle*
- *Entre las mejoras en el acceso peatonal se podrían incluir mejoras peatonales entre la estación de la Línea L (Dorada) del Metro y la Estación Chinatown/State Park, en concordancia con el plan Connect US Action Plan, incluyendo mejoras en las instalaciones y el paisaje, estructuras de sombra y posibles asientos, así como elementos de apoyo al futuro puente peatonal y para bicicletas de Los Angeles State Historic Park*

SERVICIOS DEL PARQUE

- *740 pies cuadrados (69 m2) de concesiones*
- *770 pies cuadrados (72 m2) de baños*
- *Paso cubierto de 220 pies cuadrados (20 m2) que conecta las concesiones y los baños*
- *Centro de movilidad para tener acceso a un conjunto de opciones multimodales de primera y última milla, como un programa de bicicletas compartidas*

PUENTE PEATONAL DE LOS ANGELES STATE HISTORIC PARK

- *Actualmente, el borde norte de Los Angeles State Historic Park que está adyacente limita con las vías de la Línea L (Dorada) del Metro, formando una barrera y restringiendo el acceso directo de los visitantes al parque desde North Broadway*
- *En 2019, Los Angeles State Historic Park llevó a cabo un Estudio de Puentes para Bicicletas y Peatones para explorar la factibilidad de proporcionar acceso peatonal y para bicicletas desde el parque a los barrios y los usos del suelo al norte de Broadway, incluyendo Chinatown, Cathedral High School, el barrio de Savoy, Elysian Park y el barrio de Solano Canyon*
- *El Borrador del EIR evalúa el puente peatonal del parque como la Opción de Uso y Diseño E*

Metro

唐人街的好處/州立公園站的好處

唐人街/州立公园站的益处

距離地鐵L線（金）站

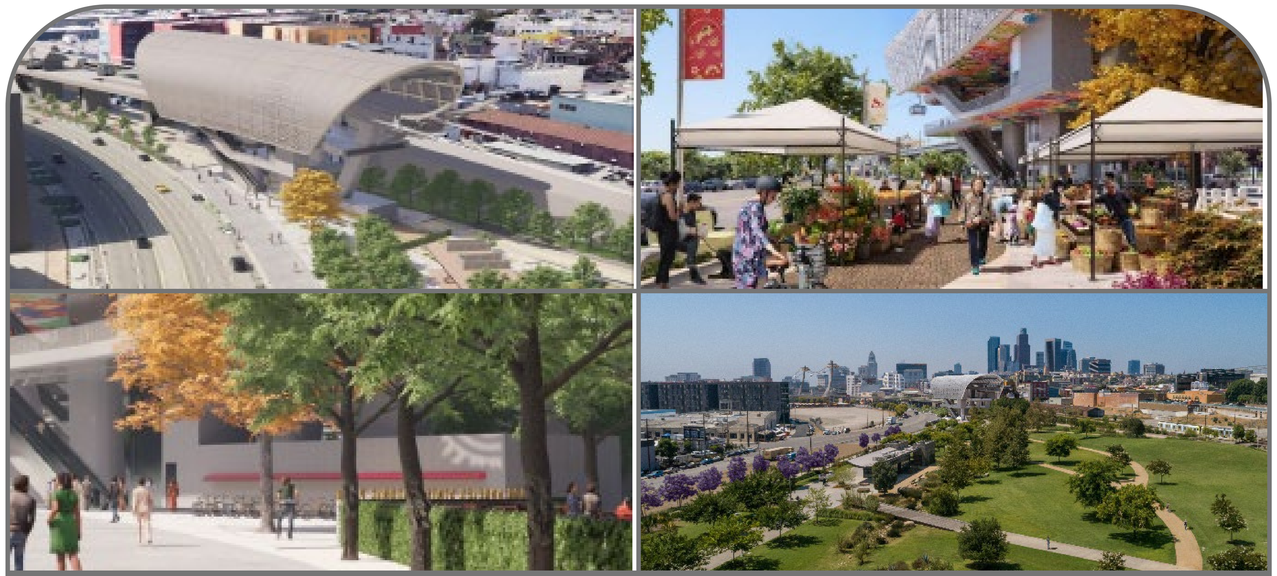
- 洛杉磯空中快速纜車唐人街/州立公園站和地鐵 L 線唐人街站相距約 500 英尺
- 這距離需在在地面步行約3分鐘，當中不需要穿越任何街道
- 行人通道的改進可能包括地鐵 L 線（金線）站和唐人街/州立公園站之間的行人道的改善，此將符合 Connect US 的行動計劃，包括人工景觀和自然景觀的改善、遮陽地方和潛在座位的興建，以及支持未來洛杉磯州立歷史公園單車和行人天橋的興建。

公園設施

- 740平方英尺的特權土地
- 770平方英尺的洗手間
- 220 平方英尺的有蓋走廊連接特權土地和洗手間
- 乘客可以在交通樞紐裡使用一套第一英里和最後一英里的多模式選項，例如;單車共享計劃。

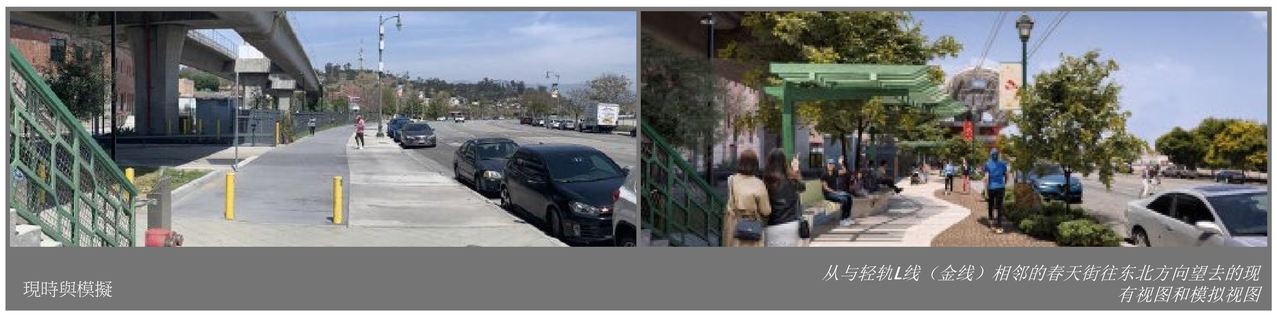
洛杉磯州立歷史公園行人天橋

- 目前，毗鄰洛杉磯州立歷史公園的北部邊緣與地鐵 L 線（金）軌道接壤，二者組成一道屏障，限制遊客從北百老匯直接進入公園
- 2019 年，洛杉磯州立歷史公園進行了一項單車和行人天橋研究，以探索提供從公園到社區與百老匯以北的土地，包括唐人街、大教堂高中、薩沃伊社區、伊利森公園和索拉諾群峽谷社區的行人和單車通道的可行性。
- 《環境影響報告草案》根據設計及用途方案E對公園的行人天橋作出評估



唐人街/州立公園站

唐人街/州立公园站



現時與模擬

从与轻轨L线（金线）相邻的春天街往东北方向望去的现有视图和模拟视图

公園設施

公园休闲设施

潛在百老匯國家歷史公園行人天橋

潜在的百老汇-国家历史公园人行天桥

与轻轨L线（金线）车站的距离

- *洛杉矶空中快捷交通唐人街/州立公园站与轻轨L线（金线）唐人街站的距离约为500英尺*
- *按照这个距离，地面步行大约需要3分钟，不需要穿越任何街道*
- *人行道的优化升级可能包括与“连接美国行动计划”一致的、在轻轨L线（金线）站和唐人街/州立公园站之间的人行道优化升级措施，包括硬景观和自然景观美化、增加遮阳设施和潜在的座位，以及对未来洛杉矶州立历史公园自行车和人行天桥的支持*

公园休闲设施

- *740平方英尺的特许经营商店*
- *770平方英尺的洗手间*
- *220平方英尺的有顶走廊，连接特许经营商店区和洗手间*
- *交通转换点，以提供第一英里和最后一英里的多种形式选择，如自动车共享计划*

洛杉矶州立历史公园人行天桥

- *目前，毗邻的洛杉矶州立历史公园的北部边缘与轻轨L线(金线)轨道相接，形成了一道屏障，限制了游客从北百老汇直接进入公园*
- *2019年，洛杉矶州立历史公园进行了一项自行车和人行天桥研究，以探索为百老汇以北的社区和土地用途，包括唐人街、大教堂高中、Savoy社区、伊利森公园和索拉诺峡谷社区，提供步行和自行车通道的可行性*
- *环境影响报告草案评估了公园人行天桥的设计和使用方案E*

Metro

Noise

Ruido

WHAT WAS STUDIED?

- Noise impacts of Project construction on noise-sensitive receptors near the proposed Project alignment and truck routes
- Vibration impacts of Project construction on vibration-sensitive receptors related to both building damage and human annoyance
- Noise and vibration impacts from operation of the aerial gondola

KEY ANALYSIS AND CONCLUSIONS

- Operation of the aerial gondola would not have a significant noise or vibration impact
- Mitigation can reduce noise from Project construction but not to a less-than-significant level
- Noise from off-site construction related traffic would be less-than-significant
- Mitigation would protect historic buildings from vibration damage
- Because of the low threshold, human annoyance vibration impacts would be significant and unavoidable

IMPACT CONCLUSIONS

Topic	Finding	
	Construction	**Operations**
Substantial increase in ambient noise levels	On-Site: Significant and Unavoidable	Less Than Significant
	Off-Site: Less Than Significant	
Excessive ground-borne vibration	Building Damage: Less Than Significant with Mitigation	Less Than Significant
	Human Annoyance: Significant and Unavoidable	
Exposure to airport noise	No Impact	No Impact

HOW WOULD IMPACTS BE MINIMIZED?

- Construction Noise
  - Robust noise barriers program with varying heights and designs depending upon the phase and location of work
  - Use of equipment with noise reduction features
  - Community outreach, including a Noise Disturbance Coordinator
- Construction Vibration
  - Monitoring of vibration equipment
  - Use of non-vibrating equipment or hand tools near sensitive structures

Sound Walls

Muros contra Ruido

¿QUÉ SE ESTUDIÓ?

- *Impactos del ruido de la construcción del proyecto a los receptores sensibles al ruido cerca de la ruta del proyecto propuesto y las rutas de los camiones*
- *Impactos de la vibración de la construcción del proyecto a los receptores sensibles a la vibración relacionados con los daños a los edificios y con las molestias a las personas*
- *Impactos de ruido y vibración de la operación de las góndolas aéreas*

ANÁLISIS Y CONCLUSIONES CLAVE

- *La operación de la góndolas aéreas no tendría un impacto significativo de ruido o vibración*
- *Las medidas de mitigación pueden reducir el ruido de la construcción del proyecto, pero no hasta un nivel no significativo.*
- *El ruido del tráfico relacionado con la construcción fuera del sitio de obras sería menos que significativo*
- *La mitigación protegería a los edificios históricos de los daños causados por las vibraciones*
- *Debido al bajo umbral, los impactos de las vibraciones en cuanto a molestias a las personas serían significativos e inevitables*

CONCLUSIONES SOBRE EL IMPACTO

Tema	*Resultado*	
	Construcción	***Operaciones***
Aumento sustancial de los niveles de ruido ambiental	*En el Sitio de Obras: Significativo e Inevitable*	*Menos que significativo*
	Fuera del Sitio de Obras: Menos que significativo	
Vibración en el suelo excesiva	*Daños en Edificios: Menos que significativo con mitigación*	*Menos que significativo*
	Molestia a Personas: Significativo e Inevitable	
Exposición al ruido del aeropuerto	*Sin impacto*	*Sin impacto*

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

- *Ruido de la Construcción*
  - *Programa de barreras robustas contra el ruido con alturas y diseños variables, según la fase y la ubicación de las obras*
  - *Uso de equipos con características de reducción del ruido*
  - *Alcance a la comunidad, incluyendo un Coordinador de Perturbaciones Acústicas*
- *Duración de la Construcción*
  - *Supervisión de los Equipos de Vibración*
  - *Uso de herramientas manuales o equipos no vibratorios cerca de las estructuras sensibles*

Metro

噪音

噪音

研究範圍是甚麼？

- 施工對計畫路線和貨車路線附近的噪音敏感受體的影響
- 計畫施工對與建築物損毀和人為滋擾相關的震動敏感受體的震動影響
- 空中纜車運行期間所產生的噪音和震動影響

主要分析及結論

- 空中纜車的操作不會產生明顯的噪音或震動影響
- 緩解措施可以降低項目施工的噪音，但水平不會十分顯著
- 場外施工相關交通的噪音將不會十分顯著
- 緩解措施將保護歷史建築，免其受震動損毀
- 由於界限低，人為滋擾的震動影響將為顯著而且不能避免

影響總結

主題	發現	
	建築工程：	**操作**
環境噪音水平大幅增加	現場:嚴重且不能避免。	影響不大。
	場外:影響不大。	
地面震動過大	建築物損壞：經緩解後影響不大。	影響不大。
	人類滋擾:嚴重且不能避免。	
暴露於機場噪音中	沒有影響。	沒有影響。

如何可將影響降至最低?

- 施工噪音
  - 根據工作階段和位置，裝置不同高度與設計的強大隔音屏障設備
  - 使用具有降噪功能的設備
  - 社區外展，包括一名噪音干擾協調員
- 施工震動
  - 震動監測設備
  - 在敏感結構附近使用非震動設備或手動工具

研究内容

- 项目施工对计划项目路线和货车路线附近的噪音敏感受体的影响
- 项目施工对振动敏感受体的振动影响，包括对建筑物的破坏和对人类的干扰
- 空中索道运行的噪音和振动影响

重点分析及总结

- 空中索道的运行不会产生大的噪音或振动影响
- 缓解措施可以将项目施工的噪音降至无重大影响的水平
- 与场外施工相关的交通噪音无重大影响
- 缓解措施将保护历史建筑免受振动破坏
- 由于阈值低，振动对人的干扰影响将是重大且不可避免的

影响总结

主题	查找	
	建筑施工	**运营**
环境噪音水平大幅增加	在现场：有重大影响且不可避免	影响不重大
	在场外：影响不重大	
过度的经地面传送的振动	建筑损坏：采取缓解措施后无重大影响	影响不重大
	对人的干扰：有重大影响且不可避免	
暴露于机场噪音	无影响	无影响

如何尽量减少影响？

- 施工噪音
  - 根据不同施工阶段和位置而作不同高度和设计的坚固的隔音屏障计划
  - 使用具有降噪功能的设备
  - 包括一个噪音干扰协调员的社区外展服务
- 施工振动
  - 监控振动设备
  - 在敏感结构附近使用无振动设备或手工工具

Metro

Transportation

Transporte

WHAT WAS STUDIED?

- Utilized both the CEQA Guidelines and LADOT's established screening criteria, analysis methodology, and threshold criteria through the City's TAG
- The analysis of VMT for the proposed Project employed a variety of data, methodologies, and models in order to estimate Project ridership, vehicle trips reduced, vehicle trip lengths, and ultimately the VMT benefit of the proposed Project
- Ridership estimates for Dodger Stadium game and event attendees, employees, tourists, neighborhood riders, and Los Angeles State Historic Park visitors and event attendees
- Location of the proposed Project stations, junction, and towers and whether these components substantially increase hazards due to a geometric design feature
- The proposed Project's construction conceptual traffic detour plans and haul route

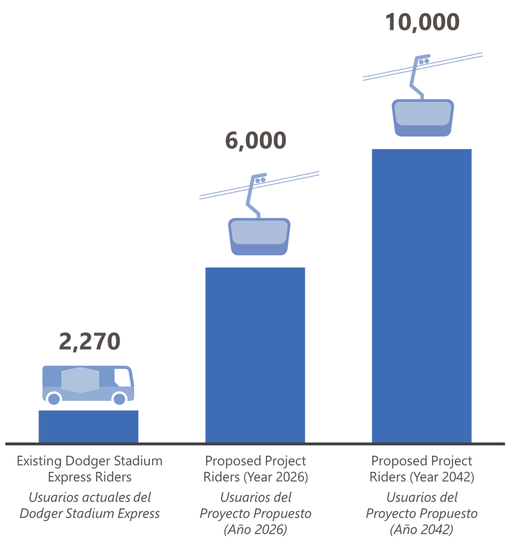
KEY ANALYSIS AND CONCLUSIONS IN THE EIR

- The proposed Project would be consistent with PPOPs – programs, plans, ordinances, and policies – addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities
- The proposed Project would not introduce any unsafe physical conditions with the implementation of mitigation measures for the Alameda Tower and Chinatown/State Park Station
- With implementation of mitigation measures, emergency access would be maintained during proposed Project construction

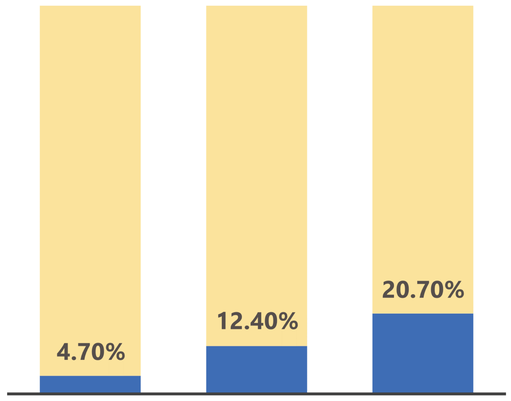
Topic	Finding	
	Construction	Operations
Vehicle Miles Travelled	No impact	No impact
Conflict with Plan or Policies	Less Than Significant	Less Than Significant
Increase Hazards through Design	Less Than Significant with Mitigation	Less Than Significant with Mitigation

HOW WOULD IMPACTS BE MINIMIZED?

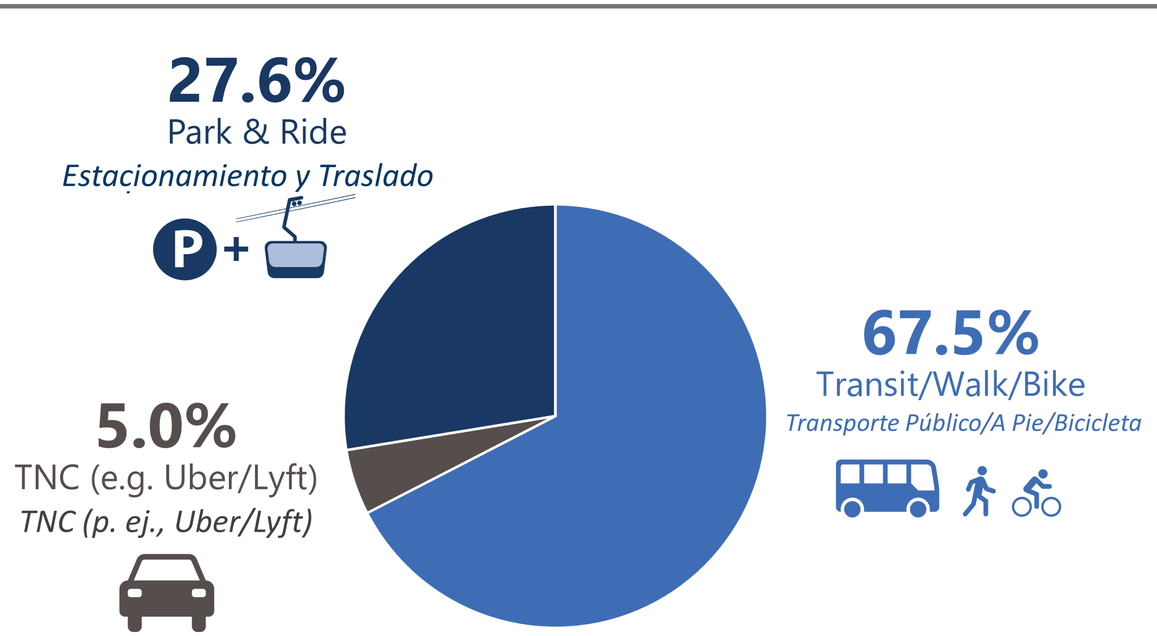
- Construction: Implementation of a City approved and detailed Construction Traffic Management Plan, including street closure information, detour plans, haul routes, and a staging plan
- Implementation of a City approved Temporary Disaster Route Plan, which would include street closure information and detour plans in order to facilitate the movement of emergency vehicles through the study area and minimize effects on emergency response during a disaster
- Visibility enhancements – such as high visibility crosswalk treatments, advanced crossing warning signs, flashing beacons, upgraded lighting, and new or upgraded traffic controls – at the proposed Alameda Tower and Chinatown/State Park Station



Dodger Stadium Transit Riders — *Usuarios del Transporte del Dodger Stadium*



Dodger Stadium Transit Mode Split — *Medios de Transporte Divididos del Dodger Stadium*



Proposed Project Mode of Access (%) — *Medio de Acceso al Proyecto Propuesto (%)*

¿QUÉ SE ESTUDIÓ?

- *Se utilizaron las Directrices de la CEQA y los criterios de selección establecidos por el LADOT, la metodología de análisis y los criterios del umbral a través de las directrices TAG de la Ciudad*
- *El análisis de VMT para el proyecto propuesto empleó una variedad de datos, metodologías y modelos para estimar el número de pasajeros del proyecto, la reducción de viajes de vehículos, la distancia de los viajes de vehículos y, en última instancia, el beneficio de VMT del proyecto propuesto*
- *Estimaciones del número de pasajeros para los asistentes a los partidos y eventos del Dodger Stadium, empleados, turistas, transeúntes del vecindario y visitantes y asistentes a eventos de Los Angeles State Historic Park*
- *Ubicación de las estaciones, las torres y la intersección del proyecto propuesto y si estos componentes aumentan sustancialmente los peligros debido a una característica de diseño geométrico*
- *Los planes conceptuales de desvío de tráfico del proyecto propuesto y la ruta de transporte*

ANÁLISIS Y CONCLUSIONES CLAVE DEL EIR

- *El proyecto sería consistente con los PPOPs – programas, planes, ordenanzas o políticas – que aborden el sistema de circulación, incluyendo las instalaciones de transporte público, carreteras, bicicletas y peatones*
- *El proyecto propuesto no introduciría ninguna condición física insegura en la implementación de medidas de mitigación para la Torre Alameda y la Estación Chinatown/State Park*
- *Con la implementación de las medidas de mitigación, el acceso de emergencia se mantendría durante la construcción del proyecto propuesto*

Tema	*Resultado*	
	Construcción	*Operaciones*
Millas Viajadas en Vehículos	*Sin impacto*	*Sin impacto*
Conflicto con el Plan o las Políticas	*Menos que significativo*	*Menos que significativo*
Riesgos que Aumentan a Través del Diseño	*Menos que significativo con mitigación*	*Menos que significativo con mitigación*

¿CÓMO SE MINIMIZARÍAN LOS IMPACTOS?

- *Construcción: Implementación de un Plan de Gestión de Tráfico de la Construcción detallado y aprobado por la Ciudad, que incluya información sobre el cierre de calles, planes de desvío, rutas de transporte y un plan de preparación*
- *Implementación de un plan de ruta temporal en caso de desastre aprobado por la Ciudad, que incluiría información sobre el cierre de calles y planes de desvío a fin de facilitar el movimiento de vehículos de emergencia a través del área de estudio y minimizar los efectos en la respuesta de emergencia durante un desastre*
- *Mejoras en la visibilidad – como tratamientos de alta visibilidad en los pasos de peatones, señales avanzadas de advertencia de cruces, luces intermitentes, iluminación mejorada y controles de tráfico nuevos o mejorados – en la Torre Alameda propuesta y en la Estación Chinatown/State Park*

Metro

交通運輸

交通运输

研究範圍是甚麼？

- 透過城市 TAG 使用加州環境品質法案(CEQA)和 LADOT 既定的篩選標準、分析方法和界限標準
- 對擬建計畫的車輛行駛里程（VMT）以各種數據、方法和模型進行分析，以估計項目載客量、減少的車輛行程、車輛行車時間，並最終估算擬議項目的 VMT 收益
- 道奇體育場比賽和活動參加者、員工、遊客、乘客,和洛杉磯州立歷史公園遊客和活動參加者的乘車人數估算
- 擬建計畫車站、路口和支撐塔的位置，以及這些組成部份是否因幾何設計特徵而令危險顯著增加
- 擬建計畫的建設概念交通繞道圖與運輸路線

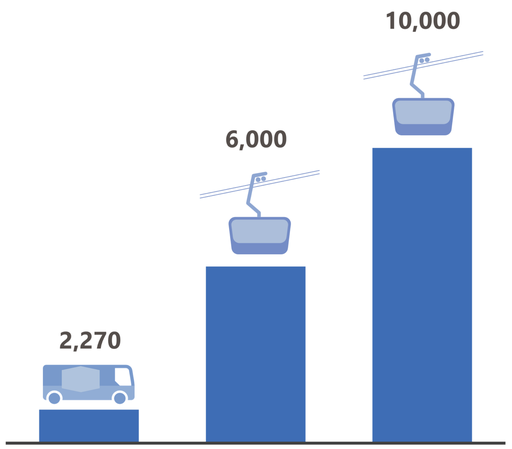
《環境影響報告》的主要分析及結論

- 擬建項目將與 PPOPs（程序、計劃、條例和政策）一致，當中涉及運輸系統，包括交通、道路、單車和行人設施
- 在阿拉米達塔和唐人街/州立公園站實施緩解措施時，擬建計畫不會引起任何不安全的物理條件
- 緩解措施實施時，在擬建計畫施工期間將保持緊急通道暢通

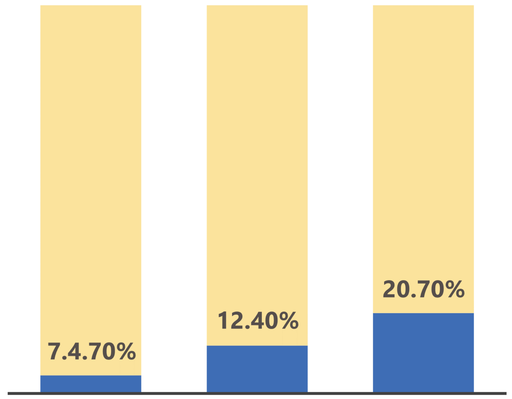
主題	發現	
	建築工程：	操作
車輛行駛里程	沒有影響。	沒有影響。
與計劃或政策衝突	影響不大。	影響不大。
設計令危險增加	經緩解後影響不大。	影響不大。緩解

如何可將影響降至最低?

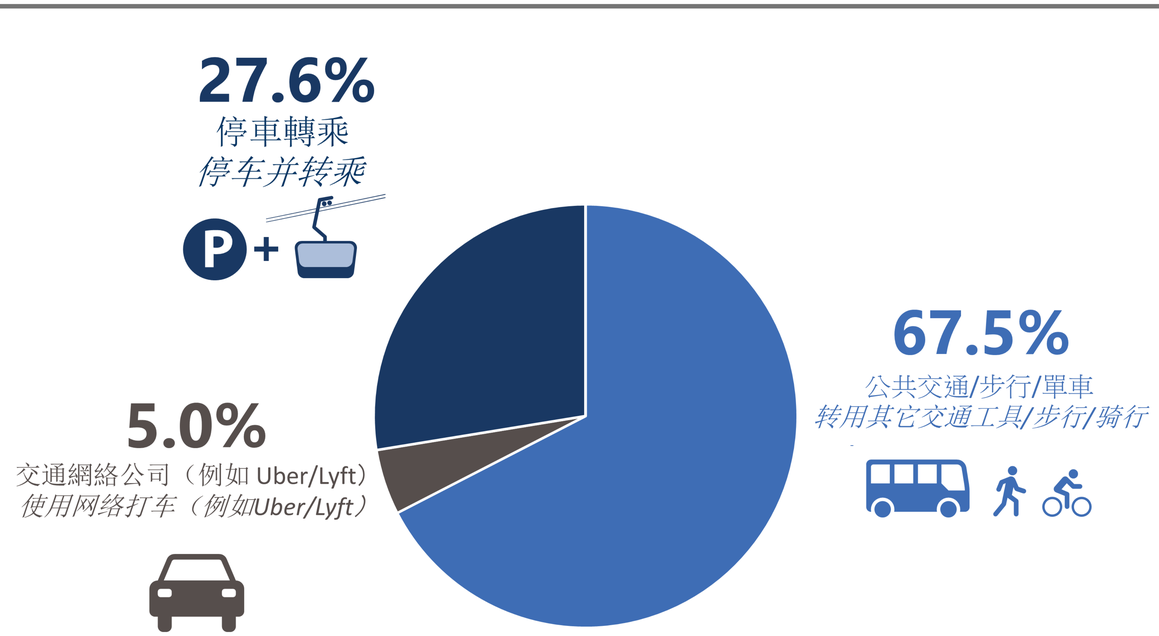
- 建築工程：實施經市批准的詳細建設交通管理計劃，當中包括封閉街道資料、繞道計劃、運輸路線和分階段計劃
- 實施經市政府批准的臨時災害路線計劃，當中包括封閉街道資料和繞道計劃，令應急車輛透過研究區域並最大限度地減少災害期間對應急響應的影響
- 增強擬建阿拉米達塔和唐人街/州立公園站的能見度——例如:高能見度行人通道、優化交叉路口警告標示、閃光燈、升級照明以及新的或已升級的交通控制裝置



道奇體育場交通乘客 *道奇体育馆的交通乘客*



道奇體育場交通方式拆分 *道奇体育馆的交通模式划分*



擬建項目入口方式（%） *拟建项目入口方式(%)*

研究内容

- *利用了《加州环境质量法案》（CEQA）指南和洛杉矶交通局通过城市标签建立的筛选标准、分析方法和阈值标准*
- *对拟建项目的行车里程（VMT）采用了各种数据、方法和模型，以便能估计项目的乘客量、减少车辆行程数量、车辆行程长度进行分析，并最终估计出拟建项目的行车里程效益*
- *道奇体育馆比赛和活动的参与者、员工、游客、附近的乘客，以及洛杉矶州立历史公园的游客和活动参与者，两者的乘客量预估*
- *拟建的项目车站、枢纽站和索道塔的位置，以及这些组成部分是否会因其几何设计特征而大大增加了危险*
- *拟建项目施工概念交通绕行方案及运输路线*

环境影响报告的主要分析与结论

- *拟建项目将符合PPOPs - 方案、计划、条例和政策 - 处理包括交通、道路、自行车和步行设施的流通系统*
- *由于阿拉米达索道塔和唐人街/国家公园站采取了缓解措施，拟建项目不会带来任何不安全的实际状况*
- *随着缓解措施的实施，在拟建项目施工期间将保留紧急通道*

主题	查找	
	建筑施工	运营
行车里程	无影响	无影响
与计划或政策相冲突	影响不重大	影响不重大
设计增加了危险性	采取缓解措施后无重大影响	影响不重大缓解措施

如何尽量减少影响？

- *建筑施工：执行经市政府批准的详细的施工交通管理计划，包括道路封闭信息、绕行计划、工地运输路线和分段运输计划*
- *执行经市政府批准的临时救灾路线计划，其中将包括道路封闭的信息和绕行计划，以方便应急车辆通过研究区域，并尽量减少灾害期间对应急响应的影响*
- *为拟建的阿拉米达索道塔和唐人街/州立公园车站加强能见度 - 例如高能见度的人行横道处理、高级十字路口警告标志、闪烁的信号灯、升级的照明以及新的或升级的交通管制*

Metro

Parking

Estacionamiento

WHAT WAS STUDIED?

- Most proposed Project riders are expected to shift to transit to get to the Project
- There are approximately 10,290 spaces in publicly available lots and garages and in on-street spaces within ½ mile of the proposed Project's Alameda Station and Chinatown/State Park Station

Parking Type	Game Day Parking			
	Parking Supply	Parked Vehicles	Occupancy	Remaining Supply
Off-Street Publicly Available Spaces	6,876	2,173	32%	4,703
On-Street Spaces	3,417	2,017	59%	1,400
TOTAL				
Proposed Project Parking Demand (2042)	**-**	**307-790**		
Total Available Off-Street Spaces with Project	**6,876**	**2,963**	**43%**	**3,913**

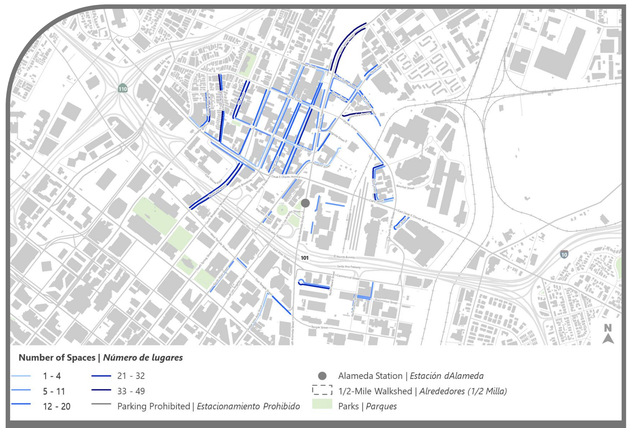
*Counts were taken on September 10, 2021, on an evening when the Los Angeles Dodgers hosted the San Diego Padres; the paid attendance was 48,403, which was higher than the 2019 Los Angeles Dodgers season average for weekday evening games. In coordination with Metro and LADOT, the Parking Study applied a 46% increase to off-street publicly available spaces to account for the COVID-19 pandemic.

PARKING STUDY CONCLUSIONS

- With the addition of the proposed Project's potential parking demand, there is plenty of available parking spaces within the proposed Project's walkshed. Even if some existing parking lots get redeveloped, there is plenty of off-street parking supply to accommodate all of the proposed Project's parking demand.

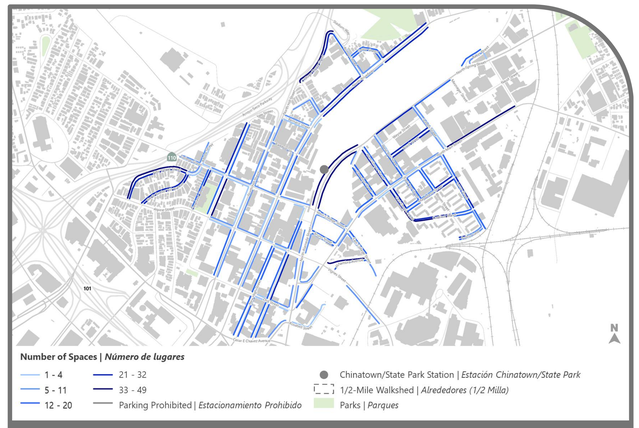
THE PROJECT IS COMMITTED TO ENCOURAGE TRANSIT RIDERSHIP

- Implement business to business partnerships with local businesses to pre-sell bundled packages that include patronage at local businesses and available off-street parking
- Support implementation/expansion of various management strategies including time limit parking restrictions and parking meters during game times to discourage riders from parking in the community and keeping spaces available for residents and local businesses



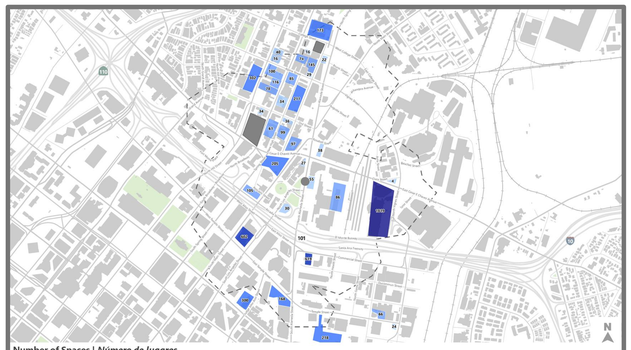
On-Street Parking - Number of Spaces - Alameda Station Walkshed

Estacionamiento en las Calles - Número de Lugares - Alrededores de la Estación de Alameda



On-Street Parking - Number of Spaces - Chinatown/State Park Station Walkshed

Estacionamiento en las Calles - Número de Lugares - Alrededores de la Estación de Chinatown/State Park



Off-Street Parking - Number of Spaces - Alameda Station Walkshed

Estacionamiento fuera de la vía pública - Número de Lugares - Alrededores de la Estación de Alameda

Off-Street Parking - Number of Spaces - Chinatown/State Park Station Walkshed

Estacionamiento fuera de la vía pública - Número de Lugares - Alrededores de la Estación de Chinatown/State Park

Off-Street Parking - 8:00 PM Gameday Occupancy - Alameda Station Walkshed

Pública - Ocupación a las 8:00 p.m. durante día de partido - Alrededores de la Estación de Alameda

Off-Street Parking - 8:00 PM Gameday Occupancy - Chinatown/State Park Station Walkshed

Pública - Ocupación a las 8:00 p.m. durante día de partido - Alrededores de la Estación de Chinatown/State Park

¿QUÉ SE ESTUDIÓ?

- *Se espera que la mayoría de los usuarios del proyecto propuesto utilicen el transporte público para llegar al proyecto*
- *Hay aproximadamente 10,290 lugares en lotes y garajes públicos y en espacios en la calle a menos de ½ milla (800 m) de la Estación Alameda del proyecto propuesto y la Estación Chinatown/State Park*

Tipo de Estacionamiento	*Estacionamiento para un Día de Partido*

TOTAL				
Demanda de Estacionamiento con el Proyecto Propuesto (2042)	***-***	***307-790***		
Total de Lugares Disponibles Fuera de la Vía Pública con el Proyecto	***6,876***	***2,963***	***43%***	***3,913***

**Los conteos se realizaron el 10 de septiembre de 2021, en una noche en la que los Dodgers de Los Ángeles recibieron a los Padres de San Diego; la asistencia pagada fue de 48,403, que fue más alta que el promedio de la temporada 2019 de los Dodgers de Los Ángeles para los juegos nocturnos entre semana. En coordinación con Metro y LADOT, el Estudio de Estacionamiento aplicó un aumento del 46% a los espacios públicos disponibles fuera de la vía pública para tener en cuenta la pandemia de COVID-19.*

CONCLUSIONES DEL ESTUDIO DE ESTACIONAMIENTO

- *Con la adición de la demanda potencial de estacionamiento del proyecto propuesto, hay muchos lugares de estacionamiento disponibles dentro de los alrededores del proyecto propuesto. Incluso si algunos de los estacionamientos existentes se reurbanizan, hay suficiente oferta de estacionamiento fuera de la vía pública para dar cabida a toda la demanda de estacionamiento del proyecto propuesto.*

EL PROYECTO SE COMPROMETE A FOMENTAR EL USO DEL TRANSPORTE PÚBLICO

- *Estableciendo asociaciones de empresa a empresa con los negocios locales para la preventa de paquetes que incluyan el consumo en los negocios locales y el estacionamiento disponible fuera de la vía pública*
- *Apoyar la implementación/expansión de varias estrategias de gestión, incluyendo restricciones de estacionamiento con límite de tiempo y parquímetros durante las horas de los partidos para disuadir a los pasajeros de estacionar en la comunidad y mantener espacios disponibles para los residentes y los negocios locales*

Metro

停車

停车

研究範圍是甚麼？

- 預計大多數議建計畫的乘客將轉乘公共交通以到達項目
- 在擬建的阿拉米達站和唐人街/州立公園站 ½ 英里範圍內，公共停車位和車庫以及街道上約提供共 10,290 個車位

車位類型	比賽日停車			
	車位供應	停泊車輪	用量	空位
室內車位	6,876	2,173	32%	4,703
街頭車位	3,417	2,017	59%	1,400
總數				
擬建計畫車位需求 (2042)	**-**	**307-790**		
可供計畫使用的總室內車位數量	**6,876**	**2,963**	**43%**	**3,913**

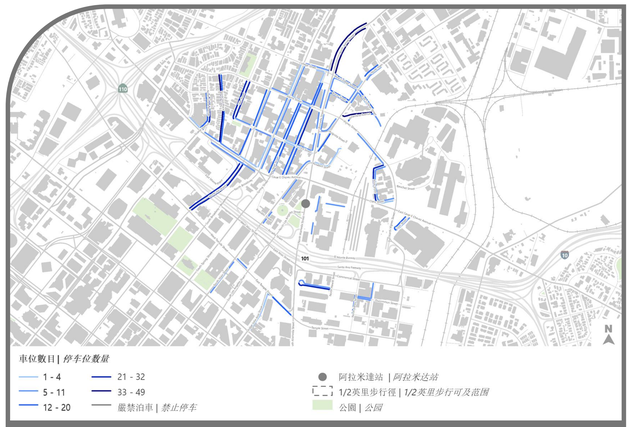
*數據根據 2021年9月10日 洛杉磯道奇隊主場迎戰聖地牙哥教士隊的晚上進行；當天付費出席人數為 48,403，高於 2019 年洛杉磯道奇隊平日晚間比賽的平均水平。與運輸局和 LADOT 合作，車輪停泊研究將室內公共泊車位置增加 46%，以應對 COVID-19 疫情對車位需求。

停車研究結論

- 對於擬建計畫的潛在停車需求，擬建項目的行人路上有大量可用車位供應。即使某些現有的停車場需重新開發，附近也有大量的室內車位供應,以滿足擬建計畫對車位的需求。

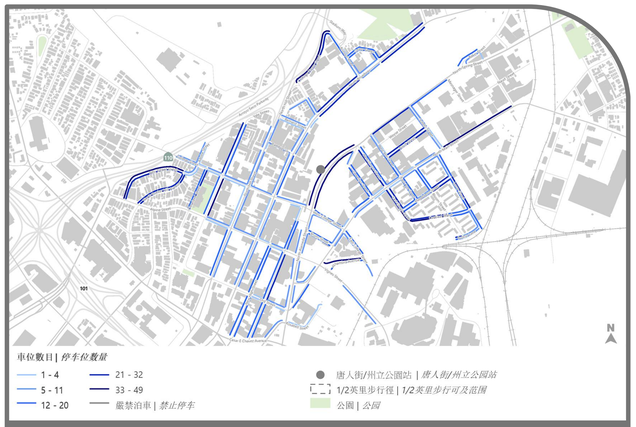
項目鼓勵乘客使用公共交通工具

- 與當地企業建立企業間的合作夥伴關係以預售捆綁套餐，當中包括企業顧客可使用路邊停車位
- 支持實施/擴展各種管理策略，包括限時停車限制和比賽期間的停車計時器，從而阻止駕車人士在社區停車並為居民和當地企業保留可用空間



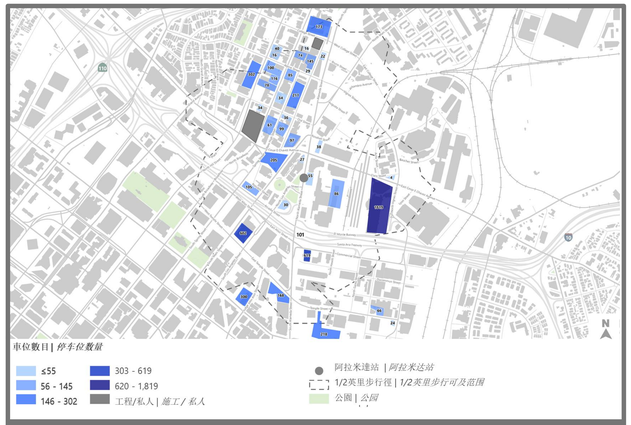
路邊車位 - 車位數量 - 阿拉米達站步行區

路边停车位 - 停车位数量 - 阿拉米达站步行可及范围



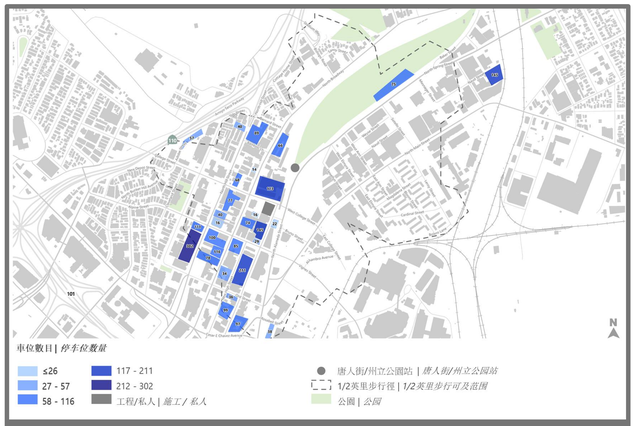
路邊車位 - 車位數量 - 唐人街/州立公園站步行區

路边停车场位- 停车位数量 - 唐人街/州立公园站步行可及范围



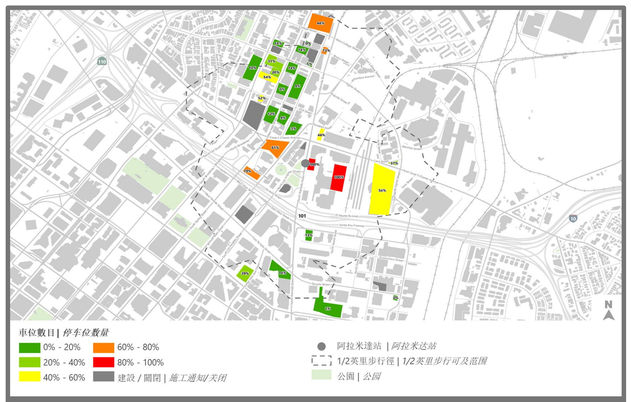
室內車位 - 車位數量 - 阿拉米達站步行區

非街道停车场 - 停车位数量 - 阿拉米达站步行可及范围



室內泊車 - 車位數量 - 唐人街/州立公園站步行區

非街道停车场 - 停车位数量 - 唐人街/州立公园站步行可及范围



室內泊車 - 比賽日晚上8時空置率 - 阿拉米達站步行區

非街道停车场 - 比赛日下午8:00点车位占有率 - 阿拉米达站步行可及范围

室內泊車 - 比賽日晚上8時空置率 - 唐人街/州立公園站步行區

非街道停车场 - 比赛日下午8:00点车位占有率 - 唐人街/州立公园站步行可及范围

研究内容?

- 预计大多数拟搭乘项目的乘客将转乘交通工具前往本项目
- 在拟建项目的阿拉米达站和唐人街/州立公园站的半英里范围内，公共可用停车位和车库以及街道上的停车位约有10,290个

停车类型	比赛日停车			
	停车位供应	停泊的车辆	停车位占用率	剩余的停车位
非街道可停车的公共空间	6,876	2,173	32%	4,703
路边停车空间	3,417	2,017	59%	1,400
总计				
拟建项目的停车需求（2042年）	**-**	**307-790**		
项目可用的非街道停车位总数量	**6,876**	**2,963**	**43%**	**3,913**

*统计时间是2021年9月10日，当天晚上洛杉矶道奇队主场迎战圣地亚哥教士队；付费入场人数为48,403人，高于2019年洛杉矶道奇队工作日晚间比赛的赛季平均水平。在与都会交通局和洛杉矶交通局的协调下，本停车研究将非街道公共可用停车位增加了46%，以应对新冠肺炎疫情。

停车场研究结论

- 考虑到拟建项目的潜在停车需求，故在拟建项目的步行可及范围内提供了大量可用的停车位。即使一些现有的停车场被重新改建，也有大量的非街道停车位供应，以满足拟建项目的所有停车需求。

本项目致力于鼓励乘坐公共交通

- 与本地商业建立商业合作关系，预售捆绑套餐，包括惠顾本地商业的客户和可用的非街道停车位
- 支持实施/扩大各种管理策略，包括比赛期间的限时停车限制和咪表收费，以劝阻乘客将车停在社区内，并为居民和本地商业提供停车位

LOS ANGELES AERIAL RAPID TRANSIT
FACT SHEET

Metro

Project Overview

Los Angeles Aerial Rapid Transit Technologies LLC is proposing the Los Angeles Aerial Rapid Transit Project, which would connect Los Angeles Union Station to the Dodger Stadium property with an intermediate station at the Los Angeles State Historic Park via a zero emission aerial rapid transit gondola system in downtown Los Angeles.

- Zero Emissions
- 1 Mile Distance
- 7 Minute Ride
- 3,000 Cars off the road on game days
- 5,000 passengers per hour per direction
- Free for Dodger ticket holders and community members who live and work along the route.

LA ART proposes to serve all Dodger home games and events at the stadium, and is also anticipated to operate daily to serve community members, park visitors, and visitors to Los Angeles. LA ART would:

- Reduce transportation related pollution and greenhouse gas (GHG) emissions as a result of reduced vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days.

- Improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit connection between the region's transit hub and one of it's largest event centers.
- Attract new transit riders to the Metro system through the unique experience of an aerial transit system connected to Dodger Stadium.
- Connect surrounding communities of Chinatown, Mission Junction, Los Angeles State Historic Park, Elysian Park, Echo Park, and Solano Canyon to the regional transit system accessible at Union Station.
- Enhance safety of neighborhoods adjacent to Dodger Stadium by reducing the number of vehicles in the area.
- Improve the Dodger Stadium visitor experience by providing efficient, high-capacity, and faster alternative access to Dodger Stadium.
- Improve transit rider experience by providing unique scenic views of the Los Angeles area.

Overview of Technology

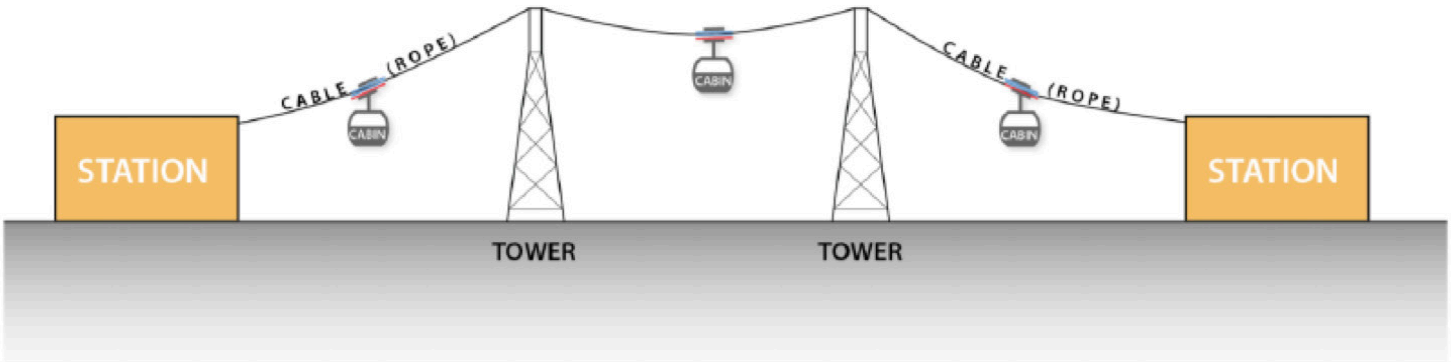
Aerial rapid transit (ART) is a proven, zero emission, safe, sustainable, high-capacity, and highly efficient form of transportation. In an aerial transit system, cabins are suspended above grade by cables strung between stations and towers. Modern applications have seen the evolution of aerial transit technology as a feasible mode of urban rapid transit.

The proposed Project would include three passenger stations, a non-passenger junction, three towers, and gondola cabins. The cabins would allow for sitting or standing; would accommodate wheelchairs, baby strollers, and bicycles; and would be air conditioned and fully ADA accessible. Each cabin would have a security camera on board with a feed to the control room as well as a "push to talk" button.

Environmental Impact Report

Los Angeles County Metropolitan Transportation Authority (Metro) is the lead agency under the California Environmental Quality Act (CEQA) and is preparing a Draft Environmental Impact Report (DEIR) to evaluate the potential for environmental impacts resulting from the proposed project. Topics analyzed and included in the DEIR include:

- Aesthetics
- Agriculture and Forestry
- Air Quality
- Biological Resources
- Cultural Resources
- Energy
- Geology and Soils
- Greenhouse Gas Emissions (GHGs)
- Land Use and Planning
- Mineral Resources
- Noise
- Parks and Recreation
- Population and Housing
- Public Services
- Transporation



Project Timeline

Project Updates

This summer, the Draft Environmental Impact Report (EIR) is available for public review and comment for 60 days, from October 17 to December 16, 2022. This milestone document evaluates the proposed alternatives, as well as their potential impacts and mitigation measures.

The Draft EIR can be viewed online or at repository sites where printed copies will be available. Public hearings will also take place to provide a presentation and an opportunity for oral comments. Formal comments may also be submitted by mail, by phone, and online.

To learn more please visit metro.net/aerialrapidtransit

Public Involvement

Community Information Session

Prior to the release of the Draft EIR, Metro is hosting two community information sessions to share details on the project and options on how to comment and participate on the upcoming release of the Draft EIR.

Virtual: Wednesday, October 12, 2022, 5pm - 7pm
In-Person: Saturday, October 15, 2022, 10am - 12pm

Draft EIR Informational Workshop

TRÁNSITO RÁPIDO AÉREO DE LOS ÁNGELES
HOJA INFORMATIVA

Metro®

Descripción General del Proyecto

Los Angeles Aerial Rapid Transit Technologies LLC está proponiendo el Proyecto de Tránsito Rápido Aéreo de Los Ángeles (LA ART, por sus siglas en ingles), que conectaría Los Angeles Union Station con la propiedad del Dodger Stadium con una estación intermedia en el Parque Histórico Estatal de Los Ángeles a través de un sistema de góndolas aéreas de tránsito rápido de cero emisiones en el centro de Los Ángeles.

- Cero emisiones
- Distancia de 1 milla
- Viaje de 7 minutos
- 3.000 coches fuera de la carretera en los días de partidos
- 5.000 pasajeros por hora por dirección
- Gratis para los poseedores de boletos de los Dodgers y miembros de la comunidad que viven y trabajan a lo largo de la ruta.

LA ART propone dar servicio para todos los partidos y eventos en el estadio, y también se prevé que opere diariamente para servir a los miembros de la comunidad, visitantes del parque y visitantes de Los Ángeles. LA ART:

- Reduciría la contaminación relacionada con el transporte y las emisiones de gases de efecto invernadero (GHG, por sus siglas en inglés) como resultado de la reducción de la congestión vehicular en y alrededor del Dodger Stadium, en las calles de los vecindarios, las

carreteras arteriales y las autopistas durante los días de partidos y eventos especiales.

- Mejoraría la movilidad y la accesibilidad para la región al proporcionar una conexión de tránsito rápido aéreo diario y de alta capacidad entre el centro de tránsito de la región y uno de sus centros de eventos más grandes.
- Atraería a nuevos pasajeros de tránsito al sistema Metro a través de la experiencia única de un sistema de transporte aéreo conectado al Dodger Stadium.
- Conectaría las comunidades circundantes de Chinatown, Mission Junction, Los Angeles State Historic Park, Elysian Park, Echo Park y Solano Canyon con el sistema de tránsito regional accesible en Union Station.
- Mejoraría la seguridad de los vecindarios adyacentes al Dodger Stadium al reducir el número de vehículos en el área.
- Mejoraría la experiencia del visitante del Dodger Stadium al proporcionar un acceso alternativo eficiente, de alta capacidad y más rápido al Dodger Stadium.
- Mejoraría la experiencia de los pasajeros de tránsito al proporcionar vistas panorámicas únicas del área de Los Ángeles.

Visión General de la Tecnología

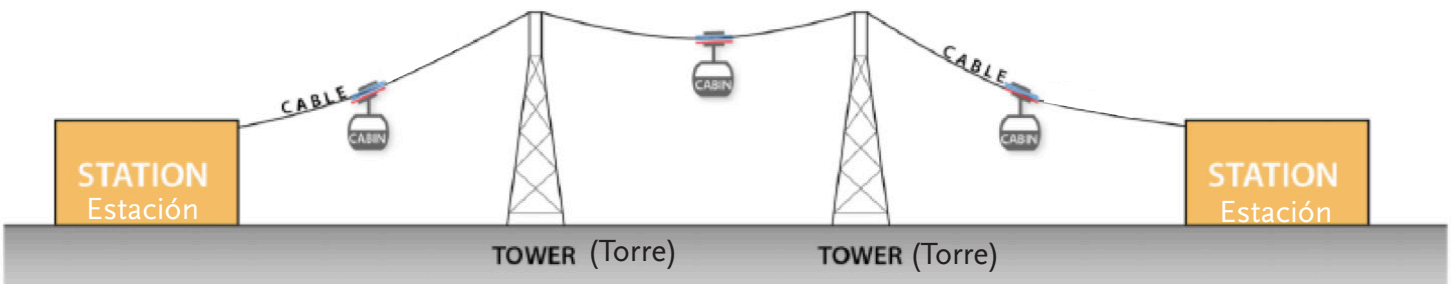
El tránsito aéreo rápido (ART, por sus siglas en inglés) es una forma de transporte comprobada, de cero emisiones, segura, sostenible, de alta capacidad y altamente eficiente. En un sistema de tránsito aéreo, las cabinas están suspendidas por encima del nivel por cables tendidos entre estaciones y torres. Las aplicaciones modernas han visto la evolución de la tecnología de tránsito aéreo como un modo factible de tránsito rápido urbano.

El proyecto propuesto incluiría tres estaciones de pasajeros, un cruce sin pasajeros, tres torres y cabinas de góndolas. Las cabinas permitirían sentarse o pararse; acomodarían sillas de ruedas, cochecitos de bebé y bicicletas; y tendrían aire acondicionado y serían totalmente accesible para la ADA [Ley de Estadounidenses con Discapacidades, por sus siglas en inglés]. Cada cabina tendría una cámara de seguridad a bordo con una transmisión a la sala de control, así como un botón de “presionar para hablar”.

Informe de Impacto Ambiental

La Autoridad de Transporte Metropolitano del Condado de Los Ángeles (Metro) es la agencia líder bajo la Ley de Calidad Ambiental de California (CEQA, por sus siglas en inglés) y está preparando un Borrador del Informe de Impacto Ambiental (DEIR, por sus siglas en inglés) para evaluar el potencial de impactos ambientales resultantes del proyecto propuesto. Los temas analizados e incluidos en el DEIR incluyen:

- Estética
- Agricultura y Silvicultura
- Calidad del aire
- Recursos biológicos
- Recursos culturales
- Energía
- Geología y suelos
- Emisiones de Gases de Efecto Invernadero (GHG)
- Uso y planificación de la tierra
- Recursos minerales
- Ruido
- Parques y recreación
- Población y vivienda
- Servicios públicos
- Transporte



Línea de Tiempo del Proyecto

Actualizaciones del Proyecto

Este verano, el Borrador del Informe de Impacto Ambiental (EIR) está disponible para revisión pública y comentarios durante 60 días, del 17 de octubre al 16 de diciembre de 2022. Este documento de hito evalúa las alternativas propuestas, así como sus potenciales impactos y medidas de mitigación.

El Borrador del EIR se puede ver en Internet o en los sitios del repositorio donde estarán disponibles copias impresas. También se llevarán a cabo audiencias públicas para proporcionar una presentación y una oportunidad para comentarios orales. Los comentarios formales también se pueden enviar por correo, por teléfono y por Internet. Para obtener más información, visite metro.net/aerialrapidtransit

Participación Pública

Sesión de Información a la Comunidad

Antes de la publicación del Borrador del EIR, Metro está organizando dos sesiones de información a la comunidad para compartir detalles sobre el proyecto y opciones sobre cómo comentar y participar en la próxima publicación del Borrador del EIR.

Virtual: miércoles, 12 de octubre de 2022, 5pm-7pm
En persona: sábado, 15 de octubre de 2022, 10am-12pm

Taller Informativo sobre el Borrador del EIR

Virtual: sábado, 22 de octubre de 2022, 10am-12pm
En persona: martes, 25 de octubre de 2022, 5pm-7pm

Audiencia Pública sobre el Borrador del EIR

En persona: sábado, 10 de diciembre de 2022, 10am-12pm

乘坐高空纜車

www.metro.net/aerialrapidtransit

洛杉磯空中捷運
項目說明書

Metro

项目概况

洛杉磯空中捷運交通技術有限公司（Los Angeles Aerial Rapid Transit Technologies LLC，LA ART）正提議建設洛杉磯空中快捷纜車項目，該項目將通過快捷的淨零排放高空纜車系統將洛杉磯聯合車站與道奇球場連接起來，並於洛杉磯州立歷史公園設立一個中轉站。

- 淨零排放
- 全程約一英里
- 約七分鐘車程
- 球賽日可減少3000輛車
- 纜車可每小時單向乘載5000名乘客
- 道奇球隊門票持有者及沿途居住和工作的社區人士可免費搭乘。

LA ART計劃爲所有道奇球隊主場比賽日和球場特別活動日提供服務，也預計每天爲社區人士、公園遊客和洛杉磯遊客提供服務。LA ART 將可：

- 在球賽日和特別活動日期間，由於減少了道奇球場內和周圍、鄰里街道、交通主幹道和高速公路上的車輛擁堵，因此也可減少與交通有關的污染和溫室氣體 (GHG) 排放。

- 通過每日在洛市的交通樞紐和最大的活動中心之間，提供高容量的空中纜車服務，可提高該地區的流動性和可達性。
- 希望通過與道奇球場相連的空中纜車的獨特體驗，可吸引到新乘客使用大都會公共交通工具。
- 通過聯合車站連接到周邊社區的交通系統，包括中國城，Mission Junction, 洛杉磯州立歷史公園，Elysian Park，回音公園和索拉諾山谷。
- 通過減少道奇體球場區域的車輛來加強附近社區的安全。
- 通過提供高效、高容量和快捷的方式進入道奇球場，以提升道奇球場的遊客體驗。
- 通過提供洛杉磯地區獨特的風景來提升公交乘客的體驗。

技術概述

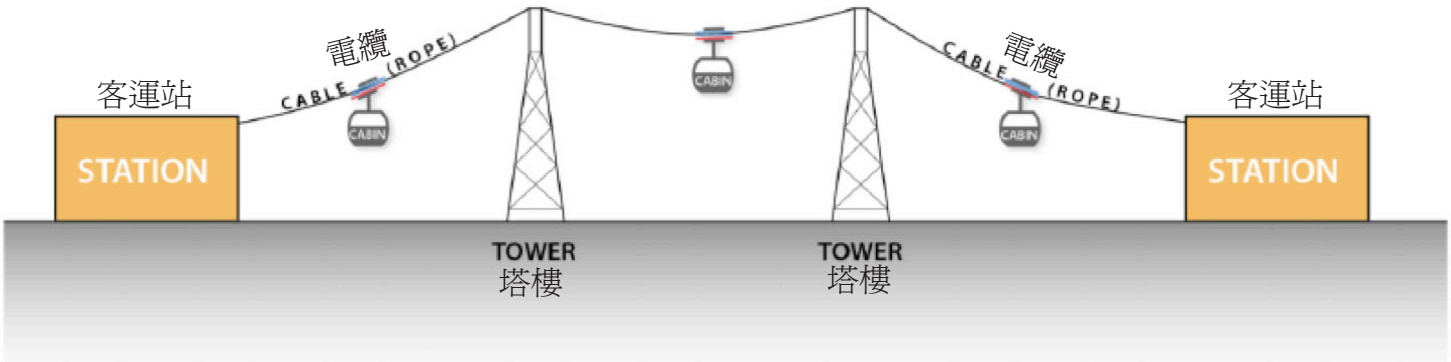
空中快捷纜車(ART) 是一種經過驗證的、淨零排放、安全、具可持續、高容量和高效的運輸方式。在空中快捷纜車系統中，座艙通過在車站和塔樓之間的電纜懸掛在地面之上。現代應用見證了空中快捷纜車作爲城市交通發展的可行模式。

擬建項目將包括三個客運站、一個非客運樞紐站、三座塔樓和客艙。客艙可以坐或站；可容納輪椅、嬰兒車和自行車；並且裝有空調並符合無障礙設施標準。每個客艙都將配備一個監控攝像頭，用於向控制室提供信號，及一個通話按鈕。

環境影響報告

洛杉磯縣大都會交通管理局 (Metro) 是加州環境質量法案 (CEQA)的領導機構，正在擬寫環境影響報告草案 (DEIR)，以評估擬議項目可能造成的環境影響。 DEIR 中分析和包含的主題包括：

- 美觀
- 農林業
- 空氣質量
- 生物資源
- 文化資源
- 能源
- 地質和土壤
- 溫室氣體排放
- 土地利用和規劃
- 礦物資源
- 噪音污染
- 公園和社區娛樂場
- 人口和住房
- 公共服務
- 交通



项目时间表

項目更新

從2022年10月17日至12月16日，環境影響報告草案 (EIR)在60天內可供公眾審查和評論。這份里程碑文件評估了擬議的替代方案，以及它們的潛在影響和緩解措施。

EIR 草案可以在線上查看，也可以在提供打印副本的存放處查閱。項目還將舉行公開聽證會，以提供說明和表達意見的機會。正式意見也可以通過郵件、電話和在線提交。

要了解更多信息，請瀏覽網站

Public Meeting Schedule
Calendario de Reuniones Públicas | 公众会议时间表

A Draft Environmental Impact Report (EIR) will be released for public review and comment on October 17, 2022. This milestone document evaluates the proposed Project, including its potential impacts and mitigation measures, as well as Alternatives to the proposed Project. Informational Workshops and Public Hearings will take place (both in person and virtually) to provide a presentation and an opportunity for oral comments. Formal comments may also be submitted by mail, online and phone. Before the Draft EIR release, join us for Community Information Sessions.

Un borrador de Informe del Impacto Ambiental (EIR) se publicará para revisión pública y comentarios el 17 de octubre de 2022. Este documento hito evalúa el Proyecto propuesto, incluyendo sus impactos potenciales y medidas de mitigación, así como las Alternativas al Proyecto propuesto. Se llevarán a cabo talleres informativos y audiencias públicas (tanto en persona como virtualmente) para proporcionar una presentación y una oportunidad para comentarios orales. Los comentarios formales también pueden enviarse por correo, en línea y por teléfono. Antes de la publicación del borrador del EIR, únase a nosotros para las sesiones de información de la comunidad.

环境影响报告(EIR)草案将于2022年10月17日发布，以供公众审阅和评论。这个里程碑式的文件可以评估拟议的项目，包括其潜在影响和缓解措施，以及建议工程项目的 替代方案。将举办信息研讨会和公开听证会(现场和虚拟)，提供演讲和口头评论的机会。正式意见也可以通过邮件、网络和电话提交。在EIR草案发布之前，加入我们的社区信息会议。

Memorandum Regarding LA ART Draft EIR Public Hearing No. 3 – Consultant Experiences During Protest

Memorandum
February 10, 2023

To: Los Angeles Metropolitan Transportation Authority
From: LA Aerial Rapid Transit Technologies LLC
Re: LA ART Draft EIR Public Hearing No. 3 – Consultant Experiences During Protest

This memorandum provides an overview of protestor actions at the January 12, 2023 public hearing on the LA ART Draft EIR, including statements collected within a few days following the hearing from consultants attending the meeting on behalf of Metro and LA ART. Statements are edited only for formatting or to otherwise omit identifying information to protect the privacy of each consultant (identification can be made available as needed).

In sum, the protestors engaged in the following actions on January 12, 2023:

- For approximately 30 minutes, protestors used bullhorns and amplified sound to raise grievances regarding LA ART and the Project Sponsor that were often laced with profanity.
    - Protestors disrupted participants from providing public comment, as the provided court reporters could not hear commenters over the noise.
- Protestors marched around the meeting room, shouting profanities through a megaphone inches from Metro staff and the Project's subject matter experts and attendees.
    - Protesters disrupted the public from engaging with Metro staff and the Project's subject matter experts to learn more about LA ART and the Draft EIR's findings at the various stations set up around the room, as well as the subject matter experts from listening and learning from questions and engagement with members of the public.
- After approximately 30 minutes of marching around the meeting room, protestors began defacing the informational materials with Sharpie, knocking down the informational boards provided and the easels supporting the boards, and ripping apart and throwing printed meeting materials.
    - Materials were provided in several languages, and the destruction of property left it such that Metro no longer had certain informational handouts available in one of the languages to provide to interested participants.
    - The removal of the boards reduced the availability of information prepared to help inform the public about the effect that LA ART will have on the environment.

Enclosures:

Attachment A – Consultant Statements
Attachment B – Consultant Videos and Photos from January 12, 2023

Attachment A
Consultant Statements

Consultant Staffing Court Reporter Comment Station

I was stationed at the court reporter comment station assisting with collection/timing of public comments. When the protesters began to use their megaphones and chanting it became very difficult for both court reporters to hear the people making comment. We stopped collecting/recording comments in anticipation of the noise level diminishing. However, after about 20 minutes it was evident that noise levels were going to remain at the level (and likely increase) as the protesters continued. I discussed moving forward with each court reporter and they both felt that they would be able to collect comment and would monitor the background noise levels as the recordings took place. If background noise levels became too disruptive to record comments we would halt the comment until noise levels returned to a level allowing comment. We adjusted the timing of people's comments in an attempt to allow for these 'starts and stops.' For those people requiring translation services the recording of comments was particularly challenging as the interpreters attempted to hear the commenter and then relay those comments to the court reporter. This back and forth with comments continued for about 30 minutes until the protesters left the building.

During the final stages of the protest when the protesters were circling the gymnasium, people became hesitant to engage in comment. There were few comments collected during that period.

It should be noted that some of the protesters came back at this time and recorded comments. They too had difficulty getting their comments recorded due to the level of noise.

Technical Consultant Staffing Public Comment and Court Reporter Station

When the protestors began using their megaphones, it was difficult to have conversations with people who wanted to provide their verbal comment. It was also difficult to provide information to other visitors for other ways to provide a public comment. In some instances, the protestors prevented the ability to for the court reporters to hear the commenters. For example, when the protestors were in the center of the gymnasium and using their megaphones, the court reporters had to periodically ask the commenter to pause their comment until the megaphone was not being used or until a particular protestor stopped talking (some protestors were louder than others). When the protestors began to circle the gymnasium, they would circulate closer to the public comment station and during the periods of times when they were closer to this station, the court reporters had to ask the public commenters to pause their comment in order for their recording devices and comment be recorded. During this time, the commenters were given longer than the allocated 2 minutes to provide their public comment in order to account for the disruption.

During one of the laps around the gym, there was a burst of activity where many protesters all began taking the information boards and throwing them on the ground, also knocking over the easels and tearing apart printed materials. We had to secure comment boxes where we were collecting the written public comments for fear that they would purposefully destroy/take the comment boxes. We also stepped further back for safety. An elderly man also approached us and yelled "Shame on you for doing the devil's work!" while waving his cane toward us at this station.

Consultant Support Staff Facilitating Check-In

I was stationed at the check-in station assisting with sign-in and explaining the format of the meeting to attendees as well as the opportunity to comment. While there, an older man with a cane began yelling at me, waving his cane, and demanding to know who I work for saying that he was going to file a lawsuit. I handed him a comment card. He yelled at me two separate times, specifically targeting me as there were other staff at the table. He told me that I was "doing the devil's work" and that it would catch up with me and that I was going to hell. I did not engage with this man's comments and remained silent looking down until he finished and would enter back into the event.

Technical Consultant Staffing Greenhouse Gas Emissions Station

When the protestors began using their megaphones, there was frequent use of profane language and at a volume such that it was difficult to have conversations with other visitors. In the beginning, they were in a location in the center of the gymnasium. However, they then began to circle the gymnasium and at that time they would approach others in the gymnasium and use their megaphones to blast their message directly in a person's face. This would occur at a distance as close as 3 to 5 feet. They did this repeatedly to various people, including myself, as they circled the gymnasium. The blasting of the message was obtrusive in volume, tone, and foul language, and expressed in a venomous way that made me feel unsafe. This was primarily the "leader woman" dressed in a white shirt (I believe) and another dressed in green. At one point, a more elderly man approached the boards adjacent to me (Aesthetics) and began marking the handouts with an 'X' using a black sharpie. He then also marked the boards with a giant 'X'. I did not engage the megaphone women nor this man. I saw this man approach another set of boards a bit further down the line and attempt the same thing. As protestors circled, they would occasionally take one board and then throw it on the ground and step on it. They did this purposefully. Suddenly during one lap, there was a burst of activity where many protesters all began taking the information boards and throwing them on the ground, also knocking over the tripods and such. I found those actions to be deeply troubling and stepped further back for safety.

Technical Consultant Staffing Project Description Station

I was manning the first station when they approached and started dropping the boards and easels. I was startled when they dropped the first two boards I was standing in between. I

started picking up the boards to put them back up, then they came back to knock them down again and they dropped one board on me as I was trying to pick up the other one. I was not hurt because the boards were light in weight, but I was definitely shook for a bit.

Technical Consultant Staffing Parking Station

I was yelled at very close range by one of the women with the megaphones. Definitely left my ears ringing.

Technical Consultant Staffing Transportation Station

My harassment experience was being physically threatened by the gentleman poking his cane at me while calling me a bastard.

Technical Consultant Staffing Cultural Resources Station

Since I wasn't comfortable standing in front of my table when the protesters began marching around the room, I moved behind it. I considered taking video, but worried it would only provoke the protesters. After I picked up my easels, boards, and handouts off the floor, the same man [referred to in the statement from LA ART's Technical Consultant Staffing Transportation Statement] is referring to attempted to take all of my handouts. I wouldn't allow him to which he replied he was just a member of the public. I told him he could have one and only one. He said something about Lucifer, but I told him the joke was on him as I'm an atheist. Throughout the exchange he was beating his cane on the floor. Frankly, I was expecting this sort of behavior at Union Station not at a parochial school campus. Perhaps the leaders thought there would be less security.

Social Media Consultant[1]

A larger elderly man approached me and yelled "Shame on you!" and then began talking to me in an angry and upset manner about the project, angling toward me and waving his cane at me.

A woman walking with the Stop The Gondola group yelled, at me, targeting me specifically, "Fuck you! And your dress is ugly! Fuck you!"

A woman with a blowhorn came within four to six feet of me, screaming into the blowhorn, directly at me, causing acute ear pain due to the measure of volume. The first few times she was yelling the protest chants, but the third time she stopped, stood in front of me and a member of LA ART, and screamed "Colonizer!!!" multiple times at the top of her voice. It was close enough for me to reach out to touch the blowhorn when the ear pain became too much. It was painful physically and emotionally difficult.

---

[1] N*ote: This Consultant was not staffed at a Station, so was not identifiable as part of the Project team.*

A woman carrying a Stop The Gondola sign walking by yelled, "Fuck you!" at me as she passed.

I believe there were more instances of verbal assault directed at me but the above were the most memorable.

Community Outreach Consultant[2]

A female CCED person yelled multiple times at me with her very loud bullhorn. This person made it very clear that she was targeting me when she passed by me several times during the group's march inside the gym building. As they marched in a circular motion, this individual would raise her voice using the bullhorn and direct all that sound directly at my face. Happened at least 4 times.

Jim Starr also approached me during their march and admonished me for work for Frank McCourt. As he approached me, he used his cane to make his point...pointed the cane at me in a threatening manner.

Project Manager

An older man with a cane stepped out of the circle march to scream at [LA ART's technical consultant staffing the Cultural Resources Station] that she was "evil…you're the devil…you're scum". [The consultant] responded that she was an atheist and, thus, didn't believe in either God or the Devil. The man responded by getting more agitated, waving his cane, and issuing more invective. I stepped in and indicating that we all, as humans, deserve respect. He responded by calling me names.

Another older man with a green sign and also with a can had a [S]harpie and shoved a few of our people out of the way so he could deface the display boards. I got security to intercept him as he came around towards the entrance. He yelled something at them and left.

The group of Cathedral High kids were grouped in the NW corner of the room and some of the circling protestors yelled obscenities at them stating, "this is our community…not yours."

Several of the circling group yelled "Fuck the Gondola", "Fuck McCourt", "Fuck Metro" many times as they circled.

---

[2] Note: This Consultant was not staffed at a Station, so was not readily identifiable as part of the Project team.

Consultant

On Thursday, January 12, 2023 at approximately 5:30 pm, I attended the DRAFT: Environmental Impact Report Meeting at Cathedral High School while escorting 6 senior citizens from Grand Plaza Apartments. The seniors wanted to make public comment and needed transportation and translation assistance. Here are my observations:

- At approximately 5:30 pm we were walking up to the gymnasium and could hear loud amplified voices yelling and screaming from inside the building.

- As we came closer we saw folks leaving the gymnasium, one stating "they have taken over the meeting, be careful". The seniors were apprehensive about proceeding.

- Upon entering, I could see approximately 16 display stations with tables and easels set up around the perimeter of the gym each manned by 2 or 3 individuals. There were approximately 30 individuals circulating around the various display stations. Additionally, there were approximately 30 individuals in a 30 foot diameter circle in the center of the gym.

- The individuals in the circle had 2 or 3 leaders with electric megaphones and yelled their objections to the Gondola. Additionally, the opposition leaders would hand the megaphones to various folks in the circle who shouted their thoughts, which included, "We need a hospital, we need a supermarket, we need extremely low income housing, we don't need a gondola".

- As the seniors and I tried to move from station to station we were challenged about our attendance and support for the Gondola. Interesting, Chinese speaking opposition folks pulled my seniors aside and engaged in active discussions that in one case became heated.

- When we arrived at the Public Comment / Translation station, only 2 individuals elected to make public comment, 2 did not want to make public comment because they were scared and the final 2 refused to make public comment and would only state that they, "wanted to go home".

- By 6:20 pm the opposition folks were now circulating the display stations knocking over easels and challenging those working the stations. One elderly heavy gentleman opponent with a cane had to be separated from a supporter, when the discussion evolved into a threat followed by a shaking of his cane.

- At approximately 6:30 pm we left the meeting and headed back to the Grand Plaza Apartments. During the car ride home, some of the seniors shared that they were in fact scared and concerned for their safety. While another wanted to reengage the opposition and continue their passionate discussion.

Pre-Final EIR Release Public Meetings - Los Angeles Aerial Rapid Transit Project

Reuniones públicas previas a la publicación del EIR (Informe del Impacto Ambiental) final - Proyecto de Transporte Aéreo Rápido de Los Ángeles

EIR 最終發佈前公眾會議 - 洛杉磯架空快速運輸計劃 | *EIR* 最终发布前公众会议 - 洛杉矶空中快速运输项目

Metro will host two Pre-Final EIR Release Public Meetings for the Los Angeles Aerial Rapid Transit Project.

Virtual Pre-Final EIR Release Public Meeting
Thursday, November 30, 2023, 5 – 6 pm via Zoom webinar. Login information is available at metro.net/aerialrapidtransit.

In Person Pre-Final EIR Release Public Meeting
Saturday, December 2, 2023, 10 – 11 am at
One Gateway Plaza, 3rd Floor, Metro Board Room,
Los Angeles, CA 90012

For ADA accommodations, please call 213-418-3422 at least 72 hours before the meeting.

Parking validation available.

Metro organizará dos reuniones públicas previas a la publicación del EIR final en relación con el Proyecto de Transporte Aéreo Rápido de Los Ángeles.

Reunión pública virtual previa a la publicación del EIR final
Jueves 30 de noviembre de 2023, de 5 a 6 p.m. a través de un seminario web por Zoom. La información de acceso está disponible en metro.net/aerialrapidtransit.

Reunión pública presencial previa a la publicación del EIR final
Sábado 2 de diciembre de 2023, de 10 a 11 a.m. en
One Gateway Plaza, 3rd Floor, Metro Board Room,
Los Angeles, CA 90012

Para solicitar adaptaciones de la ADA, por favor llame al 213-418-3422 al menos 72 horas antes de la reunión.

Validación de estacionamiento disponible.

Metro 即將就洛杉磯架空快速運輸計劃 (Aerial Rapid Transit Project) 舉辦兩場環境影響報告 (EIR) 最終發佈前公眾會議。

線上 EIR 最終發佈前公眾會議
2023 年 11 月 30 日 (星期四) 下午 5 點至 6 點 Zoom 網絡研討會。歡迎瀏覽 metro.net/aerialrapidtransit 以獲取登入資料。

Subject: Los Angeles Aerial Rapid Transit: Pre-Final EIR Release Public Meetings

LA ART: Metro to Host Two Pre-Final EIR Release Public Meetings

---

LA Aerial Rapid Transit Technologies LLC is proposing the Los Angeles Aerial Rapid Transit Project, which would connect Los Angeles Union Station to the Dodger Stadium property with an intermediate station at the Los Angeles State Historic Park via a zero-emission aerial rapid transit gondola system in downtown Los Angeles. Los Angeles County Metropolitan Transportation Authority (Metro) is the lead agency under the California Environmental Quality Act (CEQA) and is preparing a Final Environmental Impact Report (Final EIR) to evaluate the potential for environmental impacts resulting from the proposed Project.

Today, Metro announced that it will be hosting two Pre-Final EIR Release Public Meetings prior to release of the Final EIR to provide a project update and information on the Final EIR for the proposed Project. These two meetings will cover the same content. No formal public comment will be accepted at these meetings.

Virtual Pre-Final EIR Release Public Meeting

Thursday, November 30, 2023 from 5 – 6 pm via Zoom webinar
https://us06web.zoom.us/j/81604035634

Webinar ID: 816 0403 5634

In Person Pre-Final EIR Release Public Meeting

Saturday, December 2, 2023, from 10 – 11 am
One Gateway Plaza, 3rd Floor, Metro Board Room, Los Angeles, CA 90012

For ADA accommodations, please call (213) 418-3422 at least 72 hours before the meeting.

Materials for the Pre-Final EIR Release Public Meetings will be available on Thursday, November 30, 2023 at metro.net/aerialrapidtransit. Translated materials will be available in Spanish, Chinese (Simplified), and Chinese (Traditional).

Interpretation will be provided at the Public Meetings in Spanish, Cantonese, Mandarin, and Taishanese.

LA ART: Metro organizará dos Reuniones Públicas previas a la publicación del EIR final

LA Aerial Rapid Transit Technologies LLC propone el Proyecto de Transporte Aéreo Rápido de Los Angeles, que conectaría la estación Union Station de Los Angeles con la propiedad del estadio de los Dodgers, con una estación intermedia en el Parque Histórico Estatal de Los Angeles, mediante un sistema de góndolas de transporte aéreo rápido de cero emisiones en el

centro de Los Angeles. La Autoridad de Transporte Metropolitano del Condado de Los Ángeles (Metro) es la agencia líder de conformidad con la Ley de Calidad Ambiental de California (CEQA) y está preparando un Informe Final del Impacto Ambiental (EIR Final) para evaluar el potencial de los efectos ambientales resultantes del Proyecto propuesto.

En el día de hoy, Metro anunció que organizará dos Reuniones Públicas previas a la publicación del EIR final con el fin de proporcionar información actualizada sobre el proyecto e información sobre el EIR final del proyecto propuesto. Ambas reuniones cubrirán el mismo contenido. En estas reuniones no se aceptarán comentarios públicos formales.

Reunión pública virtual previa a la publicación del EIR final

Jueves 30 de noviembre de 2023, de 5 a 6 p.m. a través de un seminario web por Zoom.

Reunión pública presencial previa a la publicación del EIR final

Sábado 2 de diciembre de 2023, de 10 a 11 a.m.
One Gateway Plaza, 3er Piso, Metro Board Room, Los Angeles, CA 90012

Se dispondrá de validación del estacionamiento.

Para solicitar adaptaciones de la ADA, por favor llame al (213) 418-3422 al menos 72 horas antes de la reunión.

Los materiales para las Reuniones Públicas previas a la publicación del EIR final estarán disponibles el jueves 30 de noviembre de 2023 en metro.net/aerialrapidtransit. Los materiales traducidos estarán disponibles en español, chino simplificado y chino tradicional.

Las Reuniones Públicas contarán con servicios de interpretación en español, cantonés, mandarín y taishanés.

LA ART: Metro 将举办两场 EIR 最终发布前公众会议

LA Aerial Rapid Transit Technologies LLC 提出「洛杉矶架空快速运输计划」(Los Angeles Aerial Rapid Transit Project)， 在洛杉矶市中心建设零排放架空快速运输缆车系统， 透过位于洛杉矶州立历史公园的中途站连接洛杉矶联合车站 (Union Station) 与道奇体育场(Dodger Stadium)。 洛杉矶县大都会交通局 (Metro) 作为依据《加州环境品质法案》

(CEQA) 的牵头机构，正在编制《环境影响最终报告》（最终 EIR） 以评估拟议计划可能带来的环境影响。

今天， Metro 宣布将举办两场 EIR 最终发布前公众会议，以通报计划最新消息， 以及提供提案计划最终 EIR 的相关资讯，并举办问答环节，就提供最终 EIR 及未来参酌公众意见的机会解答相关问题。两场会议内容一致。两场会议不会受理正式的民众意见。

线上 EIR 最终发布前公众会议

Appendix B
Note Regarding Transcripts

The Appendix B transcripts for the public meetings on December 10, 2022, December 13, 2022, January 12, 2023, and February 8, 2023 are presented as certified by the court reporters. Accordingly, these transcripts contain a few typographical errors as they present the phonetic spelling or understanding of the court reporter tasked with compiling the transcript. Examples of such errors include spelling typos (e.g., “Dodger Scandium” rather than Dodger Stadium) and similar sounding words replacing the intended meaning of the speaker (e.g., “zero admissions transit” rather than zero emissions transit, and “Legion Park” rather than “Elysian Park”).

Comment - PH1

MS. XU: My name is Xiagtian Xu. I've been a resident of Chinatown for over 20 years and now that the government has invested a lot of resources into the LA ART project, once I heard of the news, I was very happy along with a lot of my neighbors. Not only is this project not going to cause any environmental impact in any negative way, it provides great convenience to people who want to get around. PH1-1 PH1-2

In Chinatown, many years we haven't seen many other issues and I hope that the government is able to invest more resources to bring about more projects like this that is going to provide great convenience and reap benefits to the people who live in this area.

In terms of our environment and our ecology, these are the things that we find very beneficial. And other problems that I mentioned before, the bus arriving on time, is making our commute very difficult and inconvenient. So this PH1-3

time, the LA ART project is bringing huge benefits to us. We are very much supportive. We're happy and we hope to see more of similar projects in our community to benefit the people and to benefit our environment.

And I would like to thank the government and everybody who are in involved in this project to bring such great convenience and benefits to us and as a community.

cont'd PH1-3

Comment - PH2

MS. HALL: I was born and raised in LA and I'm a long time community member of Chinatown. I, my family, my neighbors, and the people of LA do not need the gondola project. This project is yet another misuse of our collective time, funds, and energy. No one asked for this and no one wants it. There are already public transportation and shuttles that bring people specifically to Dodger Stadium.

PH2-1

PH2-2

$125 million for a limited worth and limited use project is an irresponsible use of funds when what we desperately need is better public transportation and infrastructure. I am

PH2-3

all my elderly-working neighbors should not have to wait an hour or two hours for the bus just to get home or anywhere.

cont'd PH2-3

There is no hospital in Chinatown because of gentrification. Many residents have to go to the USC hospital and the quickest bus route from Chinatown can be a 28 minute bus ride. Nineteen minutes of that is walking.

PH2-4

Many residents in Chinatown are elderly or disabled living on $1,000 a month with limited support networks. Put $125 million more towards eliminating transit fare and faster public transit to station hygiene to bus shelters and real ventures to affordable and free housing.

PH2-5

Chinatown and LA as a whole has seen too many developments that ultimately harm this place and gentrify our communities. It's insulting that the people behind this project tried to mislead us into thinking that this project is a community good, to fool people into thinking that this is good for us. We know better than that.

PH2-6

Yes, that's it. Thank you.

cont'd PH2-6

Comment - PH3

MS. RICO: I am opposed to the gondola project. I don't want the cars that are going to be displaced from the Dodger Stadium parking lot sent down to Chinatown where I live as a senior. It will create havoc in our neighborhood. It will suck all of the energy out of our neighborhood. There will be pollution, garbage, disease, and people will get run over because there's a lot of seniors in Chinatown.

PH3-1

It doesn't -- the gondola does not belong in Chinatown or anywhere near Chinatown. It will be intrusive to homes. It will be intrusive to our lives. It will change the flow of Chinatown as it is now.

I'm just vehemently opposed to the gondola project. That's it.

PH3-2

Comment - PH4

MR. MELGOZA: I have been a proponent of this project from the beginning. As a 15 year business operator in East Chinatown, I believe that this will be helpful to the community and also with transportation to Dodger Stadium. It

PH4-1

will ease up on congestion with traffic. cont'd PH4-1

I think that we need to push this project and with the new city council coming into office, I think that she should also be very supportive of this project. Thank you very much. PH4-2

Comment - PH5

MS. LINHEYA: I find the gondola ugly because I've been to like several cities and I've never seen a gondola in big cities. The only city that I saw that gondola is Medelin, Colombia because they have no roads and it would cause -- I don't want the taxpayer to shoulder the cost of this project because McCourt is rich enough to pay for his own. PH5-1

If that's going to be built with public funding, the public funding should be for the people, not for a private company. And I know that they -- I read somewhere that it would cost $300 million with the inflation rate. I don't think it would be costing us more than $300 million to build this gondola. I'm done. PH5-2

Comment - PH6

MR. CHEN: My name is Patrick. I'm a resident of Chinatown for over seven years and I PH6-1

just want to give my comment on this proposed project, LA ART. It does not look like it has the community's welfare in mind with its proposed plans. It doesn't seem like it's prioritizing the needs of the community in terms of transportation, housing, and other impacts. It seems like it's just like a vanity project for a billionaire.

And yes, Chinatown is facing lots of challenges, especially around gentrification, displacement of tenants, due to rising costs of housing and threats of eviction and another Metro project like that does not have community interest in mind does not seem like it would help the community at all.

So I oppose this project as it stands and I don't see really a path forward for it to actually benefit the community. Thank you.

cont'd PH6-1

PH6-2

PH6-3

Comment - PH7

MS. OCEGUEDA: Hello, good morning. My name is Rebecca Ocegueda. And I am a resident of Northeast Los Angeles.

As a resident, I am concerned about

PH7-1

PH7-2

this project for many reasons. First of all, the enormous towers of the gondola will cause aesthetic impacts on my community. I am concerned that the towers and the views of the wagons of the gondola will be used for publicity and as billboards. The gondola project will promote gentrification of our communities, in particular in Chinatown.

The gondola project will have a great impact on our public lands, especially in the Los Angeles State Historic Park with its enormous towers. This project will increase the impacts of air pollution on account of the emissions from the vehicles in the area that are already overloaded with air emissions.

This project will provoke displacement and will increase the cost of rent in the area and we cannot allow that and this is especially because for a lot of people it will increase the cost of rent and people will not be able to pay that and then we will have more homeless people.

And I beg you not to approve this

cont'd PH7-2

PH7-3

PH7-4

PH7-5

PH7-6

PH7-7

project which will use federal funds and will use our taxes. And this will just enrich one person who will be benefitted by the project. And do not allow yourselves to be deceived by Mr. McCourt who has plans to develop the parking lot in the Dodger Stadium with the pretext that he's concerned about environmental pollution.

Thank you very much. Thank you.

cont'd PH7-7

Comment - PH8

MS. RAMIREZ: My name is Esperanza. And I'm here regarding the gondola project that does not have benefits for our community. It is a lie that they will replace the vehicles that are going to the Dodger Stadium. The gondola project will impact our cultural and historical resources such as our state parks, Union Station, and El Pueblo.

PH8-1

PH8-2

The Chinatown community and our neighbors will be seriously impacted with the displacement from the property. The draft environmental report does not take into account our complaints and is concentrated on the benefits for our community and it's nothing but

PH8-3

lies.

The gondola will be nothing more than an invasion of the properties of the Chinatown residents whose homes are underneath the trajectory of the gondola.

Mr. McCourt is taking advantage of our resources for his personal benefit. We do not want the gondola and we will fight for this project not to take place. That's all. Thank you.

Comment - PH9

MR. MACIAS: My name is Robert Macias. And I am the president of the Youth Soccer organization and community organization, the name is Anahuak. For many years, we have been fighting for the welfare of our families and for better recreational opportunities for our community.

We are strongly opposed to someone with personal interest constructing an air highway over our state parks. I ask myself where will we retain privacy for persons?

I beg you not to approve this project

cont'd PH8-3
PH8-4
PH8-5
PH9-1
PH9-2
PH9-3
PH9-4

which will be use our federal funds and our taxes. We oppose this gondola. Our communities have stated our opposition and now it corresponds to you to say no to the gondola.

cont'd PH9-4

We do not want you to repeat the history that removed hundreds of Latino families from Chavez Ravine. Thank you very much.

PH9-5

Comment - PH10

MS. ANDRADE: Hello. My name is Gloria Andrade. I am 76 years old. I have lived in East LA here for 35 years and for me I would say stop the gondola forever.

PH10-1

Our taxes and federal funds should not be used to make rich people richer. At this time, there's a lot of problems in the streets and we should also focus on these homeless people who are human beings. And we should be watching out for them. That's all.

PH10-2

INTERPRETER: Interpreter correction. Where it said -- where I said there are a lot of problems in the streets, I should have translated as there are a lot of indigent people in the streets. Thank you.

MS. OCEGUEDA: Thank you very much for your time. So I already said part of it.

It is nothing but lies. Mr. McCourt only wants to fill up his pockets with more money from our taxes. We oppose this gondola. Our communities have already stated their opposition and now it corresponds to you to say no to the gondola.

We do not want to repeat the history that pushed so many hundreds of Latina families out of Chavez Ravine. The gondola will not do anything to save the environment. Those are lies. Thank you very much for everything.

cont'd PH10-2

PH10-3

PH10-4

Comment - PH11

MS. YOUNG: My name is Renee Young and I am the president of NAWBO-LA, the National Association of Women Business Owners and we are the unifying voice for more than 750,000 local women business owners in the region and we are very excited about the LA ART project. We believe very strongly that this will bring business to local, small businesses in particular, entrepreneurs.

PH11-1

PH11-2

We, as women, are one of the fastest-growing groups of entrepreneurs in the country and anything that drives business into our community, into our stores, into our companies we support. So we're very, very excited about this.

We are also very excited about the local business participation goal for 35 percent and we encourage the project as they move forward to make sure that we keep that as part of the goal and engagement because again the more we can drive business into our community, the more women business owners and all business owners can thrive and bring money back into our communities and this just goes to build back. Women who left the business world in droves during COVID, we want to be able to re-engage those women. We want to be able to offer them jobs and we believe that this project allows us to do that.

So again, we encourage the Metro and the team to really move forward with this project and we're looking forward to seeing it soon. Thank you.

cont'd PH11-2

PH11-3

PH11-4

Comment - PH12

MS. WONG: As a volunteer and worker in Chinatown who works with low income Chinese seniors, I do not support this project. Seniors with limited mobility do not want to be lifted into the sky. They want suspended buses and services in the area. They want reduced traffic on game days, not redirecting more traffic from the stadium to Chinatown where most people are projected to park with no accommodations. PH12-1

This past year, I've been canvassing for civic outreach in Chinatown. I've knocked on every door, met with nearly every resident asking what people wanted for the city. The answer was not a train in the sky to watch baseball games. The answer was affordable housing, a market, a grocery market in the neighborhood, a halt to the rising cost of living which this gondola, as a tourist attraction, would only contribute to. PH12-2

Where College Station was built, where one of the towers for this project is slated for, has already been developed into a Chinese center catering to well-off newcomers, not the long- PH12-3

time, low-income residents who they've already displaced and who continue to displace. cont'd PH12-3

I believe LA Metro's priorities are skewed. There are other entryways to Dodger Stadium. Why choose to run this project through the second poorest neighborhood in LA? It says everything that you would spend time and money catering to a seasonal entertainment issue and not the truly urgent actually life-threatening issues of displacement that our most vulnerable Chinatown residents face which is becoming unhoused. PH12-4

And to that greater point, this whole process has been obfuscated and inaccessible for community input. Just today, I had tenants, Chinese seniors in attendance who wrote written comments. One of the interpreters read her comments in Chinese, came up to me and said her point of prioritizing affordable housing over the gondola was illegitimate. That is not his jurisdiction to say that to me. He cannot overrule a long time resident's personal point of PH12-5

view, that the land this is being built on should be used to better the most vulnerable in the neighborhood is absolutely a legitimate and glaringly urgent point of all of this.

cont'd PH12-5

Comment - PH13

MR. CHIN: Okay. My name is Bill Chin. B-I-L-L C-H-I-N. I've been looking at the boards that are on the easel. They tend to be very vague and I think they're very vague intentionally, so it's not within the capabilities of actually seeing towers when there are supposed to be towers very long and tall and they look very faint on purpose.

And there's also no scaling on there and the people from, I guess, MTA, who are running the show, they're kind of vague in terms of their language. They say it's a station as Bishop and Broadway. I said are you sure it's a station? Oh, no, it's a tower. No, it's a facility. I said what do you mean by facility? Well, it's like a tower, but it's bigger than a tower. I said well, what does it do? And he wasn't sure except that it has to be big, so they

PH13-1

could turn.

So at that point I thought even I speak very clearly, concisely, and correctly in English, and when somebody is trying to help me understand the project, it doesn't seem to work out very well. It's very frustrating to read and not read too much which is vague and then somebody not being very clear, it's even worse. So I don't know if reading and listening is going to do anything because I can't experience it or understand it without some kind of preliminary sources. That's all I want to say.

(Whereupon, the above-entitled matter went off the record at 11:55 a.m. and resumed at 11:55 a.m.)

MR. CHIN: Okay, my name is Bill Chin, B-I-L-L C-H-I-N. I don't -- I'm against the gondola, but there are two things that I do like that I think can be done to improve the community where I live in Chinatown. One is to put more parkway that was proposed around the Chinatown station on the sidewalk, like trees and bathrooms

cont'd PH13-1

PH13-2

PH13-3

and bicycle facilities that could be used for the Gold Line. cont'd PH13-3

And the other things is the bridge, pedestrian bridge, they come from Broadway into the park could be very useful to cut down on traffic, so I don't have to take my car to the east side of the historical park in order to walk into the park. I can just walk while I'm shopping across Broadway into the park by way of a pedestrian bridge. PH13-4

So I am officially against the gondola, but I do see these two things as beneficial. I also want to say that the gondola station and the Union Station gondola station seems to be repetitive of the Gold Line since we do have people coming from Union Station who would go to Chinatown by way of the Gold Line and there is a Gold Line station in Chinatown already. PH13-5

So I think all that's needed is electric vehicles that would transport people from wherever that they need to come to to Dodger PH13-6

Stadium either from Union Station or from Gene Autry Museum or from the airport or any other places, just like they do with the Hollywood Bowl. You can take a charter bus from Gene Autry to Hollywood Bowl. Thank you.

LOS ANGELES AERIAL PUBLIC TRANSIT (LA ART) PUBLIC COMMENT SESSION

+ + + + +

SATURDAY
DECEMBER 10, 2022

+ + + + +

The Public Comment Session took place on the Ticket Concourse at Los Angeles Union Station, 800 N. Alameda Street, Los Angeles, California, at 10:00 a.m.

COMMENTERS

ANDREW VOUGHT
BILL CHIN
MARC FUTERNICK
TERI VANDERBERG
DOUGLAS CARSTENS
KENNETH CHAN
JONATHAN BERMAN
BALDOMERO CAPIZ
MARIA ELENA PADINO
DISRAELY BUTLER

TANY LING

PHYLLIS LING

P-R-O-C-E-E-D-I-N-G-S

(10:00 a.m.)

Comment - PH14

MS. KING: All right. Recording is going. If you please state your name and spell it for the record.

PH14-1

MR. VOUGHT: My name is Andrew Vought. V as in Victor, O-U-G-H-T.

MS. KING: Great.

MR. VOUGHT: And I'm an Angeleno resident. I'm here today to voice my strong opposition to the proposed gondola. The only benefit from the gondola is that it allows a real estate developer to get richer developing the Dodgers parking lot. The rest of us all lose. Private gain equals public pain.

PH14-2

The Angelenos who use our beautiful state park lose. Two acres will be carved out of Los Angeles State Historic Park for a station, and gondolas will fly directly over the park. No more kite flying.

PH14-3

Dodger fans lose because the arithmetic does not work for the thousands of

PH14-4

rides promised. Fans will need to wait one or two hours after the game for a six-minute ride. Who wants that?

cont'd PH14-4

Taxpayers lose because the cost of operating the gondola will not be paid by the billionaire developer. These costs will be paid by tax-payers.

PH14-5

This park was won in 2000 in a fight with real estate developers who wanted to put in big box warehouses. The people wanted a park instead, and we got our State Park. Now the State Park is again threatened by a real estate developer. Please don't destroy our State Park. Thanks. I'm sorry, I tapped that --

PH14-6

(Whereupon, the above-entitled matter went off the record at 10:17 a.m. and resumed at 10:22 a.m.)

CONTINUED Comment - PH13

MR. CHIN: What do you need from me?

MS. KING: If you could just state and spell your name, please, and then you can begin your comment.

PH13-7

MR. CHIN: Bill Chin. B-I-L-L, C-H-I-

N.

MS. KING: Great.

MR. CHIN: So this is being recorded and typed?

MS. KING: Recorded. The typing is just notes for now. It will later be transcribed I believe.

MR. CHIN: Oh, okay. So I heard that there might -- I heard that the California State Park that runs the historical park has not given permission yet or they're thinking about the gondola being part of or on the State Park property. So I was wondering, why is that? Is that because they're not committed? Or they just want to see what the interest level is before the state decides, okay. We'll go with public interest and compromise the design and the plan of our state park. Period.

My concern is, the state park has a goal in mind, and they've designed it well for the community. And I would not like to see their original plan compromised in any way by the

cont'd PH13-7

PH13-8

PH13-9

gondola project, whether that means cutting trees or putting structure very close to the State Park where the State Park will feel like there is a compromise of the original design and landscaping or of cutting of trees because the cables are too low, or they need some height in the park to run their cars through the park. Period. Is that concise enough?

PARTICIPANT: That was perfect.

MR. CHIN: Oh, really?

PARTICIPANT: Yeah.

(Whereupon, the above-entitled matter went off the record at 10:24 a.m. and resumed at 10:32 a.m.)

MS. KING: All right. Your name again?

MR. CHIN: Bill Chin. B-I-L-L, C-H-I-N. I looked at the project and the environmental. I probably don't have any problems with the five or six towers in terms of the height. But LA and Los Angeles being so creative and also very close to the art industry

cont'd PH13-9

PH13-10

PH13-11

PH13-12

and Hollywood, that there should be something done about concrete and more fashionable other than flat surface and square corners.

If you make it look like a tree or round off the corners like you see in modern apartments, where you take a piece of metal and nail it on the stud and then put sheet rock to it, then it softens the corner, just like in museums throughout the world. So that's not much to ask for because concrete can be molded into rounder corners. Make it look more organic. Period.

cont'd PH13-12

MS. KING: Thank you.

MR. CHIN: I have something --

(Whereupon, the above-entitled matter went off the record at 10:34 a.m. and resumed at 10:40 a.m.)

PH13-13

Comment - PH15

MS. KING: -- minutes. Great, we're recording.

MR. FUTERNICK: Hi. My name is Marc Futernick. M-A-R-C. Last name F-U-T-E-R-N-I-C-K.

MS. KING: Please.

PH15-1

MR. FUTERNICK: I'm an emergency physician. I live in Pasadena, but I drive, every day that I come to work, through this area. I'm really focused on the impact of climate change and air pollution on our health, and this gondola will improve both of those. It'll open the door to another mode of zero-emission transportation here in Los Angeles.

The gondola will serve as a first and last-mile connector from our main central transportation hub at LA Union Station to Dodger Stadium, the most-attended venue in major league baseball that lacks a permanent transit option, and not just for games but for many events. This also makes a key transit connection to Elysian Park, the city's oldest and second-largest park and, again, is not currently served by transit.

And my main interest, personally, are the co-benefits of connectivity, active transport, reduced congestion, reduced greenhouse gas emissions, and decreased local air pollution in the surrounding communities of Solano Canyon,

cont'd PH15-1

PH15-2

PH15-3

PH15-4

Victor Heights, and William Mead Homes. This will protect their health and improve people's daily lives in the area.

And lastly, zero-emission transit was formed to advance and accelerate zero-emission technology in the transportation sector, which is critical to a climate-resilient future for Los Angeles. And this project will demonstrate the value of this approach to the community and to our environment. Please approve this project.

cont'd PH15-4

PH15-5

MS. KING: Thank you.

(Whereupon, the above-entitled matter went off the record at 10:42 a.m. and resumed at 10:46 a.m.)

Comment - PH16

MS. KING: All right. We are recording.

MS. VANDERBERG: Hi. My name is Teri Vanderberg, and I am a resident of Chinatown. I've lived here over a year. And the whole idea of a gondola would upset the entire feeling of Chinatown and all the elderly Chinese people that live here. And this is their livelihood. This

PH16-1

is where they work.

They created that park for a safe place for us to all go walk, and I use that park twice a day for peace and quiet and tranquility. And having a gondola placed over in the park where people are going to be, by the thousands, getting on a gondola that is going to be charging $30 a person to go one mile, which is a free ride if you take it on the bus here at the train station, and which is what thousands of us do. And then they all park free on our little streets, and we all take a bus over there.

There's no reason for a gondola. This is all about money. This is all about the gentleman who's proposing it because he wants to build beautiful buildings up there when the Dodgers aren't playing. So this has nothing to do with helping people, nothing for our community. It's all about money and wealth, and I'm very much against the gondola.

MS. KING: Thank you.

(Whereupon, the above-entitled matter

cont'd PH16-1

PH16-2

PH16-3

went off the record at 10:48 a.m. and resumed at 10:49 a.m.)

Comment - PH17

MS. KING: All right. We are recording.

MR. CARSTENS: Hello. I am Douglas Carstens on behalf of the California Endowment. We've been reviewing the gondola EIR and have some initial comments with more to follow in writing. We oppose the gondola project. Metros should not be pursuing this private project at Frank McCourt's behest at all, and Metro should not be the lead agency because the city of Los Angeles is in a much better position and is more properly designated as the lead agency. These points will be expanded in our comment letter.

PH17-1

PH17-2

First, regarding the EIR, the California Environmental Quality Act, it's a bill of rights for an environmental democracy. It ensures the twin goals of public participation and environmental protection are met, and EIR is the heart of CEQA. An EIR is not supposed to be a sales brochure or an infomercial for the

PH17-3

project.

It's supposed to be a unbiased, full-disclosure document that advises the public and decision makers of the impacts of a project and how those impacts can and will be reduced. The draft EIR presented by ARTT and Metro falls woefully short of these legal requirements for full and accurate disclosure and is biased in favor of the project. cont'd PH17-3

The aesthetic impact analysis is a good example of how, instead of meaningful and accurate depictions of what the gondola towers and stations will look like in context, the EIR preparers have chosen distortions and force perspective depictions that minimize the visual impact of the towers and stations in context. Instead of -- PH17-4

MS. KING: It's been two minutes.

MR. CARSTENS: Okay. Thank you. Useful information, the EIR provides misleading depictions and half-truths. Information about whether the gondola cars will be used for PH17-5

advertising and billboards is not disclosed, though it's known advertising will be a major component of the project. The omission and misleading half-truths is a common theme of different types of analysis in the EIR. In fact, the gondola's entire financial plan, when -- is my time up? It looks like you're --

MS. KING: Your time is up.

MR. CARSTENS: I just wonder, like can I make another set of comments or come back?

MS. KING: You can come back and restart your two minutes. Yeah.

MR. CARSTENS: Okay.

(Whereupon, the above-entitled matter went off the record at 10:51 a.m. and resumed at 10:52 a.m.)

MS. KING: And we are recording.

MR. CARSTENS: Hello. This is Douglas Carstens, and this is the second half of my testimony because it was apparently two minutes on the first half.

In fact, the gondola's entire

cont'd PH17-5

PH17-6

PH17-7

financial plan, which the Metro board was promised would be made available before the end of September 2022, is missing altogether. The gondola's missing financing is critical to understanding how impacts identified in the EIR will be mitigated by the project proponent and how they will not be.

Since the proponent, Frank McCourt, and his company, McCourt Global, has only committed to funding about three percent of the entire project budget, the shortfalls in construction and operating revenues will need to be made up somewhere, and it is most likely that some, if not all, will come from public transit funding sources, better used for public projects. Mitigation of identified impacts will be expensive but will be critical to protect the neighborhoods and people living and working near the project route.

Traffic, air pollution, parking, noise, and recreation will all be impacted. The noise section of the EIR identifies that there

cont'd PH17-7

PH17-8

PH17-9

will be significant and so-called unavoidable impacts from construction equipment. This noise and vibration will affect the neighborhoods around El Pueblo and in Chinatown. The vibration will threaten the physical integrity of the El Grito Mural and the Avila Adobe. cont'd PH17-9

These impacts can be avoided by denying the project altogether or choosing the environmentally-superior alternative which, in the EIR is called transportation systems management, what comes down to enhancement of the Dodger express buses system. PH17-10

The California Endowment opposes Frank McCourt's gondola and the potential waste and gifting of tax-payer resources that it represents, including public land, such as allowing Alameda Street and at the State Historic Park. The implications of which -- PH17-11

MS. KING: Thank you.

MR. CARSTENS: Oh, is that time? PH17-12

MS. KING: That's time.

MR. CARSTENS: Okay. And let me see

--

(Whereupon, the above-entitled matter went off the record at 10:54 a.m. and resumed at 10:55 a.m.)

MS. KING: And just your name again.

MR. CARSTENS: Okay. My name is Douglas Carstens, and I'm here on behalf of the California Endowment. So the California Endowment opposes Frank McCourt's gondola and the potential waste and gifting of tax-payer resources that it represents, including public land such as allowing Alameda Street and at the State Historic Park, the implications of which the Environment Impact Report only partially discloses in more incomplete and misleading half-truths.

Instead of promoting a private gondola to a private sport stadium, more like an amusement park ride than actual public transit, Metro should focus on enhancing actual public transit options with its limited resources and staff and board time.

cont'd PH17-12

PH17-13

PH17-14

We ask that you terminate the project review process immediately. If you do not terminate the project immediately, you, Metro, should transfer lead agency status to the city of Los Angeles to complete review and processing of the gondola project. Metro should not let itself be co-opted to serve the private interests of a billionaire, especially one who has bankrupted such a revered organization as the Los Angeles Dodgers. Stop the gondola now. Thank you.

PH17-15

MS. KING: Thank you very much.

(Whereupon, the above-entitled matter went off the record at 10:57 a.m. and resumed at 10:58 a.m.)

Comment - PH18

MS. KING: We're recording. If you could just state your name and spell it before you begin.

MR. CHAN: Yeah. Kenneth Chan. K-E-N-N-E-T-H. Last name, C-H-A-N.

PH18-1

MS. KING: Thanks. Go ahead.

MR. CHAN: Yeah. Coming out. I think I'm against this project. There's not enough

analysis on housing and gentrification from what we've seen. Every time Metro comes in here and builds one of these projects, it encourages market-rate development and displaces longtime tenets.

In addition, this is really treating our neighborhood like a playground. It is not a good use of funds. You know, we still have some of the worst-maintained sidewalks, streets in our neighborhood. We have a huge demand and need for affordable housing in our neighborhood. This will not resolve Chinatown's transportation issues. It should not take me two buses to get to downtown.

Overall, I think this project is a waste of funds, and the show that's been put on today completely ignores the community. And yeah. I think that building this project would be a huge waste of funds and a huge mistake, and if folks continue to proceed with this and ignore the voices of the community, they're going to meet some real resistance. And I think it'll be

cont'd PH18-1

PH18-2

PH18-3

a waste of time for everybody.

So again, you know, we have a real need for affordable housing and a real need for real transit solutions, not some playground BS that's being funded by Frank McCourt.

MS. KING: Thank you very much.

PARTICIPANT: All right. Thank you.

(Whereupon, the above-entitled matter went off the record at 11:00 a.m. and resumed at 11:05 a.m.)

Comment - PH19

PARTICIPANT: State and spell your name

MS. KING: All right.

MR. BERMAN: Does the two minutes include my name-spelling?

PARTICIPANT: No. I'm going to start it right after you finish.

MS. KING: We're recording now, so.

MR. BERMAN: I have a very long name. Ready?

MS. KING: Yes.

MR. BERMAN: Jonathan Berman. J-O-N-

cont'd PH18-3

PH19-1

A-T-H-A-N, B-E-R-M-A-N.

MS. KING: Please.

MR. BERMAN: Now? I am currently against this project for a number of reasons. First of all, it feels like a massive boondoggle of the ownership of the area of Dodger Stadium. My understanding of it is Frank McCourt and related people, who's already bankrupted the Dodgers and other professional teams, and that the end game of all of this is the development of those parking areas in Dodger Stadium as some kind of mall or LA live type of situation. So not being transparent about what that is. Furthermore -- let me know if I'm going too fast.

MS. KING: Okay.

MR. BERMAN: Furthermore, this particular event here is incredible biased. You have 20 booths manned by people, persons, by people who are in the employ of the people who want to move this forward. And the results seem pretty ordain. It's always no significant impact.

cont'd PH19-1

PH19-2

PH19-3

Crowd control. You're going to have, for the games, 10 -- are we out of time? Are we going to have like 10,000 more people getting out of the stadium at the same time getting into these gondolas? That's going to be a special show of consternation. So yeah. PH19-4

My main -- also the environmental review. The idea that there are 10,000 parking spots in Chinatown is laughable at best given that most of these, many of these properties are being redeveloped as commercial or residential properties, some of the lots close at night. PH19-5

So I just think it's not that well thought out. I mean the ultimate thing is that this funding that will ultimately come out of taxpayers' dollars should go towards homeless, helping get people off the streets, mentally-ill people and other people who are living on the streets, rather than putting billions towards a project that's not going to happen in the four -- that this will come out in four years is insane. That's not going to happen. PH19-6

PARTICIPANT: Thank you.

MS. KING: Thank you.

(Whereupon, the above-entitled matter went off the record at 11:08 a.m. and resumed at 11:09 a.m.)

cont'd PH19-6

Comment - PH20

MS. KING: So we're recording now, and you can just start by stating his name and spelling.

MR. CAPIZ (Speaking through translator): My name is Baldomero Capiz. B-A-L-D-O-M-E-R-O. I am the president of the organization National Union of Ex Berceros. As a community leader, it is our responsibility to ensure that our taxes are not used for the benefit of third parties.

PH20-1

The gondola project is nothing more than an attraction, which has nothing to do with the protection of the environment. Metro already has a bus system which takes fans to the Dodger Stadium, and it is free. This project will only take advantage of our taxes for the benefit of a person who wants to make him or herself more

PH20-2

rich.

The gondola will only displace many residents in Chinatown, just as Latino residents were displaced from the lands where they now are living in Dodger Stadium -- where Dodger Stadium is now located, rather. Correction.

We oppose the gondola in honor of people who are known as landless, including the Ex Barceros. We robustly oppose that anyone with personal interests would construct an aerial transport.

MR. CAPIZ: That's it.

MS. KING: Great. Thank you.

(Whereupon, the above-entitled matter went off the record at 11:12 a.m. and resumed at 11:14 a.m.)

Comment - PH21

MS. KING: Okay. Name and spelling, please.

MS. PADINO (Speaking through translator): My name is Maria Elena Padino. M -- or sorry. Correction. M-A-R-I-A, E-L-E-N-A, P-A-D-I-N-O.

cont'd PH20-2

PH20-3

PH21-1

MS. KING: She can begin.

MS. PADINO: I am a member of the organization Anahuak. Our organization has fought to be able to have more green spaces and parks so that our children are able to play. For many years, we have fought for our well-being, the well-being of our families, rather, and for better recreational opportunities for our community.

cont'd PH21-1

We do not want people with money, with personal interests to build an air highway above our State Park because it is abusing the privacy of people by having a gondola that would go over the homes of these people. Doesn't the privacy of these people count?

PH21-2

We ask for you to listen to us and for you to reject this project which will use our federal funds and our taxes. We oppose this gondola. Our communities have already demonstrated our opposition, and now it corresponds to you all to say no to this gondola. Thank you so much.

PH21-3

(Whereupon, the above-entitled matter went off the record at 11:16 a.m. and resumed at 11:19 a.m.)

Comment - PH22

MS. KING: We are recording. If you could please state and spell your name.

MR. BUTLER: My name is Disraely Butler. D as in David, I-S-R-A-E-L-Y. Butler the way it sounds.

MS. KING: Got you. And you can begin.

PH22-1

MR. BUTLER: All right. And do I need to state my case, honey?

MS. KING: Yes, please.

MR. BUTLER: Okay. Wonderful project. Of course, our Founding Fathers would be so proud of what we're doing here and what you guys are doing. And, of course, the great Nubian Pharaohs. My only concern is the noise factor. LAPD needs to relocate their heliports. They're flying too low, it's too noisy, and because of the Kobe Bryant incident, there is a situation that could be very dangerous, you know, with some

PH22-2

mechanical failures.

The other situation, there needs to be more regulation of the actual train horn industry. You can't always have everything on 16 when you can turn it down to 8 and 7 and still have the same results. What's happening in our communities? People are getting vertical, the rooms are spinning around, blood pressure levels are going up, and all the other complicates related to frequencies. So those can be taken care of, I think everything else will take care of itself.

MS. KING: Great.

MR. BUTLER: See? I made it short.

MS. KING: Look at that. Thank you very much. Appreciate you.

(Whereupon, the above-entitled matter went off the record at 11:21 a.m. and resumed at 11:30 a.m.)

CONTINUED
Comment - PH13

MS. KING: Go right ahead.

MR. CHIN: My name is Bill Chin. B-I-L-L, C-H-I-N. I was at the booth for the

cont'd PH22-2

PH22-3

PH13-14

aerospace. So the question was, will there be trees that will be cut? They said yes. And then I asked, why is it that all the maps in your EIR and on your project shows no scaling? Like no millimeter per feet or how many feet per millimeter on the two-dimensional maps? And he says, oh, we don't know. I said, it's not appropriate within your capabilities if you guys are all engineers.

But it's appropriate if somebody told all the engineers, don't put any scaling on it because we don't want the public to figure out how much distance or height is involved. And therefore there's not scale. Just a map and a legend. And I really, really oppose that. Why do you want people to review the information when they can't scale down any distances on every map on thousands of pages?

PARTICIPANT: All done?

MR. CHIN: Thank you.

MS. KING: Thank you very much. Appreciate that.

cont'd PH13-14

PH13-15

(Whereupon, the above-entitled matter went off the record at 11:32 a.m. and resumed at 11:36 a.m.)

Comment - PH23

MS. KING: All right. So just your name and the spelling, first, please?

MS. T. LING: My name's Tany Ling. T-A-N-Y, L-I-N-G.

MS. KING: Perfect. And you can begin.

MS. T. LING: Okay. I'm a resident of Chinatown. I am against this project. I think it's a giveaway to a billionaire, and I think Metro should listen very closely to the people who are raising alarms about this. Why are we constantly giving away the city to billionaires? Who are they really serving because it's not really the people? It's usually -- and the bottom line is, it's all about money, okay?

So I think the project is masquerading as a, it's masquerading as a public transit project for the greater good, but it's really a means for a billionaire to use public money to

PH23-1

take a step forward towards achieving his planned huge development project at Dodger Stadium and all the while promising that it won't cost taxpayers money. But he has already transferred the operation of this project to a nonprofit. And guess what? Nonprofits can apply for federal and state funding, which is paid for by taxpayers.

There's been studies done to show that this will not improve traffic in the area. It will not improve air quality. It will actually, could possibly bring more cars into the area. It's going to be traveling not near people's homes but over people's homes and not 400 feet in the air but possibly as low as 40 feet in the air above people's heads, above people's roofs.

I am against this project also because it's going to completely change the character of the State Park. Cutting down trees, putting these tall imposing towers and stations in the State Park that the community worked so hard to bring to life and to have this beautiful, open

cont'd PH23-1

PH23-2

PH23-3

PH23-4

PH23-5

space for everybody to enjoy. It can't happen. Let's not let it happen.

cont'd PH23-5

MS. KING: Thank you very much.

(Whereupon, the above-entitled matter went off the record at 11:38 a.m. and resumed at 11:39 a.m.)

CONTINUED Comment - PH13

MS. KING: All right. Just state your name one more time for us, please.

MR. CHIN: My name is Bill Chin. And it's spelled C, B-I-L-L, C-H-I-N. As I demonstrated to the recorder here that the Cantonese speaker does not really speak Taishan, and there were four Taishan speakers that came in. But they chose not to come in because they saw the sign that says Cantonese and no Taishan.

PH13-16

And it makes a big difference because Taishan could be intimidated. They're not educated, they're barely skilled, and to come into a big, unfamiliar place like this, it's not comforting for them to know that people don't speak their dialect. And I hope that changes in the future because it's been a misleading thing

to not bring enough people from the community already. Thank you.

cont'd PH13-16

MS. KING: Thank you.

(Whereupon, the above-entitled matter went off the record at 11:40 a.m. and resumed at 11:48 a.m.)

Comment - PH24

MS. KING: All right. And your name?

MS. P. LING: Phyllis Ling.

MS. KING: And could you spell that please?

MS. P. LING: P-H-Y-L-L-I-S, L-I-N-G.

MS. KING: Great. And please.

MS. P. LING: Yeah. I think with this draft Environmental Impact Report, I think something that needs to be said is that there's still no funding plan and that all of these impacts and mitigations proposed are meaningless if there isn't sufficient funding for this project.

PH24-1

The fact that Metro is doing this draft EIR before there is any funding plan is a huge disrespect to our communities. It's wasting

our time. It's putting residents like me in the position of having to spend thousands of dollars on consultants and thousands of hours reading an 8,000 plus page draft Environmental Impact Report.

It costs a lot of money to operate and maintain systems like this, and it would run over our homes and public spaces. A system that isn't properly maintained will be noisy and unsafe and fall into disrepair, be graffitied over, and be a visual blight.

Crowd control is a huge control. It's largely ignored or dismissed in this draft EIR. People can die from crushing injuries and stampedes. It's a huge issue. You're trying to squeeze 40 people into each cabin. After events, a lot of people will be drunk. There's very little consideration for the impacts that will have, the liabilities that will impose on the city if it takes responsibility for this system.

I think you have to consider what happened after the Elton John concert in the

cont'd PH24-1

PH24-2

PH24-3

parking lot. People bumping into each other in crowded spaces, bumping into cars, bumping. That's a huge issue. A lot of fights start that way, especially at Dodger Stadium.

cont'd PH24-3

And crowd control at the stations is a big issue also. There's very little explanation for how the lines will be spread out. We can't expect a magical ticketing system, reservation system to spread people out evenly over a two-hour period before and after games. And how are people going to arrive on time for a gondola reservation if they're supposedly taking transit to the gondola stations? And who will be able to reserve these tickets anyway? Is this going to be equitable or will VIPs and certain members of clubs have early access to reserve tickets? I think I've used up my time, but can I keep going?

PH24-4

PARTICIPANT: Go ahead.

MS. P. LING: I think visual impacts are a big issue as well. You have these leaning towers that don't look very stable or balanced.

PH24-5

They don't have the sense of good Fung Shui. I don't know if that's going to be addressed in the final EIR. Seems that it would be important to consider Fung Shui in Chinatown.

And then visual blight of advertising all over the gondola cabins, stations, and towers. This is going to be owned by a private company. Are there any limits to what they can advertise? Personally, I wouldn't want to see advertisements for liquor, alcohol, online gambling, cannabis, campaign and political ads, ads for authoritarian governments' propaganda, PR during the Olympics constantly streaming over my neighborhood. Those are just a few things.

And would we have any say as a community as to what messages are constantly being streamed over our neighborhood? The visual impact is that this would turn our neighborhood into an advertising district and Disneyland type of amusement park. It would cause destructive driving, it would hurt seniors, pedestrians, and cyclists. All right. Thank you.

cont'd PH24-5

PH24-6

MS. KING: Thank you. Appreciate it.

(Whereupon, the above-entitled matter went off the record at 11:53 a.m. and resumed at 11:55 a.m.)

MS. KING: All right. Go right ahead.

MS. P. LING: Phyllis Ling. P-H-Y-L-L-I-S, L-I-N-G.

MS. KING: Oh, go right ahead.

MS. P. LING: Okay. So my comment is that the parking study, I think we were told it was not part of the Environmental Impact Report. But it is being presented here on a board, and so it's a little bit confusing. Personally, I do think it should be a part of the Environmental Impact Report because it would -- people driving to the gondola stations and parking in our neighborhoods will have an impact on traffic flow in our neighborhoods.

And the fact that it's being presented here but then not a part of the Environmental Impact Report, to me, that's just very confusing.

cont'd PH24-6

PH24-7

And it seems like it sets it up as where it's, the parking study doesn't need to be as thorough or doesn't need to meet a certain standard as a separate study outside of the Environmental Impact Report.

It's just very confusing as to the status of that. And I think it should be officially included in the final report. And I think there should be additional public review and extended review time when the final EIR is released. Thank you.

cont'd PH24-7

PH24-8

MS. KING: Thank you.

(Whereupon, the above-entitled matter went off the record at 11:57 a.m. and resumed at 12:02 p.m.)

CONTINUED Comment - PH13

MS. KING: And we're recording.

MR. CHIN: By name is Bill Chin. B-I-L-L, C-H-I-N. I've lived here for over 54 years in Chinatown. And I'm against the gondola because it seems like a repeat of the Gold Line with stations and Gold Line at Union Station and in Chinatown. But I do like to have a couple of

PH13-17

the benefits, which is a pedestrian bridge from Broadway into the historical park and to maybe see more trees along where the Chinatown Gold Line is located. PH13-18

But I wanted to say that, when I'm traveling on Alpine and going eastward toward the post office, I see that the Gold Line has three towers that are very thick. And it's daunting that there's no trees all around those towers, very grey, massive, concrete towers. And even though these towers may be just as thick and not as closely sequenced, they should also have very well-maintained vegetation, if not because there are towers. It is because those places where those towers are, they should be landscaped with even more vegetation and without the gondola. Thank you. PH13-19

MS. KING: Thank you.

(Whereupon, the above-entitled matter went off the record at 12:04 p.m. and resumed at 12:10 p.m.)

MS. KING: Just go ahead and state PH13-20

your name one more time.

MR. CHIN: Yes. My name is Bill Chin.

MS. KING: Okay.

MR. CHIN: B-I-L-L, C-H-I-N.

MS. KING: And go right ahead, please.

MR. CHIN: I'm still concerned that information on the board is so very vague. When I ask questions about the parking study, it wasn't articulated what day of the week and whether it was a weekend. It was just said that it was game day. And game day could fall on weekends as easy as it does on weekdays.

Especially on weekends, where Chinatown is highly, highly, highly tourist, and people from adjacent neighborhoods always come back to Chinatown to buy bags of rice or bring family members or even tourists. And they really occupy a lot of their private, as well as street parking, in the parking lot from very early morning all the way to the evening time on weekends throughout the year, especially during the summer months during game season as well.

cont'd
PH13-20

So this is very vague because you don't read it on the board. You don't see it on the writing. You hear it only if you ask questions. But you don't get to experience it at a glance. And so you assume that the experts are telling the truth about how many parking spaces that are available.

But if you come on a weekend, it is not true. All the parking lots are filled, paid parking lots. And all the streets, you have to like double-park to wait for somebody to leave before you find parking. Thank you.

cont'd PH13-20

MS. KING: Okay. Thank you.

(Whereupon, the above-entitled matter went off the record at 12:12 p.m. and resumed at 12:15 p.m.)

MS. KING: Ready when you are. Just state your name one more time.

MR. CHIN: My name is Bill Chin. B-I-L-L, C-H-I-N. I had a comment about LA Art, whether it's McCourt or whether it's a nonprofit. It seems the nonprofit, I have no confidence that

PH13-21

they will be around after a gondola project like this is built, that they would be able to sustain the maintenance and the ongoing operating expenses for an endeavor like This throughout the year.

Whoever was chosen may be certified with nonprofit with the state, but I don't see that they have any resources that could manage with the operating expenses of a project like this and the amount of experience that they have. Thank you.

cont'd PH13-21

MS. KING: Thank you.

(Whereupon, the above-entitled matter went off the record at 12:16 p.m. and resumed at 12:17 p.m.)

MS. KING: Recording.

MR. CHIN: My name is Bill Chin. B-I-L-L, C-H-I-N. I've seen and read parts of the EIR, so I understand the different heights of the tower, but they don't delineate where the heights are at every hundred feet or interval. It just is a very vague, saying that there's average

PH13-22

height and maximum height. But they don't demarcate where they're located.

But being vague like that still doesn't stop me from asking if you are able to calculate the height of the towers and where the cables need to be. I would like to see statistics on how deep each of the seven towers are in terms of footing and how deep they go into the ground and whether there's been any preliminary soil report to determine at what height those footings should be. Thank you.

MS. KING: Thank you. Appreciate you.

(Whereupon, the above-entitled matter went off the record at 12:18 p.m.)

Jessica: Okay.

All right. We'll go ahead and get started. So I'd like to welcome you to this public hearing for the Los Angeles Aerial Rapid Transit Project Draft Environmental Impact Report. This project is proposed by Los Angeles Aerial Rapid Transit Technologies LLC. And thank you for taking time out of your day to participate in this meeting. I'm going to say a few words about language accommodations during the meeting, and as I do so, I just wanted to give you all a heads up that even if you're listening to the meeting in English, you're going to want to select English as I go through these instructions.

So let's see here. I'm going to provide this information in English, and then I'll ask our Spanish, Cantonese and Mandarin interpreters to repeat it. So you're going to want to click on the interpretation button in your Zoom screen. This button is typically at the bottom of your screen, but the location will depend on the device you're using. And when I get through, the instructions will go ahead and enable that so you can find it.

And you're going to want to either click English if you're listening in English or Spanish, Cantonese or Mandarin. Then you'll want to, you're also welcome to download a translated version of the presentation at metro.net/aerialrapidtransit to follow along in the language of your choice. And we've got that URL in the chat for you. And on the next slide, I'll show you exactly where to access the translated PowerPoint.

And I will now ask the Spanish interpreter to repeat these instructions.

Spanish Interpreter: [Spanish]

Spanish Interpreter: [Spanish]

Jessica: Thank you. I'll now ask the Cantonese interpreter to repeat the instructions.

Cantonese Interpreter: [Cantonese]

Cantonese Interpreter: [Cantonese]

Cantonese Interpreter: [Cantonese]

Cantonese Interpreter: [Cantonese]

Cantonese Interpreter: [Cantonese]

Cantonese Interpreter: [Cantonese]

Jessica: Great. Thank you. And finally, I'll ask the Mandarin interpreter to repeat these instructions.

Mandarin Interpreter: [Mandarin]

Mandarin Interpreter: [Mandarin]

Jessica: Great. Thank you very much. Okay. So we'll now enable the audio interpretation feature so that you can access it. So you'll want to look for the interpretation globe and you're going to click on it and select your language. I see a few people joined a little bit after the hour, so I do want to reiterate that if you're listening to the meeting in English, you'll want to click on the globe and click English so that you can hear any comments that might come through that get interpreted back into English.

So everyone should select the language. And we're also going to activate the recording for the meeting. So you may hear a slight break in audio as we activate that recording. And finally, I do want to note that if you're calling in via the phone, the interpretation feature, unfortunately, is not available in Zoom for phone-only participants. So you'll want to please log in to Zoom to access interpretation if you can.

Okay. So I'll just make sure that we got the recording enabled and we'll move forward. And I see one note came in from someone that wasn't able to find the global marker on their Zoom screen. So I'm going to have my team reach out to you and see if they can help you find it. Okay, so this is a quick screenshot of where you can find the presentations in all four languages at metro.net/aerial rapid transit.

And we'll put the links in the chat for you as well. All right. Now that we have the interpretation enabled, I'd like to welcome everyone to tonight's meeting. And I know that we have some representatives from Janice Hahn's office and the supervisor herself wanted to welcome you all and appreciate you participating in the meeting tonight. And with that, we'll go through the agenda.

Item number one is the purpose of the meeting. Item number two is how to participate in this virtual meeting. Item number three is a general overview and introduction. And item number four is a sequel process overview. Then we'll move into the overview of the L.A. A.R.T. project and then an orientation to the draft EIR, Key analyses and conclusions and finally a public comment

session and we'll provide more information about how to participate in the public comment session later in the meeting.

The meeting is scheduled to conclude around 7 p.m. And finally, if you need assistance with Zoom, please use the chat function or you can see up on the screen you can email mary.nooristani@aecom.com or call 6192519180 and we'll put that information in the chat for you. And I think there might have been one or two people that were reaching out about the interpretation so we'll have the team get in touch with you.

All right. So the purpose of this meeting is to inform the public about the draft Environmental Impact Report, key analyses and conclusions and to accept public comment on the draft EIR. And today's meeting is one of three public hearings being held during the draft EIR public review period. At today's meeting, you will have an opportunity to learn about the draft EIR, key analyses and conclusions, as I said, and you'll have an opportunity to provide public comment. Since the focus of the meeting is to provide an opportunity for verbal public comment, there won't be Q&A today.

And I want to note that during tonight's public comment session, we'll be taking verbal public comment, and communications typed into the Zoom chat will not be considered a formal public comment. But on the next slide, I'm going to look at all of the additional opportunities that there are to provide official public comment through January 17th, 2023.

So let's take a look at the ways that you can comment on the draft EIR through January 17th. Our third public hearing will be held at Cathedral High School on Thursday, January 12th, from 5 to 7 p.m. And you can also comment via email, regular mail and phone, and we'll put that information in the chat for you. The phone number for providing official public comment through January 17th is 2139226913.

Okay. So how to participate in this meeting. When we get to the public comment session, you can raise your hand icon in Zoom by clicking on the hand icon or dialing star nine if you're calling in via phone. And you'll be called on to unmute yourself and provide public comment. A few notes about today's meeting. I wanted to reiterate that the last four meetings that were held in October, we had an opportunity for questions and answers.

However, today, because we will be focusing on public comment, there won't be any Q&A, it will be all public comment. And with that, I would now like to introduce Cory Zelmer, Deputy Executive, excuse me, Executive Officer with L.A. Metro.

Cory Zelmer: Thank you, Jessica. Good evening, everyone. I will start with a brief overview of the roles and responsibilities for [both] project and as Jessica already mentioned, the Los Angeles Area Rapid Transit Project is proposed by L.A. Aerial Rapid Transit Technologies LLC. Metro's role in the project is to serve as the lead agency for the preparation of an Environmental Impact Report, EIR are under the California Environmental Quality Act, or CEQA, for the draft.

The EIR, which is out now for review, evaluated the potential environmental effects associated with both the construction and operation of the proposed project. As the lead agency, Metro has the responsibility to ensure that the EIR adequately assesses the potential project impacts of the proposed project, that the proposed mitigation measures to address the project impacts are appropriate and the CEQA process has been complied with for all public noticing, public outreach and the distribution of documents.

And as Jessica mentioned, we're currently accepting public comments on the draft, the EIR for CEQA, and she also went through a few of the ways you can provide comments, the public hearings that we're having tonight, in January by email, by mail, and also by phone, and we encourage you to make comments at any time that's convenient for you and to make comments as many times as you like up until the of the commentary.

Also as part of this project, we are utilizing Senate bill 44, which contains the CEQA process and was adopted last year to streamline judicial review for what are called environmental leadership transit projects in Los Angeles County.

Jessica: Cory, I'm going to ask that you speak up a little bit. It looks like we've got a couple of comments that came in that folks are having trouble hearing you.

Cory Zelmer: Sure.

Jessica: Thanks very much.

Cory Zelmer: The proposed project would be the first in environmental leadership transit project under Senate Bill 44. As part of SB 44, there are several requirements related to two public meetings. The first requirement is to hold at least one informational workshop within the first ten calendar days of the public comment period to inform the public about the draft EIR, analyses and conclusions.

Cory Zelmer: The second requirement is to hold at least one public hearing within the last ten calendar days of the public comment period to obtain public testimony and comments on the draft EIR. Now transitioning to an overview of the CEQA process itself.

Jessica: Really quickly, Cory, I just want to interject. There were a couple of people that were saying they were having trouble hearing, so I wanted to provide a reminder that you're going to want to click on the globe icon at the, usually at the bottom of your screen and select whatever language you are listening to the meeting in. So if you're listening in English, you need to select English to preserve that audio for you.

Please go ahead. Cory. Sorry about the interruption.

Cory Zelmer: That's okay. So for CEQA.

CEQA is required for all projects undertaking funded or requiring approval by a public agency.

The process is intended to inform the public and decision-makers about the proposed project, to disclose any potential environmental impacts that may result from a

proposed project and to provide multiple opportunities for the public to comment on environmental issues.

Typically with the CEQA process, there are two public comment periods.

The first is a scoping period which happens at the beginning of the CEQA process, and the second is a draft EIR public review period, which is what we're in currently. And also, as I mentioned, this project is utilizing SB 44, which has certain requirements related to the number and timing of public meetings during the draft EIR public review period.

So here's a timeline for the CEQA process and the preparation of the environmental impact reports. In the yellow box is where we are today. To the left of the yellow box are the activities that we've completed to date and to the right of the yellow box for activities we still have yet to complete. Starting on the far left, we started the CEQA process with what's called a notice of preparation, which was released in October of 2020.

The notice was intended to inform the public and agencies about Metro's intent to prepare an environmental impact report. The notice also started what is referred to as the public scoping period, which is the time allowed for the public and agencies to provide comments about the project and about the scope of the environmental impact report itself. During the public scoping period, we held a virtual open house from October 1st to November 16th, 2020, and a virtual scoping meeting on October 22nd. Following the public scoping period in June of 2021, we held a community information session which was intended to inform the public

about the project and any updates to the project since the start of the CEQA process.

We held a second round of community information sessions in October of this year where we informed the public about the upcoming release of the draft EIR and then as we mentioned, the EIR itself. The draft EIR was released on October 17th, which initially began a 60-day public review period, which we have since extended to 90 days, now concluding on January 17, 2023. After this public review period, the process includes preparing what's called a final environmental impact report.

In large part, it includes responses to all comments received during this period with the completion of the final EIR. We will then take it to the Metro Board for certification and project approval soon after followed by the filing of a notice of determination that the EIR process is complete and the project was approved by the lead agency.

In terms of the public meetings held during the draft EIR public review period, we held two informational workshops, both in October, which were intended to inform the public about the key analyses and conclusions in the draft EIR. We have also held one public hearing so far; tonight is the second of the public hearings, and we have a third and final public hearing scheduled for Tuesday, January 12.

And again the [inaudible] for tonight the third public hearing is to obtain public testimony from the public about the draft EIR. And with that, I'll turn it now to David Grannis to provide a project description.

David Grannis: Thank you very much, Cory. My name is David Grannis and I'm a long-term transportation consultant for the project. I'm going to go through the project description. The project would provide the first permanent transit connection to Dodger Stadium. The travel time between Union Station and Dodger Stadium would be approximately 7 minutes for the 1.2-mile gondola ride. Up to 20% of fans could ride the gondola before and after each Dodger game. In addition to games and events at the stadium, the project would operate daily to serve existing residents, workers, park users and visitors to Los Angeles.

The project is zero-emission, environmentally-friendly rapid transit that would reduce greenhouse gas emissions as a result of reduced vehicle trips in and around Dodger Stadium and on neighborhoods, streets, arterial roadways and freeways. The graphic on this slide shows the project location and alignment. The project would commence adjacent to Union Station and El Pueblo and terminate at Dodger Stadium with an intermediate station at the southernmost entrance to the Los Angeles State Historic Park.

The project would connect surrounding communities of Chinatown Mission Junction, the Legion Park, Echo Park and Solano Canyon, as well as the Los Angeles State Historic Park to the regional transit system at Union Station. This slide shows several modern aerial transit systems which are feasible modes of urban transit operating in numerous cities around the world. Established [inaudible] transit systems worldwide, such as La Paz, Bolivia; Mexico City, Mexico are being used as rapid transit for urban populations that they serve.

Similar to the systems used in Koblenz, Germany; Phu Quoc, Vietnam and Toulouse, France, the proposed project is a 3S gondola with cabins that carry approximately 30 to 40 passengers and offer a smooth, stable ride. As shown in the graphic on this slide. Pardon me. A gondola system includes passenger stations, a non-passenger junction, towers to support the aerial cables that carried the gondola cabins. The 3S system includes three cables. That's two track ropes for stability, to hold the cabins, and a third [haul] rope to circulate the cabins.

Cabins detach from the continuously circulating [haul] rope and slow down upon entering a station for passenger exit and entry. Then they re-attach to the [haul] rope. The cabins allow for sitting or standing. They're fully [ADA] accessible and provide room for baby strollers and bicycles. As to purpose and need, the project will be a first last mile connection between the regional transit system at Union Station and Dodger Stadium [at] Legion Park, which draws large regional crowds approximately 100 days per year.

The vast majority of visitors to Dodger Stadium drive their personal vehicles, creating congestion and associated emissions throughout the surrounding communities, which are identified as being in the 90th to 100th percentile of communities disproportionately burdened by multiple sources of pollution in the state. The Draft EIR identifies numerous project objectives, including reducing transportation-related pollution and greenhouse gas emissions as a result of reduced vehicle congestion, providing a sustainable form of transit with the use of

zero emission electricity and battery storage backup, enhancing safety in the neighborhoods around Dodger Stadium, identifying comparable, affordable and accessible fare opportunities, attracting new riders to the metro system.

The project alignment maximizes alignment along public rights of way and publicly owned property and minimizes aerial rights over private properties, taking into account existing and future adjacent land uses. The graphic on this slide shows the alignment primarily over public right of way and publicly owned property in teal. A national standard for roadways governing California by Cal OSHA regulates vertical and horizontal clearances between the roadway and cabins, the elements such as vehicles, pedestrians, vegetation, buildings and other structures.

The project's design goal is to develop a common architectural design that unifies the overall aerial gondola system, while allowing for each component to contribute to the respective localized urban conditions and conform with the surrounding urban environment. Of equal importance is the desire to minimize the perceived scale and mass of the stations, non-passenger junction and towers.

This slide shows the Alameda Station, which will be over Alameda Street adjacent to the planned Los Angeles Union Station forecourt and [inaudible]. The station stairs, elevators and escalators would be introduced on the west to the north of the [inaudible] in a proposed new pedestrian plaza at El Pueblo and on the east from the planned forecourt at Union Station.

The Alameda Tower will be located on the Alameda Triangle, a city right of way between Alameda Street, North Main Street, and Alhambra Avenue. The project includes landscape and hardscape updates to the Alameda Triangle, including reuse and irrigation of existing pavers. In part the integration of existing pavers. The Alpine Tower will be located at the northeast corner of Alameda Street and Alpine Street, adjacent to the elevated metro L or Gold mine.

This site is a city-owned parcel currently being used as non-public parking storage for city vehicles. The Chinatown State Park Station will be located adjacent to Spring Street in the southernmost portion of the Los Angeles State Historic Park. The southern portion is located on city right of way, and the northern portion is integrated into the southern boundary of the park.

The project would integrate the park's granite pavers. Station amenities include a mobility hub where passengers would be able to access a suite of first and last-mile multi-modal options such as a bike share program, as well as pedestrian improvements, including hardscape and landscape improvements, shade structures and potential seating. The project also proposes park amenities, including concessions and restrooms.

The Broadway Junction is a non-passenger junction that would be located at the intersection of North Broadway and Bishop's Road. The junction will turn the alignment and cabins up toward Dodger Stadium. Stadium Tower will be located on Hillside private property north of Stadium Way between the Dodger Stadium, downtown gate and State Route

110 to carry the cabins over state Route 110 and to Dodger Stadium.

The Dodger Stadium Station will be located at the southeast portion of the Dodger Stadium property near the downtown gate. Cabins at this station would arrive and depart from an [inaudible] boarding platform. One Dodger Stadium station would also include a pedestrian connection to Dodger Stadium, including hardscape and landscape improvements and potential seating. This station would include a subterranean area below the platform for storage and maintenance of cabins.

The project would provide a sustainable high capacity, zero-emission aerial rapid transit option for visitors to Dodger Stadium, while also providing access between Dodger Stadium, the surrounding communities and the regional transit system accessible at Union Station. Gondola technology is quiet, and the project would reduce vehicle miles traveled and congestion, leading to reduce greenhouse gas emissions and improved air quality.

The Draft Environmental Impact Report includes detailed construction assumptions and analysis, including the timeline. Project construction is anticipated to take approximately 25 months, working hours construction equipment, the number of construction jobs, temporary lane closures. The project would implement a construction traffic management plan that would include detours and ensure emergency access is maintained throughout all construction activities. And thank you very much.

With that, I'll turn it over to D.J. Allison with AECOM, who will go through the draft EIR's key analyses and conclusions.

D.J. Allison: Thank you, David. My name is D.J. Allison. I'm a member of the CEQA EIR team, and I'm going to be presenting on the CEQA draft analysis and conclusions today. We're going to be going, we're now going to move into the draft EIR, key analyses and conclusions. We want to note that we have included quite a bit of detail. Can you go back a few slides there? We have included quite a bit of detail on these slides to be able to summarize the key analyses and conclusions of the draft EIR. In the interest of time, we're not going to read through the full content of each slide.

Instead, this portion of the PowerPoint will provide a summary of the draft EIR's analysis and conclusions. For those who would like to review the content of the PowerPoint in more detail, you may download it, download the PowerPoint from Metro's web page. I also believe links to the PowerPoint have been put in the chat of today's meeting. All environmental resource topics, CEQA guidelines Appendix G are addressed in the draft EIR.

Next slide. The esthetics analysis concludes that the project would not significantly impact visual character in its urban environment, significantly block scenic views, including that of the downtown skyline from the Los Angeles State Historic Park, or create a substantial source of light or glare. Impacts to esthetics would be less than significant. Agriculture and forestry. While the Dodger Stadium property has agricultural zoning, the property does

not contain agricultural uses and is subject to a conditional use permit which allows for the operation of a major league baseball stadium and ancillary structures and uses including mass transportation service. Impacts to agriculture and forestry would be less than significant.

The air quality analysis concludes that impacts would be less than significant because 1) project construction emissions would be less than significant, would be less than the significance thresholds for pollutants and emissions, and the project would result in a net reduction in criteria pollutant emissions by reducing vehicle miles traveled and thereby decreasing emissions compared to existing conditions.

To minimize impacts off-road diesel powered and construction equipment greater than 50 horsepower must meet tier four emission standards for non-road diesel engines. The biological resources analysis concludes that the project area generally does not 1) provide a habitat for special status species or 2) contain riparian habitat or other sensitive natural communities or protected wetlands, or 3) serve as a regional wildlife corridor. The project would implement pre-construction nesting surveys and measures to avoid and minimize impacts to bats and nesting birds during construction.

The project would replace removed trees pursuant to the trees to the city's native tree protection ordinance and other applicable requirements. Finally, impacts to biological resources would be less than significant, with mitigation incorporated. The cultural resources analysis included analysis of potential impacts to build historic

resources within the area of potential impacts, which includes Los Angeles Union Station Passenger Terminal and Grounds, Los Angeles Plaza Historic District, Cathedral High School and Arroyo Seco Parkway Historic District.

Potential impacts from ground disturbance to archeological resources within the area of direct impacts, including [inaudible] and Southern Pacific Railroad Station. To minimize impacts to cultural resources, the project would implement 1) project design features for pre and post construction documentation and protection of the winery and El [inaudible] mural, as well as protection of the mural during construction and 2) vibration monitoring and restrictions on force-adjustable ground compaction devices during Alameda stations construction.

To minimize impacts archeological resources, the project would implement 1) a cultural resources monitoring and mitigation plan and archeological resources worker implementation program, 2) a pre-construction archeological testing plan for the Alameda Station and Chinatown State Park Station and 3) potentially redesign of the Los Angeles State Park amenities to avoid archeological resources. Impacts to cultural resources would be less than significant, with mitigation incorporated. The energy analysis concludes that impacts would be less than significant because 1) temporary energy consumption associated with the project construction would allow for a long-term reduction in energy consumption associated with project operations.

And 2) the project would reduce vehicle miles traveled and increase the number of people using public

transit, resulting in decreased use of fossil fuels. Geology and soils analyzed seismic hazards, unstable geology and expansive soils. This section also analyzed the potential for project construction to destroy unique paleontological resources. With implementation of a site-specific final geotechnical report, impacts to geology and soils would be less than significant with mitigation.

The northern portion of the project has the potential to encounter paleontological resources. However, impacts would be mitigated to less than significant with compliance with a paleontological resources monitoring and mitigation plan. The greenhouse gas analysis concludes that impacts would be less than significant. The project would not result in an incremental contribution of greenhouse gas emissions and would reduce greenhouse gas emissions compared to existing conditions.

The lifetime emissions of the project would result in a reduction of approximately 166,000 metric tons of greenhouse gases. Hazards and hazardous materials. The hazards analysis assessed project activities to determine their potential impact on creating conditions hazardous to the public or the environment during construction and operation of the project. With implementation of a soil and groundwater management plan, which would specify methods for handling and disposal of hazardous materials in the event that contaminated groundwater or soil are encountered during construction impacts would be less than significant with mitigation.

Construction of the project would not substantially impair or physically interfere with an

adopted emergency response plan or emergency evacuation plan. Finally, the operation of the project would not affect emergency response. The hydrology and water quality analysis concludes that, 1) the project would comply with all applicable water quality protection laws and regulations and water quality control and sustainable groundwater management plans, and 2) the project would incorporate best management practices and implement low-impact development plans.

Impacts to hydrology and water quality would be less than significant. The land use and planning analysis concludes that through temporary closures during [inaudible] temporary closures during construction would disrupt vehicular pedestrian and bicycle access. There would be a variety of options available for connections and access within the project area that would prevent closures from physically dividing established communities.

The project would enhance community connectivity by providing first and last-mile transit and pedestrian access enhancements. The project is consistent with policies, regulations, goals and objectives of all applicable plans, codes and ordinances. State Parks considers there to be an inconsistency between the project in the Los Angeles State Historic Park general plan and therefore a potentially significant impact because the general plan does not identify transit as a use for the park.

With the implementation of mitigation measure LUP-A which would require the project to obtain a general plan amendment, impacts would be less than significant. The

project would have no impacts to mineral resources. Noise and Vibration. The noise analysis concludes that the project's significant and unavoidable on-site construction noise impacts would be a function of the noise generated by construction equipment, the location of the equipment, the timing and duration of the noise generated in construction activities and the relative distance to noise sensitive receptors.

Noise from offsite construction-related traffic would be less than significant, and noise from project operations would be lessened. The vibration analysis concluded that vibration generated from on-site construction activity would have significant and unavoidable human annoyance impacts. Potential building damage impacts during construction would be less than significant with mitigation and vibration generated from project operations would be less than significant.

The project will implement a construction noise management plan, including noise barriers, equipment maintenance and community outreach, including a noise disturbance coordinator with placement of vibration monitoring equipment for the Avalon Adobe, the 1970s edition, the [inaudible] mural and the winery, as well as restrictions on the use of force adjustable ground compaction devices during construction of the [Alameda] Station. Potential building damage would be less than significant.

The population and housing analysis concludes that impacts could be less than significant because, as a first and last-mile transit connection to Dodger Stadium,

the project would not induce substantial population growth either directly or indirectly, and the project would not displace existing people or housing. The public services analysis concludes that while project construction and operation would create an increased demand for emergency services, the project would not create an additional demand that would result in the need to add any new or physically alter any existing public facilities.

The Los Angeles Fire Department and the Los Angeles Police Department would have adequate access during project construction. The project does not include housing, so would not increase demand for school services or other public facilities. With the implementation of the Traffic Construction Traffic Management Plan, impacts related to emergency access would be less than significant, with mitigation incorporated.

The Parks and Recreation Analysis studied the potential to impact parks during construction and operation, including Los Angeles Plaza Park, and [inaudible], Los Angeles State Historic Park and Elysian Park. The project would not increase the demand for parks, such that substantial deterioration of parks would occur or be accelerated. Impacts to parks and recreation would be less than significant.

The transportation analysis utilized both the CEQA guidelines and the city's transportation assessment guidelines. The analysis of vehicle miles traveled for the project employed a variety of data, methodologies and models in order to estimate project ridership, vehicle trips reduced vehicle trip length, and ultimately the

vehicle miles traveled. Benefit of the proposed project Ridership estimates are provided for Dodger Stadium game and event attendees, employees, tourists, neighborhood riders and Los Angeles [inaudible] for park visitors and event attendees.

The lifetime vehicle miles traveled reduction for the project would be approximately 130 million miles traveled. The project would have no impacts to vehicle miles traveled. The project would have less than significant transportation impacts during construction, with implementation of a city-approved 1) construction traffic management plan, including street closure information, detour plans, [inaudible], and 2) a temporary disaster route plan, which would include street closure information and detour plans in order to facilitate the movement of emergency vehicles.

The project would implement visibility enhancements at the Alameda Tower and Chinatown State Park Station to reduce potentially unsafe physical conditions to less than significant with mitigation.

Tribal Cultural Resources. The draft EIR analyzes potential substantial adverse changes to significant tribal or cultural resources. Metro consulted with eight California Native American tribes pursuant to Assembly Bill 52. During construction of the Alameda Station, the project will 1) implement a cultural resources monitoring and mitigation program and archeological testing plan for the planned Los Angeles Union Station forecourt and 2) retain a Native American monitor to monitor ground disturbing

construction activities at the location of the Alameda Station.

Impacts to tribal resources are less than significant with mitigation.

The utilities analysis concludes that construction of the project would require relocation of existing utilities, which would be coordinated with utility providers and conducted in compliance with the applicable codes and regulations. Existing utilities would be sufficient for project operations. To minimize the potential interference with existing utilities associated with utility relocations, the project would implement a utility relocation plan. Impacts to utilities and service systems would be less than significant with mitigation.

Wildfire. The portion of the alignment containing the Broadway Junction Stadium Tower and Dodger Stadium Station are classified as being within a very high fire hazard severity zone. The wildfire analysis concludes that construction and operation of the project would not inhibit access to identify disaster routes and would not substantially impair implementation of an emergency response or evacuation plan. The project would adhere to applicable codes and regulations and best construction practices and would not exacerbate existing wildfire risks.

Implementation of project design features, including a fire protection plan and a fuel modification zone surrounding the stadium tower construction site would further reduce these risks. Impacts to wildfire would be less than significant. Alternatives. The draft EIR includes analysis of three alternatives. First, the no project

alternative. Second, the Spring Street alignment alternative. And third, the transportation systems management alternative, which is an enhanced Union Station, Dodger Stadium express service.

The no project alternative and the transportation systems management alternative would not improve connectivity for the surrounding communities or provide the same reduction of vehicle miles traveled, greenhouse gas emissions or improved air quality as the proposed project. The transportation systems management alternative would be considered the environmentally superior alternative because it would not result in a [inaudible] determination of a significant and unavoidable impact and would result in the fewest environmental impacts overall.

However, the transportation systems management alternative's impact would be greater for air quality energy, greenhouse gases, hydrology and water quality and transportation. But the transportation systems management alternative would not meet the majority of the project's objectives. The draft EIR includes analysis of Los Angeles State Historic Park usage. Due to the location of the proposed project alignment, which traverses over the western edge of the park adjacent to the metro [L] line and pedestrian pathway, the project does not significantly reduce the safe high-flying area within the park.

Due to the location of the proposed project alignment, which crosses over a portion of the park not typically used for screens and stages and because events can take place under the majority of the project alignment,

the project does not significantly reduce the event space available within the park.

The draft EIR includes an airspace evaluation of heliports in the project vicinity, which concludes that the project will be clear of the airspace associated with the existing heliports and will not result in impacts to heliports in the project's vicinity. Design Option A The draft EIR includes analysis of project variations as design use options, which are included in response to stakeholder feedback.

Design Option A shifts the alignment between the Broadway Junction and Dodger Stadium Station to avoid the area rights over 451 East Savoy Street. This design option would result in additional utility relocations and construction durations. Design Option B analyzes the potential for a single tower along Alameda Street, which results in the removal of the Alpine Tower and a 50-foot overall height increase at the Alameda Tower.

The tall Alameda Tower has potential technical constraints and would potentially result in the need for additional private aerial rights. Design Option C analyzes a taller Chinatown State Park Station, which would result in additional construction activities and has the potential to reduce the passenger experience. Use Option D substitutes a non-passenger junction for the proposed Chinatown Park Station. This use option would have the same height, location, width, length and architectural finish as the project, but would not enhance community connectivity to the park, Chinatown and the Mission Junction Neighborhood.

Finally, Design and Use Option E analyzes the [inaudible] Americans with Disabilities Act accessible pedestrian and bicycle bridge that would provide safe access between the Chinatown, Savoy and Solano Canyon communities in the park. I'm now going to turn it over to Michael Kennedy to provide an overview of the project's [parking site].

Michael Kennedy: Thank you. Thanks. Good evening. I'm Michael Kennedy with [inaudible]. I'm going to share the key findings of the project's parking study. Parking analysis is not required for the EIR but was of key interest to Metro, the city and the community. Metro conducted a peer review of the study and it has been available on Metro's website for review. While our ridership modeling and data indicate that most riders will take transit to get to the project as Dodger Stadium Express riders do today, some riders will choose to drive and park.

The parking study counted all publicly available spaces in parking lots and garages and all on-street spaces within a half-mile walking distance of the Alameda and Chinatown State Park Stations. Nearly 10,300 parking spaces were counted. Next slide, please. Of those 10,300 spaces, nearly 6,900 of them are in publicly available off-street lots and garages.

On the Dodger game day when the study was conducted, Dodger Stadium had a paid attendance of over 48,000, which is higher than the 2019 season average for weekday evenings. The study found that a bit less than 2,200 vehicles were parked and over 4,700 spaces were

vacant in those off-street lots and garages. Since the study was conducted during the COVID-19 pandemic, we used historic data to develop an adjustment factor that we reviewed with Metro and L.A. DOT to estimate pre-pandemic conditions.

Based on the peer-reviewed ridership forecasting model and data for the projects, we forecast between 307 and 790 vehicles are expected to park around project stations on game days. With the addition of this peak project-related demand, all of those vehicles can be accommodated in off-street lobbies and garages, and there would still be over 3,900 spaces remaining.

There's plenty of off-street parking capacity, even if future developments are constructed on some of those parking lots. While the project will work to ensure that as many people as reasonably possible take transit to connect to the system, a parking management plan will be finalized before project operation to ensure that riders will park where they will be welcome and are discouraged from parking where they are not.

Strategies such as business-to-business partnerships to pre-sell bundle packages that include off-street parking and patronage at a local restaurant are one example strategy under consideration. Through the preparation of the parking management plan, the project team will work with L.A. duty to support the implementation and expansion of on-street parking management strategies. Example strategies include adjusting time limit and parking meter hours during Dodger games to encourage riders, discourage riders rather, from parking in the community.

Thank you.

Jessica: We're going to get ready to move into the public comment session. As we do so, it looks like we have some representatives from Mayor Karen Bass' office, the City of West Hollywood Supervisor Hahn's office and Supervisor Solis office, so wanted to convey that we appreciate your participation in tonight's meeting. As we get started with the public comment session, I wanted to review some housekeeping items.

So just as a reminder, for those of you that might have joined late, you will need to click on the globe icon and select your language of choice.

Laura Adelman: Sorry, folks, I think we're having a technical difficulty. Give us a moment. I think… Sorry about that. I may have to step in here for Jessica. Sorry about that. I'm Laura Adelman, also part of the project team. Let me take over here, Jessica's portion, and maybe in just a moment she can come back in. So just to pick up where she left off.

As a reminder, everyone does need to select a language for this portion of the meeting. So that global icon appears at the bottom of your screen. So even if you're listening in English, please do select English from that icon. So the purpose of this session is to allow the public an opportunity to comment on the draft EIR here. And since we are focused on accepting public comments this evening, we won't be responding to questions.

Jessica, are you back with us?

Jessica: I am back. Thank you, Laura, for jumping in. I think I might have a little bit of an unstable Internet connection. So thank you for filling in.

Laura Adelman: No problem. Just getting started with those instructions. I'll let you, I'll let you pick up.

Jessica: Okay, great. Thank you. So apologies, everyone. So there will be a two-minute time limit for comment, just as we had at the in-person hearing recently. And we'll ask you to stay and spell your first and last name as you begin your comment. Once you have identified yourself, we will start the two-minute clock and you can provide your comment. If you're using interpretation, the interpreter will repeat your comment in English once you conclude your comment and we will allow extra time for your comment to be interpreted.

If you exceed your 2 minutes, we will interrupt you and thank you for your comment and will encourage you to provide any further comment at a future hearing. And we'll go over all that information again for you via email, phone or via mail. And it's important that we keep to the two-minute time limit because we want to be fair and give everyone who is providing comments in this meeting the same amount of time.

We also want to take a moment to remind everyone to be respectful of others and use appropriate language when making comments. And very quickly, before we get started, I just want to review on the next slide all of the various ways that you can provide comment through January

17th, 2023, so that you have that information. Tonight's hearing is not your only opportunity to provide comment.

We have an additional public hearing coming up at Cathedral High School on January 12th from 5 to 7 p.m. And you can also provide comment via email, phone and mail. And we're putting that information in the chat for you as well. All right. So with that, we're going to go ahead and move into the public comment session.

We'll ask that you please raise your hand if you would like to provide a verbal public comment. Okay. Looks like we've got some hands raised, so I'll go ahead and call on you and you can unmute yourself and provide your comment. We'll start with Katherine Christman, please.

Comment - PH280

Katherine Christman: Hello, can you hear me? Yes.

Jessica: Yes.

Katherine Christman: Hi, I'm Katherine Christman from West Los Angeles. I'm a 31-year-old entrepreneur from our city with Parkway [inaudible]. I'm also a proud board member on the National Association of Woman Business Owners [inaudible], currently serving in the VP role. I am in full support of this project for a variety of reasons, but to keep it short, the most pressing and urgent to me is the air quality for the beautiful community surrounding the stadium.

[inaudible] deserves a better scenario than they're currently enduring. I also love the opportunity for Dodger Stadium to become more accessible and available from other Southern California [inaudible] from Union Station. And so I think it's a beautiful project. I'm very proud of

PH280-1

the [inaudible] and I'm in full support of it, as is our Association of Women Business Owners.

We are so excited about it. A lot of value in it. Thank you so much.

Jessica: Great. Thank you for your comments. I wanted to provide a reminder for those of you that are calling in on the phone that if you would like to raise your hand and you're calling in via the phone and you're not logged into Zoom, you can press star nine to raise your hand. And then when we call on you, we'll call on you by the last four digits of your phone number, and you'll be able to unmute yourself by pressing star six.

With that, I'm going to go to Chris Wilson. Chris, would you like to provide public comment?

Comment - PH281

Chris Wilson: Good evening. My name is Chris Wilson with the Los Angeles County Business Federation. This is in full support of this project as proposed. LA ART will provide the first public transit connection to Dodger Stadium, which has the highest attendance out of any stadium in the country and is one of the few without a dedicated transit connection. It will improve traffic and parking for residents by potentially removing up to 3,000 car trips from neighborhood streets, easing local traffic, improving safety and reducing the need to park in the local community.

PH281-1

The LA ART system will be emissions free, emissions free and will provide the opportunity to connect communities who have been dis-appropriately impacted by traffic and pollution. This would significantly improve traffic conditions and air quality in the neighborhood for

these reasons, and more [inaudible] supports the zero-emission gondola from Union Station to Dodger Stadium. Thank you so much.

Jessica: Thank you for your comment. I'm going to go to a phone number now, so I'm going to go to 3233657680. You can press star six to unmute yourself and provide your comment.

cont'd PH281-1

Comment - PH282

Mary: Hello, my name is [Mary] and I live in Solano Canyon.

I support the gondola since it would eliminate the traffic as well as the cars that park and block our driveway. That would be greatly appreciated that this project passes and it will make everyone happy in Solano Canyon. Thank you so much.

PH282-1

Jessica: Great. Thank you for your comment. I appreciate it. I'm going to move on. It looks like Kathleen Johnson has her hand raised. So please go ahead and unmute yourself and provide your comment.

Comment - PH283

Kathleen Johnson: Hi, can you hear me? My name's Kathleen Johnson. I'm executive director of L.A. River State Park Partners, the support organization for our state historic park and the two other parts of the park. The gondola will not only adversely affect nearby neighborhoods, it will severely and permanently compromise people's experience of LA State Historic Park, a publicly funded green space that residents fought for decades, literally, to establish, and a site with deep historic significance to L.A. as the former home of the [inaudible] Station. LA ART seeks to take what we feel is a significant portion of land to the station with towers and gondola lines running over the southwestern section just 20 feet above people's heads.

PH283-1

This aerial road to the park will disrupt as much as an actual road would with at least 10% of the park under the constant traffic of gondola cars, the thoughtfully designed sense of tranquility and open space will be degraded and the park's open skies and magnificent views of the downtown skyline, [Legion] Park and Broadway Viaduct forever altered. These park impacts have been severely downplayed or glossed over in the draft EIR, so we request any use of this hard-fought public park, land airways [inaudible] for private enterprise. PH283-2 PH283-3 PH283-4

And despite the traffic study, there are 3,000 cars that the planners hope will be eliminated at Dodger Stadium we have little faith about. We feel that they would just be re-routed to the park and surrounding neighborhoods, just further compromising park users' access and experience of this treasured urban greenspace. Thank you very much. PH283-5

Jessica: Thank you for your comment. We'll move to Bill Chen. Bill Chen, if you'd like to unmute yourself and provide comment. Okay. We'll come back to.

Comment - PH284

Bill Chen: Can you hear me?

Jessica: There we go.

Bill Chen: Thank you. I am not at my computer. I want to say that the park should have its own autonomy and that there should be no compromise from the original park design tree cutting and/or taking of any of the land. That said is one thing, but traffic with MTA and I understand events for athleticism, it's just discretionary money that is more important for MTA to look at transportation when PH284-1 PH282-1

people are actually working in downtown [inaudible] into the downtown.

I'm talking about the intersection of Sunset and [inaudible], where the central city West specific plan says there should be widening of [inaudible] onto Sunset. And I'm talking about the 101 freeway that needs to have more lanes. If it has more lanes, it would help with commuter traffic going in and out of downtown. And it would also help with moving transportation into Dodger Stadium by way of traffic south of Sunset on [inaudible] going in and out on Sunset Boulevard by way of [inaudible] and to [inaudible] Way up to the mesa.

And I also wonder why people don't talk about having free shuttle from the Chinatown Go station to go up to the [inaudible] because there is buses from Union Station. Why not from Chinatown as well? Thank you.

Jessica: Thank you for your comment. Next, we'll go to Elias Garcia.

cont'd PH284-2

PH284-3

PH284-4

Comment - PH285

Elias Garcia: Good evening. My name's Elias Garcia. On behalf of the Los Angeles Area Chamber of Commerce, we'd like to offer our strong support for this project and join others on this call that have supported us, have stated their support. The Rapid Transit Project is a transformative project that offers the capacity to move approximately 5,000 people per hour per direction, using a quiet, safe, environment-friendly and a proven zero-emission technology.

It will connect such communities as [inaudible] Union Station, Chinatown, Mission Junction to Newark, Solano Canyon, while also providing access to the L.A.

PH285-1

State Historic Park, the LA River and [inaudible] Park. Of course, this connectivity is great, but it also means this project also means better health outcomes for these communities as a result of lower pollution and fewer congestion.

So we urge to move this project forward. Thank you.

Jessica: Thank you for your participation in the meeting and for your comment. We're going to move to Phyllis Ling.

cont'd PH285-1

Comment - PH286

Phyllis Ling: Hello.

Jessica: Hi, Phyllis. We can hear you.

Phyllis Ling: Okay, hi, my name is Phyllis Ling. I'm a resident by the Broadway Junction. I'm completely opposed to this project. It makes no sense. Logistically, it shifts parking and traffic further into Chinatown and this project would dangle less than 40 feet above my property, which invades my air rights. The noise study is vague and needs some more details. Gondola stations and junctions are noisy and you're talking about running this 18 hours per day and then doing maintenance and testing during the other 6 hours.

PH286-1

PH286-2

You don't even name the gondola system that was used to take measurements to estimate the noise that the stations would cause. There's no discussion of the differences between these systems the drive [inaudible] pulling the gondolas all the way from Union Station is in a junction across the street from my house. So that's going to have a huge impact.

PH286-3

There's also hardly any disclosure about how this project would be operated and implemented, which would impact ridership and greenhouse gas emissions. PH286-4

Security management of cues and crowd control are hardly discussed at maximum capacity. People could have to wait in line for 1 to 2 hours, and you're relying on a magical ticket reservation system to even out the crowds. You need to explain how that works. PH286-5

I don't even have time to get into the flight from advertisements constantly streaming over our neighborhoods. PH286-6

There's also cutting down 50-foot trees and oak trees in the park. PH286-7 And this faulty parking study that includes a lot of parking that isn't even open until, such as parking at the state park, which closes at sunset. PH286-8 So how are people going to get their cars out of the state park parking lot? And then also, I want to say that the pedestrian bridge into the park from Broadway, it shouldn't be held hostage to this project. PH286-9

Of course, you want the bridge, you don't want the bridge to be held hostage.

And then I think an option to get to Dodger Stadium is all fine and good, but not when it sucks away resources from all other options that we're not even discussing. This would be a tourist trap. There should be additional studies. The Dodger Stadium Express from other locations, such as Pasadena. PH286-10

Jessica: Thank you for your comment. I wanted to review the instructions for call in participants, so we've

had a couple of questions. If you're calling in via phone, you can press star nine to raise your hand, and then I'll remind you, when we call on you that you'll press star six to unmute. So again, if you are calling in via phone and you'd like to raise your hand to provide public comment, please press star nine and we'll get to the raised hands in the order that they're coming through in our Zoom box.

We'll go to Tabitha next.

Comment - PH287

Tabitha: Hi, my name is Tabitha, I'm an organizer with Power Out Way. We do organizing in this area, especially around Chinatown. I have a few issues with the draft EIR and I'm completely opposed to the project. PH287-1

The first one being that the EIR studies are routinely conducted by outside entities that are selected by the developers of the project. [inaudible] disclosure, public input in deciding who's going to conduct the EIR. PH287-2

So it's very convenient for them, that they found everything to be less than significant. PH287-3

Second is it's unclear to me that this project will reduce vehicle miles traveled. It seems like we'll just displace those vehicle miles traveled to Union Station and Chinatown Station. Chinatown is the neighborhood with the lowest [inaudible] after Skid Row. And this community cannot become a giant parking lot. PH287-4

Citizens need actual services. During the land use and planning analysis, they talk about how this will remove first the last mile transit. I don't see how that's possible. People are still going to have to drive to the gondola in order to take it. So that is, I don't see how that makes any sense. PH287-5

I'm also opposed to giving any sort of exceptions to the general plan for the park to cut down the trees. PH287-6

As several members of the communities have voiced, I don't know if you know, but Chinatown has an increasing aging community and the construction impacts, I don't know if they were calculated for average people of like average age or if they're calculated, considering that this elderly community has special needs. The elderly population is more sensitive to air pollutants and noise pollutants. PH287-7

Will the gondolas affect property values?

A lot of planners like to say that displacement will not happen because you're not removing any houses, you're not building on an existing housing site. But if it's going to hike property values and that's going to cause gentrification to come into the neighborhood, again, this is the poorest house neighborhood in the city, but you're not going to add or alter any existing facilities. PH287-8

This is a community that needs more investment in services. So the fact that you're making it harder to add more is a problem for wildfire. Existing wildfire routes are already inadequate a lot of times. PH287-9

Jessica: Thank you for your comment.

We'll move to the phone number with the last 4873.

You can press star six to unmute yourself.

Comment - PH288

Speaker 18: My name is [inaudible]. My family owns and operates the [inaudible] in Olvera Street, and we PH288-1

are in full support of the project. Not only would it help reduce traffic, good for the environment and provide much needed infrastructure and resources to an underserved part of downtown L.A., but as we enter a global recession, the L.A. region would benefit greatly from this world class project, a proven, innovative mode of transportation, and would attract much needed visitors from around the region and the globe.

It can also be a catalyst for future innovative transport solutions. This is a huge opportunity for L.A. and I hope it is approved. Thank you.

cont'd PH288-1

Jessica: Thank you very much for your comment. To move to Free SoCal.

Comment - PH289

Speaker 19: Hello, my name is [inaudible], Manager of Advocacy and Public Policy for [inaudible], Southern California. We're an environmental health non-profit that focuses on clean air and healthy lungs. We would like to convey our support for the L.A. Aerial Rapid Transit Project. The project provides a zero-emission form of transportation that would decrease greenhouse gas emissions, cut smog and reduce the number of cars on the road, all of which provide significant public health and environmental benefits.

Thank you.

PH289-1

Jessica: Thank you for your comment.

Comment - PH290

We'll go to Ernest Li next.

Ernest Li: Thank you. My name is Ernest Li from the [inaudible] Chinese Consolidated Benevolent Association. I'm speaking in full support of the gondola

PH290-1

project. It is a good project that is almost zero emission. This green project is good for the environment. And also it's at the iconic structure through the Chinatown area, and this is good for Chinatown, and also it provides an opportunity to link up the key cultural institution like Olvera Street, the Chinese [inaudible] Museum, and it links to Chinatown and allow a lot of the traffic and the opportunity for the local merchants to promote visitors, to eat and shop locally.

So it's good for the local economy. So I'm speaking in full support of this project. Thank you.

cont'd
PH290-1

Jessica: Great. Thank you for your comment. We're going to go to phone number with the last four digits 4460.

To reiterate, if you could please state your name at the beginning of your comment. So, 4460, you want to dial star six. There you go.

Comment - PH291

Speaker 21: Hello? Hello? Can you hear me?

Jessica: I can hear you.

Speaker 21: Okay. What's [inaudible] this project cause the people that we live here, we get stuck when there's anything. And if we come back from work and we forget something from our groceries we have to go away to [inaudible] come back into our own houses. This will help a lot, you know, [inaudible] we move around the city.

PH291-1

Also, zero emissions. I am here to support the [inaudible]. Thank you very much.

Jessica: Thank you for your comment. That's [inaudible] Wong next.

Wong: Hi, I organize with Power L.A. and Chinatown Community for Equitable Development, providing tenant support to low-income Cantonese seniors and I absolutely oppose this project. Seniors with limited ability, with limited mobility have no need for a train in the sky that only goes to Dodger Stadium. Their needs are on staying housed, securing affordable housing and a halt to the rising cost of living, which this gondola as a tourist attraction would only contribute to. PH292-1

If you look at just College Station alone, where one of these gondolas support towers is slated to be built, that area's already been flipped into this upscale expensive area to dire effects, pricing out long-time low-income residents. This gondola is just more of the same. And before you think that affordability of the neighborhood is not an issue with this project, which I know you're thinking because one of the L.A. ART Cantonese-speaking interpreters tried to tell me so after reading a resident's written comment at the Union Station hearing on Saturday, You're wrong! PH292-2

This gondola is being built public land where that land should be used for public good. To serve the most good, you must protect and be in alignment with the most poor. You want to fly over red lanterns and go to rooftops. You want to flash Chinese culture without paying a lick for the Chinese immigrants who built it and risk being displaced from it. PH292-3

This gondola is not a community serving project. It is a private billionaire serving project. Chinatown is the second poorest neighborhood in L.A. It doesn't even

have a full-service grocery store. It does everything that you would spend time and money catering to a seasonal entertainment issue and not honoring the truly urgent life-threatening issues of displacement that our most vulnerable residents face.

So every time I saw this project for the good of people, do not build this gondola. Thanks, maybe.

Jessica: Thank you for your comment. We're going to move to King next.

cont'd PH292-3

Comment - PH293

King Cheung: Hi, my name is King [inaudible], a member of the Chinatown Community for Equitable Development, which is located in Chinatown. I strongly oppose the gondola project. It is nothing but a rip off of the taxpayers using public space, public money and is only for the good of one guy who want to build a kind of LA life, kind of a project up on the parking lot and near the Dodger Stadium.

PH293-1

And I think that is not going to be good for the Chinatown community, for small businesses. Why would anybody stick around Chinatown when they can just get up there, eat and drink and attend games? So I think that the line that is good for Chinatown business is not are not going to [inaudible], in fact it make things worse, make things a lot worse.

If there's a station near LA State Historic Park, who want to walk up there to Chinatown, maybe for [inaudible] and the [inaudible] area. But who are going to [inaudible] and Alpine area to eat and shop, which is a [inaudible]. Nobody would do that. Convenience is they're going to just take the gondola and go and shop up there.

PH293-2

So it is going to be worse for Chinatown, but that is going to be cause more gentrification, making housing a more expensive and less affordable for the low-income residents in Chinatown. [inaudible] oppose the project.

Jessica: Thank you for providing your comment. We're going to move to Luke next. And please [inaudible] your comments. Thank you.

Comment - PH294

Luke MacDonald: Hello? Can you hear me? My name is Luke MacDonald. I live nearby Union Station and I wanted to comment that I think this is a really bad idea. I don't really trust the arguments for lower pollution and I think that the money would be much better invested in public transportation. The [inaudible] application, not just going to Dodger Stadium, baseball games. PH294-1

I'm definitely also concerned with the gentrifying of the communities and also like the thing that like that's going to improve parking I think is also very [inaudible]. It seems like it's just going to move [inaudible] thing making Chinatown a big parking lot. It doesn't seem like great idea. So it's just kind of like a really strange and kind of a waste of money.

So yeah, yeah, I think [inaudible]. PH294-2

Jessica: Thank you for providing your comment. We're going to move to Michael [inaudible] next.

Comment - PH295

Michael: Hi, good evening. Michael [inaudible] with Central City Association. We support the proposed L.A. ART zero emission project and appreciate the community engagement that the project team has conducted in downtown PH295-1

and in surrounding areas. In addition to making progress on our state's climate goals, the proposed gondola would reduce emissions, and some of the L.A. community is very most impacted by air pollution.

I think LA ART is expected to take 3,000 cars off the road before and after Dodger Stadium events. It will reduce vehicle congestion, which frees up stadium visitors and the surrounding communities' time and improves accessibility to surrounding residences and local businesses in the project area. Thank you.

cont'd PH295-1

Jessica: Thank you for your comment. We'll move to Doug Carstens.

Comment - PH296

Douglas Carstens: Hello. Good evening. This is Douglas Carstens on behalf of the California Endowment. We oppose the gondola project. Metro should not be pursuing this private project at Frank McCourt's behest at all. Metro should not be the lead agency because the City of Los Angeles is in a much better position and there's more property designated as the lead agency. First, regarding the EIR CEQA, the California Environmental Quality Act is a Bill of Rights for an environmental democracy. An EIR is the heart of CEQA, an EIR is not supposed to be a sales brochure or an infomercial for a project.

PH296-1

It's supposed to be an unbiased, full disclosure document that advises the public and decision-makers of the impacts of the project and how those impacts can be reduced. This draft EIR presented by ART and Metro falls woefully short of those legal requirements for full disclosure and accuracy, and instead it's biased in favor of the project.

PH296-2

I wish I could repeat verbatim everything that Kathleen Johnson, [inaudible], Tabitha, Phyllis Ling, Bill Chen, Luke McDonald said.

Because a lot of that I'd like to say, but I only have this 2 minutes, so I will say the analysis in the gondola, instead of being meaningful and accurate, is distorted and misleading. PH296-3

The entire financial plan, which the Metro Board was promised would be made available before the end of September 2022, is missing altogether. The missing financial information is critical to understanding how impacts identified in the EIR would be mitigated by the project proponent and how they will not be.

The project proponent, Frank McCourt, has only committed to funding 3% of the entire project budget, so the shortfalls in construction and operating revenues will be need to be made up somewhere, most likely from public transit funding sources. Better use for public projects. PH296-4

We ask that you terminate the project review process immediately if you don't terminate it immediately, Metro should transfer the lead agency status to the city of L.A. to complete the review and process it. PH296-5

Thank you for your time.

Jessica: Thank you for providing comment this evening. Next, we'll move to [inaudible].

Comment - PH297

Speaker 27: Thank you.

From the very start of this project, I knew I wanted to keep an eye on it because it impacts both my PH297-1

communities of Chinatown and my community of Pueblos or [inaudible]. My name is [inaudible], I grew up in Chinatown, and I am currently, after retiring from Cal State L.A. as a professor of [inaudible] education, I am now associated with the Chinese American Museum.

So from the very beginning I was keeping my eye on this project, and what I found very worthy of supporting is the fact that I agree that this project would benefit both Chinatown and El Pueblo. Very often when I had questions or wanted to push back on some of the plans, I was able to communicate with L.A. ART and they listened and they tried to incorporate as much of our community's suggestions as possible.

cont'd PH297-2

For the EIR tonight. I just want to comment that as an academic, I understand what significant means and what less than significant means. And so while on one hand, I like the reporting that it lessened significant with mitigation, but even then I like to connect that with community input to look at what that, what those mitigations might be so that we can have a more well-rounded view on how we can resolve some of the problems that not everybody would agree with. Thank you.

PH297-3

Jessica: Thank you for your comment. I just wanted to remind attendees that you can provide comments in languages other than English. We have interpretation available for Spanish, Cantonese and Mandarin, so please raise your hand if you'd like to provide a comment. We'll move to Jim Starr.

Comment - PH298

Jim Starr: Hello, this is Jim Starr. I'm against Frank McCourt [inaudible] because it's Alameda Street Terminal, which is designed like a Disneyland attraction, will harm the view of Los Angeles Union Station's Hispanic architecture. And one of the reasons it is a national historic landmark. Thank you. PH298-1

Jessica: Thank you for providing comment this evening. Next, we'll move to Melissa [inaudible].

Comment - PH299

Melissa: Hello.

Jessica: Hi, we can hear you.

Melissa: Hi, good afternoon.

I'm calling today because I support the gondola project.

One of the reasons is because I feel like, there will be actually more visitors to Chinatown than people just jumping into their cars after the game and going back home. PH299-1

They'll pass by Chinatown. And, you know, be curious and come back and visit. Also because of the pollution and less traffic. Thank you for your time.

Jessica: Thank you for your comment. We'll move to Mary next. Mary, are you able to get yourself unmuted to provide your comment? If not, we'll come back to you.

Jessica: Okay. We'll come back to Mary. We're going to go to Michael [inaudible].

Comment – PH300

Michael Chong: Hi. This is Michael [Chong], and I'm calling in favor of the L.A. ART project. I'm currently a Chinatown resident, and, you know, Metro has, in the past PH300-1

couple of decades, has made us understand that Los Angeles can have a strong network of public transportation along the side of cars and other variables. The [inaudible] is a good example of that.

But unfortunately, it doesn't [run] on non-Dodger events. We have a lot more activities in Dodger Stadium lately, which is a good thing, but also causes a lot of concerns in regards to traffic and congestion, air traffic congestion and pollution. I believe that the gondola project is the next step in our future. It would be a marker and an important infrastructure that people can visually see that Los Angeles can be centered around alternative modes of transportation, finding creative solutions for people to get out of their vehicles and hopefully as a result, supporting the surrounding businesses instead of driving past them.

cont'd PH300-1

Thank you.

Jessica: Thank you for your comment. We'll move to Edwin Lee next.

Comment – PH301

Edwin Lee: Hi, my name's Edwin Lee and I'm a resident at the Bishop and Broadway Junction and I'm against the project.

PH301-1

I don't, I think the visual impact assessment is biased and dismissive. These are massive concrete structures and five-ton gondola cabinets flying over our streets and parks. Of course, this will have a negative visual impact. If this was a more rich, more wealthier neighborhood, this would not be allowed.

PH301-2

And the noise from the gondola station in our neighborhood is not adequately studied. The noise analysis is vague and does not even disclose the gondola system used to take reference measurements. We are the difference. What the difference and similarities in these gondola systems? PH301-3

And furthermore, there's still no funding plan for this project. Thank you. PH301-4

Jessica: Thank you for providing comment tonight. We will move to Alan Weeks.

Comment – PH302

Alan Weeks: Okay. Okay. Thank you. My name is Alan Weeks and I'm very interested in the project. I think it's interesting, it's unique and it will make a great tourist attraction. PH302-1

But I do have one objection, and I think it's a major one. I've lived here, I'm 90 years old. I've lived here all my life. And I remember my mother took me to the Union Station opening in 1939.

And as you know, when you come in from the Plaza, you get a tremendously beautiful view of really historical monuments. And if you build that station and it appears to be quite significantly large, and will definitely block the view from people coming in on the west side of the station, it's going to block their views. So for that reason alone, if you find another location for the station, otherwise I don't have any objection to the project. PH302-2

Thank you.

Jessica: Thank you for providing your comment. Let's try to go back to Mary.

She's able to unmute herself.

Mary, [inaudible]. Oh, looks like Mary is having some trouble getting unmuted, so I'm going to go to Darryl Sauceda. Okay, we'll come back to. Let's try for eight, six, nine, five.

Comment – PH303

Darryl Saucedo: Did it work?

Jessica: Yes, Darryl, go ahead.

Darryl Saucedo: Did it work? Okay. Well, good afternoon. My name is Darryl Saucedo. I'm the chairman of the board of the Los Angeles Latino Chamber of Commerce, and we support this project as well.

PH303-1

But I would like to go on record that the LA [LCC] has strongly recommended that if this project moves forward, that the project hires at least 35% small, local, small, diverse businesses, not only in construction but to provide maintenance and staffing through our local AGC participants.

And I think that they should be given a preference for anybody that uses our local workforce. Thank you.

PH303-2

Jessica: Okay. Sorry about that. We will next go to the phone number ending in 8695. Give me a moment. And we'll get you [inaudible]. Just one moment.

Eight, six, nine, five. It, can you unmute yourself?.

Okay, Maybe we'll. Okay, go ahead. Good.

Speaker 34: [inaudible]

Speaker 34: [inaudible]

Comment – PH304

Speaker 35: So my name is [inaudible]. I'm a local resident of the Chinatown community. I'm here in support of the gondola project because I believe it brings a lot of benefits to our neighborhood and community. First, it improves the traffic, improves the air quality, also brings visitors to different locations and thereby improve our business structure. Thank you. PH304-1

Jessica: Thank you very much. Okay. And next, we'll go to the phone number ending in 4460.

Speaker 36: I already participate.

Jessica: Oh, sorry about that. Thank you very much for letting me know. If we could possibly go to phone number 513.

Thank you very much. 5137. Yes. Thank you very much. Go ahead if you're able to unmute yourself.

Phone number ending in 5137.

If you can go ahead. There you go. Five, one, three, seven. Are you able to go ahead?

Okay. Looks like we're not able to hear you at the moment. We'll move on. We'll give you a minute and we'll move on. Okay. Carlos Gomez, we'll take you next here. Carlos.

Comment – PH305

Carlos Gomez: Yes? Can you hear me?

Jessica: Yes.

Carlos Gomez: Hi. Yeah. Carlos Gomez, long-time Dodger season ticket holder. I fully support the gondola PH305-1

project. I think it's very innovative. You know, this specific year, you know, attending so many games, I caught myself waiting longer than usual for the Dodger Stadium Express. I don't know if there was maybe like, a lack of funding or but I know there were just like, you know, maybe two buses going out every 50 minutes or so.

And, you know, anything that we can do to really alleviate any type of congestion or traffic, you know, for the what is 30 to 40,000 Dodger fans that go to the games or millions throughout the season would be great. I fully support this project. And we really need this project. I mean, I think it would help the surrounding community and Dodger fans in general. Go Dodgers!

cont'd PH305-1

Jessica: Thank you very much. Okay. And next, we will go to the phone number ending 8838. If you're able to speak. And just as a reminder, if you're dialing in by phone, you can dial star six to unmute yourself. Go ahead please

Speaker 38: [inaudible]

Jessica: Okay. Looks like we may have lost that commenter or maybe we can come back to them. Okay. Next, we'll take Lester [inaudible].

Spanish Interpreter: And while Lester's getting unmuted, I'll just note that we do have a number of hands raised still, so we will extend the meeting until 7:30 so that we can make through all of the hands raised to provide comment tonight.

Comment – PH306

Lester: Oh, hello.

Jessica: Yes, go ahead, Lester.

PH306-1

Lester: Yeah, Lester [inaudible].

I just wanna say that I'm a big Dodgers fan and I support this project.

Jessica: Thank you for your comment. Okay. And next, we'll ask 6909 to provide comment. And if you're able to unmute, 6909.

Spanish Interpreter: If you're on the phone press star six.

Jessica: Yes. Thank you.

Once again, phone number 6909. If you're able to provide your comment and unmute, you can press star six on the phone. Okay. Looks like we may have some technical issues, there you go. Please go ahead.

Speaker 40: [inaudible]

cont'd PH306-1

Comment – PH307

Speaker 41: I support the project.

Speaker 40: Hello?

Jessica: You may provide your comment.

Speaker 40: [inaudible]

Speaker 41: I support the gondola project in Chinatown because it brings more attention business to the area.

Speaker 40: [inaudible]

Jessica: Okay. I think that comment is complete. Thank you very much.

Okay. Next, I'll take Kayla

PH307-1

Kayla: Good evening. This is Kayla. I am a resident of Chinatown, and I wanted to call in today to oppose the gondola project for a few reasons. There's no additional parking accommodations for those 3,000 vehicles you mentioned that would presumably be arriving at Union Station. So the traffic won't really be alleviated at all. PH308-1

The congestion will just shift south a few blocks. It's also hard to be convinced of an emission reduction plan that's only one mile long, especially when the vehicles will still be driving to the gondola terminal, but more so than the traffic in the parking. PH308-2

I'm concerned about the impacts of gentrification and displacement that were mentioned by some other commenters earlier, especially due to that property value increase in this historic but unfortunately very under-supported neighborhood. PH308-3

The gondola won't support Chinatown businesses. It'll detract from them, people going from Union Station and flying right over. PH308-4

It's the gondola's plan to use public rights of way public airspace, public land. It'll impose itself on our skyline. Cars moving thousands of camera-phone equipped sports spectators back and forth between Union Station and Dodger Stadium with a full view down into our patios or gardens or homes. PH308-5

The gondola's not needed year-round, but it'll be visible and audible year round like a permanent string of cables and towers and our sidewalks and our skies. PH308-6

Lastly, it's unclear who will pay for this project, but it's clear that a billionaire will profit from it. It's for these reasons that I oppose the gondola. Thank you. Thank you very much.

PH308-7

Jessica: Okay. Next, we'll ask phone number ending and 6343.

Comment – PH309

Monica Vasquez: Yes. Hi. Yes.

My name is Monica Vasquez, and I fully support the gondola project. This not only will help with the traffic and pollution and stuff like that, but now I live [inaudible] and it has some of the worst traffic, too. And this is [inaudible]. Less traffic and more [inaudible] transportation, which the gondola will provide all of that.

Plus it'll be good for the people. And this project will help the region with traffic. Like I said, the pollution, the time of traffic as well, because driving [inaudible] my house to the Dodger Stadium. It's only a short distance, but once in traffic it's a long way. And like I said, I just called to support the [inaudible] and gondola project and I hope you guys do, too.

Thank you so much.

PH309-1

Jessica: Thank you. And next, we'll take the phone number ending in 7886.

Please go ahead and unmute if you're able to. Just a reminder, you can press star six to unmute.

Ms. Wong: Hello?

Comment – PH310

Jessica: Yes, we can hear you.

Ms. Wong: [inaudible]

PH310-1

cont'd PH310-1

So my name Ms. Wong, I'm a local resident of the Chinatown area. I'm pulling support in favor of this project because it's going to bring a lot of good things to the area. It's going to help with the air quality and relieve the traffic and various benefits and welfare for the neighborhood. Thank you.

Jessica: Thank you. And next, we will ask Jason to provide comment.

Comment – PH311

Jason: Hi. Yes, this is Jason [inaudible]. I'm with the Los Angeles Chinatown Corporation. We are the founding organization that actually founded Chinatown when it was displaced, when it moved from Union Station to where it's at now. We own Central Plaza and we are one of the oldest organizations in Chinatown. Conceptually, the board has voted to support the gondola project, but conceptually there are still things that still need to be worked out.

But in general, we do support it for several reasons. Reasons to for reasons no other than Chinatown is completely dead. It has been dead for many, many years. I have lived in Chinatown before I moved out and nothing has happened. And so with the gondola project, this attraction will hopefully bring in visitors, people to see Chinatown, shop, visit, eat, and our merchants need it.

Despite what all the opposing arguments are, our merchants do need some kind of revitalization and right now our merchants are suffering. I speak to our merchants all the time and they support the gondola because they need people in Chinatown to serve, to make money, and to hopefully get Chinatown out of being one of the poorest area in the community.

PH311-1

cont'd PH311-1

Thank you.

Jessica: Thank you very much.

Before we move to the next commentary, I'll just note that we are coming up on 7:00 and we are planning to extend the meeting until 7:30 and we'll take comments up until 7:30 this evening.

Thank you, Jessica. And next, we will take the phone number ending in 9509. 9509, if you're able to unmute yourself by dialing star six.

Phone number 9509, if you can hear us. Okay, maybe we'll come back to that participant. How about we move on to the phone number ending in 6909? Actually, I don't see that one on my list anymore. Okay, we'll try 9520.

Participant ending in 9520.

If you're able to dial star six on your phone, to unmute your cell. We'll try one other. Sharon Coleman, if you'd like to provide your comment, Sharon.

Comment – PH312

Sharon Coleman: My name is Sharon Coleman. I am president of the National Association [inaudible] Contractors. And I just want to say I support this mission and I agree with the previous caller in reference to making sure that we have not only minority participation on the building of the actual structure, but on the long-term aspects of it. That's my comment.

PH312-1

Jessica: Thank you very much. Okay. And next, we'll go to Sarah Van de Camp.

cont'd PH312-1

Comment – PH313

Sarah Vande Camp: Hi. Thank you so much. My name's Sarah Van de Camp and I'm a resident of East L.A., specifically Cypress Park. I support this project. I think it's really no secret that we desperately need zero-emission solutions and climate solutions. We also need more public transportation options and connectivity in Los Angeles. So I wholeheartedly support this project and the efforts by climate resolve.

PH313-1

And I'm also really excited about the opportunity that aerial gondola technology presents in Los Angeles as well. This is a super innovative idea and I really do think it would be good for the city. Thank you so much.

Jessica: Thank you, Sarah. Ground Game L.A., if you'd like to provide your comment.

Comment – PH314

Bill: Hi, my name is Bill [inaudible] with people organized for Westside Renewal. Yes, we oppose this project. I'm concerned about a couple of things in the EIR in particular.

PH314-1

One is I'm concerned about the way this project fits in with the larger plan to redevelop the parking lots around Dodger Stadium. I do not believe that the actual goal of this project is to facilitate the growth of business in Chinatown, but to facilitate an excuse to redevelop the parking lots that Frank McCourt still has an interest in.

PH314-2

This is not really a secret that this was part of the goal. They were discussing it in the press over a decade ago, and I always find very, very wealthy individuals boosting a project that serves their interests

cont'd PH314-2

and trying to use the public infrastructure to do that as very suspect.

I think people have already talked about the way that the traffic study is flawed.

I don't see how adding a gondola really takes cars off the road. It doesn't do anything to get people to take transit to where they can get the gondola. I do not believe it's a first and last-mile solution. I think it's going to become an only mile solution. And what folks will do in practice is really take the gondola as kind of more a tourist attraction type thing and bring traffic and parking into the community.

PH314-3
